The children's school is called maktab (e.g. Yaqūt, Udbah, iv. 272; Makrisi, iv. 41. 201) or kuttab (Buḫṣahī, Diyyāt, bāb 27; Bahā'īnī, p. 142; Makrisi, iv. 197, 240); those founded for poor children were called almatāb (cf. e.g. Makrisi, iv. 53, 117, 199, 201). The word maktab characterizes the schools as a public benevolent institution; cf. the expression: "she made a maktab li ʿīsābī" (ibid., p. 223; of Kālātūn's hospital, ibid., p. 260; s. also Dozy, Supplement, s. v.; Quintemerve, Hist. Sult. Maml., i./i., 229 note and B. G. A., iv. 211, 258). — Cf. on elementary education: Goldziher, Art. Education, in Hastings, Encycl. of Rel. and Ethics; Mez, Renaissance, p. 177 sq.; Lane, Manners and Customs; Snouck Hurgronje, Mekka, ii. 144 sqq.

5. Libraries.

In Mecca, as well as in Medina, there were large collections of books in the mosques (Ibn Ḏu'bair, p. 89, 193); on modern conditions in Medina, see Bətānūn, Rihla, p. 254 sqq.). The Djāmi Zaitūnā in Tunis had a large library (Rec. Soc. Arch. Constantine, 1894, p. 287). The Niṣāmiya in Baghda'd had a library of which al-Farā'īnî (d. 488) was librarian (Wastenfeld, Shībʿa, ii. 314). The Muṣṭanṣirīya was better supplied in this respect than any other madrasa (Chron. Mekka, iii. 174). In Marw there were in the sixteenth century to public endowed libraries in the mosques and madaris, two of them in the chief mosque, one of the latter containing about 12,000 volumes (Yaqūt, iv. 509). Among the madāris in Cairo, the Fādiyya was particularly well endowed in this respect; it contained 100,000 volumes (Makrisi, iv. 197); these were acquired by al-Kāfiḍ al-Fāḍil from the Fādiyya Madrasa (Shībʿa al-Dīn Abū ʿĪṣa, K. al-Raṣūlīyān, Cairo 1287, i. 200; 268; Makrisi, ii. 253 sqq.) and in Kālātūn's hospital there were according to Ibn Taghribirdī (ibid., 482), 100,000 volumes from the same library. These libraries were often broken up and portions put in other madaris. During the famine of 694, the students of the Fādiyya sold the valuable books for a loaf a volume (Makrisi, iv. 197; cf. also p. 252). In Syria, Asia Minor (v. Berchem, Corpus, iii./i. 108 sqq.). Ibn Ḏu'bair says that in these eastern countries, the Kur'ān was only taught orally (by tālīkhn) while writing was practised with poems etc., out of respect for the Kur'ān (Rihla, p. 272). This did not hold generally however. At a later date (sixteenth century) we are told that a pipe was led from a school in the Azhar Mosque to the tomb of the founder so that his grave could be watered by the water in which the slates, on which sentences from the Kur'ān had been written, were washed (Sulaiman Rāṣdād, Kanz al-Dīnawar fī Tawālik al-Azhar, Cairo 1329, p. 73). As a rule the school was placed close to the mosque and beside a drinking fountain. During the Mamlūk period, nearly every founder of a madrasa built in connection with it a similar institution for orphans and poor children, who received free instruction and sometimes also maintenance in it (see Makrisi, s. v. madāris, passim). The object of one such school beside the mosque of Ibn Ṭūlūn is thus defined by Lādur as "to teach the orphans of the Muslims to recite the Book of God, the Exalted and also for other works pleasing to God and the various kinds of piety" (Makrisi, iv. 41). Elsewhere it is

6. The subjects taught and the methods of instruction.

As already explained, in the earliest period the principal subjects studied in the mosque were Kur'ān and Hadith to which was added the study of the Arabic language. In Buḫṣahī (K. al-Riʿa)
As above remarked, medicine was not only taught in special schools but also in the mosques; about 600 A.H., 'Abd al-Latif lectured in the Azhar Mosque but it is not quite clear whether his instruction in fiqh was also given there (Ibn Abi Usbah, ii. 207) and in any case the "philosophical sciences" in particular were cultivated in the mosques. Another division which still prevails, developed, that into principal sciences, those having a definite aim (maqāṣīd) and instrumental sciences (al-fāsiḥ wa-maṣūḥ) to the former belong kalām, al-khākhāt al-imāmiyya (ethics, practically the same as taqawwuf), fiqh, usūl al-fiqh, Kurān (tajwid and tafsīr), hadith. The later comprise linguistics, (ṣarf, faṣūlah, kayb, hay'ah) and in addition metrics and prosody (ṣurūt, faṣīya), logic (mantiq) including the theory of proof (uṣūl al-khākh), probably the same as the older mudhakara and marāj, mathematics (hiyāh and dhakhr), muṣūlah al-hadith (cf. Muṣūlah al-Bairum, Risāla, Cairo 1902, p. 20; Snouck Hurgronje, Meekk, ii. 200 sqq.). There are no hard and fast lines drawn. When in 1162 A.H. Pasha came to Cairo as governor, no şaḥīḥ in the Azhar could give answers to simple questions on mathematics and astronomy, because they knew only as much arithmetic as sufficient to deal with questions raised by the law of inheritance; a very few studied these subjects privately. The Pasha pointed out that astronomy was necessary for the study of religious duties, to settle the times and seasons (al-Dhahbī, Mervelle's Biographiques, ii. 110 sqq.; cf. also A. Sprenger, Die Schriftführer und die Schelastik der Muslime, Z.D.M.G. xxiii., 1878, p. 1—20).
The method of teaching was by lectures which had to be learned by heart afterwards (takhìm). The first task was to learn the Kur‘ān by heart and then acquire as many traditions as possible. The ḥadīth was repeated three times so that the student could remember it (Bukhārī, 71, p. 30). Lecturing soon became dictation (mat‘à), when the student wrote down what was said, except in the case of the Kur‘ān (approved: Bukhārī, 71, bāb 34, 36).

The method was the same for linguistic or literary subjects as for Ḥadīth, Tafsīr, etc. The philologists did not only to dictate their grammatical works, for example Ibn Duraid (Wustenfeld, Schähī, p. 127) or ‘Amm b. ‘Abd al-Wāhid (d. 744) who dictated from memory 30,000 folios on Ṭūḥa (Yaḵūt, 5,6, 7; 7, 26) but also the text of the poets, like al-Ṭabarī, who lectured on al-Ṭirāmīkh in the Mosque of ‘Amm in 526 (ibid., vi, 432). Abū Bakr b. al-Anbārī (d. 327 or 328), who dictated in one part of the mosque and his father in another, knew by heart 300,000 ḥawwāhid for the Kur‘ān and 120 commentaries on verses of the Kur‘ān with their ināsād (ibid., vii. 73). Dictation was specially important in the case of Ḥadīth, as the exact establishment of the text was the first necessity. It is therefore always said “he dictated Ḥadīth” (Husn al-Mughāra, ii. 139; Wustenfeld, Schähī, p. 210, 224, 242; 257, 287, etc.; Ibn Kuṭlubā, Ṭabarī al-Ḥanafīya, ed. Flügel, p. 51; Yaḵūt, 5, 6; 7, 24). The position of a teacher is therefore magfīl al-mati‘a (ibid., ii. 242; viii. 74), and his tumult among the students is al-mustamīl (cf. ibid., vii. 282; viii. 74). Problems of fiqh were also dictated (so Abū Yūnuf, Ibn Kuṭlubā, ed. Flügel, No. 249).

Instruction frequently began immediately after the salāt and the students performed the salāt along with the teacher. The class (dār) began with the recitation of the Kur‘ān by a hāfiz, with blessings on the Prophet, and other religious formulae (Madkhāl, i. 56; cf. Mez, Renaissance des Islams, p. 172 sq.). At the present day, the teacher as a rule simply pronounces the basmala himself. Dictation alone was not everywhere the custom. In time, there came to be so many copies of the chief texts that the students were able to get copies for themselves. The text was in this case recited aloud and the teacher gave his comments and emendations on the text (Yaḵūt, 5, 6, i. 255). It was only natural that the dictation of texts was first abandoned in philology; it is said to have been dropped as early as the fourth (tenth) century (Mez, Renaissance, p. 171 with a reference to Subki, Ṭabarī al-Ṣāḥīfa, iii. 259; Suyūtī, Mushīr, i. 30). This does not mean that dictation was completely abandoned for the teacher still made his pupils write down his comments; for example Muhammad b. ‘Abd al-Rahmān (d. 584) dictated a commentary on Ḥarīrī (Yaḵūt, 5, 6, vii. 29), and the method of having a text read aloud, while the lecturer explained any remarkable phrases was used as early as by the teacher of Ḥadīth, Ibn Kaisān (d. 99; ibid., vi. 282). At the present day, either the teacher or his familiar reads the text to be expounded from printed copy.

Cooperation between teachers and taught by questioning one another has always been an important feature of method. Ibn Khaldūn laments that so few teachers in his time understood the correct methods of teaching (ṭurūk al-ta‘ālim). They put difficult questions at once to the pupil instead of which the takhim must be arranged systematically, so that it is always combined with exposition and it is a fundamental principle that the pupil should not mix the different subjects. In Spain and North Africa in particular in his time, the instruction was not particularly good, and they laid too much stress on learning by heart (kiff) (Muḥaddīna, p. 342, 448 sq.; 450 = faṭ l. 6, N. 2, 29, 30; cf. Subki, Mu‘īd al-N‘ām, ed. Myhann, p. 151 sq.). Mechanical learning by heart is recognised for the Kur‘ān. It is therefore regularly said “he dictated and expounded” (e. g. Wustenfeld, Schähī, p. 220, 326). When the above mentioned Ibn Kaisān expounded Ḥadīths, he also asked his hearers about their meaning (Yaḵūt, 5, 6, i. 282). Vice versa, the class was at liberty to catechise the teacher. Al-Šāhī’s used to sit in his great ḥalqā in Mecca and say: “Ask me what you want and I will then give you information on the Kur‘ān and sunna” (ibid., iii. 379; cf. F. G. A., iii. 379). The teacher was sometimes overwhelmed with questions (Yaḵūt, 5, 6, i. 272). Ibn Ḫūṣair wrote questions being handed to a teacher in the Niẓāmiya in Bagdād (p. 191 sq.). Both practices are still in vogue and even in large classes the student may interrupt with questions. Ibn al-Ḥājī谴责s irregular interruptions of the lecture (Madkhāl, i. 57).

7. The Teachers.

The name for a teacher is muqtorī (also used in the pre-Muhammadan period) (Ibn Abī Uḥayrā, i. 104); ustād is a kind of honorary title (see Yaḵūt, 5, 6, i. 113, 209; ii. 271; v. 353, 354, 358, 448) and is still in use and applied also to students. There were a very large number of teachers in the great mosques. In the madrasa at first only one was appointed, for example in the Niẓāmiya in Bagdād (see above), in the first of those founded by Šalāb al-Din in Cairo (al-Naṣirīya: Makrizī, iv. 193) and in many others. A madrasa frequently took its name from a distinguishing teacher (e. g. the Gharaṭīya in Cairo: Maṣrī, iv. 235; the Sharīfīya, originally the Naṣīrīya: ibid., p. 193; M. Ibn Rashīd: ibid., p. 195; cf. Madkhāl al-Kāsī in Bagdād). In the larger madrasā, however, several teachers were appointed; Šalāb al-Din appointed 4 lectures to the Kamhīya in Cairo (ibid., p. 193 sq.); in this case a definite number (20) of students was allotted to each teacher (cf. Chen. Memba, ii. 105 sq.).

It is easily understood that the conditions in the older mosques, where every one could come and go, were freer than in the madrasā, which were built for particular teachers and students. There was certainly no official recognition of the teachers in the earliest period. After text-books had come into use, the certificate of qualification was the iḍīsā, and so it has remained to modern times. Any one who had studied with a teacher could get permission from him to teach from the book, which he had copied out and studied from his dictation: the teacher wrote this permission (iḍīsā) in the book (e. g. Yaḵūt, 5, 6, i. 253; ii. 272). A teacher could also give an iḍīsā ṣāma, which permitted the individual concerned to teach from all his works (Ibn Batṭūta, i. 251). In Damascus, Ibn Batṭūta was given quite a number of these “diplomas” (i. 251–253). It was the usual thing for a travelling scholar to collect numerous iḍīsāt;
thus 'Abd al-Latīf had certificates of this kind 
from teachers in Baghdad, Khurāsān, Egypt and 
Syria (Ibn Abī Usāhī, ii. 202). As late as about 
1700 we find al-Najmāni acquiring ājīzāt on 
his travels (Z. D. M. C., xvi. 690). There were special 
formulæ for the ājīzāt on fardīs and fawā'id (al- 
Kalkashandi, al-Abā'ī, 1542, xiv. 322 sq.). Some 
scholars only gave occasional lectures. 'Abd al- 
Wāḥib (d. 494) lectured on Ḥadīth every Friday 
in the Niẓāmīya (Wustenfeld, Schāfī, p. 287) 
and originally this was the case in the Ahāzār 
Mosque (see above).

The caliph al-Ḳadr, in his earlier days, used 
to lecture every Friday in a mosque in Baghdad 
(ibid., p. 233). Some scholars only dealt with 
a very limited subject; thus one was appointed to 
the Niẓāmīya to lecture on Bukhārī’s Sahīh because 
he had attended lectures on this from a celebrated 
teacher (ibid., p. 288). There were however many 
learned men who devoted themselves mainly to 
teaching and taught several subjects. Thus 
Shaftī began his hādīth immediately after the qālāt 
al-lasūf and taught students of the Kurān, at 
sunrise the students of Ḥadīth came to him and 
heard his comments; later in the day he lectured on 
method (masūkhara wa l-nuzūr); at the ājīz 
the ahl al-Ḥadīth came to him and he lectured on 
ṣūrā, msāhīt and shīr. He went off at midday 
(Yāqūt, l-dā'ī, vi. 383). About 300 a. h. we 
find Ibn Kāsān lecturing for the best part of the 
day on a number of subjects in somewhat the 
same order (ibid., vi. 282); others lectured 
from early morning till late in the evening (ibid., vii. 
176): Ibn Abī Usāhī, ii. 207 supra) and pious 
teachers even spent the night in the mosque in 
prayer (Wustenfeld, Schāfī, p. 258). Sometimes 
a young teacher began by dictating hadīth and later 
receiving a post with a wider scope in a mosque 
(ibid., p. 239).

The distinction between teacher and taught was 
not absolute; any one could have an ājīzāt in one 
subject, while he was still a student in others 
and even men of ripe scholarship attended the lectures 
of notable teachers. This led students to travel 
from one seat of learning to another, just as they 
used to travel in early days to collect hadīth (Bukhārī, 
ibn, p. 7, 19, 26). All the biographies of 
learned men give examples of this; the old 
Hellenistic custom was thus continued (cf. J. W. H. 
Walden, The Universities of Ancient Greece, 
New York 1910) and royal courts still played 
the same part; at them learned guests received 
donations, which enabled them to appear as teachers 
in the mosques (e.g. Ibn Ḥaṣṣa, ii. 75 sqq.; Ibn 
Khālidīn, 'Alī, al-'Ilār, Būkhārī 1284. vii. 452; 
Ibn Abī Usāhī, ii. 205; cf. Mommsen, Kemptische 
Geschichte, v 589). Distinguished scholars were of 
course much visited by lovers of learning; of 
one of the latter, it is said rīhāta ṣūrā or ṣūrā 
ḵanīd al-ṣūrā “they used to travel to him” (Yāqūt, 
p. 141). 4–600 fāṭhā had gathered round a 
teacher in the Maghreb in the time of Ibn al- 
Hādhaj (Ma‘ṭbā‘, i. 5). Sometimes a scholar 
attended another’s class to try him with questions 
(see e.g. for al-Bukhārī: Brunnw-Fischer, Christo- 
mathes, p. 103) and disputations often took place 
in which the pupils used to support their teachers 
very vigorously. If the stranger was recognised, 
the teacher might receive him with marks of 
honour (al-Abā‘ī, al-Kns`i: Yāqūt, l-dā‘ī, 
iv. 243 sq.). As in the Christian universities of 
Europe, public disputations were held in the mos- 
ques, in which considerable feeling might be 
displayed, e.g. in the disputations in the Ruṣāfā 
mosque in Baghdad between Ibn Sairajī (d. 306 = 
918) and the son of Dāwūd al-Zāhīrī in which 
the former was victorious (Wustenfeld, Schāfī, p. 110 
sq.). The teachers of the Niẓāmīya also used to 
hold disputations (ibid., p. 309). Celebrated teachers 
were not only visited by other scholars. When 
(about 300) Ibn Kāsān was lecturing, about 100 
horses etc. used to stand outside the mosque 
because prominent men were listening to him 
(Yāqūt, l-dā‘ī, vi. 282). The teachers made up the 
class of “the turban-wearers” (ma‘āshāmām, 
mu‘āshāmām, ārāb al-imāmah, asāb al-imāmah; 
see Ma‘ṭbā‘, ii. 246; Quatremère, Hist. Sult. Maml., 
ii. 244 sqq.; ‘ulūd, ii. 266; Dozy, Supplement, ii. 169); 
in eastern Andalus, they did not wear the ‘imāmah, 
but this was exceptional (Ma‘ṭbā‘, i. 137). The 
Rāsī Abū Yūsuf (d. 82) is said to have settled 
the dress worn by learned men (Ibn Ḥusayn, 
ed. Flügel, Ν. 249).

In spite of all this flexibility a certain stability 
developed in the teaching staff of the mosques. 
This was connected with the question of pay. It 
was for long in dispute whether it was permitted 
to accept payment for giving instruction. In 
the collections of Ḥadīth, the practice is both 
supported and condemned and it is said that 
the teacher may accept money, but not demand it, 
and avaricious teachers are strongly condemned. 
There are continual references to people who gave 
lectures without payment (Bukhārī, lqāna, bāb 16; 
Abū Dāwūd, Būyād, lāb 36; Ibn Mājah, Tafsir, 
bāb 8; cf. Goldscher, Mah. Stud., ii. 181 sqq.; 
Art. Education, Ν. 3–4 in Hastings, Encyc. of 
Rel. and Ethics; Lammens, Mamlūk, Ν. 360 sqq.; 
J. A., 1901, p. 143; Wustenfeld, Schāfī, p. 295; 
Mez, Renaissance, p. 176). The custom of the older 
Jewish scholars of exercising a handicraft was not 
common among the Muslims but was found 
ocasionally. Among men of learning we find shoe- 
makers, locksmiths, sandal-makers (Wustenfeld, 
Schāfī, p. 227, 231, 267; cf. also Mez, Renaiss- 
ance des Isl., p. 179). It was the rule however for 
the teacher to be paid for his work. This 
might be quite a personal donation from a prince 
or other rich man, for example al-Ṭabari was 
given a sum of money when he taught in the 
Mosque of ‘Amr (Yāqūt, l-dā‘ī, vi. 428; cf. 
the remarks above on wandering scholars); it was as 
a rule however a regular salary which was paid out of 
endowment, so that the position was a regular 
professorial chair (see under 8); this was especially 
the case in the madāris. The salaries of the teachers 
(ma‘āshām, also ṣawād, ṣawār, yāmā, see Dozy, 
Supplement, s. v.) varied considerably, 
according to the endowment. The lecturer in the 
Sayyūfiya received 11 dinars a month (Ma‘ṭbā‘, 
i. 196) but in another of Salaḥ al-Dīn’s schools, the 
Sa‘lāhya or Naṣrīya, the pay was much higher; 
the principal teacher received 40 dinars (of 13½ 
dinārs) a month and 10 dinars as principal, 
along with 60 ṭīf of bread and two beasts of 
burden, to bring water from the Nile (ibid., p. 251). 
In the Djamāl al-Dīn madrasa, each teachers 
got 300 dirhams a month (ibid., p. 253). The teachers 
also received donations in kind on special occasions; 
in the other Naṣrīya school they received sugar 
and meat every month at the festivals (ibid., p. 222),
in the Ḥidā'iyya on 'ld al-khr different kinds of bread and biscuit (ka'k and khunkūnīk), at the feast of sacrifice meat and in Ramadān food was prepared for them (p. 225). According to al-Maqrīzī, learned men might have 50 dinār's worth of food, in addition to allowances in kind (iii, 364). On ceremonial occasions, they often were given special marks of distinction, such as gifts in money and robes of honour.

The men of learning were organised in a guild. How the organisation worked in detail is not known. At the end of the third century we find the institution of the rīāsā established in Egypt. While Yazīd b. Ḥalib (d. 128) is called faqīh Miṣr wa-shābīkhū bi-siyādāt wa-shā'īnātān wa-tāhib al-qāsīn (al-Husn, i. 131), it is said of a series of scholars beginning with 'Abd al-Raḥmān b. al-Ḳāsim (d. 191), ʿAṣghāb b. Ḥubbād b. 'Abd al-ʿĀzīz (d. 204), ʿAbd al-Ṣāliḥ b. ʿAbd al-Ḥakām (d. 214 or 215) that they had rīāsā in Egypt (al-Husn, i. 135 sq.)—which seems to mean that they belonged to an organisation. The position is also called rīṣat al-ṭūm, as, for example, with reference to Yūnus (d. 264) (ibid., i. 136). When the madhhab arase, each school had its own rīṣ of the kind. The formulae for this was intahat ilāhi “rīṣās fi madhhab mālik; e.g. of Ibn al-Mawāz (d. 281), and others (al-Husn, i. 136; Ibn Taghibardi, ii/ii. 116); for the Shāfīʿī e.g. of Isfānīyīn, died 406 (Ibn Taghibardi, ii/ii. 122 sq.; cf. al-Husn, i. 196; Ibn Dībar, p. 219, 220); for the Ḥanafī e.g. of the Karkhī, died 340 (Ibn Kuṭlūbghā, i/ii. 115; cf. Nūr, 11, 13; Ibn Taghibardi, ii/ii. 116); for the Ḥanbalīs of the Barbahārī (d. 329) (Ibn Māshwala, l., Cairo, 1905, p. 260). Besides rīṣ we find other names like Imām al-Ḥanafiyya bi-Qadi dār bi-Qasīm Sur or Shāfiʿī Shīrāzī bi-nāfir ward al-Nahr (Ibn Kuṭlūbghā, Nūr, 96, 96, 196; cf. Shaikh al-Ḥanafīyya: Ibn Taghibardi, ii/ii. 116; Shaikh al-Mālikīyya fi Wāḥiba: al-Husn, i. 209). With such names it is not clear whether they are simply epithets like Imām Wāthikī, Imām ʿAṣriḥī (Ibn Kuṭlūbghā, i/ii. 206, 217), Uṣṭād Ẓanānī (al-Husn, i. 141), Rāʾi fi ʿUṣṭād al-Ḳalām (ibid., i/ii. 192), al-Sayyidīn (ibid., i/ii. 190), “the teacher of the Ḥanbalis and their Faṣīḥ” (Ibn Taghibardi, ii/ii. 114). There is also evidence of the ṭiyāsā within the special subjects, e.g. Shaikh al-Kurābī bi-Mīr (al-Husn, i. 230), Ṭiyāṣat al-Ḥadīth bi-Mīr (ibid., i. 163; al-Raḍīṣ), Ṭiyāṣat al-Fatwā (Quatremère, Hist. Sull. Maml., iii/ii. 27), Ṭiyāṣat al-Kūra bi-ṣāh (al-Husn, Chapters 123; R. al-Ḳalām for (Quatremère, cp. cit., i/ii. 68, note; ii/ii. 270, 280; Ibn Taimiyya, probably also used earlier (Mez, Renaissance, p. 179), while Shaikh al-Shāfiʿīyya means the highest distinguished leader of the Ṣafīʿī (al-Ṭārīkh, iv. 285).

It is not clear what real importance the organisation of teachers had in the early period. In different districts there was a principal director of the organisations, a rāʾis al-ṭūmān, in Medina (Ibn Dībar, p. 200, s.), in Baghdād (ibid., p. 220, s.), in Cairo and Upper Egypt (al-Husn, i. 141, 143,
somewhat modernised, was still given. The education in the madrasas is linked up with the new universities in Calcutta and elsewhere (Calcutta University Commission, 1917–1919, Report, Calcutta 1919, pp. 143–187; VI, 60–70). In 1922 there were already 14 universities of which five were founded after 1919 (Oriente Moderno, ii., 1922, p. 60; on earlier discussions on the foundation of a university see R. M. M., xxi. 1912, p. 268 sqq.). The older universities, founded on the model of that of London, are those of Calcutta 1857, Madras and Bombay 1857, Lahore 1882, Allahabad 1857 (R. M. M., vi. 4; on Chiefs’ Colleges, ibid., p. 1–51; ix. 44–81). The essential feature of the reforms is the new method of instruction, the systematic organisation of the courses, which are concluded by examinations, and the creation of a qualified body of competent teachers.

Inspired by the same spirit, if not so thoroughly, were the reforms which were carried through at the capital of Islamic studies, the Azhar in Cairo, without the assistance of a European power. In 1872 an examination for those beginning teaching was instituted and the ordinance expanded by new regulations in 1885, 1888 and 1895. The principal could however appoint teachers without examination. The students had to be registered so that unworthy persons should not share the stipends. On June 4, 1895, a council of five members was appointed to prepare reforms. They dealt with the finance and organisation. In 1896 the mosque-schools in Tanta, Damietta, and Dussuk and in 1903 those of Alexandria were put under the Act. On July 1, 1896 (supplemented in 1897 and 1898) examinations for candidates for higher history, geography and mathematics were introduced as voluntary subjects and it was forbidden to read glosses and super-commentaries in the first four years. The driving power in the council was one of its members, Muhammad ’Abduh, but he retired in 1905. The Khdive ‘Abbas II Hilmi in 1908 and in 1911, after several commissions had been working at the subject, promulgated a new law which is still (1928) practically in force. The administration of the Azhar Mosque and the institutions connected with it (particularly other mosques and the Khd School) were reorganised. The organisation is based on the old organisation of the staff with the principal as head of the ‘ulama’ and the heads of the madrash as members of the committee of management. New subjects were instituted, such as ‘Ilm in combination with the sira, history, especially Muslim, geography, natural history, chemistry, mathematics, drawing, hygiene, education Instruction is given in three divisions, each of which is estimated to cover 5 to 7 years. To obtain admission a student must be 10–17 years of age, be able to read and write and know the Qur’an by heart (by the law of 1911 he was allowed to learn half of it in his first six months in the Mosque, but this was abolished in 1921). Each year ends with the examination in the month of April; the final examination of the first section enables the successful candidate to teach in elementary schools, that of the second to obtain an appointment in certain offices or as imam or khateb in the mosques; by the examination, the candidate obtains the highest degree of ‘ilm, and can become a teacher in the Azhar, or judge or council in the Shar’a courts. By new laws of 1921, 1923 and 1924, the examinations were reformed and the relationship to the Khd School, Ddr al-Ulum and other educational institutions reorganised so that in the Azhar, a kism al-takhassus for Fikb, Tajf, Hadith, Tawhid, Mantik, Waj’, Bayan, Akhlq, Islamic history and practical courses in teaching and court practice were instituted. When by the law of Aug. 26, 1927, a university was founded with faculties of arts, law, scien ce, and medicine (Oriente Moderno, v., 1925, p. 110 sqq., 434–436; vii., 1927, p. 627 sqq.), the question of education in the mosque again came up and a new commission on Nov. 27, 1927 was charged to consider new proposals (for the reforms of Egyptian institutions see P. Arminjon, L’enseignement, la doctrine et la vie dans les universités musulmanes d’Egypte, 1907; Mustafa Bairam, Risale, 1902; Sulaiman Ra’sad al-Zayyati, Diwan jah fi Tur’ik al-Ashar, 1330, p. 147 sqq.; A mid Madjiz Isarat al-Ashar, Cairo 1333, anonymous, but by Abu al Karim Salim, cf. al-Manarih, xxv., 1372, p. 703; Commission de la Réforme de l’Université d’El Ashar, Projet de Réforme présenté par Muh. Pasha Sa’d, Cairo 1911, and the official regulations; Joh. Pedersen, al-Ashar, Copenhagen 1922, p. 65 sqq.; A. Sékaly, in Revue des Études Islamiques, i., 1927, p. 95 sqq., 465 sqq.; ii., 1928, p. 47 sqq. etc.; Oriente Moderno, v., 1925, p. 113 sq.; vii., 1927, p. 634). In Morocco the ruler in 1844 introduced European subjects into the Madrasa in Fès Djadid (whence its name Madrasa al-Muhaddisin); these innovations did not become permanent but in 1916 the madrass in Fès and Rabat were reformed (Bell, in J.A., ser. xi, p. 152; Pérete, in Arch. Maroc, xviii., 1912, p. 257 sqq.; see for Tunis: R. M. M., iii. 385). Since these reforms were arranged everywhere, their reaching reforms in education have been introduced the results of which cannot yet be surveyed.

G. The Administration of the Mosque.

1. Finances.

The earliest mosques were built by the rulers of the various communities and the members of the community did all the work necessary in connection with the primitive mosques. The later mosques as a rule were erected by rulers, emirs, high officials or other rich men in their private capacity and maintained by them. The erection of the mosque of Ibn Tulin cost its builder 120,000 dinars, the Mosque of Ma‘ayad 110,000 (Ma‘zik, iv. 32, 137, 138). The upkeep of the mosque was provided for by endowments (asa‘f, kasb) (cf. therewith besides the Fih-Books: I. Kremsik, Das Waqfrecht, Z.D.M. G., xlv., 1891, p. 511–576; E. Mercier, Le code du hawqan ou asa‘f selon la législation musulmane, 1899). In the third century we thus hear of houses which belonged to the mosques and were let by them (Papyrus Ercherzog Rainier, Führer, N°. 773, 837) and Ibn Tulin handed over a large number of houses as an endowment for his mosque and hospital (Ma‘zik, iv. 83). This custom was taken over from the Christians by the Muslims (see Becker, in Isl., ii. 404). According to Ma‘zik, states were not given as waqf endowments until Muhammad Abü Bakr al-Madhbara‘i (read thus) bequeathed Birkat al-Habab and Suyfit as endowments (about 300 A.H.); this was however cancelled by the Fidsams again (ibid.). Al-Jukim made large endowments not only for his own,
but also for mosques previously in existence, such as the Ašhar, al-Hākimi, Dār-al-Ila and Dājjāli al-Maṣṣ and Dājjāli Rāshida; the endowments consisted of dwelling-houses, shops, mills, ḫāṣṣārā and ḥawāsqal, and the document (ibid., p. 50 sq.) specifies how and for what purposes the revenues are to be distributed. Bathes were also given as endowments for mosques (ibid., p. 76 for 529; cf. 81 of the year 543). Sulṭān al-Dīn granted lands to his madāris: in 556, for example, a qaṣr in the Kaḥmiyya and a ḥār in al-Fayyum and the teachers received wheat from al-Fayyum and in the same year he endowed the Naṣṣiriyya with goldsmiths’ shops and a village (ibid., p. 193 sq.; cf. another document: p. 196 sq.). During the Mamlūk period also, estates were given as endowments (for documents of this period see van Berchem, C.I.A., i, No. 247; Maḥrīzī, vi, 107, 137). Not only were mosques built and endowed but already existing ones were given new rooms for teachers, minbars, stipends for ḥanāfī reciters, teachers etc. There were often special endowments for the salaries of the inam and the muḥdāḥsins, for the support of visitors, for blankets, etc. (see Ibn Djbāir, p. 277 with reference to the Mosque of the Umayyads). The endowments and the purpose for which they might be used was precisely laid down in the grant and the document attested in the court of justice by the kādī and the witnesses (cf. Maḥrīzī, iv, 50, 196 ināf). The text was also often inscribed on the wall of the mosque (cf. ibid., p. 76; the above mentioned inscriptions amongst others. Documents from Taḥkent see K.M.M., xi, 111, p. 278 sqq.). Certain conditions might be laid down, e.g. in a madrasa that no Persian should be appointed there (Maḥrīzī, iv, 202 ināf) or that the teacher could not be dismissed or some such condition (v. Berchem, C.I.A., i, No. 201), that no woman could enter (F.A., ser. q., iii, 589), that no Christian, Jew or Ḥanīfī could enter the building (ibid., p. 251), etc. Endowments were often made with stipulations for the family of the founder or other purposes. That mosques could also be burdened with expenses is evidence from an inscription in Edfu of the year 797 (1395) (v. Berchem, C.I.A., No. 539). If a mosque was founded without sufficient endowment, it decayed (e.g. Maḥrīzī, iv, 115, 201, 203) or the stipends were reduced (ibid., p. 251), but in the larger mosques as a rule the rulers provided new endowments. According to al-Mawardi, there were also special “Sulṭān-mosques” which were directly under the patronage of the caliph and their officials paid from the Bait al-Māl (al-Abākūm al-Sulṭāniyya, ed. Enger, p. 172 supra, 176 supra).

Just as the Bait al-Māl of the state was kept in the mosque, so was the mosque’s own property kept in it; e.g. the ḥanū or ẖirṣūn al-Ḳaṭib, which is mentioned in ‘Omar’s time and may be presumed to have existed under his predecessors (Bāṣḥīr, p. 43 supra; C.M., i, 307; ii, 14). The Bait Māl al-Dājjāli in Damascus was in a ḥubbā in the ṣahe (B.G.A., iii, 157; Ibn Djbāir, p. 267; Ibn Baṭṭaṣ, i, 201; cf. for Medina: Wustenfeld, Medīnī, p. 86). Rich men also had their private treasure-chambers in the mosque (see E 2) as used to be the case with the Temple (see E. Schurer, Gesch. d. jud. Völk., ii, 1907, p. 322-328; P. Camunot, Feuille de Donau-Europa, 1926, p. 495 sqq.).

2. Administration.

As Imām of the Muslim community, the caliph had the mosques under his charge. This was also the case with the sulṭān, governor or other ruler who represented the caliph in every respect. The administration of the mosques could however not be directly controlled by the usual government offices. By its endowment the mosque became an object sui generis and was withdrawn from the usual state or private purposes. Their particular association with religion gave the kādīs special influence and on the other hand the will of the testator continued to prevail. These three factors decided the administration of the mosque but the relation between them was not always clear.

a. Administration of the separate mosques.

The mosque was usually in charge of a nāṣir or wali who looked after its affairs. The founder was often himself the nāṣir or he chose another and after his death, his descendants took charge or whoever was appointed by him in the foundation charter. In the older period the former was the rule and is said to have applied especially in the case of chief mosques, if we may believe Nāṣir-i Ḵhosraw, according to whom al-Ḥākim paid the descendents of Ibn Ťullān 30,000 dinārs for the mosque and 5,000 for the minaret and similarly to the descendents of Amr b. al-Âzī 100,000 dinārs for the Mosque of Amr (Seffīr-Nāmē, ed. Schaefer, p. 39 and 146, 40 and 148). In 578 we read of an administrator (unīsawālī) of the mosque in Jerusalem (Maḥrīzī, iv, 11). In the case of mosques and madāris founded during the Mamlūk period, it is often expressly mentioned that the administration is to remain in the hands of the descendents of the founder: e.g. in the case of a mosque founded by Baibars (Maḥrīzī, iv, 89), in the Dājjāli Maṣṣ when the vizier al-Maṣṣ renovated it (ibid., p. 66), the Šāhīyya (ibid., p. 205), and the Karānzūnūriyya (ibid., p. 232) etc. so also in the lādīriyya in Jerusalem (‘to the best of the descendents’, cf. v. Berchem, C.I.A., ii, 129. Other cases are also found. Sometimes an emir or official was administrator e.g. in the Muʿayyad (Maḥrīzī, iv, 140), the Taibarsiya (ibid., p. 224), the Aṭhar, (ibid., p. 54 sq.) or the Mosque of Ibn Ťullān (Kalkaşandī, Šāb al-ṭārīkh, xi, 159-162). In Dijmāl al-Dīn’s madrasa, it was always the kādī al-ṭāṣrī (Maḥrīzī, iv, 256). In the Khanāqā of Baibars the kādīnāḥīs and his successors (v. Berchem, C.I.A., i, No. 252); but it was more frequently a kādī; for example in the mosque of Baibars just mentioned, the Ḥanafī kādī was to take charge after the descendents (Maḥrīzī, iv, 89); in the Aḵbūḡawīyya, the Šāfī kādī was appointed but his descendents were expressly excluded (ibid., p. 225). In the Mosque of the Umayyads during the Mamlūk period, the Šāfī chief kādī was as a rule the nāṣir (Kalkaşandī, iv, 191) and in the Nāṣir mosque in Cairo (ibid., xi, 262-264). In this city we find during the Mamlūk period that emirs and kādīs alternately acted as nāṣirs in the large mosques (e.g. the Mosque of Ibn Ťullān:}
Their governors built extensions and extended renovations (cf. C. M., i. 145; iii. 85 sqq.). During the 'Abbasid period, the kādi occasionally plays a certain part in these connections; for example, in 188-16 he presented the kādi with the necessary money to extend and repair the Meccan mosque (C. M., i. 312; ii. 43). In 263, Al-Muwaffak ordered the governor of Mecca to undertake repairs, at the Kalba (ibid., ii. 200 sqq.). In 271 the governor and the kādi of Mecca co-operated to get money from Al-Muwaṭṭak for repairs and they saw the work through (ibid., iii. 136 sqq.). In 281, the kādi of Mecca wrote to the vizier of Al-Mu'taḍād about the Dar al-Nadwa and backed up his request by sending a deputation of the staff there (sadaqa). The caliph then ordered the vizier to arrange the matter through the kādi of Baghdad and a man was sent to Mecca to take charge of the work (C. M., iii. 144 sqq.).

The importance of the kādi was based primarily on his special knowledge in the field of extradition, and he was, like the kādi of Basra, called Harith. Miskin in Cairo (237-245) forbade the kāra of a mosque to recite the Qur'an melodiously; he also had the masāḥif in the mosque of Amr inspected and appointed an amir to take charge of them (Kindi, Wulat, p. 469). After the building of the Ţulūnid mosque, a commission was appointed under the kādi l-Mu'āḍ to settle the kibla of the mosque (Mārkīz, iv. 21 sqq.). But at a quite early date they also obtained a say in the management of the funds. The first kādi to lay his hands on the al-ḥāṣa was Tawba b. Nāmir al-Iṣṭaḍāti, who hitherto every endowment had been administered by itself by the children of the testator or some one appointed by him, in 218 Tawba brought about the centralisation of all endowments and a large sum was created for the purpose (Kindi, Wulat, p. 346). How this system of centralisation worked is not clear at first, but it was carried through under the Fatimids.

Al-Muṣṭaṣrī created a special dīwan al-ḥāṣa and made the chief kādi head of it as well as of the dīwan al-masāḥif (Mārkīz, iv. 75 and 75; cf. Kindi, Wulat, p. 585, 587, 589, according to whom al-'Aṣir specially appointed the chief kādi over the two dāmīs); and a special bazīt al-māl was instituted for it in 363; a yearly revenue of 150,000 dirhams was guaranteed; anything left over went to form a capital fund. All payments were made through this office after being certified by the administration of the mosques (Mārkīz, iv. 83 sqq.). The mosques were thus administered by the kādās, directly under the caliph. The dīwan al-ṣabār wa l-maṣūdāba in Baghdad (Mer. Koresis sine, p. 72) perhaps served similar purposes.

Al-Iṣṭaḍām reformed the administration of the mosques. In 403 he had an investigation made and when it proved that 800 (or 930) had no income (zahīla), he made provision for them by a payment of 9,220 dirhams monthly from the Bazīt al-Māl; he also made 405 new endowments (of estates) for the officials of the mosque (Mārkīz, iv. 84, 264). Under the Fatimids, the kādās used to inspect all the mosques and maṣūdāba in and around Cairo at the end of Ramadān and compare them with their inventories (ibid., p. 84).

The viziers of the Fatimids, who also had the title kādi, did much for the mosques (Eljawhar, Wulati b. Kiliš, Bār al-Iṣṭaḍām; cf. v. Berchem, C. I. A., i., No. 11, 576, p. 631).
Under the Ayyubids, conditions were the same as under the Fatimids. The diwan al-ahdab was under the kāfiṣ (Makrizi, iv. 84). Sulāḥ al-Dīn gave a great deal to the mosques, especially the madārīn (cf. above) 20,000 dirhams a day is a figure given (ibid., p. 117). When Ibn Dhihār says that the sultan paid the salaries of the officials of the mosques and schools of Alexandria, Cairo and Damascus (p. 43, 52, 275), he must really mean the Diwan already mentioned.

The same conditions continued for a time under the Mamluks. In the time of Baibars, for example, the chief kāfi Tādj al-Dīn was nāṣir al-ahdab. He caused the Mosque of 'Amr to be renovated and when the funds from the endowments were exhausted, the sultan helped him from the Bait al-Mal (Makrizi, iv. 14); after conferring with experts, the chief kāfi forbade a water-supply brought by Sulāḥ al-Dīn into the mosque (ibid., p. 14; Ṣayhūt, Hun al-Maḥāba, ii. 137). In 687 the chief kāfi Taṣqū al-Dīn complained to Kašhin that the 'Amr and Azhar mosques were falling into ruin, while the ahdab were much reduced. The sultan would not however permit their restoration but entrusted the repairs of the mosques to certain emissaries, one to each (Makrizi, iv. 14, 15). This principle was several times applied in later times and the emissaries frequently gained influence at the expense of the kāfiṣ. Thus after the earthquake of 707 (1103) (cf. theron Quatremere, Hist. Solt. Maml., ii. 214 sqq.), the mosques were allotted to emirs who had to see that they were rebuilt (Makrizi, iv. 15, 53). From the middle of the seventh century, we often find emirs as administrators of the chief mosques. The kāfiṣ had however obtained so much authority that he was conceded "a general supervision of all matters affecting the endowments of his madīḥah" (al-Umari, Tādj bi l-Muṣafah al-Shaṭiṣ, p. 117; cf. Z. D. M. G., xlv, p. 559); according to this theory the kāfiṣ could intervene to stop abuses. In Syria in 660 (1262) Ibn Khalīkān became kāfi over the whole area between al-Arīṣ and the Euphrates and supervised the affairs of wakfs, al-ahdab, madrasas, etc. (Quatremere, Hist. Solt. Maml., ii. 170).

Sulān Baibars reformed these endowments and restored the office of nāṣir al-ahdab or nāṣir al-ahdab al-maṭruṣa or n. dīyun al-kāfiṣī (Kalka-bandi, iv. 34, 38; v. 465; ix. 256; xi. 252, 257 sqq.; cf. Khalil al-Zahiri, Zuhūt Kāfī al-Mumalik, ed. Raiski, p. 109). According to Makrizi, the endowments were distributed among the Mamluks in three departments (dīyun): 1. dīyun al-ahdab, managed by an emir, the Dawdār; this looked after the funds of the mosques, in 740 in all 130,000 faddān; 2. dīyun al-ahdab al-hākimiyah bi-Mus vīl kāfīṣī, which administered dwelling-houses; it was managed by the Shī‘ī Kāfī l-Kāfī, with the title Nāṣir al-Aqṣāfī. This department came to an end in the time of al-Malik al-Nṣir Farājī, but an emir supported by the opinion of the Hanafī chief kāfi, spent a great deal and misused the funds; 3. dīyun al-ahdab al-mādīḥa, comprised all the endowments which still had particular nāṣirī, either descendants of the testator or officials of the Sultan and the kāfiṣ. The emir seized their lands and Barāḳ, before he became Sultan, sought in vain to remedy the evil by appointing a commissar. The endowments in general disappeared somewhat later because the ruling emirs seized them (Makrizi, iv., pp. 83—86). In modern times, as a rule, endowments in Muslim lands have been combined under a special ministry.

To be distinguished from the administrators of the mosque is the nāṣir who is only concerned with the supervision of the erection of mosques. Any one could be entrusted with the building of a mosque (e.g. Makrizi, iv. 92). Under the Mamluks there was also a clerk of works, mutawalli al-wāṣīr wa nāṣir al-musāla: he was the overseer of the builders (ibid., p. 102; see Zuhāt Kāfī al-Mumalik, ed. Raissi, p. 115 of p. 190; v. Benchem, l’s t. A., t. 742 sqq. 751).

The caliph or the ruler of the country was in this, as in other matters, supreme. As we have seen, he intervened in the administration and directed it as he wished. He was also able to interfere in the internal affairs of the mosque, the number of prayers in the month of Ramadān was cut down, the akhūn from the minaret abolished (cf. Maḥiṣ al-Māhīṣ, no. 788). In the year 214, the governor Ṭūsī al-Nuṣairi had the mosque of ’Amr closed except at the salāt because the Bait al-Mal was kept in it, which however produced protests from the people (Makrizi, iv. 11; Kindi, Walsis, p. 266; B. G. A., vii. 110). Many similar examples could be mentioned, especially during periods of unrest. In 821 the nāṣir in conjunction with the kāfiṣ revised the budget of the Mosque of the Omayyads and made financial reforms (7. A., ser. 9, vi. 220). The aḥān formalities were laid down in details by the ruler (Makrizi, iv. 41, 45).

In the year 253, the aḥâr in Bagdād had a man whipped who had tried to disturbance of the Karim in the minaret, after he had been heard in his defence in the presence of the kāfiṣ and several learned men (Wūyāt, t. dāīt, vi. 500). The importance of the sovereign in connection with the mosque depended on his personality. As a rule he recognised the authority of the regular officials. When for example al-Khāṭib al-Baghdādī asked the Caliph al-Kārim for authority to read Ḥadith in the mosque of al-Masārı́, the latter referred the question to the nāṣir al-adabī (Wūyāt, t. dāīt, i. 210 sqq.; cf. Wustenfeld, S. t. A., iii. 280).

The consecration of the mosque was attended by certain ceremonies. When for example the midday service was conducted for the first time in the Dīmān al-Salih in Cairo, a representative from Bagdād was present (Makrizi, iv. 181). At the consecration of the Mosque of Ibn Ţālib, the builder gave al-Kānim b. Salama, a pupil of al-Shafī‘ī, who lectured on Ḥadīth there, a purse of 1,000 dinars (Sa‘īdī, Hun al-Muṣafah, ii. 130). Al-Makrizi describes the consecration ceremony at several mosques. In the M. al-Muṣaffa the Sultan was present seated on a throne surrounded by his officers; the basin of the š İyyān was filled with sugar and ḥālwa, the people ate and drank, lectures were given, then the š İyyān was read and ḥālwa delivered and the Sultan distributed robes of honour among the officials of the mosques and Sūfīs (Makrizi, iv. 139); similarly at the Zahrīyya (p. 662), were poems also recited of Quatremere, Hīt Sālt. Maml., iii. 11, p. 225 sqq., Madāra al-Dīn, p. 811; al-Saγhīmīshīya, p. 757 (Makrizi, iv., p. 217 sqq. 253, 256).
H. The Personnel of the Mosque.

1. The Imām.

From the earliest days of Islām, the ruler was the leader of the šālik; he was imām as leader in word, head of the government and leader of the common šālik. The governors of provinces thus became leaders of the šālik and heads of the kharāj when and where a special financial official took over the fiscal side, the governor was appointed šul al-šālik wa la-ḥarb. He had to conduct ritual prayer, especially the Friday šālik on which occasion he also delivered the khattāb. If he was prevented, the chief of police, šālik al-šarṣa, was his khalīfa (cf. Maqrizi, iv. 83). Ameer b. al-Ąṣām permitted the people of the villages to celebrate the two festivals, while the Friday divine service could only take place under those qualified to conduct it (who could punish and impose duties; iṣnād, p. 7). This was altered under the 'Abbāsid caliph.

The caliph no longer regularly conducted the šālik (after the conquest of the Persians: Maqrizi, iv. 45), and Anbaša b. Ishāk, the last Arab governor of Egypt (238–242), was also the last emir to conduct the šālik in the 1. This imām, paid out of the baṭt al-mul, was now appointed (ibid., p. 83), but the governor still continued to be formally appointed šul al-šālik. Henceforth the ruler only exceptionally conducted the service, for example the Fātūns on ceremonial occasions, especially in the month of Ramādān (Ibn Taghibi, ed. Juyboli, ii. 482 sqq.; Kalkashandi, Sudh al-Jāl, i. 599 sqq.); in many individual mosques probably the most prominent man conducted the service; according to the Hadith, the one with the best knowledge of the Kurʾān and, failing him, the eldest should officiate (Bukhārī, Adhān, bab 46, 49).

The imām appointed was chosen from among those learned in religious matters; he was often a Ḥaṣmī (Mez, Renaissance, p. 147); he might at the same time be a kādī or his nāsir (see Kindī, Wālid, p. 575, 589; Ibn Batūtā, i. 276 sqq.). During the šālik he stood beside the māḥarij; al-Maqrizi mentions the anomaly, that in Syria one performed one's šālik "in front of the imām" (R.C.s. i., i. 202); he could also stand on an elevated position; on one occasion Abū Hurairā conducted the šālik in the Meccan mosque from the roof (Bukhārī, Nābāt, bab 17). In Mecca, in Ibn Ḥujairā's time, each of the four recognized māḥarij (with the Zaidīs in addition) had an imām; they conducted the šālik, one after the other each in his place, in the following order: Šulānī, Mālikī, Ḥanafīs and Ḥanbalīs; they only performed the šālik al-maṣṣāṣ together: in Ramādān they held the šālik in different places in the mosque, which was also often conducted by the kurrā (Kittān, p. 101, 102, 143 sqq.). This is still the case; very frequently one performs the šālik, not after the imām of his own madhhab (Smuch Hurgrone Mekki, ii. 79 sqq.). In Jerusalem according to Mudīr al-İbn the order was: Mālikī, Šulānī, Ḥanafīs, Ḥanbalīs, who prayed each in their own part of the Haram; in Herōn the order was the same (Sauvaire, Hist. Jér. o Herōn, p. 136 sqq.). In Ramādān extraordinary imāms were appointed (ibid., p. 138).

When the imām no longer represented a political office, each mosque regularly had one. He had to maintain order and was in general in charge of the divine services in the mosque. In al-Maṣṣāṣ's time the šulān of the Mosque of 'Amr read a qūd of the Kurʾān every morning after the šālik (B.G.A., iii. 205). It was his duty to conduct every šālik, which is only valid fi ḥaram. He must conform to the standards laid down in the law; but it is disputed whether the šālik is invalid in the opposite case. According to some, the leader of the Friday šālik should be a different man from the leader of the five daily šālik (Mawardi, al-Āṣām al-Sultāniyya, ed. Enger, p. 171 sqq.; Ibn al-Hādījī, K. al-Madāʾiq, ii. 41, 43 sqq., 50, 73 sqq.; al-Suhki, Mīʿād al-Nām, ed. Myhrman, p. 163 sqq.; Ḥadīthīs s. Wensinek, Hand- buok, p. 109 sqq.). Many cherished misgivings against payment being made for religious services and quoted in support of their view a saying of Abī Ḥanīfa (B.G.A., iii. 127).

2. The Khāṭib.

The development of this office is analogous to that of imām. When the 'Abbāsid caliph no longer delivered khattābs regularly, a man learned in religious matters was appointed to the office of khāṭib [see D i and the article Khatib]. It could be pointed out that the Prophet himself had a khāṭib namely ʿUṯairī b. Ḥadhīj (Dāʾī, Bayān, i. 178) and sermons outside the Friday service had in any case become quite usual. Thus Ḥasan al-Bray was already a noted preacher (ibid., p. 190). Later it sometimes happened that a general like Dāʾīhār himself acted as imām at the šālik, while the khatta was left to a learned man (Maqrizi, iv. 44).

As the khāṭib in theory represented the ruler, he uttered a blessing upon him; to this extent the office had a political significance. The caliph was blessed and the heir-apparent and the king of the country (cf. above D i). When the caliph himself preached, he also pronounced a prayer for himself (Yāṣīf, 'Uḍâba, i. 349 sqq.) and the Fātūns mentioned their fathers. The sermons gradually became quite stereotyped; Ibn Batūtā (i. 348) praises the khāṭib in Mecca, because he gave a new sense to the mawṣūmah of Friday. A kādī was frequently chosen as khāṭib and a chief kādī a number of times preach in a large mosque (Kindī, Wālid, p. 589; Maqrizi, iv. 132; Ibn Dājabār, p. 156; according to Guettère, Hist. Sult. Mawli, ii. i, 25, a kādī was for the first time appointed khāṭibs in 604 [1225] in Damascus). The khāṭib could also be a "winnah" (Hilāl al-Silī, K. al-Wuzūra, ed. Amedroz, p. 421 s.) or hold another office like that of kādī atarrī (Maqrizi, iv. 137, 138, 139, 140); in the last mentioned case the office was hereditary, which we also find elsewhere (ibid., p. 9, 98 sqq.; Ḥanīfī, Ḥan al-Maṣṣāṣa, i. 185: al-Ṭakāṣī). The khāṭib had frequently a khāṭīfī. In the Rāshidī mosque, where in 414 two khāṭībīs were deliberately appointed, they both preached at the same time on the minbar (Maqrizi, p. 63 sqq.). We find in the larger mosques a number of khāṭībīs being appointed who relieve one another.

In Mecca the khāṭib was a particularly imposing figure. In his black robe, trimmed with gold, and turban with yālačān, he went up to the minbar between two black banners carried by muʿādhābīs, while a servant walked in front of him cracking a whip; after he had kissed the Black Stone, the chief muʿādhābīn went quickly in front of him with the sword with which he girded him on the minbar (Ibn Dājabār, i. 376 sqq.).
The whip (fa'ka'a: Ibn Djbair, p. 96, 97, 144, 156; Ibn Ba'tiya, i. 376, 379, 390, 394; see B. G. A., iv., s. v.) is also used as he goes out and on other occasions. The black was the colour of the 'Abbásids; it was also used in Egypt (Ibn Djbair, p. 56). The Fātimid khāṭib wore a cap (Satamaa'n: Makrizi, iv. 185.). The dress of the khāṭib varied with time and country (cf. ibid., p. 90; B. G. A., iii. 129, 416; Ibn al-Hādīj, Madhhab, i. 73). In Mecca there were celebrations when a young man became a khāṭīb (Ibn Djbair, p. 149). Very frequently the khāṭib and the imām were one and the same, especially in the smaller mosques, but sometimes also in larger ones (Yākūt, Udaa'da, vii. 174, 179; Makrizi, iv. 124). Ibn al-Hādīj even regards this as the normal thing (A. al-Madhhāb, ii. 59, 60, 73, 74); s. also al-Sukī, Mu'tid, i. 160 sq. and the article khāṭīb.

3. Kā'īb and Kā'īb. On these see C 3. Sometimes, in the later usage, wā'ir, which is used of the official speaker, very like khāṭīb (cf. Ibn Ba'tiya, i. 9), while al-kā'īb is only applied to the street-story-teller (al-Sukī, Mu'tid al-N'am, p. 161 sq.). The kā'īr are also frequently appointed to madrasas and particularly to mausoleums (Makrizi, iv. 223; Yākūt, iv. 509; Subki, Mu'tid, i. 162; v. Berchem, C. I. A., i, no. 252).

4. The Mu'adhdhin.

According to most traditions, the office of mu'adhdhin was instituted in the year 1, according to others only after the irād, in the year 2, according to some weak traditions while Muhammad was still in Mecca. At first the people came to the salāt without being summoned. Trumpets (būk) were blown and rattles (mūkūs) used or fires lit after the custom of Jews, Christians and Mādhūs. Abū Al-Ḥusān Zaid leaves the earliest period for the prayer as a dream; it was approved by the Prophet and when Bilāl proclaimed it, it was found that 'Omar had also learned the same procedure in a dream (Ibn Hishām, p. 357 sq.; Khāmis, i. 404 sq.; Bukhārī, A'dāhān, bāb 1; Zuruqā, i. 121 sqq.). There are also variants of the story, e.g. that the Prophet and 'Omar had the vision, or Abū Bakr or seven or fourteen Aṣ-ṣā'ir; according to some, the Prophet learned it at the mi'raj from Gabriel, wherefore the introduction of the aḍhān is dated after the irād; among the suggestions made, the hoisting of a flag is mentioned (Sīra Ḥalabīya, ii. 100 sqq.). Note-worthy is a tradition which goes back to Ibn Sā'd, according to which at 'Omar's suggestion at first a mu'ādhdih, Bilāl, was sent out who called in the streets: al-qalāta (almukātān). Only later were other possibilities discussed, but the method already in use was confirmed by the dream, only with another formula, the one later used (Khāmis, i. 404; Sīra Ḥalabīya, ii 100 sqq.). According to this account, the consideration of other methods would be a secondary episode and probably the tradition in general represents a later attitude to the practices of other religions. But in Islam other methods were certainly used. In Fā's, a flag was hung out in the minarets and a lamp at night (F. A., ser. 11, xii. 341). The flag is also found in the legend of the origin of the practice.

The public crier was a well-known institution among the Arabs. Among the tribes and in the towns important proclamations and invitations to general assemblies were made bycriers. This crier was called Munādī or Mu'adhdhin (Sīra Ḥalabīya, ii. 170; Lammens, La Maqṣūm, p. 62 sqq., 146; B. G. A., i. 229 note; Širāzi, p. 150). Aḍhān therefore means the proclamation, Sūra vii. 50 "to proclaim" and "crier", Munādī (Bukhārī, Fārād al-Khunās, bāb 15) and Mu'adhdhin (ibid., Šarī'ah, bāb 69; Širāzi, bāb 10 = Līsīya, bāb 16; Sīra Ḥalabīya, ii. 270) are names given to a crier used by the Prophet or Abū Bakr for such purposes. Official proclamations were regularly made by criers (cf. Tabari, ii. 1121, 1123; Annals of Islam, i. 410 sq.; 638 sq.). It was therefore a very natural thing for Muhammad to assemble the believers to common prayer through a crier (nūḍa lillah or 'iẓālāt, Šūrā v. 63; κι. 9); the summons is called Nidā' and Aḍhān, the crier Munādī (Bukhārī, Mu'ādhdih, bāb 5; Abū Bakr, bāb 7) and Mu'adhdhin; the two names are used quite indiscriminately (e. g. in Širāzi, bāb 5; 'Abū Bakr, bāb 5; Tabari, ii. 297 sq.). Munādī l-tālāt (B. G. A., i. 182, 192, also Sūrī "crier" is used (Tabari, i. 861; Chron. Mekk, i. 340).

In these conditions, it was very natural for the crier in the earliest period to be regarded as the assistant and servant of the ruler; he is his mu'adhdhin (Ibn Sā'd, i. 7; Muslim, Šalāt, tr. 4: Mādhūs, iv. 43, etc.; cf. Tabari, ii. 1120). 'Umar sent to Kūfah 'Ammar b. Yā'-ir as emir and 'Abd Allah b. Mas'ūd "as mu'adhdhin and waqir" (B. G. A., i. 165); he is thus the right hand of the ruler. Al-İ'tsān had his munādī with him and the latter summoned to the saʿlāt on al-İtsān's instructions (Tabari, ii. 297, 298; cf. Ibn Zayyād, ibid., p. 260 and in the year 196 the āmil in Mecca, ibid., ii. 861, 13; also Chron. Mekk, i. 340). During the early period the mu'adhdhin, when summoned by his masters in the streets and the call was very short: al-qalāta ḍjamāʾan (Ibn Sā'd, i. 7; Chron. Mekk, i. 340; Tabari, ii. 861; cf. also in the year 196, Sīra Ḥalabīya, i. 101; Khāmis, i. 404 sqg.). This brief summons was, according to Ibn Sā'd, also used later on irregular occasions (i. 7 sqq.; cf. the passage in Tabari). Perhaps also the summons was issued from a particular place even at a quite early date (see D 2a). After the public summons the mu'adhdhin went to the Prophet, greeted him and called him to prayer: the same procedure was later used with his successor: when he had come, the mu'adhdhin announced the beginning of the saʿlāt (ābāma 'ṣalāt: cf. Bukhārī, Mu'ādhdih, bāb 5; Abū Bakr, bāb 48; Sīra Ḥalabīya, ii. 104 sq.; Mādhūs, iv. 45). The activity of the mu'adhdhin thus fell into three sections: the assembling of the community, the summoning of the imām and the announcement of the beginning of the saʿlāt. With time changes were made in all three stages.

The assembling of the community by crying aloud was not yet at all regular in the older period. During the fighting, Ibn Zayyād in the year 60 called his munādī with threats to the evening saʿlāt in the mosque and when after an hour the mosque was full he had the rāma announced (Tabari, ii. 260). When a large number of mosques had come into existence, the public call to prayer had to be organised lest confusion arose, and the custom
of calling from a raised position became general after the introduction of the minaret. While previously the call to prayer had only been preliminary, it was now called the iḥāma and the iḥāma now formed two distinct phases of the call to prayer. Tradition has retained a memory of the summoning in the streets, now completely fallen into disuse, when it tells us that ʿOthmān introduced a third adḥān, a call in al-Zawr, which was made before the call from the minaret: this call however was transferred by Hishām b. ʿAbd al-Malik to the minaret (Bukhāri, Ḥumṣ, bāb 22, 25; Sīra Halābiyya, ii. 110; Ibn al-Hāджdī, Madkhal, ii. 45). This may be evidence of the gradual cessation of the custom of summoning the community by going through the street, Ibn Baṭṭūta, but this is exceptional, tells us that the muʿaddhdhīn in Khwārizm still fetched the people from their houses and those who did not come were whipped (lit. 4 sq.), which recalls Wāḥīdī measures. When exactly the Sunnī and in distinct steps to the šaykh’s formula can hardly be ascertained (see Aḥsan). The call biwaʿalā tawlahā is known from the time of ʿAbd al-Malik (65–85) (Akhtal, ed. Ṣaḥḥānī, p. 254; see Horovitz, in Isl., xvi. 297, 1924, p. 157; on ṭabāb see ibīd.; on adḥān formulae see further Sīra Halābiyya, ii. 105 sq.). At first the call was only made at the chief mosque, as was the case in Medina and Mift (Maṭrīzī, iv. 43 infa) but very quickly other mosques were also given muʿaddhdīn: their calls were sufficiently audible in the whole town. The chief mosque retained this privilege, that its muʿaddhdīn called first and the others followed together (Maṭrīzī, iv. 43 infa, 44).

The summoning by the imām in Medina was therefore quite a natural thing. The custom, at first associated with the ruler’s mosque, was not observed in Medina only (see for ʿOthmān and ʿĀli: Taḥārī, u. 3059 sq.), but was also usual among the Omanīs. The formula was: al-Salām ʾalīsī biwaʿalā tawlahā al-Maʾṣūma al-Wāḥidīyya, biwaʿalā ʾal-Salāt, biwaʿalā ʾal-Fāṣir al-Salāt, yuṣnūna Ṭabīb (Maṭrīzī, iv. 45; Sīra Halābiyya, ii. 105). After the alteration in the adḥān and the greater distance of the ruler from the mosque, to summon him was no longer the natural conclusion to the assembling of the community. In the ʿAbbasid period and under the Fatimids there was a survival of the old custom, in as much as the muʿaddhdīn ended the adḥān call before the ṣalāt al-fāṣir on the minarets with a salām upon the caliph. This part of the muʿaddhdīn’s work was thus associated with the first adḥān call. When Salāḥ al-Din came to power, he did not wish to be mentioned in the call to prayer, but instead he ordered a blessing upon the Prophet to be uttered before the adḥān to the ṣalāt al-fāṣir, which after 761 only took place before the Friday service. A muḥta-ḍī ordered that after 791 in Egypt and Syria at each adḥān a salām was to be uttered over the Prophet (Maṭrīzī, iv. 46; Sīra Halābiyya, ii. 110). Ibn Dījahī relates that in Mecca after each salāt al-maghribīr, the foremost muʿaddhdīn pronounced a duʿa upon the Ābedādūn and on Salāḥ al-Din from the Zemzem roof, in which those present joined with enthusiasm (p. 103) and according to Maṭrīzī, after each ṣalāt prayers for the ṣaltan were uttered by the muʿaddhdīn (iv. 53 sq.). Another relic of the old custom was that the trumpet was sounded at the door of the ruler at times of prayer; this honour was also shown to ʿAḍud al-Dawla in 368 by order of the caliph (Ibn Maskawī, al-Rāsūlīyya, Cairo, 1915, p. 396).

The iḥāma always remained the real prelude to the service and is therefore regarded as the original adḥān (Bukhāri, Qumma, bāb 24 sq.). In the earliest period it was fixed by the arrival of the ruler and it might happen that a considerable interval elapsed between the summoning of the people and the iḥāma (cf. Taḥārī, ii. 260, 297 sq.). The times were later more accurately defined; one should be able to perform 1–3 šalāts between the two calls (Bukhāri, Ḥumṣ, bāb 14, 16). Some are said to have introduced the practice of the muʿaddhdīn calling biwaʿalā tawlahā at the door of the mosque between the two calls (Sīra Halābiyya, ii. 105). From the nature of the case the iḥāma was always called in the mosque; at the Friday service, it was done when the imām mounted the mimbar (Bukhāri, Qumma, bāb 22, 25; Sīra Halābiyya, ii. 105); Makhzūn describes this custom, which is in front of him. This muʿaddhdīn, according to some, ought to be the one who called the adḥān upon the minaret (Sīra Halābiyya, ii. 109), while Ibn al-Hāʤdī, ignoring the historical facts only permits the call from the minaret (Madkhal, i. 45). In Tunis, the iḥāma was announced by ringing a bell as in the churches (Zarkashī, trans. Fagnan, in Rec. Soc. Arch. Constantine, 1894, p. 113 sq.). A similarity to the responses in the Christian service is found in the fact that the call of the muʿaddhdīn, which contains a concession of faith, is to be repeated or at least answered by everyone who hears it (Bukhāri, Qumma, bāb 23); this is an action which confirms religious merit (Ibn Kuṭlabugha, Taḥāṣt al-ḥanâfa, ed. Flugel, p. 30). It is possible that we should recognise in this as well as in the development of the formulae the influence of Christians converted to Islam (cf. Becker, Zur Gesch. d. islam. Kultur, in Isl., iii. 1912, p. 374 sq. and Islamstudien, i. 472 sqq. who sees an imitation of the Christian custom in the iḥāma in general; on the possibility of Jewish influence see Mittwoch, in Abb. Pr. A. W., 1913, Phil.-Hist. Cl. 2). The muʿaddhdīn thus obtained a new importance. His work was not only to summon the people to divine service, but was in itself a kind of religious service. His sphere of activity was further developed. In Egypt we are told that Masmāʿa b. Mukhallad (47–62) introduced the taʿlīhī. This consisted in praises of God which were uttered by the muʿaddhdīns all through the night until faḍrī. This is explained as a polemical imitation of the Christians, for the governor was troubled by the use of the naʿābārī at night and forbade it during the adḥān (Maṭrīzī, iv. 48). In the time of Ṭūlūn and Khūmrāwī, the muʿaddhdīns recited religious texts throughout the night in a special room. Salāḥ al-Dīn ordered them to recite an aʿṣīrah in the night adḥān and after 700 ḏākir was performed on Friday morning on the minarets (ibīd., p. 48 sq.; Sīra Halābiyya, i. 110). In Mecca also the muʿaddhdīns performed ḏākir throughout the night of the first Sawwālī on the roof of the kūfba of the Zemzem well (Ibn Dījahī, p. 155, 156; cf. for Zemzemīs, Maṭrīzī, iv. 49). Similar litanies are kept up in modern times as well as a special call about an hour before dawn (Ehli, Tarhīm; see Lane, Maṭnāt al-Kadima, s.v. Eman, Lane, Maṭnāt al-Kadima, s.v. ʿEman).
The original call of the mu‘adhdhin thus developed into a melodious chant like the recitation of the Kurān. Al-Maḍṣīṣī tells us that in the fourth century in Egypt during the last third of the night, the adhān was recited like a dirge (B. G. A., iii. 205). The solemn effect was increased by the large number of voices. In large mosques, like that of Mecca, the chief mu‘adhdhin called first from a minaret, then the others came in turn (Chron. Mecca, iii. 489 sq.; Ibn Dubair, p. 145 sq.; cf. B. G. A., v. 111, i. 399, et supra). But in the mosque itself the adhān was pronounced by the mu‘adhdhīn in chorus on the dakkā (see D 26) erected for this purpose, which is also traced to Maslama. In the third and fourth centuries we hear of these melodious recitations (taṭtīb) of the mu‘adhdhīn on a raised pulpit in widely separated parts of the Muslim world (Sa‘dā, Egypt, Khurāsān: B. G. A., iii. 327; vii. 111; the expression al-mula‘adhdhīn, “the musicians,” if correct, probably refers to the mu‘adhdhīn: B. G. A., iii. 205; cf. also Kindl, Wafāt, p. 469; for Fāirs we are expressly told that the mu‘adhdhīn call without taṭtīb: B. G. A., iii. 110 sq.). In other ways also the mu‘adhdhīn could be compared to deacons at the service. The kāfāth on his progress to the minbar in Mecca was accompanied by mu‘adhdhīn and the chief mu‘adhdhin girded him with a sword on the minbar (Ibn Dubair, p. 96 sq.).

The new demands made on the mu‘adhdhīn necessitated an increase in their number, especially in the large mosques. The Prophet in Medina had two mu‘adhdhīn, Bilāl b. Rukhāb, Abū Bakr’s mawłā, and Ibn Umm Mākūm, who worked in rotation. ʿOthmān also is said occasioned to have called the adhān in front of the minbar (i.e. the ikāma) (Maṭrīzī, iv. 45). It is therefore regarded as condensable to have two mu‘adhdhīn at a mosque (Muslim, Šafāt, tr. 4; cf. Subki, Miṣrī, p. 163). Abu Mahdiyā was also the Prophet’s mu‘adhdhin in Mecca. Under ʿOmar, Bilāl’s successor as mu‘adhdhin was Sa‘d al-Ḵurṣānī, who is said to have called to prayer for the Prophet in Kūta (Maṭrīzī, op. cit.; cf. Sira Halābiyya, ii. 107 sqq.). In Egypt under ʿAmr, the first mu‘adhdhin in al-Fustāṭ was Abū Muslim: he was soon joined by nine others. The mu‘adhdhīn of the different mosques formed an organisation, the head (ṣarf) of which, after Abū Muslim, was his brother Shurāḥbīl b. ʿAmīr (f. 65); during his time Maslama b. Muḥallid built minarets (Maṭrīzī, iv. 44). The office of the mu‘adhdhin was sometime hereditary. The descendants of Bilāl were for example mu‘adhdhīn of the Medina Mosque in al-Rawda (Ibn Dubair, p. 194); we also find in Medina the sons of Sa‘d al-Ḵurṣānī officiating (Ibn Katāiba, Ḥanḍāb, d. Gesch., ed. Wustenfeld, p. 132, 279), in Mecca the sons of Abū Mahdiyā (ibid., p. 278; Sira Halābiyya, ii. 106), in Bayṣa. the sons of al-Mundīdh b. Ḥassān al-ʿAbdī, mu‘adhdhīn of “Ṭabād- ʿAllāh b. Ziyād (Ibn Katāiba, p. 279): it is however possible that this was really the result of a system of guilds of mu‘adhdhīn. In the džawārīn of the Magribī in the eighth century each had regularly four mu‘adhdhīn who were stationed in different parts of the mosque during the salāt (K. al-Majdīḥl, ii. 47 supra); but there were often quite a large number. In the Azhar mosque in the time of al-Ḥākim there were fifteen, each of whom was paid two dinārs a month (Maṭrīzī, iv. 51). Ibn Baṭṭūtā found seventy mu‘adhdhīn in the Mosque of the Omayyads (i. 204). About 1900, in Medina there were in the Mosque of the Prophet fifty mu‘adhdhīn and twenty-six assistants (Iba- ṭānī, Ṭibā‘ī, p. 242). Blind men were often chosen for this office; Ibn Umm Mākūm for example was blind (Bukhārī, Jāmī‘ al-ṣaḥīḥ, book 4, hadith 2411; Ibn Katāiba, ii. 104; cf. Ṭanānī, Ṭibā‘ī, p. 75). The Prophet is said to have forbidden the ʿAbdī to pay a mu‘adhdhin (Wāḥid-Wellhausen, p. 385). ʿOthmān is said to have been the first to give payment to the mu‘adhdhin (Maṭrīzī, iv. 44) and Āḥmad b. Ṭūlūn gave them large sums (ibid., p. 48). They regularly received their share in the endowments, often by special provisions in the documents establishing the foundations.

The mu‘adhdhīn were organised under chiefs (ruṣūṣ): Maṭrīzī, iv. 434). In Medina the sa‘d al-munīdīn were identified with the mu‘adhdhin al-Žāmānī who had charge of the singing in the upper story of the Zāmān building (Chron. Mecca, iii. 442 sq.; Ibn Dubair, p. 145; cf. Snouck Hurgrone, Mecca, ii. 322). The ra‘ī was next to the Imam but subordinate to him; in certain districts, it was the custom for him to mount the pulpit during the sermon with the Imam (when the latter acted as kāfāth) (K. al-Majdīḥl, iii. 74; correct above p. 928, l. 34 in keeping with this). The position which they originally occupied can still be seen from the part which they play in public processions of officials, e.g. of the ʿAbbāsī ʿAlī-khatār, when they walk in front and lead the ruler and his vizier (Maṭrīzī, ii. 246).

Closely associated with the mu‘adhdhin is the mu‘awwad, the astronomer, whose task it was to ascertain the kahlā and the times of prayer (Subki, Miṣrī, p. 165 sq.); sometimes the chief mu‘adhdhin did this (Snouck Hurgrone, Mecca, ii. 322).

5. Servants.

According to Abū Ḥansāla, the Mosque of the Prophet was swept by a negro (Bukhārī, Sahīḥ, vii. 72, cf. 74). The large mosques gradually acquired a large staff of servants (khālidīn), notably buwāb, farā‘īd, and water-carriers (cf. e.g. v. Berchem, C. I. A., i. No. 252). In Mecca there have always been special appointments, such as supervisor of the Zamzem and guardian of the Ka‘ba (ṣahīḥ, pl. sudāna, also used of the officials of the mosque: Maṭrīzī, iv. 76; cf. Ibn Dubair, p. 278). In Ibn Baṭṭūtā’s time the servants (khālidīn) of the Mosque of the Prophet were numerous, particularly Abyssinian; their chief (ṣamīl al-khālidīn) was like a great emir and paid by the Egyptian-Syrian government (i. c. 778, 548), cf. the title of an emir of the year 798: ʿabhū mālik b. al-ṣamīl al-khālidīn b. Ṭāʾīr b. ʿalī al-natrūsī (v. Letchen, C. I. A., i. No. 201). In the Mosque of Jerusalem about 300 A. H. there were no less than 140 servants (khālidīn: B. G. A., v. 100); others give the figure 200 (Le Strange, Palestine, p. 165) and according to Maṭrīżī al-Īmām Abū al-Malik appointed a guard of three hundred black slaves here, while the actual menial work was done by

In other mosques superintendents (kāyim, pl. ḵārāmā) are mentioned, a vague title which covered a multitude of duties; thus the Madrassa al-Madīna had a kāyim who looked after the cleaning, the staff, the lighting and water-supply (Mārkīzī, iv. 251), the Azhar Mosque had one for the miḥḍa, who was paid twelve dinārs (ibid., p. 51) and also 4 kāwānas, who were paid like muʿaddhīns (two dinārs a month) and are mentioned between them and the imāms, probably supervisors of the staff (ibid., p. 51). In other cases a kāyim al-ḥākimī, sometimes a kāṣī, is mentioned, who is apparently the same as the imām, the khaṭīb or some similar individual of standing (ibid., p. 75, 121, cf. 122; cf. Ibn Dujayrī, p. 51). A muḥārafi, inspector, is also mentioned, e.g. in the Azhar (Mārkīzī, iv. 51).

II.

The Mosque in the Dutch East Indies.

In the Dutch East Indies, two kinds of mosque have to be distinguished, the mosque for the Friday service — these alone are called mosques (masṣāṣīt, also miḥṣīḍ) — and simple houses of prayer. This second category is found all over the country, especially in smaller villages, and owes its origin, partly to private initiative and partly to public efforts; they have native names (laṭār [Javan.], laṭaj [Sum.], laṭaj [Mad.]). The laṭār, or whatever it may be called, of the village is a centre at which the laṭārī can be performed, but it also serves other purposes of general interest. The upkeep of the building is the affair of the community and in particular one of the tasks of the religious official of the village. The upkeep of the other laṭārīs, erected by private individuals, is left to them. The building stands on its own site and is maintained by the founder or his descendants. The owner cannot however refuse admission to strangers who desire to use it for the laṭārī or as shelter the night. Such private chapels are always found beside the Muḥammādīn seminaries [Javan.]. We, however, sometimes find that these laṭārīs are endowed as waṣīf (Jav. Mal. waṣīf). The village laṭārī on the other hand has a more public character.

The mosques, i.e. the masṣāṣīt ḵāṣīmi, are found in larger places, usually in those which are also centres of administration. Their erection and maintenance is regarded as a duty of the Muḥāmmādī community; everyone contributes his share in materials, work or money, according as he is requested and is able to do. When a new mosque is to be built, not only is the site necessary for the building raised off, but also that for the dwellings of the staff and other people, whose piety induces them to seek a dwelling-place near the mosque; here they find the spot, where in their opinion they can be best benefitted by the atmosphere of their faith, spiritually and socially. This mosque area, at least the mosque itself and its immediate neighbourhood, is popularly regarded as waṣāṣīf although the conditions necessary to make it an endowment in the sense of the shāriʿa are not fulfilled. In waṣāṣīf affairs, the sharia is regarded as authoritative and not affected by common law.

Each mosque has its own staff, of the size it requires; in the large mosques there may be 40 or more. In Java and Madura, they form a regular hierarchy; this holds also for the relation of the larger and smaller mosques to each other. A mosque serves the requirements of a definite area; the staff of the mosque at the chief place in a smaller district is subordinate to that of a larger one and so on up to the capital of a regency (which is the highest native administrative unit). At each mosque a superintendent is appointed and the head of the mosque at the capital of the regency is regarded as head of all the mosque officials in the whole district. On the other islands the native, political organisation is less developed, the hierarchy of the secular power therefore less influenced by it. Generally speaking the personnel of the mosque is the same everywhere; the more the secular hierarchy is graded, the more noticeable is the classification of the personnel of the different mosques into various ranks; but we always find one recognised as the head of the staff.

The superintendent of a mosque in Java and Madura bears the general name paḥ[h]ulu. His main duty is to see that the Friday service is held; he can act as imām at itself but usually he leaves this to someone else. Besides him there are a large number of other officials, whose names usually are taken from the Arabic and whose duties are very varied; among them however we find the khāṭīb (Jav. Ar. khaṭībī). He delivers the sermon; but this also can be done by some one else. The maintenance of the building is also the duty of the superintendent. The expenses have to be met from the money collected by the staff, of which he has control (see below).

In Java and Madura generally, and very often elsewhere, the superintendent of a mosque is also an official, i.e. he is the legal authority who is present at the marriage ceremony; sometimes he acts as waṣīf of the waṣāṣīf. He is also authorised to give in marriage women who have no blood-relative to act as waṣīf; in this capacity he is called waṣāṣīf ḥākimī. Marriages are concluded in the mosque; it is exceptional for the paḥ[h]ulu himself to perform the marriage ceremony in person; he usually leaves this to one of his subordinates. People of high rank marry in the house; on these occasions the paḥ[h]ulu himself acts. The same holds mutatis mutandis of ṭalāk and ruqūṭ; these also are reported to the paḥ[h]ulu and recorded by him along with marriages in a register.

In smaller centres, where there are only laṭārī (chapels) there is an official, who assists the villagers in matters of Muḥammādīn law; he belongs to the village administration and may be regarded as the lowest rank of the mosque hierarchy; people desirous of matrimony apply to him; he accompanies them to the mosque of the district to which his village belongs; he also acts for the paḥ[h]ulu as amīl of the ṭakāt (zakāt) and fitra (ṣakāt al-ʿfitr) (see below). From this capacity comes the same he bears in some parts of the country: amīl.

The appointment of the mosque officials (as distinct from the village officials in whose cases the local customary law is followed) is not done everywhere in the same way. In Java and Madura, it is in the hands of the native chiefs who are also the highest state officials; on the other islands of the East Indian Archipelago, in so far as Islam prevails on them, the wishes of
the Muslim community are more or less respected; the secular authorities however exert a great influence.

The revenues of mosque officials come from various sources: donations, freewill offerings, in cases where their services are required: — at religious festivals, burials, etc. — need only be mentioned. The chief source of revenue is the so-called marriage fees, less from *djakat* and *pitra*; these are administered and distributed by the superintendent of the mosque. As already mentioned the mosque and its accessories have to be maintained out of the income. Neglect of this duty has induced the chiefs in Java and Madura to intervene and form a special fund, the so-called mosque fund for this purpose. This was arranged as follows: a certain percentage of marriage fees and of the *djakat* and *pitra* was set aside; the chiefs took charge of these funds. The revenues of the mosque officials earmarked in this way were however only a small fraction of the total; the greater part, perhaps 2/3 or more, remained at the disposal of the officials. This same procedure is found here and there on other islands but is not general.

The Dutch government maintains a neutral attitude to Islam, in all business matters of the mosque also. It takes no part in the building or restoration of mosques; only very exceptionally does it give a contribution in money for such purposes. This was done for example in Kuta Raja (Atjeh), where the chief mosque, which had been destroyed during fighting, was rebuilt from government funds in 1881. But this act of the authorities was not appreciated by the Muslim population; in general, the government officials only see that no compulsion is used to procure materials or funds for the building or maintenance of mosques.

With the end of the sixteenth century the Colonial administration began to pay some attention to the regular organisation of the staffs of the mosques, primarily in Java and Madura. Their measures aimed at maintaining things as they were and at getting rid only of abuses and such customs as had tended to be a burden on the people. *Djakat* and *pitra* are regarded as “freewill offerings” by the colonial authorities; the native chiefs and village authorities were therefore forbidden to interfere with them. It is left to the individual to give them or not; he is also free to give his gifts to whom he pleases. The giving of *djakat* varies very much with places and persons and is smallest in Central Java. It is concerned almost entirely with agricultural produce, especially with the staple product and even then it rarely happens that the legal quantity is given. In practice the *djakat*, where it is levied, is collected by the village mosque officials and handed over to the pa$h[h]ulu; he then distributes it in a certain proportion among his subordinates. The proceeds go almost entirely to the staff of the mosque and the village officials, firstly because they are *zmiit* and secondly because they consider themselves *fâbir* and *maslîm*; they have, as they say, no means of livelihood like other people.

*Pittra* is paid regularly; it happens very frequently with this “donation” that it is paid direct to those entitled to it and not through the officials. Nevertheless a considerable portion goes the same way as the *djakat*.

The government confined itself to seeing that

the *djakat* and *pitra* collected by the *pa$h[h]ulu*, was distributed as it ought to be according to custom but this was not always done.

Marriage, *tâlâk* and *ruđâf* have been regulated by a colonial law. The *pa$h[h]ulu* or his deputy was confirmed in his already mentioned functions as an official with legal standing. At the same time, others than the appointed *pa$h[h]ulu* were forbidden by the secular authority to perform marriages. The registration of marriages, *tâlâk* and *ruđâf* was improved. The fees and their distribution among the staff were fixed according to local custom. Every effort is made to keep these as low as possible. Similar regulations were later promulgated for the other islands.

As to the funds of the mosques, it was ascertained that there was more money in them than was required for the maintenance of the building and that they were being used for other purposes than the traditional ones. This caused the government to place the funds of the mosques under the joint control of European and native authorities. This holds particularly of Java and Madura; but wherever else the mosque had funds, these were retained.

The regulations promulgated for Java and Madura have recently been attacked by Muslims; they wanted as far as possible to withdraw everything relating to marriage from government interference. The intervention of the government is now (since 1929) limited to the fact that parties who wish to enter into matrimony have to report themselves to a registrar. *Tâlâk* and *ruđâf* have also to be reported to him. The marriage ceremony may be performed by others, but they are under the control of the registrar; this last method is now the exception: the majority continue to go to the district officer.

In one other respect the mosque has come under the control of government regulations. In Muslim districts of the East Indian Archipelago hardly a mosque is built without the consent of the local secular authority. Although it does not have to give its approval expressly, no work will be begun until the plan is approved. In Java and Madura the chiefs have long held themselves entitled to decide on the question whether a new mosque should be erected, though they justified this claim by saying among other things that a new mosque, if not desired by the entire community, may easily lead to jealousy and disputes about the validity of the Friday service etc., which might result in general unrest.

The custom of making the site of a mosque *waksaf* — or at least regarding it as such, — results in it being impossible to use such pieces of ground for public purposes, even if it is long since the mosque buildings had been removed from them.

These and other difficulties induced the government to require the approval of the chiefs for the building of new mosques on Java and Madura and also that the sites should become *waksaf*. It was however expressly laid down that there can be no possible question of interfering with the religious requirements of the Muslims; the chief can only refuse his consent in the public interest.

The law of the Dutch Indies demands the presence of the *pa$h[h]ulu* or some one with similar functions, at the courts for Muslim natives and also when a native appears as accused or plaintiff
in a court, to assist the court as adviser. An 
endeavour is made to get the most suitable people 
as advisers: they are officially appointed. It was 
found to be desirable to combine this office and 
that of the administrator of the mosque in the 
one individual: and this is now the usual practise. 
The influence of the government on the appoint-
ment of the personnel of the mosque, which 
otherwise is reserved for the chief, has thus been 
increased, especially as in the appointment of the 
assistant[s] of the paib[ka]hu, the ability of acting 
as adviser is also taken into account.

The bonds which connect the personnel of the 
mosque and the secular authority are thus fairly 
dense; — in the opinion of some too close. In 
recent years the effort has been made in nationalist 
Muslim circles, to loosen or even break all secular 
connections in the fulfilment of religious duties. 
One way of doing this is to get private individuals 
to found mosques with the help of similar-minded 
people. This is quite possible in the conditions 
developed and is still was.

III. 
Architecture.

The mosque with an open quadrangle was 
the natural form for the hot southern lands of Islam, 
and is simply a continuation of the many types 
of pillared halls and chambers which were to be 
found all over the near east, beginning with the 
Egyptian temples and coming down to the apadanas 
of the Persians and the stoas of the Greeks, 
of which of course only the latter influenced the 
development of the early Muslim mosque. This 
consists of a courtyard or quadrangle (gār) usually 
very large which is surrounded by colonnades (makār) 
which are either connected by flat beams, or 
more usually by arches and covered by a flat 
roof. At the kiblah side the mawās were deeper so 
that the rows of worshippers could find shelter 
from the sun. The supports were at first very 
often columns taken from ancient buildings and 
where these were not obtainable, were of wood 
or brick. The pillared hall at the kiblah side was 
called al-tawm al-afihi or rīwān. A portion of the 
ṣumr was shut off by a railing and reserved for 
princes and priests. On the quadrangle side of 
the rīwān is a podium (dikāk) supported by pillars 
and reached by a staircase or ladder; this is for 
the officials of the mosque, who repeat the words 
of the imām during the service to make them 
audible on all sides. At the end of the rīwān the 
makārā is set into the middle of the wall and 
herein it is the minbar. In the centre of the 
court is a well, originally intended for ritual ablutions 
but these were as a rule performed in 
rooms specially set apart for the purpose.

These mosques with open quadrangle were built 
in the first century A.H. on a large scale, as they 
were primarily intended to be mosques for the 
troops, whence they were called askar mosques.

The Djamīʿ Ibn Tulun in al-Ḳatāʾ, Cairo is a 
comparatively well preserved specimen of one of 
these askar mosques. It was built in 264—267 
(876—879) and measures 466 × 385 feet and its 
court is 300 feet square. The principal liwān had 
originally five rows of pillars but has now only four 
since the first fell down, the others still two rows 
each, which are connected by pointed arches, parallel 
to the walls, thus still following the type of the 
Hellenistic agora. The piers are built of brick 
and into the corners are let small columns. Between 
the pillars are pointed arches and ornamental 
walls with little pillars at the sides. Similar windows 
with stucco gratings pierce the outer walls. The 
roof, most of which is now modern, was made of 
palm trunks with sycamore planks nailed over 
them. In front of the makārā was a makārā for 
the ruler. This makārā was as here usually 
distinguished by its cupola. In the later mosques of 
this kind an aisle of some width led through the 
pillars up to the makārā, usually through the 
walls of the liwān so that the mosque was 
reserved for a ceremonial procession by the ruler into 
the mosque. In the Djamīʿ Ibn Tulun as in the askar 
mosques of the third (ninth) century in general 
there are no transepts as yet so that the succession 
of pillars is quite uniform. The makārā projects 
out as the wall juts out a little here and the niche 
have two steps cut into the wall and then projects 
in a semi-circle. Two marble pillars are built into 
the angles formed by the projection of the niche, 
which have been taken from older Christian build-
ings. The white stuccoed surfaces of the walls 
are ornamented along the upper margins and 
archivots with decorative strips, which were 
originally painted. The interiors of the arches 
were also originally decorated but are now for 
the most part whitewashed. Immediately below 
the roof on a wooden frieze runs a Kufic inscription 
two miles long with sūras from the Kurʾān, 
the letters of which are cut out of wood and nailed on 
to the boards. The mosque has a battlemented 
wall, which again was surrounded on three sides 
by a second outer wall so that the whole area 
was square in shape and the outer courtyards 
put some distance between the quadrangle of the 
mosque and the surrounding streets. The outer 
walls of these early army mosques looked like a fortress with round projecting towers even 
though not intended for defence. This was not 
the case with the Mosque of Ibn Tulun. On the 
mountain, which stood outside the mosque among 
the outer buildings on the north side and like the 
mosque itself was restored under the Mamluks Sultan 
Lajjin, cf. the article MANARA. Similar mosques 
for the troops were built in all the garrison towns 
of the young empire, like Baṣra, Kūfa, Baghādād, 
Samarra, Raʾka, in Cairo, Kairawān and elsewhere.

The type of mosque with quadrangle and piers 
or columns was however by no means limited to 
the mosques for the troops but was generally 
in the early centuries of Islam and survived much 
longer than this, just as the early Christian basilica 
had done. Many pillared mosques, the foundation 
of which dates back to the early centuries A.H. 
are still in use, like the mosque of the Umayyads 
in Damascus, the great mosque of Sidi Uiba in 
Kairawān, many mosques in the Maghrib, where 
they have frequently remained faithful to this type 
down to the present day, the Djamīʿ al-Azhār and 
others in Cairo. In towns that are cold in winter, the
The Dome Mosques. The great mosques built on piers — in so far as they were not simply army mosques — were primarily used for the Friday service in the larger cities. In addition to these, there were in every town several smaller mosques either for the use of the separate quarters or for special purposes. For these also in Egypt and the lands of the Maghrib the type of pierced mosque with open quadrangle persisted while in Mesopotamia, the lands of the Caucasus and Persia, suiting the ruder climate and undoubtedly stimulated by the influence of the Christian churches the closed domed mosque became the type. Some of these mosques (e. g. in Wārāmīn) reveal with their combination of a long building and a dome such a striking similarity to the older, mainly Nestorian, churches that M. Dieulafoy and van Berchem comprised them under a type to which they gave the name “mosque-réglée”. The type with a central domed chamber and internal piers are to be found in Tabriz, Erīvān, Dījār Bakr etc. It was only under the Ottomans in Asya Minor that the domed mosque attained the next stage in its development and it reached its zenith — not by chance — where the similar Christian style of church architecture had reached its final development, namely in Constantinople.

Madrasa. The foundation for the further development of the mosque with a great open quadrangle, as perfected under the Saldjikhs in the east, was the type of madrasa which had in the meanwhile been evolved (cf. the articles MADRASA AND ARCHITECTURE). The ideal plan of a madrasa is an open court with vaulted cloisters opening on a central quadrangle in the centre of the four façades, i. e. at the intersection of the axes. This plan however only became regular in Persia and we only find a few specimens exceptionally in Cairo. On both sides of these four iwāns are the cells and dwelling apartments of the teachers and pupils usually in two stories. In contrast to the pierced mosque with an open court, which arose out of a Hellenistic Mediterranean type of building, the model for the development of the eastern madrasa, which combined both school and monastery, was on the one hand the Indian Buddhist monastery and on the other the Khwarazmian iwān, while the madrasa of Syria, Egypt and the Maghrib was influenced by native types of mosque and house. The Turkish peoples, as representatives of the Sunna and its propaganda through the madrasa, before they invaded Persia and became Muslims, were mainly under the influence of Buddhism and Nestorian Christianity, which survived much longer in Turkestan and the Taif basin than in Persia and still was very important as late as the ninth century A. D., as is evident from the narrative of William of Rubruck. The Turks before they adopted Islam had, among the Buddhists and Nestorians, become acquainted with the missionary side of religion. This seems to explain the prominent part later played by them as propagandists of Islam in Persia and Asya Minor. It must, however, have seemed to them that the most suitable centre of propaganda was the same type of building as used by the Nestorians and Buddhists, namely the monastery. The Buddhist monasteries which were courtyards with cells built round them, numbered hundreds in Central Asia. They are as a rule oblong quadrangles with cells built round them and a stūpa in the centre and several large rooms for meetings. In Persia, under the influence of these buildings, the type of quadrangle and cells with four iwāns in the form of a cross became established as the ideal scheme of a madrasa. That this plan which was architectonic in origin was also the practical ideal for the fourfold doctrine of the Sunna, was a fortunate combination, which in some large state madrasas became of practical significance.

The Persian Mosque-Madrasa. The quadrangle surrounded by cells with four iwāns of the Persian Madrasa was now combined with the old pierced mosque and the result was a very happy combination: the mosque-madrasa (as we Europeans call it). The important result of this combination was from the architectonic point of view the monumental quadrangle with cells, which now replaced the old courtyard with pillars or piers which was no longer architectonically satisfactory and was also no foreign to types of the old type. But with this transformation of the quadrangle a change was brought about in the spiritual aspect of the mosque. It symbolized the transformation which had meanwhile taken place internally and externally in Islam from a combative, conquering religion organized on military lines into a spiritual attitude to life, controlled by theologians and men of learning. The fighting, however, which was still conducted by military forces, and the conquests had now become more or less the private business of the secular rulers, above whom was the religious propaganda of the Muslim clergy. The most instructive example of this penetration of the older type of mosque by the Persian quadrangle surrounded by cells is the Madrīd-i Husnā wān in Isfahan. This mosque, like all the Friday mosques in Persia was originally built as a pierced mosque and had been frequently enlarged. At the present day, as the plan shows, it consists of colonnades which have in course of centuries been added to one another from time to time. A great deal of wood must have been built into its framework, since Yākūt tells us that during the siege of Isfahan by the Saldjik Tughil Beg (142 = 1056/1057) the mosque was destroyed to obtain wood. From the contemporary accounts that have been handed down, we further learn that the Saldjik Būlān Malik Shāh when the mosque was completely restored by his orders began with roofing the walls of the courtyard. He is credited with building the southern iwān. The other three iwāns are over their present form of later origin. By covering over this huge quadrangle, the courtyard, the only characteristic architectural feature of the mosque, received the necessary unity and importance. (Around it, this mosque, like most Friday mosques, was completely surrounded by bazaars which made any external development impossible.) The quadrangle was therefore all the more important) The rows of cells had here no longer any practical significance as dwellings but became an architectural feature. Behind the southern iwān, directly towards the large domed hall was built as a sanctuary, in the south wall of which were the mūsābāb and pulpit. Here the solemn Friday service was held. Thus the Friday mosque was created of the type which became general in Iran and Turkestan. Mosques and madrasas were frequently combined with mausoleums (cf. the article ARCHITECTURE).
The Mosque building in the early period. Muhammad left no instructions as to how future mosques were to be built so that the earliest mosques varied considerably and we can hardly talk of a fully developed type before the third (nineth) century. The Prophet's house in Medina, where he performed the salah for his faithful followers and instructed them, was a dár of the usual local type quite unsuitable as a model for the future mosque. It consisted of a courtyard surrounded by a brick wall with living rooms and outhouses along the inner wall. As usual and still is in every house of this kind in Arabia and other tropical lands, palm trunks were put up in the courtyard and a flat roof of palmeleaves put over them and covered with a layer of clay. This is how the earliest accounts would lead us to picture the Prophet's house. In the courtyard was a reception tent furnished with fine carpets and materials, for Muhammad did not despise the nomadic luxuries and comforts of his Idrissian times (cf. Lamens, Inéma et les filles de Mahomet and de, in J. A., 1915, p. 238 sqq.). Around this establishment of the Prophet, his wife and daughters, lay the court in which his friends and followers used to assemble for the daily prayer and which thus became the first quadrangle of the first mosque. The use of a typical Arabian courtyard arranged in this way as a masjíd however gives us no idea of the future impound building. For half a century, it is true, they were content with this primitive mosque, during the patriarchal period of the first four caliphs, out of respect for the Prophet's home. But the first Omayyad caliph Walid I who in transforming the church of St. John in Damascus into the Mosque of the Omayyads had acquired experience "in matters of building" and connections with builders, on the occasion of his pilgrimage to Medina in 90 (709) ordered the primitive mosque which had served the purpose so far, to be removed so that an entirely new building could be erected on its site, which was extended. For this purpose, as Samhūdī tells us, he asked the Byzantine emperor for skilled workmen and shells for the ornamentation, which were sent to him. "The walls and columns of the new mosque were built of large hewn stones of equal size and bound with plaster, ornamentation in shell and marble was carried out and the roof built of palm wood and covered with gold paint". Instead of the early primitive mosque, Walid had thus given the Medinene a substantial pillared mosque, like the first mosques which he had built in Syria with the help of Byzantine arti-sans from pillars plundered from Hellenic colonies and Christian churches. It was only in this Hellenised form that the mosque of Medina could have influenced the further development of the mosque in so far as we can speak of such influence at all. (It was given its present form by the Mamlik Sultan Ka'īt Bey in 885 = 1483.) The ordinary Arab village mosque is different in appearance. It has retained the form of the Arab pre-Islamic māqālat. This "place of salah" was and still is a long hall supported by pillars, open on one side without a courtyard and having no mīhrāb and mimbar.

The lack of any generally binding or recognised rules for tradition is shown by the varying form of the mosque in the early centuries A.H. The earliest mosque of the general Amr ibn Fūsāf of 21 (642) was an enclosed rectangular hall without a courtyard, with a kibla which was not yet marked by a mīhrāb. The first mosque in Baṣrā was, like the whole city of encampments, built of reeds so that it could be taken down with the camp. In the year 16 or 17 A.H. Abu Abd Allāh the newly appointed governor of Baṣrā built a mosque of unbaked brick and clay with a roof of grass. It was only under the Omayyad governor Yazīd that a mosque was built of brick and plaster with a roof of teak and pillars, which came from the quarries of Ahwāz on the Karūn river. The first mosque in Kūfā on the other hand of 17 A.H. was "a covered hall... which had no side wings nor buildings behind it" (Tabari); before it was an open square "and so, continues Tabari, were all the mosques except the Masjīd al-Ḥarām (i.e. Mecca); out of respect for the sanctity of the latter, it was not copied in the other mosques". This mosque also was rebuilt by Yazīd, governor for the first Omayyad dynasty, in 661–680. For he had plans drawn up by Mazdaean architects: "Uno degli architetti gli fece un disegno sul modello degli edifici celtici dei rei sassanidi, ossia un vasto colonnato con tetto e chiuso ai lati" (cf. Annales d'Alislam, III, § 47, p. 857). When, on the other hand, the conquerors found buildings in towns which were suitable for masjīds from the point of view of space, they utilised them. In al-Madā'in, for example, the old twin-city of Seleucia-Ctesiphon, the iwān of the white palace was used as a place of assembly for the Friday salah, and the pictures of men and animals in it were not destroyed by the Moslem conquerors. In Syria, however, the churches were turned into mosques by changing the orientation from east to south and placing a quadrangle in front of them. In this way the building of the mosque of any place in the early centuries A.H. was adapted to the traditions in existence and where there were no buildings, as in the newly founded camp-cities, it was on every occasion a problem for the governor requiring much consideration. In spite of this uncertainty, as one can deduce from the descriptions, they were more inclined, even as early as the first century A.H., to the type of pierced mosque with a quadrangle, to which all the prototypes as well as the climate pointed.

Development of the Masjīd and the Madrasa in the different countries.

Syria. As the place of residence of the first dynasty of the young Muslim empire and a land of ancient culture, Syria was naturally destined to build the first substantial mosques and to influence early developments. This influence exercised on the one hand indirectly through the Syrian mosque built by Walid in Medina, next to Mecca the most sacred and most visited city of Islam; on the other hand, the Mosque of the Omayyads in Damascus, as we know from Arabic sources, was taken as a model as far away as Cordoba. The earliest centre of Muslim building was Jerusalem, which the Omayyads endeavoured to play off against Mecca. Beside the rotunda of the Kūbat al-Sakhrā on the Harām al-Sharif, the sacred rock of which was to supplant the Ka'ba, Abu al-Mulik used the parts still standing of Justinian's Church of the Virgin to build the Dżumā al-ʿĀṣī (finished in 83 = 702). According to de Vogüé's plan, this building, later often restored or rebuilt, was a pil-
larded hall with three naves, of necessity oriented to the south with the mihrab in the long axis. At a later date the transept with the dome and four side naves was added. The *Mosque of the Omayyads* in Damascus arose out of the rebuilding of the Church of St. John, which had been built on this site by Heraclius and his son Constantine; after the other stones of the Antonine temple of Jupiter. We must assume that Walid had the pillars of the basilica moved so that three equal naves were built. These were crossed in the centre by a transept, which led up to the mihrab and had a dome over its centre. The rich decoration with mosaics was a suggestion from Syria and was probably done by Syrian workmen (plan and history of these buildings in Dicz, Die Kunst d. Islam. Volker, p. 14 sqq. of the first and p. 32 sq. of the second edition; with references to the literature). The mosque of Damascus was the first to have a transept, the prototype of which Thiersch no doubt rightly finds in the chalke of Byzantium (*Pharos*, p. 214), which frequently appears again in Syria and Northern Mesopotamia. The great mosque of Aleppo was also built after the plan of the Omayyads with a transept, as the latter can hardly have been added until the rebuilding of 365 (976) (pictures in Saladin, Manuel, p. 85). The mosque of Isâ in Ephesus, finished in 777 (1375), and the mosque of Dıyâr Bakr are northern outposts of this type, the influence of which can also be often traced in Cairo and the Maghrib.

Alongside of these principal mosques in Syria a series of smaller mosques arose, partly out of ancient temples (Aleppo, Hama, Homs, Ba'albek, Tripoli, al-Um'ayya), partly built out of material available from Christian buildings (Ramla, Kusair, al-Hallabât, Bosra). Some of these mosques may have been pre-Omayyad foundations, certainly the Mosque of 'Omar in Ba'ra. All these mosques, except Kusair al-Hallabât, have the same type of quadrangle with halls around it, two or more being on the kibla side, without transept. The development of these halls varies however, as a result of local tradition or the material available (e.g. the naves of Christian churches). They are as a rule vaulted with pointed arches but sometimes have gable roofs and thus, along with their closed façades, in front of which we exceptionally have a bowed corridor, bear a western or northern stamp in keeping with the ruder climate. The later Syrian mosques under the Ayyubids and Mamûlîks differ very much in their plans. The Mosque of Firdaws in Aleppo, for example, has a small pillared court and a broad nave, with a row of five small domes, as the harâm besides various side-rooms. The Ayyubid mosque of Dâr al-Imarat in Cairo (*Voyage en Syrie* (M. I. F. A. O., Cairo 1914, 2 vols.)).

**Madrasas in Syria.** A very complete study of the madrasa in Syria and Egypt by K. A. C. Creswell (*The Origin of the Cruciform Plan of the Cairoite Madrasas*, B. I. F. A. O., 1929) has brought some clearness into the question of its typical form etc. After an examination of eight madrasas built before 1270 A. D., the plans of which can still be traced in Aleppo, Damascus and Hama, Creswell shows that the symmetrical plan was unknown in Syria and that there was no regular scheme in the arrangement of the rooms, but it depended on the site available. A typical specimen is the always correctly oriented mosque: a nave of three vaulted rooms with three pointed arched doors to the court; a *iwân* in the court, rows of cells in the rest of the court and usually two tomb-capulas usually flanking the mosque; the rest of the area was used for rooms. Madrasas used by two rites had two iwâns. Of the 80 madrasas counted by al-Ilmawi in Damascus in the 19th century (*F. A.*, ser. 9, vol. iii.—iv.), 33 were Hanâfî, 31 Shâfi'i, 9 Hanbalî, 1 Malûkî, 6 used by Shâfi'îs and Hanafis. Creswell's investigation shows that in Syria there was not one madrasa of all four rites nor a cruciform one, a result, which suggests new deductions for the Egyptian madrasas.

**Arabia.** The indigenous form of the madjid in Arabia is a large hall formed of chambers with pillars and arches. The author found such oratories, more correctly to be described as musâllas, in *Masûnâ' on Bahrain* (picture in Dicz, K. d. d. F., p. 46). These praying chambers, open to the street without a courtyard, have no furniture, not even a minbar or mihrab. The latter was foreign to Arabia and in the larger madjuds its place was taken simply by a slab of stone with some adornment. But these pillared halls were only a more substantial form of the local native madjid of palm-trunks, which could probably often be found in the simple villages of the interior and whose sanctified precursor was the Madjd al-Nahawî in Medina built in this fashion. Alongside of this type of mosque which was indigenous to Arabia we find imported forms, like the madjad in Medina (see above), of slight importance from the archaeological point of view. Mention may be made of the ruins of a mosque near Manâmâ of 740 (1339/1430) described as an inscription as *maṣjid al-sharîf dîn 'l-imâmânât*, with old pillars of teak of the fourth (tenth) century; the Shi'a form of the crescent and also the inscriptions on the kibla stones of the sixth century mark it as a Shi'a edifice (cf. Dicz, Eine schiitische Moschee auf der Insel Bahrain, in Jahrb. d. ass. Kunst, II, 1925).

**Irák and Mesopotamia.** The earliest settlements of the conquering Arabs in the Irak were in the primitive camps built of reeds; equally primitive were the earliest mosques. Sásânian buildings were used for the purpose in conquered cities, like Ctesiphon. A pillared mosque was early built in Kûn (17 A.H.) which Tabari describes and which was rebuilt as early as the beginning of the Omayyad period by "Persian builders" in the form of a completely enclosed pillared hall (see above). In the capital of the caliphs also, as a result of its complete destruction by Timûr nothing worthy of note has survived. We know however that the Friday Mosque of al-Manṣûr (149–766) was built of pillars of wood and a flat roof. A wooden dome over the maṣjûra is probable. It was rebuilt under Hârûn in 192–195 (808). Al-Mu'tadîd began to enlarge it after the return of the troops from Samarrâ (280 = 893) (cf. Sarre-Herzfeld, *Arch. Revue*, II, 134 sqq. with plan). Outside of Baghdad the unlimited space available permitted great mosques for the soldiers to be systematically planned, as in Ka'kâ and Samarrâ; these were the great pierced mosques of the third (ninth) century, which were copied in the Mosque Ilân Tullûn in Cairo. Of the three large old mosques in Masûl, that of the Omayyads has completely disappeared; according to Yahûdî's description it was "completely vaulted, with alabaster slabs". This seems to be the origin of that type of pierced mosque
with vaulted arches which was later further developed by the Sālājūk and Ottomans (see below). The Mosque of Nūr al-Dīn (541–569 = 1146–1173) or Liwā dāl al-Kabīr was also vaulted from the first (with cross-vaulting) on piers (543 = 1148) and on its rebuilding in 568 (1170–1173) was completed in a cupola. The third Mosque of al-Mudhāzīd, Kāhir Iyās, has been completely modernised. Smaller mosques of the 7th (xiiith) century like the Dājmī Nābi, Dīrijīd have single domed chambers as praying-rooms.

In Baghādād the following madrasas were built under the 'Abdālīs: the Shāfī Niyāmīya in 549 (1066), the Tādjiya in 482 (1089), the 'Aṣaṣfī Tutuṣiyya in 508 (1114), the Nāṣirīya, c. 600 a.h. and the Mustaṣfījya about 630 a.h. Only the latter is still in existence and is used as a customs warehouse (sketch-plan in Sarre and Herzfeld, Arch. Rizm. ii. 161). Of remarkable oblong shape (86 ft. by 210 feet) it has six iwans, a large vaulted hall, rows of cells and side rooms. Besides the four iwan this, the first state madrasa, also accommodated a dār al-ḥadīth and a dār al-ṣurūān. If the Mustaṣfījya was not planned in a strictly symmetrical way with four iwans at the intersection of the axes, it nevertheless incorporated the same idea and may therefore have stimulated the development of the next type. In Mīṣūl there were several ʿAṣaṣfī madrasas.

Egypt. The type of pillared mosque imported from the 'Irāq under Ibn Tūlūn prevailed in Cairo along with the pillared mosque down to the Mamlūk period. It is the regular mosque that the large military and Friday mosques always have piers, the smaller mosques intended for the people of the quarter have pillars. Some of the latter however were on occasion also used as Friday mosques. The rows of piers were always parallel to the Kibla wall and connected by arches, a natural result of the rectangular form of the piers, which had to run parallel to the rows of worshippers. In the pillared mosques the naves might also be perpendicular to the Kibla wall, without inconveniencing the worshippers. The Cairo mosques of this group are:

The Mosque of ʿAmr b. ʿAbd al-ʿAzīz in Fūṭāt, which received its present form as a result of repeated rebuilding and additions to the above mentioned hall of the year 21 (642) (cf. E. K. Corbett, The History of the Mosque of ʿAmr at Old Cairo, J. R. A. S., 1890).

The Mosque of al-ʿAzhar of 599–601 (970–972) on pillars: the first Mosque of Fāṭimīd Cairo, remarkable for the central nave, broader than usual with two domes (qalārat) probably borrowed from the Maghrīb and unival here; also for its stilted pointed arches which henceforth became frequent in Cairo; finally for the rich decoration of the plaster in the arches, which were recently cleaned. (They will be published by S. Hury in Creswell's great work on the architecture of Cairo). The ʿAzhar has long been used as a Dār al-ḥadīth (state madrasa).

The Mosque of al-ʿAṯmar, a small pillared mosque historically important for its façade built by Abū ʿAli al-Manṣūr al-ʿAmīr (965–954), finished 519 (1125); restored by Burūjī in 799 (1396–1397) and given a manārā which was removed in 535 (1142) (cf. M. v. Berchem, J. A., 1891, reprint, p. 81).

The Mosque of al-ʿAṣāṣī l-Tulāzī, built by the Fāṭimīd caliph al-Zāhir in 543 (1148–1149); completely restored in the Ottoman period.

The Mosque of al-Zāhir Bābās of the year 665–667 (1266–1269), a mosque with piers of brick, built for the troops with very strong stone wall and three portals jutting out like the Mosque of al-Ḥākim. The six rows of columns in the ārām are crossed by a transept with a dome of three naves broad in diameter before the mihrāb. Porticoes with double naves surrounded the court.

The Mosque of Sulīm Muḥammād al-Nāṣir on the citadel, of the year 718–735 (1318–1335) on pillars.

The Mosque of Amir al-Mās (Shāfī Hilmiya) of 730 (1339–1340).

The Mosque of Amir Akṣūnqīr of 747–748 (1346–1348) on pillars.

The Mosque of Muʿāṣir of 819–823 (1416–1420).

Of pillared mosques in Egypt outside Cairo we may mention the Mosque of St. Athanasius and the Mosque of the “Thou-and Pillars” in Alexandria the plans of which were recorded by the French expedition (Description de l'Egypte, Antiquités, v., reproduced in Thiersch, op. cit., p. 224). Shortly before the arrival of the French, Alexandria still had 88 mosques, 46 of which were large. Practically nothing of these is left at the present day. The two above mentioned were pillared mosques and particularly the second, also called the “Mosque of the Seventy”, with its iwāns of equal depth on all sides (only the northeastern one has 4 instead of 5 rows of pillars) the arches of which always run parallel to the outer walls, i.e. palm-like, continue the type of the Hellenistic pillared agora or the gymnasium as Thiersch has pointed out. The same type predominated in the towns of the Delta.

The second, later type of mosque in Egypt was decisively influenced by the madrasa, to which we may now turn our attention. As Creswell has shown, the Egyptian madrasa was by no means always cruciform, as was usually supposed previously. It is also distinguished from the Syrian type and cannot be at once said to have been introduced from Syria. It is true that the first madrasa for all four rites in Cairo was built by Sulīm Naṣīr al-Dīn Ayyūb, but this Sulībīya was a building divided into two halves and cannot be considered as the original of the later type (641 = 1243–1244). The first cruciform madrasa with 4 iwāns in Cairo was the Zāhirīya which was built on the site of a part of the old Fāṭimīd palace which was cleared for this purpose and consecrated in
The south liwān belonged to the Shāhīs, the north to the Hanafis; lectures on Ḥadīth were given in the east liwān and in the west liwān the seven ways of reading the Qurʾān were taught (Maḵrit, ʿĀṣīfāt, Ḥāṣibāt, Ḥāṣibāl Mawṣūʿī). While the Sāliḥīya held all four rites but was not cruciform, the Zāhiriya was cruciform but did not accommodate all four rites. The Nāṣiriya of 695 (1295–1296) was the first madrasa of the rare type which, cruciform and accommodating all four rites, allotted a liwān to each. Maḵrit also mentions a large number of other madrasas of one or two rites which have completely disappeared but probably were of different forms, as the existing madrasas and ruins show. One great difference in principle between the Syrian and Cairene madrasas was the installation of the mosque. In Syria this was always a broad chamber with a central dome and two tunnel vaults but in Cairo one of the liwāns was always used as a mosque and with this object was furnished with a miḥrāb. The Egyptian madrasas also always had minarets, which was the exception in Syria. Creswell’s assertion that the cruciform mosque is of Cairene origin, although it remained the exception, therefore will hardly find acceptance. Timūr and his successors certainly did not get the design for their numerous cruciform madrasas from Cairo but followed the old Kūjarānī tradition. It remains to be seen whether future excavations in Nīshāpūr, Tūs and other towns of Kūjarān will supply further information on this point. Creswell gives a chronological list of the madrasas of Cairo mentioned by Maḵrit and others, which were built between 566–811 (1170–1408); these number 55, 26 of which are still in existence. Two of these are devoted to four madhhab, the Madrasas of Sulṭān Ḥasan 757–764 (1356–1363) and of Dīmāl al-Dīn of 811 (1408) (Creswell, op. cit., p. 44). Further details of these madrasas will be found in Creswell, op. cit. and in Diez, Kunst d. isl. V. 2, p. 118–125.

Here we shall just mention the most celebrated building of this kind in Cairo, the tābīʾī mosque-madrasa of Sulṭān Ḥasan. It belongs to the group of buildings which contain several places of worship and are devoted to all four madhhab. The central liwān of which were however outside the central court at the four corners of the building, quite separate from one another. The four liwāns had therefore only an architectural significance. In keeping with the Cairo tradition, the kibla liwān was made much larger and arranged as a masjid. With this adaptation of the madrasa for use as a mosque, the foundations were laid for the further development of the mosque during the period of the Circassian Mamluks when it may be considered as a true mosque-madrasa. As a rule we can distinguish in it three compartments, the kibla liwān, a central chamber sunk a step lower occupying the place of the former open courtyard and a room at the back, as a rule a smaller one. Of little importance from the architectural point of view, these small mosques were elaborately decorated and formed fine specimens of the decorative art of Cairo. The tomb mosque of Kāḥl Bey of 880 (1475), the mosques of Kishmā al-Ishāṣi of 885–886 (1480–1481), of the Amir Aḥkār of the year 908 (1503), and of al-Muṣṭaṣf of the year 953 (1550–1554) are the outstanding building of this group. The Ottoman domed mosques from 935 (1528) follow the Turkish tradition. The Maghrib (North Africa and Spain).

The Maghrib (North Africa and Spain).

The typical mosque of the Muslim west is the mosque with courtyard, on pillars or columns. It was only under Turkish rule that the domed mosque became established in those parts of North Africa affected by it. The rows of pillars run, as a rule, perpendicular to the Kibla wall from which however they are separated by a transept. The axis of the latter is a continuation of the axis of the central nave which is always broader. Of the rows of pillars in the axis the two or three outermost ones are continued over the court and form the arcades, of which the inner entrance side of the court has as a rule only one. The beginning and end of the central nave are as a rule marked by a dome. The western mosques are given their characteristic features by the horsehoe and bulbous arch (a mixture of the horsehoe and the pointed arch). The miḥrāb of the western mosques is as a rule a pentagonal niche considerably deeper than the eastern semi-circular one. The oldest surviving large mosques in the west are in Kairāwān, Tunis and Córdoba (since the expulsion of the Church).

The foundation of the Great Mosque of Kairāwān like that of ʿAmr in Cairo goes back to the first century AH, but like that in Cairo also retains nothing from its founder ʿīkba b. Nāth except the name. By 76 (695) the original masjid was rebuilt, and later enlarged but in 221 (836) it was completely taken down by the Aghlabīd Ziyādat Allāh and rebuilt and in the third (ninth) century again enlarged on two occasions. In spite of many later restorations, the mosque has retained the form it was given in the third (ninth) century. Seventeen naves on pillars run perpendicular to the Kibla wall from which however they are separated by the transept. The central nave is broader and flanked by double columns and marked externally by two domes. It may be noted as a special feature that the first two travées of the hārām seem to be one with the court arcades while the part behind was shut off by doors. The arcades of the court rest on pillars with double columns in front of them, which, with their bulbous arches give the court its architectural character. The Dāmī Zaitūna in Tunis was built as early as 114 (732) by the Omayyad governor Ibn al-Habbāb but entirely rebuilt in 250 (864); in spite of many internal restorations, it has in the main retained to the present day its old form of the end of the ninth century. In Spain we have from the Omayyad period the (former) Mosque of Córdoba. It was built by ʿAbd al-Rahmān 1 (135–172 = 756–788) and several times extended by his successors until the hārām contained 19 naves. One special feature of this mosque is the double storied arrangement of its rows of arches, a bold innovation, which does not seem to have been imitated elsewhere. Recent investigations have revealed the original floor of the mosque at a much lower level, which is decorated with mosaic. This would alter the proportions. The horseshoe arch taken over from the Visigoths was varied in the clover leaf and indented arch and these arches were imitated in the Maghrib (mosques of Algiers, Tlemcen etc.). The domes swelling into various shapes were copied in Sanairawān and Córdoba. The mosque of Sūn (236 = 850) and Sfax (236 = 850) were founded in the Aghlabīd period but the latter was completely restored in the tenth century. The rise of
the Fāṭimid empire in North Africa (297 = 909)

brought about a new development of mosque
building. The mosque of the new Shī‘i capital
Mahdiya in Tunis however corresponds completely
to the preceding Aghlabid type. A novelty how-
ever is the use of cross vaulting which henceforth
we find frequently, first of all in the two mosques of
Monastir and in the new part of the Great
Mosque of Sfax. Of the great pillared mosque of the
Kal’a of the Bani Hammād, the minaret of
which still stands and was mentioned in the article
Mahdia, it is only possible to reconstruct the
ground plan, which had 13 naves with 8 travées
xvii, p. 13 sqq. and De Beylié, La Kasba des
Bent Hammada, p. 77 sqq.). A second mosque of the
Bani Hammād has been destroyed in Bourgic
but it is evident from an old description that it
belonged to the type of Kairouan (De Beylié, op.
cit., p. 102–104).

Mosques of the Almoravids (448–541 =
1056–1147) and Almohads (524–667 = 1120–
1267). The great mosques in Algiers and
Tlemcen, the Kutubiya of Marrakesh and the
mosque of Tinmâl are pillar mosques with
bulbous arches. On the other hand the Mosque
of Ḥasan in Rabat, now completely destroyed,
the largest mosque of the Maghrib, stood on round
pillars (1610 × 465 feet; begun 539 = 1196–1197).

A noteworthy feature is the mausoleum behind the
mihrāb in the mosque of Tlemcen, which now
becomes frequent in the Maghrib (but seems not
to have been known in eastern Islam, as
the plan of the madrasa of Kharga shows; cf. Dez, Charras, Bandenkerler, p. 73).

Marrakids in Morocco (1195–1470), suc-
cessors of the Almohads (xiii–xiv century): a large mosque in Taza, Morocco, piers,
broad central nave and transversal nave, finished in
693 (1294). A large mosque in Auida on
the Algerian-Moroccan frontier (696 = 1296). Sidi
Hassan in Tlemcen (696 = 1296), a
mosque with two naves on onyx columns, and
Awlad al-İmām in Tlemcen (710 = 1310), small, but
richly decorated. The great Maṣṣūra mosque in
Tlemcen (736 = 1336), a very regular
building, thirteen naves on onyx columns, a broad
central nave, a three naved transept, a maqṣūra
in the centre, a polygonal mihrāb with mausoleum
behind. Sidi bū Medyen of al-Awlad (739 =
1339) and Sidi al-Halwâ (754 = 1353), both
in Tlemcen, small, the former on piers, the second
on columns with slightly modified horseshoe arches
with a wide span. Shella (harbour of Rabâs),
Necropolis of the Marrakids, a tomb-mosque (739 =
1339) (plan in Marçais, Manuel, ii, p. 498). Around
Tlemcen are several small mosques of the xivth
century.

Mosques of the Ḥafsids in Tunis, xiiith–xvith century: Mosque of the Kasba in
Tunis, built by the founder of the Ḥafsīd dynasty
Abū Zakariyâ b. Yahyâ I (625–647 = 1228–1249),
finished in 633 (1235). Pillars with chapitres,
supporting horseshoe arches in the quadrangle
and cross vaulting, the usual form of roof in Ifriqiya
from the tenth century (cf. Sfax etc.) is similar. The
Mosque of al-Hawâ of the xith century is similar.

Mosques in Morocco under the Shāhīs
951–1311 (1544–1839).

In Morocco preference was given to the old
Almohad type of mosque as exemplified in the
Kutubiya. The Bāb Dukkâla 965 (1537) and
Moussy 976 (1562) mosques in Marrakesh
have seven naves at right angles to the kibōla, and
a transept along the kibōla wall. Innovations seem
to be, in addition to the broader central nave,
that the two outside naves left and right along
the side walls were broader and a dome was placed
at each of the four corners of the mosque. A
second transept on the court side of the Ḥarâm
seems to be exceptional, as in the Bāb Dukkâla.
The mosque of the Kasba of Marrakesh
dates from a foundation of the Almohad al-Mansûr.
After the explosion of 1574 it was rebuilt in and
the xvith and xivth centuries repeatedly restored
(cf. the monograph by H. Basset and Terrasse).
The mosques of al-Karawiyin and Mâliy
Idris in Fès have likewise been restored.

Mosques in Algeria under Turkish rule
(1518). In addition to the two mosques which
date from the Almoravid period, the Great
Mosque 490 (1489) and the M. Sidi Bouaḥîn in
Algiers, only two other mosques of the old type are
believed to exist; all the others, over 100 in
number, are Turkish. The oldest Turkish mosque
is 'Alî Bitshûnîn (1622), now Notre Dame des
Victoires. This building had a large central
dome, which is surrounded by small domes. It is
noteworthy that the square minaret was not
inspired by the Turkish type. All the later mosques of
Algeria show variations of this type, except the
"Mosque of the Fish-Market" 1070 (1660)
the plan of which recalls those of the Jezuit
churches of the xviith century; it may however owe
nothing to them but derive from Byzantine-Turkish models.

Mosques in Tunis under the last Ḥafsids and Turks (from 1334)
Under the last Ḥafsids the venerable Dā‘î Zaitiūn was again restored,
enlarged and given its present portico and the
outer gallery of arcades. The oldest Turkish mosque
is Yūṣuf Dâī (1610–1637). It is significant that
it is built after the old Tunisian type on pillars with
cross-vaulting, as are the later M. Hâmmâd a
Bey finished in 1067 (1654) and several mosques of
the xvith and xivth centuries. The Turkish style
(Ahmediya in Constantinoipoles) represented by
the Sidi Mahrez (second half of the xvith century)
remains the exception in Tunis.

The medersa in the Maghrib. Medersas
were first introduced into the western lands of
Islam by the Almohads but nothing of these seems
to have survived. The oldest medersas date from
the xiiith–xvith centuries. The Marrakids in
Maghrib al-Askâ were particularly active in
building and encouraging medersas, which, as in
Syria and Egypt, were also state institutions. This
evolution of the medersa was apparently a result of
the Sunnī, particularly Mâlikî, revival under the
Marrakids (1195–1470). Al-Saffârîn, the oldest
medersa in Fès, built by the great warrior and
champion of the ta’īr Yâkût b. Yûsuf (685–706
= 1286–1300) of the Marrakids who also built
a mosque (see above), was the prototype of all the
later medersas in the extreme Maghrib. An angular
gateway, such as is usually only found in private
houses leads into a court with a central basin and
the cells. A domed chamber with a pentagonal
mihrāb adjoins it. On the analogy of the true
tombs, it is called kubbâ. Adjoining it reached by a
corridor is a midâ‘a, with a basin in the centre for
ablutions and latrines. These three main parts of
the building, ta’dīn, kubbâ and midâ‘a and usually
4 Cairo. Mosque of Ibn Tulun. Reconstruction.

10. Isfahān. Djāmi'. Detail.

11. Isfahān. Shāh Husain Madrasa.
15. Mashhad (Khurāsān). Mosque in the sanctuary of imām Rijāl.
a separate mausoleum, are found continually in a number of variations, usually dependent on the space available, which Maqāṣid, ep. cit., ii. 504, divides into three groups. In Fes in addition to those mentioned there are other seven medersas of the eighteenth century. With the medersas of Meknes, Sale, Taza and al-Awba'd in Fesmen we have in all eleven medersas of the Marinid extant (cf. the list in Maqāṣid, ep. cit., ii. 504 sqq.). The most imposing and finest medersa in Fes is the Bū ʿAinīya, founded by Abū ʿAinī, 749–759 (1348–1358). With its madras of two transepts at the end of the square court and two domed chambers in the central axis of the court it recalls the mosque of Hasan in Cairo with its iwāns. The façades on the court display the wealth of wall adornment usual in the Maghribi tiles, stucco moulding and stalactites.

Medersas of the sixteenth century in Morocco. The Medersa of Ben Yūsuf in Marrakesh is comparable as the largest in the Maghrib and stands on the site of an originally Almoravid (3) and next Marinid Medersa Abū ʿl-Ḥasan. The plan seems to be old and in its regularity recalls the al-Ḥarīrī type of Arab palace and the palaces of the Omayyads and ʿAbbāsids built in this style in the desert (plan in Maqāṣid, ep. cit., ii. p. 762). The Medersa al-Sharrātīn in Fes, begun in 1670, shows a similar plan but is smaller and simpler.

Medersas of the sixteenth century in Tunis. In the sixteenth century the Hafsid built a number of medersas here. Of the Turkish, the most interesting is the Medersa al-Baḥyā of ʿAbbās Pasha (1740–1755): a court with cells, madras on pillars and miṣrāb, but, like the Egyptian madrasas, it has also the tomb of the founder and a public fountain. In Tunis, probably as the result of Egyptian or Oriental influence, it is common to find medersas and mosques associated with the tomb of the founder. The three varieties distinguished in Egypt by van Berchem, mosque-madras, madrasa-mausoleum and monastery-mausoleum were also built in Tunis.

Salṭḫā empire in Rūm, Armenia and Georgia. In Salṭḫa Anatolia (47700–10777). In the sixteenth century, according to the courtly māhrās madrasa and domed madrasa are to be distinguished. The pierced hall was used as the large public mosque. On account of the colder climate the open courtyard with pillars was not found here. The pillars were sometimes of wood (Eshref Rūm Ljāmi‘ī), usually however of stone. The flat wooden roof rested directly on the piers or on the arches which connected them, which run sometimes parallel, sometimes perpendicular to the qibba wall. The Ulu Ljāmi‘ī in Wān has a vaulted roof resting on pillars, a system later often used in the Ottoman empire. Of more importance architecturally are the smaller (mosque-madrasa), which played a prominent part in the Salṭḫā empire: but they fell far behind the Persian madrasas in impressiveness and harmonious development The model for the evolution of the māhrās madrasa was the Mesopotamian-Anatolian fara house. From the latter came the bowers along the sides of the court which were placed in front of the iwān and the rows of cells. The combination of school and mausoleum in which the builders, usually high officers of state, were interred, was the rule. The domed madrasa consists of a domed hall with a water basin in place of the open court with living rooms, a lecture-room and a mausoleum adjoining it. The external ornamentation of these Salṭḫā madrasas and mosques is confined to the gateways. The façades of the gates, irrespective of the material used elsewhere in building (brick or moulding), were always covered with slabs and the portals then ornamented with strips of decoration or inscriptions, fantastic looking candelabra of palmettes (Diwrigi), bundles of rods and convolutions in low and high relief and thus one of the highest points in Mamluk ornamental art was attained. The iwāns along the court, interiors of the comparatively low domes (which here usually bridge over the corners on triangular consoles), the frizes on the wall and the nihārās are frequently adorned with glazed brick and mosaic frizes in a style which in pattern and colour is readily distinguished as an independent pattern from the Persian decoration. Here we find geometrical network patterns, which were not usual in Persia, and a colour scheme which receives its special character from the much used black, alternating with bright and dark blue, although other colours are also found. The following is a list of the most important buildings, so far as they are known: 1. Pierced mosques: Mosque of ʿAbā al-Dīn Kūnāya, completed 616 (1220–1221), Ljāmi‘ī Kūnāya in Iṣṭābūr, sixteenth century; Ljāmi‘ī in Iṣṭābūr, sixteenth century, (with octagonal Minārā, Ulu Ljāmi‘ī in Wān, sixteenth century. — 2. Court iwān madrasas: ʿSirjāl Madrasa 641 (1243–1244), Gūk Madrasa, Barābūdiyya and Ṭijfet Minār, all 670 (1271–1272) in Sīwāḥ, Khabāsīya, 783 (1381–1382) in Ṣarāb, Ṭbrāhim Bey Madrasa, sixteenth century in Ṭekrīr, ʿTijfet Minār, sixteenth century in Ṭekrīr. — 3. Domed madrasas: Kārā Taʾl Madrasa 649 (1251) in Kūnāya. Iṣṭābūr Minār, 650–656 (1251–1256) in Kūnāya, Enjīrge Ljāmi‘ī 657 (1258) in Kūnāya, ʿSirjāl Madrasa 613 (1261) and 659 (1266) in Iṣṭābūr, Sulṭān Wālīde sixteenth and seventh century in Saiyādī Gharībi. The mosque of the Turcoman ruler Šāh I (1348–1390) in Aynalūk (Ephesus) is an exception in Asia Minor; it was finished in 777 (1375–1376) and its architect is said to have been ʿAbd al-Diābīškī. The interior is modelled on the mosque of the Ommayads in Damascus; the walls however are in the Turkish style of that period, as developed in the provinces of the Akbeks. The west façade is closely related to the façades of the mosque of Hasan in Cairo, which also drew inspiration from Northern Mesopotamia.

The Ottoman empire. The Ottoman Turks further developed the types of mosque built by their predecessors, the Salṭḫās. A second very important factor in the development was their expansion into Europe and the new model, the Byzantine domed churches, especially the Hagia Sophia in Constantinople. Here three main types of mosque may again be distinguished: the pierced hall, the cruciform domed mosque and the central or great domed mosque. The first and third were

The Encyclopaedia of Islam, III.
commonly used for Friday mosques and mosques for the people, while the second type was reserved for the Sultan's Friday service and religious instruction, and was more used for private mosques. The Ottoman piered hall mosque is distinguished from the Salljuk, principally by its vaulting, rows of cupolas over the piers. The court is limited to a hypaetral water-basin of the same size as the dome above it. The Ulu Djami in Brussa for example is an undorned pillared hall, rectangular in shape with five aisles each with four domes in a row. The second group of four pillars in the central aisle was originally uncovered (now it has a glass dome) and contains the basin for ablutions, the rudiments of a court. The domes of the five aisles rise one above the other to the central row.

The most important buildings of this group are: Ulu Djami 1370-1420 in Brussa, Uc Sheherefeli Djami 1389-93 (1484-1487) in Adrianople, Ulu (Eski) Djami ca. 1403-1420 in Adrianople, Ulu Djami 16th century (?) in Manissa (Magnesia on Sipylus), Djumaya in Filibe (Philippopolis), old mosque (now museum) 1512 (1477-1478) in Sofia, Sindjirlif Kuyu Djami ca. 1500, Ahmad Pasha Djami by Sinan ca. 1555 and Pitle Pasha Djami 1573, all in Constantinople, Eski Wadie in Scutari ca. 1570. The pierced hall as an unmixed form became extinct in the 16th century. The Ipek Golu Djami in 1734 in Constantinople is a mixture of the latter with the great dome. The origin of the cruciform domed mosque is rightly sought by Wulzinger in the Salljuk madrasas with courtyard halls which come in time to be covered over with a dome. The centre which lies somewhat below the level of the rest, is occupied by a square roofed with a dome, again the rudiments of the former courtyard, and still often containing a fountain. The Kibla chamber is vaulted with a barrel or dome, the praying chambers to right and left are either like twins open towards the centre or have barrel-vaulting. The similarity of these mosques to Byzantine churches (in plan, not in structure) is involuntary and lies in the system. On the other hand, the open pierced outer court (kaygali) may go back to Byzantine stimulation. These outer courts however are very general in the east to give shade. The most important buildings of this type are according to Wulzinger's list (op. cit., p. 186): Mosque of Murad I (1359-1389) in Brussa, fin. end of 14th century, two storied, Mosque of Bayazid I Yildirim (1389-1403), fin. after 1402, Yashil Djami in Brussa, fin. 1423, Mosque in the Koinmesh church in Isnik, beg. of 16th century, Nilufer Khatun Imaret, end of 14th century, Piruz Bey Djami in Milas, fin. 797 (1394), Mosque of Murad II (1421-1451), fin. 1447 in Brussa, Mosque of Murad II in Adrianople, Imaret Djami in Philippopolis 1359, Mosque of Hamza Bey before 1451 in Brussa, Ghazi Michel Djami ca. 1400 in Adrianople. The great domed mosques developed out of the more primitive single domed mosque which was very common throughout Asia Minor and Turkey as the simple village mosque, private mosque etc. and continued to survive. (In Ayasoluk alone 14 small single domed mosques were counted). This type of building was also used for the numerous turbes. The following are more important single domed mosques outside Constantinople: Yazi I-Isham Djami 794 (1392) and Mahmut Celebi Djami about 1400 in Isnik, Masjid of Khodja Yadygyar beg. 1369 in In Onu, Masjid of Elias Bey fin. 806 (1404) in Balat (Milet). The development of the great domed mosque from this type took place in part through combination with cruciform domed types, but its aim was however the elimination of all minor domes which at first it had for constructional reasons to put at the sides. A. Gabriel's table gives a good idea of the different variations. It gives the mosques of Constantinople, which number 42 (with Scutari), under six main types (Les Mosquées de Constantinople, in Syria, vii., 1926, p. 352-419).

D. Square or oblong halls with one or more domes, sometimes flanked by secondary domed chambers: Mahmut Pasha Djami 868 (1464), Murad Pasha Djami 870 (1466), Dativd Pasha Djami 890 (1485), Ai'th Ali Pasha Djami 902 (1497), Sultan Selim Djami 926 (1520).

E. Quadrangular single domed halls (continuing the list just given of the not yet very large single domed mosques from the city area of Constantinople): Firuz Agha Djami 896 (1491), Dzecen Kazim Pasha Masjid 921 (1515), Khaseki Khurem Djami 940 (1539), Mehmed Agha Djami 993 (1585), Chilli Djami 1050 (1640), Nurai Othmanija Djami 1169 (1755), Lalali Djami 1177 (1763), Wadie Djami 1287 (1870).

F. Square hall with a central dome, usually supported by two half domes: Sultan Bayazid Djami 906 (1500), Sultan Sulaiman Djami 957-964 (1550-1557), Kildj Ali Pasha Djami 988 (1580).

D. Square hall with a central dome supported by four axial half domes: Shakhzade Djami 955 (1548), Sultan Ahmed Djami 1026 (1617), Yeit Wadie Djami 1120 (1708), Sultan Mehmed Djami 867 (1463), reconstructed 1180 (1767); variants: oblong hall with a central dome supported by three half domes: Iskele Djami in Scutari 954 (1547).

F. Obong hall with central dome and aisles.

Group a. Central dome with square plan and pendentives: Ball Pasha Djami middle of 16th century, Mihremah Djami middle of 16th century, Zal Mahmut Pasha Djami 958 (1551).

Group c. Central dome on hexagonal basis: Ahmedi Pasha Djami 962 (1555), Sulus or Mehmed Pasha Djami 971 (1570), Ai'th Wadie Djami 991 (1583) in Scutari, Djembe Pasha Djami 1022 (1594), Hakim Oghlu Ali Pasha Djami 1147 (1734).

A survey of this list shows that the type given under A. is also the earliest. This was directly linked up with that in use in the older capital Brussa and already being built in Konya in the 14th century (Kara Tai Madrasa, Yildirim and Yashil Djami) which seems to be continued in the Mahmud and Murad Pasha Djami. But already the original Sultan Mehmed Djami (re-built in the 16th century)
which forms a striking anachronism in Gabriel’s list under D, with its date 1463 (only the second modern Mehemediya of 1797 belongs properly there), had made the first important step toward a single great chamber (cf. Agha Ogulu’s reconstituted plan in Diez, Kunst d. isl. Volker, 2nd ed., p. 105) and this plan was repeated for the ‘Atıkh ‘Ali Pasha Džami’, while the Dâvud Pasha Džami’ of 1485 had already used another variation (cf. the plans in Gabriel, op. cit.). This in brief is the historical development of the Constantinople mosque from the Anatolian Seldjük-Ottoman type. The next important step to the gigantic domed mosques of Constantinople given under D was completed by the greatest of Ottoman architects Sinan (1489–1588) step by step in the Shahzade Džami’, the Sulaimânîye and the Selimiye (1567–1574) in Adrianople. His guiding idea was, by thrusting the pillars of the domes as far back into the walls as possible, to get a single domed chamber of the largest possible dimensions, no longer interrupted by pillars; Sinan achieved this end in the Selimiye in Adrianople.

Persia, Turkestan and Afghanistan,

Old mosques or remains of them have not survived in Persia, as in Egypt, the Marghab and Syria, except perhaps for a few old parts still standing in the great complex of buildings, that forms the mosque of the Red want to be in Persepolis, the old Friday Mosque of Shiraz. We know however from literary sources that at the beginning of the 19th century, several mosques were built every where in the towns and some must have existed even earlier. Abu Muslim, the celebrated general and Abbâsid propagandist, built mosques in Merw and Nishabur. The latter was built on pillars of wood and similar structures are occasionally mentioned in Persia (e.g. at Kabâbîn in the province of Djrudjan, Siraf on the Persian Gulf etc.). In the ninth century, however, greater use began to be made of columns of brick or stone or marble columns taken from older buildings where they found them, as in Bagdad at Persepolis.

‘Amr b. al-Latîf (265–287 = 878–900), the second ruler of the Sassârid dynasty, renovated the Friday Mosque in Nishâbûr and among other mosques built the Džami’ ‘Atıkh in Shirzâbh, both mosques with columns of brick, of which parts are still standing in Shirzâz. The Friday Mosque of Balkh destroyed by the Mongols in 1220, is said to have had splendid pillars, as Ibn Banîthû records. An old mosque on piers of the fourth (tenth) century has survived in the remote desert town of Naiyrin, east of Isfâhan, and enables us to make deductions about the architecture of mosques in the Islamic world. The buttresses, the eleven barrel-vaulted aisles running perpendicular to the kibla wall, of which the central one is broader than the others. The court is flanked by four aisled riwaq which run parallel to the kibla wall, only the wall of the entrance has an arcade. The plan is therefore similar to that of the mosques of the Marghab. It is built on columns or piers of different forms. The part around the mihrâb is richly ornamented in stucco and has bands of inscriptions around it (cf. H. Viollet and S. Flury, Un monument etc., Syrie, ii, 1921). How securely the piered hall, as the type of Friday Mosque, maintained itself in the Sunni east, is seen from the rebuilding of Timur’s great mosque in Samarkand after his return from his raid on India in 1410, a mosque with columns, which was directly connected with the ma’mrâza of Bibi Khanum, but has now completely disappeared. The mosque had 460 columns of hewn stone, each seven els in height. The vaulting was covered with beautifully carved and polished slabs of marble. There was a minaret at each of the four corners of the mosque. The door was of bronze and the walls were covered inside and outside with inscriptions in relief (according to Sjarif al-Dîn ‘Ali Yâdî). How far there was any Indian influence here cannot now be ascertained. In any case, the İwan and mihrâb court became established in Persia in the fifth (eleventh) century and as the above described Friday Mosque in Isfâhan shows, became blazed with the piered court. The great Mosques of Herât (cf. Niedermer-Diez, Afghanistan, p. 55 and figs. 149–153) shows a similar mihrâb court adapted to the (probably older) pierced hall. In the completely new buildings of the Timurid and Safavid period, the pierced hall completely disappeared and the hârâm is extended by a central dome with vaulted halls at the side, when the kibla İwan itself does not fulfill the purpose. The mosque of the great sanctuaries in Kûm Ma’âhad, Kerbelât, the Madžd-dî Shâh in Isfâhan and many other urban mosques of Persia are built on this plan. Only in Eastern Khurasân, as in the Turkistan Shâhik Džami’, the mosque has always survived but with vaulted arches and a large dome in the centre of the hârâm, all of which betrays Indian influence (cf. the plan in Diez, Chauvannerische Baukunst, p. 79).

Of the already characterised type of domed mosques may be mentioned: the “Blue Mosque” in Tabriz and the Madžd-dî Shâh in Mašhâd, both similar in plan with a large central dome and two flanking minarets. The former was built during the reign of the Turcoman ruler Djhâhan Shâh (1437–1467), the latter by Amir Małik Shâh, the architect being Aymâd b. Shams al-Dîn Muhammed Tabrîzî (cf. F.R.A.S., 1910, 1911, 131). The Tabriz mosque had a dome only from the domed area with a second smaller dome. Both domes were decorated with tiles, the larger with white tondris on a black ground (Tavernier). Only fragments survive of the Blue Mosque, which show how splendidly it was once decorated; on the other hand, the Madžd-dî Shâh in Mašhâd is still standing, although the dome has lost its decoration. To this group belong also the mosques on the citadel mound of Eriwân, the mosque of Shâhîk Luʿî Allah in Isfâhan, the Kâlibân mosque used as a royal private mosque and the public Mosque of ‘Abû Bakr in Baghdad, both with high entrance İwan and without a court. At largely attended common prayer, the people assemble in front of such mosques. This is particularly the case in Turkestan; for the İwan and niches were simply very large mihrâbs and nothing further was necessary. In Balkh also there is a similar, formerly domed mosque probably intended for the ruler with a towering İwan (zvth century) (cf. Niedermer-Diez, Afghanistan, figs. 204–205). Besides these large main types, there were and are in these lands of eastern Islam hundreds of smaller mosques in the towns and villages, which sometimes show very interesting structures. Thus in Djadjarî in the Isfâhan steppe (northern Persia) there is a mosque with a small
open court and domed chamber in front of the mihrāb, and two triple yoked aisles, probably a reminiscence of Nestorian churches (cf. Diez, Churatas, Bakhūn, p. 83). We also find everywhere small masjids, which are simply little oratories, where the people can promptly worship at the proper time: flat-roofed large halls on wooden pillars, which are frequently richly carved in Turkestan, Afghanistan (Khābul) and Central Asia (Kashmir etc.).

The Madrasa in Persia, Turkestan and Afghanistan. Shāfi'i madrasas were built in the Abbāsid period in Nisābūr (where Ḥāfiz Abrū counted 17). Mev, Būgharā, Amol, Fās and other towns. Nāy, brother of Māljūd of Ghazna, is said to have built the first state madrassa. Under the Sādūqīs, Nīzm al-Mulk, vizier of Alp Arslān, and of Malik Shāh, built three state madrasas in Nisābūr, Fās and Bāghūd. None of these pre-Timūrid madrasas in Persia has survived; unless the ruined iwān in Khārgir is what is left of a madrasa, which is very probable (cf. Diez, op. cit., p. 71 sq.). The ruins of the Timūrid period however give us a picture of the Persian madrasa of the golden period of Muslim Persian architecture. The madrasa in Khārgir near Khāsh to the Afghan frontier, completed in 848 (1444-1445), still shows a pure unimixed madrasa design: a quadrangular court with four barrel-vaulted large iwāns, equal in size, at the intersection of the axes, each flanked by two or, with the upper storey, four cells, four vaulted corner-chambers, a narthex-like outer building, consisting of three successive domed chambers; low confined mihrāb façades with low flanking towers at the corners. The walls, especially of the court, were adorned with rich tiled mosaic, the walls of the domed chambers with ornamental frescoes (cf. Diez, Churatas, Bakhūn, p. 72-76, pl. 31-34). In contrast to the low façade of Khārgir built by a West Persian (Shāfī) architect are the Turkestan madrasas with their high iwāns, characteristic of the east in general, and gateways especially. In Samarqand we have the three Rigistan madrasas: Shīr Dār (c. 1610), Tīlya Kārī (c. 1610?) and Ulugh Beg (c. 1434); also the Madrasa Bibi Khanīm (about 1410) built by Timūr, all large courtyards with mihrāb courts and domed chambers, usually four minarets at the surrounding walls. In Būgharā, the Madrasa Mir Arab of the end of the xvi century is related to the Madrasa Shīr Dār. Of the madrasas in Herāt, e.g. the celebrated Ekklauissiya, nothing has survived, nor do we have anything left of the madrasa of Turbat-i Šahīd Dām in Eastern Khurāsān (cf. Diez, op. cit., p. 78). A ruin architecturally interesting is the state madrasa founded in the xvi century by Malik Ḥamze, the Gumbaz-i Surkh at Kaft-i Fath in Sīdjestan (cf. Tate, Seistan, fig. p. 78). The cells are vaulted with the typical Persian house and bazaar domes. The last fine Persian madrasa is the Mader-i Šah Sulṭān Husain in Isfahān built by the Safawī Shāh of this name (1694-1722). The tiled decoration of the court is among the finest of its kind, that has survived in Persia (cf. Tate, Seistan, fig. 2, and Pers. Arch., Special d. list, Vökel, p. 106-107). The dome still shows the original glazed tiles with foliage patterns: dark blue and white, changing to black stalks and yellow leaves on a turquoise blue ground.

India. In India the history of Muslim architecture so far known does not go beyond the xiii century. The two earliest mosques of which the ruins still survive, the mosques of Ajmīr and of Dehli, are large covered courts, built of pillars taken from Jaina temples. The domes on eight pillars found in all Jaina temples are here found ranged in rows. The richly sculptured pillars were simply cleared of any figures on them before being used. Vaulting on square piers continued in use after there were no more pillars to plunder (mosques in Kulbarga and Bidjāpūr). For the rest, Indo-Muslim mosque architecture developed in different ways according to various traditions and local conditions. In towns completely islamised like Māndū on the Nerbada, the capital of the sultanate of Mālwa founded by Dīlawar Shāh at the beginning of the xv century, or Dīlawarpur near Bīrāmar, which was founded by the sultan of Dehli in 1359, Muslim places of worship show a marked synthesis of Hinduistic tradition with the rigid forms of Muslim symbolism. Similarly in the Muslim towns of Gudjarāt, in Ahmedābād, Cambay, Dhoḷkā, Māhmūdābād, Muslim sacred architecture developed out of the local Hindu art so that the demands made by Islam on the shape of a mosque, such as an entrance-iwan and minaret, were carried through by purely Indian means and only the arch gave the building a Muslim stamp. In Bengal again, where the curved bamboo roof prevailed, mosques were built with curved roofs from the bricks in use there, as is shown, notably by the ruins in Gaur on the Ganges. Instead of glazed tiles, the walls were generally adorned with richly ornamented slabs of stone. South of the Vindhya range, in the region and in South India local schools of architecture grew up according to the same general principles. In Aḥmadānagar, Golkonda, Kulbarga, Bīdār, Awrangābād and other capitals of Muhammadan principalities, the building of mosques was much cultivated. Architectonically, the most important city was Bīdāpūr, the capital of the state of the same name, which became independent in 1490 under Vīsam ʿAḍīl Shāh and survived down to the xvii century, when its great period of building culminated in the gigantic dome of the mausoleum of ʿAḍīl Shāh. The mosque of Bīdāpūr (second half of the xvi century) consists of a pierced hall with small domes over each group of four piers and a large dome in the centre. In the Moghul period little change was made in this mixture of Hindu and Muslim methods, although the Persian elements are often more marked. The huge mosque with courtyard built by Akbar in Fathpur Sikri has the usual plan with slight variations. The Great Mosque of Agra built by Akbar still shows little Indian pavilions on the tops of the cornices. It was only under his successors that a Puritan reaction set in, which finds its fullest expression in the mosques of Dehli and Lahore. The process of assimilation thus attained its end.

China and Indo-China. From the Maghrib to the Pamirs and southeast of them the general character of the country, plains and deserts, linked the peoples of Islam together by certain common features, which also secured the mosque its uniformity of structure in the early centuries. In China where Islam was only the religion of a few isolated groups of immigrants the mosque soon adapted itself to the well marked Chinese style of architecture and the mosques of the south and western
According to late Arab writers the mosque was built by the caliph 'Abd-al-Malik (785–805), a statement which might simply mean that Justinian's church was rebuilt. On this compare AL-KUDS, ii, p. 1098 sqq. where the further history of the mosque is given.

For a picture of the site and the mosque see Pl. v. to the article AL-KUDS; plan and description of the interior in Travels of Abu Bey. London 1816, ii, 214 sqq.; Baedecker, Palastina und Syrien, p. 54 sqq.

AL-MASJID AL-ḤARAM, the name of the Mosque of Mecca. The name is already found in the pre-Muhammadan period (Horovitz, Kosmische Studien, p. 140 sqq.) in Kais b. al-Khatim, ev. Kowański, v. 14: "By Allah, the Lord of the Holy Masjid and of that which is covered with Yemen stuffs, which are embroidered with henna thread" (!) It would be very improbable if a Medina poet by these two references meant anything other than the Meccan sanctuary. The expression is also fairly frequent in the later Meccan period (Horovitz, op. cit.) and in various connections, it is a grave sin on the part of the polytheists that they prohibit access to the Masjid Haram to the "people" (Sūra ii. 214; cf. v. 33; v. 84; xvii. 25; xlvii. 25); the Masjid Haram is the pole of the new kițba (Sūra ii. 139, 144); contracts are sealed at it (Sūra ix. 7).

In these passages masjīd haram does not as in later times mean a building but simply Mecca as a holy place, just as in Sūra xvii. 1 Masjid ʿal-ṣāḥa [q. v.] "the remotest sanctuary" does not mean a particular building.

According to tradition, a ṭāḥā performed in the Masjid al-Ḥaram is particularly meritorious (Buḫārī, al-Ṣaḥīḥ fi Masjid Makka, bab 1). This Masjid is the oldest, being forty years older than that of Jerusalem (Buḫārī, Andāṣir, bab 10, 49).

This Meccan sanctuary included the Kaʿba [q. v.], the Zamzam [q. v.] and the Makāmah Ibrahim [see Kitaib], all three on a small open space. In the year 8. Muhammad made this place a mosque for worship. Soon however it became too small and under Yaman and 'Uthman, adjoining houses were taken down and a wall built. Under 'Abd Allāh Ibn al-Zabān, the Marjā' and 'Aḥād al-qulūb, successive enlargements and embellishments were made. Ibn al-Zabān put a simple roof above the wall. The Masjid had colonnades built around, which were covered by a roof of tile. The number of minarets in time rose to seven. Little columns were put up around the Kaʿba for lighting purposes. The mosque was also given a feature which we only find paralleled in a few isolated instances: this was the putting up of small wooden buildings, or rather shelters for use during the ᾱlāf by the ḫāmān, one for each of the four orthodox rites. The fact that one of these makkāns might be more or less elaborate than another occasionally gave
rise to jealousies between the Hanafis and the Shāfiʿis. Ultimately the ground under the colon-
nades, which was covered with gravel was paved
with marble slabs, in the maqṣf around the Kaʿba
as well as on the different paths approaching the
masjid.

The mosque was given its final form in the
years 1572—1577, in the reign of the Sūlān
Selim II, who, in addition to making a number of
minor improvements in the building, had the
flat roof replaced by a number of small white-washed
cone-shaped domes.

A person entering the mosque from the Masʿā
or the eastern quarters of the town, has to descend
a few steps. The site of the mosque, as far as
possible, was always left unaltered, while the level
of the ground around — as usual in oriental towns
and especially in Mecca on account of the Sīl —
gradually rose automatically in course of centuries
(cf. Snouck Hurgronje, Mekka, i. 15—20).

The dimensions of the Ḥaram (interior) are given
as follows (al-Batānūmī, Riḥā, p. 96): N. W. side 545
feet, E. W. side 553 feet, N. E. side 260, S. W.
side 364 feet; the corners are not right angles,
so that the whole roughly represents a parallelogram.

Entering the maqṣf from the eastern side, one
enters first the Bāb Bani Shība, which marks an
old boundary of the masjid. Entering through the
door, the Maqṣf Ibrāhīm is on the right, which is
also the Maqṣf al-Shāfīʿī, and to the right of it is
the minbar. On the left is the Zemzem building.
As late as the beginning of the sixth century,
there stood in front of the latter, in the direction
of the northeast of the mosque, two domed buildings
(al-Kubbatayn) which were used as store-houses
(Kron. d. Stadt Mekka, ii. 337 sqq.). These Kubbas
were cleared away (cf. already Burchhardt, i. 265);
they are not given in recent plans.

Around the Kaʿba are the maqṣafs for the imāms
of the madhhabas, between the Kaʿba and the south-
est of the mosque, the maqṣf (or musalla) al-
Ḥanbali, to the south-west the maqṣf al-Mālikī,
to the north-west the maqṣf al-Ḥanafī. The latter has
two stories; the upper one was used by the
maʿādhidiin and the maballigh, the lower by the
imām and his assistants. Since Wahhābī rule has
been established, the Ḥanbali imām has been
given the place of honour. The maqṣf al-Ḥanafī stands
on the site of the old Meccan council-chamber
(dār al-nadwa) which in the course of centuries
was several times rebuilt and used for different
purposes. The maqṣf is marked by a row of thin
brass columns connected by a wire. The lamps for
lighting are fixed to this wire and in the colonnades.

The mosque has for centuries been the centre
of the intellectual life of the metropolis of Islam.
This fact has resulted in the building of madrasas
and riwaṭs for students in or near the mosque,
for example the madrasa of Kātīr Bey on the left as
one enters through the Bab al-Sulām. Many of
these waqfs have however in course of time become
dedicated to other purposes (Burchhardt, t. 282;
Snouck Hurgronje, Mekka, i. 17). For the staff
of the mosque cf. SHEBA (BANÜ); Burchhardt, i. 287—
291.

MĀṢḤAF. [See MUSHAF.

MĀṢḤAFI, GHULĀM ḤAMDĀNI B. WĀLI MUḤAMMAD, a distinguished Urdu poet,
was born in Lucknow but went to Dihli in 1190
(1770), where he applied himself to the cultivation
of Urdu poetry. His house was resorted to by
the eminent poets of the capital. In 1219
(1795) he was made wazīr, one of the
rest of his life there under the patronage of Prince
Sulaimān Shāh, son of Shāh ʿAlām. He died in
1240 (1824). He is the author of several Divāns
in Persian and Hindustānī, and of biographies of
Urdu poets, called Tadhkīrā-ī Hind. He also
wrote another Tadhkīra of Persian poets who
flourished in India from the time of Muḥammad
Shāh (1131—1161 = 1719—1748) to the reign of
Shāh ʿAlām (1173—1221 = 1759—1806) entitled
ībād Tharīʿa, and a historical work in verse which
he entitled Shāhī-Nama.

MĀṢḤA-ALLĀH, the son of Aḥmad or Sirāyī, a
celebrated astrologer, who along with
Nawbakht fixed the day and hour for the foundation
of Baghdad by order of al-Maḥṣūr. According to
the Fīhrīst, he was a Jew whose original name
was Mīṣā (a corruption of Manāshī, i.e. Ma-
nasse); whether he later adopted Islam and for
this reason took the name Māṣḥa-Allāh is not
recorded. The date of his birth is unknown, but
it can hardly be later than 112 (730). He is said
to have died in 200 (815).

In numerous works Māṣḥa-Allāh covered the
whole field of astrology, and also the making and
uses of astronomical instruments. There has only
survived in Arabic fragments of a treatise on the
prices of various wares which was translated into
Latin under the title Māṣḥa-Allāh and speedily
Mercatorise. Many of his astrological works were
translated into Latin by Johannes Hispalensis and others and
later printed. Hebrew versions are also known. It
may be safely assumed that Arabic originals will
still be found in eastern libraries. The critical
study of the Latin translations existing in manu-
script and printed form is most desirable in view of
the early date of the author.

**AL-MAŠIH, the Messiah;** in Arabic (where the root mš-h has the meanings of "to measure" and "strove") it is a loanword from the Aramaic where מָשִׁיחַ was used as a name of the Redeemer.

Horovitz (*Koránische Untersuchungen*, p. 129) considers the possibility that it was taken over from the Ethiopic (waswāb). Muḥammad of course got the word from the Christian Arabs. In Arabic writers we find the view mentioned that the word is a loan-word from Hebrew or Syriac. Ĥabari (Tafsīr on Sūra iii. 40: vol. iii., p. 160) gives only purely Arabic etymologies; either with the meaning "purified" (from sins) or "filled with blessing". Horovitz, op. cit., calls attention to the occurrence of the word in inscriptions, proper names and in the old poetry.

In the Kur'ān the word is first found in the Meccan sûras, a. alone: Sūra iv. 170; ix. 30; b. with Ibn Marya: Sūra v. 19, 76, 79; ix. 31; c. with ʿĪsā b. Marya: Sūra iii. 40: vol. iii., p. 156. None of these passages make it clear what Muḥammad understood by the word. From Sūra iii. 40: "Who is more entitled to the name of ʿĪsā b. Marya" one might suppose that al-Maših was here to be taken as a proper name. Against this view however is the fact that the article is not found with non-Arabic proper names in the Kur'ān.

In canonical Ḥadīth, al-Maših is found in three main connections: a. in Muhammad's dream, in which he relates how he saw at the Ka'ba a very handsome brown-crested man with beautiful locks, dripping with water, who walked supported by two men; to his question who this was the reply was given: al-Maših b. Marya (BUKHĀRĪ, Liwa', bāb 68; Tafsīr, bāb 11; Muslim, Ṣaḥīh, tr. rodp. 60); b. in the descriptions of the return of ʿĪsā (q.v.); c. In the Last Judgment the Christians will be told: "What have you worshipped?" They will reply: "We have worshipped al-Maših, the Son of God". For this they shall wallow in Hell (BUKHĀRĪ, Tafsīr, Sūra iv., bāb 8; Tafsīh, bāb 24; Muslim, Ṣaḥīh, tr. rodp. 302).

In Ḥadīth also we frequently find references to al-Maših al-Kadim (and al-Abdu) and al-Maših al-Daudījī; see the article AL-DĀDIM. Bibliography: given in the article.

(A. J. WENSSINK)

**MAŠKĀT, 1. a seaport on the Gulf of ʿOmaįn, on the east coast of Arabia in 25° 37' 26" N. Lat., and 56° 15' 26" Eas. Long.** Maškāt is the only harbour between `Aden and the Persian Gulf, which ships of any size can enter and next to `Ade and Djjidda, the best harbour in the Peninsula. The port is of considerable importance from its position commanding the entrance to the Persian Gulf. It lies at the end of a hor-o-shoe-shaped bay 900 fathoms long and 400 broad which is enclosed and sheltered from the wind by multi-coloured rocks of volcanic origin, devoid of any vegetation. Behind the white town rises a series of extensive ranges of mountains on the highest of which, the Djaqal Akhdar, 9,000 feet high, snow occasionally lies in winter-time. On the slopes we even find the Muscatel vine growing which is said to have been introduced by the Portuguese. The harbour is very busy; in the middle of the shore stands the sultan's palace, at the south end the offices of the British political agent. On either side the town is flanked by an old Portuguese fort, Marānī and Djalālī. The chapel in one of them bears the date 1588. The bazaar consists of low buildings and is of little importance. The mosques are remarkable for the absence of the usual tall minarets.

The climatic conditions are by no means favourable. With al-Ḥaināda and Ḥjjidda, Maškāt is one of the hottest towns in the world. In 1912 the maximum temperature was 45ºC, the minimum 17ºC; the rainfall varies between 75 and 150 mm. The high temperatures are caused mainly by the hot winds which at certain periods in the summer months usually blow from the Arabian desert and from the rocky hills for several hours in the night. From November to the middle of March the weather is however quite pleasant, but one must beware of malaria and fever.

Maškāt plays a considerable part as centre of trade with the nearer east. There are regular communications with India, Persia, East Africa and Mauritius. The ships of the various ship companies call regularly at Maškāt, e.g. the British India Steam Navigation Company on the route from London to India, the Bucknall Steamship Company and the Strick Line to Bāṭrā, the West Hartlepool Steam Navigation Company on the Aden-Bayrā route, the Hamburg-America Line monthly to the harbours of the Persian Gulf, the Arab Steamers Ltd. on the Bombay-Bayrā route, and the Compagnie Rusive de Navigation à Vapeur et de Commerce. In 1912–1913 the total tonnage entering port was 98 steamers with 127,885 tons and 63 sailing vessels with 5,021 tons and leaving 86 steamers of 90,850 tons and 50 sailing-ships of 2,379 tons. The ships in question were mainly British (86.7% of). Maškāt has a regular postal service with the rest of the world instituted by the British, as well as a cable connection which the Indian Government has laid to Djasāk. The population, which changes a good deal, is about 10,000 souls, primarily Arabs but there are also Persians, Hindus, Indian Muslims, Beludjīs and a few Europeans settled here, mainly traders.

Maškāt was at one time a flourishing centre of the silk and cotton trade but in recent years this has almost been destroyed by Indian and American competition. The gold and silver work done by Indians here is famous, notably richly ornamented swords and daggers. The imports of Maškāt in 1912–1913 were valued at £ 463,551 and the exports at £ 301,477. The former were mainly arms and munitions, cereals, dyers, precious metals, pearls, foodstuffs, textiles, tobacco, building materials, enamels, glass and porcelain, ironmongery, perfumes and soaps, the latter camels, horses and asses, weapons, cereals, dried and salt fish, dates, lemons and pomegranates, walks and dragon's blood, pearls, melted butter (ṣhe), muskels, mother-of-pearl and tortoise-shell, textiles, hides and leather. The chief importers were India, then Belgium, England and 'Adeyn, the exports went mainly to India, the Arabian coast, England, Persia, America and Zanzibar.

According to local tradition Maškāt was founded at an early period by Himyar colonists. A. Sprenger has identified Maškāt with the Μασκάτ Αίολος of Ptolemy, vi. 7, 12. As the harbour has only a narrow entrance on the north and is enclosed on
the east by rocky heights, it is, as a matter of fact, easy for sailors to overlook it, and the name 'the hidden' would be quite appropriate. Al-Mukaddasi (B.G.A., iii. 95 sq.) who mentions the part of al-Maṣṭān, says that it is the first place which the ships from Yemen reach and is a fine town, rich in fruits. Ibn-al-Fakih al-Hamadhani (B.G.A., v. 111) says of Maṣṭān that it is the very end of ʿOman, about 200 parasangs from Sirāf, the starting point for ships sailing to India and to Kālimbālī, a month’s journey beyond it. Ships take in water here and Chinese ships pay 1,000 dirhams for it, the other 10–20 dinārs. Idrīs briefly mentions Maṣṭān as a densely populated town. Ibn al-Mudawwir is fuller (in A. Sprenger’s Post- und Rezeption, p. 145 sq.) and tells us that Maṣṭān was originally called Maṣṭān—so also Ibnulbair, p. 296—and that it is a considerable centre of trade with Africa and the coast of the Persian Gulf, whence the wares are forwarded to Ṣūfīshān, Ḥafūz and Zābuluṣān. In the beginning of the eighth century A.D., Maṣṭān, whose history had hitherto been that of ʿOman, attracted the attention of European powers. In 1526, Allmünchberg appeared before the town and demanded that it should submit to the Portuguese. At the first the people seemed to be peacefully inclined and willing to accept his terms, but this attitude changed and the Portuguese admiral decided to attack and destroy the town. Forty large and small ships and many fish-hunting vessels and the Imam’s arsenal were destroyed, the mosque pulled down and the town burned. The Portuguese fortified the place and in 1527 built two forts, Marānī and Djalālī, and factories; the present buildings of these names were however only built after the union of Portugal with Spain in 1580 by direct instructions from Maḥruq. The Portuguese had not an easy position here. They were frequently attacked by the surrounding tribes and in addition by the Turks; in 1526 a rising in Maṣṭān was put down by Lopo Vaz, the governor of India. In 1530 a Turkish fleet under Pir Bey appeared before Maṣṭān, attacked the town and took it by storm after eighteen days’ bombardment. The Portuguese commander and chief were carried off to be Turkish galley-slaves, but in 1553 the Portuguese succeeded in destroying the Turkish fleet and re-establishing their sway in the Persian Gulf. Maṣṭān was now fortified as a naval base. But after 1631 Portuguese pre-emptive began to decline rapidly. At the end of 1649, Maṣṭān was attacked by the Imam’s army and had to surrender on January 23, 1650, as relief came too late. The town now lost much of its former importance, although under Dutch influence its commerce was still considerable. Towards the end of the eighteenth century it attained an unenviable notoriety as a meeting-place for pirates. In 1757 it was taken by the Persians, who were driven out by Ahmad b. Solīḥī, the founder of the dynasty still ruling in Maṣṭān, who was elected imām in 1741. Since 1705 Maṣṭān has been the capital of the sultanate of ʿOman. After 1747 the French began to be influential in Maṣṭān, the town played a prominent part as a base for attacking India in Napoleon’s grandly conceived plan for destroying England’s power; we need therefore not be surprised that England al- so showed increased attention to the town. In January 1807, Capt. John Malcolm was sent to Maṣṭān by the Indian government and concluded a treaty with the Sultan by which an earlier agreement with the East India Company was ratified and an agent of the company established at Maṣṭān. In 1807 and 1808 the French made treaties with the Sultan and also sent a consular agent to Maṣṭān. The town flourished under this sultan, Saʿīd b. ʿOman, and became a centre for commerce with the Persian Gulf. Maṣṭān repelled an attack of the Wahhābis with the assistance of the English in 1809, but in 1833 it became tributary to them. The change from sailing to steamships brought about a decline in the importance of the town. In 1863 Palgrave describes Maṣṭān as an important harbour with 40,000 inhabitants, but in 1895, Bent puts the population at only 20,000 and at present it can hardly be more than 10,000. In 1833 however, the sultan was able to negotiate a commercial treaty with the United States, followed by a similar one with England in 1839; in 1844 France and Maṣṭān drew up a commercial treaty by which France obtained the privilege of the most favoured nation and French subjects were given full freedom to trade in Maṣṭān. The independence of Maṣṭān, although expressly stated in the Anglo-French declaration of 1862, was however little more than nominal, for England, who had several times come forward to protect the sultanate, had through her political agent considerable control over the sultan. In connection with the slave-trade, which England was endeavoring to suppress, the sultan of Maṣṭān had bound himself in various ways to England and in 1844 even ceded to England the Khor-rūn-Māraḥ Islands of which France was endeavouring to obtain possession. When Sultan Saʿīd b. Saʿīd died in 1856, his kingdom was divided between his two sons Ṣawārah and Ḥamīd, to whom the former received Maṣṭān, while the latter was given Zanzibar which had belonged to Maṣṭān since the end of the eighteenth century. This division was negotiated by England through Lord Canning, the Viceroy of India. In 1861 Zanzibar was declared independent, but it still had to pay an annual tribute to Maṣṭān, which England in 1873 undertook to pay in compensation for various concessions of the sultanate of Maṣṭān in connection with the suppression of the slave-trade. When long as the sultan refused to pledge this friendship for England. This readiness to meet the English was also seen in a telegraph agreement of 1864. In 1871 Sultan Ṣawārah concluded a treaty of friendship, commerce and navigation with England in which the Sultan bound himself and his successors not to cede, sell or let land except to England. The French opposed this and in 1894 succeeded in obtaining a coal mining station five miles S.E. of Maṣṭān. England raised objections and quoted the treaty with the sultan although France in the treaty of November 17, 1844, had secured the right to acquire land. Diplomatic negotiations finally brought about a settlement, by which France gave up the coal mining station in the Gulf of ʿOman, and in compensation was lent half the coal deposits of Maṣṭān. As France in 1916 again lent this coal mining station to the English, the dispute was finally settled in favour of the English. A second pretension was similarly settled, although for a time it caused grave diplomatic negotiations. The French consul of Maṣṭān and Zanzibar had given French papers and flags to a number of ships belonging to ʿOman. The captains of these ships, who often traded in slaves and smuggled arms, resented the jurisdiction of their sovereign, the
sultan of Maskat, and when the latter took steps to deal with them, they were protected by France. The affair finally became so serious that in 1903 there appeared to be danger of a conflict between England and France, but in 1905 the question was submitted to the Hague Tribunal which decided that only those sailing-vessels which had received the French flag before January 2, 1892, had the privilege renewed and licences later issued were cancelled as invalid, so far as they were not given to French protectes of 1863. As, in 1917, only 12 Omân sailing-vessels still carried the French flag, this privilege of France must soon die out. It was only natural that the active smuggling of weapons from Maskat not only to Persia and Afghanistan but also into the interior of Arabia, should cause anxiety to England. The flourishing trade in arms was put down in 1912 by the establishment of a depot for the sale of arms under government control, which alone could sell arms. It is true that the smugglers have now migrated to Birk, Shablain and Ruais, but the great decline in the import of arms into Maskat is best shown by the statistics of the year 1912–1913 when in the first half year 147,391 lbs. of arms were still imported while in the last five months the total was only 36,667. In 1913, the new ruler Sultan Taimur, who succeeded his father on October 4 and was recognised by England and France on November 15, 1913, met with serious opposition from the tribes in the south of Oman, who declared themselves independent under an Imam whom they chose themselves. It is only England's power that keeps these rebels from Maskat and thus secures the existence of the dynasty, whose rule has long been quite nominal.

2. Maskat ad-Kamīl, a village on the road from al-Ḥmāh to al-Nībah. 3 Market town on the Black Sea (Bohr: al-Khazān), said to have been founded by Khūrāw Anūshirvān. 

Maslama ibn 'Abd al-Malik, son of the second Marwānid caliph. “His chivalrous figure seems to have made a vivid impression on the popular imagination; one might think he came out of a popular romance” (C. H. Becker). Few of the Marwānid princes were so active and gifted in so many divergent directions. He lived long enough to give proof that he was not unworthy of the high hopes placed upon him. His gifts earned him the confidence of all the Marwānid rulers, to whom he was a Nestor whose counsels were always heeded, from 'Abd al-Malik to Hishām, not even excepting 'Umar II, who was not at all favourably inclined to the sons of 'Abd al-Malik, nor the hysterical Yazid II nor the criminal and fanatic Walid II, who kept at his loss. He had been carefully educated by his father 'Abd al-Malik. His long career as a military leader revealed his personal courage and his knowledge of the art of war. A man of good counsel and excellent judgment, versed in literature, a patron of poets and an accurate critic of their merits, adored by his men, Maslama made use of his exceptional position to be a protector of all the oppressed, to maintain the unity and cohesion at the heart of his dynasty, which was threatened by the absurd law of seniority which regulated the succession to the throne.

The chance of birth — his mother was a slave-girl — prevented him from rising higher. Walid I gave his brother Maslama the task of conducting the military operations against the Greeks. Henceforth — with a few short intervals — he was to hold the office of commander-in-chief of the Arab armies in which he frequently had under him his able and valiant 'Abd Allāh (q.v.), son of the caliph Walid. In the year 91 (709–710), he succeeded his uncle Muhammad as governor of Armenia, a province not completely subdued, which required a military man to rule it. He also governed the gūnūl of Kinanān (q.v.), another frontier province continually exposed to the attacks of the enemy. He never spent much time in civilian appointments, for which his soldierly spirit seemed less adapted and in which the independent character of the Marwānid prince usually came into conflict with the central power.

His campaign was marked by the capture of the important fortress of Tyana (Tuwânâ), the vigorous winter of the high Alanian plateaus did not interrupt the operations of this long siege, in which the assailants suffered great hardships (for the chronology see 'Abd al-'Alā'ī ibn al-Walîh). The dis-mounted town remained de-serted, a serious loss for the Byzantines. Their enemies now held both slopes of the Cilician Taurus, the gateway to Anatolia. Under Maslama’s directions, his nephew 'Abd Allāh in the next two or three years completed the conquest of mountainous Isauria. In 95 (712) the fortress of Amass was taken and Maslama entered Galatia through Armenia. This opened up the road to Constantinople. In 98 he laid siege to the capital. The attack dragged on and caused unpalatable sufferings in the Arab army. Contemporary writers blame for their failure the lack of foresight and insufficient diplomatic skill in the commander-in-chief. 'Umar II recalled the besiegers to Syria and sent Maslama to the 'Irāq against the Khārijīs. Yazid II sent his brother to put down the rebellion of Yazid b. Muhallab [q.v.] in the 'Irāq. After the death of this rebel (102 = 720), Maslama became governor of the two 'Irāq.

Before this, he had very opportunely persuaded the caliph not to modify the order of succession so as to avoid the disadvantage of Hishām. Yazid was not long in finding fault with his brother, especially as he neglected to send him the taxes of his immense eastern vice-royalty. He recalled him to Syria, where Maslama endeavoured to combat the influence of favourites on this weak sovereign. Returning to the army in 108 he conquered Caesarea in Cappadocia. The following years were marked by Maslama’s great campaign in Armenia and the land of the Khazars. After partial successes in which the country was laid waste, the stubborn resistance of the natives and the Turkish tribes forced him to retire. The retreat was a disastrous one: with great difficulty Maslama succeeded in bringing back the remnants of his army to Arab territory by sacrificing all his baggage and equipment (115 a.h.). His intervention to support the claims of Walid b. Yazid [q.v.], heir presumptive to Hishām, compromised him at court. He died before this caliph and seems to have taken with him to his grave the fortune of the Marwānids, for they rapidly declined after his death.

(H. Lammens)

MAŞMUDA (the broken plural Maşmûda is also found), one of the principal Berber ethnic groups forming a branch of the Barānis.

If we set aside the Masmûda elements mentioned by al-Bâkiri in the neighbourhood of Bone, the post-Islamic Maşmûda seem to have lived exclusively in the western extremity of the Maghrib; and as far back as one goes in the history of the interior of Morocco, we find them forming with the Sanhāja [q.v.], another group of Barānis Berbers, the main stock of the Berber population of this country. Indeed from the first Arab conquest in the seventh century to the importation of the Hīlalus by the Almohad Sulṭān Yaḥyī al-Manṣūr in 1190, it was the Maşmûda who inhabited the great region of plains, plateaus and mountains, which stretches from the Mediterranean to the Anti-Atlas to the west of a line from N. E. to S. W. passing through Mknāsa (Meknès) and Imnān; the only parts of this territory which were not occupied by them were the three small Sanhaja enclaves: the Sanhāja of Tangier, of the valley of the Warghā and of Azamīnī. To the north and to the west, the land of the Maşmûda was bounded by the Mediterranean and the Atlantic. To the east and south it was bounded by the lands of the Sanhāja. To the north were the Sanhāja of the region of Tāzā and those of
Wargha; in the centre, the Zamaga or Sanhadja of the Central Atlas, to which should be added the Zanata of Fassa; to the south, the Haskura, the Lamta and the Guelala.

It was from the presence of this Maşmuda bloc, extending continuously from Süs to the Mediterranean, that eastern Morocco generally must have received the name of Süs, a name found for example in Yaqtin (cf. Mijyam, s. v. Süs) who distinguishes a Hither Süs (capital Tanger) and a Farther Süs (capital Taifa) separated from the other by two months' journey. It is also to this racial unity that are due the legends according to which all the N. W. corner of Morocco was once inhabited by the people of Süs (abl Süs). Before the coming of the Hilâli Arabs, the Maşmuda parties were divided into three groups:

1. In the north, from the Mediterranean to the Sabil and Wargha, the Ghamara (q. v.).
2. In the centre from the Sabil to the Wadi Umm Rabî, the Barahawta (s. Berghilawata).
3. In the south, from the Wadi Umm Rabî to the Anti-Atlas, the Maşmuda in the strict sense of the word.

Like the majority of the Barânis, who in this respect are a contrast to the Butr, who are inclined to be nomads, the Maşmuda were all settled; for if, in one passage, Ibn Khalid mentions two nomad tribes, the Lâghs and the Zaggan as forming part of the nomad contingents of the Hilâli, he also points out that they were tribes of the Lamta, i.e. of the nomadic Sanhadja, who finally became incorporated in the Dawâw Hassân, Maqâlik Arab nomads of Süs. Ibn Khalid further mentions that special mention of the fortresses and fortified villages (ma adapté nso-taou) of the Maşmuda who lived in the mountains of Daran or the Great Atlas. Other Arab historians and geographers mention the many little towns (karva) in the plains occupied by the Dukkala or the Barahawta, a pastoral and agricultural people; but these were gradually ruined and destroyed in the course of the fighting which went on without interruption in their country from the establishment of the Zanata principalities of Şâlîla, Tâdilâ and Âghmûn: the Almoravid and Almohad conquests, repeated campaigns against the heretical Barahawta, the Hilâli occupation, the struggle between the Almohads and the Marinids, the rivalry between the Marinid kingdom of Fas and that of Marrakesh and lastly the wars with the Portuguese. Exterminated as heretics, dismissed of their lands and driven from them by the Arab or Zanata nomads brought into their territory, transported to a distance (region of Fas) by the Waṭjasid sulûns, for whose taste they showed too little hostility to the Portuguese, the central Maşmuda of the original Maşmuda of Tamasnâ and of the land of the Dukkala finally disappeared: their place was taken by nomads, Hilâli Arabs (in the north, in Habî and Aqghar, the Riyâh; in the south, the Djuwân, Sufyan, Khulû, Banû Djaûr) and the Berbers (Zanata Hawwârâ); in the xviith century the coming to power of the Sa'dian dynasty brought about the immigration of Maqâlik Arab tribes to the same region: 'Abda, Aymar, Rahâmîna, Barâbêsh, Wadlaya, Awdâl Doulâm, Zu'aîr, etc.

From the xviith century onwards, as a result of the occupation of their central plains by the Arabs, Hilâli then Maqâlik, the Maşmuda only survived in the mountainous regions which formed the northern and southern extremes of their old domains. The Maşmuda of the north (or Maşmûta al-Sûlî): "M. of the shores of al-Kûyân were chiefly represented by the Ghamara group (q. v.). But, alongside of them, we find two small groups having the same racial origin:

a. The Maşmuda of the Straits, settled between the district of Cuta, which belonged to the Ghuwara and that of Tangier, a Sanhadja country. It was they who gave their name to the fortified port of Kûsàr Maşmûda, also called Kûsîr al-Madîjz, the modern al-Kûsîr al-Sâghir. Their presence here is attested in the tenth century, for it was while fighting here against them that Isâm Mînî, the prophet of the Ghuwara, was slain; al-Rûkî (xith century) knows them in the same area corresponding to that of the modern Aqzâq.

b. Al-Bakrî mentions another group of Maşmûda (tribe of the Aqzâq) settled in the land lying between al-Kûsîr al-Kabîr and Wâzzân; there is still a small Maşmûda tribe between these two towns.

The Maşmûda of the south, who inhabited the lands between the Wâdî Umm Rabî and the Anti-Atlas, were divided into two groups: those of the plain and those of the mountain.

a. The Southern Maşmûda of the plain lived to the north of the Great Atlas. The chief tribes were the Dukkala; the Banû Mâgûr (around Safi); the Hazîmâ; the Ragража and the Hadîya (to the south of that of the Tânsîf). The chief town in this region was Safi (Ar. Asîfî), for the town of Azemmûr (q. v.) and the rîba' of Tît (q. v.) were in the enclave of Sanhadja; besides the port of Safi, we must also mention that of Kûsîr (the Aguz of the Portuguese) at the mouth of the Tânsîf, which gave Agmân access to the sea and had a rîba', and that of Amadûli (the Mogador of the Portuguese) which served the district of Sûs. Besides these three centres, there were, as in Tamasnâ, a large number of fortified little towns (karva) many of which survived down to the xvith century; the Portuguese chroniclers, Leo Africans and Marmol have preserved for us many names of towns which have disappeared, their very memory being lost; the local hagiographic collections and notably the Kûtub al-Tâjsgawwass of al-Tâdîlî (xvith century) have preserved a good deal of valuable information on this subject. At the present day all the country to the north of the Atlas is arabised and if the old Berber element has not completely disappeared, it is at least overwhelmed by Arabs of whom the majority seem to be of Maqâlik origin. The Hadîya alone, between Mogador and Agadir, have maintained almost intact and have retained the use of the Berber language.

b. The Southern Maşmûda of the mountains occupied the Great Atlas (Zalahl Daraw), the massif of Surwâ (anc. Suswâ) and the Anti-Atlas or mountains of the Najâra (Beib. In Gis). In the Great Atlas, the Maşmûda extended to the east as far as the upper course of the Tânsîf (a pass called Tizin-Telwet). From west to east, the following were the chief groups: the Galfâwâ; the Hulûnâ (or Allâna), the Warika and the Hazradja, near Aqzâq; the Aqzânâ, including the Mgâfîa, the Maghâris and the Dagaîhû or Banû Daghbû; the Hinta, including the Ghaibû; the people of Tin-Mallâ, on the upper course of the river of Nâfis; the Sûda or Zanda, in the lower valley of the Asîf al-Mâl; the Gaddûnwa and
lastly in the west, the Gafsa, the chief tribe of which was the Sakstra or Saksawa.

The massif of Sirwa and the high valley of the Wadi Sint were inhabited by the Banū Wawazig and the Sakhāna. The N. E. part of the Anti-Atlas was occupied by the Hargha.

Farther to the south, the Sūs, properly so-called, was inhabited by heterogeneous elements of Masmūda origin (al-Idrisī, al-Butūn al-Dīr al-Masmūda). Describing the road leading from Ţarfūdant to Aqghmāt, al-Idrisī mentions between Ţarfūdant and the land of the Hargha, four tribes the names of which, corrupted by the copyists, are unfortunately hardly identifiable.

Besides these highlanders, who were strictly Masmūda, we must mention the Haskara (or Hasakara). These were highlanders of Sanhâja origin, brethren of the Lamta and Gair, who led a nomadic existence to the south and the Anti-Atlas. The Haskara settled in the high valley of Tānūfīt and the Wādī al-Abbīd, on the two slopes of the mountain range which locks the Great Atlas, the home of the Masmūda, with the Central Atlas, the home of the Zanîgā (Sanhâja) of Ţadilla; their chief tribes were the Zamīsawa, the Maghara, the Garmâna, the Ghudja-dama, the Fatwâka, the Mashâra, the Hultâna, and the Hantâna, who, as they lived on one slope or the other, belonged to the Haskara al-Ḳibla (H. of the south) or to the Haskara al-Dīl (H. of the north), Ibn Khâlidān, who calls attention to the Sanhâja origin of the Haskara, adds that as a result of their taking up the Almohad cause, it became customary to associate them with the Masmūda tribes, but that they never enjoyed the same privileges as these latter.

History. In 682, ʿUqba b. Nāfiʿ marched against the Masmūda of the Atlas with whom he fought several battles. On one occasion he was surrounded in the mountains and owed his safety solely to the help given him by a body of Zanîgā. In the same year he attacked and took the town of Nafsa which was occupied by ʿRûm and Berbers professing Christianity. Thence he went to Iglī, a town of Sūs which he also took.

Legend adds that he even thrust his way to the Atlantic where he rode his horse into the water, calling God to witness that there were no more lands for him to conquer. This first submission of the Masmūda does not however seem to have lasted after the departure of ʿUqba. In 707, Māʾāt b. Nūrār had to reconquer Morocco; his person took Iglī and Taḍīft and sent his son to the conquest of Sūs and the land of the Masmūda.

In 712 ʿAbd Allah b. al-Habībah was appointed governor of the Maghrib; he appointed his son ʿIsmāʿīl as assistant to the governor of Morocco and gave him particular charge of the district of Sūs.

In 725, the same ʿAbd Allah sent Ḥabīb, grandson of ʿUqba, to make an expedition into Sūs against the Masmūda and the Sanhâja (Masmūda). Later the latter's son ʿAbd al-Kahman al-Fifti (d. 715) became an independent governor of the Maghrib, occupied Iglī and built a camp there, the remains of which could still be seen in the Almohad time. It is to this same governor that is attributed the making of the well, which supply the road from Tānūfīt to Awādīghī through the modern Mauritania.

The land of the Masmūda then disappears from history till the ninth century. The conquests of Idrīs I did not extend in the south beyond the Tānūfīt and the Tādilla. But in 812 Idrīs II made an expedition against the town of Naffis; on his death in 828, his son ʿAbd (or ʿUbayd) Allāh obtained as his share of the kingdom, Aqghmāt, Naffis, the lands of the Masmūda and of the Lamta as well as Sūs. Al-Bakri records that some of his descendants ruled as lords of Naffis and among the Banū Lamta, not far from Iglī. Other Idrisiids, descendants of ʿUbayd b. Idrīs, were at this time lords of Darā.

With the decline of Idrisiid power in the tenth century, the Masmūda again became independent and were ruled by elected chiefs or inghârīn (= Arabic ṣawâdek); al-Bakri tells us that those of Aqghmāt were appointed by the people for a term of one year. When at the end of the tenth century, Zanîgā principalities became established in Morocco (at Fas, Shâlā and Tādilla), Maghrawa established themselves at Aqghmāt; but all we know of them is that they were attacked by the Almoravids. In 1057, after receiving the submission of Sūs and of the Masmūda (Zauda, Shâfīja, Gadrîwa, Kârānā and Hâla), the Almoravīd chief ʿAbd Allāh b. Yūsuf took Aqghmāt; the last Maghrawa ruler of which, Lagūt b. ʿAlī, fled to the famous Zumâar, who was one of the Nafzawa, and became the wife of Yūsuf b. Tâshfin whom she initiated into the fine art of diplomacy.

From 1057 Aqghmāt was the capital of the Almoravids till 1062, when Yūsuf b. Tâshfin founded Marrakush [q. v.]. In 1074 the same ruler, having divided his empire among several governors, gave his son Tamūn the governorship of Marrakush, Aqghmāt, of the Masmūda and of Sūs, then of Tādilla and Tānūfīt.

The Masmūda seem to have remained subject to the Almoravids till the rebellion in 1121 provoked by the mabdi Ibn Tanart [q. v.] of the tribe of Hargha, who, supported by ʿUmar Inti, shaikh of the Hintāta, and by ʿAbd al-Muʿmin [q. v.], brought about the foundation of the Almohad dynasty [q. v.]. The history of the Masmūda is henceforth involved with that of the dynasty which they brought to power and which was to last till 1269. The Masmūda, together with the Almohad dynasty, thus contributed to the rise of the Hafsids [q. v.], who ruled over Ifriqiya from 1228 to 1574, through the descendants of ʿAbd al-Hāf ʿUmar Inti, shaikh of the Hintāta.

During the first half of the xiii rh century, the power of the Almohads, routed by the Christians of Spain at the battle of Hījān al-ʿUkhab (las Navas de Tolosa) in 1212 and vigorously attacked in Morocco by the Banū Marin, soon began to decline. The Masmūda of the Atlas, indifferent to the fate of the dynasty, took advantage of this plight to regain their independence. It was the tribes of the Hintāta and the Haskara, which in 1224, at the proclamation of al-ʿAdil assumed the leadership in the movement; frequently allied with the Ḥabīb Arabs of the plains, Sufyān and Ḥafṣ, we find them fighting in all the civil wars and supporting various pretenders to the throne.

When in 1260, the Marinids had definitely crushed the Almohads, the Masmūda retained a certain amount of independence and lived more or less in submission to the central power, ruled by chiefs chosen from the great local families: Awdāl Yūnis among the Hintāta; Awdāl Saʿīd Allāh among the Gadrīwa; among the Sakstra, ʿUmar b. Haddi.
was an independent chief who went so far as to claim the Berber title agellid (= king). In Sūs the Banū Yaddar founded an independent principality which lasted from 1254 till about 1340. As to the Haskūra, the power among them was exercised by the Banū Khattāb.

Down to the xvi century, except during the first half of the reign of the Almohad dynasty of which they had been the principal supporters, the Maşmūda of the Atlas were hardly ever under the direct rule of the Moroccan government; only the tribes of the plains, Dukkāla and Ḥaḷa, in a position to be of the greatest importance, were able to offer less resistance and had to submit. The later dynasties, Sa'dīan and 'Alawī, were no better able to subdue the Maşmūda of the highlands; but instead of gathering round local chiefs with temporal power, the latter now placed themselves under the leadership of holy men with religious prestige.

In the beginning of the xvi century, the land of the Maşmūda was in a state of anarchy. Some aṭṣṭāk of the tribe of the Hintāta held the lands of Marrākush; the most famous was Abū Shāmūt; to the south of Tāmnīf, the xvi century saw the rise of the group of the Kāṭrīgā in the xv century, the power of the mystic al-Dīzuḷi [q.v.] spread among the Ḥaḷa. In the adjoining country of Darā'a, the Sa'dīan dynasty was rising, which after occupying Sūs imposed its domination on the whole of Morocco.

But it did not however succeed in subduing completely the highlanders of the Atlas. The powerful Aḥmad al-Maṣrū himself had to fight against a pretender who had proclaimed himself king of the Ṣaksāwa.

After the death of al-Maṣrū, the Atlas and Sūs were all under the authority of local religious leaders of whom the most important were to be found among the Ḥaḷa and in Tāzarwāl (family of Aḥmad U-Mūsī).

It was the 'Alawīs Sulṭān Mawlāy Raḥā'id who restored Sūs and the Atlas to the Moroccan empire. The only episode to note is the constitution in Tāzarwāl, by a marabout Saiyīdī Hīṣām of a kind of independent kingdom, the capital of which was Ilīghat and which lasted from the end of the xvi century till 1886.

Henceforth the Maşmūda disappear from history. The Atlas remained more or less independent, according to the degree of power of the ruling sovereigns, but all the important events in the region took place among the Ḥaḷa or in Sūs [q.v.].

The French occupation found the old Maşmūda grouped, since the death of the 'Alawī Sulṭān Mawlāy al-Ḥasan, into three bodies each under the authority of a local family: the Gūwa in the east, the Gūnja in the centre, and the Mṭuğgā in the west. The only one who is now the Gūwa; as a result of the disappearance of their leaders, the two others were recently broken up.

The name Maşmūda, still preserved in the north of Morocco in the name of a small tribe of the Kašr al-Kabir, seems to have completely disappeared in the south, where the former Maşmūda peoples, continuing to talk Berber, bear the name of Shīḥā (χίνις). Ibn Ṭūṣī, however, speaks of the name Maşmūda, which is found so often in the Arab historians and geographers, was ever in regular use among the peoples to whom they apply it; it is, indeed, suggestive that it is not found in the long lists of ethnics given in the Kitāb al-Ansāb, published in the Documents inédits d'Histoire Almohade.

Sociology. The Maşmūda of the Atlas lead a settled life, living by a little agriculture and breeding a poor type of cattle; they live in villages or hamlets of stonehouses with clay roofs. Ibn Khāldūn notes the existence among them of numerous little strongholds and fortified villages (mādīiq wa-hayyūn), the ancestors of the modern tighrens and agādīrs. There were no towns among the mountains; Tin Mallal, famous for the mosque where Ibn Tāmūr was buried, was never a town. Before the Almoravid ruler Yūsūf b. Tāṣhīf founded Marrākush in 1062, built moreover in the plains out of reach of the highlanders, whom it was to control, the only urban centres in the district were situated at the foot of the Atlas on its lowest slopes. The principal towns were in the north, the double town of Aghmāt [q.v.] and that of Nafis on the river of the same name; in the south, in Sūs, Iglī and Tāʾūdant; as places of less importance we may mention in the north, Shīḥāwa (mod.: Shīḥāwā), Aʿṣīf and Tamarūrī; to the east, among the Ḥaḷa and in the borders of Sūs, Tadnaṭ, the great trade routes on which travelled the region started from Aghmāt for the port of Kūz (at the north of the Tāmnīf), Fās (via Tāllā), Sīdīmlās (through the land of the Ḥadżadja and the Haskūra), and Sūs (via Nafis, the land of the Banū Maǧhūs and Iglī; no doubt using the pass now called Tawi-n-Ṭesṭ). Al-Bakrī particularly mentions the industry and application and the thirst for gain, characteristic of the Maşmūda of the Atlas and of Sūs. The principal products of the country were fruits (nuts and almonds), honey and oil of argan (hargīn, argūn), a tree peculiar to the country, of which there were regular forests among the Ḥaḷa. The Maşmūda could eat and work iron and also copper, which they exported in the form of ingots or "loads" (gūntūl); they also worked and chased silver jewellery. In Sūs also the cultivation of the sugar-cane enabled sugar to be made.

From the intellectual point of view, the Maşmūda seem to occupy a place of first rank among the Berbers. Each of their three principal groups has produced a reforming prophet, the author of sacred works in the Berber language: Ḥā-Mīm of the Gūmārā; Sha'īb b. Ṭārīf of the Barāghwātā; Ibn Tūmart of the Maşmūda of the Atlas. It may also be noted that, Sūs is one of those few districts in which books were written in Berber down to a quite recent date (cf. H. Basset, Essai sur la littérature des Berbères, p. 73–81).

As regards religion, the Maşmūda were converted to Islam in the vii century by Ukhra b. Nafī', who left his comrade Shīkār among them to teach the new religion. The latter died among them and was burned on the banks of the Tāmnīf where his tomb is still venerated. The place is now called Rūḥ Saiyyīdī Shīkār near the confluence with the river of the Shīḥāwa. The Mosque of the town of Aghmāt of the Hailāna was founded at the beginning of the eighth century in 704.

Ibn Khāldūn describes the Maşmūda of the Atlas as being among the last to be converted from the first conquest, in which they differed from their brethren of the north, the Barāghwātā and the Gūmārā, who remained faithful to their heretical beliefs. At the beginning of the eighth century, several
of them accompanied ʿĀrif on his conquest of Spain: the best known of these was Ṭawāsī b. Wāzīṣ b. ʿĀrifī, of the tribe of the Aṣḥāda, who settled in Spain and was the grandfather of Yaḥyā b. Yaḥyā, one of the rulers of the Musawwarī; many others also settled in Spain and their descendants played important parts under the Omayyads.

In the eleventh century however, al-Bakri notes Kutub al-ḥerētes among the Masūmāš; these were the ʿIrbān ʿĀrānī who settled to the north of the Ḥaritha and the town of ʿIgī. In this district he also mentions the existence of idolators who worshipped a ram: perhaps we have here a relic of the cult of the god Anmon among the ancient Berbers. The towns however formed important centres of Muslim culture, the influence of which was felt not only by the Masūmāš of the district but also by the ʿIrbān ʿĀrānī of the adjoining deserts: ʿIrbān and ʿAzāzā. We know that it was in the town of Xafqī, with Wāzīṣ b. Zallū, a learned jurist of ʿIrbān origin and a pupil of Abū Iʿrānī Abū al-ʿAffā of al-ʿAṣ ibn al-ʿArāmīn, that in 1039 Yaḥyā b. Ibrahim al-Gudārī recruited ʿAbd Allāh b. ʿAbd Allāh al-Gudārī who was the promoter of the Almoravī movement. For the Almohād period al-Tallīī’s hagiographic collection, entitled Kitāb al-Tālīī, shows us the land of the Masūmāš of the south full of wonder-working saints. Later the tribe of the ʿArāmīn, settled on the land occupied by the ʿIrbān ʿĀrānī, was the center of a movement at once religious and political, the details of which are little known but the memory still alive. In the first half of the xviith century, religious activity seems to be concentrated in the south of Sinā, in Ẓāwār where the descendants of the saint Sayyid ʿAbd al-ʿĀrānī ʿUṣārā carved themselves out an independent marabout principality.

AL-MAṢMUGHĀN, a Zoroastrian dynasty whom the Arabs found in the region of Dunīwān (Dunbāwind) to the north of Ray. The origins of the Masūmāsh. The dynasty seems to have been an old one though not particularly celebrated. As is shown by the legend recorded by Ibn al-Fakhrī, p. 275—277, and in al-Brūkī, p. 227. The title of masūmghān is said to have been conferred by Fārūqī upon ʿArmālī, Bawārī’s former cook (ʿahāk), who had been able to save a large part of the men-de-tensed to perish for the tyrant’s serpents. ʿArmālī (according to Yaḥyā, ii. 606, a Naḥṣānī, a native of the Zabīhāj) showed to Fārūqī in the mountains of Dalām and Shīrī, a whole nation of these refugees which caused Fārūqī to exclaim: was mānī kāta ʿārānī (which is explained to mean: “What a large number of people of the house of ʿAbd Allāh thou hast saved”).

The first historical reference to a masūmghān is found in Tabārī’s (i. 2656) account of the taking of Ray by Naʿīm b. Mūkārin in the time of the caliph ʿOmar (according to Ibn al-ʿAthīr in the years 18, 21 or 22; ʿArbārī however puts these events as late as 98 (716—717). The King of Ray, ʿIyāwākāsh b. Mīhrān b. Bāhrām-ʿAbbās, had received reinforcements from the people of Dunūāwānd, but when he was defeated, the masūmghān of Dunūāwānd made peace with the Arabs and received the terms (al-kaʿārī maḥrūr wa-l-munīnī) promising an annual payment of 200,000 dīnār. The charter given by Naʿīm was addressed to the masūmghān of Dunūāwānd, ʿAbd al-Ẓāwār, to the people of Dunūāwānd, of Kūnār, of Lārīz (Lārgān) and of Shirīz. This gives us an idea of the extent of the masūmghān. His possessions included the country round Mount Damāwānd [q.v.] and stretched down the plains as far as the east of Ray. The district of Dunūāwānd (Dūbāwānd, the land occupied by) the ʿAbd ʿAlī clan did not form part of Tabārī. The Arabs mention it along with Ray (Tabārī, i. 2655—2656; Naḥṣānī, p. 209; Ibn al-Fakhrī, p. 275—277) but as we have seen at the time of the conquest, Ray and Dunūāwānd were under different dynasties. The old capitol of Dunūāwānd may have been at Mandān where, according to Ibn al-Fakhrī, ʿArāmī had built a wonderful house of teak and ebony, which in the reign of ʿAbārīn al-Rahīd was taken to pieces and transported to Baghdad. In the Arab period there were two towns in Dunūāwānd: Ţīmā and Ṣhalānī (the latter is marked on Stahil’s map to the south of the modern town of Damāwānd, which lies on the slopes of Mount Damāwānd). According to Yaḥyā, the masūmghān’s principal stronghold was called ʿUṣārātān (or ʿArānī). This should be sought above the village of ʿArānī, which must correspond to the old ʿArānī al-Hadādīn. (Ibn al-Fakhrī’s story of the shops of ʿAwnānī in which worked the smiths, the noise of whose hammers exercised the encircling Bewārās must refer to the chambers carved out of the rock near ʿArānī; cf. Crawfay-Williams, Rock-Dwellings at Rīsān, J.R.A.S., 1904, p. 251; 1906, p. 217).

An attempt made by Abū Muslim in 131 to conquer the masūmghān was a disastrous failure: his general Māṣūr b. Kūnār was attacked by the masūmghān’s men and on account of the difficult nature of the country (li-dībi biḥṣādā) was forced to return to Ray (Ibn al-ʿAthīr, v. 304; cf. ʿIzār b. ʿAbd in Dorn, Ausweis, p. 441).

The principality was not conquered until 141. In this period there were dissensions in the family of the masūmghān. Abarwī b. al-Mansūr quarrelled with his brother and went over to the caliph al-Mansūr who gave him a pension (Tabārī, iii. 150). The Kitāb al-ʿĀrānīnb i-Haddāk, p. 228, teases out his bravery in the rising of the Rāwawīya and calls him “al-Masūmghān Māṣūr b. Dinār, makī al-dīn ʿArānī”. This Abarwī (or Māṣūr) had enjoyed considerable influence, for, according to Ibn al-Fakhrī, the appointment of ʿOmar b. ʿAlī as commander of the army sent against Tabārīstān was made on the advice of Abarwī who had known him since the trouble with Sunbāh (on the partisans of this “Khurrami” in Tabārīstān cf. Maṣūdī, Muṣnūt, vi. 158) and with the Rāwawīya.

In the year 141, the brother of Abarwī who occupied the throne of Dunūāwānd was at war with his father-in-law, the ispahāb Khurram of Ṭabaristan; but when he heard that the forces sent by al-Mansūr were on their way to Ṭabaristan, he hastened to effect a reconciliation with his adversary (Tabārī, iii. 136; Ibn al-ʿAthīr, v. 386).
The stories of the campaign against Tabaristān directed by al-Mahdi by order of his father al-
Maṣfir are very contradictory as is shown by their very detailed analysis in Vasmer, op. cit. After the defeat of the ispahbads, the Arabs con-
quered the masalmahān and captured him and his daughters Bakhhtariya (?) and Šnry (for Shokla). Of these princesses one became the wife of Mahdi b. Maṣfur and the other the amān-walad of ‘Ali b. Ra’ītā. According to a story in Ibn al-Fākhi, p. 314, Khālid b. Barmak (Vasmer, op. cit., p. 100, thinks that his expedition was sent especially against the lord of Dunbāwland) sent the masalmahān and his wife and his two daughters to Bagdad, but in another passage, p. 275, the same writer says that the masalmahān obtained amān from Mahdi b. Maṣfur and came down from the mountain of al-
Aiāin (?) He was taken to Ra’i and there Mahdi ordered him to be beheaded.

After the death of the masalmahān, the people of these mountain regions lapsed into barbarism (hawwa) and became like wild beasts (Tabari, i. i. 136). According to Ibn al-Fākhi (p. 276) however, the descendants of the masalmahān (zhumr al-maṣfur) were still well known.

Spiegel’s and Malqurt’s hypotheses. Yağūt i. 244 interprets masalmahān as kahib al-
maṣfur “the great one of the magi” (weis, “great”; N.W. Iranian form). Spiegel thought of connecting this dynasty with the prince-priests of Ra’i, whose existence is known from a well-known passage in the Avesta (Yasna, ix. 28, transl. Darmesteter, i. 170; cf. Jackson, Zoroaster, p. 202-205). In spite of Malqurt’s criticisms, who says it is impossible to quote the authority of Avestan traditions which relate to much earlier state of affairs, Spiegel’s suggestion is still of interest. We have certainly to deal with vague memories and not with actual facts. In the time of the Arab conquest the descendants of Bahram-Cōbīn were ruling in Ra’i, but the Arabs (Tabari, i. 2653-2656) installed there a certain al-Zainabī, son of Khwāja and father of al-Farrukhān. It remains to be seen if this family of Zainbād, “whom the Arabs call al-Zainabī” (Nadhirī, p. 317) is connected with Dunbāwland. The name was called ‘hriz (Ra’i) which resembles the name of the mountain al-
Aiāin from which the last masalmahān came down (cf. the note by de Goeje in Ibn al-Fākhi, p. 275). Mar-
quart wanted to connect the masalmahāns of the Bawandi dynasty, the eponymous ancestor of which Baw, a descendant of Kayīl, brother of Khuşraw I, is said to have lived in the time of the later Sāshānians. This Baw was a man of piety and after the fall of Yazdagird III had retired to his father’s fire-temple. Malquart regards him as a “magus” and identifies him with the father of the Christian martyr Anastasius, who bore this name (Bz6) and was a “master of magian lore.” Lastly he quotes the fact that the Bawandis appeared in 167 only after the disappearance of the masalmahān (after 141) as if to continue their line. Unfortunately several details of the ingenious arguments are not accurate: our sources (Ibn Isfandiyār, Zahr al-Din in p. 200-205) give not the slightest suggestion that Baw belonged to the priestly caste. According to Ibn Isfandiyār (transl. Browne, p. 98), his grandfather’s temple was at Kūsān, which Rabino, p. 160, locates a little distance west of Ashraf i.e. quite remote from Dunbāwland. The passage in Tabari, i. 1294, which Marquart quotes to prove the occurrence of the name Masalmahān among the Bawandis refers to the cousin of Mazīyar of the Kairīn dynasty, which is quite different from the Bawandis (cf. below).

The Kairīn masalmahāns. It is curious that neither Ibn Isfandiyār nor Zahr al-Din speak of the dynasty of the masalmahān of Dunbāwland, perhaps because they do not include this region in Tabaristān proper. On the other hand, they mention a masalmahān (masalmahān > masalmahān) Walsah, who was the marzubān of Miyān-dru-ru’d (Zahr al-Din, p. 42 says that this canton was near the Sāri between the river Kaliand and Mihbān and that on the east it adjoined Qara-
hūghān; Miyān-du-rū’d is thus quite close to where Rabino puts Kūsān). This masalmahān Walsah (Ibn Isfandiyār, p. 101; Zahr al-Din, p. 42) lived in the time of Djamasp Farrukhān the Great (700–722) and belonged to the elder branch of the Kairīns descended from Zarmīr b. Sūkhās. (We do not know why Juzjī, p. 430, takes this Walsah to be the son of the last masalmahān of Dunbāwland?). The Kairīn Wändad Hurmuz (of the younger line, descended from Kāruz, brother of Zarmīr) in his rising against the caliph (cf. Mahdī, p. 158–169) had combined with the ispahbads Shahr-
win (772–797) and the masalmahān Walsah of Miyān-dru-ru’d. This latter (Ibn Isfandiyār, p. 126; Zahr al-Din, p. 155) seems to have been one of the successors of the masalmahān Walsah mentioned above.

Under 224 (838) Tabari (i. 1294) mentions a cousin of the Kairīn Mazīyar, who was called Shāhhrīyār b. al-Masalmahān. According to this, al-
Masalmahān would be identical with Wändad Ummid, uncle of Mazīyar (cf. Justi, p. 430). On the other hand under the year 250 (864), Tabari, i. 1529, mentions a Masalmahān (рез) among the allies of the ‘Alī Ḥasan b. Zaid. Ibn Isfandiyār, p. 165 calls him Masalmān b. Wändad-Ummid. One must either suppose there is an error in Tabari’s genealogy or admit that the title of mas-
almahān was borne both by Wändad Ummid and his son, but the form of the designation of the latter (Masalmān) with the article) would rather suit the title that had become a simple proper name (Brown is wrong in translating ‘the Masalmahān’).

To sum up then: Alongside of the masalmahāns of Dunbāwland, we have the masalmahāns of Miyān-
dru’id. These marzubān, if we may rely on Zahr al-Din, belonged to the Zarmīrīn branch of the dynasty of Sūkhās (Ṣaṣānīn governor of Tabaristān descended from Kāruz, son of the famous smith Kāva) Later we find the title (or proper name!) of masalmahān recurring in the younger branch of the line of Sūkhās (the Kairīn branch), which occupied a position in Tabaristān subordinate to the Bawandi ispahbads (Zahr al-Din, p. 154, 4).

(V. MINORSKY)

MĀSSA (Berber Massat), the name of a small Berber tribe of Morocco of Sūs, settled some 30 miles south of Agadir at the mouth of the Wādī Māssa; the latter is probably the fiume Marzat mentioned by Piny the Elder (v. 9) to the north of the fiume Darat, the modern Wādī Darā, and the Māssat of the geographer would correspond to the modern ahl Māssat.

The name Māssa is associated with the first Arab conquest of Morocco; according to legend, it was on the shore there that, after conquering Sūs, Cūḥa b. Naḥi drove his steed into the waves of the Atlantic calling God to witness that there were no more lands to conquer on the west. In any case, Māssā appears very early as an important religious and commercial centre. Al-Yaḥṣūbī (end of the third = ninth century) notes that the harbour was, by one and another, renowned, that of Bahālib, Al-Bakri and al-Idrīsī mention the harbour of Māssat; al-Bakri emphasized the fame of the ribāt and the importance of the fairs held there. Ibn Khaldūn devotes several passages to his Kitāb al-ṭabaṣr to the ribāt of Māssā, where according to popular belief the expected Mahdi or Fātīmīd was to appear: this belief induced many devout people to go and settle in this ribāt and also sent many adventurers there to raise rebellions.

Towards the end of the ninth century, the religious movement begun by al-Iṣḥāqī made Māssā one of the great sanctuaries of Sūs. In the middle of the eleventh (viii) century Leo Africanus describes Māssā as a group of three little towns surrounded by a stone wall in the middle of a forest of palm-trees; the inhabitants were agriculturists and turned the raising of the waters of the Wādī to their advantage. Outside the town on the sea-shore was a very venerated “temple”, from which the Mahdi was to come; a peculiar feature of it was that the little boys in it were formed of ribs of whalebone: the sea actually throws up many cetaceans on this coast and ambergris was collected here; local legend moreover says that it was on the shore of Māssā that Jonah was cast up by the whale.

After the fall of the Sālṭians, the development of the Marabu principality of Tāzarwāl again made Māssā a commercial centre. The port was frequented by Europeans but it was soon supplanted by that of Agadir. The rapid decline of the principality of Tāzarwāl and the steadily increasing influence of the central Moroccan power finally destroyed almost completely any religious and economic importance of Māssā.

MASŪD Abū Sālih, the eldest son of Sultan Mahmūd of Ghazna, was born in the year 588 (998). In 406 (1015—1016), Sultan Mahmūd nominated him his heir-apparent, and two years later made him governor of Herāt. In 411 (1020), at the command of his father, he led an expedition to Ghur and reduced the north-western part to submission. Shortly after this, he was disgraced and sent as a prisoner to Multān, but he was soon taken back into favour and was reinstated in his government at Herāt. When the province of Kājur was conquered in 420 (1029), Sultan Mahmūd placed it under Masūd who, after subjugating the outlying parts, conquered Hamadān and Isfahān from their Buwahīd ruler, Ālī al-Dawla b. Kākawail, in the beginning of 421 (1030), and was making preparations for further conquest when news arrived of the death of his father and the succession to the throne of his brother Abū Ahmad Muḥammad. Masūd hurried to Ghazna to claim the throne. In the meantime, the army tired of Muḥammad, deposed him, and had the khaṭba said in the name of Masūd. Muḥammad was blinded and sent to the fort of Mandish, and Masūd ascended the throne in Shawwal, 421 (October 430), about 6 months after the death of his father. The Caliph al-Ḫālid bin ʿAbdullāh conferred upon him the titles of ʿAbd al-Dāni b. ʿAbdullāh, Ḥārūn b. ʿAbdullāh, and Zahir Khāligi ʿAbdullāh.

In 422 (1031), Sultan Masūd sent an army to punish ʿĪsā, the ruler of Mukrān, for his rebellion. ʿĪsā was defeated and put to death, and his brother named Abū ʿImār al-Maṣāqi was placed on the throne. In 424 (1032—433), Masūd lied a siege to a fort named Sarasti in the southern Kāshān hills, took it by assault and returned to Ghazna in the spring. After this he attacked Tabaristān, as the ruler of that country, named Abū Kālimḏar, had adopted a hostile attitude, and captured Astārābād. Abū Kālimḏar was forced to offer submission and to promise to pay annual tribute. About the end of 426 (October 435), Abū Ahmad b. Ṯaylīḡīm, the governor of Lahore, rebelled. Masūd sent against him one of his Hindū generals who was defeated and slain in battle. He then sent another Hindū general named Ṭatāk, who defeated Abū Ahmad and forced him to fly to Sind where he was drowned while attempting to cross the river Indus. About the end of 427 (October 436), Masūd led an expedition to India, took the forts of Hānsī and Sonipat and returned to Ghazna, leaving his son Maṣūd as the governor of the Kundāb. In 430 (1039—40), Masūd crossed the Oxus to punish ʿĀṭīqīn, son of ʿAlī, ruler of Bukhārā, for his hostility, but before he could accomplish anything he received news that the Saldūjīs were advancing to Balkh to cut off his retreat, and he immediately returned to Khurāsān.

Early in his reign, Sultan Masūd had been called upon to deal with the Saldūjīs whose power had considerably increased during the period of disturbance following the death of Sultan Mahmūd. They raided Herāt as early as 422 (1031) but were repulsed with heavy loss at Farasāb and forced to take refuge in the Balkhān Mountains. This however did not stop their activities, and by 425 (1034) they had started to make systematic incursions into Khurāsān. In Shabān 426 (June, 1035) Masūd sent against them two of his generals, the Ḥādhib Baktrīḡīh and Husain Abū Mīḡāl, who inflicted a crushing defeat on them, while the Ghaznavī troops were engaged in plundering the camp of their vanquished foes, a body of the Saldūjīs under Dūwūd issued from the hills, fell upon their disorderly ranks, and made fearful slaughter among them. Husain ʿAli was taken prisoner, and
Baktohdh managed to escape. Instead of marching against the Saldjûks, Mas'ûd wasted his time in a fruitless expedition to India in 427, as stated above, and the result was that they became bolder and more powerful. In 428 (1036–1037), they captured Balkh, but retired to Marw at the approach of Sultan Mas'ûd, and sued for peace. Mas'ûd gladly consented to it, but it was only a shampeace and when Mas'ûd started on his return march to Ghazna, the Saldjûks fell upon his rear and put many of his soldiers to death. Mas'ûd turned round and took terrible revenge for this treachery. The Saldjûks redoubled their efforts against the Sultan, and won over the people of Sarâkh, Nasâ and Baward to their side. Mas'ûd now personally took the field against them. The Saldjûks advanced to meet him under their leader Tughîrî. The two armies met at Dandânakân on 8th Ramâdân, 431 (May 23, 1040). Mas'ûd fought bravely but being deserted by his generals and finding himself surrounded on all sides by the enemy, he fought his way out of the field of battle and managed to reach Ghazna in safety.

The Saldjûks had evidently become too strong for him, and he resolved to withdraw to India, possibly with a view to gaining a respite and preparing a large army there to retrieve his affairs. He left Ghazna with all his treasure, and accompanied by his captive brother Abû Ahmad Muhammâd. At Ribât-i Mûrikalah, shortly after crossing the river Indus, his slaves rebelled against him, plundered his treasure, and, being joined by the rest of the army, they seized Mas'ûd and acclaimed the blind Muhammâd as their sovereign. Mas'ûd was sent as a prisoner to a fort where he was put to death on 11th Djamâdâl 1, 432 (January 17, 1041). His reign had lasted 10 years and three months.

Mas'ûd was a man of strong build and great physical strength. He was brave and generous, but he lacked the wisdom of his father, and early in his reign, he lost the cooperation of his officers by foolishly attempting to bring about the ruin of the old servants of the House on the advice of his young and ambitious courtiers, and demanding the return of the money which Muhammâd had distributed to them at the time of his succession to the throne. Mas'ûd was a great lover of learning, and numerous scholars had assembled at his court, one of whom was the famous Abû Rahjân al-Bihâni who dedicated some of his greatest works to him. Several poets sang his praises and were given munificent rewards. He adorned his capital with beautiful buildings, and the New Palace with its magnificent throne was one of the wonders of the times.

MAS'UD B. MAWUDUD B. ZANGI, 'IZZ AL-DIN ASHKAF, son for Abu 'I-Mu'azzaf, 3rd of al-Mawjûl. Mas'ûd [q.v.] died in 595 (1170); he was followed by his son Saff al-Mawjûl [q.v.] as Atâbeg of al-Mawjûl. When the latter came into conflict with Saladin [q.v.] in 570 (1175) he gave his brother Mas'ûd command of the troops sent to relieve Halab, which was being besieged by Saladin. After Saladin had left Halab and seized the citadel of Hims, Mas'ûd, who had in the meanwhile attacked the Halabis to his side, attacked him but was defeated in Ramdân 570 (April 1175) at Kûrûn Hâmat. Saif al-Din died on 3rd Safar 572 (Aug. 11, 1176), or according to another less authenticated statement in 576 (began June 29, 1180), and Mas'ûd then became lord of al-Mawsûl. To this in 577 (1181) he was added Halab, which his cousin al-Malik al-Salih [q.v.] bequeathed to him shortly before his death; but Mas'ûd did not hold it very long. On the advice of the influential emir Muhammâd b. Zâmar, he ceded his new possession to his brother 'Imad al-Din al-Zangi who gave him Sindjâr in exchange, and in Muharram 578 (May 1182) the latter occupied Halab. Soon afterwards, Saladin took Edessa, al-Râkja, Sarujû and Naşibûn, and in Ra'djâb (November) of the same year he appeared before al-Mawsûl but could not take it by force; so he retired in the following month and turned his attention to Sindjâr. After he had taken this town, he forced 'Imâd al-Din to capitulate (Safar 579 = June 1183). In 581 (1185) Saladin again attacked al-Mawsûl but had once more to retire with his object unachieved. After the capture of the town of Maysâfarin, he made a third attempt to take al-Mawsûl, and encamped at some distance from the town but fell ill and was taken to Harrân. In spite of this, 'Izz al-Din did not dare to oppose him any longer but began negotiations. Saladin declared himself ready to make terms, and in Dhu 'l-Hijdja 581 (March 1186) peace was made on condition that 'Izz al-Din recognized the suzerainty of Saladin and gave him Shahrazur with the lands behind the Zâb. 'Izz al-Din died in al-Mawsûl on Sha'bân 27 or 29, 589 (Aug. 28 or 30, 1193) after designating his son Nûr al-Din Arslân Shâh as his successor. The Arabic historians pay him as high a tribute as they do to his father Mawûdûd.

MAS'UD B. MUHAMMAD ABU 'I-FADL GHU'ITH AL-DIN, a Saldjûk ruler in the 'Irâk (529–547 = 1134–1152). Like Muhammâd's other sons, Mas'ûd, when quite a child, was entrusted to an atâbeg to be educated, namely the celebrated emir Mawûdûd and when the latter was murdered, Aq Sokkor and Abâ Dju'yish Beg acted successively as Mas'ûd's tutors. The latter, an ambitious emir, in the beginning of Mahmûd's reign tried to secure the sultanate for his protege, then an eleven-year-old boy, but the attempt failed; in an encounter with Mahmûd's troops he was put to flight and Mas'ûd as well as his wazir, the famous Arab poet al-Tughrî [q.v.], were taken prisoners (514 = 1120). On the fate of the poet see the article on him. Mas'ûd was pardoned and later given Gandja by his brother (1130). After Mahmûd's death (525 = 1131), his son Dâwûd was at first recognised as sultan but Sandjar decided that Mas'ûd's brother Tughûrî should be sultan. Mas'ûd soon made peace with Dâwûd, after some fighting near Ta'bîrî, and sought to obtain from the caliph al-Mustârshid that the latter should mention him in the khutba in
Baghdad. The caliph, who had been approached with the same object by another brother of Mas'ud named Sahljuk and his atabeg Karajda, found himself forced to accede to both by having Mas'ud's name mentioned first, followed by that of Sahljuk. He also collected his forces to go in alliance with them against Sandjar; but when he moved in Khurasan, he withdrew so that Mas'ud and Sahljuk had to continue the struggle against their uncle alone and they were routed by him near a hill called Pandj Anghush in the neighbourhood of Dinawar (1132). Sandjar however allowed Mas'ud to return unhindered to Gandja and at the end of the same year Mas'ud found an opportunity to go to Baghdad where Dawud also now was. Both princes were received by the caliph in public audience and given robes of honour and other tokens of esteem. Homage was paid to Mas'ud as sulthan and to Dawud as heir-apparent. Thereafter he fought with varying fortune; his brother Tughril and after the latter's premature death (528 = 1134) was generally recognised as sulthan. Anushwarin b. Khalid, the caliph's vizier, now was given the office of vizier to the sulthan. Soon afterwards however, a number of Turkish emirs became dissatisfied with Mas'ud because they had felt themselves insulted by the advancement of Kara Sonkor, the powerful emir of Adharladjan, and were able to win the caliph over to their party. In the hope that Dawud would join him, he went with some 7,000 horsemen towards Hamadhan, where Mas'ud then was, but when the sulthan's troops met him at Daimarg, his own men left him in the lurch or even went over to Mas'ud so that he and his vizier and other high officials were taken prisoners (529 = 1135). The sulthan, it is true, treated him with deference, and began to discuss terms of peace, but he did not release him. He took him with him to Maragha, where in the same year (cf. the various dates given: Welt, Gesch. der Chalifen, ii. 231, note 4) he was murdered by a number of fidahis. The murderers were apparently hired by the sulthan, on the advice of Sandjar, who had been stirred up against the caliph by Dubaisi [q.v.]. The latter, who was also with Mas'ud, was soon afterwards treacherously slain by him. These deeds of violence naturally made a very bad impression Dawud and Sahljuk began again to bestir themselves; the new caliph Al-Kasid b. Illah, a son of Al-Mustansir, adopted a hostile attitude and other Turkish emirs, notably Zangi, the lord of al-Mawlid, began to insubordinate; in a word, anarchy soon prevailed everywhere. But when Mas'ud returned to Baghdad with his troops they all retired. Mas'ud thereupon had the caliph, who had escaped with Zangi to al-Mawlid, imprisoned by a fatwa of the kadi, and jurors and approved the appointment of al-Muqtasif (530 = 1136). After peace had in this way been at some extent restored, Mas'ud thought he might now devote himself to his pleasures and remained the whole year of 1137 in Baghdad in comparative inactivity, without allowing his leisure to be disturbed by a demonstration by the mob of the capital, which was intended to remind him that it was his duty to wage war upon the unbelievers. Once again several Turkish emirs rebelled and tried to bring Dawud to the front again; among them the most dangerous were 'Abd al-Rahman b. Tughyanerik, lord of Kalkhâli, and particularly the prince Mungabars, whom Sandjar after Karajda's death had sent to Fars and who was vigorously supported by his deputy in Khuzistan, Buzâba. Mas'ud, it is true, sent troops against them under Kara Sonkor but they had to retire, and a battle was only fought when Mas'ud himself came up, at Kurshahbâ near Hamadhan (532 = 1138). The sulthan was at first victorious and put Mungabars whom he had captured, to death; but when his troops were scattered plundering the enemy's camp, Buzâba fell suddenly upon them so that he and Kara Sonkor had narrow escapes and some twelve of the emirs with him were captured and all pat to death by Buzâba. Fortunately for Mas'ud, Buzâba did not pursue him, but was content with occupying Fars; the sulthan was also able to make peace with Dawud, and the deposed caliph was murdered in Isfahan on Rama'dân 25, 532 (June 6, 1138). The sulthan's position however was not one whit better, for the different provinces of the empire were in the hands of powerful emirs, who not only paid no heed to the sulthan, but occasionally appeared in open rebellion against him in the name of various Sahljuk princes whose atabegs they were. The most powerful of these was still Kara Sonkor who began a war on Buzâba to avenge his son, who had been murdered by the latter. When he approached, Buzâba withdrew into an inaccessible citadel and when Kara Sonkor retired, he took prisoner the prince Sahljuk whom he had appointed to rule over Fars and then continued to rule in Fars as atabeg of two sons of Ma'umud, Malikshah and Muhammad. After the death of Kara Sonkor, who died in 535 of a broken heart after the great losses he suffered in the terrible earthquake in Gandja in 533 (1138), Cavî al-Djandar took his place and like his predecessor was generally attached to Mas'ud. Buzâba's attempt along with another emir named' Abbâs [q.v.], who had gained an influential position in al-Kay, to put the sulthan's youngest brother Sulaimân on the throne therefore failed. Mas'ud invited this prince to come to him and when he came he found himself imprisoned in spite of the sulthan's promise. Cavî died in 541 (1146) in the same year as Zangi and in the following year 'Abd al-Rahman and 'Abbâs were disposed of by assassination so that Buzâba alone remained of the enemies of Mas'ud Buzâba now set out for Hamadhan to attack the sulthan, but not far from this city was taken prisoner in a fierce battle and executed (542 = 1147). The princes Muhammad and Malikshah who were with him escaped. Mas'ud afterwards sent for the latter, gave him his daughter in marriage and designated him his successor. In these negotiations the sulthan followed the advice of his favourite beg Arsân b. Balangari, best known by the title Khâbôvqeg, who in this way disposed of all his rivals, but at the same time aroused great discontent so that even the aged Sandjar once more to al-Rajî to remonstrate with his nephew (544 = 1149). But all this was in vain; and when in 547 (1152) Mas'ud died, Khâbôvqeg put Malikshah upon the throne; when in a short time the latter showed himself quite incapable, he sent for Muhammad, who had Khâbôvqeg treacherously murdered.

Bibliography: in the article SELJUKS. — Ibn Khallikân's article on Mas'ud (Bûla'î edition 1299, ii. 531) is of no importance.

(M. Th. Houtsma)
remained for a considerable time in the service of the kings of Ghazna and had become the possessor of great wealth and lands in Lāhore and other parts of India. After his father's death these lands were confiscated by the Governor of Lāhore and Mas'ūd was compelled to proceed to Ghazna to demand justice, but there also his enemies were able to put him to more troubles and bring against him a false accusation, which caused him to be imprisoned. He at last through the recommendation of Mas'ūd b. Sulṭān Ibrāhīm was permitted to return to India and take possession of his estate. When Sa'īd al-Dīn Māhmūd b. Sulṭān Ibrāhīm came in India as viceroy, Ma'ṣūd attached himself to this prince as courtier and panegyrist and became one of the special favourites of his court. But again, a false charge being brought against him, he once more fell upon evil days and loss of fortune. It was maliciously reported in 492 (1098) to Sulṭān Ibrāhīm b. Māhmūd that his son Sa'īd al-Dīn Māhmūd intended to go to ʿIrāq to Malikshāh. This report so much aroused the indignation of the Sulṭān that he ordered his son with all his courtiers to be arrested and put to prison. Our poet for the next ten years remained a prisoner. But on the intercession of Abu l-ʿKāsim Ḑhālib, the Sulṭān pardoned him and released him from prison. He returned to India and was again placed in possession of his father's lands and dignity.

He died in 515 (1121). He is the author of two diwāns, one in Arabic and the other in Persian.

(M. HIDAYET HOSAIN)

AL-MAṢŪDĪ, Aḥū b. ʿAbbās b. al-Husayn, Arab historian and geographer and one of the most versatile authors of the fourth century A.H. Information about his life can only be gleaned from occasional references in his works; as his activity lay outside the lines of the regular schools of learning, he gets little mention from their representatives. The author of the Fihrist regards him as a Maghrībi. According to his own statement, however, he was born in Baḥdād and descended from an Arab family which could trace its ancestry to a Companion of the Prophet. While still quite young he travelled through Persia where he spent part of 305 (915) in ʿIsṭakhr. Next year he went to India and visited Mulkān and al-Mansūra. He went by Khāhāya and ʿAṣmār as far as Ceylon, joined some merchants on a voyage to the China Sea and back to Zanjābīr from which he returned to ʿOmān. We again find him travelling along the southern shore of the Caspian Sea and in 314 (926) at Tiberias in Palestine. In 332 (943) he visited Antioch and the Syrian frontier towns and after a brief visit to his native province of Basra, he was staying in Damascus in 334 (945). Afterwards he seems to have lived sometimes in Syria and sometimes in Egypt. He was in al-Fustāṭ in 335 (947) and 344 (955) and he died there in Djamād al-ʿAṣr 345 (956) or 346.

His restless life is reflected in his literary activity. His travels were certainly stimulated not by thirst for adventure but by a strong desire for knowledge. But this was superficial and not deep. He never went into original sources, as did al-Bīrānī later, but contented himself with superficial enquiries and accepted tales and legends with out criticism. Nevertheless we owe him a good deal of valuable information about the lands on the periphery of Islam. His method of presenting his material has the same faults as his scholarship. He is never able to finish a subject he has begun but continually diverges from his theme. His literary activity, in addition to philology and theology in the narrower sense, touched on almost all the fields of interest of his time, particularly natural philosophy, ethics and politics as well as heresiography. His works, a list of which is given by de Goeje in the preface to the Kitāb al-Tanbih, p. vi., are for the most part lost because they were not of general interest. Posteriority was only interested in him as a historian. In the year 332 (943) he began his great history of the world Kitāb ʿAlḥāṣib al-Zamān wa-man abūlāha l-Ḥiththin min al-Wāqīāt al-Māʾīyāt wa-l-ʿAgīyāt al-Dīlāyīya wa l-ʿAṣimād al-Dālīyyā, which is said to have filled 30 volumes.

Brinkhard's statement, Travels in Nubia, p. 527, that twenty volumes of it are preserved at the Aya Sofā in Constantinople has unfortunately not been confirmed. Only a single volume, the first of the work, which A. v. Kremer obtained in Aleppo, is preserved in Vienna (see v. Kremer, S. B. W. A., 1850, p. 207–211; Flugel, Die ar. pers. u. turk. Hist. der K.K. Hofbibliothek, ii, p. 1262; another MS. of the same part is in Berlin, see Ahlwardt, No. 9426). The work begins with the creation and after a brief geographical survey discusses the non-Muslim peoples and goes fully into the legendary history of Egypt. He reproduced extracts from this work in the Kitāb al-anwaʿ of which one volume perhaps survives in Oxford (see G. Catalogus cod. MSS. or. i, 666). The substance of these two works he gave in a shorter form in the Murādīgī al-Dhahāb wa-Maṣrūdīgī l-Dhawārīkī, which he finished in Djamād al-ʿAṣr 330 (Nov.–Dec. 947) but revised in 352 (965). In addition to the manuscripts used for the Paris edition, a number of others are in existence, e. g. in the Ambrosiana (R. S. O., iv, 97), in Fez (Fihrist Mardīgī al-Karaśawī, No. 1208) and Muṣūl (Dāwāl, Mubāḥāt al-Muṣūlī, p. 122, No. 22; p. 173, No. 32); printed as Maçoud, Les prairies d'or (the more correct translation would be "Gold-washings"); see Gildemeister, W.Z.K.M., v. 202, Texte et Traduction par C. Barthez de Meynad et Pavet de Courtelle, 9 vols., Paris 1861–1877, Bâlûq 1283, Cairo 1313, on the margin of Ibn al-Athīr, Bâlûq 1301, of Maqārī's, Naḥīf l-Tīb, vol. 1–5, Cairo 1302. A synopsis of the Murādīgī al-Dhahāb down to the fall of the Omayyads was made by Ibrāhīm al-Nabiḥī in 1118 (1706) in MSS. Vienna, Flugel, No. 807. Another synopsis of which it has still to be ascertained whether the two works on which it was based had not been used in addition to the Murādīgī, with a continuation down to the year 638 (1238) was composed by Aḥū b. ʿAbbās Māḥmūd b. ʿAlī al-Shāṭībi of Tarā in Morocco under the title al-Dīnān fī Muhāqaq al-Qāhīr al-Zamān (wrongly ascribed by de Saucy, N. E., ii, 1787 to Maqārī; MS. Gyongos, 64, fol. 31–195; see Asin Palacios, Escatologia, p. 374; other MSS. in Cairo and
AL-MAS'UDĪ — MAŠYĀD

Damasca: see M. Kurd 'Ali, R. A. A. D., iii, 229–223. An anonymous synthesis of his magnum opus with special reference to travellers' tales from the Indian Ocean with additions from the Kitāb 'Adīqā' al-Hind of Kānhurmuzi, as well as from the legends of Egypt, entitled Kitāb Aḥkār al-Zanāt wa-Aḥkār al-Buldān, or Mubāqar aṭ-Adīqā' wa-l-'Idārāt is preserved in several MSS. in Paris (see Carra de Vaux, T.A., ser. 9, vol. vii, p. 133–144). Towards the end of his life, Mašīdī composed a survey of his whole literary activity and supplemented it where necessary from new sources in the Kitāb al-Tanbih wa-l-Ishyrāf (ed. de Goeje, in B.G.A., viii, Leyden 1894; additions to these in a Leipzig Ms., Z.D.M.G., i, 223–236; see Carra de Vaux, Magaeq, le livre de l'avertissement et de la revision, French transl., Paris 1897.)

(C. Brockelmann)

Mašyād, a town in Northern Syria on the eastern side of the Ḫibaḥ al-Nasirīye. The pronunciation and orthography of the name varies between the forms Mašīd, Mašūf (in official documents and on the inscriptions mentioned below of the years 646 and 870 A. H.), Mašyād and Mašīfāt (on the interchange of j and th see Kescher, Z.D.M.G., ixxv, 405; Praetorius, Z. D. M.G., ixxv, 392; Suassou, Topographie hist. de Syrie, p. 143, note 4; 209; note 3). The variant Mašūf (Yāqūt, Muqīmīn, ed. Wustenfeld, iv, 556), Mašyāf (Khalīf al-Zahiri, Zāhdīn, Rawāsīn, p. 49) and Mašiṣīf (al-Nābulūsī, in v. Kremer, S.B. Ak Wien, 1850, iii, 331) are both doubtful due to mistakes in copying (van Berchem, T.A., 9, iv, 1897, 457, note 2). At a later period, the pronunciation Mašīf, Mašyāf became usual (al-Dimashqī, ed. Mehren, p. 208; al-Kalashandī, Subh al-Qāda, Cairo, iv, 113; Ibn al-Shihāba, Barīr, p. 265; cf. Mašīqī f. Oppenheim's map in Petermanns Mitteilungen, Ibn [1911, ii, Taf. 11]). The name is perhaps a corruption of a Greek Mašīfār (= Māsēfā) or Māsēfō xáous, which presumably lay on the Mašīqī ama, the boundary river of the Nācarm, (ancestors of the Na'amānis, Plut. Hist., v 81) (cf. Fa'īl-Wissowa Kroll, Reiterzyklopädie, s. v., Col. 1859 sqq. s. Marās, N°, 3).

A number of ancient pillars and capitals built into the gates of the fortes (some reproduced in G. I. Bell, Syria: The Desert and the Scour, p. 212–220) are only remains of antiquity. An old Roman road (rebāf) from Hamā to the west passed the town (according to Miss Bell, loc. cit.).

Mašīd is not mentioned in the early midle ages; the first mention of the fortes is probably in a Frankish account of the advance of the Crusaders in 1099: Fenestruinus gradantes hostitari ad guadam Arabum castrum (Anonymi gesta Friderici et alia chronica Hierosolimitana, ed Hagenmeyer, 1890, p. 418 with note 29; Dussaud, Histoire et religion des Musulmans, Paris 1900, p. 21, note 4). When in 503 (1109–1110), the Franks advanced on Kafānīa, Tughtakīn set out to relieve it; by the terms of the peace concluded between them, the Franks bound themselves to abandon all designs on Mašīfāt and Hish al-Akrud and in compensation these two places and Hish Tufān were to pay them tribute (Shib b. al-Dīwān, Murātr al-Zamān, in Rec. Hist. Or. Crois., iii, 537). Before 521 (1127) the fortes was in possession of a branch of the Mirdūds, who sold it to the Bāṭī Manṣūrī. After the Nūsairī cātāl in Kādūs and al-Kahī had fallen into the hands of the Islamīls in 527 (1132–1133), the latter also seized the fortes of Mašīfāt in 535 (1140–1141), by outwitting the commandant Sunkūr, a manūkī in the service of the Bāṭī Manṣūrī of Shīrāz, who was surprised and slain (Abū 'l-Fālid, Mubāqar fī Aḥkār al-Buldān, in Rec. Hist. Or. Crois., i, 25; Ibn al-Athīr, Kāmil, ibid., i, 438; al-Nawwāb, Cod. Leyden 2m, f. 222b, in van Berchem, T. A., 1897, p. 464, note 1). Mašīfāt now became the residence of the Syrian Master of the sect (as we may call him, with van Berchem, to distinguish him from the Grand Master in Alamūt, known as 'Abd Allāh al-Dībā, after the Master (Muḥaddim) Abū Muhammad had gathered round him the members of the sect in the hills of Kādūs, about 557 (1162) Kāshīd al-Dīn Sinān [q. v.] appeared in Syria, as envoy from the Persian Grand Master, took over command of the Assāssins [q. v.] there and displayed his unusual organising ability, by raising the sect to be a well equipped and dreaded force, the terror of the Crusaders. Saladin, who wanted to punish them for two attempts on his life, invaded the land of the Islamīls in Mašūrīm 572 (July–Aug. 1176), laid it waste and laid siege to Sinān in Kaṭāt Mašīfāt. Through the mediation of Saladin's uncle Shīhīd al-Dīn al-Hārīmī, lord of Ḥamā, Sinān however succeeded in obtaining Saladin's clemency; in the beginning of August, he went with his army to Ḥamā (Abū'l-Fālid and Ibn al-Athīr, in Rec. Hist. Or. Crois., i, 47, 626). Shortly before he raised the siege of Mašīfāt (about the 14th Safar), he received from Ustāma b. Munkīdī, who was in Damascus, a letter containing a narrative of his great patron (Dereburg, Vie d'Oclem, Paris 1893, p. 400 sqq.). Raṣīlī al-Dīn died in 558 (Sept. 1192). The Syrian Masters, as the official epithet al-Dannā y wa-l-Dīn henceforth regularly borne by them shows, were raised by him to a position with power and privileges equal to those of sovereign rulers (van Berchem, op. cit., p. 470). While Sinān had completely emancipated himself from the suzerainty of the headquarters of the sect in Alamūt, in 608 we find the old conditions completely restored (Abū Shīma, al-Dībhīlī fī Ruknān, in van Berchem, op. cit., p. 475 sqq., note 1). According to an inscription in the inner gate of the castle (van Berchem, T. A., 1897, p. 482 = van Berchem in Oppenheim, Beitrag z. Assyriol., v. 1, p. 17, No, 13), this building was restored by the Syrian Master Kāmil al-Dībā y wa-l-Dīn al-Ha-an b. Mašūf under the suzerainty of the Grand Master of Alamūt 'Alī al-līn Muhammad III (618–653). The reference is probably to the al-Kamālī who according to al-Nasawi (Hist. d. Sultan Yezdi al-Dīn Mankehriti, ed. Houwads, p. 132) was for a period before 624, governor for the Syrian grand master of, it is uncertain whether the commandant (mutawallī)
Majdī al-Dīn, who received in 624 the ambassadors of Frederick II (Hāmāwī in Amari, Bīlūb arabiciscula, App. ii., p. 30) was one of the Masters (van Berchem, J.F.A., 1897, p. 501, note 1) About 625/6 and still in 635, Sirāḍ al-Dīn Muḥarrar b. Abū-Ḥusain was Syrian Master of Naṣrī (op. cit., p. 168, inscription of al-Kahf, ed. van Berchem, in op. cit., p. 488). A Persian from Alamut, Tādī al-Dīn, was in 637 nanukāzam of the Syrian Iṣmāʿīlīs (Ibn Wāsīl, Geschichte der Asylhiden, Paris, MS. Ar. 1702, f. 333b in van Berchem, p. 466, note 2).

As Tādī al-Dīn Abūl-Futūḥ he appears in an inscription in Maṣyād of Dhu'l-ʿĀḏar 646 (Feb.–March 1249), according to which he had built the city wall of Maṣyād and its south gate. The commander of the fortress under him was Abī ʿAlāʾ b. ʿAbd Allāh b. ʿAbd Allāh (inscriptions A and B in van Berchem, J.F.A., 1897, p. 456 = van Berchem-v. Oppenheim, Beitr. z. Assyri., op. cit., No. 19). It probably was Tādī al-Dīn to whom the Dominican monk Yvo the Breton, a member of an embassy sent by Louis IX to "the Old Man of the Mountains" in May 1250, sent a naive and fruitless appeal for his conversion (text de Joinville, Hist. de St. Louis, ed. Wailly, p. 246 sqq.; van Berchem, J.F.A., 1897, p. 478–480). In the time of the Master Ṣūbā b. Abūl-Maʿālī in 658 (1260) the Tatars seized and held the fortress for a time, but after the victory of the Egyptian Sulṭān Abūl-ʿĀṭā at Ṭāmūl, they abandoned it. About two years later Baibars began to interfere in the affairs of the Iṣmāʿīlīs and to demand tribute from them. He very soon deposed the Master Naḍīm al-Dīn Iṣmāʿīl and appointed his son-in-law ʿAlī b. ʿAlī as Master of Muḥārīr in his place and took Maṣyād from him. When the latter returned there, Baibars had him seized and brought to Cairo, where he was thrown into prison. Naḍīm al-Dīn was again recognised as Master for a brief period and then his son ʿAbd al-Salām al-Dīn, before the Sulṭān definitely incorporated Maṣyād in his kingdom in Raḍjāb 668 (1270) (Abū ʿl-Fidāʾ, in Rev. Hist. ar. croz., i. 153; Muḥāfiz b. Abī ʿl-Fidāʾ, Gesch. d. Mamluk-Konsulate, ed. Blochet, in Petrol. Orient., xiv. 445; van Berchem, J.F.A., 1897, p. 465, note 2).

Maṣyād presumably at first belonged to the "royal province of fortunate conquests" the capital of which was Hīṣn al-Akrād, then to ʿAṭābūlūs (after its capture in 688). It was later separated from this province and added to the niyāba of Dimashq to which it still belonged in the time of ʿAlāʾ al-Sulṭān ʿAbd Allāh, Cairo, iv. 113, 202, 235) about 814 (1412). Khālīl al-Zāhirī (Zublāt Kāshf al-Mamālik, ed. Ravaisse, p. 49) includes Maṣyād with Hāmā (about 850) Under Egyptian rule the position of the lands of the Iṣmāʿīlīs with Maṣyād as capital was to some extent exceptional (Chaudory-Demombynes, La Syrie à l'Époque des Mamelouks, Paris 1923, p. 182, No. 3).

Abū ʿl-Fidāʾ (about 720 = 1320) described Maṣyād as an important town, with beautiful gardens through which streams flowed; it had a strong citadel and lay at the eastern base of the Djabal al-Lukkām (more accurately Djabal al-Siklīn) about a farashā north of ʿAṭān and a day's journey west of Hāmā (not Hīṣn, i.e. Strange, Palestine, p. 579 erroneously says: Abū ʿl-Fidāʾ, Geogr., ed Reinard, p. 229 sq.). As a result of its high situation, it has a more temperate climate than the low ground on the Nahr al-ʿAṣī; the young ʿUṣāma in 516 (1122–1123) brought to Maṣyād the wife and children of the emir of Shīzār, his uncle ʿĪzz al-Dīn Abū l-ʿĀṣikr Sulṭān, from the heat of Shīzār which was cauing the emir anxiety about their health (Derooeng, Vie d'Osumān, p. 43).

Ibn Ṣanūṣū passed through Maṣyād in 735 (1335) and al-Nābuluṣī in 1305–1306 (op. cit., p. 349). The latter mentions that the governor of the town then was a certain Sulaimān of the tribe of Tānīkh. An inscription of Maṣyād of Ramadān 870 (April–May 1466) contains a decree about taxes of the Sultan al-Malik al-Zāhirī Khshadhād (van Berchem-v. Oppenheim, Beitr. z. Assyri., vii., p. 20, No. 23: No. 22 is perhaps of the same Malik al-Zāhirī). Of a later date are two inscriptions of an emir Muḥāfiz b. ʿAbdī, one of the year 1203 (1788–1789) relating to the building of a well (tabīl) (op. cit., p. 21, No. 24), the other (No. 25) of 1208 (1793–1794) to the building of the house of the Iṣmāʿīlī emirs.

The Iṣmāʿīlīs lived constantly in open or secret enmity with the Naṣirs, although various tribes of the latter had offered their services to the Iṣmāʿīlī Masters, for example as early as 724 (1324) to Raḍjāb al-Dīn (Guizy, Une mission des Assassins au temps de Saladin, J.A., p. 1877, p. 165; Dussaud, Histoire et Religion des Noqairis, p. 86).

A number of Naṣirs of the tribe of Raḍān, whom the emir of Maṣyād had allowed to settle in the town under their Shaikh Mahmūd, in 1808 murdered the emir, his son and about 300 Iṣmāʿīlīs and seized the town. The other inhabitants, who had sought refuge in flight, applied for protection to Yūsuf Pāshā, the governor of Damascus. He sent a punitive expedition of 4,500 men against the Naṣirs; Maṣyād had to be surrendered by the Bani Raḍān after three months' stubborn resistance and the fugitive Iṣmāʿīlīs returned to Maṣyād in 1810 (Dussaud, op. cit., p. 32; Barckhardt, Reisen in Syrien, p. 258). In 1812 Barckhardt estimated the population of Maṣyād at 250 Iṣmāʿīlī and 30 Christian families. The population since then seems to have diminished still further. Barckhardt and Lammens found many houses in the towns in ruins and large gardens within its walls. According to Barckhardt, the land east of the town is a desert mor, while in the north at the foot of the hills the citadel stands on a high steep rock: on the west side is a valley, in which the inhabitants grow wheat and oats. The town, which lies on the slope of a hill is about half an hour's walk, in circumference. Three older gates have been incorporated in the present more modern walls. The mosque is in ruins. The citadel has an outer wall from which the inner defences are reached by a vaulted passage (G. L. Bell, Syria: The Desert and the Sown, p. 218). The old citadel is for the most part destroyed; only a few buildings have been roughly restored and in parts are still inhabited. (Bibliographie, Yahyā b. ʿAbd Allāh, ed. Wustenfeld, iv. 556, (the 556, Saftā, ed. ʿAbd Allāh, iii. 390, according to Dussaud, Syria, iv. 3259, is based on a misspelling of Maṣyād): ʿAbd Allāh, Marājīd at-Tafṣīlī, ed. Juyhollah, iii. 111; Ibn al-Aṭār, Kāmil, ed. Torkhub, xi. 52; Abu ʿl-Fidāʾ, Tākām al-Rūḍān, ed. Reinard, p. 229 sq.: al-Dimashqī, ed. Mehren, p. 208; Ibn Ṣanūṣū, ed. Défrémery-Sanguinetti, i. 166; Khālīl al-Zāhirī, Zublāt Kāshf al-Mamālik, ed. Ravaisse, p. 49; Ibn al-Shāhna, al-Durr al-μuṣābāk fi Tārwīkh Mamlāk al-Halāb, Bâirūt 1909, p. 265; ʿUmar, 405

MATĀLÌ. See Matāla.

MATAMMĀ, a town in the Eastern Sudan (province of Kasala, district of Gallabat). Matamā is a remarkable importance as a market on the Sudanese-Ethiopian frontier near the route of the caravans between the Abyssinian region of Lake Tānā and Khartūm. Its economic value has greatly increased on account of the development of agriculture in the Anglo-Egyptian Sudan and the new survey of Lake Tānā as a possible reservoir of water to extend irrigation in the Sudan and Egypt and by this means to increase and intensify the culture of the cotton, which is the principal source of prosperity in these countries.

Matamā is famous in the recent history of Ethiopia, because the Emperor (Negus Nagač) Yohannes IV was defeated and killed in the neighbourhood of this town by the so-called Darāwīsh of the Sudanese Mahdi, March 10, 1889 a. D. (1st March, 1881 of the Abyssinian era). The Emperor was preparing an expedition against Shāwā to oblige Meniek, King of that country, to recognize definitely his vassallage to the Ethiopian Crown. But, when he was informed that a corps of Darāwīsh had advanced as far as the frontier and that the zone of Lake Tānā with the ancient capital, Gondar, was menaced by the fanatic followers of the Mahdi, he came back to the Northern regions with his army, and met the Darāwīsh at Matamā. After a strenuous fight the Emperor Yohannes IV himself was killed and the Abyssinians were defeated.

The Darāwīsh cut the head of Yohannes and sent it to the Mahdi as a sign of their victory.

The battle of Matamā however had no greater value for the Mahdi's followers than a successful razzia: they retreated to the Sudan after pillaging some neighbouring countries and did not occupy any territory of Ethiopia. On the contrary, Matamā caused the end of the Northern Abyssinian dynasties; and the southern region — the Shāwā kingdom — became the political centre of the Empire, when in the same year, 1889 A.D., King Menlek proclaimed himself Emperor (Negus Nagač) as a descendant of the Salomonic dynasty.

The death of the Emperor Yohannes as a martyr during the battle against the Muslims, hereditary enemies of the Christian Abyssinians, has been celebrated in many songs and poems. The following is a very interesting example of the Abyssinian poetry in recent times:

"The Emperor Yohannes was a fool, and we all despise him.

They said to him: "Reign in the middle of the country?"

He answered: "I will be the keeper of the frontier!"

The Emperor Yohannes was a liar!

He said: "I do not like drink."

And we have seen him drinking a drink which causes the head to turn around!"

(Enrico Cerulli)

MATHARAH, the name of a Berber tribe belonging to the great family of the Buti; they were related to the Zånīt and brothers of the Matmāta, Kümā, Lamāysa, Šaddāma, Matmāta, Matmāta, etc., with whom they form the tribal group of the Banū Fātūna. Like the other tribes belonging to this group, the Matghara originally came from Tripolitania: the most eastern members of the Matghara, however, known to al-Bakri and Ibn Khalīdān were those who lived in the mountainous regions along the Mediterranean from Mil- yānā and Tenes to the north of Ḫanīda (port of Tābāshīr); those of the western part of this zone were allied with the Kümā: their mountain rose not far from Nadmara and the fortress of Tāwun was on their territory.

Three sections had reached the western Maghrib as early as the eighth century and there formed an important bloc. These were:

1. The Matghara of Fās and the coulour of Tānū: al-Bakri observes that the source of the Wādi Fās was on their territory, in the region where Leo Africanus still mentions the Šāk al-ğāmīs of the Matghara "fifteen miles west of Fās".

2. The Matghara of the Middle Atlas in the Dżbāt Matghara which Ibn Khalīdān locates S.E. (ṭabīb) of Fās and which Leo Africanus says is five miles from Tānū (to the south?) The reference then is to the mountain region now occupied by the Ait Wārān: an important section of the latter, the Ait Djeelidāsian, represents the Banū Gallidāsān
whom al-Bakri gives as a section of the Matghara, settled near Tenes in Algeria. We still find among the Ait Wârûn several sections of the Imlâni who represent the Maghâla, brethren of the old Matghara.

In al-Bakri’s time (6th = xi-th century) these two sections of the Matghara had as neighbours in the west, the Zawâgha of Fârâz and of Tâlûla. 3. The Matghara of the oasis of the Sahara settled in the region of Sidjilmassa and in the town itself, in which they constitute the main element of the population, in the region of Fig; in Tum, Tamânît and as far away as Wallûn (Onelliers).

At the beginning of the Arab conquest, the Matghara are represented by Ibn Khaldûn as settled and living in huts built of branches of trees (khaïñûl); those of the Sahara lived in fortified villages (bâbûr) and devoted themselves to growing dates. In the time of Leo Africanus, the Matghara of the Central Atlas occupied about fifty large villages.

Like other peoples belonging to the group of the Banû Fattûn, the Matghara took an active part in the events at the beginning of the Arab conquest and weakened themselves considerably in the fighting. As soon as they had become converted to Islam, a number of bodies of Matghara went over to Spain and settled there. Later, like their brethren, the Matmâa, they adopted the principles of the Sunnî; one of their chieftains, Mâsûr, provoked the famous schismatic rising of 740, which was the beginning in Morocco of the Baraghîa heresy. In a list of the tribes which adopted this heretical teaching we find the Matmâa and Matghara of the Central Atlas, as well as the Banû Abî Nâṣîr, the modern Ait Bû-Âsîr, the eastern section of the Ait Wârûn.

With the rise of Idrîsî, the chief of the Maghara, Bahîlî, declared himself at first a supporter of the caliph of Baghdad, Hûrin al-Rashîd, then rallied to the new dynasty. Later and down to the xvii-th century, the Matghara of the Central Atlas do not seem to have played any part in politics; they retained their independence at least. From the xvii-th century, they seem to have been supplanted on their territory by invaders from the south. As to the Matghara of the shore, settled in the region of Nadrûnna, their alliance with the Kûmây gained them considerable political importance, when the latter became supporters of the Almohads. It was at this period that they built the fortress of Tawant. They then rallied to the Marinids but this brought upon them the wrath of the ruler of Tlemcen, the celebrated Vaghamurâsân, who finally crushed them.

Ibn Khaldûn uses the form Madghara instead of Matghara; in Moroccan texts of late date we also find Madghara.

MATHAL (A., pl. ââthâl) is originally by etymology, like the Eth. metl, messêlê, Aram. mathâl and Hebrew mishâl (see O. Eissfeldt, Der Maschil im Alten Testament, Bihkrê zur Z.A.T.W., xxiv., Giessen 1913), simile, comparison; as popular sayings commonly appear in this form, the term was applied to them in general and thus obtained the general sense of proverb and popular saying. The fondness for similes and allusions, which is common to all primitive cultures, survived among the Semites and especially among the Arabs with great tenacity and therefore plays an important part, even in the higher forms of literature. The simplest form of metaphor usually draws parallels between man and beast. Of a sleepless man, one says îâsû bî-lidâlî anâkâdâ (or anâkâd) ‘he spent the night like a hedgehog’ (Abû Hilâl al-Askarî, Madjma’ al-Amthîl, on the margin of Mâdînî, Cairo 1310, i. 109; 15; Li’ân al-Arîb, iv. 437) and with the downrightness beloved by the Arabs the good example and educative influence of a leader or father is described as bâbûr kimânî ba’îthâlî akirâmûn ba’îthâlî fâlîrânî ba’îthâlî dâjlînî (al-Mâdînî, Madjma’ al-Amthîl, Cairo 1310, i. 64, 65). The comparison to animals is also used to indicate veiled mockery of unpleasant social conditions as al-bâgîkhâmî fî arîdnî yastasîniru ‘here among us the sparrow plays the falcon’ (al-Askarî, i. 193, 26). Such proverbs are sometimes developed into regular fables (see Brockelmann, Fabel und Tiermachen in den alten arabischen Literatur, Islamica, ii. 96—128). Among them we find that much is common to all nations, which it is hardly ever possible to trace back to a single source (cf. the discussion on the ‘goat and knife’: Z. D. M. G., xlvii. 373 sqq.; xlviii. 86 sqq.), unless the origin is as well known as that of the two bulls from the Katsila wa-Dimma, which is given by al-Askarî, i. 47, 16 sqq. and therefore ‘All cannot have applied it to his relationship to Quthamîn.

But the circumstances of everyday life also provide material for similes which usually take the form of alîm men, as in those which al-Askarî and al-Mâdînî quote at the end of each chapter of their collections of proverbs arranged in alphabetical order. Even quite banal happenings may pass into proverbs (fâ-lidârît or dâhnîbat mathalân or darîba bhî ‘î-mathalîn, as so many Arabic stories end), like the story of Qalîs’î of whom we know no more than that his aunt once gave him as a surety and never redeemed him (al-Mufajjûl b. Si‘lûm, al-Fâkkîr, ed. Storey, p. 24, No. 54); or story of the poor woman selling butter of whom a vogue took advantage after inducing her to hold two skins of butter firmly together in her hands (al-Fâkkîr, p. 70, No. 147). But the memory of important historical events is also perpetuated in proverbial sayings, like that of the fratricidal war between the Bakr and Taghlib provoked by Basâsî (al-Fâkkîr, p. 76, No. 157); al-Mufajjûl in his al-Fâkkîr, p. 217—231, and al-Mâdînî, i. 38—47, therefore give the most notable battles of the Arabs in their lists of proverbs and proverbial allusions. Many incidents of the Muslim period have attained equal renown, like Mu‘âwiyâ’s exclamation of joy on hearing that al-Ashârî had been poisoned (see above, i. 504; al-Mâdînî, i. 38); or the memory of the fine voice of the two sons of the bôn vivant Calîph Yâzîd b. ‘Abd al-Malîk (al-Mâdînî, i. 137, 12). It is however not always epoch-making events that are handed down to posterity in this way, like the stormy night in the time of the Calîph al-Mahdi, which provoked him and his retinue to do such penance (al-Mâdînî, i. 176, 12); or the story of the defeat and fall of the Khâqân, apparently that chief of the Khuttal, whom Asâm b. ‘Abd Allâh conquered in the year 119 (737), which, according to Tàbârî, i. 1616, made a great sensation at the court of Hishâm, while Mufajjûl in al-Fâkkîr, p. 86, 14 sqq., refers to the fighting
against the Khazars, but the historians record no
event of the kind among them; or the story of
Ma‘āwiyah’s ambassador to the Emperor of Byzantium
(Ibn Katibah, ‘Cīyān, p. 238, and the proverb:
‘Askārī, i. 76, 11 sqq.; Maidānī, ii. 72, 4). Such
historical memories are frequently preserved in
the form of allusions like the famous ‘sifat al-
Ma‘āsyammas and the gawū Sinimūr. Many prob-
lems of this kind are of local origin, like the
allusion to the two equally poor asses of the man
from Hira (Maidānī, i. 72, 16) or to the Meccan
dandy (Maidānī, i. 127, 17); such proverbial allusions
are particularly common in Madīnā (ibid., i. 168,
6, 173, 20; 261, 19; 264, 12; 280, 25; 298, 7),
and so we have them from Basra (ibid., i. 145,
16 and 30); also from Kufa in Dīja, K. al-
ဟားရိုးဌာန, v. 153, 21). Kūfah (ibid., i. 192, 18
as a nest of ‘Shī‘a, Wāṣṣ (ibid., i. 97, 9) and Ḥimṣ
(‘ṣūd, i. 190, 22). Men celebrated for particular
qualities; as in other lands, are frequently
memorated among the Arabs in proverbial sayings,
but the popular imagination very often invests
the representative of such virtues; when Ḥūtūm
has to share the reputation for liberality with the
‘lāhir Kaff b. Mānā and Ḥarmī b. Sinān (‘Askārī,
i. 223 sqq.; Maidānī, i. 123 sqq.); this is due
to tribal rivalry. There are therefore various
typical representatives of fideity (‘Askārī, i. 251
sqq.; Maidānī, ii. 231 sqq.), of peculiarity (Mai-
dānī, i. 210 sqq.), and of stupidity (Dughlā:
al-Fā‘ākhīr, p. 24, N. 58; Maidānī, i. 147; Shawlā:
al-Fā‘ākhīr, p. 71, N. 108; Gothamites of Arabia,
The people of al-Hadjar: Maidānī, i. 178, 19; Abū
Ghālshān and others in Madīnā (ibid., i. 146, 195,
50 sqq.). the best known is Dīja, among whom have
attached the stories of a wandering rogue in the
Adab literature (E. S., Z D., M., G., lvi. 237 (1)).
We also have the Omayyad governor of the ‘Irāq,
Vissal b. ‘Omar al-Dhījah (Maidānī, i. 99, 31).
Memories of Penelope seem to have found their
way to Arabia in completely perverted form (“stup-
ider than the woman who continually undid the
weaving”, which is found as soon as Kūrān, xvi.
84: cf. ‘Askārī, i. 283, 7; Maidānī, i. 172, 8), and
apparently “guiddier than he who turned the rock”
(Maidānī, i. 207, 37), among the typical repre-
sentatives of stupidity and greed respectively.
But among Arabic proverbs there are not a few
the meaning and origin of which had already been
quite forgotten at the time they were put on
record, so that Arab writers invented all kinds of
explanations for them from pseudo-history, with a
particular fondness for the Amalekites; not in-
frequently a choice is given of several stories, as
for the “nailed warrior” (Maidānī, i. 217, 20), the
gatherer of acacia shoots of the tribe of ‘Anazā
(ibid., i. 49, 21; 288, 17), “the repenance of al-
Kūsā” (al-Fā‘ākhīr, p. 74). We also find widely
disseminated motives, as in the story of Khurāzā
which the Prophet is said to have told his wives
(al-Fā‘ākhīr, p. 137, N. 280). In many cases the learned
editors have gone so far as to invent
stories because they passed over the simplest
explanation as too easy. Thus the saying ḥuda, ḥudā,
‘arī ḥala (‘unūda probably only means “hawk,
hawk, the ball which was shot from the bow
before the invention of fire-arms” is behind you”,

1) The Varāḏī ‘Aṣūr (Al-Kubra, ed. Hikmet
Bek Şahrīf, Cairo 1346 (1928) are for the most
part from the Turkish Naṣṣūdān.
which Abū ‘Ubaida refers to a children’s game;
al-Kalbī and al-Shahrīkī however take ḥudā,
‘unūda as names of South Arabian tribes who
had fought with another (al-Fā‘ākhīr, p. 38,
N. 93). Similarly the same writers invent stories
of the time of the Amalekites in which Ḥimār
is a proper name to explain ḥurakūs ḥuraz ‘uṣūda
hůmīr, which al-‘Aṣmā‘ī rightly takes literally (al-Fā‘ākhīr,
p. 12, N. 18).

The number of proverbs is naturally very large
in which maxims of life, often very trivial, are
laid down; they include some which owe their
origin to social conditions in Arabia, like “assist
thy brother whether he is right or wrong” (al-
Fā‘ākhīr, p. 119, N. 258). They also include much
that is the common property of all nations, the
origin of which can rarely be demonstrated, as
in the Arabic pendant to the definite Roman
Res vestit ad triarios in al-Aṣkārī, ii. 32, 16.
The subject can only be touched on here. To
the references given by the writer in Ostas. Zeitschrif,
vi. 66 sqq., we may add a few Arabic parallels to our
proverbs: “Walls have ears” (Maidānī, i. 57,
31); “Speak of an angel and you hear his wings”
(ibid., i. 57); “Hammer and anvil” (ibid., i. 58,
19); “A liar must have a good memory” (ibid., i. 49,
17); “Festina lente” (ibid., i. 87, 33); “Out of
frying-pan into the fire” (ibid., ii. 25, 9); “To fall
between two stools” (ibid., ii. 64, 7); “To be
on tenter-hooks” (ii. 74, 12); “Hoist with his own
petard” (ii. 168, 12); “A bird in the hand is worth
two in the bush” (‘aṣūra wa al-kaffi ‘uṣūda
min ‘uṣūda ‘uṣūda; al-Hamadānī, Resādl, Baitūr
1890, p. 44, 3).

Among sayings which are international in char-
acter those disseminated by religious communities
occupy a special position. It is of course not an
accident, but is quite in keeping with the importance,
which is becoming more and more evident, of
Christianity for the intellectual life of ancient
Arabia, that New Testament sayings are common
among Arabic proverbs, notably from the Sermon
on the Mount, like Mt. 7, 2 = Maidānī, ii, 67, 7;
Mt. 7, 15 = Maidānī, i. 192, 25; Mt. 7, 16 = Mai-
dānī, i. 34, 8, 336, 11; Mt. 18, 14 = Maidānī, i. 68;
Mt. 9, 24 = Maidānī, ii. 114, 23; Mt. 17, 3 = Mai-
dānī, ii. 67, 26; Mt. 23, 24 = Maidānī, ii. 259, 16;
Gal, 6, 7 = Maidānī, ii. 73, 12. On the other hand,
except for a few echoes of Proverbs and Eccles.
in which the origin is uncertain, the only one
from the Old Testament is Maidānī, i. 228, 99,
which looks like a quotation from Deut. 32, 15.
From Christian legend we have also the proverb
martyrdom of Euphrates (al-Fā‘ākhīr, p. 256, N. 517)
and the story of the Seven Sleepers which appears
in various forms (al-Fā‘ākhīr, p. 109, 239; Maidānī,
196, l4; Kāfī, Amāli, i. 61; of ‘M.Z., N. v.,
288). On the other hand, of Old Testament figures
we find only Noah once in a later proverb, probably
native to Mūsul (Maidānī, ii. 250, 11). The Mandaean
Creator-deity Fiṭḥū must have gone into the proverb
Maidānī, ii. 62 sq., from the verse of Ru‘ha quoted
there, to whom it was welcome, like other foreign
matter, to give an appearance of learning (see
Ahkwadd, Dījaww rūb, xv). Later tradition also
associated with Buṭmān (q. v.), the wise hero
of Arab antiquity, sayings attributed to Āḥīkār
and common to many nations.

Although the proverb is from its nature ano-
nymous, learned tradition often tries to find authors.
Many proverbial sayings are therefore attributed
to the Prophet and his Companions. The Amīṭḥāl al-Nabī, which circulated outside the canonical collections of Tradition were collected by Ibn Khaldun al-Raḥmān (Fīriskt, p. 155) and Abū Hilāl al-Askarī; al-Mađānī accuses the latter of being uncritical and quoting in his preface as an example of genuine Ḥadīth the parable of the good and bad companion in Buḥārī, Ṣaḥīḥ (ed. Kṛehl, ii. 17). This does not prevent him however from putting in his collection a series of sayings of the Prophet, as his predecessors had done, and at the end of his book compiling a special chapter of them, which also includes sayings of the first Caliphs. Special popularity was always enjoyed — not only among Shī'is — by sayings attributed to 'Ali. Ibn Kūtaiba in his Cīvīn al-Asbābīn, in the fifth book, K al-ʾilm wa ʾl-Bayān (ed. Köpr., fol. 155b), already uses a collection of this kind, such as was current in various recensions (anonymously in al-Tasfa al-bahība, Stambul 1302, p. 107—114) in the order of Saʿīd b. Abī Wahīd b. Muhammad al-Mađī, about 510 (1116), entitled Ghūr al-Ḥikam wa-Dirār al-Ḳalīm, lith. Bombay 1280 and also edited in Persian and Turkish (s. i. 299, and also W Yule, Apophthegms of Alte the son of Aboo Tālib (Maṭall kūl Tālīb) with an early Persian paraphrase and an English translation, Edinburgh 1812; Sad Kūlimi Ṭawūṣī Muttabbīyān Aмир al-Muʾminin. Teheran 1304; Naṭr al-Ṭallī, the second coll. in Fleischer, with Turk. paraphrase by Muṣallim Nādīd entitled Amīṭḥāl ʿĀlī, Stambul 1313, with Turk. comm. by Naṣīr entitled Rūṣṭān al-Dawārī, Stambul 1257).

Numerous also are the proverbs which have a metrical form, while it is impossible to say whether the poets, in whose poems they are, originated the idea or only gave it its form. Al-Sukkārī (Fīriskt, p. 78) and Ṭawīla b. al-Muḥī (ibid., p. 48) composed such abāb suʿūra. A fine collection has been made by al-Īṣāhābī in the Kitāb al-Muṣṭafī af, Cairo 1320, i. 27 sqq. Among such metrical sayings are some by the greatest poets of the pagan period like Tarafa (al-Fāqīrīr, p. 254, 509; al-Mađānī, i. 161), Imrāʿ al-Kāsī (ʿAskari, i. 255 = Mađānī, i. 133), Lelīb (ʿAskari, i. 37) and by later poets like al-Ḥarīṣ (al-Fāqīrīr, p. 250, N. 406; al-ʿAskari, i. 46) and Muṭṭī b. İyās, whose two palm of Huľūn (ʿAskari, i. 297, 452; Mađānī, i. 297) are famous. From a misunderstanding of a verse of Farazdāk in which the way to ʿUsulān is mentioned (Mađānī, i. 38; quoted by Yākūt, iii. 736), this verse became typical of taking the wrong way. Al-Mutanabī's verses that have in al-Maḥfūz he have been collected by Īsābī al-Talakānī, d. 385/995 (Yākūt, Irshād, vi. 501—518; Suyūtī, Rağbāt al-Walā, p. 35, in al-Amīṭḥāl al-ʿawra min Shīr al-Maṭunabī (Fīriskt, Cairo 2, iii. 23).

Proverbs excited the interest of the learned from the very beginning of Arabic literature; historians and philologists emulated one another in collecting and explaining them. Thus we find among the sources of the works that have survived to us the old historians and genealogists like al-Sharī ḵ b. al-Ḳūtāmī (Wustenfeld, Geschichtsschreiber, N. 23) and ʿAwāna b. al-Hakam (ibid., N. 27) and Abū ʿIyāz (ibid., p. 36; al-Fāqīrīr, p. 253), the two former very often as authorities for Ḥadīth b. al-Kalbī, to whom with the great monographist Muhammad b. Ḥabīb (Wustenfeld, N. 50), Zuhair b. Bēkār (ibid., p. 61) and al-Mađīnī (ibid., p. 47), we owe most of the legendary and historical material. Almost all the philologists of note have devoted special works to the subject. To their interest in language is to be ascribed the fact that the limits of the scope of the subject are extended to include phrases and idioms which have really nothing to do with the proverb and, as for example laʿānaḥu ʿĪḥū (al-Fāqīrīr, p. 7), do not seem to require explanation; but we owe, for example, to al-Muḥadīl the interesting note that it had become a habit with some Syrian Arabs to use the Greek ปราก, "says he". The oldest work of the kind that has survived is the Kitāb al-Amīṭḥāl al-Muṣṭafī al-Dabbi († 170 = 785), pr. Stambul 1300. The next oldest, that of Abū Ṭubābī al-Kāsim b. Sollām al-Harawī (d. about 223 = 837), is preserved in a number of Stambul MSS. (s. Rescher, Z.D.M.G., lv. ixv., N. 43; M. S. O. S. A., xiv. 6; M. O., vii. 123), and in the Escorial (Derenbourg, Lévi-Provençal, N. 1757), also the commentary by Abī Alāl b. Bakrī (d. 487 = 1094), ibid., N. 526 and Lādeli, N. 1795; printed as N. 9 of the al-Tuḥfa al-ḥabbage, Stambul 1302, p. 2—16; on the other hand, the work dealt with by E. Bertheau in his Diss., Göttingen 1836 (s. Freytag, Arabun Verba, i., vii. — xi) is much more recent. The Kitāb al-Fāqīrīr of al-Muṣṭafī b. Salla, a pupil of Ibn al-Arābī (d. 231), has been edited by C. A. Storey for the "De Goege Foundation", I edyn 1915. The specially numerous proverbs of the form afzul min were collected by Ḥamza al-Isfahānī (d. between 450—460 = 960—970) in a work which only survives in a unique MS. in Munich (see Wittow, in M. S. O. S. A., 1909, p. 33 sqq.), which was much used by later writers, and copied word for word by al-Mađīnī for the corresponding section of his book. Abū Hilāl al-Askarī (q. after 395 = 1005) compiled the Dīmararat al-Amīṭḥāl, extant in several MSS, in Stambul (see Rescher, Z.D.M.G., lv. ixv. 513; M. F. O. B., v. 501; M. S. O. S. A., xiv. 36) and printed at Bombay in 1306—1307 as well as on the margin of Mađānī (Cairo 1310), in which an attempt was made for the first time to annotate each proverb from the philological and historical point of view, excluding all post-classical material, to which Ḥamza had allotted considerable space. Al-Mađānī [q. v.] collected the material compiled by his predecessors in their Madmū ḱ al-Amīṭḥāl and expanded each section by an appendix on modern proverbs. This has since then been regarded as the standard work on the subject and not even Zamakhšārī's Kitāb al-Muṣṭafī h the Amīṭḥāl, although also much read (to the MSS. mentioned in G. A. M., i. 202, xiv. 97, 102, 121; also Aghā, N. 991; Dāmāzade, N. 1557; Scutari, Z.D.M.G., ixvii. 58; Brussa, ibid., p. 50; Mōsul, Dāwil, al-Maṭunabīyān al-Mawīlyā, p. 329, 37; Cairo: Fīriskt, ii. 355), could according to Ḥājjī Khālīfa, N. 1142, permanently affect its popularity. Al-Mawīdī's [q. v.] book, like the different collections of sentiments made by al-Zamakhšārī, was from the first intended to deal rather with the literature than with the language of the people. It was not till the sixteenth century that interest in the east was again aroused in proverbs under the influence of European scholarship. Almost all works on modern Arabic dialects contain collections of proverbs (cf. the lists which could of
MATHAL — MATHNAWI

(C. Brockelmann)

VI-MATHĀṆI, a term of uncertain meaning which occurs twice in the Kūrān, namely in Sūrā xv. 87: "and we have brought thee seven of the mathanāt and the noble Kūrān," and Sūrā xxxix. 24: "Allāh sent down the most beautiful recital, a book which is in harmony with itself, mathāni, at which the skin of those who fear their Lord creeps." In the interpretation of the word is made more difficult by the fact that in the latter passage it seems to mean the Kūrān itself, in the former, on the other hand, something similar to the Kūrān.

In Tājūrī (Ṭadbirt, xiv. 39 sqq.; cf. xxix. 124 sqq.) we find the following opinions:

a. Māhsūs was given six out of the seven mathanāt; two were lost when he broke the tablets. The seven mathanāt are like seven long sūras, i.e. xxvii. and a seventh, on the identity of which there is a difference of opinion: it is either Sūrā x. or viii. and ix. combined.

b. The seven mathanāt mean the Fāṭiḥah which contains six verses. These with the hamalat in the beginning make seven. It is called the mathanāt, i.e. repetitions, because it is repeated in the qālid at each rafʾ. This explanation is supported by quoting the term mutaḥašbah (=in harmony with itself) which immediately precedes the word mathanāt in Sūrā xxxix. 24.

c. The mathanāt means the Kūrān in general.

Hadith hesitates among these interpretations a. (Ṭalmīdī, Tafsīr, Sūrā ix., trad. i; cf. Bkhārī, Aḥādīth, bāb 106) and b. (Bkhārī, Tafsīr, Sūrā ix., bāb 1; Sūrā xv., bāb 3; Fāṭiḥat al-Kūrān, bāb 9; Tirmīdī, Tafsīr, Sūrā xv., trad. 3: Naṣārī, Littāb, bāb 26).

Nor is there any unanimity in explaining the form mathanāt. Badawi on Sūrā xxxix. 24 gives as the singular mathanān, mathanān or mathanān, Zanakahīn gives mathanāt. The latter form is found in the Kūrān (Sūrā iv. 3: xxvii. 45: xxxv. 1) and in Hadith (Bkhārī, Sahīh, bāb 84; Witr, bāb 1. Tirmīdī, Sahīh, bāb 206 et al.) as a distributive, meaning "occurring in pairs." This meaning however would not be at all suitable for mathanāt.

Geiger (Was hat Mohammed aus dem Judenthum aufgenommen?, p. 57 sqq.) has already compared the Hebrew mathnāh (Arām: mathsitādā). According to him then mathanāt would mean the Kūrān itself as a whole. His suggestion is approved by Noldeke-Schwall (Geschichte der Quānāt, p. 114 sqq.). Attention might further be called to the fact that mathanāt means a single law as well as the whole code and from this could be derived the double meaning of mathanāt (separate verses and the whole Kūrān), a derivation which could be supported by the parallel double meaning of the word Kūrān (single revelation and all revelation as a whole).

Spranger (Das Leben und die Lehre des Mohamads, Berlin 1861, i. 463 sqq.) explains the word from the Hebrew śārār to repeat" and the conception from Sūrā xxxix. 24, from which it would appear that the mathanāt are part of the stories of punishment. This view has been adopted by D. H. Müller, Die Propheten in ihrer ursprünglichen Form, i. 153; A. H. Grimes, Mohammed, ii. 77; N. Rhodokanakis, in W. Z. K. M., xxxv. 66 sqq.; J. Horovitz, Koranische Untersuchungen, p. 26 sqq. This would imply that, at least when Sūrā xv. 87 was revealed, there were seven of these legends of punishment.

Early evidence of the use of the word outside of the Kūrān is found in a poem of Abu ʿl-Aswad al-Duʿali (text and transl. by Noldeke, in Z. D. M. G., xiiii. 236 sqq.; cf. thereon Bēnān, in J. R. A. S., 1921, p. 584 sqq.; Horovitz, op. cit.). Here the mathanāt are mentioned along with the Mīlānā, "the seven verses" along with the "hundred verses" sūras of the Kūrān. The exact content of these groups is unknown.

In conclusion it may be mentioned that Goldziher (Z. D. M. G., lii. 866 sqq.) has called attention to a term mathānāt which occurs in non-canonical tradition and is obviously a new formation modelled on the Hebrew mathnāt.

Bibliography: In addition to the references in the article: Th. Noldeke, Neue Beiträge z. sem. Sprachwissenschaft, p. 26; Fakhruʾd-dīn al-Kāzī, Maṭāḥ al-Gshāb, iv. 110—112; Suʿyūnī, Ṭabaqāt, p. 124; Lišān al-Arab, xvii. 127 sqq.; Lane, Lexicon, s. v. mathanāt.

MATHNAWI, a form of poetry in which each bāḥt (verse) is normally a self-contained whole, grammatically complete and with the two miṣrāʾīs (hemistichs) rhyming with one another and not—except accidentally—with the verses that follow. In Persian, Turkish, Urdu and Urdu, poetic compositions of any length dealing with epic, romantic, ethical or didactic themes are of the mathnawī form, which probably originated in Persia. Dowlatshāh (ed. E. G. Browne, p. 29) relates a tradition that in the time of the Dalālamite ʿAṣād al-Dawla (d. 372 = 982) there was still to be found inscribed on the palace at Kāsr-i Shirān a bāḥt in "Old Persian" having the two hemistichs rhyming. There would appear to be no pre-Islamic Fāhāli verse of the kind extant, and the mathnawī form may be merely a development or expansion of the maṭāḥ of the ḥzdā or ghazal. However that may be, in the oldest fragments of Muslim Persian literature that have come down to us, there are examples of the mathnawī as of the other forms of verse. Of these fragments the oldest belong to the work of Abū Shukūr al-Balṭāni, who is said, probably on that account, to have invented the genre. They appear to be parts of a series of narrative mathnawī (cf. Asadi’s Lughat al-Furs, ed. P. Horn, p. 29 of the Persian, and also p. 22 sqq.). Alongside of them are to be found sufficient portions of the work of Rūḍār (a later contemporary of his), to indicate that he also used the same form
for a translation of the Kalila u-Dinna (Asadi, op. cit., p. 19 sqq. and Dawlatshah, p. 34). There is also a couplet-like hazaaj metre indicating an erotic mathnawi (Asadi, p. 48; cf. Eshiq, Kudaj, in N. G. W. pict., 1873, p. 755 sqq.).

The first complete poem that has survived of the genre is the Shab-nama, begun by Dakeji and completed by Firdawsi. Actually, apart from the arrangement of the rhyme, it is not of the regular mathnawi type. More characteristic is Firdawsi's Yasuf u-Zalikha, composed in the same metre (the muta'kāriib). It begins with a number of introductory sections of which the first is in praise of Allah and the rest are headed respectively: "In praise of the Prophet", "In description of the king of Islam", "On the cause of the revelation of the Qur’an of Joseph", "On the reason for setting down this narrative", etc. Then comes the story proper, commencing with the description of Jacob’s working for Rachel and pursuing its way through the various episodes of Joseph’s career until he becomes the vizier of the viceroy of the Pharaoh, whose wife Zalikha falls in love with the youth. When he refuses her advances she denounces him for wizardry to her husband. Here is introduced the often illustrated incident of the Egyptian ladies who, at a feast to which they had been invited by Zalikha, catch sight of Joseph and are so astounded by his beauty that, without being conscious of what they are doing, they peel the skin from their hands instead of keeping their knives for their oranges. Then comes the account of the imprisonment of Joseph, the events that lead to his release and exaltation, the confusion of the wicked brethren, the repentance of Zalikha, her rejuvencence and marriage to Joseph, and the death of Jacob.

A contemporary of Firdawsi’s, ‘Unsari, is credited with a mathnawi romance which has not survived: Wāmik u-Ashara. What purports to be a version of the story is given in a Turkish mathnawi by Lāmī (d. 940 = 1533), according to which, Wāmik, a priest in a fire-temple, is described as having fallen in love with Ashara, a maiden devoted to the cult. They are forced to part; Ashara going to the frozen regions of the North and Wāmik to the torrid lands of Ethiopia. They pine away in separation, and dying are turned into stars. The maiden becomes Virgo holding Spica in her hand, while Wāmik becomes Arcturus. The story bears marks of being of Pahlawi origin, the Arabic names being only translations.

Of mathnawis who have survived there follow chronologically two works of Nāṣir-i Khusraw, namely the Rawshān-i-nama and the Sa’di gasht, two romantic dialogues written in the hazaaj metre. After them in time is the romance of Wis u-Rāmin, ascribed by ‘Awfi to Fakhri al-Din Gurgānt (d. 440 = 1048), who is said to have derived it from the Pahlawi. In the version which has come down to us (ed. W. N. Lees, Calcutta 1865), we have a tale of passion unrestrained, which Pizzic (Poesia Persiana, ii. 88) characterizes as a vulgar product of India in Akbar’s time. In the tale, Wis or Wisa, the wife of Mōbad, king of Merw, has for her paramour her husband’s brother Rām or Rāmin, who proves unfaithful to her but in the end marries her after Mōbad has been killed. If the work is genuine, it marks a step in the differentiation of the romantic from the epic mathnawi, being composed in the hazaaj and not the muta’kāriib metre which had hitherto been common to both.

The true creator of the romantic mathnawi is Niẓāmi of Ganja, who, after beginning with the composition in that form entitled the Makhdun al-Arsarr — a collection of ethical and religious maxims interspersed with anecdotes, — wrote in succession the four other works which form his Khamsa or Pandj Gandj. This quintet provided the model for all subsequent mathnawi writers. Strictly speaking, only the second, third and fourth of them are romances; namely (a), the Khusrav u-Shirin, the story of the love of the Sasanian prince Khusrav Parwiz for the Christian princess Shirin, who is also loved by the mighty builder and engineer Parhad, and of the latter’s betrayal and tragic end; (b), the Laila u-Majnūn, the scene of which is laid in the desert and which shows the two lovers prevented from union by the hatred of their families for one another; and (c), the Haft Paikar, which has Bahram Gūr as its hero and consists of two sets of tales each told to the king by one of his seven favourite wives. The Sikandar-nama, which forms the fifth of the group, treats of the life of Alexander in epic style, but with a mystical touch in the later passages which makes him a prophet as well as a conqueror. Each of the five mathnawis is prefaced by introductory sections similar to those in Firdawsi’s Yasuf u-Zalikha, with the necessary changes for the names of patrons etc. and with a further section headed “On the mirāy of the Prophet” added in the works which follow the Khusrav u-Shirin. Every imitator of Niẓāmi’s mathnawi copies him in this respect as in others, so that even the eighteenth century Judeo-Persian Dandil-nama (by Khwāja Bahkhr, British Museum, MS. Or. 4743) has this introductory matter, though Moses is substituted for Muhammad in the section devoted to the Prophet.

The chief imitators of Niẓāmi are, in Persian, Djamān in Turkish, Shaikhī with his Khusrav u-Shirin and Fudullī with his Laila u-Majnūn; in Turki, Mīr Ṭāhir Nawāwī with his Khamsa; and in Urdu, Amin with a Yasuf u-Zalikha, Tadjalli with a Laila u-Majnūn, etc. (cf. G. de Tassy, Anteaux Hindustanès, Paris 1885, p. 30 sqq.).

The Mathnawi par excellence, i.e. the Mathnawi-i Ma’navi of Djalal al-Din Rumi, is in a class by itself, being a long medley of the doctrines of Sufism combined with parables, allegories, and pseudo-historical narratives. It is without the preliminary sections characteristic of the romantic mathnawi.

Arabic contains no poems of the mathnawi genre, but poems having the rhyme muta’kāriib of each line are known. The arrangement of the rhyme is known as muta’kāriib. Short specimens translated from Persian are quoted in Thālibī’s Yatīmat al-Dahr (iv. 23), and there are longer compositions, metrical grammars, by Hafti (Muḥāf al-Fu‘ād) and by Muhammad b. Mālik (Kitāb al-Alfaya) (for both of which see de Sacy, Anthologie Arabe, p. 134 sqq. and 145 sqq. of the Arabic text and p. 325, 356 of the notes).

The metres normally associated with the mathnawi form are those used by the masters in their compositions: i.e., in addition to those mentioned above, the sarf and khafrī used by Niẓāmi for Makhdun al-Arsar and the Haft Paikar respectively;
and the raman, used by Djalal al-Din Rumi in his Mathnawi and by Farid al-Din 'Aṭṭār in the Manṭik al-Tair.

(R. Levi)

MATURITY, name of a city, situated in 27° 31' N. latitude and 77° 43' E. longitude, and of a district of the same name in Northern India. The site of the city was of importance in the Buddhist period, as is proved by the numerous inscriptions and pieces of sculpture that have been found there. In later Hindu times it attained sanctity as the reputed birthplace of the god Kusenā and the temples erected there acquired great wealth and reputation. In 1617 Mahmod of Ghazna [q. v.] captured the city and levelled all the temples to the ground; there is no further record of the city until the reign of Sikandar Lodī, Sultan of Dihī (1488-1516), who destroyed all the temples that existed in Mathurā in his time. The city was practically refounded in the reign of Akbar, who visited the sacred site and gave permission for the erection of four temples, the ruins of which still exist. In 1669 Awrangzēb destroyed a vast temple that had been built in the reign of Līghangir and changed the name of Mathurā to Islāmābād, but like many other Muslim designations of towns in India it failed to displace the original name of the city. With the break-up of the Maghāl empire after the death of Awrangzēb, Mathurā suffered from the political confusion in which all the country between Dihī and Āgra was involved, and at one time or another passed into the hands of the Dżuj, the Marathas and finally the British.

In the centre of the modern city stands the mosque erected in 1661 by 'Abd al-Nabi Kān, who was appointed governor of Mathurā by Awrangzēb in 1659. The Muslims number 15,475 out of a total population of 56,666 in 1921.

vi-MATIN. [See Allāh.]

MAṬLA', MAṬTI', ascension. Two kinds of ascension are distinguished:

1. Ascension in the spherea recta R. — Modern astronomers use the expression right ascension for all points of the heavens; the older astronomers only for those of the ecliptic. The right ascension $R$ is found by drawing a circle of declination which is perpendicular to the equator through the corresponding points of the ecliptic. With us and as a rule with the Arabs the right ascension of the arc of the equator is between the beginning of Aries, the vernal equinox and the intersection of the circle of declination with the equator. Many Arab astronomers calculate the ascension $R'$ from the beginning of Capricorn; then $R' + 90^\circ$ gives the degree of the equator which rises at the time at which the corresponding degree of the ecliptic culminates. The ascertainment of this is, according to Suter, of importance for certain astrological purposes. If in fig. 1, the point $A$ or the star $S$ of the ecliptic rises above the horizon, the point $B$ of the equator, the pole of which are $P$ and $P'$, rises at the same time; $\gamma B$ is therefore the ascension of the arc $\gamma A$ of the ecliptic in the spherea recta.

One also talks of the ascension of a sign of the zodiac; it is the arc of the equator which rises contemporaneously with the 30° of this sign. The longitude of the ascension generally varies with the different signs, but from time to time is the same for those which are similarly situated at the beginning of Aries or of Libra, and for those which are at the beginning of Capricorn or of Cancer.

The maṭāli in the spherea recta are therefore so important (for astronomical purposes also) because in stereographic projection they give the curves corresponding to the degrees of the ecliptic, according to which the ecliptic, which is projected as a circle, is to be divided on the astrolabe.

Tables for the right ascensions have been prepared by numerous Muslim scholars, e. g. by Muḥ. al-Mūsawī, Muḥ. al-Ḥāfiẓ al-Iṣwā'ī, Muḥ. al-Kura al-mustaṣhām, Muḥ. al-Kura al-muṣṭaṣḥib, etc. ; al-Iṣwā'īyā and al-falakīyā.

If the point being observed does not lie on the ecliptic, the maṭāli are those of the degrees of the equator, which run at the same time as the star through the centre of the heavens i.e. the upper meridian (tattawarāt), quite in keeping with the modern definition.

The ascension in the spherea recta is called maṭāli (often with the addition of al-burūq = the sign of the zodiac); fi 'l-falak al-mustaṣhām (M. in the spherea recta); M. li 'l-burūq fi ḫaṣṣ al-Iṣwā'ī; M. al-Burūq bi-Ḫaṣṣ al-Iṣwā'ī; M. fi Muṣawī ḫaṣṣ al-Iṣwā'ī; M. al-Kura al-mustaṣhām; M. al-Kura al-muṣṭaṣḥib or fi 'l-Kura etc.; M. al-Iṣwā'īyā and al-falakīyā.

If one calculates from the degree of Capricorn, the right ascension is also called maṭāli al-khubb (i.e. ḫaṣṣ al-Araḍ, "M. of the dome", namely of the dome of the earth).
2. The ascension obliqua (fig. 2) of a point $A$ in the ecliptic at any point is the curve $\gamma B$ of the equator the poles of which are $P$ and $P'$, between the beginning of Aries and the horizon at the moment in which this point rises (for any particular star $S$ substitute “star” for “point of the ecliptic”); it is often also made to begin at Capricorn.

Tables for the ascension obliqua can only be given for particular places as they differ from place to place. The ascension obliqua however can easily be calculated from the ascension recta.

The ascension obliqua is called: $\text{Magâbât}$ al-Balad, $M. \text{al-Buldân}$, $M. \text{al-Ikhâm}$ (of the clime), $M. \text{fi} \ 'l-Balad$, $M. \text{fi} \ 'l-Ikhâm$, $M. \text{al-balâdiyâ}$, $M. \text{al-akhâkiyâ}$, $M. \text{fi} \ 'l-Ajlâk al-mâ'dâ', $M. \text{al-burîq} \ 'l-Kura al-mâ'dâ', M. al-Shurûq. We may also note the terms $M. \text{al-Ma'âsir}$ and $M. \text{al-Waâjît}$.

Ascension recta might perhaps be translated direct or spherical ascension and ascension obliqua by local ascension.

Arab astronomers, following Ptolemy, have proposed the following formulae for the ascension obliqua. If $e$ is the plane of the ecliptic, $\delta$ the declination of the point $A$ on the ecliptic, $a_1$ its right ascension and $r$ the number of parts (usually 60) into which the radius is divided (with the later Arabs and modern astronomers $r = 1$) then according to al-Khwârizmi and al-Battânî, we have:

$$\sin a_1 = \frac{\sin \delta}{\cos \phi} \sin \epsilon \cdot r = 1 \text{g cîg}.$$ 

The ascension obliqua $a_2$ is for the latitude $\phi$

$$a_2 = \text{ascension recta} (a_1) + \text{arc} \left( \sin \phi \sin \delta, \cos \phi \cos \delta \right) = a_1 \pm \text{arc sin} (\text{tg} \phi \pm \text{tg} \delta).$$

At the same time it is to be observed that al-Khwârizmi (d. about 850) and al-Battânî, who published his book before 900, give the formula with sine and cosine, while Habâb al-Hâsib, who made his observations between 825 and 835, uses tangents and cotangents.

To ascertain the ascension, the above formulae are used if tables are not available. But one can also use one of the many apparatus which are made for the mechanical solution of such problems. The simplest of these is the armillary sphere (see Nolte quoted in Kura) and the globe with thearm (see Schnell quoted in Kura) as in both cases the heavens can be used as the largest circles. There are also the monographic methods, in which projections of the sphere of heavens are used, as in the astrolabe (s. J. Frank, Die Verwendung des Astrolabium nach al-Khwârizmi, Abhandl. zur Gesch. der Naturwissenschaft, etc., Heft iii., 1922), the universal plane, the Zarkâl plane (see an article to be published later by Mittelberger), Werner's meteoroscope (Joannis Verneri de Meteoroscopii, publ. by J. Würschmidt, Abhandlungen zur Gesch. d. Mathematik, Heft xxviij, 1913) and the muqâfârâf quadrants. On the sine quadrants, the system of lines which enable the sine and cosine to be read off, the above formulae can be obtained with the help of the latter (see P. Schmalz, Zur Geschichte der Quadranten bei den Arabern, Munich 1929).

Along with the maţâlî, the magâbâbî also were ascertained. If one is observing, not the rising but the setting points, the corresponding curves are called magâhrib (a table for the latter is given by al-Birûnî in the Mas'ûdîc Canon).

Addendum. Among the Greeks and Arabs and European astronomers of the xiith-xvith century φαία means: 1. the globe or geometrical sphere; 2. the space between two surfaces of two concentric spheres, a shell of a sphere; 3. the circle which corresponds to the assumed path of a heavenly body, i.e. the ecliptic, the epicycle, the eccentric circles. — The Arabic kura has only the first meaning, the word faîak the second and third, the second in the theory of Ibn al-Halîfîm (see al-Kâarakî). The sphera recta, al-afâlak al-mâ'dâ is the sphere of the heavens, i.e. for the inhabitants of the equator; in the Latin translation of the tables of al-Khwârizmi (table 59) it is said of the ascension in the sphera recta “horoscopus secundum terram Arin” (Arin is a corruption of Azîn-Ud'înî = Ujajînî in Sanskrit, which was erroneously taken to be the kubbat al-arîd, dome of the earth, the centre of the equator and of the inhabited world). At all places which do not lie on the equator, there is a sphera obliqua so that these are innumerable.

Bibliography: Ptolemy, Almagest, ed. Heiberg, passim; al-Battânî Opus astronomiûm etc., ed. C. A. Nallino; H. Suter, Die astronomischen Tabellen des Muhâmmâd Ibn Mâsû al-Khwârizmi etc. [cf. also al-Khwârizmi] and numerous works on astronomy. — I am much indebted to Prof. Nallino for a number of suggestions. (E. Weidemann).

MATMÂTA, the name of a Berber tribe, belonging to the large family of the Butr, and brethren of the Maghâtî, Kûmûa, Lâmûa, Şadîna, Mâdyûa, Maghîla, etc. They formed with them the ethnic group of the Banû Fâtîn who, like all the other Butr, seem to have had their original home in Tripolitania.

Our chief source of information about the Matmâta are al-Bakît and Ibn Khâldûn. As with the majority of the Butr Berbers, three principal divisions can be distinguished:

1. Elements settled in the eastern Maghrib not far from their original home: these are the modern Matmâta in Southern Tunisia, some 30 miles S.W. of Gâbes.

2. Elements which have settled in the Central Maghrib: first in the plateau of the Serîl, in the N.E. of Mîdâs; then having been driven out of this territory by the Zanîa Banû Tûdjîn, they sought refuge in the mountainous massif of Wânscharî (the modern Ouarzânsî). One part of these elements has moved to the mountains of the Mediûn which are included within the borders of Morocco and the other part has moved to the upper valley of the Moulûa at 'Amuckûr. Ibn Khâldûn also mentions a little isolated group settled on the mountain...
which bears their name between Fās and Ṣaḥūf; there must also have been some of them in the coutour of Taza for a place between Fās and Taza still bears their name. Finally we owe to al-Idrisī the record of the most western body: the Maghmāt of Tamasna.

The Maghmāt played a fairly important part in the early centuries of Islam. Those of the central Maghmāt had adopted Abādī doctrines: being conquered by the Ṣanḥādja and Ṣanā, many of them migrated to Spain. The most famous member of this people was Sālīḥ b. Salāmān, the famous Berber genealogist, so frequently quoted by Ibn Khaldūn.

**MATN** (*v.*) a term with different meanings (cf. the lexica, s. v.), of which that of text, especially that of the text of a tradition, deserves to be mentioned here.

Main occurs in the sense of text already in pre-Islamic poetry and is used in this sense in Arabic literature up to the present day. It denotes especially the text of a book as distinguished from its oral explanation or its written or printed commentary.

In connection with traditions main denotes the contents as distinguished from the chain of traditions who handed it down (wannād).

**Bibliography:** Goldziher, *Muhammedanische Studien*, ii. 6 sqq. (A. J. Wensinck)

**MĀṬRAḤ, a town on the Gulf of ʿOman, two miles west of Masqat on the east coast of Arabia. The town, which has about 14,000 inhabitants, is the starting-point for caravan traffic into the interior of Arabia and next to Masqat, the most important commercial centre in Ṣanā. The town is beautifully situated in fertile surroundings, has a good harbour, easily entered but little sheltered, from which Masqat can be reached in an hour by boat. The inhabitants of Ṣanā used to have wharves for shipbuilding here and the textile industry was not unimportant (spinning and weaving). A fort built by the Portuguese still stands as a memorial of their rule in Ṣanā. According to Wellen, the town used to have 20,000 inhabitants.

**MĀṬURĪDI, ABU ʿMAYR Muḥammad b. Muḥammad b. Muḥammad b. Maḥmūd al-Ḥanāfī al-Muṭakallim, al-Māṭurīdī al-Māṣmārī** is the titular head of the Māṭurīdī School of theology which, with the Ashārite School, formed orthodox Sunni Islam. The two Schools are equally orthodox, but there has always been a tendency to suppress the Māṭurīdī’s name and to put al-ʿAskārī forward as the champion of Islam against all heretics except in Transoxiana (Maṣūma al-Tabrī) where his school has been, and is, the dominant, representing the views of abī al- ṣanmaʾ wa l-ʿaṣmaʾ. Next to nothing is known of al-Māṭurīdī’s life, but he died at Samarkand in 333 (944), a contemporary of al-ʿAskārī who died a little earlier about 320 (931), while al-Ṭahāwī [q.v.], another contemporary, died in Egypt in 331. All three represented the movement, which must have been very widely spread, to defend orthodox Islam by the same weapons of logical argument with which the Muʿtazilites had attacked it. Mūtarrī or Māṭurīdī is a locality (maḥall, kury) in Samarkand. Its geographical reality and the identity of Abū Maṣmār al-Māṭurīdī are assured by the article Māṭurīdī in the *Aṣāb al-Samānī* (vol. 489, i. 4; cf. also Barhool, *Turkoistan down to the Mongol Invasion*, G.M.S., p. 90, notes 9 and 10; p. 267; note 5, and the Russian references there). The books of Hanafite Ṭabāḥārī give the names of his teachers, but to us they are names only (see Ibn Kuṭlūbghū [ed. Flugel, *N. 173*] and Flugel’s *Hanütem*, p. 274, 292, 295, 298, 313). The Saiyid Mūtarrī in his little treatise on Māṭurīdī, inverited in his commentary on the *Iṣbāʿ* (i. 5–14), complains that he has found only two biographies and that both are short (alī ‘l-ṭāghīt). Even Vākūr in his *Muʿjam al-nāmā* has no mention of him or of Mūtarrī. Ibn Khaldūn in his sketch of the origin and history of Kalām (Maḥaddima, transl. de Slane, ii. 55 sqq.; ed. Quatremère, iii. 38 sqq.) has no place for him and speaks only of Asḥāri and the Asḥārites. For Ibn Ḥanīfa (d. 456 = 1064; Fīqāl, ed. Cairo 1320, ii. 111) the orthodox opponent of Abī Ḥanīfa is Abū Hanīfa and he has no mention of Maṭurīdī. Similarly Shahrastānī (d. 548 = 1153, *Malal*, transl. Haarbrücker, i., p. 159; text on margin of Ibn Ḥanīfa, i. 188) gives the views of Abū Ḥanīfa but does not mention Maṭurīdī. Abū ʿAbd al-Ḥanīfa, he says, inclined to the Muṣṭafites and his followers were even called the Muṣṭafites of the Sunni, meaning, apparently, a form of Mūtājīrism consistent with orthodoxy. Similarly the Saiyid Mūtarrī (loc. cit., p. 13 foot) says that the Muṣṭafites claimed Abū Ḥanīfa for themselves and rejected his authorship of one book because it was too flatly against their positions. The truth evidently was that Abū Ḥanīfa (d. 150 = 767) was the first to adopt the methods of the Muṣṭafites and apply argument to the foundation of the Faith. Also, from the beginning, his standing was so high that it was simply impossible to call him a heretic. This status continued in the Māṭurīdī School.

All this goes back to the time before kalām had become a technical term and when fīqī meant both theology and canon law, with the difference that theology was called “the greater fīqī” (afki al-ḥikmat; see article KALAM above, vol. ii., p. 6726). That was the title of one of Abū Ḥanīfa’s books and we have a commentary on it ascribed to Māṭurīdī (Haidarābād 1321), the only writing ascribed to him, apparently in print. This does not occur in the two exactly similar lists which we have of his books (Saiyid Mūtarrī, p. 5; Ibn Kuṭlūbghū, p. 43): 1. Kitāb al-Taṣawwīḥ; 2. Kitāb al-Maḥāfīz; 3. Kitāb Rādī ʿAdwāl il-Dīn. l-ʿAṣmaʾ; 4. Kitāb Bayān Ḥākim al-Muṭakallim; 5. Kitāb Taṣawwīḥ al-Kurān. Of these only the last is given by Brockelmann, i., p. 195; 4; the biographers praise it highly. The others suggest only anti-Muṣṭafite polemic (for al-ʿAskārī see Horten, *Philosophische Systeme*, by index). As a matter of fact it is only in one MS. of the com-
MĀṬURĪDĪ — MĀ WĀRĀʾ AL-NĀḤR

How the theological school of Abū Ḥanifa came to be known as that of al-Māṭurīdī we do not know. The epithet al-muqaṭṭalīmīn, applied to al-Māṭurīdī, may mean that he was the theologian of the school of Abū Ḥanifa as opposed to those who were canon lawyers (fārāḥī). But the two tendencies to accept him and to suppress him still continue. The ʿAṣ[qī]dī of one of his followers, al-Nasafī, fortified with the commentary of al-Taṭfūzī, an Ashʿarite, is the theological text-book of the last two years of the Ashʿar course and is a final authority in Egypt. Yet when Muhammad ʿAbdūl, the late Chief Muftī of Egypt, a regenerator and reformer of Islam, put his views of the development of Muslim theology and of its final position into a course of lectures at Bairūt (Risālat al-nuṣūḥ: Exposé de la religion musulmane, traitee de l'Arabe... by B. Micheli and Moustaφhāʿ Abduh Kāzik, Paris 1925) he showed himself a Māṭurīdī with no mention of al-Māṭurīdī. The Māṭurīdīs in the two Schools are commonly reckoned as thirteen in number; six, a difference in idea (maʿnawī) and seven in expression (lafzi) (for them in detail see the Saiyid Murtada, p. 8 sqq. and Abū Ṭūṭhā al-Kawākib, Haidarālīdā 1904). They have been studied by Goldziher in his Forschungen, p. 110 sqq., and by Horten is His Philosophische System, p. 531 sqq. It is frequently said that these points of difference are slight, but that is not so. The moral position of Abū Ḥanifa is as plain in them as in his canon law. Al-Ashʿarī was concerned only to maintain the absoluteness of Allah's will; that he could do anything; and that a thing was "good" because he willed it. Future rewards and punishments, therefore, had no "moral" basis. But Abū Ḥanifa, and after him al-Māṭurīdī and his School, recognizes that man possesses free-will (khhāṭārī) actions for which he is rewarded and punished. No explanation is attempted of this fundamental antimony of predestination and free-will; they are stated side by side as equal, if contradictory, facts. Similarly, while Abū Ḥanifa admits that evil deeds are by the will (irḍa) of Allah — otherwise they could not happen — he cannot bring himself to say that they are by the "good pleasure" (riṣāqa) of Allah. Further, the Māṭurīdī School admits the doctrine of "assurance of salvation" and the Ashʿarite does not. A Māṭurīdī may say, "I am a believer, assuredly" (haḵaḵun), but an Ashʿarite must say, "I am a believer if Allah wills". Because, then, of this essential difference in human moral feeling the School of Al-Māṭurīdī has steadily penetrated the School of Al-Ashʿarī and even the professed Ashʿarīe at the present time is, to a greater or less extent, a Māṭurīdī.

Bibliography: has been given in the article. But cf. article KAI. in throughout.

(D. B. MacGonald)

Al-Māʿūn, title of Sûra cvii. taken from Vs. 7 where māʿūn denotes the zakāt.

Mawāliya, Mawwālī, means a kind of popular song. Tradition says that this genre of poetry was invented by the people of Wasit; but that it was the people of Baghdād who after improving it made it fashionable. It is said that when Hārūn al-Raṣīd had the most prominent Ermecides massacred, he forbade for lamentations them. One of the slaves of Dūʿār, so well-known from the Arabian Nights, composed in everyday language an elegy on her old master and at the end of each strophe she said wā maṣāliya "O my masters!" Whence the name of this kind of poetry.

From the view of metre, the mawwālī, a popular form from maṣāliya or maṣāliyā, is a song in the kisīr metre (first ʿarpaʿ) of which the last verse of each hemistich is ʾarbūn, ʾulān or ʾulān. In its primitive form, the mawwālī consisted of strophes, each of four hemistichs rhyming with one another. Later it was somewhat altered: the strophe contained five hemistichs in which the first, second, third and fifth, but not the fourth rhymed together or it contained seven hemistichs of which the first, second, third and seventh had the same rhyme and the fourth, fifth and sixth rhymed together.

The red mawwālī is used for war-songs while the green mawwālī is used for love-songs. In all cases the mawwālī must be in the popular dialect and make use of alliteration.

(Moh. Benchedine)

Mā Wārāʾ al-Nahr (Arab.) "that which (lies) beyond the river"; the name for the lands conquered by the Arabs and subjected to Islam north of the Amu-Dairī [q. v.]. These lands were called Mā wārāʾ al-Nahr on north and east were where the power of Islam ceased and depended on political conditions; cf. the statements of the Arab geographers on Mā wārāʾ al-Nahr in G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 453 sqq.: W. Barthold, Turkestān (G. M.S., 21. v., London 1928), p. 64 sqq. The phrase Mā wārāʾ al-Nahr passed from Arabic literature into Persian. As late as the ninth (xvth) century, Ḥāfiz Ābrāʾ [q. v.] devotes a special chapter (the last) to Mā wārāʾ al-Nahr in his geographical work. Under the influence of literary tradition, the phrase Mā wārāʾ al-Nahr was used down to quite recent times in Central Asia itself (Pāṣār, G.M.S., i., 1. The Ottom Muh. ʿāliī, Sprāv. Knīžka Samark. Oblastī, v, 240 et pass.)
although to the people of Central Asia the lands in question were on their side of and not across the river.

(W. BARTHOLD)

AL-MAWARDI, ABU 'L-HASAN 'ALI B. MUHAMMAD B. HABIB, a SHAH. Ik' al-Qašī, who, on the conclusion of his studies taught in Başra and Baghda and after holding the office of čāfand at 'Uṣūl near Nisabūr, settled permanently in Baghda. Here he often acted for the caliph al-Kālid (381–422 = 991–1031) in his negotiations with the Byzādids, who then ruled al-İraq; when the Bāyiid Dālāl al-Dawla in 429 (1037–1038) asked the caliph al-Muktafi to grant him the title of shāh (malik al-nāl), he expressed his objections in a fāṣah and thus earned the enmity of the Bāyiid. He died an 50th Rabī' I 450 (May 27, 1058) at the age of 86.

His works are said to have been collected and edited only after his death by one of his pupils. The following have survived: 1. Taṣfīr al-Kamīn or Ḳitāb al-Nabat wa l-Salīm; MSS. in Rampūr (s. Journ. As. Soc. Bengal, N.S., ii., xl.), Fez (Fīhāt al-Maṣūtiyān, N. 215) and Stambūl (Ḳilāb 'Aṣa, N. 90); 2. K. al-Mālik al-Kālid y l-Fāsid; MSS. in the Brit. Mus. Cat. 552; s. Ellis and Edwards, Deser.-List, p. 222; Cairo (Fīhāt, ii. 215) and Stambūl (Sulaimānīa, N. 436); 3. his most celebrated work, dealing with constitutional law in purely theoretical fashion, disregarding the political conditions of the time (s. A. v. Kremer, Cultuurgeschiede, i. 396; M. Hartmann, Unpolitische Briefe aus der Türkei, p. 242), entitled K. al-Akhān al-Sulṭāniyā, Constitutions politiques, ed. K. Enger, Bonn 1853; pr. Cairo 1298, 1324, 1327. Translations: Publik en administratief recht van den Islam met een invloed over de toepaslijkhed van dat recht in Nederlandse-Indië door S. Keizer, s. Groenhage 1852; Les constitutions politiques, trad. et commentées d'après les sources orientales par le comte L. Otrogo, Paris 1900–1906; Les statuts gouvernementaux en règle de droit public et administratif, trad. et comm. par F. Fagnan, Algiers 1915; cf. H. F. Amédro, Les Masal fields juridiction, J.R.A.S., 1911, p. 635–674; 4. K. Naṣīḥat al-Mu/liḥ, MS. in Paris, de Sane, N. 2447; 5. K. Talkāt al-Nasār wa-Talqīl al-Qādir, on politics and the art of government: MS. in Gotha, s. Pertsch, Vetus, N. 1572; 6. K. Kāmil al-Waṣāy, MS. in Vienna, Consularakademie, Kafft, p. 475, entitled Kāmil al-Waṣāy wa-Siyāsah al-Mulk; MS. formerly in Landberg's possession, s. Goldzimer, Arch. für philol. u. hist. p. 14 (the K. al-Waṣāy in Stambūl. Top Kapu 2495, 1 is however, according to Recher, R.O.S., iv. 710 perhaps only a part of N. 4); 7. K. dī'm al-Waṣāy; MS. in Berlin. Ahlwardt, N. 2557; Cairo (Fīhāt, i. 270); pr. Cairo 1310, 1330 (cf. Diet, Donbseridenten von Asien, ii. 582; Schreiner, in Köchel's Sammlungen, p. 503–513); 8. K. Ablād al-Kādī, MS. in Stambūl, Sulaimānīa, N. 581; 9. K. Ablād wa al-İraq, a collection of 500 traditions, 500 wise sayings; and 500 verses in 10 fat'āl to 30 proverbs, in Leyden, s. Catalogus, i., N. 382; 10. K. (al-Biyā′a al-qiṣāṣ wa l-Din, a work still much read; pr. Stambūl 1299, Cairo 1509, 1230. 1327, 1328, 1339: on the margin of al-Amuli's Kāfihan, Cairo 1316, in India 1315. Uways Waifa b. ʻAlaw al-Arzdānī Kāfihānd wrote a commentary entitled Manāhid al-Yawm, pr. Stambūl 1238. A synopsis was prepared by Ibn Liyūn a teacher of the vizier Liyūn al-Din b. al-Khašīb (d. 770 = 1370), Madrid, N. 427. An anonymous synopsis entitled K. Ablād al-Faṣād is in the Escorial, s. Arentenburg, ii. 748.

(C. BROCKELMANN)

MAWUDD, ABU 'L-FARID IBN AL-DÂNIL WA-QUB AL-MÂLLA, rûler de Ghāzna, was born about 1012—1022. In Muharram 432 (September 1040) he was appointed to the government of Balkh with Khwâja Abû Naṣr Ahmad b. Muhammad as vazir. A few months later, his father Sultan Masûd was deposed and Muhammad, son of Sultan Muhammad, was raised to the throne. On hearing news of this, Mawudd left Balkh, took possession of Ghazna, and spent the winter in making preparations for a struggle for the throne with Muhammad. At the end of the winter, Muhammad marched from India to take Ghazna and Mawudd advanced to meet him. A fierce battle took place on 3rd Rabî‘ I 432 (April 6, 1041) near Duppar or Dinawar (modern Pâṭhâbâd on the Peshawar-Kâbul route) in which Mawudd was victorious. Muhammad, all his sons except ʻAbd al-Rahîm, Sulaimân b. Yûsuf, and Nîshîgin of Balkh were taken prisoners and executed. Mawudd returned to Ghazna in triumph, but he was not yet the undisputed master of the kingdom. His brother Maḥmud, governor of Multan, was advancing on Ghazna by way of Lahore, but three days after his arrival at Lahore, he died mysteriously on the morning of 10th Dhu l-Ḥijâjah, 432 (August 11, 1041).

In 435 (1043–1044) ʻAbd al-Raḥîm, son of DJâ salts of the HindÝshîhîya dynasty of Waihând, formed a confederacy with some HindÝ Râjd-î and laid siege to Lahore. Sukhâpâl was killed in action, and after his death the Râjdîs quarreled among themselves, raised the siege and retired to their respective kingdoms. The Muslims followed them in pursuit and laid siege to the fort of Sonjîst where one of the confederates named ʻAlîpâl Haryānâ had taken refuge. The fort was captured and given up to plunder but ʻAlippâl managed to escape. About 5,000 Muslims who had been imprisoned in the fort were released. The victors next attacked another Râjdî called Tâlāt Bâlî, but ʻAlâ-al-Aṭīr, his master, took the fort and returned to Lahore with immense booty. These victors restored for some time the waning prestige of the Ghaznavids in Upper India.

It was the ambition of Mawudd to restore the greatness of his empire by conquering the provinces which his father had lost to the Saljuqs. In Muharram 435 (August 1043) he attacked Khurasân but was defeated by Alp ʻAlâsh b. Dâwûd. In the following month the Ghaznavid troops retrieved their reputation by inflicting a defeat on the Saljuq near Bist, but in spite of this reverse they became so powerful that Mawudd found it difficult to overcome them single-handed. After protracted negotiations, he secured the assistance of the ruler of Isfâhân and the Khân of Turkistan, and marched towards Balkh to join forces with the Khân of Turkistan, but he had not gone far
when he was taken ill with colic and was forced to return to Ghazna where he died on 20th Rajab, 441 (December 18, 1049), at the age of 29 years.

Mawdūd was a good ruler and was famous for his generosity. Padānī- Mawdūdī (the Arrow of Mawdūd) is called after him. It is stated that in his wars he used golden arrows so that if the victim was killed, the gold in the arrow would pay for his funeral, and if he was only wounded, it would defray the expenses of his treatment. He was a skilful general, and his premature death put an end to all hopes of crushing the power of the Saladujis.

(A. J. Wensinck)

MAWDŪD B. 'IMĀD AL-DĪN ZANGLI, KUTB AL-DĪN AL-RAHMĀNI, LORD OF AL-MAWIL. After the death at the end of 744 (Nov. 1149) of his elder brother Saif al-Dīn Ghāzī I [v.], Mawdūd was recognised as lord of al-Mawil through the influence of the powerful vizier al-Lujāwīd [v.] and of the commander-in-chief of the army Zain al-Dīn 'Ali. A number of emirs negotiated with the third brother, Nur al-Dīn Mahdī, who lived in Hādib, and seized the town of Sīnjarī, and according to the old chronicler, the vizier however, who feared not only Saladin but also the Franks, succeeded in persuading him, whereupon Nur al-Dīn handed over Sīnjarī to his brother and was given Hums and al-Kahba instead. On other questions also Mawdūd followed his vizier's advice; al-Lujāwīd however fell into disgrace and in 558 (1163) he was thrown into prison and replaced by Zain al-Dīn Kūkī. In the next year Mawdūd joined forces with his brother Nur al-Dīn in a war against the Franks, and in Ramādān (Sept. 1164) the latter defeated the Christian forces and stormed Kafrat Gārīn. According to the most usual statement, Mawdūd died on 22nd Dhu'l-Hijjah 565 (Sept. 6, 1170) aged about forty. He is described by the Oriental historians as a just and benevolent ruler. He was succeeded in al-Mawil by his son Saif al-Dīn Ghāzī II.

(K. V. Zettersetten)

MAWKIF (A.), noun loci from co-l-b to stand'. Of the technical meanings of the term two may be mentioned here:

a. the place where the mawalī [v.] is held during the pilgrimage, viz. 'Arafat and Muzdalīfa [v.] or Dāmā; in well known traditions, Muḥammad declares that all 'Arafat and that all Muzdalīfa is mawalī (Muslim, Ḥadīṣ, trad. 149; Abū Dāwūd, Musawīk, bāb 56th, 64th; cf. Hanbīkook of Early Moh. Tradition, s. v. 'Arafāt'). Snauk Hurgrone, (Hest mekkasneke fest, p. 150 = Verbreite Geschichten. i. 99) has conjectured that these traditions were intended to deprive the hills of 'Arafat and Muzdalīfa of their sacred character, which they doubtless possessed in pre-Islamic times.

b. the place where on the day of resurrection several scenes of the last judgment will take place; cf. al-Ghazālī, al-Durr al-Faṣīha, ed. Gautier, p. 577. 683; 68; 813; cf. Khwāja Aḥmad al-Kūkī, ed. W. Wolf, p. 65 sqq.

(A. J. Wensinck)

MAWLĀ (A.), a term with different meanings (cf. Lustān al-Arāb, xx. 289 sqq.) of which the following may be mentioned:

a. Fator, trustee, helper. In this sense the word is used in the Kūfān, Sūra xlvii. 12: "God is the mawālī of the faithful, the unbelievers have no mawālī" (cf. Sūra iii. 143; vi. 62; xvi. 41; xvi. 51; xxi. 72; lxv. 2). In the same sense mawla is used in the Shi'ite tradition, in which Muḥammad calls 'Ali the mawla of those whose mawla he is himself. According to the author of the Liṣān, mawla has the sense of wali in this tradition, which is connected with Ghadīr al-Khanām [v.] or C. van Arendonk, De oorkonde van het Zenditische imamsat, p. 18, 19). It may be observed that it occurs also in the Manusel of 'Abd al-Hādib B. Ḥanibal (i. 84, 116, 119, 152, 330 sqq.; iv. 281 et al.).

b. Lord. In the Kūfān it is in this sense (which is synonymous with that of sālyūd) applied to Alī (Sūra ii. 125 and Al-Hādi xix. 37), who is often called Mawalīd, "our Lord" in Arabic literature. Precisely for this reason in Tradition the slave is prohibited from calling his lord mawalī (Bukhārī, Qiyās, bāb 165; Muslim, Ṣaḥīḥ, trad. 15, 16).

It is not in contradiction to this prohibition that Tradition frequently uses mawla in the sense of "lord of a slave" e.g. in the well known Ḥājīkh: "Three categories of people will receive twofold reward... and the slave who fulfills his duty in regard to Allāh as well as to his lord" (Bukhārī, al-Bukhārī, bāb 31; Muslim, Al-Nānī, trad. 45).

Compositions of mawla and suffixes are frequently used as titles in several parts of the Muslim world, e.g. mawla (mawlā), "my Lord" especially in North Africa and in connection with saints); mawla (mawla), "Lordship" (especially in India and in connection with scholars or saints).

The term mawla is also applied to the former lord (pant) in his relation to his freeman, e.g. in the tradition: "Who clings to a (new) panton without the permission of his (legal) mawla, on him rests the curse of Allāh" (Bukhārī, Dīya, bāb 17; Muslim, Ṣaḥīḥ, trad. 18, 19).

c. Freed slave, e.g. in the tradition "the mawla counts as the people to whom he belongs" (Bukhārī, Fatawī, bāb 24, etc.). In this sense mawla, or rather the plural mawalī, is frequently used in Arabic literature. The evolution of the idea as well as the position and the aspirations of the mawalī have been expounded by von Kremer (Geschichte des Orients unter den Chaisen, ii. 154) and by Goldziher (Mier und Afrikanische Studien, i. 103 sqq.), by the latter especially in connection with the Ḥaʾībīn [v.]. On the position of the
mawālī in the law of inheritance law cf. the art. MIBAIL.

MAWLAVI. [See Mawlā]

MAWLAWIYA (Turkish pronunciation Mewlewîa), Order of Deirmishes called by Europeans Dancing or Whirling Deirmishes.

1. Origin of the Order. Its name is derived from mawâlînā ("our master"), a title given by excellence to Djalâl al-Dîn al-Rûmî (e.g. by the Turkish writers Sa'd al-Dîn and Pécévi, cited below), of which the Persian equivalent was according to the Munâdî al-Asrifîn (translated by Huarte in Les Huitante des Derviches Tourniers, Paris 1918-1922) bestowed on Djalâl al-Dîn [q.v.] by his father, with whom this hagiography commences. According to the same authority (i. 162), his adherents adopted the name Mawlawî, and indeed copies of the Međîhânî of the years 687 and 706 A.H. thus designate themselves (Nicholson's ed., i. 7 and ii. 11); yet Ibn Bââîî, who visited Konia after the latter date, asserts that they were styled Djalâliya, and the word Mawlawi seems to have been occasionally in the Munâdî in the sense of "scholar", which it ordinarily has in India. This work asserts that one Bââar al-Dîn Gûharî (a historical personage, since he is mentioned in Ibn Bibl's chronicle of the Seldûqs of Asia Minor) built a college at Konia for the children of Djalâl al-Dîn's father, which was inherited by Djalâl al-Dîn, The Munâdî (by Shams al-Dîn Ahmâd al-Alâîkî, 718-754 A.H.), however, so teems with anachronisms and extravagances that its statements must be used with great caution.

The European name is taken from the ritual of the dîkîr, in which the dervishes revolve, using the right foot as a pivot, to the tune of various instruments. Djalâl al-Dîn is said to have claimed that he had elevated the practice, but denied that it was an innovation (Munâdî, ii. 79). Certainly "dancing" (i'dâ) is mentioned as a Sufi practice in works earlier by some centuries than Djalâl al-Dîn's time, often with severe condemnation. The historian Sekhâni (al-Tîbi al-Munâdî, p. 220) in recording an event described in 852 against the background of the Cairene cures by one of the "earliest Sa'âdîs" in which the Sûfis who perform it are compared to apes and are bitterly reproached.

Dancing is indeed a natural accompaniment of music (Abyîhîn, x, 121) or poetry (Fîrâ'd al-Anbî, v, 131, 11), but the whirling of the dervishes would seem to have for its purpose the production of vertigo rather than the presentation of an idea in rhythm. Of the various reasons which have been assigned for it the most interesting is that recorded in the Munâdî (i. 190) as the excuse of Djalâl al-Dîn, viz. that it was a concession to the pleasure-loving inhabitants of Asia Minor, who might thereby be drawn to the true faith. The theory that the whirling was a reproduction of the motions of the celestial bodies is found in his Međîhânî (ed. Nicholson, iv. 734), and the same view is encountered in the much earlier ikhâdî of Ibn Tâfârî (Caioi 1072, p. 75), where its phallic effect is emphasized. The saints in the Munâdî are represented as able to maintain the exercise for many days and nights continuously, but the actual dîkîr lasts only about an hour, with some intermission.

2. Relations with other Orders. Although the earlier mystics, such as Djuânî, Bîstâmî and Hâlîdî are mentioned in the Munâdî with profound reverence, the treatment of founders of orders who came near Djalâl al-Dîn's time is very different. Alî al-Kâdirî of Djalâl is ignored, Ibn 'Arabi mentioned with contempt, and Kîfîn with severe condemnation. Hâdîdî Bektâshî is represented as having sent a messenger to inquire into the proceedings of Djalâl al-Dîn, and to have acknowledged the supremacy of the latter. At a later period the rivalry of the Mawlawi with the Bektâshi Order became acute.

It has been shown by F. W. Hasluck (Christianity and Islam under the Sultans, Oxford 1929, ii. 370 sqq.) that the environment wherein the Mawlawi Order originated was favourable to Manichaeism, and that throughout its history it has shown itself tolerant and inclined to regard all religions as reconcilable on a philosophic basis. He suggests that the veneration of the Muslims of Konia for the supposed burial-place of Plato (in a mosque which was once the church of St. Amphelochius) may have been intentionally favoured by the Mawlawi dervishes, or possibly their founder, as providing a cult which Muslim and Christian might share on equal terms. In three other sanctuaries of Konia, one of them the mausoleum of Djalâl al-Dîn himself, he found evidence of a desire to provide an object of veneration to the adherents of both systems. It is not, however, easy to accept his inference that some sort of religious compromise on a philosophic basis was devised between the Seldûq sultan 'Alî al-Dîn, Djalâl al-Dîn, and the local Christian clergy. It appears from the Munâdî that the Order was frequently exposed to persecution from the fikakhâ in consequence of its music and dancing; and they found an analogy in Christian services to the employment of the former. They are credited in recent times with having impeded the massacres of Armenians.

3. Spread of the Order. The Munâdî attributes its propagation outside Konia to Djalâl al-Dîn's son and second successor, Sultan İbahâl al-Dîn Walâd, who "filled Asia Minor with his lieutenants" (ii. 262). It would however appear from Ibn Bââîî's narrative (ii. 282) that its following was not in his time extensive outside Konia, and was confined to Asia Minor. The story told after Sa'd al-Dîn by v. Hammer (G. O. K., i. 147) and others, that as early as 759 (1357) Sulaimân son of Orkhan received a cap from a Mawlawi dervish at Bulaq, has been shown by Hasluck (ii. 613) to be a fiction. The historians make no allusion to any importance attaching to the Mawlawi chief when Murâd I took Konia in 1386; but when the city was taken by Murâd II in 1435, peace was negotiated according to Sa'd al-Dîn (i. 358) by Mawâlînâ Hamza, but according to Neqî (quoted vâ'da) by a descendant of Mawâlînâ Djalâl al-Dîn al-Îmî, "Aîfî Celebi, "who united all the glories of worth and pedigree, and possessed mystic attainments"; the rebellious vassal supposed that a holy man of the family of the Mawlâ would inspire more confidence. The same person performed a similar service in 1442 (Sa'd al-Dîn, i. 371). According to V. Cunet (La Turquie d'Asie, i. 829) Selim I when passing through Konia in 1516 in pursuit of the Persians (i?) ordered the destruction
of the Mawlāwīyah, at the instance of the Shāikh al-Islām; and though this command was repealed, the moral and religious authority of the head of the Order was gravely compromised. That the saints of Konia were highly revered in the Ottoman Empire later in the sixteenth century appears from the list of graves visited by Sājid ʿAlī Kapūtān in 1554, which commences with those of Hayāt al-Din, his father and his son (Pelew's History, 1285, i. 371). In 1534 Mardīr IV assigned the khrāṣṭā of Konia to the Čelebi. Yet the first reference to “dancing dervishes” in Constantinople which Hasluck produces, is from the time of the Sultan Ibrāhīm (1640–1648). Cuinet mentions three Mawlāwīyah of the first rank and one Tekye of the second in Constantinople and the neighbourhood; he gives the names of the saints whose tombs they contain, without dates. He mentions seven other Mawlāwīyah of the first rank, at Konia, Manisā, Karālijăś, Bāghariya, Egypt (Cairo), Gallipoli and Bursa; and as the more celebrated of the second rank that of Shamsī Tabrīzī at Konia, and those in Medina, Damascus and Jerusalem. To these Hasluck adds Tekye at Canea (Crete), founded about 1850, Karaman, Ramlā Tatar (in Phœnice), and possibly Tempe (in Asia Minor). He omits the Tekye of Alexandria, founded for one in Salonica see the work of Garnett, and for one in Cyprus (that of Lukach cited below). It would seem then that the Order was confined to the limits of the Ottoman Empire, and indeed to its European and Asiatic territories.

By a decree of Sept. 4, 1925 all the Tekye in Turkey were closed, and the library of the Mawlāwīyah of Konia was transferred to the Museum of the city (Oriente Moderno, 1925, p. 455; 1926, p. 594).

4. Political importance of the Order. Reference may be made to Hasluck’s work (ii. 604 sq.) for refutation of the stories uncribrally reproduced by Cuinet and some less authoritative writers. In these “the Shāikh of the Mawlāwi becomes first the legitimate successor by blood of the Seldžūk dār-ʾal-šarḥ, and finally the real Caliph!” Hasluck supposed these tales to be based on the supposed “traditional right” of the Mawlāwi Shāikh to gird the new Sultan with a sword. This right cannot be traced earlier than 1648, and appears to have obtained recognition in the nineteenth century. It would seem that reforming Sultan used the Mawlāwi Order as a make-weight against the Bektāšis, who supported the Janissaries, and then against the ‘Ulama’, who supported the treatment of the Muslim community as a privileged community against the dāmmis. In recent times the Sultāns ʿAbd al-ʿAzīz and Meḥmed Reşād were members of the Order.

5. The ritual of the Order has been described by numerous travellers, e.g. J. F. Brown, The Dervishes, 1868, p. 190–208; 1927, p. 250–258; W. Cuinet, loc. cit., p. 387; Garett and Lukach in the works cited; M. Hartmann, Der islamische Orient, 1910, iii. 12; S. Anderson, M. W., 1923. The attire consisted of a cap called sikba, a long sleeveless skirt called tennûre, a jacket with sleeves called destenû, a waistband called elif-lûm-end, and a cloak with sleeves called kherbe, thrown over the shoulders (in Lukach’s description [Cyprus] “a violet gown worn over a dark green cassock”). The instruments employed according to the last writer (dealing with Konia) are six: reed-flute, zither, rebek, drum, tambourine, and one other. Cuinet enumerates four, of which three agree with the above, the last being hatilî, vulgarily zi, a sort of small cymbal. Brown enumerates three, flute, violin, and kettle-drum. Those mentioned in the Manāṣir are rendered by Haïelt, flûte, violon and tambour de bagasse. The service in Konia according to Lukach was held twice a month after the Friday prayer; in Constantinople, where there were several tekės, they were held more frequently, to enable the members of different tekė to join in.

6. Administration of the Order. The head of the Order, resident at Konia, had the titles Mulla Khânjār, ʿIṣâḥet-i Pîr, Čelebî Mulla, and ʿAzīz Esken. A list of persons who have held the office is given by Hartmann (loc. cit., p. 193) after the Haṭîb-ʾi Ādâbî-sı Sanawîn, making 26 in all down to 1910; this list appears to be imperfect, and the Čelebî whom Lukach found in Konia was uncertain whether he was the 39th or the 40th. The head of the establishment at Manisa counted as second in authority. Cuinet enumerates seven officials subordinate to the Čelebî at Konia, but the names of several seem seriously mutilated. Others mention a secretary (awelîl). An account of the discipline which those who wished to enter the Order had to undergo is given by Haïelt (Konia, la ville des Derviches Touroueurs, Paris 1897). They had to perform menial service for 1001 days, divided into periods of 40; when this was over, they were clothed in the uniform of the tekė, assigned cells, and instructed in the exercises of the Order; and they had to remain thus occupied till they believed themselves able to enter into relation with the Deity by means of whirling, meditation, and music.

MAWLĪD (A.) or MAWLĪD (pl. mawālīd); time, place and celebration of the birth of any one, particularly of the Prophet Muhammad (Mawlaṭ al-Nabāū). From the moment when Islam in its attitude to Muhammad abandoned the line laid down in the Kūrānic view of him and began to bring his personality within the sphere of the supernatural, the scenes among which his earthly life had been passed naturally began to assume a higher sanctity in the eyes of his followers. Among these, the house in which he was born, the Mawlaḍ al-Nābul, in the modern Sīk al-Lāl in Mecca, the history of which is preserved principally in the chronicles of the town (ed. Wustenfeld, i. 422), does not seem at first to have played a part of any note. It was al-Khaṭţār (d. 173), the mother of Ḥāṭṭī al-Khaṭrī, who first transformed it from a humble dwelling-house to a place of prayer. As they did to the tomb of the Prophet in Medina, the pilgrims now made pilgrimages also to his mawlaḍ to show their reverence for it and to receive a share of its blessings (iʿtarab). In time also the reverence in which the house was held found expression in its development in a fitting architectural fashion (ibn Ḥujjāb, ed. Wright, p. 114, 163; on the present state of the house: Snouck Hurgronne, Mecca, i. 106; ii. 27).

Records of the observation of the birthday of
the Prophet as a holy day only begin at a later date; according to the generally accepted view, the day was Monday, the 12th Rabi' I. The story which Watenfeld originated, according to which the pious Shafi'i Karadji (d. 543) observed this day by breaking his fast upon it, which he only did on one other occasion, the 10th Dhul-Qa'da (Abk. G. W., ii., xxxv., No. 126), does not seem to find any confirmation in the sources and is in contradistinction to the general custom of fasting on Monday, as this day plays a special part in the life of Muhammad as the day of his birth, of his Hijra, and of his death (Ghazali, Ihot' [Biiik], i. 363 and pass. On the Jewish origin of fasting on Monday, see Wensineck, Mohammed ou le Jour, p. 126). But that on this day a special celebration was arranged, as distinct from private observation, one first learns for Mecca, where one would expect it earliest from the local traditions, from Ibn Jubair (d. 614; Travels, p. 113), who however is obviously referring to a custom which has already been a considerable time in existence. The essential feature of the celebration is however only a somewhat considerable increase in the number of visitors to the Ma'dhid house which was exceptionally open the whole day for this purpose. The visit and the ceremonies associated with it (mash etc.) are carried through entirely in forms which are characteristic of the older Muslim cult of saints.

But just as the later cult of the Prophet cannot be put on a level with the reverence shown to other holy men, so new and special forms developed for his birthday celebrations, which in spite of minor differences in time and place show the same general features everywhere and are comprised under the name Ladi al-Ma'dhid or briefly Ma'dhid al-Nabi. An anticipation of the Ma'dhid celebration is found in Egypt as early as the middle and later Fatimid period. During the period of office of the vizier al-Madjal (487-515), we hear that the 'four Ma'dhid' were abolished but a little later received in all their old glory (Makrizi, al-Ma'dhid, i. 466; for the description of the festival: i. 433 sqq.). The celebration still took place in broad daylight and participation was practically limited to the official and religious circles of the city. There were not yet any preliminary celebrations; but we already have a solemn procession of all the dignitaries to the palace of the caliph, in whose presence — he sits, covered with a veil on one of the balconies of the palace — the three Badshi of Cairo (cf. above, ii., p. 928) in succession deliver a religious address, during which a special ceremonial is observed. As to the matter of the discourses, we only know that they were like those delivered on the nights of the illumination so that they presumably dealt mainly with the occasion of the celebration. It is interesting to note that the ma'dhid ceremonies here are not confined to that of the Prophet but the ma'dhids of 'Ali, Fatima and even that of the reigning Caliph, the Imam al-Hadi, are similarly observed. As in the fundamental idea of these celebrations (Ma'dhid al-I'mam al-Hadi), Shi'a influence can also be traced in separate elements of it. It had not yet come to be a festival of the common people in the time of the Fatimid. This no doubt explains why — except in Makrizi and Kalkagandi, the great historians of Fatimid Cairo — there is hardly any reference to these celebrations in the literature emanating from Sunni circles, not even when writers like 'Ali Paşa Mubarak are dealing with features peculiar to Cairo and deal very fully with the history of the Ma'dhid festival.

The memory of these Fatimid ma'dhid seems to have almost completely disappeared before the festivals in which Muslim authors unanimously find the origin of the Ma'dhid, the Ma'dhid which we first find celebrated in Arbelia in 604 by al-Makhdum Sahib al-Din al-Kolturi, a brother-in-law of Saladin. The fullest account is given by a somewhat later contemporary, the great historian Ibn Khallikan (d. 681) on whom later writers continually base their statements (e.g. al-Suyuti, Ittad al-Ma'dhid [Broekelmann, G.A.L. ii., 157] and others). The personality of the ruler, his period so disturbed by the turmoil of the Crusades, and his milieu to which Ibn Khallikan calls special attention, lead us to suggest marked Christian influence in the development of this celebration; his close relations with the Sufi movement on the other hand suggest the possibility of influence of quite a different nature. This is clear from the description of the celebrations. Preparations are begun long before and people come in from remote districts. The prince takes special care that the visitors are housed in splendid wooden kubbahs specially built and they are entertained with music, singing and all kinds of amusements (mash, jugglers etc.). The streets of the town were for weeks as busy as on the occasion of an annual fair. On the eve of the Ma'dhid a torchlight procession took place from the citadel of the town to the khankah, led by the prince after the maghrib salat. Next morning the whole populace assembled in front of the khankah, where a wooden tower had been erected for the ruler and a pulpit for the hadj. From this tower the prince surveyed not only the crowd assembled to hear the address but also the troops summoned to be reviewed on the adjoining maidan. We are told nothing of the substance of the address. On its conclusion the prince summoned the distinguished guests up to the tower to give them robes of honour. The people were then feasted at the prince's expense in the maidan, while the notables were entertained in the khankah. The following night was spent by the prince like so many of the Sufis in samā ('Ibn Khallikan, Bllak 1299, ii., 550 sqq.).

In contrast to the Fatimid celebrations, what is specially striking here is the large share taken in the festival by the Sufis and the common people, a circumstance which is all the more notable, as it is probably in this association with Sufism that we have the reasons for the later great popularity of the Ma'dhid. At the same time the torchlight procession, really foreign to Muslim sentiment, and borrowed from contemporary Christian customs at festivals deserves our attention; it is not found at the celebration in Cairo which was purely a day ceremony, while the lavish entertainment of all present, especially with sweets, and the addresses are found in both cases. In this remarkable ceremonial, we seem really to have the foundation of all Ma'dhid celebrations. With the great political and religious movement, which we may call Saljuq reaction, the Ma'dhid reached Egypt in Saladin's time, where it is significant that Sufism very quickly took deep roots, thus preparing the way for an observance like the Ma'dhid, which is essentially kept up by popular religious sentiment.

The observance of the festival spread sooner
or later from here to Mecca where its old form was transformed. Its further progress was along the coast of North Africa to Ceuta, Tlemcen and Fès to Spain but it also went eastwards to India, so that ultimately the whole Muslim world is united on this day in a ceremonial, frequently of unprecedented splendour, but alike everywhere in its main features. We have innumerable descriptions of the festival from all parts of the Muslim world, most fully for Mecca (Chronik der, ed. Wustenfeld, iii. 438 sq.; Ibn Hadjar al-Haitami, Mawlid (Brockelmann, G.A.L., ii. 389); for modern times: Snouck Hurgronje, Mecca, i. 57 sqq.), where the celebrations have always been famous, for Egypt (Muh. Tawfiq al-Bakri, Bait al-Sidde, Cairo 1323, p. 404 sqq.; Lane, Manners and Customs (1871), ii. 166 sqq.) and the Indies (Snouck Hurgronje, Achehneyer, i. 207; do., Verspreide Geschichten, ii. 8 sqq.; Herklotz, Corte des saints (1860), p. 13; here it is frequently not the birth but the death of the Prophet that is commemorated). The Turkish element in Islam also has not resisted the advance of the celebration of the Mawlid (Turk.: Mevlid). Since Sulṭān Murād III introduced it in 996 into the Ottoman empire, it has enjoyed increasing popularity. Besides the lit has been celebrated like a national festival. Accurate descriptions of the festival as celebrated in the older period of the court of Constantinople (Mouradge d’Ohsson, Tablīq general, Paris 1787, i. 255 sqq.; G. O. R., viii. 441) clearly reveal its relationship with the festivals of a more popular nature in other lands of Islam.

One element in particular is very prominent, and that is the most characteristic one of the later celebrations, namely the recital of mawlid as i.e. panegyrical poems of a very legendary character, which start with the birth of Muḥammad and praise his life and virtues in the most extravagant fashion. The origin of these addresses is already to be found in the religious addresses in Fīhum Cairo and in Arbela and perhaps in part at least go back to the sermon usual at Christian festivals. The Kāl-Tawfiq fi Madīl al-Sirīfī, which Ibn Diyāh composed during his stay in Arbela at the suggestion of Kobkurt was already famous as a mawlid at this period (Brockelmann, G.A.L., ii. 310). It was not till later times however that mawlid became a predominant element in the celebration, along with torchlight processions, feasting and the fairs in the street, ever increasing in size. In Mecca, for example, at the present day they form the main feature of the celebration in the mosque; among the pious they are the most popular evening entertainment for days before the celebration and teachers interrupt their lectures in order to deliver mawlid to the students and the people on the streets and in the coffee houses find edification and entertainment in listening to them. The number of such mawlid is quite considerable. Beside the famous but not very popular Burād Sa’ad of Kaḥb, Zuhair of the older period, the Burda and the Hanziya of al-Buṣrī and their numerous imitations, there are a whole series of regular mawlid, some of which are intended to instruct like that of Ibn Hadjar al-Haitami, others purely edifying like a shorter version of it, and notably that of Ibn al-Dżawīl (G.A.L., i. 503) and al-Barzanjī (G.A.L., i. 384). In addition to those in Arabic, there are a great many mawlid in Turkish (Irmg. Engelke, Sulejmān Tschiblisch’s Lied gedicht, 1926). It is significant of the part played by these poems, that they have passed from the mawlid celebrations to other festivals, so that the word has actually become a name for “festival” and particularly “feast” (Cażima; cf. Snouck Hurgronje, Mecca, ii. 147, 154 and pass.; Becker, in Isl., ii., 1911, p. 26 sqq.). Quite apart from any festivals, the recitation of mawlid is popular, in Palestine for example in fulfilment of a religious vow (T. Canaan, in Journal of the Palestine Or. Soc., viii., 1926, p. 55 sqq.; cf. also the introductory anecdote to the mawlid alleged to be by Ibn al-ʿArabī (G.A.L., i. 441)). Like the substance of these mawlid, the form is also very regular. Prose and poetry alternate, interrupted frequently by appeals to utter blessings on the Prophet. Dhikr are usually added at the end.

The Mawlid as the finest expression of reverence for Muḥammad has found almost general recognition in Islam, as fulfilling a religious need of the people and as a result of the strength of the Sūfī movement. This must not however blind us to the fact that at all times there has also been vigorous opposition to it. This is found as early as the festival of Arbela (al-Suyūtī, Ḥusn al-Maṣāḥif). The celebration is a bid’a, a religious innovation, which is in sharp contrast to the Sūfī doctrine. A large number of the Sūfī advocates of the festival confess this and the strictly orthodox, who adhere to the sunna, reject it most emphatically. But, as in so many other things, practice has here proved stronger than dogmatic theory. Once the festival had been thoroughly established in the religious life of the people, it was bound in time to find approval as an element of the ʿilm. Its supporters found it easy to get this bid’a legitimated, in theory at least, as a bid’a ḥasan. When the festival had been accepted by the consensus of the community, the essential thing had been done and legitimate ground for opposition had been removed. While the opposition thus finds itself reduced to combatting the outer forms of the festival and its developments, its supporters are never tired of calling attention to the merit that lies in feeding the poor, in the more frequent reading of the Kurān and mawlid, and in the joy of the leisure of the Prophet and all that the day brings with it. It is significant of the character of the opposition that the opponents object to those very forms which show the influence of Sūfīsm (dancing, samā’, ecstatic phenomena etc.) or Christianity (processions with lights etc.). The most interesting document of this feud is a fīrat al-Suyūtī (d. 911; Brockelmann, G.A.L., ii. 157: Ḥusn al-Maṣāḥif fi ‘Amal al-Mawlid) which gives a brief survey of the history of the festival, then discusses the pros and cons very fully and concludes that the festival deserves approval as a bid’a ḥasan, provided that all abuses are avoided. Ibn Ḥadżar al-Haṭṭāmi in his Mawlid and Kaḥb al-Dīn (Chronik der Stadt Mecca, iii. 439 sq.) take the same view, while Ibn al-Ṭāhilī (d. 737) in a more strict Mālikī condemns it most vehemently (K. al-Mawlid [1320], i. 153 sqq.).

Although the height of this struggle was apparently reached in the eighth—ninth century, it did not completely die down in later years; indeed it received new life with the coming of the Wahhabis. The cult of the Prophet is in such contradiction in their fundamental principle, the restoration of the ideal purified primitive Islam, that we can understand that they should completely
MAWLID—AL-MAYURKI

disapprove of this, the most popular and most splendid expression of it. In doing this, they are only putting into action the protests of the extreme Ḥanbalī Ibn Taimīyā (d. 728), the famous precursor of their movement, against innovations which are contrary to the sunna (Ibn Taimīyā against the holding of ḥatams in the Mawlid night: Fatwā[Cairo 1326], i. 312). Similar ideas are still found to-day even where Wahhābism is rejected, notably in the school which Goldziher calls “Kulturwahhābismus”, founded by the celebrated Muhammad ʿAbdul (d. 1905), who in connection with the worship of saints condemns the Mawlid also, in the periodical al-Manā (Goldziher, Richtungen des Islam, Koranauslegung, p. 369 sqq.).

In the reverence shown to other Muslim saints, the Mawlids also play a great part. Although the success of an appeal to a saint does not depend on particular days, yet certain days and bithdays in particular are regarded as particularly favourable. These celebrations are often connected with places, to which a certain sanctity has been attached from pre-Islamic times (the Mawlid of Shāhīn Asān al-Badawi in ʿAṣr: Goldziher, Muḥ. Stud., n. 318 sqq.). There are also other Mawlids of nameless saints. In the dervīsh orders, next to that of the Prophet, the Mawlid of the founder is held in particular popularity. “Alī Pasha Mustaṭb (Khīṭṭ Ḫudīda, i. 90; iii. 129 sqq.) mentions a large number of such festivities in modern Cairo, the characteristic features of which, he says, are the brilliant illumination of the town, the ceremonial procession (Muḥād: at the Mawlid al-Nabī: muwakī; cf. P. Kahle, in Ṭīl., vi., 1916, p. 155 sqq.) and the great feasts. One cannot now imagine the popular religion of Egypt without these festivities.

AL-MAWSIL. [See Mosul.]

MAWSIM. (fr. the root mws—“to stagnate”), market festival. In this sense the term is used in ʿĀṣī, especially in connection with the markets of early Arabia, such as those which were held in ʿUkā, Madīyān, Dūḥa ʿl-Mudājā, ʿAtāfa, etc. (Bukhārī, Ḥadīṣh, b. 150: Tabārī, sūra 2, b. 34). At these markets the worst elements of Arabia gathered (al-mawsim yajmmara ṭawāʾ al-mārūn, Bukhārī, Ḥadīṣh, b. 31). Advantage was also taken of these assemblies to make public proclamations and inquiries, e. g. in order to regulate the affairs of deceased persons (Bukhārī, Ḫumr, b. 13: Muṣāfīk al-ʿAṯārī, b. 27). As the pilgrimage was at the same time one of the chief markets of early Arabia, the term mawsim is often combined with it (mawsim al-ḥajj, Bukhārī, Ḥadīṣh, b. 150: Tabārī, b. 1; Abū Dāwūd, Muḥ. b. 6).

Upon this basis the term mawsim has developed chiefly in two directions: it has acquired the general meaning of (religious) festival (Dozy, Supplement, s. v.) and that of season. In the Lebanon mawsim denotes the season of the preparation of silk (Bistānī, Muḥīṭ, s. v.).

In India and in European terminology referring to these parts of the world, it has acquired the meaning of season in connection with the weather-conditions special to these regions, such as the regularly returning winds and rainstorms. Monsoon, monsoon, monsoon, and other corruptions of the term are found in this literature.

MAWWAL. [See Mawliya.]

MAWZŪNA, a small silver coin struck by the Sharifs of Mawjūd in the eighteenth and early nineteenth century. It was the smallest silver piece and equivalent to 24 copper fulls or a quarter dirham. Another name for the mawzûna was ʿalīja. In 1911 (1330) copper coins of the value of 10, 5, 2 mawzûnas were issued, the mawzûna being now the equivalent of a centime. On recent issues the name mawzûna has disappeared and its place is taken by a new coin.

MAYURKĪ, a nisba of three Arabic authors, belonging to Mārijū (Mallorca), the largest of the Balearic Islands.

I. the poet Abu Ṭāhān ʿAlī b. ʿAḥmad b. ʿAbd al-ʿAzīz b. ʿUza, d. in 475 (1082), according to others in 477 at Kazima near Baghdād; poems by him are preserved in the MS. of the Escorial in Dernigen, No. 467, 2; cf. al-Suyūṭī, Buḥaynī al-Waṣīl, 1327; Yaḥyā, Mirjam, iv. 722.

III. ʿAbd ʿAllāh b. ʿAbd Allah al-Tardjuānī, born in Majorca of Christian parents, studied in Lerida and Bologna, then went to Tunis on the advice of Bishop Nicolas Martell, who was himself a Muslim in secret, there adopted Islam and in 732 (1340) wrote a pamphlet against Christianity entitled ʿArūf al-ʿArīf (Aṭīb) bāʾl-ṣāʾīl al-Ṣāḥib b. ʿAbd Allah al-Ṣāḥib; MS. in the Brit. Museum Or. 5942; Ellis and Edwards, Descriptive List, p. 131; in Stambul, Ḫālīs, No. 5275 (with Turkish translation), Fāṭih, No. 2909, Asʿad, No. 1147—1148; pr. Cairo
MAZAGAN (old Arabic name: al-Buridja, "the little fortress"; modern Arabic name: al-Djedida "the new"), a town on the Atlantic coast of Morocco, 7 miles S.E. of the mouth of the Wadi Umm Rabī'. Its population in 1926 was 19,159, of whom 14,141 were Muslims and 3,385 Jews.

Some writers think that Mazagan was built on the site of the Pouzaiez or Pouzae ze of Ptolomy, or Portus Rubialis of Pliny. The texts however do not say that there was a town there, but only a roadstead frequented by ships. The situation seems to have remained unchanged throughout the middle ages. As to the name Mazagan, it seems to appear for the first time in al-Bakīt (eleventh century a.d.). This geographer, enumerating the ports of Morocco on the Atlantic coast, mentions a Marifen (de Slane's reading), which should undoubtedly be deemed to Masjīghan, a form attested by Idrisi (eleventh century). The same place-name is found in a manuscript collection of edifying anecdotes relating to the great saint of Azemmūr: Sidi Abū Sha'a'īr, who also lived in the twelfth century. Mazighan appears here as a fishing village between Azemmūr and the rivāt of Tī (q.v.). The proximity of these two fairly important towns prevented it from developing. The roadstead is marked on a folio of the Burj of Marrakesh and portolans of the sixteenth and seventeenth centuries (publ. by Ch. de La Roncière, Découverte de l'Afrique au Moyen-Age, 1925) which give the forms Messegan (1530 and 1573), Maseghen (1567), Mazagem, intermediate between Mazighan and the Mazagō of the Portuguese. The latter, from the end of the sixteenth century, used to come to the harbour of Mazagan for cargoes of the grain of Dukkāla to supply the capital. In 1502, a squadron commanded by a Portuguese gentleman, Jorge de Mello, caught by a storm in the Straits of Gibraltar was driven to Mazagan and landed there. The Portuguese installed themselves in a deserted tower there to defend themselves against a possible attack by the inhabitants. Jorge de Mello soon returned to Portugal and obtained the king's permission to build a fortress at Mazagan. Although the story of these events is only recorded by writers of the eighteenth century, it must be in keeping with the facts, for letters patent of king Dom Manuel dated May 21, 1505, give Jorge de Mello the captnacy of the castle which he is authorised to build at his own expense at Mazagan. He did not however make use of his privilege for, when on Aug. 27, 1513 the Portuguese army sent to take Azemmūr under the command of the Duke of Braganza landed at Mazagan, there was neither town nor fortress there except the old ruined tower (al-Buridja). The difficulty of entering the port of Azemmūr led the Portuguese to establish a more accessible base at Mazagan. During the summer of 1514 under the direction of the architects Diego and Francisco da Arruda, a square castle flanked by towers at each of the four corners was built. One of these bastions was formed by the old tower, al-Buridja, the name of which survived among the natives as that of the Portuguese town. This early castle still exists almost in its entirety. Particularly striking is a magnificent subterranean hall, the vaulting of which is supported by 25 pillars. It was probably, rather than a salle d'armes, a huge granary built to hold the contributions in grain paid by the tribes subjected to the Portuguese protectorate. It was at a later date used as a cistern to hold supplies of drinking-water for the garrison, when the place blockaded by rebellious tribes had no longer any taxes in grain to collect, which happened in 1541. For ten years before, the situation of the Portuguese stations on the coast, in view of the religious and anti-foreign movement stirred up by the coming and successes of the Sa'idian Shāhīd, had been so bad that the king of Portugal thought of abandoning several of his fortresses. The taking of the town of Sāfī and the capture of Guer (Agadir) by the shah (March 12, 1541) was a warning. John III decided to evacuate Sāfī and Azemmūr and to concentrate on Mazagan, a more favourable and more easily defended position, all the Portuguese forces he wanted to leave in the south of Morocco. The operation was carried through in the autumn (before Nov. 6). From the month of April onwards the work of putting the town in a state of defence had been going on. The work was actually pushed on during the last months of the year 1541 under the direction of the great architect João da Castilho, who used plans prepared by an Italian engineer, Benito di Ravenna. This was when the walls of Mazagan were built as they still stand to-day.

In retaining Mazagan the Portuguese wanted to keep a base along the coast to secure protection for the route to India. They also hoped that the fortress would serve them as a base for the conquest of Morocco, when a favourable conjuncture should arise, which however never happened. In fact for the more than two hundred years in which the Portuguese retained it, the possession of Mazagan only served them as a pretext to obtain from the Pope bulls of Crusades, which supplied the Papal Treasury with appreciable revenues. The tribes kept the town so closely blockaded that the inhabitants could not go outside its walls without military protection. The collection of wood and the cultivation of a few gardens, continually devastated by the natives, gave rise to continual skirmishes. The Muslims of the country around had built two little towns, a few miles from Mazagan, Fâby, across the Almimf and Fâby, Awlad Alwâyih, where they entrenched themselves to keep up the blockade and where the devout, desirous of acquiring merit from participation in the holy war, used to come to discharge a few shots at Mazagan. Badly supplied by sea, often a prey to famine and epidemics, the garrison and population however lived in sufficient security under their powerful walls, against which the tribes could do nothing. On several occasions however, they had to resist vigorous attacks. In April 1562 Muḥammad, son
of the Sa'dián Sultan, ‘Abd Allâh al-Ghâlib b’il-lâh, at the head of a vast horde of tribal warriors laid siege to Mazagan. Two assaults were repulsed and the besiegers lost heart. On Aug. 4, 1623, the place, attacked by 5,000 Muslims during the absence of the governor, who was led into an ambuscade, owed its safety to his wife who ordered the gates to be shut, organised the defence, distributed arms to the whole population, women as well as men, and sent them on to the walls. During the disorder which accompanied the decline of the Sa’dián dynasty, the governors of Mazagan seem to have succeeded in ratifying the blockade and resuming relations to some extent with the tribes. The mandâhar Sidi Muhammad al-Ayâshî, to put an end to this, attacked the Portuguese in 1639 and inflicted some losses on them. Mâlâwî Is’âmî, occupied with the siege of Ceuta, never seriously tried to take Mazagan. The honour of retaking it belonged to his grandson Sidi Muhammad b. ‘Abd Allâh. The Sultan came to besiege it in person at the end of Jan. 1769. The place held out successfully for five weeks, but, the order to abandon it having arrived from Lisbon, the governor surrendered on honourable terms. The garrison and civilian population returned to Portugal with their arms and baggage. Among the historical manuscripts on March 10, 1769 the Portuguese explored another town which did great damage; the sultan entered a ruined town which he repopulated in part but it remained in so miserable a state that it was called al-Mahdâmâ “the ruined”, until, in the reign of Sidi Muhammad b. Hîshâm, in 1240 (1824-25) it was restored by Sidi Muhammad b. al-‘Atîyah, kâdî of Dukkela and Tâma-na, who gave it the name of al-Qâdîâ through which it is generally known to Muslims.

MAZANDARÂN 

A province to the south of the Caspian Sea bounded on the west by Gilân, on the east by the province of Astârâbâd (q.v. formerly Gurgân).

The name of Gurgân to the Iranians was the “land of the Wolves” (voirkîn), the region to its west was peopled by “Mazanian dwâs” (Barbâoma, Alter. Wetterbuch, col. 1169 under mazâmeya dawâ). Darmesteter, Le Zend-Avesta, ii. 375, note 32, thought that Mazandaran was a “comparative of direction” (“Mazana-tara” cf. Sîrîn and Shîrâstî) but Noldeke’s hypothesis is the more probable (Grundr. d. Iran. Phil., ii. 178) who thinks that Mazâr-dar = “the gate of Mazân” was a particular place, distinct from the part of the country known as Tâpurâstân. [A village of Mesdar (?) is marked on Stahl’s map 12. km. south of Firuzkôh.] In any case the name Mazandaran seems to have no connection with the “Mazandarán” which according to Ptolomy, vi., ch. v., was situated between Parthia and Ariëa (Hari-rûd) and was connected by Olsoschen (Mas- daran und Mazandaran, Monatsberichte Ab. Berlin, 1877, p. 775-783) with Mazâr-daran, a station 12 farsaks west of Sarakhs; cf. Ibn Khurâddîbîh, p. 24; Maqaddasi, p. 351 [ref. however the late source of 881 (1476) quoted by Dorn, Melanges asiat., vii. 42].

The Avestán and Pahlavi quotations given by Darmesteter, loc. cit., show to what degree the people of Mazandaran were regarded by the Persians as a foreign group and little assimilated. According to the Bûnâqânî, xv. 28, transl. West, p. 58, the “Mazandaran” were descended from a different pair of ancestors to those of the Iranians and Arabs. The Shâh-nâmâ reflects similar ideas (cf. the episode of Khal-kûs war in Mazandaran and esp. Vullers ed. i., p. 332, v. 290: the war is waged against Afrîman; p. 364, v. 792-795: Mazandaran is contrasted with Iran; p. 574, v. 955: the hestial appearance of the king of Mazandaran among the inhabitants of Iran; p. 432, d. b. 142: the “Shâh-nâmâ” was written by the king of Mazandaran, the king of the country, whom the people call “Shâh-nâm-a” (q.v. the “Shâh-nâmâ” to the west of Harâmân) and their place was taken by the Tâpyre (Tâpyre), who must have occupied the mountains (north of Simnân), and the Amdarâs (Amderas) to the region of Khwar (Khwar to the east of Harâmân) and their place was taken by the Tâpyre, whose name came to be applied to the whole province.

The Arabs only know the region as Tabâristân (q.v. the Pahlavi coins). The name Mazandaran only reappears in the Safîwî period in Ibn al-Athîr, v. 34, in speaking of the deaths of 8 farsaks by Alp Arslân (586) it says that Mazandaran was given to the emir Inandê Baigu. Ibn Isfandiyâr, p. 14, and Yâkûn, iii. 502, 99, that Mazandaran was a name for Tabâristân only is of fairly modern origin (in Arabic?) but according to Zakariyâ Khâzîmin, p. 270, “the Persians call Tabâristân Mazandaran”. Hamdallâh Mustawfî distinguishes between Mazandaran and Tabâristân. In his time (1340) the 7 tumen of the “willayât of Mazandaran” were: Djûrdjûn, Mûrusîtûk (q.v.), Astârâbâd, Amôl and Kustâm-dûr, Dîhistân, Rûghad and Nishâr-rustûk (q.v.); on the other hand the diyar-i Kâmîs sea-Tabâristân included Sîmân, Dâmghân, Firuzkôh, a town of Damâvâd, Firerim etc. We find a similar distinction in Khwânîmâr, ed. Dorn, p. 83.

Geography: The actual breadth of Mazandaran (Rahûn) is 300 miles from east to west and 46 to 70 miles from north to south. Except for the strip along the coast — broader in the east than the west — Mazandaran is a very mountainous country. The main range of the Elburz forms barriers parallel to the south of the Caspian, while the ridges running down to the sea cut the country up into a multitude of valleys open on the north only. The principal of the latter ridges is the Mazâr-dûr, which separates Tabâristân from Tûn-kûn. The latter is bordered on the south by the chain of the Elburz in the strict sense, which
separates it from the valley of the Shāhrūd (formed by the waters of the Alamūt and Talakān and flowing westward into the Safid-rūd).

To the east of Māzār-e-Shāh, a number of ranges run out of the central massif of the Elburz: 1. to the east the chain of Nūr which cuts through the Harāz-vey and 2. to the S.E. the southern barrier which forms the watershed between the Caspian and the central plateau. Between the two, rises in isolation the great volcanic cone of Damavand (9,900 feet).

To the east of Damavand the southern barrier rejoins the continuation of the Nūr and the new line of the watershed of eastern Māzārdar is marked by the ranges of Band-i-vey, Sawād-kūh, Shāh-mirzād (to the south of Simnān), of Harāz- djarb (to the south of Dāmghān), of Shāh-kūh (to the south of Shāhrūd) etc.

The rivers of Māzārdar are of two kinds. A hundred short streams run straight down into the sea from the outer mountains of Māzārdar. Much more important are the rivers which rise in the interior and after draining many valleys form a single great river when they break through the last barrier. Such are (from west to east): the Sarūd; the Čalles; the Harāz-vey, which drains the region of mount Damavand and then runs past Amol; the Bābāl (the river of Bāfrūḏ); the Tālar (river of ʿAllābād); the Tidjin (river of Sāi) and the Nikā (or Aspeynāt) which flows from east to west, its valley forms a corner between the southern chain (cf. above) and the mountains which surround the Gulf of Artašābd on the north.

strip of lowland between the Gulf of Astarâbâd and the mountains; cf. Ibn Rusta (p. 149) who speaks of the brick wall (zūbūr) and of the Gate of ʿUmar through which travellers had to pass (cf. ibn al-Fakhrī, p. 303). To the west the town of Shâli (Câli) was situated on the frontier of Dailam (Ibn Rusta, p. 150: fi naqād 'aladwâr) but later the valley of the Sarâbâb-dûr (Kalâr-dûr) seems to have been annexed to Tabaristan. Farther west the coast of Tuṅkâbûn was governed sometimes with Mâzândarân and sometimes with Gilân.

The Arab geographers distinguished between the plain (al-sâliha) and the mountains (al-dâjâbiya) of Tabaristan (Iṣṭakhrī, p. 211, 271). The important towns of Tabaristan were in the lowlands: Amol, Nâtil, Shâli (Câli), Kâla (Kalâr), Mila, Târdji (Tûdi, Bardîji), ʿAin al-Humûn, Mâmûr (= Bârûfîrîsh), Sârî, Tâmishâ (cf. Iṣṭakhrī, p. 207; cf. Mûkaddasî, p. 353). The principal town (madîna) of Tabaristan in the time of Yaḥyâ, p. 276, still was Sârî (p. r.), but in the time of Masûd, Tâmûshî, p. 179, Iṣṭakhrī, p. 211, and Ibn Hawâkî, 271, the principal town (Jâpatâ) and the most nourishing one in Tabaristan was Amol (larger than Kâzin).

The mountain area was quite distinct and its connection with the plain is not very clear in the Arabic texts; cf. the confused summary in Iṣṭakhrī, p. 204. Tabârî, iii. 1295 under the year 224 (838) distinguishes three mountains in Tabaristan: 1. the mountain of Wandâd-Hurmuz in the centre (wasâf); 2. that of his brother Wandâsândjian (i.e) Bâlandâd b. Kâsin and 3. that of Shahrî b. Surkhbî b. Bâlî. Now according to Ibn Rusta, p. 151, (the Kârînî) Wandâd-Hurmuz lived near Dânbâwût. On the other hand, the same writer, p. 149, says that during the rule of Tabaristan by Dâjrî b. Yaîrîd, Wandâd-Hurmuz had bought 1,000 qair of domain lands (gâzâfî) outside the town of Sîrî. These off dijâb seem to correspond to the region round the sources of the rivers Tûdîn and Nîkâ which in Persian is called Haẓâr-dîjar. Later, the lands of Wandâd-Hurmuz included the greater part of eastern Mâzândarân. "Wandâsândjian seems to have ruled over the greater part of Mâzândarân for his capital Muz was the rallying point from which expeditions set out against Dâlbâwût. Finally the mountain of Shahrîn comprised the S.E. part of Mâzândarân, for according to Ibn al-Fakhrî, p. 305, it was close to Kûmî.

In the time of Iṣṭakhrî, the three divisions of the mountains specified are: the mountains of Rûbândî, of Fâdâbânî and of Kûrîn. "They are high mountains (dijâb) and each of them (gâzâfî) has a chief".

Rûbândî, according to Ibn Hawâkî, lay between Râî and Tabarîn. Barholtz, Oeter, p. 155 emends the name to Rûянî and identifies it with Rûянî. Ibn Rusta, p. 149 says that Rûянî, near the lands of Râî, did not form part of Tabaristan but formed a special kâra with the capital Kârdîja which was the headquarters of the Wall (cf. Kârdîstâkî in the buhûq of al-Umârî). According to this, Rûянî = Rûянî is to be situated in the S.W. part of Mâzândarân (north of Tabarîn). In the Mongol period, ʿâmidâlah Kâzinî, p. 160, is the first to mention Rûянî (on the Shâh-dûr). As Vasmîr, loc. cit., p. 122—125, has shown, Rûşandîr later included all western Mâzândarân between Sâkhtasr (Gilân) and Amol.
Rustamār therefore included Rūyān, without the two terms being completely synonymous.

Dībāl Kārin had only one town Shāhmār. a
day’s journey from Sāriya. The local chiefs of the
kārin lived in the stronghold of Firrum which must have stood on the western branch of
the river Tidjin, which later flows past Sāri. The
modern bālūk of Firrim is in the Hazār-Djarib
(more accurately in its western half which is called
Dudāniga). According to Ibn Isfandiyār, p. 95, the
possessions of the Kārnids included the mountains
of Wandūn-umid (ibid., p. 25; the water supply
of the mosque of Amol came from this mountain).
Amol, Lāfīr (on the eastern source of the river
Bābul which runs to Fārsūrūgh) and Firrim, "which
is called Kūh-i Kārin". According to Yāqūt, iii,
283, the lands of the Kārnids included Dībāl
Shawrin (cf. above) which Tīmāmd al-Saftāna, Khišīb
al-Tadwin, p. 42, identifies with Sawad-kūh i.e.
the sources of the Tālār (river of "Alībāb between
Amol and Fārsūrūgh"); the pass leading to Sawad-
kūh is still called Shafīn < Shawrin

The Dībāl Pādišān (ناوئرین) lay a day’s journey from Sāri.
The district had no cathedral mosque; the chief
lived in the village of Uran (Ibn Hāshāl, p. 268,17;
Uram-khūst, Aram). As Vasmer has shown, p. 127—
130, this must be sought on the middle course
of the rivers of Fārsūrūgh and Alībāb (to the
north of Lāfīr and near Shīrgāh).

Bibliography. R. G. A., s. v. Dailam, Tabārīstān,
Amol, Sāriya etc. Ibn al-Fakhīr, p. 301—314, in
particular gives very detailed information about
Tabārīstān. Mashīd, Murūd al-Dhakāb, index;
338 (of little originality); Zakarīya Šaftāna. Alīgar
al-Buštīn (clime iv.): Amol, p. 160: Bilād al-
Dailam, p. 221: Rūyān, p. 250: Tabārīstān; Yāqūt.
cf. Dorn, Auszuge, 1858, p. 2—45, where are
collected all the articles relating to Tabārīstān
[but the text of Wūstenfeld’s edition is preferable].

Indian geography from Sanskrit texts); Barthold,
Istor.-geogr. obzor Irana, St Petersburg 1903,
295; Le Strange, The Land of the Eastern Caliphate,
p. 368—376; Vasmer, Die Erhebung etc.

History. The local dynasties of Mazandarān
fall into three classes: 1. local families of pre-
Islamic origin, 2. the Allīd sayids and 3. local
families of secondary importance. 1. The
second name of the Sāsiānian dynasty, the
king of Tabārīstān and of Padāshvārgar (Marquart,
Erzähler, p. 130: "the district opposite the region of
Khāzār"); Farshūwagār is a misreading of the
name, which is also found in the Bundūdshīk, xii.
17) was Gushnaspa, whose ancestors had reigned
since the time of Alexander. In 529—536 Tabārīstān
was ruled by the Sāsiānian prince Kāyu, son of
Kawāt. Anāširwān put in his place Zāmhr, who

traced his descent from the famous smith Kāwa.
His dynasty ruled till 645 when Gil Gāburga (a
descendant of the Sāsiānian Djamasp, son of Perzūr
annexed Tabārīstān to Gīlān. These families, on
whom their coins might throw some light (cf.
below), had descendants ruling in the Muslim period.

The Bwāndids (who claimed descent from Kayvān), provided three lines: the first 45—597
(665—1007) was overthrown on the conquest of
Tabārīstān by the Ziyārid Kābūs b. "Ushāmir;
the second reigned from 566 (1073) to 606 (1210)
when Mazandarān was conquered by Muhammad
Kāvārizmshāh; the third ruled from 635 (1237)
to 750 (1349) as vassals of the Mongols. The
last representative of the Bwāndids was slain by
Ahrāsāyāb Cūlāwī.

The Kārinids (in the Kūh-i Kārin) claimed
descent from Kārin, brother of Zārhmūr (cf. above).
Their last representative Māyāzīr (9.v.) was put
to death in 224 (839).

The Pādíspānids (Rūyān and Rustamār), claimed
descend from the Dāhbyids of Gīlān (their
eponym was the son of Gil Gāburga; cf.
above). They came to the front about 40 (660)
and during the rule of the Alids were their vassals.
Later they were vassals of the Bwāndids and
Bwāndids, who depose them in 586 (1190). The dynasty,
restored in 606, survived till the time of Timūr;
one of its branches (that of Kārūn b. Kayvāmarth)
reigned till 975 (1567) and the other (that of
Iskandar b. Kayvāmarth) till 984 (1574).

II. Alongside of these native dynasties the
Alids were able to establish themselves, princi-
ually in Tabārīstān. In 250 the people of Rūyān,
rebellious against the governor, sent to Rayy for
the Zaidi Sayyid Ḥasan b. Zaid, a descendant of the
Caliph ʿAlī in the sixth generation. This (Hasanīd)
branch ruled in Tabārīstān till 316 (928). The
Hasanīd branch ruled from 304 to 537 (?). Another
dynasty of Marāgāsh sayyids ruled in Mazandarān
between 760 (1358) and 880 (1475). The founder
of this dynasty was Kīwām al-Dīn, a descendant
of ʿAlī in the twelfth generation. A third family
of Murtaḍāi sayyids is known in Hazār-Djarib
between 760 and 1000 A. D.

III. The noble families who enjoyed considerable
influence, mainly in their fiefs, are very numerous.
Rabino mentions the Kiyā of Čalāw (at Amol,
Tabālān and Rustamār) between 795 A. H. and
900 A. H.; the Kiyā Djalālī of Sāri in 750—
765; the house of Rūfa spān of Sawad-kūh between
897 and 923; the Dīw in the period of
Shāh Tahmāsp in certain parts of Mazandarān;
the Banū Kādūs between 857 and 957; the
Banū Iskandar between 857 and 1006 and the
different princes of Tamishā, of Miyānūrūd, of
Lārdījān, of Māmūr, of Lāfīr etc.

Besides this confusion of feudal dynasties, a
series of conquerors from outside has ruled in
Mazandarān: the Arabs (their expeditions began
in 22 = 644; the final conquest took place under
al-Mamūr in 145—144) (cf. the archaistic, rather
dates and facts given are very contradictory,
as Vasmer has shown), the Tāshirs, the Saffārīds,
the Samānids, the Ziyārids, the Ghaznawīs, the
Saljuqs, the Khvārizmshāhs, the Mongols, the
Sarbadārs. Timūr and his descendants, the Safawīs.
Shāh Ismāʿīl sent an expedition to Mazandarān
in 923 (1517) but it was under Shāh Abdās that
the land was definitely incorporated in Persia in
1005 (1596). This monarch claimed hereditary
rights there from the connection of his family with the Saiyid Kiwam al-Din Marashi (Mom-\u00e7er. Tcheran, p. 354). Farahabad was founded in 1020 (1612) and in the next year Ashraf was built with its famous palaces.

On the Russian expeditions to Mardazar see Dorn, Cypria; Kostomarow, Bint Sterki Razorin (1668-1669), in Sobrevre io neniini, St. Petersburg 1903, Kniga I, vol. ii. 407-505 (Persian sources call the Cossack chief Sterki Razorin "Istun Guraz"); Butkow, Sur les evenements qui couru lieu en 1787 lors de la fondation d'un etablissement russe sur le golfe d'Astarabad (Russ.), Ann. Mus. Vautr. del. xxiii. 1839, p. 9; Butkow, Materiali dlia morni istorii Karakara, St. Petersburg 1869, index (in the Persian sources the leader of the Russian expedition of 1781 Count Woszninicki is called "Karaffa = Ghiy Senatekhan"). Archaeology. Bode, On a recently opened tumulus in the nighnessward of Astarabad, Archologia. London 1844, xxx. 248-255 (on the circumstances of the find made at T"ring-tapf of Bode,
Anonymous coins were also struck. The issue of these coins with Sasanian types ended in the year 143 Tabaristan era (794, anonymous) but we have a coin of 161 (812) on the obverse of which in place of the king’s head — as earlier on the coins of the governor Sulaiman (136—137) — there is a rhombus with the initials, the Arabic letter, and on the margin al-Fadl b. Sahl Dhi-l-Kaysatun (in Arabic) is named; on the reverse, instead of the altar with its guardians are three parallel designs like firm brackets, between them an inscription in four lines giving the Muhammadan creed in Kufic and the date and mint in Pahlavi (Tisienhausen, Zap. vost. otd arch. obsh., ii. 224).

We know that coins of Tabaristan mint of the Caliphs of the years 102 (Lavoix), 147 (Brit. Mus. with the name of the governor Rawh), 190—192, copper coins of the years 145 and 157 (Zambur, Novum, Ztschr., xxvi, the latter with the name of Omar b. al-‘Ala). At a later date, coins were struck there by the ‘Alids (Amul, 253 Ar, 306 AV and Ar), the Bâyids and Ziyârids (Amul, Satia and Firrûm), the Bâvandids (Firrûm, 353, 357, 394), sometimes by the Samanids (Amul AV 241, AR 302, 353—357), still later by the Hâllâjids, Serberdâns, Timurids (Amul, Sâr) and Shâhs of Persia (Amul, Sâr, Tabaristan, Mazarandān). In Amul anonymous copper coins were struck from the xvith century onwards. On several pieces of this period the mint Tabaristan occurs. As these are all very rare, the issue must have been an occasional one. The dates are not pre-erred on any specimens. More common are copper pieces of the value of 4 kâbêkî (18—22 grammes = 280—340 grains) with the lion and sun and mint Mazarandān, which belong to the xvith century. During the Russian occupation of Gilan in 1723—1732, to meet the shortage of currency provoked by the financial crisis in Russia at this time, Persian copper coins were overstruck with a Russian double-ruble and cistre in the occupied provinces in place of Russian money.

These coins are often called Mazarandān pieces but this is not correct, as only Gilan and not Mazarandān was occupied.

MAZÂR-I SHARIF, a town in Afghânîstân, south of the Amû-Dirzû [q.v.]. In the middle ages it was the site of the village of Kheir, later called Khodja Khairân, 14 miles east of Balkh. On two different occasions, in the xvith (xvith) century after 530 (1135—1136) in the time of Sultan Sandîjâ [q.v.], and in 885 (1480—1481) in the reign of the Timûrid Sultan Husain, the tomb of the caliph ‘Alî was “discovered” here and its genuineness declared to have been proved. A place of pilgrimage (mâzûr) at once arose around the tomb with a considerable market: the second
tomb which is still standing (the first is said to have been destroyed by Čingiz-Khan), was built in 836 (1431—1432). The maqâr does not seem to have been of any particular importance during the time of the Özbeğs and is hardly mentioned although several Özbeğ Sultanlı were buried there. In the first half of the sixteenth century, the place is usually simply called maqâr by travellers, the name Maqâr-ı Şerif seems to have arisen within the last hundred years. 'Abd al-Karim Bûkûhâri (ed. Schefer, p. 4) does not mention Maqar at all among the towns of Afghanistan: in 1532 when A. Burnes passed through it, it was a little town with about eight hundred houses. In 1586, the Afghan governor Na'îb Alî Khan, a Shi'i, chose Maqâr-ı Şerif as his residence; since then Maqar-ı Şerif has become the capital of Afghan Turkistan. In 1878 it was described by the Russian general Matveyev as one of the best towns in Northern Afghanistan, with about 30,000 inhabitants (Costenko, Two Ke-stansky Krai, u. 157).

At-Maṣţî, a name borne by over twenty Abâdî writers or men celebrated for their piety, among whom may be mentioned Abu 'l-Kalîb Sulamân b. Yâghişî al-Maṣţî, a pupil of Abu 'Abîd Allah Muhammad b. Bakr. Celebrated for his learning and his virtues, he spent all his life in study and teaching and died in 474 (June 11, 1081—May 31, 1082) in a little town of the Banû Wisâlî, a clan of the tribe of Maṣţî, which in those days occupied the lands between Gâbes and the south of Tripoli. He wrote a book on the principles of law (mahfî) entitled al-Mahfî. Bibliography: Abu 'l-Abâb Ahmad b. Sa'îd al-Shâmîmashî, Kitâb al-Siyar, Cairo 1904, p. 412, 592. (Moh. BENCHEINE)

Maţdak, the apostle of a religion, which was founded two centuries before him by Zar'udî, son of Khurrâṡhân, but spread in Persia only after his propaganda; it had great political influence in the country in the time of Kâvâdî (488—531 A.D. with an interregnum). The latter adopted it and even made arrangements for putting its teaching into practice but after his restoration he put Maţdak and a large number of his followers to death. The best known feature of his teaching was the endeavour to remove every cause of covetousness and discord among men, and thus to purify religion, by making women and possessions common property.

It is not possible to reconstruct from the sources the Mazdak doctrine in detail nor to settle its relations with the other religions or sects of Persia. The main features will be indicated here.

The sources. Detailed narratives of the reign of Kâvâdî and some important references to Maţdak and his teaching will be found in the contemporary Syriac and Byzantine writers (Joshua Syllutes, Agathas, Procopius, Malala, Theophanes). In Pahlavi literature there are few references to Maţdak. The bulk of our information about Maţdak and his relations with Kâvâdî come to us from Arab and Persian writers and go back mainly to the Khwâdistânîmâgh or Royal Sâsânîan Chronicle, of which the best known Arabic version was that of Ibn al-Muqaffâ. Baron Rosen has shown that the other Arabic versions were not all independent on this one, some of them having been prepared directly from the original. Some compilers also inserted historical or legendary episodes taken from other Pahlavi works and others attempted to harmonize different narratives and did a certain amount of retouching in their reconstruction of the original. The Persian and Arab writers who had these different versions or computations at their disposal only very rarely mention their sources and endeavour in turn to reconcile the statements made. Noldeke has already distinguished two "Hauptquellen" for the various Arabic and Persian narratives (the first followed by Ibn Kûtaiba and Eutychius and a part of Tabâtî, the second by al-Ya'qûbî and another part of Tabâtî), Christensen in his fundamental study thinks he can distinguish four lines of the tradition of the Khwâdistânîmâgh found by the Arab and Persian writers in the different versions or editions of it. Noldeke's two "Hauptquellen" correspond to the first two; a third is represented by al-Dinawâri (Noldeke thinks his story is a harmonising of the two "Hauptquellen") and the Nihayat al-ṭarîb fi Aḥkâm al-Ṭarîb wa-l-Ṭarîb (J. R. A. S., 1900, p. 195 sq.), the fourth presents features of its own, some of which are legendary in character and are found again in the Siyasât-Nâma of Niẓâm al-Mulk, which is independent of the Khwâdistânîmâgh. The common source of all these legendary features would be, according to Christensen, the Book of Maţdak, a Pahlavi work of fiction (like the Kâlila wa-Dimna), which enjoyed great popularity and was translated into Arabic by Ibn al-Muqaffâ' and into Arabic verse by Abûn b. Abû al-Ḫâmid al-Lâhîkî. The elements of this fourth line of tradition are, according to Christensen, found in the Kitâb al-Ašrâmî, al-Lâhîkî, Firdawsi, al-Hira, Ibn al-Album and Abu l-Fadîl. Some references in al-Maṣţî and al-Khânînamî can also be traced to the book of Maţdak. Independent traditions would also be preserved elsewhere, for example by the Arabs of al-Hira. Al-Shâhrastânî's notes (to which some critics deny any historical value) might go back to books of the sect now lost. These are not found elsewhere and their immediate source was Muhammad b. Harûf Abû Ḫarîrî al-Wârāq, a Zoroastrian converted to Islam. The source of the notices in the Fihrist is not known (it calls the Mazdakists Zoroastrians); the Persian work of the sixteenth century called Lahnvâ-nâma Maţdákân, is probably a mere compilation of no value, from sources already mentioned and the pretended Maţdak book Dinwâdî, which it quotes, is quite unknown.

Doctrine. The fact that the majority of these sources emphasize the social aspect of the Mazdakī reforms and do not mention special doctrines or beliefs of the sect (some like the Fihrist and Ibn al-Vahir connect it with Mazdaism) has convinced the majority of Orientalists who have studied this subject (e.g. Noldeke, Nicholson, v. Wesendonk) that the reforms must be considered as a social movement which aimed at purifying the Mazdaean religion: a communist system of which the precepts regarding women and property and those of an ascetic nature (like the prohibition of slaughtering
animals and eating their flesh) had however a religious aim, and were clearly distinguished by this character from modern socialist communism.

Christensen, in his work already quoted, comes to the contrary conclusion that Mazdakism was above all a religious movement and that its social precepts were originally a very secondary feature: it was, he says, a reform of Manicheism, already preached by Zaradust, two centuries before Mazdak. Christensen supports his argument by two well-known passages in Malala, of which the first deals with the doctrines propounded at Rome under Diocletian by the Manichean Bundos in opposition to official Manicheism.

This Bundos is supposed to have afterwards gone to Persia and spread his doctrine there, which was called vah dast-o-dast (from the Pahlavi form deryt-darman = followers of the orthodox faith). The other passage calls king Kawaghi dast-o-dast (an inaccurate form for dast-o-dast, an epithet which contains an allusion to the Mazdaki faith. A popular form of dast-o-dast is said to be the origin of the very corrupt forms of this surname, which are found in the Arabic texts and are due to the similarity of certain Arabic letters (al-Tha‘allab translates it “may his beard fall” which presupposes a form داس-ن. دانتش). Christensen thinks these links sufficient to identify Zaradust with Bundos (Bundos would be an honorific title of the reformer, “the venerable”, from the Pahlavi bundaz, bundoq) and defines Mazdakism as a Manichean oyoogozia.

This theory is supported by al-Shahrastani’s resumé, which gives us, along with the general character of the religious history of Iran, the best argument for this thesis, and those who hold the other view are forced to deny any force to the evidence of this historian of sects. Christensen also concludes that it is with good reason that the Byzantine historians call the Mazdakis Manichaeans: but it must be added that their classification of a doctrine so little known in the west (where on the other hand Manicheism was well known and was, so to speak, the typical heresy of Persia) is not of much value.

According to al-Shahrastani’s exposition, Mazdak’s system consisted in that of Mani; except that he said that the dark spirits did not act of their own will and without restraint (bhod-kha’t va’l-khaiwar), but blindly and by chance (bi’l-khaht va’l-ittifak); that mixture is produced also by’l-khaht va’l-ittifak and liberation will be produced by’l-khaht va’l-ittifak. In this connection we must remember that the same author in his survey of the Manichaean tells us that the views of the Manichaean on the cause of mixture were divided and that some of them said that it was produced by’l-khaht va’l-ittifak the opposite of what was laid down in the original cosmogony. Other Muslims writers allude to this point in dispute among the dualist sects: al-Mu‘tahalib b. Tahir al-Makdisi says, for example, that mixture bi’l-khaht va’l-ittifak is taught by the Sabians, a name which is sometimes applied to the Manichaean. All this gives the impression that the mention of the Mazdaki teaching in this connection is quite in keeping with the conditions of polemic among dualists. Perhaps the practical teachings of Mazdakism should be connected with the doctrine of mixture bi’l-khaht va’l-ittifak.

Al-Shahrastani also gives from another source other details on Mazdaki cosmogony (the four forces, which surround the object of worship as court dignitaries surround the king of Persia; the seven viziers, the twelve spiritual beings, the three elements, the director of good and of evil), details which have their parallels in other gnostic and dualist cosmogonies, which should be studied with their names from the point of view of the latest studies on Iranian syncretism.

Al-Shahrastani finally alludes to certain cabalistic speculations on the letters of the supreme name and mentions Mazdaki sects (like the ‘Abul Musliya) still in existence in his time in Persia and as far away as Sogdiana.

We may conclude that it is at least premature to deny all connection between Manichaeanism and Mazdakism; it seems that rather than put the question in the form of a rigid alternative between Mazdaean or Manichean influence, it would be better to regard Mazdakism as a form of gnosticism upon which two powerful religious forces have exerted an equal influence, the official religion and the Manichaean heresy, and some other elements also (just as Manichaean gnosticism owes much to the national religion).

In any case, the feature which appears most clearly from the sources which struck contemporaries was the general body of Mazdaki precepts with communist and humanitarian tendency and especially those which relate to community of women and property and were actually put into practice for a short time. The ascetic prescriptions are quite in keeping with a gnostic character of the sect (the prohibition of slaughtering animals and eating their flesh) which with communist teachings would be the elements forming the path to gnostics and liberation.

The presence of an ascetic strain in Mazdakism, as in Manicheanism, is probable. The people naturally seized on these principles and eagerly attempted to put them into practice on a large scale. Thus excesses resulted which, at least in origin, were very far from the intentions of the reformer and the elite of his adherents. This explains also why the religious character of the sect was forgotten and memory of its social teachings retained. Whether the founder and his leaders also abandoned themselves to the excesses of which the sources accuse them, one cannot say; we know that very frequently the initial good faith of reformers is disturbed by contact with reality.

It was natural to give a more practical value to this body of teaching, if we regard Mazdakism as a Puritan reform remaining within the Mazdaean religion and not becoming an independent religion.

Contemporary sources also tell us of a bishop elected by the Mazdaks, named, according to Malala, Indarazar (which Noldeke connects with the Pahlavi word andazgar = to advise; cf. the inspagan or episksopos of the Manicheans) who was slain with the other Mazdaks on the day of the massacre; according to Christensen, it is possible to identify him with Mazdak.

During the persecution which followed the massacre, all the Mazdaki books were destroyed. The Persian work of the seventh century, Dabistan-i Madzakih quotes a book called Dismad which is usually regarded as a forgery: all the notices of the sect professing to come from this book are
taken from the text of al-Shahrastānī and other sources, like the rest of the book. The Book of Mazdak, which enjoyed a great popularity and was translated in Arabic by Ibn al-Muqaffa and into Arabic verse by Abūn b. 'Abd al-Hamid al-Lāhijī, was a work of entertainment and not of religious teaching (cf. above).

History of the Mazdak movement in the reign of Kawād—the Massacre. We know very little about the life of Mazdak (also written Mazdak). His father was called Bān-dādī (a Persian name like Mazdak) and according to Tabari, they came from a town which Christensen is inclined to identify with Māddhārāyā. Itspākhr and Tabriz are mentioned as the birthplace of the reformer. According to some sources, he had been a Zoroastrian priest (mōbadāh); al-Burūnī who sometimes follows a romantic tradition (cf. above), calls him mōbadāh mōbadāh! The details of his doctrine are not known but it is certain that he developed and spread the teaching of his precursor Zarādāšt of Pasā, who lived two centuries before him. It is evident that the disturbed condition of Persia after the victories of the Hephtalites facilitated the spread of revolutionary doctrines; but it is difficult to see why the king (who in the beginning of the sixth century became a convert of the new faith (and this is a question which also puzzled the ancients), and how he became connected with Mazdak.

The necessity of crushing the power of the nobility and higher clergy which he found annoying may have caused the king to use for his own ends a sect which aimed at destroying the privileges of these classes. Noldeke (who thinks Kawād was a man of strong will) credits him with this plan. Christensen (who had accepted this thesis) now sees in the allusions of some of the sources proof of the sincerity of Kawād (whom, as he says, the contemporary sources do not credit with a "Mazdakian character"). He thinks, was above all primarily by religious motives and was attracted by the religious element in the new teaching, while really to take advantage of any political advantages that the sect might be likely to gain for him. In any case it is evident that in his wars he was not restrained by any humanitarian prejudices, although one Arabic source with a hostile bias says that the king as a cantīf feared to spill blood. Christensen likes to compare his attitude with regard to Mazdak with that of Constantine with regard to Christian teaching. In any case it is difficult to give a verdict on Kawād, in view of the varying prejudices of the sources and the tradition of the time of Khusraw which in general tends to elevate the figure of Anūsharwān at the expense of the others. There were numerous conversions among the upper classes; proselytising among the common people was facilitated by the wretched conditions in which they lived and of course also by the nature of the teaching which in every age has seduced the masses. Mazdakism thus became a remarkable force and permeated all the machinery of government. The practical effect of the king's favour was seen in the measures alluded to in contemporary sources; but we do not know to what degree they realised the Mazdak ide. either as regards community of women (perhaps this was only an extension of regulations already existing in the Sasanian code?) or community of property (only taxes on the rich?). But what is certain is that Khusraw at the beginning of his reign had to take important steps to remedy the disastrous results to property and the organisation of the family; such abuses were however not the direct result of the legal measure adopted by Kawād but rather of the violent application of communism which was a later development.

The philo-Mazdak policy of the king and the growing power of the sect provoked a revolution in the palace and Kawād was dethroned and imprisoned. Djamān, his brother, was put on the throne in his stead. Kawād succeeded in escaping and took refuge with the Hephtalites and regained his kingdom with their assistance (498 or 499). In the meanwhile, in spite of the dethronement of the king, the sect had grown more and more and its power became disquieting. The people, urged on by their leaders and more alive to the practical advantages than to the religious elements of the reform, naturally abandoned themselves to all sorts of excesses and disorder broke out everywhere. The estates of the nobles were plundered, the women carried off, which, with a horror of communist principles, explains the violent language used by contemporary and Arabic and Persian sources against the sect. All this must have frightened the king on his return in 500 and became a convert of the new faith (and this is a question which also puzzled the ancients), and how he became connected with Mazdak.

The necessity of crushing the power of the nobility and higher clergy he had been attacking may have caused the king to use for his own ends a sect which aimed at destroying the privileges of these classes. Noldeke (who thinks Kawād was a man of strong will) credits him with this plan. Christensen (who had accepted this thesis) now sees in the allusions of some of the sources proof of the sincerity of Kawād (whom, as he says, the contemporary sources do not credit with a "Mazdakian character"). He thinks, was above all primarily by religious motives and was attracted by the religious element in the new teaching, while really to take advantage of any political advantages that the sect might be likely to gain for him. In any case it is evident that in his wars he was not restrained by any humanitarian prejudices, although one Arabic source with a hostile bias says that the king as a cantīf feared to spill blood. Christensen likes to compare his attitude with regard to Mazdak with that of Constantine with regard to Christian teaching. In any case it is difficult to give a verdict on Kawād, in view of the varying prejudices of the sources and the tradition of the time of Khusraw which in general tends to elevate the figure of Anūsharwān at the expense of the others. There were numerous conversions among the upper classes; proselytising among the common people was facilitated by the wretched conditions in which they lived and of course also by the nature of the teaching which in every age has seduced the masses. Mazdakism thus became a remarkable force and permeated all the machinery of government. The practical effect of the king's favour was seen in the measures alluded to in contemporary sources; but we do not know to what degree they realised the Mazdak ide. either as regards community of women (perhaps this was only an extension of regulations already existing in the Sasanian code?) or community of property (only taxes on the rich?). But what is certain is that Khusraw at the beginning of his reign had to take important steps to remedy the disastrous results to property and the organisation of the family; such abuses were however not the direct result of the legal measure adopted by Kawād but rather of the violent application of communism which was a later development.

The philo-Mazdak policy of the king and the growing power of the sect provoked a revolution in the palace and Kawād was dethroned and imprisoned. Djamān, his brother, was put on the throne in his stead. Kawād succeeded in escaping and took refuge with the Hephtalites and regained his kingdom with their assistance (498 or 499). In the meanwhile, in spite of the dethronement of the king, the sect had grown more and more and its power became disquieting. orientalists Mazdaki elements can be discovered in Bətinism and Isma'iliism. But the whole question of the relations between these sects (of which very often insufficient is known) and the old Persian religious forms must be examined thoroughly with a knowledge of the progress made in the study of Irānian gnoses and syncretisms. It cannot be dealt with here; cf. the articles ISMA'ILIYA, KHURRAMIYA, MUBAYYIDA, MUHAMMARA, MUKANNA, RAVANDIYA, SINBAD etc.

**MAZHAIR, MIRZA DAEVAMIN AN A'UD PACHSAND AND CIVIL SERVICE SAINT**

His descent is traced back to the period 1699/1701. His biography, together with that of his father, was written by the name which the emperor had selected for him. He was received into the Naqshbandi order by Saiyid Mir Muhammad Badlaun and into the Kādiri order by Muhammad 'Abid Sumānt. He died in Dihili on the 10th of Muharram 1195 (January 6, 1780) from a pistol shot fired at him by some Shīa fanatic. His memoirs and some letters, called Ma'mār Khāshvar or Lu'ā'if Khāna, are edited by Muhammad Beg b. Rahim Beg, Dihili H. 1305, A.D. 1887. His biography, together with some of his disciples, has been written by Muhammad Na'im Allāh Bahādūd in Bishārat Mu'hammadiyya.

**MAZIN, THE NAME OF SEVERAL ARAB TRIBES WHO ARE REPRESENTED IN ALL THE GREAT ETHNIC GROUPINGS OF THE PENINSULA; THIS FINDS TYPICAL EXPRESSION IN THE ANCESTOR RECORDS IN AĞHĀNI, VIII. 141 (= YAKUT, IRJAD, ii. 382—383), ACCORDING TO WHICH THE CALIPH-AL-WALĪKH ASKED THE GRAMMARIAN ABDULLAH QUTHMUN AL-MAZIN, WHO HAD COME TO HIS ACCOUNT, TO WHICH MAZIN BELONGED: — IF TO THE MAZIN OF THE TALMUD, TO THOSE OF THE KAYS, TO THOSE OF THE BA'RA' OR TO THOSE OF THE YEMEN.

The first are the MAZIN B. MA'LĪK B. 'AMR B. TAMIM (Wustenfeld, Genes. Tabellen, 12) and the second, the MAZIN B. MAṢŪR (D. 10) or the MAZIN B. FAŻARA (H. 13); the third, the MAZIN B. SHABĪN B. DUGH (C. 19); the last, the MAZIN B. AL-NĀDIJĀR, A CLAN OF THE KHAZAJI ANSU (19, 24). But alongside of these, many other tribes and clans bore this name. The Djayharat al-Anāṣ of Ibn al-Kalbi gives no less than seventy, of whom the best known are the: MAZIN B. SA'D B. DĀ'BĀBA (Ibn Kūtaba, K. MAṢĀ'IR, ed. Wustenfeld, p. 56; more accurately according to the Dijamharra, MS. Br. Mus., Add. 23, 297, fol. 14r: MAZIN B. 'ĀBD MA'MĀT B. BAKR B. SA'D B. DĀ'BĀBA; not given in the Tabellen); MAZIN B. SH'Ā'RĀ B. MUṢĀ'IRiya B. BAKR B. AL-MAZIN (Ibn Kūtaba, p. 42; Tabellen, H. 14); MAZIN B. RA'Ī KHĀṢ'A FAN (H. 10); MAZIN B. RA'ĪKH B. ZUHĀR B. MAZIN MAṢĀ'I (7, 18); MAZIN B. AL-ĀZĪ (11, 11). The large number of tribes named MAZIN and their distribution over the whole of Araba makes the hypothesis that we have here a single tribe that had been broken up into small sections impossible and we are led to suppose that the name MAZIN, is a descriptive rather than a proper name; since the verb ma'sana means "to go away"; one might suppose that MAZIN originally meant "the emigrants" and was used in a general way of any ethnic group which became separated from its own tribe and was incorporated in a strange tribe. This etymology, like almost all those of the names of the Arab tribes, is most singular.

The sources give a certain number of geographical and historical references to different tribes called MAZIN; but they are generally very scanty, none of these tribes, having attained sufficient importance to make it independent of the larger body to which it was attached. We have a few details about the MAZIN B. AL-NĀDIJĀR, a fairly important group of Madinese KHAZAJI (on the part played by them at the beginning of Islam see CAETANI, Annali dell' Islam, Index to Vols. i.—ii.), as well as about the MAZIN B. FAŻARA WHO TOOK PART AS MEMBERS OF THE TRIBE OF THE DHUDYĀN, IN THE WAR OF DĀSĪKH AND AL-QA'BĪ (cf. DUDVĪN, and AĞHĀNI, xvi. 27). Ibn MawāṣIYA, himself a DHUDYĀN, directed a violent satire against them at the end of the first century A.H. (AĞHĀNI, ii. 90, 102). As for the B. MAṢĀ'IR, it is said that Abu B. 'AMR B. DUGH, to whom the grammarian ABDULLAH QUTHMUN belonged, we know from the anecdote above quoted that in their dialect, m (initial?) was pronounced like b (ba'smuka for ba'muqa, what is thy name?), a peculiarity which does not seem to be recorded of the dialect of other RA'BĪ. Lastly the MAZIN B. AL-ĀZĪ, whom tradition makes migrate to the north, changed their name to GHAṢĀN (q.v.) under which they became celebrated.

It is only of the MAZIN B. MA'LĪK B. 'AMR B. TAMIM that we have fairly full information. Legend, which has developed with unusual detail around the sons of Tamim (q.v.), gives MAZIN a part in the story of his uncle 'ABD SHAMS B. SA'D B. ZAID MA'MĀT B. TAMIM's fight against al-'ANBAR B. 'AMR B. TAMIM (cf. MAFJIDJAL B. SALAMA, al-FĀHIR, ed. Storey, p. 235 and the references given in the note). This tribe of MAZIN never left the great group of the 'AMR B. TAMIM to which it belonged and dwelled with them in the lands in the extreme N.W. of NADĪJ; their headquarters were around the well of SAFĀR near DHUD KĀR (NABA'ID, ed. Bevan, p. 48, note to line 17; YAKUT, iii. 95; BAKR, p. 724, l. 1: 787—788); their principal subdivisions were the BANĀṬ URRAKH, KHAZAJI, Kisson, Anmar, Zabīna, UTHAITHA and RA'LĀN. In the DJIHĀLIYA, the MAZIN followed their parent tribe and we find them sharing in the
wars of the latter; in rotation with the other Tamimi tribes they held the office of ḥākim at the fair of Ḫūṣqah (Khâtib, p. 438). At the coming of Islam, their chief was Muh'ammad b. Shāhāb, also known as a poet (cf. especially al-Dhābiq, Bayān, ii. 171; al-Kalī, Amārli, iii. 50; Ibn Ḥadjar, Ṭabāh, Cairo 1325, vi. 156). Without being particularly zealous partisans of the new religion, they did not take part in the riḍḍa with the other Tamim tribes (11 A.H.) and they even drove away the messengers sent them by the prophetess Sadīqah [q. v.] and made one of them prisoner, the Ṭaghlibi al-Ḥudhāfī b. Imrān; the latter waited for his revenge till the troubled period that followed the murder of the Caliph ʿAbd Allāh (35—656), of which he took advantage to ravage the district of ʿAlāfī; but the Māzin met him and slew him and threw him into the well (Ṭabarî, i. 1111, 1915; cf. Akhānī, xix. 145—146, transl. in Caetani, Annali dell' Islam, x. 552—555; in the last passage the expedition against the ʿAlāfī appears to be that of the second Māzin). At a later date, the Māzin settled in large numbers, like the rest of the Tamim, in Khuṣqah and took part in the conquest of Central Asia; among the Māzīnins who distinguished themselves there were Shāhāb b. Muh'ammad, son of the chief already mentioned (Ṭabarî, i. 2569, 2707); Ḥilāl b. al-ʿAbīwāz, who in 102 (720) slew the members of the family of Ya'qūb b. al-Muḥallab after the defeat of the latter (Ṭabarî, i. 1112—1113); ʿUmar b. Simān, who killed the Persian chief Rutbil (Ibn al-Kalībī, ʿAbu al-Khayl, p. 30, note to lines 3—4). We also find many of the Banū Māzin in the time of the Fāṭimid army in the time of the rising against the ʿUmayyads. But a no less number went to swell the ranks of the Khuṣqahīs; the celebrated chief of the ʿĀzārīns, Ka'bār b. al-Fadlābī [g. z.], belonged to the Māzin clan of Ka'bāy a b. Ḥurqis. Very few of the remarkable number of poets produced by the Tamim belonged to the Māzin. We may note however Ḥilāl b. As'ār of the Omayyad period (ʿAkhānī, ii. 186); Mālik b. al-Rabiʿ, poet and brigand, contemporary of al-Ḥadījād (ʿAkhānī, xix. 162—169; Ibn Kūtabī, al-Sīla wa ʿl-Sayrār, ed. de Goeje, p. 205—207 etc.); Zuhair b. ʿUrwa al-Sabī (ʿAkhānī, xix. 156: the few verses that we have by him, often quoted, are also attributed to his father, ʿUrwa b. Ḥajjāh, and even to ʿAbd al-Rahmān b. Ḥassān b. Ṭāḥibī: cf. Muṣafīd, ed. Lyall, p. 249, note y). Lastly it may be mentioned that the Māzin have given to ʿArabic philology two of its most illustrious masters: Abū Amr b. ʿAbī Allāh [g. z., d. 154] and Naṣr b. Sh̄uma whose genealogies are given in Wustenfeld, Tabellen (1). Bibliography: Wustenfeld, Register z. d. gehei Tabellen, p. 291; Ibn Kūtabī, K. al-ʿUmarī, ed. Wustenfeld, p. 36—42; Ibn Durāid, K. al-ʿUmarī, ed. Wustenfeld, p. 124—126, 171, 211, 258; Ibn al-Kalībī, Dinārī al-ʿAntīb, ms. Brit. Mus., Add. 23, 297, fol. 90 v—92 t, and passim. (G. LEVI DELLA VIDA)

MAZYDĪS, a Muḥammadān dānast in al-Ḥilāl. The Banū Māzin, closely bound to the tribe of Assad and living west of the Tigris, from Kāfān to Hit. In the southeast, on the Kūzīstān frontier, the Banū Dubais had settled. When Abu ʿl-Ḥanāfī Muḥammad b. Māzin, who was related to the Banū Dubais, slew one of their chiefs with whom he had quarrelled, a war broke out between the two tribes (401 = 1010—1011). Abu ʿl-Ḥanāfī fell to his brother Abū ʿl-Ḥasan ʿAllāh; the latter went out against the Banū Dubais with an army, but was defeated and Abu ʿl-Ḥanāfī fell in the battle. In 402 (1012—1013), ʿAllāh was recognized as emir by the Ḥāfiẓ Sūlfān al-Dawla. In Muḥarram 405 (July 1014), he undertook a campaign against the Banū Dubais, to revenge himself for the defeat he had suffered and slew Ḥāfīz Sūlfān and Nābāḥ, the sons of Duba, but in ʿAlamādā of the same year (Oct.—Nov. 1014) he was routed by their brother Muḥāfiz. After ʿAlī's death in Dhu ʿl-Ka'ba 405 (March—April 1018), his son Dubais succeeded him. The latter's brother al-Muṣṭafa, with the help of Turkish mercenaries in Baḡdād, endeavoured to seize the power for himself; but order was soon restored and al-Muṣṭafa went to al-Mawṣil and to the ʿUqulīs. In a few years Dubaize became involved in war with ʿAbū aṣ-Ṣūlān al-Muṣṭafa [q. v.] and he had also troubles within his own dominions. In 421 (1030) the Banū Kālidār and Djalal al-Dawla, the former was supported by Dubais and the latter by al-Muṣṭafa. After the defeat of Abū Kālidār in 421 (1030), al-Muṣṭafa with the help of the Banū Ḥaḍījā and the troops of Djalāl al-Dawla invaded his brother's territory. Dubais had to take to flight and the land was laid waste. Peace however was soon arranged. Dubais was allowed to retain his lands but had to pay Djalāl al-Dawla a considerable sum. The third brother ʿAbd al-Ṣūlān allied himself with Baḡdād, the military governor of Baḡdād, and in 426 (1032—1033) they advanced against Dubais. The latter sent an army to meet them; but his troops were routed and he himself had to take to flight. After receiving reinforcements he advanced against Djalāl; they met at Djarjarīyā and after a fierce battle, Dubais had to cede a part of his possessions while al-Baḡdādī, who arrived too late to take part in the battle, returned to Baḡdād. In Ḫurāb 446 (Oct.—Nov. 1054) the Banū Ḥaḍījā invaded the country but were soon driven out with the help of al-Baḡdādī. Two or three years later war broke out between al-Baḡdādī who was joined by Dubais, and the Sardjuk Sūlārī Toghrī Beg and his follower ʿAbū aṣ-Ṣūlān b. Badrān [q. v.]. Dubais died in Shawwāl 474 (March—April 1082) at the age of 80. His son ʿAbū Manṣūr succeeded him but died in Rabiʿ I, 479 (June—July 1086). In the reign of his son and successor ʿAbdāl [q. v.] the power of the Māzinīs spread over almost the whole of the ʿIrāq. At first he was a stout supporter of Baktiyarī [q. v.]; in 494 (1100—1101) he moreover turned to his brother. The towns of Hit, Wāṣit, Baḡra and Tarīt fell successively into his hands but, as the commander, ʿAbdāl in Baḡra did not prove fit for his task, Muḥāfiz seized the suzerainty of the town and installed a new governor. In ʿAbdāl's reign the capital al-Ḥilālī was extended and fortified, and given the name of al-Hilla (495 = 1101—1102). His steadily increasing power however aroused Muḥāfiz's misgivings and in spite of long negotiations, a rupture finally occurred between them. At the end of Ḫurāb 501 (Febr.—March 1108) Muḥāfiz himself set out from Baḡdād against ʿAbdāl. A section of the Arabs allied with him fled and ʿAbdāl fell in the battle. His son Dubais was taken prisoner but the latter's two brothers escaped and were only able to return home after Muḥāfiz's death
MAZYAR — MAZYAR

(511 = 1118). In 529 (1135) he was treacherously murdered [cf. the article DUBAIS] and succeeded by his son Şadaqa. In the war between Sultan Mas'ud and his nephew Dâvûd, Şadaqa declared for the former. After Mas'ûd's victory, the troops scattered to seek booty and several emirs including Şadaqa were surprised and captured by the enemy and at once put to death (532 = 1137–1138). Şadaqa's brother Muhammad was thereupon recognised as lord of al-Hilla. In 540 (1145–1146) however, the third brother 'Ali went to al-Hilla, because he was afraid of the Sultan and drove out Muhammad. After he had taken the town, he drove back the Sultan's troops and it was not till 542 (1147–1148) that Salâkerd, one of Mas'ûd's generals, was able to expel 'Ali but in the same year he was defeated by the latter and had to abandon the town. In 544 (1149–1150) 'Ali endeavoured to induce the caliph al-Mu'tâfi to abandon Mas'ûd but, as the caliph refused and summoned the Sultan to his help, 'Ali had to submit and the rebels who had joined him dispersed. 'Ali died in the following year and al-Hilla was given as a fief to Salâkerd by Mas'ûd. On Mas'ûd's death in 547 (1152), the town fell into the hands of Mas'ûd Bilâl, the commander of Baghdâd; the latter however was driven out by the caliph's troops who occupied al-Hilla. When in 551 (1157) Sultan Muhammad took the field against al-Mu'taft (q.v.), they had to withdraw and Muhammad and Mas'ûd gave a garrison in the town. The Mazyaids submitted to his deputy but in 558 (1162–1163) the caliph al-Mustانdjd sent an army against them which put an end to their power. 10,000 men were slain and the remainder outlawed so that they were scattered in all directions.

(K. V. Zetterstêen)

MAZYAR, [Balâdûrî gives the form Mâyazîyâr (= Mâh-ýz-yâr), the last of the Kârinid rulers of Tabaristân, leader of the rising against the caliph al-Mu'tasim.

Origins. The Kârin-wand dynasty claimed descent from Kârin b. Sâkhra, whom Khusrâw Anûshirvân had established in Tabaristân and who was descended from the legendary smith Kâwâ, who saved Fâdîldûn. The hereditary fief of the dynasty was the "mountain of Kârin" [or of Windâd-Hurmuz], Tabari, iii. 1295. The capital of this region was probably Lapûrî (cf. Lâsûr on the eastern source of the river Bâbul which later runs through Bâwûrîsh). The Kârin-wand were subordinate to the Bâwandîd îspahbâds (capital Firîm). The genealogy of the Kârnîds given by Zâhir al-Dîn, p. 167 and 321 is fantastic. The first Kârinid known is Windâd-Hurmuz (138–190 = 755–805?) who raised a coalition of local chiefs against the Arabs (the Bâwandîd Sharwîn, [the] Mâshûgânî Walîsh of Mâyûndûrûd, the Pâdûspân Shahrîyâr b. Pâdûspân) and defeated the generals sent by the caliph al-Mahdi (= Sâlim Fârghânî, then Fârghânî; Ibn Isfandiyâr, p. 128; Zâhir al-Dîn, p. 155–159). Windâd-Hurmuz had to submit to Hâdi, the son of the Caliph, and accompany him to Baghdâd. Soon he returned to his native mountains and resumed an independent attitude (ibid., p. 160).

According to Ibn al-Fakhî, p. 304, Windâd Hurmuz came to the court of Hârûn al-Rashîd, who appointed him îspahbâd of Khurâsân. He died in the reign of al-Ma'mûn. His son and successor was Kârin (a contemporary of the Bâwandîd Shahrîyâr). According to Ibn Isfandiyâr, p. 145, he accompanied al-Ma'mûn on his campaign against the Byzantines but this does not agree with the dates given for his successor.

According to Zâhir al-Dîn, p. 321, Mâyâyr b. Kârin ruled for 30 years (194–224 = 809–839) but on p. 167 the same writer says that his (tyrannical) government lasted 7 years (217–224). Tabari, iii. 1015, under the year 201, speaks of the conquests in Tabaristân of 'Abd Allâh b. Khuradâbîd (sic!) as a result of which the Bâwandîd Shahrîyâr b. Sharwîn had to leave the mountains and Mâyâyr b. Kârin was sent to al-Ma'mûn. According to late sources,
Shahrüyar b. Sharwin had deprived Māzyār of his possessions. Māzyār sought refuge with his cousin Windād Umud b. Windād-aspān, who handed him over to Shahrüyar. Māzyār however managed to escape, sought refuge with al-Ma‘mūn and became a Muslim, assuming the name Muḥammad. After the death of Shahrüyar (210 = 825; Tabarī, iii. 1093), Māzyār, returning to Tabaristān, slew Shahrūr b. Shahrūyr and seized the mountain (Tabarī, vi. 1093). (Ibn al-Fakhrī’s story, p. 305—306, about the “assassin of Sharwin b. Shahrūyr,” whom Māzyār assassinated treacherously seems to refer to Shahrūyr, the ally of the suqūm of his victims, Māzyār had built a mosque in Fīrūz.) Māzyār assisted the Arab governor Mūsā b. Ḥāfṣ b. ʿUmar b. al-ʿAṣār to subjugate the mountain of Sharwin and al-Ma‘mūn appointed him governor of Tabaristān, Kūyān and Dunbāwān with the rank of ʿiṣbahād (Balāḏūri, p. 229; Ibn al-Fakhrī, p. 309). At this time (Yaḥyā, Historiae, ii. 582), Māzyār boasted the title of Qāṭil ʿiṣbahād, ʿiṣbahād Kūyān-ṭūbān (read Pātūbān-ṭūbān), Muḥammad b. Kūrān, muwālā (sic) amīr al-muʾāminin (i.e. “ally” instead of maqālī “client”). When Mūsā b. Ḥāfṣ died, Māzyār paid no heed to his son Muhammad b. Mūsā. Complaints against Māzyār were taken to Bāghādād by the Bāwandīds and by devout Muslims, but as al-Ma‘mūn was setting out against the Byzantines (expedition of 210—218) Māzyār felt himself free from any control. In his turn he charged Muhammad b. Mūsā with intriguing with the ‘Alids and on this imagiary pretext besieged Amūl. The town capitulated at the end of 8 months. Māzyār executed his enemies and imprisoned all the notables, including Muhammad b. Mūsā, first at Rūd-bast and then in his principal stronghold of Hurmuzābād. To judge from Tabarī, iii. 1289—1292, the place must have been in the valley of the Ṭālār, above ʿUram (Arum) at a distance of 8 farsākhs from Amūl and from Sāri [cf. the article MĀZANDĀRĀN].

In the sixth year of the reign of al-Mu‘tasim (218—227), Māzyār openly rebelled (Balāḏūri, p. 239; Kafarār ūw-zardārā). The Šāhīd Aḥmad Allāh, governor of Khūrāsān, had denounced to the Caliph the suspicions of the people and the apostasy of Māzyār. When al-Mu‘tasim’s ambassador arrived, Māzyār would not listen to him. Ibn Isfandiyār, p. 152, even accuses him of having conferred honours “on Bābak, Māzdak and other Maqāns who had ordered the destruction of the mosques and the obliteration of all traces of ‘Īslām”.

Māzyār’s schemes. It is difficult to reconstruct Māzyār’s programme from the sources, which are hostile to him, but the narratives of contemporaneous witnesses which Tabarī, iii. 1265—1303, gives under the year 224 contain a number of curious and important details.

The extension of Māzyār’s power (after the assassination of the Bāwandī Shajar b. Ḫosraw) had brought him into conflict with the Šāhīd to whom he refused to pay khārādy. It may be noted that Māzyār’s very title “iṣbahād of Khūrāsān” (this variant is given in Yaḥyā, B. G. A., ii. 276) must have been displeasing to the Šāhīd. On the other hand the celebrated Aḥṣīn, who after his victory over Bābak was at the height of his glory, coveted Khūrāsān. He therefore secretly encouraged Māzyār’s resistance to his rivals and according to Tabarī, iii. 1269, played upon his sentiments as a man of noble Iranian blood (ṣaṣṭ midārāhū bī ‘l-dāḥarānī).

From the national point of view, Māzyār could recall the precedent of his grandfather Windād-Hurmuz to whom late sources attribute the organisation of the massacre of the Arab garrisons. Māzyār, who came out of “the mountain” where he had only an almost unknown town (litsakhī, p. 206: al-Asāḥmār) must have looked askance at the urban elements of the great towns of the “plain” among whom Arabs and their clients (ʿābūn) predominated. The landowning class was certainly hostile to him, as in order to weaken and even extirpate them, he had relied on the support of the peasants. Māzyār’s actions were certainly very violent, for ten centuries later, Zahir al-Dīn, p. 167, quotes the proverb: “so and so has done an injustice such as not even Māzyār could have done”.

Coming out in open rebellion (probably before the year 224 under which Balāḏūri and Tabarī relate the denouement) Māzyār had homage paid to himself, took hostages and levied ḥarād at once. The doings of his governor Surkhastān in Sāri are characteristic. He transferred all the inhabitants of Sāri to Amūl, where he shut them up in a fort; as to the people of Amūl, he took 20,000 of them away into the mountains of Hurmuzābād (cf. above). The walls of Sāri, Amūl and Šāmīs were razed to the ground “to the sound of hoes and drums”.

Māzyār had given orders to the peasants to attack and plunder their masters (Tabarī, ii. 1269). The next passage (ii. 1270) seems to indicate that a cadastral survey was ordered (amara an yamsahu ʿl-balad) and the lands were let out, the rental being 30% (of the produce). As to Surkhastān, he collected 260 nobles (abnaʿ ʿl-farandū), the bravest he could find, and on a pretext “that the ʿabūn” were favourable to the Arabs and to the ‘Abbāsids, handed them over as dangerous individuals to the peasants, who slew them at his suggestion. He even tried to provoke a massacre of all the imprisoned landowners, saying to the peasants “I have already handed over to you the houses of the landowners and their wives”; but this time the peasants refrained from following his advice.

The later sources retain the usual accusation of apostasy against Māzyār (“he once more assumed the girdle of Zoroastrianism”, says Ibn Isfandiyār, p. 150 quoting the kādī of Amūl). Balāḏūri, p. 229 and Ibn al-Fakhrī, p. 309 also say that Māzyār “renounced the faith and committed treason”, but this point is more obscure in Tabarī, where it only occurs in the list of charges made against Afṣīn, iii. 1311 (transl. in Browne, Lit. Hist of Persia, i. 334). The tone of the letter which Māzyār had addressed to his representatives, ibid., iii 1351, is respectful to the Caliph, in form at least. But there is no smoke without fire, if we may believe the authors who mention the existence in Tabaristān of a Māzyārī sect connected with the ‘Abbāsids [cf. Yaḥyā, B. G. A., ii. 276] or Muḥammārī [q. v.] (i.e. followers of Bābak). Cf. al-Baghdādī (d. in 429), Fārāk bain al-fārāk, p. 251—252; Tāhir al-Isfārā’īn (d. in 451), Tāhirī jīmān (quoted in Flugel, Bābak, Z. D. M. G., 1869, p. 533) and ʿAmānī, G. M. S., col. 501a.

Māzyār’s end. Aḥmad Allāh b. Tāhir sent against Māzyār his uncle Ḥasan b. Ḥusayn to operate from the direction of Djiurdjīq as well as
Hajiyan b. Djalala, who went with 4,000 horses via Khamis towards Djalal al-Sharwān (Sawadkhūh); cf. the article Māzdārān). At the same time the caliph al-Mu'tāsām sent considerable forces under the command of Muḥammad b. ʿIbrāhim who entered Rūyān (western Tābaristān) by Shalmāb and Rūdghār (Tābari, iii. 1264). Manṣūr b. Ḥasan, "lord of Dībānāwānd," attacked from Raiy while Abu 'l-Sādāj advanced via Lāriz and Dībānāwānd.

The Arabs very skilfully exploited the rivalries and enmities in the entourage of Māzājr First of all his nephew ʿAfarīn b. Shāhryār (his representative in the mountain of Sharwān = Sawadkhūh) went over to Hatyan, who marched on Sārī and began to negotiate with Māzājr’s brother Kūhylir. In the meanwhile Surkhastān’s army which occupied the Tāmīḫa front dispersed and allowed Ḥasan b. Ḥasān to advance. Kūhylir, who had promised Māzājr’s place, submitted to Ḥasan Māzājr seems to have lost his courage when he found himself surrounded by the Arabs and betrayed by his follower. He trusted Kūhylir, who had promised him the āmān, and came with him to Ḥasan (Tābari, iii. 1288–1291, dramatic story by an eye-witness) but Ḥasan did not even acknowledge his greeting. Māzājr was handed over to Muḥammad b. ʿIbrāhim and sent to Sāmarrā. Here he was confronted with Afsān and seems to have denounced the latter. The caliph ordered him to be given 400 lashes, under which he died and his body was exposed beside that of Šabak in 224 = 839.

Kūhylir’s treachery served him little. He was slain as a traitor by his cousin Shāhryār b. Māsin-muhinn who commanded the Dailamis in the service of Māzājr.

Surkhastān was betrayed by the soldiers after the defeat at Tāmīḫa and the other of Māzājr’s generals, al-Durra, who was fighting against Muḥammad b. ʿIbrāhim on the Rūyān front, died while attempting to reach Dīlām (Tābari, iii. 1300).

MECCA.

On the eve of the Hīdhrā. It is with the birth of Muḥammad — between 570–580 A.D. — that Mecca suddenly emerges from the shadows of the past and thrusts itself upon the attention of the historian. The geographer Ptolemy seems to know it under the name Macoraba; but it must have been in existence long before his time. Mecca was probably one of the stations on the "incense route", the road by which the produce of the East especially valuable perfumes, came to the Mediterranean world. It owes its importance to its position at the.

Intersection of great commercial routes. The town that had grown up around the well of Zamzam and the sanctuary of the Ka'ba was advantageously placed at the extreme ends of the Asia of the whites and the Africa of the blacks, near a breach in the chain of the Sarat, close to a junction of roads leading from Babylonia and Syria to the plateaus of the Yemen, to the shores of the Indian Ocean and the Red Sea. By the latter it was in communication with the mysterious African continent. What advantages were offered by this situation at the boundary between civilisation and barbarism, at the point of contact of two societies, brought together by necessities more pressing than political ambitions or the quarrels of race and religion! This was the part played by the Palmyrans, situated between the Romans and the Parthians. It demanded an adaptability and diplomatic skill beyond the ordinary. The two societies were frequently at war; it required wits to deal tactfully with them. But if the position had its risks, it had the advantage of being able to fix the price for its services to the belligerents. In the delicate role of intermediary and broker between two world, the strength of will of the Ishmaelite and the tenacity that lay beneath his apparent compliance assured his success from the start. Civilisation and barbarism might conclude peace for a time or be at war; he was able to trade on their agreement or exploit their dissensions with equal satisfaction to himself. Ambiguous and ambivalent, the Meccan was able to have a foot in both camps without it being possible to discern where his sympathies really lay.

At an early date we see the Meccans opening negotiations with the states adjoining Arabia. They obtained from them safe conducts and capitulations, permitting the free passage of their caravans. This is what their chronicles call the “guarantee of Caesars and of Chosroes”. They also concluded agreements with the Negus of Abyssinia, with the principal shahs of Nadjd, the kātir of the Yemen, with the phylarchs of Ghassān and of Hira. In the negotiations with the Greeks and Persians the principal of the “open door” was not admitted. Commercial transactions were carried through at points on the frontier or in towns specially designated for the purpose. In Palestine these were the ports of Aila and Ghazza and perhaps also Jerusalem. In Syria, Bosrat was their principal outlet, their great market.

Sūrā c.vi. 2 mentions as a permanent institution "the double caravan of winter and summer". The nasābā, genealogists, record the names of the Kurash chiefs who had succeeded in obtaining by negotiation permits to trade. The countries open to commerce in this way were called wādīh, direction, maliqar, region of trade. There were innumerable restrictions, limiting the extension of the privilege. Eastern governments did not permit free trade. Distrustful of merchants even when their own subjects, Byzantium showed herself still more...
suspicious of foreigners, especially Bedouins, a slippery race which filled her with an unconquerable distrust. The latter had therefore to make heavy sacrifices, to pay onerous taxes, to pay continual customs-dues and tolls or to hand over hostages before negotiations could be begun. Mecca was not inspired by principles any more broadminded: she took care to recompense herself from foreign traders and to levy various charges upon them, tithes, charges for permits to stay in the country, to travel about and to trade. Tithes had to be paid before entering Mecca. There was also, as at Palmyra, a "departure" tax or tax on exportation. In short, foreign merchants were entangled in a very intricate fiscal system, whether they settled in Mecca or only passed through it, especially those who did not obtain the ḍiyār or guarantee of a local clan or notability.

The population. About the time of the Hijr, the people of Mecca claimed descent from a common ancestor. They called him Kuraish or Fāhr, sometimes also al-Naḍr named Kuraish. The origins of the Kuraish were humble and little is known of them. They formed one of the less wealthy branches of those who went back to the main stock of the Quraysh. At first they led a miserable existence in the wild mountains around the sacred territory of Mecca. A condottiere from the northern Hijr, Kuṣayy, is said to have installed them by force of arms in Mecca, which he took from the control of the tribe of Quraysh. Some ten main clans can be distinguished among them: Hāšim, Umayya, Nantif, Zuhra, Asad, Taim, Makhūm, 'Adi, Djumah and Sāhīm. These occupied mainly the centre of the town, the bottom of the valley, al-Baḥṣa, where the water of the well of Zamzam accumulated, the hollow where the Ka'ba stood. Their living in this neighbourhood earned them the epithet of al-Ṣaḥiḥ, al-Ṣayaḥ or Kuraish al-Ṣayḥ. This central quarter of the town was regarded as that of the aristocracy and of the oldest Kuraish families. Among these ten groups, some owe to Islam a renown hitherto denied them. Such were the Taim and the 'Adi, rendered illustrious by the caliphs 'Abdāl Bakr and 'Umar. Other clans more connected with the eponymous ancestor were thrust towards the outskirts of Mecca, on the lower slopes or in the gorges (ṣabiyah) of the hills which dominate the town. They were called the "Kuraish of the outskirts" (Kuraish al-zawāhir). Held in less consideration than their fellow-tribemen of the Baḥṣa, these suburbs had the advantage of being distinguished from them by their bravery. They supplied the Kuraish community with its best soldiers and never failed to cast this up to the Meccans "of the centre".

Government and Administration. It is not easy to discover definite indications of this. There must however have been a rudimentary system of archives in which to preserve treaties of alliance and commerce, and later the equivalent of an office to take charge of the collection of taxes on foreign traders. Nowhere do we find any explicit allusion to the working of such administrative organisations. A tradition records the existence of purely honorary offices with no jurisdiction. But it does not agree either upon the number (ten or six) nor upon the functions of these offices. I imagine it was invented to satisfy the vanity of the great families. The only allusion to it is in the verses of a Meccan poet, Ḥāsān b. Thābit.

The office of "pavilion and reins" has nothing to do — as has been supposed — with the art of war. This dignity, which was an ancient one and no longer understood, was a memory of the ritual processions held in pagan Arabia. The ḫubba was simply the pavilion or portable tabernacle, containing the fetish of the tribe and solemnly carried on the back of a camel. The chiefs and notables took turns at holding the reins of the animal bearing this precious burden. It is taking nothing from the glory of Khuṣayb b. al-Walid to say that he had not a monopoly of this privilege. Behind the legend of the Kuraish dignities, we perceive the intention of glorifying the cradle of the Prophet. In giving it administrative institutions, an attempt was made to conceal the modest beginnings of the Hāšim and no less those of Abū Bakr and 'Umar. The onerous office of ṣīhāb, which had to pay compensation for murder and injury, was far beyond the financial resources of the modest citizen called Abū Bakr. The entrusting to 'Umar of the safāra or diplomatic missions cannot be reconciled with his extreme youth and plebeian origin.

I have elsewhere, for lack of a better term, called Mecca "a merchant republic". If Abū Sufyān is called "Shaikh and chief of the Kuraish", several of his contemporaries are given equally high sounding titles. There is not the slightest reason to think that he was a kind of Kuraish doge. The manner in which the events of the first eight years of the Hijr are recorded produces the fallacious impression that he held the power in Mecca in his hands. In reality he was only the ablest and most intelligent of his peers, the chiefs of the Kuraish clans. As al-Fāṣi pertinently observes, all were equal: "no one exercised authority unless delegated or kindly permitted to do so by them". Did their chiefs constitute a regular official body? Yes, says tradition. Mecca is even said to have had a kind of Senate or Grand Council, the dār al-nadwa. It met only in extraordinary circumstances. Usually however, we find that it is in the madīlah, family groups or clubs, the Nādi Karam opening on the square of the Ka'ba — the forum and bourse of the town — that affairs of general interest were dealt with.

The Kur'ān cannot conceive of authority without a council of notables, without the maḥb. This institution is so frequently mentioned in the Kur'ān that the Prophet must have seen it working before his eyes. We think then that Mecca was ruled by the oligarchy of the maḥb, the equivalent in the town of the madīlah of the nomad tribe. This was an assembly of the chiefs of the wealthiest and most influential families. This is why Umayyads and Makhzsūmids are most usually mentioned as composing the maḥb. Neither election nor birth could necessarily open the way to a seat on it, but rather the fame of services rendered, the prestige of ability and wealth. Thus it welcomed to its counsels the very wealthy Ibn Dzuj'ān, a member of the humble clan of Taim. An assembly of elders or if you like of senators, in conformity with the principle of seniority among the Arabs: its authority, purely moral, was limited to advising, studying, looking ahead and giving to the merchant community the benefit of the experience of its conscript fathers. In the absence of any coercive
powers, persuasion was the only force it had to make its wishes obeyed. Hence the importance of eloquence in a milieu like this, where every family and every clan claimed autonomy. The cause of peace was in continual conflict with their claims. Without infringing their prerogatives, the Mala' was able to exert moral pressure when the general good required it. The system recalls, though remotely, the organisation of Palmyra and of Venice.

Site and climate. In the form of an elongated crescent with its points turned towards the flanks of the Kuʿaitīn, the town was hemmed in by a double range of bare and steep hills. The centre of this ill-ventilated couloir coincided with a depression in the soil. The early town occupied the bottom of this; this was the wādī, the valley, the ṣaʿī or Mecca, the hollow of Mecca. The centre, the lowest part of this depression, was called al-Raṭɑ' (cf. above). Some buildings in this quarter were so close to the Kaʿba that in the morning and in the evening their shadows were merged in that of the sacred edifice. Between these houses and the Kaʿba [q. v.] a narrow esplanade (fīnā) lay below the level of the surrounding soil. This open area formed the primitive masjīd, a sanctuary open to the heavens.

The pre-Islamic Raṭɑ' knew no other. The ends of the little streets opening on this open space were called the "gates of the ḥaram or of the masjīd". The so-called gates or openings took their names from the clans settled around the Kaʿba. Thus one regularly spoke of the "gate of the Bānī Džumāh". The walls of their houses served to mark the boundaries of the masjīd. It was on the ground floor of the buildings facing the sides of the Kaʿba that the maqṣīls or nādī of the chief families met, those that formed the Mala' (cf. above).

In the suburbs (qiwaḥi), and at a later date in the ravines (ṣābī), which had been dug by erosion out of the flanks of the hills, was a confusion of poor houses, low and ramshackle hovels. The unpleasant features of a town of this kind are obvious. The geographer Maḳdisī has summed these up strikingly: "suffocating heat, deadly winds, clouds of flies". The continual difficulty was the dearth of water. The population was dependent on the variable output of the Zamām. There were other wells, mainly outside the town. Those inside had a doubtful reputation. The scarcity of drinking-water is evident from the amount of precaution taken, when some thousands of pilgrims had to be supplied. In such deplorable conditions one can imagine what suffering the long days brought, ramīla Makka "the burning of Mecca"; why the great families preferred to send their children to be brought up in the desert; why the Sira only incidentally mentions the plague of Mekka (qiwaḥa Makka). Smallpox is mentioned only in connection with the enemies of the Prophet.

Rains are few and far between. Droughts sometimes last for four years. But when the winter season is wet, the rains may sometimes attain an unheard-of degree of violence. To the east of Mecca a rocky wall raises its steep barrier, a succession of strata and summits merging into the chain of the Sarāt. These jagged hills collect on their flanks the surplus rains of the monsoon which brings fertility to the Yemen. All along these slopes, where no shrub interrupts the fall — at the bottom of each a sail is formed — the cataracts augmented by all these tributaries fall into the hollow of Mecca, baṭn Makka, of which the Kaʿba occupies the bottom. The waters rush to this depression they force a passage through the "gates of the masjīd" and flow over the area around the sanctuary.

They fill it and rise to attack the Kaʿba. Before the Lidjarah, the Karashiṣyndicate seems to have paid no heed to the flooding or said they were powerless to prevent it. Efforts made by the caliphs yielded "only mediocre results".

This is why the misdeeds of the sail fill the annals of Mecca. On several occasions their violence has overthrown the Kaʿba and turned the court of the great mosque into a lake. As a result of the floods, epidemics broke out. The deposit of filth brought by the waters polluted the wells: bodies left unburied formed centres of epidemic infection. The analyses avoid dwelling on this, troubled by the Tradition which says that the plague never reaches Mecca. The absolute sterility of the soil brought another scourge, that of famine. The slightest irregularity in the conveyance of grain from Syria or the Sarāt was enough to cause it. It continues to figure along with the ravages of flood and plague in the monotonous annals of the town.

Economic life and finance. On examining closely the picturesque literature of the Sira and Hadīth, one sees the impression of business, of intense activity bursting out of the narrow and sterile valley of Mecca. The Qurʾān only strengthens this impression. All his life the Prophet retained the impress of his Qurashi education and training. This fundamentally mercantile character is revealed at every turn.

Writing and arithmetic. One is amazed at their importance in the economic life of the town. Relying on the Qurʾānic epithet ummut, i.e. pagan, gentle, and on biased writers like al-Baladhuri, it has been held that, except for some fifteen individuals mentioned by name, all the pre-Hdjran Karashi were illiterate. Alongside of the "book" of accounts, the scales always figure in the Meccan shops; not so much to weigh goods as to verify and check payments of all kinds including cash. Now, coins were not plentiful on the Meccan market; they were supplemented by the precious metals, ingots of gold and silver, by tibr, gold dust. Only the scales could determine the value. In the more delicate cases, recourse was had to the services of a wasāṣan or professional weigher.

It would be difficult to imagine a society in which capital enjoyed a more active circulation. The ṭājir, business man, was not engaged in hoarding, in gathering wealth into his strong boxes. He had a blind faith in the unlimited productivity of capital, in the virtue of credit. Brokers and agents, the bulk of the population lived on credit. The sleeping partnership was much in favour (muḏārâ), especially the "partnership for the half", which supposes 50% participation in the profits by the sleeping partners. Thanks to the development of the institutions the humblest sums could be invested, down to a gold dinar or even a masūd or half dinar. Such a flexible organisation stimulated even the humblest to take his share in commercial enterprises.

The coins brought to Mecca were of very different kinds: the denarius aureus of the Byzantines
and the silver drachm of the Sasanids and Himyars. These pieces were often worn, rudely engraved, very unequal in weight, and enormous, came from the most varied mints. Only the money-changer had the requisite flair, the eye sufficiently trained to deal with the confusion of currencies, to determine accurately the standards, values, and the kinds in circulation. In addition there were the complications caused by the difference of standard and the oscillations of exchange. The Byzantine provinces, Syria and Egypt, were among the abī al-dhahab or countries with a gold standard. Babylonia was abī al-warī, a land with a silver, the Sasanian, standard. On the eve of the departure of the caravans for Syria, there were regular battles in search of dinārs. The Meccan tādir was not distinct from the financier. His first article of trade was money. When occasion arose, he invested his capital in business, in the organization of large caravans. To the leaders of the caravan, to the traders and to the factors, he advanced the funds necessary for their operations.

Primarily a clearing house, a banking town, Mecca had customs and institutions peculiar to this kind of transaction and to finance. Sometimes it is ribā, usury, in all its ugliness: dinar for dinār, diham for diham, i.e. 100% interest. To the condemnation of ribā in the Kūr'ān, the Kuraish objected that they saw in it only “a kind of sale” (Kūr'ān ii. 275), of letting out capital for a rent. Speculation too was rampant, on the rates of exchange, the load of a caravan which one tried to buy up, the yield of the harvests and of the flocks and lastly the provisioning of the town. Fictitious associations were formed, bonds and ivory sets were made, which loans were borrowed. “Every Arab”, says Strabo, “is either a trader or a broker”. In Mecca, says the ḥadīth “he who was not a merchant, counted for nothing”. In setting out on a military expedition the citizens always took merchandise along with them. This is what they did when going to relieve the Bādār caravan. The first thing the Meccan murājī harām did on arriving in Medina was to ask the way to the market-place. The women shared these commercial instincts: Abū Dā'ī's mother ran a perfumery business. The activities of the tādira Khaḍīja are celebrated. Hind [q.v.], the wife of Abū Sufyān, sold her merchandise among the Kalbīs of Syria. Like their husbands the Meccan women had financial interests in the caravans. On the return of the convoys they gathered round Abū Sufyān to know what their money and their contributions had earned and to get their share of the profits.

The caravans. The organization of a caravan was the subject of interminable palavers in the nāḍi around the Ka'ba. Its departure and return were events of public interest. The whole population was associated with it. En route it remained in continual communication with the metropolis through Beduins met on the journey or special couriers. Abū Sufyān sent one of these messengers to describe the critical position of the Bādār caravan. It cost him 20 dinārs, an enormous sum, but one proportionate to the value of the convoy in which Mecca had 50,000 dinārs invested. The Meccan caravans were of considerable size. Neither horses nor mules appeared in them. The number of camels on occasion rose to 2,500. The men (merchants, guards [dā'il] and guards) varied from 100 to 300. The escort was strengthened on approaching areas infested by bandits (qā'īd) or when traversing the territory of hostile tribes. The Bādār caravan may be taken as typical. We do not now of another in which the capital invested attained such an amount. The greater part was supplied by the important Umayyad firm of Abū Uṣayba, i.e. the family of Sa'id b. al-Ṭāṣ. This firm had formed a company of the family, adding to their own considerable reserves the contributions of their sleeping partners. To their 30,000 dinārs the other Umayyad houses added 10,000. Four-fifths of the capital of the Bādār caravan was therefore of Umayyad origin. We can understand why the direction and supreme control of the convoy was entrusted to Abū Sufyān, who was personally interested in the enterprise.

In the first place a caravan from Mecca carried skins and leather, sometimes also the saḥib of Tā' if, a kind of currant; then ingots of gold and silver partly from the mines of the Banū Sulaim and tīrū, gold dust from Africa. The texts frequently call it latīma, i.e. convoy laden with perfume and rare spices. Of the perfumes, the most esteemed came not from the Ḥijāţ, but from southern Arabia, the “land of frankincense”, or even from India and Africa. To these might be added aromatic gums and medicinal drugs, like the senna of Mecca, all objects of small bulk and purchased at higher prices by the luxury of the civilized countries.

From the Yemen the Meccan caravans brought back the products of India, the silks of China, the rich 'adān cloths, so called from 'Aden. Besides gold dust, the main exports of Africa were slaves and ivory. In 629 Mecca recruited her labourers and her mercenary soldiers, the Ḥafīẓ or Abyssinian. In Egypt and in Syria, the Kuraish traders bought luxury articles, products of the industry of the Mediterranean, mainly cotton, linen or silk stuffs and cloths dyed in vivid purple. From Borsa and the Ṣa'ar (Syria) came arms, cereals and oil, much appreciated by the Beduins. The pace of the caravan was slow but the articles transported, leather, metals, scented woods, feared neither damage nor the delays of long journeys. The expenses were confined to the hire of the animals, the payment of the escort, the tolls and presents to the chiefs of the tribes. With such an economical organisation, the profits of 100% attested by our authors were quite usual. This was the case with the caravan of Bādār “each dinār having brought back a dinār”. Two years after this brilliant affair, the Companions of the Prophet who had sought refuge in Medina were able to carry out as profitable a transaction in the same field “since each of their dirhams gained a second dinār”, that is to say a profit of 100% again.

Fortunes in Mecca. We can now imagine how money had gradually accumulated in the chests of the Meccan financiers, who were naturally of a saving disposition. This explains Pliny the Elder's ill-humour when he recalls “the millions of sestercii which the Arabs take annually from the Roman Empire giving nothing in return, nisi insidiam sedimentibus” (Hist. Nat., vi. 28). This last statement is an exaggeration, but it should be remembered that the Meccan caravan carried only articles of high value, and that with regard to the Empire the Arabs were mainly importers, so that the trade balance was always very much
in their favour. The 30,000 dinārs invested by the one house of Abū Umarīah in the Badr caravan suggests that H. Winckler is quite right when he tells us to think of the Palmyra of Zenobia if you wish to get an idea of the financial capacity of Mecca. The fortunes of the Makhlūmis were no less than those of their Umaiyyid rivals. The Taimī 'Abd Allāh b. Djiḍdān must have been a millionaire if the poet thought of comparing him to Caesar. The principal organisers of the Badr caravan were also millionaires. The thousands of dinārs subscribed by them did not even represent all their fortune. Other portions of their capital were out at interest or put in other speculations. Among other millionaires we may mention the Makhlūmis Walīd b. al-Mughira and 'Abd Allāh, father of the poet 'Umar b. Abī Raisā.

Next to these representatives of high finance come the well-to-do Meccans, like 'Abd al-Rahmān b. 'Awf who had a capital of 8,000 dinārs and al-Harīrī b. 'Amir and Umaiya b. Khalāf. Of the latter two, the first had 1,000 and the second 3,000 dinārs in the day. In the class of the small traders, there were the small traders, brokers and shopkeepers who formed the petite bourgeoisie of the town. To their commerce a number added the supervision of some industry like ironwork or carpentry. The most typical representative of this class is given us by the future caliph Abū Bakr, a basās, retailer of cloth. He belonged like Abū Djiḍḍān to the plebeian clan of Taim, rich in men and women of initiative, like 'Ašīṣa, daughter of Abū Bakr. He seems to have had a capital of 40,000 dirhams. 'Abbas, the uncle of the Prophet, is also mentioned among the rich bankers of Mecca, but we have no details about him. The other Makhlūmis lived in circumstances bordering on poverty. Those Meccans most certainly must have been wealthy who paid without a murmure the enormous ransoms demanded for their relatives after the defeat of Badr. After this sacrifice — it cost them not less than 200,000 dirhams — the Meccan chiefs gave up their share of the profits in the Badr enterprise — some 25,000 dinārs — to prepare for the revenge. They did this with a good heart", with the easy grace of opulent financiers, used to running the risks of speculations on a large scale. One touching detail is recorded. They refused to touch the modest shares of the small contributors. This example shows how at Mecca, "the strong", abī al-fawās (Wāqīdī), i.e. the patricians, were able in critical circumstances to realise a spirit of solidarity and of sound democracy.

Mecca before the Hijra had neither ships nor a port. It was only exceptionally that foreign ships cast anchor in the little bay of Shu'āiba off a desert shore. It was here that the Byzantine ship was wrecked, the wood of which went to build the terrace of the Ka'ba. It was to Shu'āiba that the first Muslim emigrants for Abyssinia went, no doubt on hearing that two merchant ships had touched there. More rarely sailings took place from the desolate shore of Djīdā, which was nearer Mecca. From the time of 'Uthmān, Djīdā took the place of Shu'āiba and became the port of the Kurāsh metropolis. When Muhammad settled in Medina and cut their communications with Syria, the Meccan leaders never thought of taking to the sea but resigned themselves to the enormous detour through al-Najd. The creation of an Arab navy was the work of the caliph Mu'āwiya.

2. Aftér the Hijra. We need not rehearse the events of the first eight years of the Hijra. They are summed up in the struggle with the Prophet. This struggle and the ridda, the surrender of Mecca, were fatal to its economic prosperity. One after the other, the great families migrated to Medina, now the capital of Islam. This tendency increased under the first three caliphs, who made their headquarters among the Ansār. 'Ali definitely left Arabia to settle in Kufa. Richly endowed by the state, the leading Kūraishi, becoming generals and governors of provinces, lost interest in commerce. No more is heard about caravans or fairs in the Hijāz. It was only at the period of the pilgrimage that Mecca became alive again and saw the caliphs reappear at the head of the pilgrims. The conquest of the ḍirāq dealt the last blow to the economic decline of western Arabia. The Indian trade resumed its old route by the Persian Gulf and the valley of the Euphrates. The second commerce was established by land with the markets of the middle east.

Umaiya period. The situation improved with the coming of the Umaiya dynasty. Mu'āwiya took an active interest in his native town. He erected buildings there and developed agriculture in the environs, dug wells and built dams to store water in the spring. Under his successors, especially the Marwānids, Mecca became a city of pleasure and ease, the rendezvous of poets and musicians, attracted by the brilliant society formed by the sons of the Companions of the Prophet. Many people returned to live in Mecca after making their fortunes in the government of conquered provinces. Contact with foreign civilisations had made them refined and fastidious. They had become accustomed to baths, a luxury which presupposes an abundant water-supply. Water had to be procured from the hills of the Sarā'. Khalid al-Kasrī's [q. v.] name is associated with this undertaking which changed the aspect of the town. To meet the scourge of flood, the caliphs 'Umar and 'Uthmān had called in the aid of Christian engineers, who built barrages in the high-lying quarters. They also secured the area round the Ka'ba by making dykes and embankments. The Umaiya caliphs continued and completed these works. They dug a new bed along the course of the sail and endeavoured to break its violence by barriers built at different levels. Their great anxiety was to protect the depression of the Baṭḥah where the Ka'ba stood. The skill of the engineers of the period did not succeed in overcoming the topographical difficulties nor in averting the ravages of the winter rains, regular phenomena. They were frustrated by the steep slopes of the ground, still further aggravated by the unusual shape of the Baṭḥah, a basin with no outlet. The houses on the bank of the sail were taken down and the alleys adjoining the Ka'ba removed. Each modification of the old plan meant the sacrifice of more buildings. These clearances in time changed the traditional aspect of Mecca, where the sail continued to sow destruction.

Along with these precautions against flooding an endeavour was made to enlarge the exiguous court around the Ka'ba. Islam aspired to possess a temple in keeping with its worldwide claims. Successful expriations begun by 'Umar and finished
by Walid I prepared an esplanade. The plan of the great mosque [cf. Al-Maṣfīd al-Ḥakām] with its galleries, a vast courtyard with the Ḳa‘ba in the centre, is the work of the Umayyad caliph. He had the assistance of Christian architects from Syria and Egypt to carry it out. The important governorship of the Ḥijāz with its three cities, Medīna, Mecca and Ta‘if, could in principle be given only to a member of the ruling family. Among the most celebrated of these Umayyads may be mentioned Sa‘d b. al-‘Azīz and the two future caliphs, Marwān b. al-Ḥakam and ‘Umar b. ‘Abd al-‘Azīz. When no Umayyad was available the choice fell upon an officer of tried capacity like Ḥādżjādī and Khālid al-Ḳasrī. At first they were given Ta‘if and then transferred to Mecca. It was only after this probation that the three towns were entrusted to them. But even then the centre of government remained in Medīna, which under the Umayyads eclipsed Mecca by its political importance and by the fact that it was the home of the new Muslim aristocracy.

Under Ya‘qūb I, the rising of ‘Abd Allāh b. al-Zubayr [q.v.] brought Syrian troops to Mecca. The rebel had made his headquarters in the court of the great mosque. A scaffold of wood, covered with straw, protected the Ka‘ba. The carelessness of a Meccan soldier set it on fire. Ibn al-Zubayr rebuilt the edifice and included the Ḥijār within it [see Ka‘ba]. When Ḥādżjādī had overthrown the Zubayrid anti-caliph, he restored the Ka‘ba to its former dimensions which have since remained unaltered. In 747 a Ḥārūnī rebel from the Ye‘men seized Mecca without meeting opposition. He was soon defeated and slain by the troops of the caliph Marwān II. In 750, Mecca passed with the rest of the caliphate under the rule of the ‘Abbāsids.

II

Mecca under the ‘Abbāsids down to the foundation of the Sharifate (750–961).

Although the political centre of gravity in Islām now lay in Baghda‘d, this period at first presents the same picture as under Umayyad rule. The Ħaramān are as a rule governed by ‘Abbāsīd princes or individuals closely connected with them (Die Chroniken der Stadt Mecca, ed. Wustenfeld, i., 151 sqq.). Sometimes Mecca and Ta‘if were under one ruler, who was at the same time leader of the Ḥādżjī, while Medīna had a separate governor of its own.

Arabia had however from the first century A.H. contained a number of ‘Alīd groups, who, as was their wont, fished in troubled waters, lay in wait as brigands to plunder the Ḥādżjī caravans and from time to time hoisted their flags when they were not restrained either by the superior strength or by the bribes of the caliphs. We find al-Mansūr (136–156 = 754–774) already having trouble in Western Arabia. Towards the end of the reign of al-Mahdi (156–160 = 774–785) a Ḥasanī, Ḥusain b. ‘Ali, led a raid on Medīna, which he ravaged; at Fakīkh near Mecca, he was cut down with many of his followers by the ‘Abbāsīd leader of the Ḥādżjī. The place where he was buried is now called al-Shu‘hādā‘ī. It is significant that it is regarded as the “martyr of Fakīkh” (Tabari, ii. 551 sqq.; Chron. Mecca, i. 435; 501 sqq.).

Ḥārūn al-Rashīd on his nine pilgrimages expended vast sums in Mecca. He was not the only ‘Abbāsīd to scatter wealth in the holy land. This had a bad effect on the character of the Meccans. There were hardly any descendants left of the old distinguished families and the population grew accustomed to living at the expense of others and were ready to give vent to any dissatisfaction in rioting. This attitude was all too frequently stimulated by political conditions.

In the reign of al-Ma‘mūn (198–218 = 817–833) it was again ‘Alīds, Ḥusain al-‘Alīs and Ḥibrīm b. Mūsā, who extended their rule over Medīna, Mecca and the Yemen (Tabari, ii. 981 sqq.; Chron. Mecca, ii. 238), ravaged Western Arabia and plundered the treasures of the Ka‘ba. How strong ‘Alīd influence already was at this time is evident from the fact that Ma‘mūn appointed two ‘Alīds as governors of Mecca (Tabari, iii. 1039; Chron. Mecca, ii. 191 sqq.).

With the decline of the ‘Abbāsīd caliphate after the death of Ma‘mūn, a period of anarchy began in the holy land of Islām, which was frequently accompanied by scarcity of famine. It became the
regular custom for a number of rulers to be represented at the Ḥadjijj in the plain of ʿArafāt and to have their flags unfurled; the holy city was rarely spared fighting on these occasions. The safety of the pilgrim caravans was considerably affected; it was very often ʿAlids who distinguished themselves in plundering the pilgrims.

The ʿAlid cause received an important reinforcement at this time by the foundation of a Ḥasanid dynasty in Tabaristan (Tabari, iii, 1523–1533, 1583 sq., 1682–1685, 1693 sq., 1640, 1880, 1884 sq., 1940). In Mecca the repercussions of this event were felt in the appearance of two Ḥasanids (Chron. Mekka, i. 343; ii. 10, 195, 239 sq.), Ismāʿīl b. Yūsuf and his brother Muhammad, who also ravaged Medina and Diḍjāda in the way that had now become usual (451 = 865–866).

The appearance of the Karamatians [q.v.] brought still further misery to the country in the last fifty years before the foundation of the sharifate (Tabari, iii. 2124–2130). Hard pressed themselves at the heart of the empire, the caliphs were hardly able even to think of giving active support to the holy land, and, besides, their representatives had not the necessary forces at their disposal. From 916 onwards the Karamatians barred the way to the pilgrim caravans. In 930, 1,500 Karamatian warriors raided Mecca, massacred the inhabitants by the thousand and carried off the Black Stone to Baghdad. It was only when they realised that such deeds were bringing them no nearer their goal — the destruction of official Islam — that their zeal began to relax and in 950 they even brought the Sr. over to their side. Mecca was relieved of serious danger from the Karamatians. The following years bear witness to the increasing influence of the ʿAlids in western Arabia in connection with the advance of Fāṭimid rule to the east and with the Ḥajj rule in Baghdad. From this time the Meccan ʿAlids are called by the title of Sharif which they have retained ever since.

2. From the foundation of the Sharifate to Kātāda (c. 350–498 = 960–1200).

a. The Mūsāwīs. The sources do not agree as to the year in which Ḥajjār took Mecca. 966, 967, 968 and the period between 951 and 961 are mentioned (Chron. Mekka, ii. 205 sqq.). ʿAlids had already ruled before him in the holy land. It is with him however that the reign of the Ḥasanids in Mecca begins, who are known collectively as sharifs, while in Medina this title is given to the reigning Husainids.

The rise and continuance of the Sharifate indicates the relative independence of Western Arabia in face of the rest of the Islamic world from a political and religious point of view. Since the foundation of the Sharifate, Mecca takes the precedence possessed by Medina hitherto.

How strongly the Meccan sharifate endeavoured to assert its independence, is evident in this period from two facts. In 976 Mecca refused homage to the Fāṭimid caliph. Soon afterwards the Caliph began to besiege the town and cut off all imports from Egypt. The Meccans were soon forced to give in, for the Hijāz was dependent on Egypt for its back supplies (Ibn al-ʿAthr, Kāmil, viii. 491; Chron. Mekka, ii. 246).

The second sign of the Sharifs' feeling of independence is Abu 'l-Futūḥ's (384–432 = 994–1039) setting himself up as caliph in 1011 (Chron. Mekka, ii. 207; Ibn al-ʿAthr, Kāmil, ix. 233, 217). He was probably induced to do this by al-Ḥākim's heretical innovations in Egypt. The latter however was soon able to reduce the new caliph's sphere of influence so much that he had hurriedly to return to Mecca where in the meanwhile one of his relatives had usurped the power. He was forced to make terms with al-Ḥākim in order to be able to expel his relative.

With his son Shukr (432–453 = 1030–1061) the dynasty of the Mūsāwīs, i.e. the descendants of Mūsā b. ʿAbd Allāh b. Mūsā b. ʿAbd Allāh b. Hasan b. Hasan b. ʿAli b. Abī Ṭalib came to an end. He died without leaving male heirs, which caused a struggle within the family of the Husainids with the usual evil results for Mecca. When the family of the Banū Shaiba (q.v.; the Ṣōkhā) went so far as to confiscate for their private use all precious metals in the house of Allāh, the ruler of Yemen, al-Sulaiḥi (Chron. Mekka, ii. 208, 210 sqq.; Ibn al-ʿAthr, Kāmil, ix. 422; x. 19, 38) intervened and restored order and security in the town. This intervention by an outsider appeared more intolerable to the Ḥasanids than fighting among themselves. They therefore proposed to al-Sulaiḥī that he should instal one of their number as ruler and leave the town.

He therefore appointed Abū Hāshim Muḥammad (455–487 = 1063–1094) as Grand Sharif. With him begins the dynasty of the b. Ḥāshimiyyah (455–598 = 1063–1200), which takes its name from Abū Hāshim Muhammad, a brother of the first Sharif ʿAbdīr, the two brothers were descendants in the fourth generation from Muḥammad, the ancestor of the Mūsāwīs.

During the early years of his reign, Abū Hāshim had to wage a continual struggle with the Sulaimānī branch, who thought themselves humiliated by his appointment. These Sulaimānīs were descendants from Sulaimān, a brother of the Mūsī II above mentioned.

The reign of Abū Hāshim is further noteworthy for the shameless way in which he offered the suzerainty, i.e. the mention in the khutba as well as the change of official rite which is indicated by the wording of the asḥān, to the highest bidder i.e. the Fāṭimid caliph or the Sāljuḵ sultan (Chron. Mekka, ii. 253; Ibn al-ʿAthr, x. 67). It was very unwelcome to the Meccans that imports from Egypt stopped as soon as the official mention of the Fāṭimid in the khutba gave way to that of the caliph. The change was repeated several times with the result that the Saljuḵ, tired of this comedy, sent several bodies of Turkmans to Mecca.

The ill-feeling between Sulṭān and Sharif also inflicted great misery on pilgrims coming from the Irāk. As the leadership of the pilgrim caravans from this country had gradually been transferred from the ʿAlids to Turkish officials and soldiers, Abū Hāshim did not hesitate occasionally to fall upon the pilgrims and plunder them (Chron. Mekka, ii. 254; Ibn al-ʿAthr, x. 153).

The reign of his successor is also marked by covetousness and plundering. The Spanish pilgrim Ibn Duhaylī, who visited Mecca in 1183 and 1185, gives hair-raising examples of this. Even then however the Harūn were no longer absolutely free of their own masters, as over ten years before, the Ayyūbī dynasty had not only succeeded to the Fāṭimid in Egypt but was trying to get the whole of near Asia into their power.
Saladin's brother, who passed through Mecca on his way to South Arabia, abandoned his intention of abolishing the sharifs but the place of honour on the Ḥajjī belonged to the Aiyūbids and their names were mentioned in the khutba after those of the ʿAbbasid caliph and the sharif ( Ibn Djuubair, p. 75, 95). The same Aiyūbid in 1186 also did away with the Shīf (here Zaidī, for the Sharifs had hitherto been Zaidīs) form of the adḥām ( Chron. Meḳka, ii. 214), had coins struck in Saladin's name and put the fear of the law into the hearts of the sharif's bodyguard, who had not shrunk from crimes of robbery and murder, by severely punishing their misdeeds. — A further result of Aiyūbid suzerainty was that the ʿShīfī rite became the predominant one. But even the mighty Saladin could only make improvements in Mecca. He could abolish or check the worst abuses but the general state of affairs remained as before.

3. The rule of ʿKatāda and his descendants down to the Wahhābi period (c. 1200—1788).

In the meanwhile a revolution was being prepared which was destined to have more far-reaching consequences than any of its predecessors. ʿKatāda, a descendant of the same Mūsā (see above) from whom the Mūsāwīs and the Ḥawāqih were descended, had gradually extended his estates as well as his influence from Yaqūb to Mecca and had gathered a considerable following in the town. According to some sources, his son Ḥanẓala made all preparations for the decisive blow on the holy city, according to others, ʿKatāda seized the town on the 27th Ṣaʿdīb when the whole population was away performing a less ʿumra in memory of the completion of the building of the Kaʿba by ʿAbd Allāh b. al-Zubair, which was celebrated on this day along with the festival of Muharram's ascension to heaven. However it came about, ʿKatāda's seizure of the town meant the coming of an able and strongwilled ruler, the ancestor of all later sharifs. He steadfastly followed his one ambition to make his territory an independent principality. Everything was in his favour; that he did not achieve his aim was a result of the fact that the Ḥīdżaz was once again at the intersection of many rival lines of political interest.

Katāda began by ruining his chances with the great powers; he ill-treated the son of the Aiyūbīd al-Malik al-ʿĀdil (540—615 = 1145—1218) in brutal fashion ( Chron. Meḳka, ii. 265). He roused the ire of the caliph by his attitude to pilgrims from the ʿIrāk. He was able however to appease the latter and the embassy he sent to Baghdad returned with gifts from the caliph. The caliph also invited him to visit Baghdad. According to some historians, however, the sharif turned home again before he actually reached Baghdad. On this occasion, he is said to have expressed his policy of the "splendid isolation" of the Ḥīdżaz in verse, as he did in his will in prose (see Snouck Hurgronje, Qudāddah's Policy of Splendid Isolation etc. in Bibli.).

On the other hand, Katāda is said to have vigorously supported both the Imām of Hāsānī descent in founding a kingdom in the Yemen. After the reconquest of this region by a grandson of al-ʿĀdil, the Aiyūbīs of Egypt, Syria, and South Arabia were mentioned in the khutba in Mecca along with the Caliph and Sharif.

Katāda's life ended in a massacre which his son ʿHāsān carried out in his family to rid himself of possible rivals ( Chron. Meḳka, ii. 215, 263 sqq.; Ibn al-ʿAṭṭīr, Kāmil, xii. 262 sqq.). The Aiyūbid prince Manusīd however soon put a limit to his ambition and had Mecca governed by his generals. On his death however power again passed into the hands of the sharifs, whose territory was allowed a certain degree of independence by the rulers of the Yemen as a bulwark against Egypt.

About the middle of the xiiiith century the world of Islam assumes a new aspect as the result of the advent of persons and happenings of great importance. In 1258 the taking of Baghdād by Hāsānī put an end to the caliphate. The pilgrimage caravan from the ʿIrāk was no longer of any political significance. In Egypt power passed from the Aiyūbīs (the Mamluks; Sulṭān Baḥārī (658—676 = 1260—1277) was soon the most powerful ruler in the lands of Islam. He was able to leave the government of Mecca in the hands of the sharif, because the latter, Abl Nūmaī, was an energetic individual who ruled with firmness during the second half of the xiiiith century (1254—1301). His long reign firmly established the power of the descendants of Katāda.

Nevertheless the first half of his reign was almost entirely filled with fighting between different claimants to the throne. Aḍjlūn's reign also (1340—1375) was filled with political unrest, so much so that the Mamluk Sulṭān is said on one occasion to have sworn to exterminate all the sharifs. Aḍjlūn introduced a political innovation by appointing his son and future successor Aḥmād co-regent in 1361 by which step he hoped to avoid a fratricidal struggle before or after his death.

A second measure of Aḍjlūn's also deserves mention, namely the harsh treatment of the Muʿāthīdhīn and Imām of the Zaidīs: this shows that the reigning sharifs had gone over to the predominant rite of al-ʿShīfī and forsaken the Zaidī creed of their forefathers.

Among the sons and successors of Aḍjlūn special mention may be made of ʿHāsān special mention because he endeavoured to extend his sway over the whole of the Ḥīdżaz and to guard his own financial interests carefully, at the same time being able to avoid giving his Egyptian suzerain cause to interfere.

But from 1425 he and his successors had to submit to a regular system of control as regards the allotment of the customs.

From the time of Ḥāsān, in addition to the bodyguard of personal servants and freedmen, we find a regular army of mercenaries nominated which was passed from one ruler to another. But the mode of life of the sharifs, unlike that of other Oriental rulers, remained simple and in harmony with their Arabian surroundings. As a vassal of the Egyptian Sulṭān the sharif received from him every year his ʿawāfī [q.v.] and a robe of honour. On the ceremonies associated with the accession of the sharifs see Snouck Hurgronje, Meḳka, i. 97 sq.

Of the three sons of Ḥāsān who disputed the position in their father's lifetime, Barakāt (1) was chosen by the sulṭān as co-regent; twenty years later, he succeeded his father and was able with slight interruptions to hold sway till his death in 1455. He had to submit to the sulṭān sending a permanent garrison of 50 Turkish horsemen under an emir
to Mecca. This emir may be regarded as the pre-
cursor of the later governors, who sometimes at-
tained positions of considerable influence under
Turkish suzerainty.

Mecca enjoyed a period of prosperity under
Barakat's son Muham mad (Chron. Mekka, ii.
341 sqq.; iii. 230 sqq.), whose reign (1455—1497)
coincided with that of Kâtîbey [q.v.] in Egypt.
The latter has left a fine memorial in the many
buildings he erected in Mecca.

Under Muhammad's son Barakat II (1497—
1525) who displayed great ability and bravery in
the usual struggle with his relatives, without getting
the support he desired from Egypt (Chron. Mekka,
ii. 342 sqq.; iii. 244 sqq.), the political situation
in Islam was fundamentally altered by the Ottoman
Sultan Selim's conquest of Egypt in 1517.

Although henceforth Constantinople had the im-
portance for Mecca that Bagdad once had and there
was little real understanding between Turks and
Arabs, Mecca at first experienced a period of
peace under the sharifs Muhammad Abû Nu-
maiyy (1525—1566) and Hassan (1566—1601).

Under Ottoman protection the territory of the
sharifs was extended as far as Khaibar in the north,
and Hadd in the south and in the east into
Nadîd. Dependence on Egypt still existed at the
same time; when the government in Constantinople
was a strong one, it was less perceptible, and
vice versa. This dependence was not only political
but had also a material and religious side. The
Hijaz was dependent for its food supply on corn
from Egypt. The foundations of a religious and
educational nature now found powerful patrons in
the Sultans of Turkey.

A darker side of the Ottoman suzerainty was its
intervention in the administration of justice. Since
the sharifs had adopted the Shafi'i madhab, the
Shi'i Kâdi was the chief judge; this office had
also remained for centuries in one family. Now
the highest bidder for the office was sent every
year from Constantinople to Mecca; the Meccans
of course had to pay the price with interest.

With Hasan's death a new period of confusion
and civil war began for Mecca. In the language
of the historians, this circumstance makes itself
apparent in the increasing use of the term Dhawî...-
for different groups of the descendants of Abû
Numayti who dispute the supremacy, often having
their own territory, sometimes asserting a certain
degree of independence from the Grand Sharif,
while preserving a system of reciprocal protection
which saved the whole family from disaster (Snouck
Hurgeonje, Mekka, i 112 sqq.).

The struggle for supremacy, interspersed with
disputes with the officials of the suzerain, centred
in the xviiith century mainly around the 'Abadîla,
the Dhawî Zaid and the Dhawî Barakat.

Zaid (1631—1666) was an energetic individual
who would not tolerate everything the Turkish
officials did. But he was unable to oppose success-
fully a measure which deserves mention on account
of its general importance. The ill-feeling between
the Sunni Turks and the Shi'i Persians had been
extended to Mecca as a result of an order by
Sultân Murâd to expel all Persians from the holy
city and not to permit them to make the pilgrim-
age in future. Neither the Sharifs nor the upper
classes in Mecca had any reason to be pleased
with this measure; it only served the mob as a
pretext to plunder well-to-do Persians. As soon
as the Turkish governor had ordered them to go,
the Sharifs however gave permission as before to
the Shi'i to take part in the pilgrimage and to
remain in the town. The Sharifs likewise favoured
the Zaidis, who had also been frequently forbidden
Mecca by the Turks.

The further history of Mecca down to the coming
of the Wahhâbîs is a rather monotonous struggle
of the Shi'i families among themselves (Dhawî
Zaid, Dhawî Barakât, Dhawî Mas'ûd) and with the
Ottoman officials in the town itself or in
Djidda.

4. The Sharifs from the Wahhâbî
period to its end. The Kingdom.

Although the Wahhâbîs [q.v.] had already
made their influence perceptible under his prede-
cessors, it was Ghâlib (1788—1813) who was
the first to see the movement sweeping towards
his territory like a flood; but he left no stone
untorned to avert the danger. He sent his armies
north, east and south; his brothers and brothers-
inar in law all took the field; the leaders of the Syrian
and Egyptian pilgrim caravans were appealed to at
every pilgrimage for help, but without success. In
1799 Ghâlib made a treaty with the emir of Darîya,
by which the boundaries of their territories, were
laid down, with the stipulation that the Wahhâbîs
should be allowed access to the holy territory.
Misunderstandings proved inevitable however and
in 1803 the army of the emir Sa'ûd approached
the holy city. After Ghâlib had withdrawn to
Djidda, in April Sa'ûd entered Mecca, the inhab-
habitants of which had announced their conversion.
All kubbahs were destroyed, all tobacco pipes and
musical instruments burned, and the adhân purged
of praises of the Prophet.

In July, Ghâlib returned to Mecca but gradu-
ally he became shut in there by enemies as with a
wall. In August the actual siege began and with
it a period of famine and plague. In February of
the following year, Ghâlib had to submit to acknowl-
ding Wahhâbî suzerainty while retaining his
own position.

The Sublime Porte had during all these hap-
penings displayed no sign of life. It was only
after the Wahhâbîs had in 1807 sent back the
pilgrim caravans from Syria and Egypt with their
mahmals, that Muhammadd 'Ali was given in-
structions to deal with the Hijaz as soon as he
was finished with Egypt. It was not till 1813 that
he took Mecca and there met Ghâlib who made
cautious advances to him. Ghâlib however soon
fell into the trap set for him by Muhammadd 'Ali
and his son Tunân. He was sent to Salonika,
where he lived till his death in 1816.

In the meanwhile Muhammad 'Ali had installed
Ghâlib's nephew Yâhîyâ b. Sarîr (1813—1827)
as sharif. Thus ended the first period of Wahhâbî
rule over Mecca, and the Hijaz once more became
dependent on Egypt. In Mecca, Muhammad 'Ali
was honourably remembered because he restored
the pious foundations which had fallen into ruins,
revived the consignments of corn, and allotted
stipends to those who had distinguished themselves
in sacred lore or in other ways.

In 1827 Muhammadd 'Ali had again to interfere
in the domestic affairs of the sharifs. When Yâhîyâ,
had made his position untenable by the vengeance
he took on one of his relatives, the viceroy deposèd the
Dhawî Zaid and installed one of the 'Abâdîla,
Muḥammad, usually called Muḥammad b. ʿAwn (1827—1851). He had first of all to go through the traditional struggle with his relatives. Trouble between him and Muḥammad ʿAli’s deputy resulted in both being removed to Cairo in 1836.

Here the sharif remained till 1840 when by the treaty between Muḥammad ʿAli and the Porte the Hijāz was again placed directly under the Porte. Muḥammad b. ʿAwn returned to his home and rank: Ottoman suzerainty was now incorporated in the person of the wāli of Jidda. Friction was inevitable between him and Muḥammad b. ʿAwn; the latter’s friendship with Muḥammad ʿAli now proved of use to him. He earned the gratitude of the Turks for his expeditions against the Wahhābī chief Faisal in al-Riyadh and against the ʿAsir tribes. His raids on the territory of Yemen also prepared the way for Ottoman rule over it.

In the meanwhile the head of the Dhawi Zaid, ʿAbd al-Muṭṭalib (1851—1859), had made good use of his friendship with the grand vizier and brought about the deposition of the ʿAbadīa in favour of the Dhawi Zaid. ʿAbd al-Muṭṭalib however did not succeed in keeping on good terms with one of the two pashas with whom he had successively to deal. In 1855 it was decided in Constantinople to cancel his appointment and to recall Muḥammad b. ʿAwn. ʿAbd al-Muṭṭalib at first refused to recognise the genuineness of the order; and he was supported by the Turkophobe feeling just provoked by the prohibition of slavery. Finally however, he had to give way to Muḥammad b. ʿAwn, who in 1856 entered upon the Sharifate for the second time; this reign lasted barely two years. Between his death in March 1858 and the arrival of his successor ʿAbd Allāh in October of the same year took place the murder of the Christians in Jidda (June 15) and the atonement for it (cf. Ḫidda, and Snouck Hurgronje, Een rector der meekanschke universiteit, in Bydragen t. i. Taal-, Land- en Volkenkund en van Ned.-Indië, 5° volg., deel ii, p. 381 sqq., 399 sqq.):

The rule of ʿAbd Allāh (1858—1877) who was much liked by his subjects, was marked by peace at home and events of far-reaching importance abroad. The opening of the Suez Canal (1869) meant on the one hand the liberation of the Hijāz from Egypt, on the other however more direct connection with Constantinople. The installation of telegraphic connections between the Hijāz and the rest of the world had a similar importance. The reconquest of Yemen by the Turks was calculated to strengthen the impression that Arabia was now Turkish territory for ever.

The brief reign of his popular elder brother Husayn (1877—1880) ended with the assassination of the latter by an Afgān. The fact that the aged ʿAbd al-Muṭṭalib (see above) was sent by the Dhawi Zaid from Constantinople as his successor (1880—1882) gave rise to an obvious supposition.

Although the plebs saw something of a saint in this old man, his rule was soon felt to be so oppressive that the notables petitioned for his deposition (Snouck Hurgronje, Mecca, i. 204 sqq.). As a result in 1881, the energetic ʿΩlīmān Nūrī Pāsha was sent with troops to the Hijāz as commander of the garrison with the task of preparing for the restoration of the ʿAbadīa. ʿAbd al-Muṭṭalib was outwitted and taken prisoner; he was kept under guard in one of his own houses in Mecca till his death in 1886.

ʿΩlīmān Pāsha, who was appointed wāli in July 1882, hoped to see his friend ʿAbdīlāh, one of the ʿAbadīa, installed as Grand Sharīf alongside of him. ʿAwn al-Kafīl (1882—1905) was however appointed (portrait in Snouck Hurgronje, Bilder aus Mecca, p. ). As the wāli was an individual of great energy, who had ever done much for the public good and ʿAwn, although very retiring, was by no means insignificant, nay even tyrannical, trouble between them was inevitable, especially as they had the same powers on many points, e.g. the administration of justice and supervision of the safety of the pilgrim routes. After a good deal of friction ʿΩlīmān was dismissed in 1886. His successor was Djiāmil Pāsha, who only held office for a short period and was succeeded by Sāwāt Pāsha. Only ʿAbdīlāh could keep his place alongside of ʿAwn and that by shutting his eyes to many things and being satisfied with certain material advantages. After ʿAwn’s death ʿAbdīlāh was chosen as his successor. He died however before he could start on the journey from Constantinople to Mecca. ʿAwn’s actual successor was therefore his nephew ʿAli (1905—1908). In 1908 he and ʿAbdīlāh both lost their positions with the Turkish Revolt situation.

With ʿHusayn (1908—1916—1924), also a nephew of ʿAwn’s, the last sharīf came to power. But for the Great War his sharīfate would probably have run the usual course. The fact that Turkey was now completely involved in the war induced him to declare himself independent in 1916. He endeavoured to extend his power as far as possible, first as liberator (muḥājir) of the Arabs, then (June 22, 1916) as king of the Hijāz or king of Arabia and finally as caliph. Very soon however, it became apparent that the Sultan of Nadj, ʿAbd al-ʿAzīz al-Saʿūd, like his Wahhābī forefathers, was destined to have a powerful say in the affairs of Arabia. In Sept. 1924 his troops took Taif and in October Mecca. King ʿHusayn fled first to Egypt and then to Mecca. His son ʿAli retired to Jidda. Ibn Saʿūd besieged this town and Medina for a year, avoiding bloodshed and complications with European powers. Both towns surrendered in December 1925.

Since January 1926, Ibn Saʿūd has been king of the Hijāz; the official title of his kingdom now is Hijāz, Nadj and dependencies. A political unit has thus been formed which covers a larger area than the sharīf ever ruled and possesses greater internal strength than has ever been seen in Arabia since the end of ʿAbbāsīd power.

By the organisation of the Nadj warriors (iššāwīn) as agriculturists also, by the maintenance of a strict discipline among the Beduins, by the creation of a military police, which is held in awe, a security has been created such as Arabia has perhaps never known and secure foundations laid for traffic, especially of the pilgrims.

With the representatives of foreign governments in Jidda the king maintains friendly relations. Recently several states have raised their consulates there to the rank of an embassy. Treaties have been concluded with a number of states.

By making use of modern technical skill, the king is endeavouring to counteract the natural poverty of the land. The automobile has become of importance for the pilgrim traffic, agricultural machinery is being imported and cisterns built to hold the rain water. A project for examining the
ground to prospect for minerals has been drawn up as well as a plan for a quay in the harbour of Djidda.

Wahhábism — or as they prefer to call it in Arabia: Ḩaḍrami according to the Ḥanbalite rite — is the state religion. But it has advanced cautiously in comparison with its attitude at the beginning of the sixteenth century. The external symbols of veneration for saints and the dead have been removed; Muhammad’s tomb in Medina has however been spared. The māḥmūl [q. v.] no longer comes to the ḥadāj; the new covering for the Ka’bah is made every year in Mecca. The pilgrim traffic again shows high figures and even Shi’is are admitted again to the pilgrimage.

The religious and economic life of the city has from the earliest times centred round the pilgrimage (cf. the article Ḥaḍīj) and the Mosque (cf. Al-Masjid al-Ḥaram). The character of Mecca as the metropolis of Islam is reflected in the great variety of its population. Besides the original Meccan nucleus we have numerous Arab elements — among which the Ḥadrami are particularly prominent on account of their energy — and colonies of foreigners from all parts of the Muslim world who have out of worldly or religious motives taken up residence in Mecca permanently in the capital. Among these, special mention must be made of those from the Malay Archipelago who are known collectively as Dža’; with them it is exclusively religious motives that have caused them to take up permanent residence in Mecca.

Even at the present day, slaves mainly African, form an important element in Meccan society. Abyssinian slave girls have always been highly esteemed as concubines. The slave-market however no longer carries the importance it once was. Freedmen rise from the slave caste and their dwellings, huts put together of every conceivable material, are on the outskirts of the city.

Artisans are, or at least down to the end of the sixteenth century, organized in guilds. Among these guilds of the pilgrim guides (mu’tawakkilīyya, q. v.), who have agents in Djidda and outside Arabia, is the most important; it lives entirely on the pilgrim traffic.

This is true in a way of the whole population, which has arranged to let houses to the pilgrims for a considerable portion of the year. By the eight month, tens of thousands of these visitors are in the town. Their number increases till the twelfth. In Muḥarram, Mecca resumes its usual appearance.

During the last few hundred years — except for the first Wahhabī period — the cult of saints in Mecca has steadily increased. Numerous places have sacred memories of Muḥammad and his family, the most prominent muṭābiqūn and later saints; numerous ḥawls were built over their graves and ḥawls and māls were celebrated in their honour. The Wahhabīs have done away with a great deal of this, how much is not exactly known.

Mecca is the seat of the government, although the king’s residence is in Riyyād. The official gazette Umm al-Kurā appears weekly. There are also printing presses, which mainly print Wahhabī or Ḥanbalite literature.

List of the Sharifs of Mecca (ca. 961–1916).

a. Muḥāṣṣib (ca. 961–1061)

Djīf’ar ca. 961–980

As Sharif till 1914 as King.

al-Arab; Oriente Moderna, passim (especially v. 143 sqq., 302 sqq., 413 sqq., 660 sqq.; vi. 219 sqg., etc. s.v. Arabia; treaties: vi. 14 sqq., 42 sqq.; vii. 6 sqq., 474—479; x. 105 sqq., 122; constitution: vi. 530 sqq.; assumption of regal title: vi. 101 sqq.; cf. vii. 172 sqq.).

MEDEA, a town in Algeria (depaement of Algiers), 60 miles S. of Algiers, in 36° 15' 50" N. Lat. and 2° 45' E. Long. (Greenwich). Medea lies on an altitude of 3,070 feet on the northern border of the mountainous massif which divides the high plateaus from the Mitidja. Down to the French occupation, it could only be reached by a bridle-path over the Muzania pass (3,270 feet). The building of a road through the gorges of the Chiffa, alongside of which a railway now runs, has made access to it easier. The town itself is built at the foot of slopes covered with vineyards which yield wines of superior quality and orchards in a district and as a result of the temperate climate, fruit trees grow very well. In the neighbourhood a number of European villages have grown up in which the cultivation of cereals is combined with that of the vine. There is also a fairly busy market but it is losing in importance since the railway has been extended to Djelfa at the southern end of the high plateaus. The population (census of 1926) is 13,816 of whom 2,225 are Europeans, almost all French and 11,591 natives.

Medea occupies the site of the Roman settlement of Lambida, on the ruins of which Boluggin b. Zivi in the ninth century built the modern town. The site was burned in 1069, according to Ibn Khalidun (Barberis, transl. de Selimur, S. 181) inhabited by the Sanhadjia tribe of Lembida, whence no doubt the name Lembani taken by natives of Medea. Of the history of the town itself we know hardly anything. Leo Africanus (Bk. iv., ed. Schefer, iii. 66) and following him Marmol (Africa, ii. 394) only tell us that after having belonged to the sultans of Tlemcen who kept a garrison there, it passed into the hands of the sultans of Tenes, and then of the Turks when the Barbarossa established themselves in Algiers. Under Hasan Kha'ir al-Din, Medea became the capital of one of the three provinces (beliklik) of the Regency, the beylik of the south or of Tiltiri, to which a later date was added the lower valley of the Sebou in Kabylia. Down to about 1770 we therefore find the bey of this province living alternately at Medea and Bordj-Sebou. It was not till this date that the region of Sebou having been incorporated in the Dār al-Sultan governed by the bey, the bey of Tiltiri settled permanently at Medea where he was in a better position to control the nomadic tribes of the plateaus. He had however no authority over the inhabitants of the town itself, who were under the authority of a ḥākim appointed by the agha of Algiers. The population, which did not exceed 1,000—2,000 among whom were many Kalgghiis and Turks retired from service, became wealthy through its trade with the south. Caravans brought thither the produce of the Sahara and also negro slaves who were sold to the citizens of Algiers.

During the years which followed the capture of Algiers, the French on several occasions (Nov. 1830—May 1831—April 1836) occupied Medea, without taking permanent possession. 'Abd al-Kādir however placed a bey in it and had his ownership of it recognised by the treaty of the Tafna [cf. 'Abd al-Kādir]. The outbreak of hostilities again between the Emir and the French led to the final occupation of Medea by the latter on May 17, 1840.

(G. YVER)

MEDINA. The Arabic word madina "town" [cf. al-Madinah] has survived in Spain in a number of place-names. The principal are Medina de las Torres in the province of Badajoz, Medina del Campo and Medina de Rioseco, in the province of Valladolid, Medina de Pomar, in the province of Burgos, Medina del Campo, in the province of Soria and Medina-Sidonia, in the province of Cadiz. The Arabic place-names Madinat al-Walid and Madinat al-Paradj correspond to Valladolid [q. v.], and to Guadalajara respectively (from the second Arabic name of this town: Wadi l-Hidjarah) [cf. above li. 177, and it may be added that the town took its name from a known individual, Mālik b. 'Abd al-Rahmān Ibn al-Paradj, according to Ibn al-Khaṭīb, Iḥāta, MS. in the Escorial, i. 189].

(E. LÉVI-PROVENCE)

MEDINACELI, a little town in the N. E. of Spain on the railway from Madrid to Saragossa, about halfway between these two towns, some 3500 feet above sea-level on the left bank of the Jalón. In the Muslim period it was called Madinat-Salim, which is not to be confused with Madinat Ibn al-Salane, or Ibn Salane in the Seville district (Idrisi, Descr. de l'Espagne, 174/208 and note 5, 177/215), the modern Grazalema in the province of Cadiz.

The Arab geographers give brief descriptions of Medinaceli. According to Idrisi, it was a large town built in a hollow with many large buildings, gardens and orchards. Abu 'l-Fidā' says that this town was the capital of the Middle March (wādghar al-await); Yākūt adds that Tārik [q. v.] found the town in ruins at the conquest of Spain but it was repopulated under Ibulm and became a prosperous town.

Through its geographical position, Madinat-Salim was of considerable strategic importance for the Umayyads from the fourth century onwards. It was on many occasions, as the last stronghold on Muslim territory, the point from which forces assembled at Córdova finally started for expeditions against the Christians of the N. E. of the Peninsula and to which they retired. Though somewhat decayed down to the reign of 'Abd al-Rahmān III al-Nāṣir, it was rebuilt, if we may believe the detailed evidence of a chronicler quoted by Ibn Ṭāhir, in 335 (949): this ruler put the work in charge of his client, the general Qālib, and all the governors of the country lent their aid in the work. This Qālib remained governor of Medinaceli and all the Middle March until the power was seized by al-Muṣārāf Ibn Abi ʿAmar [q. v.]. It was in Medinaceli that this famous hāḏiḥī died on 27th Ramadan 392 (Aug. 10, 1002) on returning from his last expedition against Castile. In the following century Medinaceli was frequently taken by the Christians and retaken by the Muslims, before being finally incorporated in the Kingdom of Castile.

MEDINA-SIDONIA, a little town in the S.W. of Spain, in the province of Cádiz, almost equidistant from Algeciras and Jerez de la Frontera. Under the name of Shadhîna it was in the Muslim period the capital of the district of this name; its territory formed part of the province of Seville and adjoined that of Moron.

MEDJELLE (a. meqalla). Under this name the Civil Law Code of Turkey; is generally known it is an abbreviation of Medjelle-i âhkâm-i 'adîsî. The elaboration of this Civil Code took place between 1869 and 1876 and was a part of the legislative programme of the Tanzimat (q.v.). It had been preceded by a Penal Code (1858) and a Commercial Code (1861), but while these two codifications had been based in a large measure on the laws of European countries, the Medjelle was a codification of that part of Hanâfit fiqh, which treats of obligations (mi'âma'ât). The codification was done by a commission of seven members, having as pre-sident Ahmed 'Ijwadet Pasha (q.v.). In a preliminary report (fadl-bu'a), dated 18 Dhù 'l-Ḥijjâ 1285 (April 1, 1869), this commission explained the reasons why a codification of this matter had become necessary. The previous, scattered secular tribunals (nişâmîye) had often to deal with matters of common civil law, but the judges did not know much, as a rule, about fiqh; it had, therefore, been thought wise to appoint the president of the so-called religious tribunal at the same time president of the secular tribunal. This, however, did not prove satisfactory and it was necessary to put the main points of the law of obligations into a code that could be more easily consulted than the voluminous fiqh-books. Among the previous, endeavours to bring Hanâfit law into this form the commission mentions expressly Ibn Nujjâm (q.v.); the biography of this jurist is to be found at the end of the first part of the Cairo edition of 1334 of his al-Bahr al-râîf [communication of Dr. C. van Arendonk]). The editors have followed as a rule those opinions of Hanâfit doctors, which are most in harmony with the exigencies of modern life and business. It is, however, expressly stated that the Introduction (muḥaddîme) and the first Book have been approved by the Shahâk al-Islâm and other prominent jurists.

Though the different parts were successively sanctioned by Imperial khatt (with the formula muqaddîme 'amel ilâm), the Medjelle cannot be said to have had an exclusive authority in the matter regulated. The jurist were perfectly free to form their own opinion as regards the study of the Hanâfit law books and this liberty was really used.

The muḥaddîme of the Medjelle contains in 100 articles a number of principles (kuwâ'id) as already elaborated by Ibn Nujjâm and his school; then follow sixteen books (kîthâb), beginning with the Kitâb al-Bayân; the last four books deal with process matters. The whole has 1,801 articles. The first part of each book gives definitions of the technical law terms used, and most of the articles are followed by examples taken from the collections of fećâצûn. The Introduction and the first book obtained the imperial sanction on the 8th Muharram 1286 (April 20, 1869) and the last two books on the 26th of Sha'bân 1293 (September 16, 1876).

The text of the Medjelle is to be found in the big code collection Davûtûr (the introduction and books 1.-viii. in vol. i. ; books ix.-xiv. in vol. iii. ; and books xv. and xvi. in vol. vi.). It has been published several times with a commentary, as the Medjelle-i âhkâm-i 'adîsî şarî'î by H. M. Diya'd al-Dîn (Der-i Se'âdet 1311) and a work under the same title by the in his time famous jurist 'Aţif Bey (Der-i Se'âdet, in different parts from 1328 to 1339; most parts had a second and the first part a third edition); the latter commentary, however, does not go beyond art. 1448. A full French translation is found in G. Young, Corps de Droit Ottoman, vol. viii., Oxford 1906, p. 170-446.

Since the Great National Assembly has adopted, on February 17, 1926, a new civil code (Kânûn-i mideât; cf. Ortrutte Moderne, vi. 134 sq.), which is substantially the Swiss civil code, the authority of the Medjelle has disappeared.

(J. II. Kramers)

MEDJIDIYE. In February 1814 (Muharram 1260) in the reign of 'Abd al-Medjul the Turkish coinage was entirely re-organised on European models and this currency is known as the Medjidiye. The name Medjidiye was also given to the largest silver piece in the new coinage: the 20 piastre piece of this new issue; it weighed 372 grains (24.68 grammes). (J. Allan)

MEHEDJA [See M. I. Mâhîyâ].

MEHEMET, MEMHED, MEHEMED. [See Muhammed].

MEHEMED PASJA. [See Karâmî Mehemed Pasha].

MEHRI 1), the language of the Mahra country in Southern Arabia, which with Shâwî (spoke in the mountains northeast of Za'far) and the dialect of the island of Sokotra forms a separate branch of South Semitic; the relation of this branch to the now extinct languages found in the inscriptions of the Sabaean, Minaean and Hadhramawtans has not yet been accurately defined. Mehri itself as a spoken language in South Arabia is seriously threatened by the steady advance of northern Arabic. The Mahra people are already almost all bilingual and their native idiom is very much influenced, especially in vocabulary, by northern Arabic; for example, of its old numerals it has preserved only the first ten; all higher numbers have been replaced by the northern Arabic forms. It is therefore not always easy to distinguish with certainty old words which are also found in northern Arabic from later borrowings.

As regards phonetics, the Mehri consonants are in general agreement with Arabic and Ethiopic. Of the laryngeal loss of 'ain, which still sur-

---

1) In this article the author's system of transliteration is retained for philological reasons.
vives in Shihwari, is characteristic of Mehrī. The uvalar plosive \( \ddot{a} \) seems always to be voiceless; of the palatals the \( s \) which still survives in Shihwari, is always voiceless, as in northern Arabic, to \( \ddot{a} \).

The case of the sibilants is particularly characteristic. The original Semitic \( s \) seems to have been replaced by \( h \) in genuine Mehrī words, initially for example in \( hima \) (he) "heard" (compare mi'ma "ear-muscle") and mediavly in \( neh\dot{a} \) "forgotten"; in the final position it may be dropped, as in \( t\dot{a} \) "a goat", \( h\dot{a} \) "head". But when we find alongside of \( hated \) "to obstruct" \( sa\dot{a} \) "to carry over, to come to an agreement", which is connected with the Arabic \( su\dot{d} \) "straight, correct", the latter can only be regarded as borrowed from the Arabic. This however is also found in words like \( n\dot{a} \) (he) "put on" and in the pronoun of the third pers. fem. \( s\dot{u} \), etc., in which any such borrowing is highly improbable; these must therefore belong to a dialect for which the phonetic law \( \ddot{s}h\dot{h} \)--\( h \) did not hold. The primitive Semitic \( \ddot{s}h \) has also survived where a following \( t \) was assimilated to it, even when the consequent doubling was dropped, as in the prefix to the causative reflexive \( \ddot{u} \).

A primitive Semitic sound seems also to have survived in the \( sh \), to which Jahn has given the name "lateral", and which is transliterated in the Vienna texts by \( s \); it corresponds etymologically to the Arabic \( sh \), and therefore to the \( s\dot{h} \) in Canaanite and Old Aramaic. Whether the position of articulation was exactly the same cannot of course be decided; but the description of the sound as "lateral" probably means the same as the pronunciation with flattened tongue which is assumed for Canaanite and Aramaic. Among the dentals we find alongside of \( d \) and \( t \) also the fricatives \( \ddot{d}h \) and \( \ddot{d} \) in native as well as loanwords; but in both groups the fricative pronunciation has frequently been dropped, e.g. in the case of \( \ddot{d}h \) regularly in the demonstratives alongside of \( th\dot{a}l\dot{a} \) "this" 300. we have \( \ddot{t}h\dot{a}n \) 30. In \( s\dot{h} \) "behind" \( \ddot{s}h \) appears instead of the \( \ddot{t}h \) in the Arabic \( \ddot{s}h\dot{a}r \) "track", probably under the influence of \( r \), like \( \ddot{d}h \) in the Ethiopic \( \ddot{s}h\dot{a} \) instead of the \( \ddot{t} \) which we should expect. So also in the case of \( z \), the fricative has in many cases become a plosive \( \ddot{z} \) under conditions still to be explained, as in \( \ddot{p}\dot{z\dot{a}}r \) "moon", \( \ddot{z}\dot{a}m \) "great" = Arabic \( \ddot{z}\dot{a}m \), \( \ddot{z}\dot{a}n \).

The voiced \( \ddot{d}h \) has a lateral articulation differing from the Arabic. In the labials, as in Arabic, the voiceless fricative \( \ddot{d}h \) corresponds to the voiced explosive \( b \). The liquids, \( m \), when in proximity to vowels and palatals, is frequently more nasal than in Arabic, \( d \) and \( r \) before consonants frequently lose their own sound and merge in the preceding vowel, as \( m\dot{a}\dot{m} \) "slain" from \( l\dot{a}k \) 24 = \( \dot{a}k \); \( y\dot{u} \) "he carries" from \( \ddot{k}\dot{h}l \) (by dissimilation in \( h\dot{a} \) "night", \( k\ddot{l}\dot{a} \) "every night"), \( k\dot{a}n \) "horn", \( k\ddot{a}n \) > \( \ddot{k}\dot{a}n \) "belly".

The vowels are frequently prefixed with the laryngeal fricative instead of the laryngeal plosive, i.e. we often have \( k\dot{a}r \) for \( k\ddot{a}r \). As in Ethiopic and probably also in primitive Semitic, only two short vowel sounds, \( a \) and \( i \), are distinguishable, while of long vowels we have \( a \), \( \ddot{a} \) and \( i \). The old diphthongs are contracted to \( e \) and \( e \). These basic vowels are however more strongly affected than in Arabic by the predominant articulation of consonants. The distinction between \( a \) and \( e \) is thus frequently obliterated. Stress brings about the disappearance of short vowels in unaccented syllables and lengthens them in accented ones, whereas \( a \), if not retained by laryngal-
genders as in Arabic, m. dāl, f. dāl, in plur. comm. dāl; they are further combined with (neither to m. wālī, f. dīna, pl. lā'ī, with k to m. dākī, dīqī, pl. lāqī, or with both elements to m. dākān, f. ḍīmān, pl. ḍīmān; in the basic form both genders when unstressed sometimes coincide in dī, in the combined form in ḍīmān. The basic form ḍīmān is used without the addition of gender, pl. lā, lā, lā, serves also as a relative. In the interrogative besides the personal pronoun "who?", we have the neuter hē <u>at what" of the numerals, as already mentioned, only the first ten have survived. "One" in the basic form hād is only used as an indefinite "any one": otherwise it has been driven out by the relative phrase dād; talk; the fem. talk, the ending of the nomina unumītis (see below), which by analogy has been transferred to 2 and the other numerals—except 4 and 5, perhaps under the influence of mānī, which follows the regular phonetic law; from *pawīt we get by haplography *pawīl. The numeral 2 agrees in its stem with the Aram. ḍām; hē ḍām; hē ḍār; hē ḍām, ḍār, ḍān, ḍār, ḍān from ḍān is the old dual ending of the feminine. In 3 the initial letter, as in Saharian and Ethnopic, is dissimilated (from the final tā) to and the final nā becomes a phonetic: ḍātī; the feminine form after dropping the l (see above) has dissimilated the final ṭ of the stem to f, becoming ḍāītā. 4 and 5 lose in the feminine the unaccented first syllable: ḍāī; 5 loses the last radical, weakened to h; in the masculine the basic form hāmān, hāmān has through vowel assimilation become hāmān through hāmān, the feminine shows the feminine ending ē, to which the vowel of the stem is assimilated: hāmān, 6 and 7 change the initial ṭ to h, while the final ṭ of 6 as in Arabic by mutual synthesis becomes ṭ; ṭ; 7 following phonetic laws: m. ḍābān, f. hēkē,t 9 loses its initial sound, which had already lost its vowel in the unaccented syllable: sē, f. sāt, 8 and 10 show, following regular phonetic laws, m. hēnumā, f. hēnumītī; m. hār, f. hārī.

Among the nouns, the most noteworthy for their form are those which were originally monosyllabic: they are found throughout with the prefix as (hot) as in īmābīl alongside of kār (see above) "son," a new formation (frequently Bittner, i. 28, g), following hērī alongside of hērī "daughter," hāmān "water," hēmān, hēmān, hēmān "day," "sun," alongside of māhī "to-day," hāmān alongside of hēmān (hot, hāfīl see above) "night," hērī "father" and hērī "hand" are therefore not to be equated directly with ah and ṭ with h for h instead of hāmān, as it is found in ūmān "mother," but we must recognize in them as well the prefixed syllable which is found also before some nouns which are tential in the other Semitic languages, like hērī "head" = ṭālīk, hāmān "soul," which Bittner explained by metathesis, hērī "vowell" = Ar. mād, ḍādī, pl. ḍaṭādīn, "great, elders = Āt, mād, pl. aswādīn, "old she-camel, head of a family," hāmān "water, skin" = Hebr. hāmān, Accad. hāman. To hēmān "in a valley" (Müller, ii. 24, s) this syllable (here assimilated only to the beginning of the next word) serves as an indeclinable article, which has lost its significance in the above word. The feminization of the masculine stem, as in modern Arabic and in Hebrew and Ethiopic only in adverbs. The suffixal syllable is the plural ending of the masculine in unaccented syllables (Gramm., 1. 442), just as the fem. sī it takes the masc.
ending -a (as above), or it may be, as Rhodokanakis (of cit., p. 8) suggests, the other plural ending -an, as in Accad. *kullitum "all." In the formation and use of the broken plural, Mehri adopts a mean between Arabic and Ethiopic. Characteristic are the number of formations from plurals of the plural, such as are found also in Arabic, e.g. *šurq "a piece of wood," plur. -šurq, then *šurqayt and on that basis širayq (Rhodokanakis, p. 7.) Double plurals also arise through the addition of the masc. pl. ending in in in *řenāt "wind," ḥamītun "tails," ṣemin "bows," to which the original plurals širq, ḍerob, ḍîmûn are then taken as singulaires (Rhodokanakis, p. 9) and again with vowel reduction after the accented syllable in kūltûn "hitches," ḍāhātun "daughters," in which however Rhodokanakis (p. 15) sees the ending -an.

The case inflections, except for a few remain from the accusative in some adverbs, have completely disappeared. The genitive is expressed by the simple juxtaposition of two nouns, more frequently by the relative, sometimes with a demonstrative suffix, as in gēldēt de gēgelīs ḥēbē dī bagri "the skin of the steer, the young of the cow," Hein, p. 15, 16, alongside of  тебē ṭīvec "the young of the ox," ibid., p. 37.

Determinatives and indetermination are never indicated. Nomination only survives in some adverbs, like fenāmēn in "in front," alīven "behind," nyfèren "later."

The prepositions of Mehri are for the most part new formations, some of uncertain origin. Of the old Semitic prepositions, only bi (ba, b), bēn, ṣad "after," fi ẓūlan and ilā, and min have survived; ḫa, ḫe has come to mean "with". The place of li has been taken by ḫa, ḫe, which Bittner traces to the 1st syllable of ẓūlā, but this is not very probable. The other prepositions have been replaced by words indicating place, like fenāmēn, fenī "before", sār (properly "track") "behind", tawwīl, ṭawwīl "at" (properly a T-nomen connected with Arabic ṭawwīl "to be neat", rather than with Syriac ṭawālād, as Bittner considers), ḫaqāl "below" (properly "depression"), but Sukūfl, ḥēt, Müller, nii. 54 infra), or parts of the body, like ḥrēk "in" (lit. "in the bosom"; Christian) and ṣār, ṣār "upon" (properly "back") which receives distinctive forms from the simple form, is found in the active as ḫantīr "wrote" and as ḫantīs "was clothed", an intensive which has however dropped the doubling and thus coincides with the purpose, and a causative with the prefix ḫa, which in the imperfect also sometimes has the same form as the intensive (e.g. ḫwiirmīd "to tend a sick person", impf. ind yihrīmīn, subj. yiḥramāt, but ḫajalāt "to remedy", impf. ind yiḥajalīn, subj., yiḥajalāt). The causative has very often a passive sense, like the simple intrasitive verb, with which it often coincides as an inner causative. To each of these stems there is a reflexive with inserted t: to the simple verb in double form as ḫatīt, or kattīt, or with assimilation to the vocal of the simple verb kattīt, to the intensive kattīt, to the causative from the simple form ḫakāfīr "to beg pardon", to the purposive stem ḫāñkēm "to go to law", ḫagāśīd "to quarrel."

In contrast to the perfect (quoted above as the normal form), which expresses a fact as such, there is an imperative in the active ḫāł "break", in the passive ḫālūs "put on", in the intensive ḫālsīr "travel", in the causative ḫakītēb "cause to write", in the reflexive kītītēb, kītōtēb, kītīb, in the caus. refl. ḫagāśīfī and ḫāñkēm. From these imperatives is formed the affective mood (Bittner's subjunctive), like yiḫbēk "that he crushes" yīḥbēk, "that he put on", yīṣāfīr "that he travel", yīḥakītēb "that he write", yīkītītēb, yīkītōtēb, yīkītībīfīr, yīkāñkēm. Next there is expressed the progressive aspect, which presents the action as in process, often with limitation to the present and future, a form which doubles the second radical in the simple verb but, as in the intensive, has replaced the reduplication by lengthening the vowel as in yīṭōbīr "he crushes", so also in the causative yīḥakītēb, but in the intensive and sometimes in the reflexive shows an ending corresponding to the Arabic energetic, as in yīṣāfīn "the travels", refl. yīkītētēn and yīkāñkēten, caus. refl. yīkāñkēm. In the intransitive simple verb, the affective mood serves also to indicate that an event is happening at the present time (as a so called indicative); on account of the relations of the intransitive, to the caus. and refl. already referred to this formation, but now for the indicative only, is transferred to these forms in yīḥakōkēb (alongside of yīḥakītēb), yīḥāgōfīr and yīkītētēb (from kātōb).

In the so called perfect in active verbs, the stress remains on the second syllable of the stem, except in the exception of the 3rd fem. sg., the ending of which ẓā, as in the noun, attracts the emphasis to itself (ṭeḇērōt). The 3rd pl. has lost the endings and replaces them only in the masc. by em, which comes from the pronoun. The consonantal terminations have lost their vowels, but the double consonant at the end of a word is separated by the insertion of an epenthetic vowel only before the sonant n of the 1st pers. plur. (ṭeḇēron); before other terminations the vowel ḫa, ḫi, ḥa remains short. As in Ethiopic the initial of the 2nd pers. is assimilated to that of the 1st (ṣ-); as in the suffix, the 2nd fem. sg. appears in the palatalised form ḫ. The intransitives with the exception of the 3rd fem. sing. retain the stress on the first syllable of the stem, the vowel of which is assimilated to that of the second (ṭiḥō). In the intensive the lengthening of the a to ḡ is found only in the forms which do not add a termination.

In the imperative in the transitve simple verb and as well as in the causative there is no distinction of gender in the singular. In the intransitive form however, the vowel of the second accented syllable of the stem was assimilated to the feminine ending i, so that even after it was dropped the distinction between m. teborah and f. tevir was retained, similarly in the reflexive fīḥōmīn, fīḥīmīn.

Accordingly, in the intensive and its reflexive and in the causative reflexive the distinction of gender is expressed also by changing the accent of the vowel: m. ṣūfar, f. ṣūfar, m. ṣūbāb, f. ṣūbāb, m. ḫāñkēfī, f. ḫāñkēfī. In the plural the genders are distinguished by the endings in -em, f. -en. In the intransitive simple form however, the vowel change is transferred from the singular to the plural, m. teḥōrem, f. teḥōrem and in the reflexive of the scheme kētēb, with peculiar change of function m. kētēbēm (assimilation to the indec. imp. yīkítētēm, pl. yīkítētēm, f. kētōbēm. The same change of function is also found in the perf. of the causal: 3 m. pl. hākāñkēm, f. hākētēb. Out of the imperative arises the so-called subj. 1
of the imp.f. by means of the same personal prefixes as in all Semitic languages and with the endings i for the 2nd sg. f. and m. -em, f. -en for the plural of the 2nd and 3rd pers. In the corresponding indicative the distinction of gender is expressed in the second person by internal vowel change, m. te‘eb, f. te‘eter and on the addition of the plural endings the short vowel (yitberem etc.) is restored. In the intransitive simple verb the moods are not distinguished, the genders of the 2nd pers sg. are distinguished by tawaqit ‘to be as in the imperative; this vowel change is also transferred to the plural (m. tathorem, f. tathoren) and with exchange of functions also to the 3rd pers. (m. yittharem, f. tathoren). In the intensive, distinction of gender in the second person is expressed only in the singular (subj. tinfer, f. tefer, indic. m. teferen, f. teferen); before the endings, the vowels are short and the mood endings give way to the plural endings so that the 3rd pers. f. sg. and pl. are the same: teferen.

Participles are in the simple form active tebrone, f. tebrite (see above), pass. net Ahmed; in the derivative stems as in e.g. intensive mekhtab, f. mekhtatite, cause, mekhakte, f. mekhaktite; in the passive they follow the model of the simple verb, makhads ‘despatched’ (in the intensive only when borrowed from the Arabic like meqaddim ‘chief’). The infinitives are in the simple verb of the form tiher (more rarely like qebel ‘to carry’, ninie ‘to be ill’) or qitiher ‘to take’ (frequently with med. lar), with prefix like muntal ‘work’, or with ending like qubos ‘to forgive’; in the intensive wawd ‘to cool down’, in the causative and reflexive with the ending i; taw (taw) as in Eth. hakhteb, keteteb, shaqshafer.

In the verbs with laryngal as second radical, the perfect is e.g. dykelm ‘he went’; it is therefore, as in Ethiopic, the intransitive scheme with the type of the transitive making itself felt; the imperfect is therefore inferred as in the intransitives without distinction of mood. As a first radical, a laryngal frequently produces intrusive syllables, as subj. yibebem ‘let him judge’. Hamza, arising out of ain as first radical, acts in the same way, e.g. ya’anas ‘let him become hard’ (cf. Arabic ansafa, not Hebrew annas as Bittner suggested), while an original hamza disappears, as in yameb ‘let him say’. As a second radical ain disappears, but keeps a in the perfect of the simple verb unchanged, as faan ‘trust (past tense) with the lange’. In the verbs with third an unlike Ethiopic, trans. and intrans. formation is distinguished in the simple verb, whereby the perf. of the trans. coincides with the intensive (date ‘he paid’ like dama ‘he collected’): the intransitives distinguish the moods of the imper. exactly like the intransitives.

In the verbs with first waw, the primitive Semitic formation of the blunter stem is lying out. It is true we still find the imperative ain ‘give’ with the subj. yizen and ay ‘come in’ with the subj. yikhe, but yikhe is already limited to the feminine and the masc. wakhab formed from it; we have besides the reduplicated imperative zim, kekkib, as well as dhabak and dhabak ‘to load’, and with vowel lengthening bakk ‘to calm’ and dyer ‘to be necessary’. In secondary formations the 2 disappears from the root in some forms of the reflexive, like watlab ‘to go in the afternoon’, imp. ind. yickhab, subj. yitkhab, inf. yakhab and wakhab ‘he awakened’, imp. ind. yetkab, subj. yetkab, inf. teltefin. For the rest the first-waw verbs inflect regularly, and the few first-y verbs follow them.

The third-hamza verbs very often coincide with the third-waw and third-y. In the intransitives in the simple form we have m. taw, and in the intransitive z, which in the perfect in the forms with consonant endings merges with the stem, e.g. kew ‘he found’, but 2.m. and f. kask and lini ‘he saw’, but linc. In the 3rd plur. m. besides the original kiten, we have alitken with secondary vowel differentiation, and with a new formation on the model of forms like kuskem also kusem. In the imper. and subj. the form of the third-y, like kes, yikhe has predominated; in the indic. the unaccented final vowels disappear except in the 2. f. sg. (lekhyi). The denominative biru ‘to bear’ from ber ‘son’ follows completely the strong paradigm tiher, only the 2. of the 2. sg. f. is also found in the 3rd sg. f. (tibit) and 2. pl. (tibir). The strong stems only the 3rd m. sg. of the perf. in the caus. (hekihi) and its refl. (hekihi) is formed after the trans. simple verb, in all other forms the paradigm of the third-y is followed (keto, ketsi, katsi etc.). But the final vowel is lost in the imperative always and in the subj. of the reflexive sometimes (katir ‘hide thyself’, subj. jikatir, but qatir ‘speak’, subj. qehtin); and both forms lose it regularly in the causative and its reflexive (hede, yikhe, sometimes with lengthening: heyder ‘get up’, ehye, yeye, zulb (Zah, p. 113, 25) ‘give heed’, yigish).

The medial a and i verbs are, as in Ethiopic, to a great extent assimilated to the plan of the strong verbs, ya and waw being treated as consonants. Only in the simple form of the med. a is the old Semitic inflexion retained in principle. But the old form dimit (frequently dimit) has become indicative, and a new subj. has been formed with vowel change, yimait, followed by the imperative yimait. As in the intransitives, the ending of the 2nd sg. f. reacts on the stem in the indicative: temit, whence also the fem. plur. temiten to the m. temiten and the 3rd pers with these reversed: temiten, temiten. In the perf. meit < mata is retained but abbreviated before consonant suffixes, as met; the participle from it is meten. But the pass. part. is quite strong in formation as makhe ‘feared’. Some verbs, probably formed from nouns, follow the strong paradigm throughout the simple form, like tanit ‘to be finished’, haiaret ‘to be mad’. This is always the case in the blunter stem of the base. e.g. liwak ‘to long for home’ and in the causative, as haiteb ‘turned’ and its reflexive, e.g. sbakub ‘warned himself’, as well as in the med. ya verbs e.g. sey ‘travelled’.

The intensive stem shows a peculiar formation, e.g. avoq ‘returned’, imp. i. ind. avoqied, subj. yavoqid, imp. avoqit, part. maavoqide, inf. avod (from the simple verb, elsewhere however like taavit) and avit ‘called aloud’ following the formation of the doubled verbs.

The biliteral roots with short waw (the so-called med. gem. or doubled verbs) have retained the primitive Semitic inflection with doubling of the second radical only in the perfect of the simple form; in addition the consonantal endings take some epithetic vowel: 3rd m. temm ‘was at an end’;
f. termo, 2d m. tennem etc. But the vowel of the stem changes without regard for the meaning; he-s "thought of", riis "creep" (spider), hadd "stopped", zil "lost the way", guff "covered", döö "creep". The imper. and subj. follow the pattern of the strong verb, e.g. wäoni, yatim. The indicative however is yätim (yätim). This is a new formation on the analogy of the med. 6, like yömîd : yöntö. The simple form yätimna had avoided the threefold repetition of the same sound just as the intensive has done, but forms in the perf. termun, imper. yätim, subj. yätim (with assimilation to the vowels of the inf. termun).

The causative of the simple form follows in the perf. kisäni and imper. the strong paradigm e.g. yämäni, while in the subj. the succession of similar consonants is avoided, as in Aramica, by doubling the final radical: wätiini, and in the perf. kätten and part. mahattanö. The causative of the intensive however follows its formation, e.g. yämäni, etc. The reflexive of the simple form replaces in the perf. (after the model of bätät) the repetition of the second radical by doubling it: döööni. Other respects follows the pattern of the strong verb e.g. ind. yätäni, subj. yätäni, imp. yätät, part. yäsätäni, inf. yätäntä. The causative reflexive follows the same pattern but with doubling of the 2nd radical in the subj and part.: yömäntä, "the attained", ind. yämäntäni, subj. yämäntäni, part. yämäntäni.

The suffixes are added to the 3rd pers. sg. m. of the perf. with the "doubling vowel" i, which as in the similarly constructed forms of the Syr. imperf. (e.g. nedelâ) may have been an originally independent particle, which in Arabic is expanded to yät, cf. e.g. zaabi "he met her" with zaabit. Only before the 2nd pers. sg. m. suffix, it appears instead for unknown reasons. This i may also appear in association with the element t found in North Semitic (Hebrew 3th, 3rd etc.) probably abbreviated from the verb at mitto "come", which with the 2nd pers. sg. m. take also shows t/y. These independent suffixes however may also appear after all the other verbal forms, which otherwise take the suffixes direct or with an enclitic vowel.

The vocabulary shows the closest affinity, apart from later borrowings, to northern Arabic, but possesses, in addition to many characteristic new formations like i'si "mouth" (cf. Arabic ishâri ket "air-hole"), many old words which otherwise survive only in outcry regions, like fam "foot" as in Arabic, instead of the phonetically inconvenient rcf. so: lô edit, eit. Sok. taten, i.e. Müller, iv. 170. 22, 1. 2., "sheep" = Fg Aram. and M. and ihtâ (see Lardzsists, Ep. ii. 44). 176: Yâhâm, i.e. 215 notes: fástâ, "together", cf. occurs in the "to resemble" the language of the Berbers and that of poetry in addition many special features, particularly in its vocabulary.

The colonists, most of whom have come from Algeria, cultivate mainly wheat, of which they are obtaining increasing yields. The cultivation of the vine is increasing each year. The region of Mawâlîn Idrîs is one of the principal centres of olive-growing in Morocco (400,000 trees); 330 farms are laid out in the district, covering 85,000 hectares. Official colonisation which has now disposed of almost all the reserved lands has been outdistanced since 1927 by private colonisation. The native farms (137,000 hectares) tend to disappear from the plain and to confine themselves to mixed farming in the mountains. Prospecting for minerals has only been done piecemeal; traces of petroleum have been found beside Petit Jean and of lead in the Central Atlas.

The government of Meknes, which is a makhzûna town, is in the hands of a bâbî. He is also bâbî of the Bâbkhers, who have retained a relic of their past greatness in a special statute and a high title. He has under his command, and is independent of that of the bâbî. The Inhabitants of the town, many of whom have built their houses here, because of the advantages of the site, have now built houses around the old town. The place has become a centre of trade and industry, and the bâbî has become the head of the gnawa, the inhabitants of the town.

The government of Meknes consists of two distinct elements: the bâbî, Bâbkhers, Berbers and Jews. The bâbî bâbî, who have played their part in the history of the town, and retain privileges of the numerous descendants of Mawâlîn Idrîs, only the families residing in Fas and Meknes are allowed to share in the income of the zîâyan of Fâs and the bâbî bâbî, who have many privileges of their own, form a kind of aristocracy, generally prosperous. The Bâbkhers- descendants of the 'abd of Mawâlîn Idrîs, up until 1912 formed an unreliable element, which was always a nucleus of trouble. Since that date they have become the leaders of the tribes of the Bâbîb and Baqiq, who live close to the town of old bâbîs and gardens which belong to the Meknes, and in the old kashî of Mawâlîn Idrîs in the bâbî Makhzan quarter. Their houses, roofed with thatch, look like African encampments. But it is the Berber (Bâbîb) element which predominates at Meknes and gives it its desire for independence, a feature of which has for centuries been a headache of Fâs. It is the Berbers of the mountains, who give it its tone; when they come down to the town, their women give colour to the streets of the bâbî with their short skirts, their leather gaiters, and their wide-brimmed hats. The Berber elements of the plain are much more mixed, having undergone many vicissitudes since the day when Mawâlî Muhammad b. 'Abd Allâh inaugurated the policy, considerably practised by his successors, of transferring tribes. A considerable part of the population of Meknes consists of floating elements who come, usually between harvests, to work as artisans. These immigrants almost all come from the south, from Tâdbîl in particular (potters, tanners and porters),
from Sīs (grocers), from Tūṭṭ (oil-makers), from Figg and Dāʻa (masons). The Rifans and Jbāla supply most of the agricultural labourers. A small number of Fāsīs, who have in recent years merged into the population of the town, are cloth-merchants, old-clothes-dealers and shoemakers.

Jews form a quarter of the native population. Foucauld estimated the miṣīrīd of Meknes to be half that of Fās. Chénier remarked on its prosperity. It has increased since his day as elsewhere and the position of the Jews is greatly improved since the establishment of the French Protectorate.

Religious life. From the presence of the Idrissids and Ḥasanids of the Ḥārūn, the proximity of the sanctuary of Mawlāū Īdrīs and the religious event of the celebrations of his miṣām (class. maṣūmīn, q.v.) every year, Meknes is one of the most important centres of šariʿīs. At the same time for the Berber population it is a centre of markab rites of the most elementary kind. All the brotherhoods that have zawiyas in Morocco are represented in Meknes. The most important are those of the Kādirīya, Tāqīnīya, and especially Ḥamādhā and the largest, the Ḥāwa, to which half the population is attached. Meknes, whose patron saint is Sīdī Muhammad b. Ṣūd and which contains his tomb under the khubba erected by Mawlāū Muhammad b. ʿAbd Allāh, is the capital of the order. This saint came here at the end of the 7th century. His teaching at first met with a vigorous resistance, which he overcame so completely that, when the governor of the town sought to take steps against him, the people protected him. Before his death he acquired an estate, constituted it khubba and set it aside as a cemetery. It is still used and many men of religion are buried there. The celebration of his miṣām on the first day of the miḥrīd (mawlid) festival is the great event of the year. The preparations for it begin forty days before and include all-absorbing ten days before the festival. On the day before or the preceding day delegations flock in from all parts of Morocco, following the traditional routes. The most generous hospitality is given to the pilgrims by the descendants of Shakh āl-Kāmil, who have the miḥrīd (Brunel). The excesses committed on the occasion of this pilgrimage have been frequently described. Many other special cults are observed in Meknes. Bū Ṣekrī is the patron of the graziers, and Mawlāū Īdrīs of the Zarihīn is the patron of the tanners, weavers and butchers (Mawṣiqna). There is even a cult of a living holy man, Mawlāū Aḥmad Wazzānī. As it was his custom to sit in the public way in a very simple costume, he was in 1917 granted clothes and a khubba at the request of Mawlāū Yūsūf. The khubba is at the entrance to a dispensary and the admirers of the saint come there daily to keep him company.

History. We know nothing certain about the history of the region in the Roman period nor in the centuries which followed. The most advanced Roman stations were on the slopes of the Zarihīn guarding the plain, out of which the warriors of the Central Atlas might descend, and perhaps throwing out a screen as far as the plateau of el-Hājīb.

We do not know at what date the people here had their first contact with Islam, nor even if it was not till the Hilālī invasion that Islam became securely established here. The Berber tribes of the Saiṭās and Sebū made the most of the fertility of their country. A tradition records that a fire destroyed the gardens there in 917. It was at this period that the country was covered, from Tāzā to Meknes, by the migration of a Zanīta tribe, the Mīkās, a section of whom, who received the name of Mīkās āl-Zatīn to distinguish them from the Mīkās Tāzā, who lived farther to the east, established themselves securely in the plain. The Idrissids met with a vigorous resistance from the Mīkās. They always found in them opponents whom they could not overcome in spite of several campaigns, and who were the medium of Umayyad intervention.

The Kīrihī records that a governor of the district, al-Mahdī b. Yūsuf al-Kezānī, having joined Yūsūf b. Ṭāshfīn, was assassinated by the tribesmen, but the terrified citizens hastened to disown the murder. At this date a few villages stood on the site of Meknes. One cannot say at what date, perhaps in the tenth century, they were grouped together to form the Tuqatīd mentioned by Idrīsī (Taqrīr, according to the Kīrāb al-Idābīrī). The population seems to have been more numerous in the 8th century than later, and prosperous. Enclosed by a wall, Meknes looked like a pleasure resort, with its gardens, cultivated fields, its mosques, its baths and water channels.

The Mīkāsīs vigorously opposed the Almohad onslaught. When passing through this region in 1120—21, Ibn Ṭūmāt preached here but he was not well received. Twenty years later, ʿAbd al-Maʾūnīn laid siege to Meknes but it was not he who took it. He left it to enter Fās, leaving the conduct of siege in the hands of Yāḥyā b. Yaghūmur. The Kīrīhī says the siege lasted seven years. The town fell in 1150. It was plundered, the defences dismantled, a part of its wealth confiscated, and all its garrison put to death, except the governor Yāḥyā b. Uqūf, who was said to have gone over to the Almohads before the surrender in order to save his head. On the site, or beside the ruins, Meknes rapidly rose again under the shelter of the fortifications built by the Almohads. At the end of the century, it had regained some importance and the mosque of al-Najdīrīn was finished. This is the oldest monument in Meknes: in 1756—757 Muḥammad b. ʿAbd Allāh had it restored and built the present minaret. The Almohads brought water hither from Tādījena, five miles away. In 1182 the khubba was said in five different places in Meknes and there were six gates in the wall which surrounded the town.

In the course of the following century, the intrigues of the Banū Marīn (q.v.) disturbed the country, where the fighting that accompanied the fall of the Almohads was particularly lively. In 1231—1232, al-Maʾūnīn had to intervene against the Banū Fāzāz and Meklāta, who were ravaging Meknes. In 1236—1237, as a result of the Marinid success in the battle in which al-Saʿīd's son was slain, ʿAbd Bakr entered the town. This occupation was only temporary but the Almohad restoration was not secure. In 1245—1246, the governor left there by al-Saʿīd was slain in a rising in the town in favour of ʿAbū Zakariyyāʾ the Ḥafṣīd. Al-Saʿīd again returned victorious, causing Yāḥyā b. ʿAbd al-Hakīk to fly to Tāzā. The Marinids had only two years to wait: after the death of the Almohad governor, he returned to Meknes to occupy it definitely.

The first period of greatness for Meknes dates from the Marinids. They set out to make it beautiful
like Rabat and Fás. Abū Yūsuf moved from Fás to Meknes, which owed to him a kāsha and a mosque (1276). Abū ʿl-Ḥasan improved its water-supply, built bridges on the road to Fás and began the Madrassa ʿal-Dīdīla which Abū ʿl-Ḥasan was to finish. It bears the latter’s name and is still the most notable building in Meknes, in spite of the indiscreet restorations carried out in 1917–1922. Other madrasas, ʿAṭṭārīn and ʿIlāla, were built by the Marinids.

During this period the political organisation of the country was developing in quite a different direction. The ʿIdrīsī shūrā, having assisted the Marinids to gain power, prepared to take advantage of the organisation which the latter had given them. Thus the foundations were laid for the movement which was to end in the partition of Morocco in the last years of the xvi th century into practically independent divisions. The shūrā were numerous in Meknes. When the weakening of the Marinids and the decline of their prestige made it possible, they supplied leaders. History has preserved the name of Mawālī ʿAzīzīn. The Waṣṣīns—only once intervened, it appears, when at the beginning of the xvi th century Mansūr b. Abū-ʿl-Ḥasan, having rebelled against Muhammad al-Borjūgī, found an asylum at Meknes. The Sultan besieged the town and took it, then installed his brother al-Ḥasan al-Kaddul there, who however did not prove faithful to him. The few years of independence enjoyed by Meknes were not particularly glorious. They mark, however, an epoch in the history of the town destined at other periods to be the prey of anarchy or the plaything of a tyrant.

The rise of the brotherhoods of the xvi th century found a favourable soil among the Mknāsīs. The Zāwīya Dżazūlā was established there, as in other places in Morocco. A few years later, Muhammad b. ʿIsā was teaching there.

Meknes was thus well prepared to welcome the Saʿdīns. When Muhammad al-Ṣaʿīd al-Shaikh approached in 1548 he entered the town without much trouble. The Marinid al-Naṣīr al-Ṣaḥrī was said to have agreed to hand over the town in return for the liberty of his father Ahmad Bū Zekrī, and the marabouts to have demanded the conclusion of such an agreement. Muhammad al-Ṣaʿīd, however, took a sufficiently sure method to establish his authority; when the Khāṭīb Abū ʿl-Ḥasan ʿAli b. Ḥarṣūz began to preach against him, he had him scoured to death. When he returned two years later, he was welcomed with gifts. The estimates of travellers of this time put the population of the town at 6—8,000 hearths. It was the only town in the region. The Saʿdīns took little interest in Meknes which never attracted their attention. The country was well in hand and the Berber tribes peaceful to such a degree that the road from Marrākush by the Tâlīla was regularly used. It was the practice to make Meknes the residence of one of the sons of the Sultan. There was however no important command attached to it. Leo Africanus credits it with a revenue equal to half that of the viceroyalty of Fás, which is astonishing. Under Ahmad al-Mansūr, Abū ʿl-Ḥasan ʿAli lived there and then after the second partition, Zūlān and, lastly Mawālī al-Ṣaʿīd, but as a prisoner in the last years of his father’s life.

The civil war which broke out on the death of al-Manṣūr placed Meknes at the mercy of the Berber risings and marabout intrigues. Mawālī ʿAbd Allāh b. al-Ṣaʿīd lived by brigandage and often found a refuge in al-Ḳasr al-Ḳabīr. In 1619, his brother Muhammad defeated him near Meknes. Abū ʿl-Ḥasan ʿIraqī mentions for the next year the rising of an individual who called himself the Sharif Amghār. In the midst of this disorder an authority gradually made itself felt, that of the Zāwīyas, and especially that of the Zāwīya of Dīla. In 1640—1641, Muhammad al-Ḥāḍīj was even able to seize the sovereign power and get himself recognised by Fás and Meknes after his victory over Mawālī Muhammad al-Ṣaʿīd b. Zūlān. He gamed over the Berber tribes, and Mawālī al-Ruṣūlī, in 1666 found the Bani Mṭr against him, allied with the Dīla’s Abū ʿAbd Allāh, and he had to fight them again in 1668.

Mawālī al-Ruṣūlī seems to have been interested in Meknes, the Kāsha of which he restored. In burying him in the mausoleum of al-Ḥāḍīj, Mawālī Ismāʿīl said he was fulfilling the last wishes of the deceased. But the most important event was that al-Ruṣūlī sent Mawālī Ismāʿīl to Meknes. The latter lived before his accession in the Almohad Kāsha, as a landed proprietor managing his estates. In his choice of a capital, we see the attraction of a rich district like this. He wished to build on his own image and real-ised his desires. For fifty years Meknes was simply the framework for his splendour, the scene of his extravagances. He at once decided to build himself a palace and at once a grandiose scheme was projected. He began by clearing a space. The houses adjoining the Almohad wall east of the town were destroyed and their owners forced to carry the debris off to a site which has retained the name of Hedum, then to rebuild on a site which the sharif enclosed by a wall to the N.W. of the mādīna. The site which he chose for himself was also separate from the town. His palace was built, and one even more splendid for his women. This first edifice, Dar Khirā, was finished in 1679. It was a series without intelligible plan, of tiyāds embellished with fountains, paved with marble, surrounded by galleries which were supported by columns of marble; the apartments opened on to three galleries. The sovereign’s palace was in two suites, that of his ladies in four and larger than his. His four wives and his favourites were equally splendidly housed. The other concubines, of whom he had 500 of all nations, were housed in rooms along the passage. At the end was a common hall, on a higher level, which gave a view over the gardens through iron grilles. The reception pavilions were planned on the same scale; one of them had forty rooms. The palace contained in all 45 pavilions and twenty kūbāb. The whole was surrounded by a crenellated wall pierced by twenty gates. It was triple in the N.E. with a road round it and it could be defended equally well against the interior of the kasāla. The bastions supported walls of guns and mortars. The women being subject to rigorous confinement and Mawālī Ismāʿīl being very meticulous in the performance of the duties of religion, a mosque was set aside for them. Another had begun in 1672, communicating with the town by the Bāḥi ʿIsī. Lastly the palace with its dependencies contained four mosques; two are still in use, the Dīmān b. al-ʿĀkhdar and in the quarter of the mews, very broken down, the Dīmān al-Ruṣūlī. To the south was a garden, the area of which is equal to that of the present mādīna, an
orchard in which olive trees predominated. Farther on were the stables to which the Sultan admitted only picked horses, to the number of 1,200; two parallel rows of arcades about 100 feet apart. In the centre ran running water. Each animal had its stall and a shelter for its equipment. Opposite was a stables, the āri, which supported a supplementary palace with twenty pavilions. Between the palace and the stables was the granary, forty feet high and big enough it was said, to contain the whole harvest of Morocco. At the sole was a pond for irrigation purposes and also subterranean reservoirs of water in case of a siege.

The buildings did not stop here. To the south-west of the town lay a city of pleasure, Ḍāmil al-Kuṭb, where the officials had palaces, where Mawāli ʿIsāfīl himself had his mosque, his madrasa, his hamam, his fondāl and the offices of the ministry of the Treasury, with the shops of the Shāfīs traders. In 1732–1733 Mawāli ʿAbd Allāh, on returning from an unsuccessful expedition into the saḥ, had the Madin al-Kuṭb destroyed by Christian slaves. There is nothing left of it today except the Bāb al-Khamsī, dated 1667, one of the finest and best preserved gate in the city.

Lastly a site was reserved for the troops. To the west of Meknes a large āra was settled with ṣabīs and their families. To the east of the Dār al-Mahbūn, five kābās for the 150,000 men of the ghīb were gradually incorporated in the great kāba.

After fifty years of unorganised but superhuman effort, the buildings were not yet completed. It was in 1731–1732 that Mawāli ʿAbd Allāh finished the surrounding wall and the Bāb Manṣūr, the most finished example of the Ismāʿīlī gate, pandentives, of proportions by no means perfect but imposing, of which the Bāb al-Bahrīn and the Bāb al-Xān are the other two finest examples at Meknes at the present day. This name of a renegade, Manṣūr al-Kuṭbī, was no doubt that of a keeper of the gate. Mawāli ʿIsāfīl directed all the operations himself. During the last twenty-four years of his reign he never spent twelve months on end at Meknes. But he returned there after each expedition; in proportion as his ambition and his power increased, his despotism and the needs of his government, his army and his family grew. His scheme became more and more grandiose: the work done was found unsatisfactory, modifications were made, buildings taken down and the work begun all over again. The result certainly was magnificent and imposing but also odd and varied.

All the country helped in the work. Mawāli ʿIsāfīl collected materials wherever he could. Volutes, chafas, marquetry were plundered. If he destroyed al-Badi, it was perhaps out of jealousy of Šāhān work or perhaps simply to get material. Like Ahmad al-Manṣūr, he procured marble from Fustat. One day when a caravan ship had stranded near Tangier he ordered the Gunyahī to bring the coffin from it by unused manual labour. When he died the columns of marble which were still on their way were left at the roadside.

Labour was remunerated by similar means. The Sultan imposed days of labour on the tribes, forced labour as he pleased, sent his ministers to the workshops, but relied mainly on renegades and Christian slaves who were his permanent workers. From 1680 the work was pushed on frenantically. All the Christians in Morocco were collected there. The Trinitarians of Fás joined them. The slaves were at first housed in sheds near the building-yards, then they were moved to the Dār al-Mahbūn, then to the stables, under the arches of a bridge, where their lot was particularly miserable, finally to the interior of a ruined bābījī, east of the town along the north wall of the Dār al-Mahbūn. They were able to organise themselves a little there, to build themselves a church, to have chapels, a convent and infirmaries. A pharmacist monk made up a medicine, the “Christian decoction”; this was the means by which humane relations were established with the natives, even with the dwellers in the palace. Their last historian has reduced the number of Christian prisoners in the service of Mawāli ʿIsāfīl to its real figure: they did not as a rule reach a thousand and the Sultan, in the course of over fifty years, himself killed only one hundred and nine (Koehler).

The emperor revealed in his palaces his extravagance and his cupidity; he accumulated wealth as he did buildings, but only to hide it. The consuls and ambas-sadors who came to negotiate the ransom of captives he received with a mixture of baronial courtliness and splendour. We often mention the madly of the cruelty and the terror which this ruler inspired; he loved to torture his women and cut off heads to show his skill. His amusements were of a similar character; he liked to shoot with his hārd at the deer in his menageries then to finish them off with spear-thrusts. “Let us avert our eyes from all these horrors which make nature shudder”, says Chénier. Following his example his household inspired terror in the town. He had six hundred children, a nursery of slaves, *who might have had a happier lot if he had loved them as much as his horses*. On the approach of any of them, “every one hid all that he might take a fancy to”, and the ʿābd in their turn, negroes robed in bright cloths, went about bullying, in the name of their master at first and then in their own.

All his work was to collapse at his death, but he was able to keep it up in his lifetime. From the troubles that broke out when he disappeared from the scene, one can judge of the energy of this man of eighty who maintained order among his horde of negroes and in this country desolated by an epidemic of plague, outbreak of the ʿābd were simply given orders to kill anyone who came from Fās.

Mawāli ʿIsāfīl was buried like his brother in the mausoleum of Šāh ʿAbd al-Rahmān al-Majidī, a moralist saint of the eight century. He was the rebel Mawāli Muljamīn, killed at Tāru in 1706, and Mawāli Ẓāīn in 1707, had already joined Mawāli ʿAbd al-Rahmān. In 1859 the ashes of Mawāli ʿAbd al-Rahmān were also deposited there.

On the death of Mawāli ʿIsāfīl, the Ḥakīka and the soldiers of the āri stirred up a palace war which lasted twenty years. Mawāli ʿAbd Allāh lost and regained his throne six times. But however great this danger was, the other threat was still more disturbing; having got rid of the garrisons of the Ismāʿīlī kābas, the Berbers, armed, came down from the mountains. The problem for the sultāns was to choose the lesser evil; they
declined to disband the 'ghibl' and in the struggle which naturally arose between these and the Berbers relied more on the former. The civil war extended to the tribes of the plain and the garrisons of Fès, especially the Ciswa; pretenders stirred up the flames, readily giving the signal to plunder and, in the rivalry of races and tribes, easily finding a party to support them. Gradually the Bu'abders sank in misfortune. It was in vain that Mawāli 'Abd Allah and his sons expended the treasure of Mawāli Ismā'il for them. The worst of all was that every one ended or began by plundering it.

Muhammad b. 'Abd Allah almost re-established order and restored to the town its past glory. He did a great deal for it; his palace of Dār al-Da'āḥiq, the severe architecture of which, not without charm, can still be seen in a part of the olive-grove of al-Hammām; in the ka'bah, he built the Ḫamā'ī al-Anwar and in the Ḫamā', the maqṣūra of the Ḫamā'ī al-Muhājirīn, the kubah of Sulīm Muhammad b. Salām and several mosques (al-Aṣār, al-Baṣṣārīn, Bāb al-Maḥāl, Berutīn and Sitt Bū Ṭūlim). It was he who made the 12,000 books of the library of Mawāli Ismā'il hāfiẓ for the benefit of all the mosques of Meknès. As regards the tribes his policy was to break them up. He transplanted many of them and took several repressive measures. The end of his reign was marked by the success of the Berbers whose attacks had been resumed about 1775.

Doing nothing was to be left of the work of Mawāli Ismā'il. The Christian community lost its Franciscan mission in the reign of Mawāli Yāqūt and did not survive the persecution of this sharif. The earthquake of 1755 had destroyed their church, convent and hospice. The renegades, who had gathered together at Ka'bah Agūrīn, were gradually absorbed.

The Berber crisis was again acute from 1811. Communication with Fès was continually being cut and it was something to boast of for the sulṭān to go out of Meknès. Mawāli Shāhān (Ṣuḥmān), who had an interest in restoring the kahf and rebuilding the bridges on the road to Fès and who would have liked to get rid of the Bu'abders, decided to settle in Fès. His walls were his only defence at Meknès, which was beseiged by the tribes. Mawāli 'Abd al-Raḥmān, whom Delacroix saw there and who built a kubah in Ḥamān b. Ḥalīm, left the Berbers in semi-independence and even disbanded the 'ghibl' without even granting those who remained in Meknès the character of Malagzi troops. His son carefully avoided all quarrels.

Mawāli al-Ḥaṣan revived the tradition of the great sulṭān and made his authority felt. He was able to enter Meknès after his accession only by crushing the power of the tribes. In 1857 he conducted a campaign against the Beni Mūjr. In 1857 he forced his way through the country of the Beni Mūjr in his campaign against the Nūn. On his death the Berbers regained their independence. If they retained their ka'bah, it was because the latter cast out their allegiance to the Malagzi. After the fall of Mawāli 'Abd al-'Arīf, Meknès recognised all the competitors in succession. It was Mawāli that proclaimed 'Abd al-Ḥafṣ, who had come via the Berbers of Tarfī in 1908, in 1909 it summoned the sharif al-Ḥaṭṭānī and in 1911 rallied to Mawāli Zāin. It was in this year that General Moïnier entered Meknès and two years later Colonel Henrys under the direction of General Lyautey pacified the Beni Mūjr country.

(C. TUCK-BRENNANO)

MELLĀH, the name given to the quarter in Moroccan towns which the Jews are compelled to inhabit. Being all d'el-dummā, the Jews have a right to the special protection of the government which allows them a particular quarter to live in, situated very often close to the citadel (qāṣbah) where the governor of the town resides. Moreover, the sovereigns and governors used to have at hand "their" Jews who were frequently of use, to them as clever diplomatic
agents and often gave them valuable financial support. All the towns of Morocco, even the large ones, did not necessarily have a mellah. Thus at Tangier there are certain quarters particularly inhabited by Jews but they are not set aside for them and we also find Muslims there. As to Rabat, its present mellah was established only in 1808 by Sultan Moulay Suliman; formerly the Jews lived together in the Al-Ɓahira quarter (el-Ɓeira) where there were also Muslims. When he founded Fas in 805, Idris II compelled the Jewish refugees who flooded into the capital to reside in the northern part of the ‘Adwat al-Karawiyin (Agilan quarter as far as the gate called lih II-a Suliman); this was undoubtedly the first Moroccan ghetto; and the present Fondak el-lândi (“the Jew’s warehouse”) apparently preserves its memory. But at the end of the xiiith century, the Marinid dynasty, wishing to create a new capital, founded alongside of “Old Fas” (Fas al-Bāli) “New Fas” (Fas al-Ijālid) or “White City” (al-Malānat al-Daifâ). In the first half of the xivth century, the town of Ims was built close beside Fas and at first occupied by the Ghuzz archers who formed a part of the regular Marinid army: after the suppression of this force in 1320, Ims became the quarters of the Christian mercenaries, whom we find there in 1361. Later, probably at the beginning of the xivth century, and no doubt as the result of massacres, the Jews of Old Fas were ordered to settle in Ims; this town was built on a site known as al-Mellah, the “salt spring”, or “salt marsh”, and the new ghetto became known by this name. From a proper, this became a common noun, and passed from Fas to the other towns of Morocco as the name for the quarter assigned to the Jews. The etymology proposed by Dozy in his Supplement (al-mellah < al-naḥallā “quarter”) is therefore to be rejected, as are the explanations as “salted, accursed land”, or “quarter of the Jews who were forced to salt the heads of decapitated rebels”. In Morocco instead of al-mellah, in speaking, the expression el-meniss (class. al-manis) is often used by anti-Semites as “not-salted”.

The mellah of Fas is therefore the oldest in Morocco in every way. For a long time it was also the most important; in the middle of the xith century, al-Bakri says that Fas is the town with most Jews in the Maghrib, which has given rise to the proverbial saying: Fas balad bi-lā nās. “Fas, a town where there are no people (worth mentioning)”.

But the constitution of Marakush in 1063 resulted in the foundation in southern Morocco of a new Jewish centre which was to attract to it the Jewish and pseudo-Jewish peoples of the Atlas. The term el-mellah however appears for Marakush only in the second half of the xivth century (cf. E. Fagnan, Extraits inédits relatifs aux Maqreke, p. 409). At the present day the mellah of Marrakesh and the Jewish town of Mogador form the most important Jewish centres of Morocco.

The name al-mellah is peculiar to Morocco; there, however, it is applied not only to the Jewish quarter in a town but also to little mountain villages exclusively inhabited by Jews. At Tlemcen the term dar el-stūd (class. dar el-saṭūd) is used; at Constantine esh-šādr and in Algiers, Tunis and Tripoli: el-hārā.

On the interior organisation of the present day Moroccan mellah see E. Aubin, Le Maroc d’aujourd’

(Georges S. Colin)

MELILLA (in modern Arabic: Milīya, Berber Tamlilt, “the white”; in the Arab geographers: Milīta), a seaport on the east coast of Morocco on a promontory on the peninsula of Gelfiya at the end of which is the Cape Tres Forcas or the Three Forcas (Fas-Hurk of the Arab geographers, now Dibb el-Hurk). Melilla probably corresponds to the Rassadar of the ancients (cf. Rhysiodor ap. pipium et portus Pliny, v. 18), Rassadar Colonia of the Antoninian itinerary. Leo Africanus says that it had belonged for a time to the Goths and that the Arabs took it from them, but in reality we know nothing of the ancient history of the town.

It is only at the beginning of the tenth century that Melilla appears in the Muslim history of Morocco. In 930, the Umayyad Caliph of Spain, Abd al-Rahmān al-Naṣir li-Dīn Allāh succeeded in detaching from the Fāṭimids the famous Miknās chief Mūsā b. Abī ‘l-‘Afyā, who had established his authority over the basin of the Muluya and the district of Tāzz; having seized Melilla, al-Naṣir built ramparts around it and gave it to his new ally, who thus had at his command a base of defence against the Fāṭimids and a port which made communication with Spain easy. Later on, the descendants of his son, al-Brī b. Mūsā, rebuilt the town, which remained one of the strongholds of the Miknās in Morocco down to the time of the decline of the power of the tribe, who were definitely defeated and scattered by the Almoravid Yūsūf b. Tashfin in 1070.

But the Miknās must have abandoned it before their dynasty was crushed by the Almoravids; for al-Bakri shows us that by 1067 a descendant of the Hammūdī Idrīsīds of Spain had been summoned to Melilla and recognised as ruler by the people of the district.

At the period when al-Bakri wrote (1067), Melilla was a town surrounded by a wall of stone; inside was a very strong citadel, a great mosque, a bazaar and markets. The inhabitants belonged to the tribe of the Banū Wartadi (or B. Wartadi), a branch of the Ṣanḥājya group of the Batliya. Melilla had a harbour which was accessible only in summer. It was the terminus of a trade route which connected Sidjilmassa with the Mediterranean through the valley of the Muluya and Agarsiff (French: Guerif). The trade must have been considerable; the principal exports were no doubt those mentioned by Leo Africanus: iron from the mines of the mountains of the Banū Sfīd and honey from the Kabdāna country; we may also add pearls which were taken from oysters found in the harbour itself. Al-Bakri notes that the inhabitants made money by granting protection to merchants. The environs of the town were occupied by the Banū Wartadi (who also occupied the stronghold called Kuliū Garei), the Maṭmā, the Ahl Kabdān, the Marnisa of the “White Hill” (al-Kudriyat al-bahidī) and the Ghassāsa of the massif which ends in Cape Tres Forcas (Dibb el-Hurk). All this region was then independent and had no political
link with the kingdom of Fás or that of Naksūr. But in 1680 the Almoravid sovereign Yūsuf b. Tāshītīn took Melilla and added its territory to the Almoravid empire. In 1441–1442, in the course of the Almoravid pursuit of the Almohads, a body of the latter set out from Tantsimān to lay siege to Melilla, which was taken and plundered. In 1272, the Marinid Sultan Ya'qūb took Melilla from the Almohads and Ibn Khaldūn simply mentions it as a fortified place. It seems in fact that these three captures of the town had destroyed its commercial importance to the advantage of another town on the west coast of the peninsula of the Gellāta: Ghassās (also called al-Kudayt al-ba'ādī), the Aţuda of the Portolans; in the thirteenth century it is this latter town that appears as the Mediterranean port of Fás and Tāzāt, and it was through it that political and commercial relations with eastern Spain and Italy (Genoa and Venice) were carried on.

Leo Africanus says that in 1490, hearing that an attack on it was planned by the Spaniards, the inhabitants abandoned the town and fled to the mountains of the Gellāta; to punish them for this the Waṭṭāsdūl Sahān had the town burned down; when in Sept. 1497 the Spaniards arrived they were thus able to disembark without resistance and occupied the town, abandoned and half destroyed. The occupation of Melilla enabled the Spaniards to attack the port of Ghassās by land and it was taken in April 1506. The Moroccans recaptured it in 1533 but the dangerous proximity of Melilla henceforth deprived it of its importance. The commercial activity of this region was moved farther west to the port of Mazīmīn (Spanish: Almucézar, Fr.: Alhoubene). And the centre of Muslim resi-tance in this part of Morocco was henceforth the strong-hold of Tāzāt, which after having been the capital of the Marinid Tafsīn the Banū Waṭṭās became that of a practically independent leader of a holy war. After passing into the hands of the Spaniards, Melilla was continuously besieged by the Muslims, mainly by the forces of the leaders of holy war established at Tāzāt and at Mūjān (the Meggea of Leo Africanus). Occupied by the Christians, the town naturally became one of the places in Morocco in which Muslim pretenders and rebels found asylum and support against the central power, especially at the beginning of the Sa'dian dynasty. In 1549, it sheltered the dispossessed Waṭṭāsdūl Abū Ḥassūn, "king" of Bādīs; in 1550 it welcomed with his family the Mawlāy 'Āmar, "king" of Debdū. It was from Melilla that in 1595, the pretender al-Naṣir b. al-Qāhir b'ilāḥ set out against his uncle Sulṭān Ahmad al-Mansūr.

Later Melilla only appears in history in connection with sieges which it had to suffer: sieges by Mawlāy Ismā'īl in 1657 and 1658, siege in 1774 by Mawlāy Muhammad b. Abū Allah; Spanish-Moroccan war of 1893 (Sābit Waryāsh affair). From 1903 to 1908 the region of Melilla was the scene of struggles between the pretender al-Djibrīl al-Rūgī, established in the Qašba of Selwān, and the troops of the Sulṭān Abū Al-Azīz; defeated and receiving no support, the latter had to take refuge in Spanish territory and be repatriated. Still more recently in 1921, the same district witnessed the sanguinary battles between the Spaniards and the Rifans under Abū Al-Durar, an infidel. Melilla is for Spain a "place of sovereignty" like Alhucemas, Peñón de Velez and Ceuta. Before the establishment of the French protectorate, Melilla, constituted a free port, was the landing-place for all the European merchandise (cotton, sugar, tea) intended not only for eastern Morocco but also for the Saharan regions of Morocco and Tunisia. It has now lost much of its commercial importance.

(M. G. Colin, Geogr. S. Colon)

MENDEZ, the name of two rivers in western Anatolia:
1. Buyuk Menderes (called by al-'Umarī Menderes, by Piri Reis, Mendarız or Mendaro), the ancient Maeander, the Mandra of the Crusaders. It rises in the district of Germiyan in a little lake, the Huweiran Golu (Sarı) above Diner (according to Abū Bakr b. Bahām in a spring called Buiār bashī, a day's journey from Homa), flows past Homa at some distance off, then through the plain of Şākhīl and the kaşat of Bāhān and Cāl. In the kaşat of Cāhāna (capital Bolām) it is joined by the Banāz Ĉaī (called Murad Dagh Suyu in Abū Bakr b. Bahām whose statement that it flows past Şākhīl is wrong), which rises in the Muṣād Dagh and flows past Banāz. Farther down its course, in the plain of Denizli, it receives the Čuk Šu, the ancient Lycus Fl. Further on a ruined bridge called Demirsahi Köprüsü marks the frontier between the two old livās of Germiyan and Ašíl; according to Abū Bakr a warm spring rising in its foundations had contributed to the destruction of this bridge. In the territory of Nisbīn the Buyuk Menderes flows past at a distance the villages of Ortoçı, Nazlılı, Sulţānişār, Koşāk and Güzeliş-har Aşi. In 1549, it sheltered the dispossessed Waṭṭāsdūl Abū Ḥassūn, "king" of Bādīs; in 1550 it welcomed with his family the Mawlāy 'Āmar, "king" of Debdū. came down the river valleys opening on the Aegean thus ended in Smyrna, just as at the present-day the railways which utilize these valleys start from Smyrna.

MENF. [See MANEF.]

MENGÜÇEK (HANDGÜL), a Turkish emir, who after the capture of Komnatu Djeçen in 1071 A.D. seized various places in the northeast of Asia Minor and transmitted his power to his descendants. We find them in Erzindjan, Koghboa (Colonna, Kara-Ilyar Sharji) and Durgi (cf. the genealogical table in von Zamburr, *Manuel de Genealogie etc.*, p. 146). Little is known of their history. It is incidentally mentioned in Michael Syros (cf. Chabot, in 205) that Ibn Mengüçek, being represented at the Portukal Bajaz, made an alliance with Theodore Galuzis, the Byzantine commander of Trebizond, but was taken prisoner in battle along with the latter (1118). He was, how again released by the Danishmand Urı̄n Châri, whose daughter he had married, while the Greek had to pay a heavy ransom. His name is not mentioned but, from the genealogical statements in the inscriptions of his descendants, he was called I-ḥâk. The same story is given elsewhere but not so fully. Better known is his grand-on Fâhär al-Din Bahramshâh, who ruled for many years in Erzindjan and died in 622 (1225). To him the celebrated poet Najmuddin dedicated his poem *Malḵūn al-Iṣrâʾīl*, which was composed in 1198 or 1199. He was on the best of terms with the Seljuks of Konya, with whom he was connected by marriage, but when these relations were altered under his son ʿAlā al-Din Ibadštâh, the rule of the Mandjuks was ended. At the end of 625 (1228) he was forced to cede Erzindjan to Kaikhschâh, and his brother Muṣtafar al-Din Muḥammad who ruled in Koghboa met a similar fate. A collateral line established in Dzwin and ruling there in the name of the Seljuks held out for a few more years, perhaps till the coming of the Mongols into the region in 675: only a few scraps of information about this line have been obtained from inscriptions and coins.

(M. Th. Houttm.)

Menteshe-eli, a little principality in Anatolia. The boundaries of the territory of the Menteshe-eli's [q. v.] are given by MüSN-DAJ-MAH (cf. Fr. Babinger, *G.O.W.*, p. 234 sqq.) on his *Sūrah al-Abīr* (Stuttgart 1285) as marked by Muğbâ, Halâl, Boz-lyuk, Münts, Lâgman, Manife, Čine, Tâvas, Bornâz, Mackri, Dogânja, Foca and Mermere. They thus correspond approximately to those of the ancient Caria. The origin of the name is uncertain, but it can confidently be asserted that the opinion, presumably first put forward by F. Meninski (Lezoum, iv. 737) and till quite recently upheld, that the district takes its name from the Munûds (Mûdzêq in Strabo) of the ancients is not worthy of credence. Several of the places above mentioned played a not unimportant part as centres of scholarship and literature in the earlier period of Ottoman intellectual life. Thus in the time of the Menteshe-eli's Mehmedm (757-777) a certain Muḥammad b. Mehemmed of Bâdjin composed a *Fâlkuš*, which was published by J. v. Hammar-Purgstall under the title *Falkwinkel* (Pest 1840) from the Milan MS. and rightly described as one of the earliest documents of the Ottoman language. In many of these places there were academies where an active intellectual life flourished, so that the share of the district of Menteshe in Ottoman literature is strikingly large.

(En. Barb.)

Menteshe-oghluari, a petty dynasty in Anatolia. The princes of Menteshe first appear in history after the break up of the Seljuks empire. The founder of the family is said to have been a certain Hâbîb Bey Bâdjin al-Din Karsh. He had his court at Milas (Mylasa) in the ancient Caria, and not far from it his stronghold Pağini (Petona). His descendants also lived in Milas until they moved their court to Mileus. The son of the Menteshe was Urkhan Bey, who is known from an inscription on a building in Milas and from Ibn Balşâh who visited him in 1334 in Milas (cf. Ibn Balşâh, *Inschriften*, ed. Dehremy, Paris 1854, ii. 278 sqq.) Urkhan's successor was his son Ibrahim, who built a mosque in Milasa in 745 (1344) and left two sons, Ahmed Châri and Mehmedm. The second succeeded him in 755 (1354), but succumbed in the struggle for the throne to his brother Ahmed, who took the throne in 755 (1354). In 777 (1375) founded an academy at Bâdjin and at the end of Lûmâsâ II, 780 (Oct. 1378) completed the *Ulu Lâmi* in Milas. Ahmed Châri died in Şahîn 793 (July 1391) and was succeeded by his nephew Ilaysia. The Ottomans had in their reign already taken possession of several principalities in the neighborhood of Menteshe-eli, such as that of the Germân-eli [q. v.] and of the Hamel-eli [q. v.], and now seriously threatened the existence of the Menteshe. Immediately after the accession of Ilaysia Bey, Lâyazid I, who had just become Şârîn, deprived the lords of Menteshe of the last vestige of their independence. The sudden and unexpected death of the ruler of Sûrûn, Bâzîrî and Kûma, and later with the conquest of the Ottomans, Timur-Lenk, Ilyas Bey, who built a mosque in Mileus, regained possession of Menteshe-eli in 1402. On 24 July 1403, he concluded a treaty with the Count of Crete, Marco Falieri (publ. by M. Attie, at the end of his essay, *Commence d'Epître et de Milet moyen âge* in the *Bibli. de l'E. O.* xi. 6, 1884, xvi. 3, 1884, xvi. 3, 1884, v. Vol. vi. Paris 1864, p. 226 sqq.) and with
the admiral Ser Pietro Civrano on 17th Oct. 1414 (cf. Diplomatarium Venet-Locarnianum, ii. 305, 293 and W. Heyd, Histoire du commerce du Levant, ii. 553 sq.). The reign of Ilyas beg filled with fighting and difficulties of all kinds ended in 824 (1421) when his lands passed to the Ottomans. Mehmed I had struck coins as early as 818 (1415) on which he calls himself lord of Menteshė. Among the children of Ilyas beg, mention is made of Latih beg, but the shadowy part he played is quite uncertain. The year 829 (1426) saw the end of the princes of Menteshė. A certain Bahman was appointed as Ottoman governor of Menteshė-el and henceforward the district formed a part of the Ottoman empire. The chronology of the dynasties of Menteshė is still uncertain and essential points have still to be cleared up, which will require a systematic study of the many monuments in Menteshė-el with their important inscriptions, especially in Milas, Miletus, Bardjum, Mugla, etc.

The following genealogical table shows how the relationship of the various princes and is based on coins and inscriptions.

Bibliography: The Arabic historians of
MERIDA — MERÍNIDS

(E. LÉVY-PROVENÇAL)

MERÍNIDS (Barūn Marin), a Berber dynasty, which ruled over the extreme Maghrib (Morocco) from the middle of the xith to the middle of the xith century.

The first references we have to the Banū Marin show them living a nomadic life in the Sahara between Fugqīg [q.v.] and Tafṣīlt [q.v.]. Like the other groups who claimed to be Zenātā, they must have been driven to the west by the nomad Arabs Banū Hilāl in the second half of the xith century. Like their brethren, the Banū 'Abd al-Walī, whose lands adjoined theirs, they had attempted in 1145 to revict the conquest of the Central Maghrib by the Almohads and had been defeated. While the Banū 'Abd al-Walī entered the service of the conquerors, the Banū Marin took refuge in the desert. The weakening of the Almohad empire gave them a chance to take their revenge. In the course of their periodic movements in the valley of the Muluya, they learned of the weakness of the defences of the extreme Maghrib, the best forces of which were engaged in Spain, and the Benū Marin therefore made a formidable razzia northwards in 615 (1216). This was the first stage of the war, which went on year by year, for 53 years. It was continued next year by the razzia of the Banū Risayl Arabs, who lived in the plains of the west, and by a first fiscal exploitation of the country. The Almohads, paralysed by dynastic feuds, made no serious thrust in return until 27 years later, when the Banū Marin were defeated by the troops of the caliph al-Sa'id (642 = 1244). After a forced check, the conquest was resumed with more method by the amīr Abū Yahyā b. 'Abd al-Haqq. He endeavoured to increase his military forces by granting lands to groups of his kinsmen and taking into his service foreign mercenaries and esteems, every effort to capture towns. To achieve this end and to gain a moral support which he lacked, the amīr claimed to be the mandatary of the Haṣfīdīs [q.v.], the Almohads of Ifriqiya. He further declared himself the protector of the holy men, who were venerated by the people. It was thus that he took possession of Meknes, Fas, Tāzā, Rabat and Sāla. Finally the help he gave the Almohad pretender Abū Dabīhū enabled the amīr Abū Yūsuf Ya'llūb, Abu Yahyā's successor, to annexe Marrakesh, which marked the completion of the Marinid conquest (669 = 1269).

Inheriting this area of the western Muslim world, which had been the very heart of the great Almohad empire, the Merīnids also inherited the traditions of those they had dispossessed and their dreams of hegemonv in Spain and Barbary.

As in the time of the Almoravids and Almohads, Spain was for the Merīnids the land of martyrs for the faith. Not only did the dynasty send there its troublesome sons, princes whose presence in the Maghrib might be inconvenience and who formed the corps of volunteers of the faith, but several sultans fought there in person: Abū Yūsuf, whose re-occupation of the holy war was his one great scheme, his successor Abū Ya'llūb, and Abu l-Hasan, who saw the failure of these overseas expeditions.

In crossing the Strait, Abū Yūsuf fulfilled his dearest vow but he was also answering the reiterated appeals of the Banū l-Ḥamr of Granada, who were tired of enduring the exactings and insults of the King of Castile. He was received there as a saviour and at once undertook a plundering expedition. Don Nuño de Lara, endeavouring to capture the loot taken from the Christians, sustained a heavy defeat near Écija and was himself slain (674 = 1275). Very few other pitched battles are mentioned in these wars of the Merīnids in Spain, but almost daily razzias into Christian territory. The Muslims destroyed or carried off the crops and stocks and they took prisoners who were sold as slaves in the Maghrib. The relations between the Sulṭāns of Fāṣ and of Granada, by no means warm at the time of the landing in Spain, became decidedly hostile when Abū Yūsuf claimed the ownership of the town of Ceuta as a base for his future operations in the Peninsula. Ibn al-Ḥamr appealed to the King of Castile for help against the encroachments of his rescuer. A league was formed between Christians and Muslims of Spain which Yaghammadun, sulṭān of Tlemcen, soon joined. The latter undertook to prevent or impede any further crossings of the Moroccan ruler into Andalusia.

The entente with the Christians did not however prevent the latter from continuing the task of the reconquest. In 709 (1309) they took Gibraltar, an island which was afterwards re-occupied, again to the Maghribi Sulṭān. Abu l-Hasan sent his son 'Abd al-Malik who recaptured Gibraltar (733 = 1333). 'Abd al-Malik having been killed, Abu l-Hasan sent a large army on ships supplied by the ports of Ifriqiya and himself landed near Tarifa. This town was in the hands of the Christians. He tried to take it but was routed by the combined forces of Alfonso XI of Castile and Alfonso IV of Portugal. This disaster of 1340 and the taking of Algeciras by the King of Castile finally discouraged the Merīnids sultāns. Neither he nor his successors again made attempts in Spain.

If cunning was the foundation of the Merīnids from reviving against Christianity the glories of the wars of the Almohads, they were able to devote themselves to regaining the great African empire of their predecessors and they succeeded in doing so for a comparatively short time. That empire, as is well known, covered in addition to the kingdom of the Merīnids, that of the 'Abd al-Wādīds of Tlemcen and that of the Haṣfīds of Tunis [q.v.]. The Kingdom of Tlemcen was that most directly threatened by the ambitions of the sultāns of Fāṣ. Causes of quarrel were numerous between these neighbouring and related dynasties. To old rivalries dating from the days when the two clans were nomads, had been added the competition of two adjoining states each seeking to extend their frontiers.
The ‘Abd al-Wādids very soon lost hope of annexing territory in the west. If, as we have seen, they were a thorn in the side of the Merinids who desired to cross into Spain, this policy was of brief duration. Very soon they had to confine themselves strictly to the defensive. On many occasions, the kingdom of Tlemcen was invaded and the Tlemcenians shut up within their walls. For example for eight years and three months, from 698 (1299), they were blockaded, during which period the Merinids established a permanent camp which became the town of al-Mansūra [q.v.] in addition to numerous other works of circumvallation; Tlemcen however did not fall till later. In 737 (1337) Abu l-Hasan took it; he and his son Abū ‘l-Hassan were to hold it for 22 years. For these two princes, whose reigns mark the apogee of the dynasty, Tlemcen was only a first stage towards Ifriqiya. The dream of recreating the empire of the Almohads was to be realised by annexing the Ḥafsid kingdom.

Constant relations, in which each hoped to gain some advantage, united the two states of east and west, Baṣṭar Ḥafs and Baṣṭar Marin. To a contemporary observer like the Egyptian al-Umari, the Baṣṭar Marin alone counted as a military power, but the Baṣṭar Ḥafs, descendants of the Almohad caliphs, had a prestige which the Baṣṭar Marin could not claim in spite of the title of Amir al-Muʾminin which Abu Inān arrogantly assumed. This explains why, from the very first, the Baṣṭar Marin in annexing the towns of the Maghrib declared themselves mandatories of the sovereigns of Tunis and why they married Ḥafsid princesses. On their side, the Baṣṭar Ḥafs did not think it wise to refuse their daughters; they dealt tactfully with the Moroccan sultans, who might be useful in protecting them against the sultans of Tlemcen. In a word, they hoped to see the Merinids attack central Maghrib but not to become complete masters of it, which would directly expose Ifriqiya to the attacks of the conquerors.

This is what actually happened in 747. Taking advantage of the usurpation of the throne of Tunis and of the troubles which followed it, Abu l-Hasan invaded Ifriqiya and sought to impose his authority there as in his own kingdom. The situation here however was very different from what he was familiar with in the Maghrib. In Ifriqiya, the Arabs were still very strong. Abu l-Hasan came to grief against the Arab tribes united against a foreign master and near Kairawan they inflicted a disastrous defeat on him in Muharram 749 (April 1345). This disaster even endangered the position of the Marinids in the Maghrib itself. An attempt by Abu Inān, son of Abu l-Hasan, to reconquer Ifriqiya proved fruitless.

In spite of the collapse of Marinid aims, the period of these two last sultans was nevertheless one of the greatest in the history of Muslim Barbary, one of those which has left us most memorials of its magnificence.

The Merinids were vigorous builders. In 726, Abu Yūsuf had founded New Fās, west of the old town, to make it his official capital; but it was during the first half of the xivth century that the greatest building activity was displayed. The majority of those that have come down to us dates from this period. Works of considerable artistic value, they are at the same time evidence of the military activity and religious ardour of the Baṣṭar Marin, like the ramparts and the mosque of al-Mansūra, the walls and necropolis of Chella, the medersas of Fās and Sale, the different buildings erected near Tlemcen around the tomb of the great ascetic Sidi Bū Madyan. Piety in the form of mysticism was the dominating note in the intellectual life of the Maghrib. We must however not forget that the court of Fās was frequented by men like ‘Abd al-Rahmān b. Khaldūn, Ibn al-Khaṭīb and Ibn Batūṭa, who have left a name in the field of literature and profane learning.

The failure of the attempts upon Ifriqiya and the disaster at Kairawan may be taken as the beginning of the decline of the Merinids. As a result of these military failures, the troops stationed in some parts of the Maghrib had to be withdrawn. The passes of the Atlas being no longer guarded, the Arabs of Sūs and Tafṣīlīt, excited by the rumours from Ifriqiya, began to display their turbulent spirit. The tribes who paid taxes now paid only at longer and longer intervals under the threat of expeditionary forces sent against them. There was still a graver cause of decline: the power of the viziers vastly increased. An aristocracy of high officials related to the royal family handed down offices from father to son, backed by powerful clans, and ended by acquiring the power to nominate the new sovereigns. To keep them in subjection, we have to choose for the throne a minor or a weakling. When the Sultan displayed some desire to rule in person, they did not hesitate to dethrone or assassinate him. Thus in 762 (1361) Abū Sālim was decapitated by a soldier of the Christian militia; his successor Taṣfīn, an idiot, was deposed and replaced by Abū Zayīn, who was found strangled and drowned in a reservoir.

In the midst of these palace revolutions the unity of the kingdom was destroyed. We find the prince who governs Sijilmāsa fighting with the sultan reigning at Fās. The vizier who has control of the legitimate sovereign had pretenders against him, who end by dividing up the country among them. Marrakshī fights against Fās. At one time, the traditional enemies of the dynasty, the ‘Abd al-Wādids of Tlemcen, endeavoured to profit by the occasion to resume the aggressive policy of Yaghmorān. But Tlemcen was itself too weakened to attain success. Besides, it was attacked in the rear by the Arabs of the Central Maghrib, instigated from Fās. One of the shahīgs of the Swwāt Arabs is called the ‘friend and patron of the Marinid dynasty’. The Baṣṭar Marin had another means of neutralizing Tlemcen; this was to support pretenders of the ‘Abd al-Wādīd family. To sum up, in spite of the weakness of the Baṣṭar Marin, the Baṣṭar ‘Abd al-Wādī, whose lands had for the most part passed into the hands of the Arabs, cut a still sadder figure and could not resist when attacks from the west were resumed. From 1389 all the sultans of Tlemcen ruled under the suzerainty of Fās.

But grave events were to turn the attention of the Merinids from the affairs of the Central Maghrib. In 1401, King Henry III of Castile landed in Barbary to take vengeance for outrages of the Muslim corsairs and destroyed Tetwān. This attack, which produced considerable commotion in the Maghrib, and the taking of Cartagena by the Portuguese in 818 (1415), provoked a vigorous campaign by the religious element. The threat from abroad, combined with its weakness in meeting this critical
situation, brought about a series of troubles under which the dynasty succumbed. In 823 (1429) after the assassination of the Sultan Abü Said, the Merindës gave place to the Bântë Wagga.

**MERKEZ, Muṣliḥ al-Dîn Mūsá, an Ottoman Shaikh of an Order and Saint.** Merkez Muṣliḥ al-Dîn Mūsá b. Muṣṭafā b. Ḥalîf. b. Ḥajjâr belonged to the village of Ẓarî Mahâfolî in the Anatolian district of Lâjûlikîa. He was at first a pupil of the Mollâ Ahmad Paşa, son of Khâliq Mâk [q.v.], later of the famous Khlâwî Shâtî, Sunûlîn Sunûlîn Efendi, founder of the Sanûsîya, a branch of the Khâlîwîya, head of the monastery of Khoja Muṣliḥî Paşa in Stambol (cf. on him: Drûsal Mehemmed Tâhir, *Othmanî Mûsidîddî, i. 78 sqq.). When the latter died in 936 (1529), Merkez Efendi succeeded him in the dignity of Ẓir. He held the office of head of a monastery for 23 years and died in the 6th zâhîr of 959 (1552), aged nearly 90. He was buried in Stambol in the mosque which bears his name (cf. Ḥâṣîṣît al-Mâliwî, i. 230 sq.; J. v. Hammer, G. O. K., iv. 95, N. 495) before the Vekt Kapû. At the tomb of Merkez Efendi there is a much visited holy well, an *awza*, to which one descends by steps. Its reddish water is said to have the miraculous power of healing those sick of a fever (cf. Ewîlya Ẓahlî, i. 372; J. v. Hammer, Constantinopolis, i. 503; do., G. O. K., ix. 95, N. 495, following the Ḥâṣîṣît al-Mâliwî, loc. cit.). Beside it is the cell (*zâwîya*) of Merkez Efendi, of which wonderful stories still circulate among the people. He had many pupils, including his son Ahmad, famous as the translator of the ‘Arâmf, his son-in-law Muṣliḥ al-Dîn (cf. Ewîlya, i. 372), the poet Râmâdân Efendi, called Bîshikî and many others.

**MERSİNA, an Anatolian sea-port on the south coast of Asia Minor.** Mersîna, the port and capital of the former sandjak of the same name (with an area of 1,780 sq. m.) in the vilayet of Adana (*q.v.*), on the south coast of Anatolia, is 40 miles from Adana, to which a railway runs. The name Mersîna comes from the Greek *myrsini*, *myrtos*, myrtle, because this tree grows in large numbers in this region. The regularly built town, founded only in 1832, with about 21,171 inhabitants (1927) is only of importance as a port for the export of silk, corn and cotton. The climate is very unhealthy in summer. The old name of Mersîna was Zephyrium; in the vicinity (8 miles S.W.) lie the ruins of Soloi or Pompeipolis. The town which is quite modern is of no Muslim historical interest.

**Bibliography:** V. Cuinet, *La Turquie d’Asie*, ii. 50 sq. (Fr. Bâbinger)

**MERTOLA, or Martafla and Mirafila, a little town in the south of Portugal on the Gua- diana, 35 miles above and north of the mouth of this river, at its junction with the Guadiana. This place, the *Murtallas* of the Romans, was of some importance in the Roman period. It was the district of Beja and according to Vâhk was the best defended stronghold in the whole of the west of the Peninsula. At the end of the ninth century it was the headquarters of an independent chief, ‘Abd al-Malik b. Abî ‘l-Djarâwî, who was in alliance with the lords of Badajoz and Oesonoba and held his own against the Cordovan emir ‘Abd Allah.

**MÉRWAHA, a British district in Râjidputana, lying between 25° 24′ and 26° 11′ N. and 73° 45′ and 74° 29′ E., has an area of 641 sq. miles and a population (1901) of 109,459. The local name of the district is Mâra, or "hills". Beyond the fact that between 1138 and 1232 (1725 and 1816), several unsuccessful attempts were made by Râjidpûts and Marâthas to subdue the country, the history of Mérwa is a blank up to 1234 (1818), when the British appeared on the scene. The District was at one time an impenetrable jungle, inhabited by outlaws and fugitives from other states. The population known under the name of Mâra originally comprised a mixture of castes, Cândâla Gujîrars, Bâtî, Râjidpûts, Brah- mans and Mînas. It is said that Nisâlîdë, the
Čauhán King of Adžmir, subdued the inhabitants and made them drawners of water in the streets of Adžmir. The country has made much progress under the British rule.

(M. Hiadayet Hosain)

**MERZIFÜN,** also called **Mǎrshīwān,** a town in the **Anatólian wilāyēt of Siwās** [q.v.], and in the **sandjak of Amasia** [q.v.] at the beginning of the fertile plain of Sultan Owa, with 11,334 inhabitants, plays a notable part in the history of Ottoman culture as the birthplace and scene of the activities of learned men and authors (cf. A. D. Mordtmann, Anatolien, ed. F. Babinger, Hanover 1925, p. 88). In Merzifun there used to be a number of deriwh monasteries (cf. Ewliya Celebi, Sīyāšetnīma, ii. 396 infra, where several are mentioned). Of special interest are the mosques, mainly converted from Byzantine churches, including the so-called Eski Džami, on the walls of which Christian paintings could until recently be seen (cf. V. Cucin, *La Turquie d'Asie*, L. 761) and the mosque of Murad II, both on the market-place. The saint locally revered was Pir Dede Sultan, said to be a pupil of Hāḍjdži Bektaş (Ewliya, *op. cit.*, ii. 396). In A. D. Mordtmann's time (1852) the "whole Turkish population" consisted of šarīfīs, i.e. descendants of the Prophet.

Monis, *Kurzere Reisen,* (1829); and the mosque of Murad II, both on the market-place. The saint locally revered was Pir Dede Sultan, said to be a pupil of Hāḍjdži Bektaş (Ewliya, *op. cit.*, ii. 396). In A. D. Mordtmann's time (1852) the "whole Turkish population" consisted of šarīfīs, i.e. descendants of the Prophet.

**Mesheh** (al-Mashhad), capital of the Persian province of Khūrsān [q.v.], ii, p. 966, the greatest place of pilgrimage for the Shi'ites in Persia. It lies 3,000 feet above sea level in 59° 35' E. Long. (Greenw.) and 16° 17' N. Lat. in the valley from 10 to 25 miles broad of the Khesf-Rud, which runs from N. W. to S. E. This river, also called Ab-i Mesheh ("the River of Mesheh"), rises about 12 miles W. of the ruins of Tūs [q.v.] in the little lake of Češme-i Gilās (cf. Fraser, *op. cit.*, p. 350; Khatīkoff, *op. cit.*, p. 110; Vate, *op. cit.*, p. 315) and joins the Heri (Hari)-Rūd (q.v., and cf. Le Strange, *op. cit.*, p. 407 sq.) about 100 miles S. E. of Mesheh on the Russo-Persian frontier. Mesheh lies about 4 miles south of the bank of the Khesf-Rūd. The hills which run along the valley rise to 8,000 or 9,000 feet at Mesheh.

In consequence of its high situation and proximity to the mountains, the climate of Mesheh is in the winter rather severe, in the summer, however, often tropically hot; it is regarded as healthy.

Mesheh may in a way be regarded as the successor of the older pre-Muhammadan Ṭūs [q.v.], and it has not infrequently been erroneously confused with it.

The fact that Ṭūs is the name of both a town and a district, together with the fact that two places are always mentioned as the principal towns of this district, has given rise among the later Arab geographers to the erroneous opinion that the capital Ṭūs is a double town consisting of Ṭabārān and Nīkān; e.g. Yākūt, iii. 560, 1 (correct at iv. 824, 21) and in the Liḥāb of Ibn al-Ąджir [q.v.] quoted by Abu 'l-Fida' (*op. cit.*, p. 453). Kašwī (*Abār al-Buldān, ed. Westenfeld, p. 275, 1) next made the two towns thought to be jointed together into two quarters (*māḥālis*). This quite erroneous idea of a double town Ṭūs found its way into European literature generally. Sykes (*J.R.A.S.*, 1910, p. 115—116) and following him Diez (*Charakteristik der blondeen*, Berlin 1918, i. 53 sq.) have rightly challenged this untenable idea. The older Arab geographers quite correctly distinguish between Ṭabārān and Nīkān as two quite separate towns. Nīkān, according to the express testimony of the Arabic sources, was only ⅓ Parasang (farrāḵād) or one Arabic mile from the tomb of Hādrān al-Kashīd and 'Ali al-Ridā (see below) and must therefore have been very close to the modern Meshed. The ruins of Tūs and Meshed are about 15 miles apart.

As to Nīkān (often wrongly vocalised Nawkān) it is sometimes called more precisely (e.g. Yākūt, iii. 153, 21) Nīkān Ṭūs, and occasionally (e.g. Ṣīkārī = B. G. A., i. 257, 1; Ḥamd Allah al-Mustawfī, *op. cit.*, p. 151, 2—3) included with Sanābād. The distance between these two towns is put at an Arabic mile (Yākūt, iii. 153, 21) or what is practically the same, ⅓ farrāḵād (e.g. Ṣīkārī, *op. cit.*; Ibn Ḥawkal in Abu 'l-Fida', *op. cit.*, p. 451). Nīkān must have lain to the east and north-east of the modern Mesheh and a small part of it is the northeastern quarter of the latter town.

In Nīkān or in the village of Sanābād belonging to it two distinguished figures in Muslim history...
were buried within one decade: the caliph Hārūn al-Rashīd and the ‘Alid ʿAli al-Ridā b. Mūsā.

When Hārūn al-Rashīd was preparing to take the field in Khurāsān, he was stricken mortally ill in a country house at Sanābād, where he had stopped and died in a few days (193 = 809). The caliph, we are told (Ṭabarī, op. cit., iii. 737; 13–17), realising he was about to die, had his grave dug in the garden of this country mansion and consecrated by ʿUmar ibn ʿAbd al-Malik.

The three available accounts differ at first sight as to the house in which Hārūn spent his last hours. Two of them are given by Ṭabarī: according to the first (iii. 736; 17–18; 737'), it was on the estate of Dujnāid b. ʿAbd al-Raḥmān that the caliph stopped; the second story (iii. 735; 15–16; 738'; 14–15') says that Hārūn lived in the mansion of Humād b. Abī Ghannām. A third story in Yākūt (ix. 560) says that the tombs of Hārūn and of ʿAlī al-Ridā were in one of the gardens of the house of Humād b. Kaḥṭāba. Now there is not the slightest doubt that the references to the house (dari) of Humād b. Kaḥṭāba and to that of Humād b. Abī Ghannām are to the same place. Humād b. Kaḥṭāba must be the same person as Humād b. Abī Ghannām; they are both described as of the tribe of Taʾy. As to Ṭabarī’s second story, which substitutes a ḍar b. ʿAbd al-Raḥmān for a ḍar Humād, it may be observed that Dujnāid b. ʿAbd al-Raḥmān had the office of governor of Khurāsān under the Omayyads (caliphate of Hishām) from 111 to 116 (729–734) (in him cf. above i. 1109 sq.; ii. 357b; Weil, op. cit., i. 629–631; E. v. Zambur, op. cit., p. 47). Dujnāid probably resided as a rule not in Nishāpūr or Tūs but in the palace at Sanābād which he had probably built. One of his successors, Humād, also chose to live here and seems to have enlarged the place. This would explain how our sources call the same house the house of Humād and of Dujnāid. Perhaps the estate became the property of the ʿAbbāsid family on the death of Humād.

100 years after the death of Hārūn, the caliph al-Maʾmūn on his way from Merv spent a few days in this palace. Along with him was his son-in-law ʿAlī al-Ridā b. Mūsā, the caliph designate, the eighth imām of the Twelvers. The latter died suddenly here in 203 (818); the actual day is uncertain (cf. Strothmann, Die Zwölfer-Shia, Leipzig 1926, p. 171). On ʿAlī al-Ridā and his death cf. above i. 296, 2968; iii. 2224; Weil, op. cit., p. ii. 225b; Fraser, Narrative of a Journey into Khurasan (London 1825), p. 449–451 (gives the story current in Mešḥed of the imām’s death); Yate, op. cit., p. 340–342; Sykes, The Story of the Shahi World, London 1916, p. 235–236; W. Jack, ibid., p. 265–266.

It was not the tomb of the caliph but that of a highly venerated imām which made Sanābād (Nūkshan) celebrated throughout the Shi’a world, and the great town which grew up in course of time out of the little village actually became called al-Maʾmūn al-Mašḥad (Mešḥed) which means "sepulchral chapel" (primarily of a martyr belonging to the family of the Prophet). Cf. on the conception of Mašḥad, iii. 325 and v. Berchem in Diez, Churassiana, 2. Diezenerkte, i. (Berlin 1918), p. 89–90. Ibn Hawkāl (p. 313) calls our sanctuary simply Mešḥad, Yākūt (ix. 153) more accurately al-Mašḥad al-Ridāwī = the tomb-chapel of al-Ridā; we also find the Persian name Mešḥed-i muḥaddas = "the sanctified chapel" (e.g. in Ḥamd Allāh al-Muṣawwi, p. 157). As a place-name Mešḥed first appears in al-Muṣawwi (p. 352), i.e. in the last third of the tenth century. About the middle of the eleventh century the traveller Ibn Baṭṭūṣa (iii. 77) uses the expression "town of Mešḥad al-Ridā." Towards the end of the middle ages the name Nūkshan, which is still found on coins in the first half of the eleventh century under the Ilkhanids (cf. Codrington, A Manual of Muslim Numismatics, London 1904, p. 189), seems to have been gradually ousted by al-Mašḥad or Mešḥed. At the present day Mešḥed is often more precisely known as Mešḥed-i Rīdā, Mešḥed-i muḥaddas, Mešḥed-i ʿUṣū (so already in Ibn Baṭṭūṣa, iii. 66). Not infrequently in literature, especially in poetry, we find only ʿUṣū mentioned, i.e. New ʿUṣū in contrast to Old ʿUṣū or the proper town of this name; e.g. Muḥammad Mahdī al-Aʿlāwī, Taʾrīkh ʿUṣū aw al-Mašḥad al-Ridāwī, Baghderd 1927, p. 3.

The importance of Sanābād–Mešḥed continually increased with the growing fame of its sanctuary and the decline of ʿUṣū. ʿUṣū received its death blow in 791 (1389) from Mirānshāh, a son of Timūr. When the Mongol noble who governed the place rebelled and attempted to make himself independent, Mirānshāh was sent against him by his father. ʿUṣū was stormed after a siege of several months, sacked and left a heap of ruins; 19,000 inhabitants were massacred (cf. Yate, op. cit., p. 316; Sykes, in F.R.A.S., 1910, p. 1118 and Browne, op. cit., iii., p. 190). Those who escaped the holocaust settled in the shelter of the ʿAlid sanctuary. ʿUṣū was henceforth abandoned and Mešḥed took its place as the capital of the district.

As to the political history of Mešḥed it coincides in its main lines with that of the province of Khurāsān [q. v.]. Here we shall only briefly mention a few of the more important events in the past of the town. Like all the larger towns of Persia, Mešḥed frequently saw risings and the horrors of war within its walls. To protect the mausoleum of ʿAlī al-Ridā in the reign of the Ghaznawid Muʿāwī [q. v.], the then governor of Khurāsān erected defences in 1037. In 1121 a wall was built round the whole town which afforded protection from attack for some time. In 1161 however, the Ghuzz [q. v.] succeeded in taking the place, but they spared the sacred area in their pillaging. We hear of a further visitation by Mongol hordes in 1296 in the time of Sulaiman Ghāzin [q. v.]. Probably the greatest benefactors of the town and especially of its sanctuary were the first Timūrid Shāh Rukh (809–850 = 1406–1466; see vol. iv. 265 sq.) and his pious wife Džawhar-S̄adūq.
With the rise of the national Safawid dynasty [q.v.], a new era of prosperity began for Meshed. The very first Shaikh of this family, Isma'il I (907–930 = 1501–1524; q.v.), established Shifism as the state religion and, in keeping with this, care for the sacred cities within the Persian frontier, especially Meshed and Kumm, became an important feature in his programme as in those of his successors. Pilgrimage to the holy tombs at these places experienced a considerable revival. In Meshed the royal court displayed a great deal of building activity. In this respect Tahmasp I, Isma'il I's successor (930–984 = 1524–1576; q.v.), and the great Shaikh ʿAbbās I (995–1037 = 1587–1627; q.v.) were especially distinguished.

In the eighteenth century the town suffered considerably from the repeated raids of the Ozbekhs (Uzbek). In 1507 it was taken by the troops of the Shahbânt Khân [cf. Shahbânt Xāvārī]; it was not till 1528 that Shah Tahmasp I succeeded in repelling the enemy from the town again. Stronger walls and fortifications were then built and another attack by the same Ozbekh chief was repulsed. But in 1544 the Ozbekhs again succeeded in entering the town and plundering and murdering there. The year 1589 was a disastrous one for Meshed. The Shahbânt ʿAbd al-Muʿīmin after a four months' siege forced the town to surrender. The streets of the town ran with blood and the thoroughness of the pillaging did not stop at the gates of the sacred area. Shaikh ʿAbbâs I who lived in Meshed from 1555 till his official ascent of the throne in Kashan in 1567 was not able to retake Meshed from the Ozbekhs till 1598.

At the beginning of the reign of Tahmasp II [q.v.] in 1722 the Afghān tribe of Abâli [q.v.], invaded Khurāsān. Meshed fell before them, but in 1726 the Persians succeeded in retaking it after a two months' siege. Nādir Shaikh [q.v.] (1736–1747) had a mausoleum built for himself in Meshed.

After the death of Nādir Shaikh civil war broke out among the claimants to the throne, in the course of which the unity of the Persian empire was broken. The whole eastern part of the kingdom of Nādir Shaikh, particularly Khurāsān (except the district of Nishāpūr), passed in this period of Persian impotence under the rule of the vigorous Afghān Shaikh Ahmad Durrānī. An attempt by Karim Khan Zand to reunite Khurāsān to the rest of Persia failed. Ahmad defended the Persians and took Meshed after an eight months' siege in 1167 (1753); cf. above i., p. 164., 202b, 203b. Ahmad Shaikh and his successor Timūr Shaikh left Shaikh Rukh in possession of Khurāsān as their vassal, making Khurāsān a kind of buffer state between them and Persia. As the real rulers however, both these Afghān rulers struck coins in Meshed (cf. above i., p. 202b).

Otherwise the reign of the blind Shaikh Rukh, which with repeated short interruptions lasted for nearly half a century, passed without any events of special note. It was only after the death of Timūr Shāh (1207–1792) that Agha Muhammad Khan, the founder of the Kâjîr dynasty, succeeded in taking Shaikh Rukh's domains to death in 1210 (1796) and thus ending the separation of Khurāsān from the rest of Persia (cf. above, i., p. 204b). The death soon afterwards of Agha Muhammad (1211 = 1796) enabled Nâdir, who had escaped to Herât, to return to Meshed and take up the reins of government again. A siege of his capital by a Kâjîr army remained without success; but in 1803 Fath 'Ali Shāh was able to take it after a siege of several months when Nâdir's funds were exhausted.

From 1225 Khurāsān suffered greatly from the raids of Turko-Turkoman hordes and the continual feuds of the tribal leaders (cf. Conolly, op. cit., i. 288 and Yate, op. cit., p. 53). To restore order the crown prince ʿAbbâs Mirza entered Khurāsān with an army and made Meshed his headquarters. He died there in 1249 (1833). The most important political event of the sixteenth century for Meshed was the rebellion of Hasan Khan Sâlîr, the prince-governor of Khurāsān, a cousin of the reigning Shaikh Muhammad-ʿAbbâs. For two years (1847–1849) he held out against the government troops sent against him. At the time of the accession of Nâdir al-Din (1848) Khurāsān was actually independent. It was only when the people of Meshed, under pressure of famine, rebelled against Sālîr that Ḥusnān al-Saltāna's army succeeded in taking the town. In 1851 a certain Vice-Admiral of Herât declared himself independent in Meshed under the name of Muhammad ʿAli Shāh and for a period disturbed Khurāsān considerably with the help of a body of reactionaries who gathered round him. This gave the Russians a pretext for armed intervention, and on March 29, 1912, they bombarded Meshed in gross violation of Persia's suzerain rights and many innocent people, citizens and pilgrims, were slain. This bombardment of the national sanctuary of Persia made a most painful impression in the whole Muslim world. Yūsuf Khan was later captured by the Persians and put to death (cf. E. G. Browne, The Persians and Persia, Cambridge, 1914, p. 124, 127, 156; Sykes, History of Persia, London 1917, ii. 426–447).

Meshed is now the centre of eastern Persia, the capital of the province of Khurāsān which, since its eastern part was taken by the Afghāns in the eighteenth century, is barely half its former size (cf. Le Strange, op. cit., p. 383 sq.; ibid., xi., 198 sq. and above, ii. 966). In the middle ages it was not Ṭūs, Meshed's predecessor, but Našābūr (modern Per-i Našābūr) that was the capital of this extensive and important province. A royal prince has usually been governor since the fall of the Nādīrids. Since 1845 the lucrative and influential post of Mutawallī-šāh, the controller or treasurer of the sanctuary of the Imām, has usually been combined with the governorship (cf. Yate, op. cit., p. 322).

The only plan — not very accurate — of Meshed known to me is that of Colonel Dolmage (cf. Curzon, op. cit., i. 151, note 2; 160) and was made about 1870. It is published in MacGregor, op. cit., i. 284. The plan of the town is an irregular oblong with its longer axis running from N.W. to S.E. Its circumference is according to the most reliable calculations about 6 miles, the greatest breadth about a mile, and the length not quite two miles measured along the main street Khvāshān which runs right through the town.

Like most Persian towns Meshed is enclosed by a great girdle of walls, which gives it a very picturesque appearance. The lines built to strengthen the defences, namely a small moat with escarpment before the main wall and a broad ditch running outside, are now in ruins and in places have completely disappeared.
The citadel (ark) in the southwest part of the town is directly connected with the system of defence. It is in the form of a rectangle with four great towers at the corners and smaller bastions. The palace begun by Abbās Mirzā but finished only in the 17th century by the Safawī Shahs, is connected with the fortress proper, now fallen into disrepair (cf. Yate, op. cit., p. 327). It is used as the governor's residence. The whole quarter of government buildings which, according to MacGregor, occupies an area of 1,200 yards, is separated from the town by an open space, the Maidān-i Tāp (Cannon Place) which is used for military parades.

There are six gates in the city walls.

The town is divided into six great and ten smaller quarters (mahalīs) (see Yate, op. cit., p. 328). The six larger bear the names of their gates; see al-Mahdī al-`Ālawni, op. cit.

The principal street which divides the whole town into two roughly equal halves, the Khīyābān, is a creation of Shāh Abbās I who did a great deal for Meshhed (1587-1627); see Yate, op. cit., p. 192; cf. of the Sūks. The Glory of the Shia World, p. 231). This street, a fine promenade, is, being the main thoroughfare, filled all day with a throng of all classes and nationalities, including numerous pilgrims, and caravans of camels and asses; the bustle is tremendous, especially in the middle of the day.

The canal, which flows through the Khīyābān in a bed about 9 feet broad and 5 feet deep is fed, not from the Keshf Rūd (see above) which runs quite close to Meshed, as it has too little water, but from the Čeher-e Gīlās already mentioned, which used to provide Tūs with water. When this town had been almost completely abandoned, Šīr Allāh, the viceroy of Sūltān Husain b. Maḥmūd b. Bahārī (1468-1506; on him see above, i. 933-1. 594), at the beginning of the sixteenth century had the water brought from this source to Meshed by a canal 45 miles long, thus sealing the ruin of Tūs; cf. Yate, op. cit., p. 315; al-Mahdī al-`Ālawni, op. cit., p. 13.

The making of this canal (see Yate, op. cit., p. 315; Mahdī al-`Ālawni, p. 13) contributed essentially to the rise of Meshed; for the greater part of its inhabitants rely on it for water, although after entering the town, the canal becomes muddy and marshy (which was often a subject of satire; cf. Abd al-Karrām, op. cit., p. 74), and used for drinking, washing, and religious ablutions, without hesitation. There are also large and deep reservoirs before the main gate. The water is saline and sulphurous and therefore has an unpleasant taste (cf. Conolly, i. 333-334; Khanikh, p. 105; Curzon, i. 153).

The sacred area divides the principal street into two parts: the Bālā (Upper) Khīyābān in the N.W. and the As in (Lower) Khīyābān in the S.E., of which the former is about 3 times as long as the latter. The sacred area covered by the sanctuary of the Imām al-Ridā is usually called Bālā (cf. above, i. 709). The name Ḥaram-e Shīrvān or Ḥaram-e Muḥammad or ʿArāmī al-Khīyābān (al-Ridā’s Haram), is often also applied to it: frequently it is called simply “Imām” in Persia as in the Irāk this title is applied also to a holy relic or piece of ground sacred to the Bālā. The rectangle 1,000 yards × 700 feet in area, is in the lower half of the Khīyābān. With its courthouses, sanctuaries, madrasas, caravanserais, bazaars, dwellinghouses etc. it forms a town by itself; a wall around it cuts it off completely from the rest of Meshed. The main entrances from the Khīyābān are two great doors on north and south, but they are barred by chains so that no vehicle or person can enter; for the ground of the Bālā is holy and may only be trodden on foot. Animals which get in by accident become the property of the administration of the Imām. The Bālā also has the right of asylum (whence the name Bālā). Debtors who take refuge in it are safe from their creditors; criminals can only be handed over by order of the Mutawalli-Bashī, which is now usually done after three days. In the whole of the sacred area strict discipline is maintained by its own police; there is a special prison for thieves (see the plan in Yate, p. 332, No. 75; cf. also Conolly, i. 263; Khanikh, p. 98; Keswas, op. cit., p. 224; Curzon, i. 153-154; Massy, op. cit., p. 1006; Yate, p. 334)

Entrance to the Bālā is strictly forbidden to all non-Muslims. In earlier times the rule does not seem to have been so strict. In 1591, Molla Afsari in 1404 was able to visit the sepulchral chapel of the Imām al-Ridā. In the sixth century Fraser (1822, 1833), Conolly (1830), Burns (1832), Ferrier (1845), Eastwick (1862), Vāmberi (1863), Colonel DOLMAGE (in the sixties) and Massy (1893) visited the sacred area. Only Fraser, Conolly, DOLMAGE and Massy actually entered the sepulchral chapel itself. Vāmberi and Massy were dressed as Muslims while the others retained their European dress. Except DOLMAGE, all these travellers have given more or less full descriptions of the sacred area. The full and accurate description given by Sykes in the J. R. AS., 1910, p. 1130-1148 and in the Glory of the Shia World, p. 240 and in the Glory of the Shia World, p. 1128 and in the Glory of the Shia World, p. 100. The latter differs in details not inconsiderably from Šārī al-Panah’s plan which is right we have not the means of telling.

The history of the sanctuary of ʿAlī al-Ridā is pretty well known from inscriptions and literary sources (cf. especially the references in Yate, op. cit., p. 317 sq.; Sykes, J. R. AS., 1910, p. 1130 sq.; and Mahdī al-ʿĀlawni, p. 14 sq.). According to local legend, Alexander the Great built a wall around the site as he foresaw in a dream that it was destined to be the tomb of a saint (cf. Fraser, Narrative, p. 449; Sykes, op. cit., p. 1130). As early as the second half of the tenth century, as Ibn Hawšāl tells us (P. S. A., ii. 313), the ʿAid sanctuary had a strong wall built around it, within which devout men who wished to lead an ascetic life (ritikāf, q.v.) took up their abode. The almost contemporary account of al-Mukhallābī in Abu Tāfīd, p. 452 is similar. A few decades later, Sūltān Mahmūd of Ghazna (988-1030) as a result of a dream enlarged the
buildings of the tomb and provided a new wall around them (see Sykes, p. 1130). The sanctuary at a later date seems to have fallen somewhat into disuse; for about a century later it was restored by the Sadjak Sulthan Sandijq (q.v.) out of gratitude, local tradition says, for the miraculous cure effected on his sick son there (see Fraser, *cf. etc.*, p. 451; Napier, *J. R. G. S.*, xlii. [1869], p. 80). Sykes, *cf. etc.*, p. 1141—1142 and in *Glory of the Skin World*, p. 238 *et seq.*). It is to this event that an inscription of *512* (1118) inside the chamber of the tomb refers (see it in Sykes, p. 1140—1141 and cf. Mahdi al-Alawi, p. 15). There is also a second inscription (in Sykes, p. 1142—1143) which records a restoration undertaken in 612 (1215). The existence of these two inscriptions, the oldest in Meshhed, shows that the Mongols of Mongol-Khan when they swept over Khurasan in 1220, if they may have plundered the sanctuary, spared the buildings. We hear of another restoration of the buildings in the reign of Sulthan 'Uljiaji Khudzbanda (1304—1316; cf. Sykes, *J. R. A. S.*, 1910, p. 1132; Mahdi al-Alawi, p. 18). From the middle of the sixteenth century we have the somewhat fuller description of the sanctuary of 'Ali al-Kijja by Ibn Battuta (ii. 77—79). Timur's son Shah Rukh (1406—1446) and his wife Iqwar Shuddi did a great deal for the Haram. The latter built the splendid mosque to the south of the tomb which still bears her name. The Dar al-Suytija, the fine hall within the tomb, and the adjoining chamber of the Dar al-Hujra, are also due to the queen. Under Timur's grandson Sulthan Husain Bakhsh (1469—1506) the famous Shri 'Ali erected the southern part of the Shah-i Kuhna, "the old court", with the imposing portal; see the inscription reproduced in Sykes, p. 1133.

With the coming to power of the Safawids a new and brilliant era dawned in Meshhed. The rules of this dynasty vied with one another in the development and adornment of the sanctuary of 'Ali al-Kijja, which they raised to the religious centre of their kingdom. In the re-pect of the Tahmasp I (1524—1576) and Solomon I (1576—1581) devotes his attention mainly to the further decoration of the Shah-i Kuhna. The inscription published in part by Sykes, p. 1133 (cf. also Khanikoff, p. 1912) was written by the master hand of Muhammad Raja Aibash (on him cf. Sarre and Mitwach, *Zeichnungen aus dem Islam*, Munich 1914, p. 15—16). Solomon I (1566—1604) devoted special attention to the restoration of the dome of the Imam's tomb: see Mahdi al-Alawi, p. 19 (cf. also Yate, p. 345; Sykes, p. 1137). Foreign potentates also gave great gifts to the 'Aliid sanctuary in the Safavid period, such as the Emperor Akbar of India who made the pilgrimage to Meshhed in 1595 (cf. Yate, p. 319) and in 1512 the Raja of Bikaner, the Raja of Deccan. It was Nadi ar Shuh (1735—1747) who did most for the town of Meshhed in the eighteenth century. Although a very strict Sunni, he devoted a considerable part of the enormous wealth which he had brought back from his Indian campaign to the embellishment of the great Shuh's place of pilgrimage. He restored thoroughly the southern half of the Shah-i Kuhna built in the reign of Sulthan Husain Bakhsh. He decorated the portico richly and covered it with sheets of gold so that it is still called 'Nadir's Golden Gate' after him. In 1750, before his accession to the throne, Nadi ar erected a minaret covered with gold in the upper part of the Shah, as a counterpart to that erected by Tahmasp I on the north side of the 'old court'. Cf. on Nadi ar's activities at the sanctuary of al-Kijja. Muhammad 'Ali Hazan *Turk' Akbar Shaikh Hazan* (Memoirs, ed. Balfour, London 1851, p. 272).

The rulers of the Khujjar dynasty of the sixteenth century, Fath 'Ali (1797—1834), Muhammad Shah (1833—1848) and Nasir al-Din (1848—1896), faithfully followed in the footsteps of their predecessors, as regards attention to the Imam's sanctuary.

In spite of the number of times which the Shahi sanctuary has been plundered in course of time, it still has countless treasures within its buildings and courts, in the shrine, as regards the wealth and the extent of its buildings and courts, all the other great Muhammadan sanctuaries, except perhaps Mecca, but including the much-admired Nadyf and Kerbela.

A detailed and accurate description of the Haram and an account of its architectural history detailed in its present state cannot be given because the strict prohibition of admission to members of other faiths has prevented non-Muslim scholars from examining thoroughly and reproducing the buildings. Relying on descriptions of the sacred area prepared by Europeans and Orientals and on the valuable data contained in inscriptions (the latter were first noted by Khanikoff, p. 103—104; the more important were published by Sykes assisted by Khan Bihahar Ahmad Din, in *J. R. A. S.*, 1910, p. 1151 *et seq.* we can assume with considerable probability that, except the tomb proper, which in its present form (excluding the later dome) according to the inscription (512 = 1118), dates from the beginning of the sixteenth century, only insignificant remains of the earlier mediæval period have survived. The Haram in its present form is the main a creation of the last 500 years, as is briefly outlined in the above short historical sketch of the sanctuary.

The dome of the tomb with its various annexes rises in the centre of the sacred area and is bounded on the north and east by two great rectangular courts, the Shah-i Kuhna and the Shah-i Naw, while in the south it is bounded by the extensive buildings of the Iqwar Shuddi mosque.

The most popular entrance to the last and the one preferred by pilgrims is the gateway in the Bāl-Khāyān barāda by a chain. The road runs for 250 yards through this street till it meets at the end a great gateway through which the Shah-i Kuhna, the 'old court' is entered. Its northern part dates from the time of Shuh Aibash I, while the southern is as old as the second half of the fourteenth century, reign of Sulshan Husain Bakhsh, but was completely altered by Shah. Four great towers with niche-like halls called *aqwāl* admit to the court. The simplest are the west and east towers built by Aibash I; the former has the clock tower, while the platform of the latter is used as *nikšār-khānez* i.e. *music-
house", where, according to an old Persian custom, found in other royal cities, sunrise and sunset are greeted with music. From the east gate one reaches the eastern exit of the Bost through the Bazar of the Pā'īn-Khiyābān. Much more impressive from the architectural point of view are the northern gateway built by 'Abbās II and especially the southern gateway of the court, “Nādir’s Golden Gate.” Nādir Shāh’s most splendid achievement and the most imposing building of the whole Haram. At each of the two great gates stands a minaret 100 feet high, the upper part of which is covered with gold; the builder of the northern gate was Tāhmasp I and of the southern Nādir Shāh. Nādir built in the centre the famous octagon of “Nādir’s Well” covered by a gilt baldachin (Saḥāla-Khān-e Nādirī = Nādir’s water-carrier-house”); it was hewn out of a huge block of white marble which the Shāh had brought at great expense from Herāt. The walls of the court are pierced by two rows of alcoves, the lower of which is occupied by artisans, schools and dwellings of the servants of the mosque, while the higher officials of the Imam occupy the upper storey. The whole courtyard which has a length of about 100 yards and a breadth of 70, is paved with dark Mešhērī stones (cf. below) which are also to some extent tombstones. For pictures of the Šāhni Kuhna with clock tower and Nādir’s Well see above, iii. 354, pl. 15; Yate, p. 340, 345; Sykes, Glory of the Shīr World, p. 241; picture of Nādir’s Golden Gate in Yate, p. 326 and Sykes, 19, cf. cit., p. 245.

Nādir’s golden gateway leads southwards into the area of the holy tomb, the sepulchral chamber with the halls and rooms surrounding it. Strictly speaking, it is only this nucleus of the whole sacred area that should be called Haram or Hāram-ī Muḥaddas or Hāram-ī Mūbārak, terms often extended to the whole Bast. The names al-Ra’i’sa al-Maʾshahara and Asīrān = (the holy) threshold, are also used. After passing through the Golden Gate one enters the Dār al-Siyādah, built by Dājwār Shāhī, the finest hall in the sacred quarter. Hung on a wall here is a round disk said to be that on which the poisoned grapes were offered to ʿAbbās the Great. The pilgrim can see into the sepulchral chamber through a silver grille from the Dār al-Siyādah. Turning to the southeast one enters a smaller, more simply decorated chamber, the Dār al-Huṣayn.

Adjoining the Dār al-Huṣayn in the north is the dome of the Mausoleum of the Imām. The interior of the sepulchral chamber (see the picture in Sykes, cf. cit., p. 251), an almost square area, 30 x 27 feet, is, as there are no proper windows, lit by the dim light from golden lamps and candlesticks and furnished with the greatest splendour. The tomb itself is in the N. E. corner and surrounded by three beautiful grilles, one of which, dated 1747, is said to come from the mausoleum of Nādir Shāh now destroyed. ʿAbbās I gave the top of the tomb with its gold covering. In a projection at the foot of the tomb, Fath ʿAlī Shāh placed a false door of gold inlaid with jewels (picture in Sykes, cf. cit., p. 253). In niches in the wall behind glass are kept very valuable votive offerings (jewelled arms, etc., mainly gifts of the ruling house). On the wall are the two inscriptions already mentioned of 512 (1118) and 612 (1215) of which the first is the earliest known example of the so-called round hand (thulth) in Arabic epigraphy (cf. v. Berchem in Diez, Churaran. Beaufändler, i. 97, note 8). These enable us to place the building of the present chamber in the beginning of the xivth century, while the dome 65 feet high covered with sheets of gilt copper was built only in 1607 by ʿAbbās I and renovated in 1675 by Sulaimān I, according to inscriptions on its outside. As the thread of tradition regarding the site of the Imām’s grave can hardly have been broken, it may be assumed practically with certainty that the present dome is built on the true site. There is no longer any trace of Ḥārūn’s grave; it probably was in the centre of the mausoleum, whence the tomb of the ʿAlid who died later was put in a corner of the same place.

Of the other chambers and isolated buildings belonging to the system of the Haram proper, we shall only mention here the Qanbaq (domed tomb) of ʿAbbās Wardi Khān, which lies to the N.E. and takes its name from its builder, a famous general of ʿAbbās I (cf. Conolly, i. 271; Sykes, The Glory of the Shīr World, p. 266; see also the picture in Diez, Persien: Islam. Baukunst in Churaran, p. 54).

Leaving the sacred chamber by the eastern door one reaches, after traversing two adjoining rooms, the “Golden Gate” of Naṣīr al-Dīn, which leads into the New Court (Ṣahni-ī Nāvo); its northside is bounded by the Pā’īn Khiyābān. Fath ʿAlī Shāh began this court in 1818. His two successors continued the building, which was completed in 1854.

If one turns southwards from the Dār al-Siyādah already mentioned, one enters the area of the charming mosque endowed by Sūlāna Dājwār Shāhī and bearing her name. Like the Šāhni Kuhna this other court, an oblong running N. to S. about 100 yards long and 90 broad, is broken in the middle of each of its four sides by an arched hall (awān), while the unbroken parts of the walls have rows of alcoves fitted up as dwellings. The largest and finest of these four awāns of the mosque, the Awān-ī Maḵṣūra in the south (for Maḵṣūra = stall, cf. iii., p. 336), is used for prayers; in it is a wooden pulpit in which the Māḥbī will one day show himself to the faithful. The entrance hall is covered by a blue dome which surpasses that on the tomb of the Imām in height and width, and is flanked by two high minarets covered with blue glass tiles. The centre of the court is occupied by the Masqīlijī Pir-i Zind = “Mosque of the Old Woman”, a square unroofed area surrounded by a wooden balustrade around which runs water in a deep stone channel.

The Dājwār Shāhī mosque is the noblest and finest building in the sacred area; cf. the opinions of Fraser, Narrative, p. 467; Vāmbrī, Meine Wanderungen etc., p. 322 and Sykes, J.R.A.S., 1010, p. 1145. — Pictures of the mosque in Sykes, The Glory of the Shīr World, p. 265; Yate, p. 344 (Awān-ī Maḵṣūra and Awān-ī Pir-i Zind); Diez, Persien: Islam. Baukunst, p. 45-48.

Of the various small sanctuaries which the pilgrim visit in the Haram, only two need be mentioned here, the Ziyārat Kadam-i Mūbārak or Shārif = “the place of pilgrimage of the blessed or excellent foot” also called Dājī-ī Sing-i Cuḥār-pā = “place of the foot-stone” (see the plan in Yate, p. 332, No. 16), a circular space covered by a dome (east of the north awān of the Dājw-
hath Shâh mosque), in which reverence is paid to a dark grey oval-shaped stone said to contain an impression of 'Ali al-Ridâ's foot (cf. Massy, op. cit., p. 1003—1004). The second noteworthy feature of the Bâst is a tall stone pillar, out of which a water basin has been roughly hewn. It is said to have fallen into the Bâst as a shapeless block from heaven (see Massy, op. cit., p. 1002).

Inside of the sacred area are the richest and busiest bazaars of the town, the most richly endowed madrasas, the most profitable caravanserais and the most popular baths. These are all, like the dwelling houses here, the absolute property of the Imâm, the 'Alîid buried here, i.e. of the ecclesiastical authorities who administer the sanctuary on his behalf. The whole Bâst belongs exclusively to them. This dead hand however has still more possessions in land, buildings, canals (jâdâl, q.v.), in all the provinces of Persia, especially in the immediate and more distant vicinity of Meshed.

To the vast sums which these properties yield in produce and rents, are to be added the considerable payments for funerals and tombs, the gifts of pilgrims etc. There is also considerable expenditure, the payment of a considerable number of higher officials and of a large number of lower officials and servants, the maintenance of many pilgrims, the cost of repairs, lighting, decoration of the sanctuaries etc. The income of the Haram in course of time has naturally varied. Towards the end of the Safawid period it is said to have been about £15,000 while at the time of Fraser's first visit (1822), as a result of the troubled times, it had sunk to £2,000—2,500 (Fraser, Narrative, p. 455). Later travellers, like Basset (1878) and Curzon (1889), estimated the annual revenues of the Imâm at £20,000 to £17,000 (without revenues in kind); for the last decade of the sixth century Massy (p. 1106) and Yate (p. 344) give £20,000. Ibrahim Beg's estimate (op. cit., p. 43) of £50,000 is certainly much too high.

At the head of the administration of the Haram there has been from early times a Mutawalli-Bâshi, who must be a layman. In view of the very influential position which this official occupies in his capacity as head of the greatest Persian sanctuary and treasurer of a very considerable estate, it is only natural that an appointment to such a position of trust is regarded as a very special honour. As it was not uncommon for disputes about the limits of their respective spheres of authority or other matters to arise between the holder of this office, the representative of ecclesiastical power, and the governor of Khurâsân, the clerical element has since the middle of the sixth century been subordinated to the civil power by giving the office of Mutawalli-Bâshi to the governor of the time (see Yate, p. 322, 344).

This very lucrative double office — the Mutawalli-Bâshi gets 10% of the revenues of the Haram — is as a rule only held for a few years by the same individual.

The Mutawalli-Bâshi is assisted by a staff of higher officials (mutawalls). He has further at his command the varied hierarchy of the sacred area, among whom the muftis [q.v.] who have a thorough knowledge of religious law and are men of great prestige and influence, occupy the first place. Next comes a regular army of lower clerics (malâls) who conduct the services, teach in the schools and guide the rites of the pilgrims; not a few of them make a living by supplying official documents sealed with the seal of the Imâm (see the picture in Sykes, Glory of the Shia World, p. 278) which deal among other matters with the answering of petitions made by the pilgrims at the sacred tomb (cf. Khanikoff, p. 99). On the administration of the sanctuary of Meshed cf. Fraser, op. cit., p. 455—456; Curzon, i. 162—164; Massy, p. 1006 and especially Yate, p. 344—345.

As we know from mediaeval Arabic sources, pilgrimage to the tomb of 'Ali al-Ridâ began at an early date. We occasionally hear also of royal visits from the sixth century onwards.

As to the number of pilgrims who visit Meshed annually we have different estimates for the sixth century but as exact figures can hardly be kept and the numbers vary greatly, they can only claim reliability to a very limited extent. While Yate (p. 334) gives the annual number for the last decade of the sixth century at 30,000, earlier travellers, except Marsh (1872: 20—30,000) give much higher figures, e.g. Bellieu (1872): 40—50,000; Forster (1845): 50,000; Khanikoff (1858) and Eastwick (1862): over 50,000; Curzon 1889 even gives 100,000, but this is certainly too high. The numbers go up considerably when special religious ceremonials are going on, e.g. at the anniversary of 'Ali al-Ridâ's death (cf. the pictures in Diez, Persien etc., p. 46) and during the first third of the month of Muharram at the Ta'âsya [q.v.] in memory of the tragedy of Kerbelâ. We have a full description of the Muharram festival (see his Journey etc., i. 267—284, 335—336) and a shorter one of 1894 by Yate (op. cit., p. 144—148); cf. also the illustrations in Yate, p. 146 and the drawing by the painter 'Ali Ridâ 'Abâd of a Meshed pilgrim at the time of the Muharram festival in Sarre and Mutwoch, Zeichnungen des Kisa Abbasi (Munich 1914), Plate 1 (thereon p. 23, 49 and Iis., i. 216 sq.).

Every pilgrim who arrives has a right to free maintenance for three (according to Vâmbéry: six) days. In the sacred quarter, south of the Bâst Khiyâbân (see the plan in Yate, p. 322), there is a special kitchen used exclusively for pilgrims, which gives out 5—600 free meals every day (cf. Vâmbéry, op. cit., p. 322; Goldsmith, Eastern Persia, i. 304 and Curzon, i. 162).

On the ceremonies which the pilgrims have to perform at their visit to the tomb of 'Ali al-Ridâ, we have accounts by Massy, op. cit., and the notes supplied by Khân Bahâdur Ahmed al-Din Khân in Sykes, J.R.A.S., 1910, p. 144—145 and in the Glory of the Shia World, p. 240 sq. Special mention may be made of the three circumambulations (proid [q.v.] of the tomb and the cursing of all enemies of the imâm three times, especially the Caliphs Harûn and Ma'mûn.

Every pilgrim who has performed the pilgrimage to 'Ali al-Ridâ's grave in the prescribed fashion is entitled to call himself Meshkedi. Meshed occupies first place among all the places of pilgrimage in Persia. Among the great sanctuaries of the Muslim world, Meshid stands seventh in the view of Shi'a theologians, coming after, not only Mecca and Mekâh, but also the four specifically Shi'a sanctuaries of the 'Irâq, Nejdjef, Kerbelâ, Sâmarra and Kûttâmân, in this order (cf. Sykes, The Glory of the Shia World, p. viii). According to a version current in Shi'a
circles which Curzon (i. 150) gives, Meshed is entitled to the sixth place, coming between Kā'imānī as fifth and Sāmāntrī which is put seventh.

The longing of every Shī'ī to find a last resting place in the shadow of any of the beloved Imāms caused extensive cemeteries to be laid out at an early date at the great centres of pilgrimage. Thousands of corpses are brought every year to Meshed, mainly of course from Persia, but also from all the Shī'ī lands, particularly India, also Afghanistan and Turkestan. Nowhere in the whole of Persia are there so many tombs as at Meshed. As the ground of the cemeteries must be used over and over again, the graves change their occupants every few years. Fine solid tombstones are not used, but simply rough blocks of granite or soapstone from the quarries of the neighbourhood (cf. also Conolly, i. 243–4 and Khanikoff, p. 105). Graves within the sacred quarter itself are naturally most desired. Every available space there is used for the purpose; the pavingstones in the courtyards are often tombstones for the dead below. The fees for graves within the Bast, which vary with the distance from the Mausoleum of 'Alī al-Ridā, bring a not inconsiderable revenue to the authorities.

Of the large cemeteries (mağbaras) outside the Bast the most important is the Mābarra Kātī Gāh ("place of the killing") lying north of the sacred area. East of it is that of Saiyid Aḥmad in which three children of the seventh Imām, Muṣṭaṣr al-Kāẓim, are buried (cf. Mahdī al-ʿAlawi, p. 8). In the Pāčī Khiyābān quarter is the Mābarra Pirt-i Fālāndās. S. E. of the citadel is the cemetery of Gumbad-i Said ("green dome") which takes its name from a half ruined mausoleum there, now inhabited by dervishes (cf. Yate, p. 328; Mahdī al-ʿAlawi, p. 9).

In the Naḵūn quarter is the Mābarra Shāh-za'de Muḥammad (see Mahdī al-ʿAlawi, p. 8). We may also mention that outside the Naḵūn gate on the site of the old town of Naḵūn (see above), are visible the remains of a gigantic cemetery on which, according to Sykes (J. R. A. S., 1910, p. 1116), there may be found stone sarcophagi with inscriptions carved upon them dating from 760 to 1099 (1359–1685).

Outside of Meshed a good half hour's journey to the south, on rocky ground, is the cemetery of Miḥrāb-ʿAbd al-Rāfiʿi (see Mahdī, op. cit., p. 8) and still farther from the town, 5 miles north of it, that of Khabūrārā Rāfiʿ (cf. Sykes, op. cit., p. 1124 and Ibn Saʿd, vi. 127 sq.). According to the popular view, he was a Sunni in spite of his relations with 'Ali and is therefore in a way regarded as the patron of the Sunnis in Kūh-i-Rās, of whom those who live in Meshed are usually buried near his tomb. Rābiʿ's mausoleum is one of the most interesting in the whole of Kūh-i-Rās: it is a large octagonal building crowned by a dome but now it is in a half ruined condition.

Meshed is the centre of Muslim theological and legal studies in Persia. A number of colleges (madrasas) there are devoted to teaching these subjects. Lists of them with dates are given by Fraser (p. 456–460) who mentions 14 of the present 16 madrasas, also by Khanikoff (p. 107) who gives 13, and by Mahdī al-ʿAlawi (p. 9–10). The latter observes that there were 20 older colleges, of which he gives 15, and a number of more modern ones. Fraser also gives brief notes on the possessions of the various madrasas and the clerics (muallās) attached to them. Yate (p. 329–330) simply mentions six of the best known. From these lists, which supplement one another in welcome fashion, we get the names of 20 colleges. From the dates of foundation we find that the oldest of the madrasas still standing in Meshed is the Madrasa Dūdār, which was built in 823 (1420) by the Timūrid Sultan Shāh Rakh and restored by Sulaimān I. Under the same ruler was built the Pāčī Khiyābān Madrasa which was completely remodelled by Sulaimān I. From the time of 'Abbās II date the two almost contemporary colleges Khatīr Kān (1058 = 1649) and Mirāz Dīfār (1059 = 1650). The majority of the older colleges, no fewer than nine in number, date from the time of Sulaimān I, who also restored some buildings (1666–1694). As to the Kāẓamī, one was founded in the reign of Fath 'Abd al-Shāh and two in that of Nāṣir al-Dīn, who also restored two that had fallen into ruins.

From the artistic point of view, the finest is the Madrasa of Mirāz Dīfār which was built and richly endowed in 1059 (1650) by a Persian of this name who had made a fortune in India. It is generally regarded as the third finest building in Meshed, next to the Mausoleum of 'Alī al-Ridā and the Dījāvar Shāhī Mosque. In its plan, with vaulted halls and courtyard with niches, and its rich decoration, it follows the style of the courts and mosques of the sacred area above described, typical of the ecclesiastical architecture of Persia (cf. above, iii. 439, 447 sq., and also Fraser, p. 466–467). Not only the Madrasa of Mirāz Dīfār but also other richly endowed colleges, like that of Fath Sīn (both of the time of Sulaimān I) owe their origin to Persians who had made fortunes in India (cf. on the foundation of the two last named colleges: Fraser, p. 457–459; Sykes, The Glory etc., p. 267–269). The most esteemed colleges are in the Bast, namely the three already mentioned as the oldest, Dūdār, Pārīzād and Khatīr-Kān, also Fathār and Ālī Nāṣir Mirāz. Others, like the above mentioned Mirāz Dīfār Madrasa and the Mustaṣḥār Madrasa have doors communicating with the Shāh-i Kūhān of the Haram quarter.

Students also live in the madrasas, their maintenance being provided for by pious endowments. While in Khanikoff's time (1852) there were no outstanding teachers there and the number of students was small, the reputation of the Meshed colleges went up again in the second half of the sixteenth century so that Sykes (The Glory etc., p. 267 sq.) in 1910 puts the attendance at 1,200 students, who came from Persia, India and other Shī'ī regions. The student who wishes to take a higher theological training after the nine years' course at Meshed must go to Meshed 'Alī (Nedjef, q.v.) and attend the lectures of the teachers there, who are the first authorities on Shī'a theology.

We have no details of the libraries of the Meshed colleges. Of the rich Fāṭimah Kān Madrasa, Fraser only says (p. 457) that it has a valuable library. The administration of the Haram also has a large and valuable collection of books (on its location see the plan in Yate, p. 332, No. 65 and cf. No. 29), founded in the first half of the sixteenth century by Sultan Shāh Rakh. The treasures accumulated under him and his successors were for the most part lost when Meshed was sacked by
the Ozbegs under Abul-Mu'āmin Khān (1589; cf. Yate, p. 318; Sykes, The Glory etc., p. 239; cf. also Herfeldt, in Ephemerides Orientales, 1926, N. S. 28, p. 7—8). A thorough examination of the manuscripts here might give valuable results.

In this connection we may mention the activity of the Meshed printing presses. Newspapers etc. which began with the last decade of the 19th century; see thereon Browne, The Press and Poerty of Modern Persia (Cambridge 1914), p. 348 (Index s. v. Meshed); Browne, Literary History of Persia, iv., Cambridge 1928, p. 223, 489; Mahdī al-ʿAlawi, p. 12.

Meshed is remarkably rich in mosques which are built in the sacred area, at cemeteries and at separate tombs, and are connected with madrasas and other buildings of a religious character.

Here we may also mention the Musaʿīlī which stands outside the town, 1/2 mile from the Fārīn Khīyābān gate on the Haḍrāt road. It is a hall (ārdābār) about 50 feet high which opens into a great hall about 60 feet high.

However picturesque Meshed may look from outside, the impression one gets on entering is quite different from pleasing, except for the Saṭrā which forms a separate enclosure. Except for the already described broad main street (Khīyābān), there are only narrow dark alleys the level of which is almost always considerably above that of the inner courts of the houses of brick, so that they can be entered by long gloomy passages (cf. Khanikoff, p. 304; Yate, p. 328).

As to the population of Meshed, the permanent residents, excluding the many pilgrims, is said to be greatest in the reign of Nādir Shāh, who frequently held his court there and every way contributed to the prosperity of the town. At that date Meshed had not less than 60,000 inhabitants. But the half century of turmoil which followed the reign of Nādir Shāh brought about a great decline in the town so that only 3,000 houses were reckoned there in 1769 (cf. Yate, p. 330). In the 18th century began a slow but steady rise. Trüllhier in 1807 estimated the number of houses at 4,000; Fraser in 1822 at 7,700 with 25—30,000 inhabitants. Conolly (1850) and Burnes (1839) estimate 40,000 inhabitants; Ferrier (1843) and Khanikoff in 1844 at 60,000. In 1874 Khrasānī suffered a terrible famine and 24,000 in Meshed alone died of starvation (see Goldsmid, i. 361). Baker is too high in putting the figure at 80,000 in 1873 and Curzon too low at 45,000 for 1889. Meshed at the present day is said to have 100,000 inhabitants (see Mahdi al-ʿAlawi, p. 4); it is in any case the third largest town in Persia.

The permanent population of Meshed is a rather mixed one; in consequence of the great influx of pilgrims and the commerce which was very great at least in an earlier period, many foreigners (Turkmans, Afghans, Indians etc.) settled in Meshed. Except for a very small section, all the Muslims of the town are Shīʿa. The small number of Sunnis are mainly Afghans and Turkomans. We have already mentioned that the Masjd-i Shāh and the Makbara Khwāja Kābīr are used by the Sunnis. The number of Christians is infinitesimal and is confined to a few Armenian traders and the personnel of English and Russian consulates established in 1889.

Nādir Shāh settled 100 Jewish families in Meshed whom he had transplanted from Każwin. After his death their position became a miserable one, especially after the catastrophe which overwhelmed them in 1839. When in this year, during the celebration of the Muslim Kurbān festival, a Jewess on medical advice placed her hand, which was suffering from an eruption, in the bosom of a dog, the Muhammadans took this for an insult to their religious observances. The excited mob, seizing the excuse, fell upon the Jewish quarter, plundering and murdering as they pleased and destroyed the synagogue. The surviving Jews had to adopt Islam. The Jews were called Ljudid, more fully Ljudid al-Islām = "new comers to Islam", because their forced conversion is of recent date. The change of faith was only an external one; it is true that these Ljudid to avoid suspicion regularly attend the mosque, but not a few of them are said to observe their old rites in secret. The number of Judeo-Muslims in Meshed at the present day who are small traders, physicians, etc., was put by Bassett (1878) at 300 families, by Yate at 200 On the Jews of Meshed and their persecution in 1839 cf. Trüllhier, p. 273; Conolly, i. p. 304—308; J. Wolff, Narrative, p. 177, 394—396; Ferrier, p. 122—123; J. J. Benjamin (see Fisk), p. 189—190; Vamiery, Wanderungen, p. 324—325; Bassett, p. 235—233; Yate, p. 322.

The clerical element is strong in the Muslim population; everywhere one sees mulās, jolmas (students) and dervishes. The town swarms with saiyāls (alleged descendants of the Alim amid who the Rāis has, who claim descent from ʿAlī al-Khātā, enoy special privileges Meshed is not only one of the most fantastic cities in the whole Muslim world but also one of the most immoral in Asia. Prostitution, the so-called pilgrim marriage (Paschtsch; cf. muta'a and iv., p. 353, 355), sanctified by the Imāmī group of the Shīʿa, flourishes here. Most pilgrims take advantage of this institute of temporary marriage (cf. Khanikoff, p. 98; Currzon, i. 164—165; Ibrahim Beg, p. 45; Yate, p. 419; Allemagne, iii. 86—87).

The people of Meshed are described as very superstitious; see especially Bassett, p. 228 sq. and the Meshed Storie in Conolly, i. 316—318. Many stories are told of miracles wrought in the ʿAṣl sanctuaries: see Fraser, p. 451—452; Bassett, p. 426—427; Massy, p. 992—993, 1002; Yate, p. 325, 337.

The population of the town lives partly by catering for pilgrims and partly on local industries and commerce.

The industries, once so flourishing, have now declined. The famous manufacture of sword-blades, introduced by a colony of sword-makers transplanted by Timur from Samarkand, has now almost entirely disappeared (cf. Trüllhier, p. 275; Fraser, p. 124; Ferrier, p. 468; Curzon, i. 166).

A specialty of Meshed is the manufacture of decorated vessels (howesh-ul utensils, like jugs, pots, dishes etc.) out of serpentine and dark grey soapstone (Meshed stone), from the quarries 1½ hours south of Meshed. This stone industry is old and the Arab sources of the middle ages mention it as native to the district of Tīs and especially to the town of Nāmūnī, the predecessor of Meshed; cf. B. G. I., i, 258; ii. 311; iii. 321, 326; al-Muhallab in Alī al-Fidāʾī, p. 452; Alī Ḥumāmid al-Gharnānī, in J.A., 1925, p. 203; Yāḵūt, iv. 824 and cf. G. Le Strange, Op. cit.
For the sixth century cf. Truhl'ier, p. 274–275; Fraser, p. 409; Ferrier, p. 124; Bellew, p. 366–367; Baker, p. 184; MacGregor, i. 291–292; Basset, p. 234; Curzon, i. 167.

When the construction of the important line of communication between Ashkhabad and Meshhed was begun, the centre of the tuquoise trade was located in Meshhed. The tuquoise came to Meshhed by camel and was transported to the market town of Nishapur (about 1½ days journey distant). The same route was used by the camel trains from the Caspian to Khurasan.

The trade of Meshhed is still very extensive. The city is a centre of the turquoises trade. The tuquoise is obtained from the mines in the neighbourhood of Meshhed and is sent by camel to the Gulf. The trade of Meshhed is still very extensive. The city is a centre of the turquoises trade. The tuquoise is obtained from the mines in the neighbourhood of Meshhed and is sent by camel to the Gulf.

Weaving is an important industry in Meshhed. The carpets produced here were at one time of immense greater value than those of the present day, which are produced in factory fashion. The modern shawls of Kashmir style are especially prized and known as Meshhdari, as are the veils, which in Fraser’s time were regarded as the best in Persia. On weaving in Meshhed cf. Fraser, p. 468; Ferrier, p. 124; Goldsmith, i. 365; Baker, p. 184–185; Curzon, i. 167; Ibrahim Beg, p. 47; Schweinitz, p. 27–28; Allemagne, iii. 116.

Until the second half of the sixteenth century, Meshhed was one of the first emporia of Eastern Iran. At the intersection of important caravan routes, it was the centre of the trade of Central Asia and especially of Afghanistán. Since however Russia has established itself in Turkestan and built the Transcaucasian railway, Meshhed’s trade has declined. Nevertheless the town must still be described as an important centre of trade, not least on account of the numerous pilgrimage routes that lead to it. Meshhed is 150 miles from the Russian railway station of Ashkhabad (q. v.), the capital of the Transcaucasian area; there is a good road between the two towns.

For the housing of the numerous pilgrims and other strangers who come to Meshhed, a considerable number of caravanserais are available. In Fraser’s time (1822), there were at least 25–30 such places in u. e. apart from some that had been abandoned and allowed to fall into ruins (see Fraser, Narrative, p. 460). Khankhoi (p. 107–108) gives 16, four of which, intended for pilgrims only, were inside the i. a.; of these the latter are the old is the Šabja; Caravanserais, built by Tāhmasb I; others date from Sulaymān I.

**MESHED-ALI.** [See NEJAFI.]

**MESHED HUSAIN (Kerbela),** a place of pilgrimage west of the Euphrates about 60 miles S.S.W. of Bagdad on the edge of the desert (Yākūt, *Mu'jam*, ed. Wüstenfeld, iv. 249). It lay opposite Kār on Ibn Hubair (al-Iṣkāhri, B.G.A., i. 85; cf. al-Balāghrī, *Fatār*, ed. de Goeje, p. 287; al-Makdisī, B.G.A., i. 121). The same Kerbelā is probably connected with Aherār Kerbelā (Daniel, 3, 3) and the Kerbelāk (a kind of head-dress) (G. Jacob, *Turkische Bibliothek*, xi. 3, note 2). It is not mentioned in the pre-Arab period.

After the taking of al-Ḥira, Khālid b. al-Walid is said to have encamped in Kerbelā (Yākūt, iv. 250). On the 18th day (19th Muharram) 61 (Oct. 10, 680) the Imam Husain b. 'Ali (cf. ii., p. 339) on the march from Mecca to the Iraq, where he intended to enforce his claims to the caliphate, fell in the plains of Kerbelā in the district of Ninawa (al-Tabari, iii. 2190; Yākūt, iv. 870; now according to Massignon: Khaymat Kā'a; according to Musili: Iṣhan Nainwa) in a battle with the troops of the governor of al-Kufa and was buried in al-Hira (Yākūt, ii. 188 sq.; al-Tabari, iii. 752; E. Herzfeld, cf. above, ii., p. 221.

The place where the decapitated body of the Prophet's grandson was interred (on the fate of the head which was cut off and sent to Damascus to Yazid I, cf. van Berchem, *Festskriften*, Ed. Sahau geworden., Berlin 1915, p. 298–310), called Kahr al-Husain, soon became a celebrated place of pilgrimage for the Shiites (cf. art. MA)'s.

As early as 63 (684–685) we find Sulaimān b. Ṣulaymān b. Ṣāḥib (cf. above) with his followers to Husain's grave where he spent the day and a night (al-Tabari, ed. de Goeje, ii. 545 sq.). Ibn al-Athir (Ta'rikh, ed. Tornberg, v. 184; ix. 358) mentions further pilgrimages in the years 122 (739–740) and 436 (1044–1045). The priests of Meshed Husain at quite an early date were endowed by the pious benefactions of Ṣumma Mīsā, mother of the Caliph al-Mahdi (al-Tabari, iii. 752).

The Caliph al-Mutawakkil in 236 (850–851) destroyed the tomb and its annexes and had the ground levelled and sown; he prohibited under threat of heavy penalties visiting the holy places (al-Tabari, ii. 1407; Ṣamī̄d Allah al-Mustawfī, *Nihayat al-Kalb*, ed. Le Strange, p. 32; Ibn Hawkal (ed. de Goeje, p. 160), however, mentions about 977 a.d. a large mosque with a domed chamber, entered by a door on each side, over the tomb of Husain, which in his time was already much visited by pilgrims. Dābīb b. Muḥammad al-Asadi of 'Ain al-Tamr, supreme chief of a number of tribes, devastated Meshed al-Hira (Kerbela) along with other sanctuaries, for which a punitive expedition was sent against 'Ain al-Tamr in 369 (979–980) before which he fled into the desert (Ibn Mansuwar, *Tāhir al-Umm*, ed. Amadrous, in *The Eclipse of the Abhārid Calipha*, ii. 338, 414). In the same year, the Shi'ī Bāyūd 'Aīdād al-Dawla (cf. above, i. 143) took the two sanctuaries of Meshed 'Ali (al-Majdāʿ) and Meshed al-Husain (M. Harī) under his special protection (Ibn al-Athir, v. 518; Ṣamī̄d Allah al-Mustawfī, loc. cit.).

In Rabi‘ al-awwal 407 (Aug./Sept. 1016), a great conflagration broke out caused by the upsetting of two wax candles, which reduced the main building (al-Kubbah) and the open halls (al-Arwiga) to ashes (Ibn al-Athir, ix. 209).

When the Sultān Sultan Malik Shāh came to Bagdad in 479 (1086–1087) he did not neglect to visit the two Meccahs of 'Ali and al-Husain (Ibn al-Athir, x. 103). The two sanctuaries at this time were known as al-Maghāhadān (al-Hurādī al-Isfahānī, *Tawārikh al-Salāf*, ed. Houssain, in *Revue des textes*, ii. 77) on the analogy of the dual al-Iṣkān, al-Baṣra, al-Hirān, al-Misrān.
(al-šāri'iyā) in which the pilgrims are entertained. Admission to the tomb could only be obtained by permission of the gate-keeper. The pilgrims kiss the silver sarcophagus, above which hang gold and silver lamps. The doors are hung with silk curtains. The inhabitants are divided into the Awdāl Raḥīk and Awdāl Fāyiz, whose continual feuds are detrimental to the town, although they are all Shīʿa.

About the same date, Ḥamd Allāh al-Mustawfī (op. cit.) gives the circumference of the town as 2,400 paces; he mentions there also the tomb of Ḥurr Raʾīṣ (b. Ṭāʾīḍ), who was the first to fall fighting for Husain at Kerbela'. Šāḥ Ismaʿīl I (d. 930 = 1524) made a pilgrimage to al-Najaf and Meshhed Husain.

Ṣulfān Sulaimān the Magnificent visited the two sanctuaries in 941 (1534–1535), repaired the canal at Meshhed al-Husain (al-Husainyā) and transformed the fields which had been buried in sand into gardens again. The Māmar al-ʿAbd (see below), formerly called Enguşṭā Yār, was built in 982 (1574–1575). Murād III in 991 (1583) ordered the Wālī of Baghdād, ʿAli Pasha b. Alwān, to build or more correctly restore a sanctuary over the grave of Husain. Soon after the capture of Baghdād in 1623, ʿAbbās the Great won the Meshhed for the Persian empire. Nādir ʿShāh visited Kerbela' in 1743; while he is credited with guiding the dome in Meshhed ʿAlī, he is also said to have confiscated endowments intended for the priests of Kerbela'.

The great prosperity of the place of pilgrimage and its large number of inhabitants is emphasised on the occasion of the pilgrimage of ʿAbd al-Karim, a favourite of Nādir ʿShāh. Radya Sulṭān Bēgum, a daughter of ʿAdī ʿHusain (1694–1722), presented 20,000 nādīris for improvements at the mosque of ʿHusain.

The founder of the Kādjar dynasty, Aḵta Muḥammad Kājān, towards the end of the eighteenth century, presented the gold covering for the dome and the maqām of the sanctuary of ʿHusain (Jacob in A. Noldeke, op. cit., p. 65; note 4).

In April 1801, in the absence of the pilgrims who had gone to al-Najaf, 12,000 Wahhābis under Ṣaḥīḥ Saʿād entered Kerbela', slew over 3,000 inhabitants there and looted the houses and bazaars. In particular they carried off the gilt copper plates and other treasures of the sanctuary and destroyed the shrine. But after this catastrophe contributions poured in for the sanctuary from the whole ʿArabī world.

After a temporary occupation of Kerbela' by the Persians, Najīb Pasha in 1843 succeeded by force of arms in enforcing the recognition of Turkish suzerainty over the town; the walls of the present old town were now for the most part destroyed. The governor Mīḥāṣ Pasha in 1871 began the building of government offices, which remained incomplete, and extended the adjoining market place (references for the history of Meshhed ʿHusain are given in A. Noldeke, op. cit., p. 35–50).

At the present day with over 50,000 inhabitants, Kerbela' is the second largest and perhaps the richest town of the ʿIraq. It owes its prosperity not only to the great number of pilgrims who visit the tomb of Husain, but also to the fact that it is the most important starting point for the Persian pilgrim caravans to al-Najaf and Mecca, and through its situation on the edge of the alluvial plain it is an important "desert port" for trade with the interior of Arabia.

The old town with its tortuous streets is surrounded by modern suburbs. About half to three quarters of the citizens are Persians, the remainder Shīʿa Arabs. The most important tribes among them are the Bani Saʿād, Salāhe, al-Wuṣūm, al-Tahmāz and al-Nāṣiriyye. The ʿDede family is the richest: for constructing the ʿNahr al-Ḥusainiya it was rewarded with extensive estates by Sulṭān Selim.

The name Kerbela' strictly speaking only applies to the eastern part of the palm gardens which surround the town in a semi-circle on its east side (Mussīl, The Middle Empires, p. 41). The town itself is called al-Meshhed or Meshhed al-Ḥusain.

The sanctuary of the third Imām lies in a court yard (sahra) 354 × 270 ft in area, which is surrounded by liwāns and cells. Its walls are decorated with a continuous ornamental band which is said to contain the whole ʿKurʾān written in white on a blue ground. The building itself is 156 × 138 ft in area. The rectangular main building entered by the "golden outer hall" (picture in Grothe, Georg. Charakterbilder, pl. Ixxviii., fig. 136) is surrounded by a vaulted corridor (now called qāmān; A. Noldeke, op. cit., p. 20, 3) in which the pilgrims go round the sanctuary (pāwaf) (Wellhausen, Reise arab., Heidelberga, p. 100–112). In the middle of the central domed chamber is the shrine (ṣanaʾiḥa) of ʿHusain about 6 ft high and 12 long surrounded by silver mazharīya work, at the foot of which stands a second smaller shrine, that of his son and companion-in-arms ʿAli Akbar (Masʿūdī, Kitāb al-Tanbih, ed. de Goeje, B. G. A., vii. 303).

"The general impression made by the interior must be called fairy like, when in the dusk — even in the daytime it is dim inside — the light of innumerable lamps and candles around the silver shrine, reflected a thousand and again a thousand times from the innumerable small crystal facets, produces a charm beyond the dreams of imagination. In the roof of the dome the light loses its strength; only here and there a few crystal surfaces gleam like the stars in the sky" (A. Noldeke, op. cit., p. 25 sq.).

The sanctuary is adorned on the Kibla face with magnificent and costly ornamentation. Two manāras flank the entrance. A third, the Manāṭir al-ʿAbd, rises before the buildings on the east side of the ʿSābah; south of it the face of the buildings, surrounding the court recedes about 50 feet; on this spot is a Sunnī mosque. Adjoining the ʿSābah on the north side is a large medrese the court yard of which measures about 85 feet square with a mosque of its own and several miḥrābs (on the present condition of the sanctuary: cf. A. Noldeke, op. cit., p. 5–26, on its history p. 35–50 and on its architectural history, p. 51–66).

About 600 yards N.E. of the sanctuary of ʿHusain is the mausoleum of his half-brother ʿAbbās. On the road which runs westward out of the town is the site of the tent of ʿHusain (Khaılmah). The building erected there (plan in Noldeke, pl. viii.; photograph in Grothe, pl. Ixxxiv., fig. 445) has the plan of a tent and on both sides of the entrance there are stone copies of camel saddles.

On the desert plateau (hamāmah) west of the town stretch the graves of the devout Shīʿa. North of the gardens of Kerbela' lie the suburbs, gardens
and fields of al-Bkārē, N.W. those of Kurra, S. those of al-Qadhbāriyya (Yākūt, iii. 768). Among places in the vicinity, Yākūt mentions al-ʿAkr (iii. 695) and al-Naʿwāyi (iv. 816).

A branch line diverging north of al-Ḥilla connects Kerbāli with the Baghdād–al-Baṣra railway. Caravan roads lead to al-Ḥilla and Najaf. The sanctuary of Ḥusain still has the reputation of securing entrance to Paradise for those buried there, wherefore many aged pilgrims and those in failing health come and stay on the holy spot.

**(E. H. HOMMANN)**

**MESHED-I MĪSRIYĀN, a ruined site in Transcaspia (Turkménistan).** N.W. of the confluence of the Atrak and its right bank tributary the Sumbar, or more exactly, on the road which runs from Čat a right angle to the road connecting Cikīghtar with the railway station of Aydūn.

The ruins are surrounded by a wall of brick and a ditch and have an area of 320 acres. The old town, situated in the steeples which are now peopleed by Turkomans, received its water from a canal led from the Atrak about 40 miles above Čat. Near the latter place the canal diverged northwards from the river, crossed the Sumbar by a bridge and finally followed an embankment 6 feet high on which the bed of the canal was 12 feet broad.

The ruins of a fine mosque can still be seen, the gateway of which, decorated with faience, has an inscription according to which this ṭābī was built by Ḍirār al-Danāy wa l-Dīn ʿAlīyāt al-ʿĀṣimi wa l-Mūṣlimin zill Allāh fi l-ʿAlāmin Sūlān Muḥammad b. Sūlān Tākī b. Burān Amīr al-Muʿāminīn. The Khwārizmshāh Muḥammad in question reigned 1200–1220. On one of the two towers (minarets) is written: bismillāh.... barakātun min Allāh nimāmā amara bīhī Abī Ḥāfīz Abī Ḥāmid b. Abī ū-Aqār ṣāḥib al-ribāb, d'aṣṣu ṭūlūk. Āmar Ḥāli R....(f). The identity of this Ḥāmid is unknown but the title of the ribāb which he gives himself, confirms the fact that M.-Mīsriyān was a frontier fortress (ribāb). Near the east gate stood another white mosque.

Tradition (Conolly) ascribes the destruction of Mīsriyān to the "Kalmaṭ Tatars." The appearance of the Kalmaṭs in these regions may be dated about 1600.

The name Meshed-i Mīsriyān (variants: Mestorian, Meshedebian, Meshedovran, Mastian) is obscure, unless Mestorian is to be explained as "Nestorian "Nestorian Christians"; it may be recalled that during his campaign in the Col (*Cuylu*), to the east of the Caspian, Yazguludū persecuted the Christians (Hoffmann, p. 50; Labouret, Le christianisme dans l'Empire d'Erse, 1904, p. 126).

The site of the ruins (to the north of Dājrūnā) is given the name Dihistan in Muslim sources, which recalls the name of the old Scythian people Daha who led a nomadic life on the Atrak (Greek Δαχος and ἄφος; cf. Tomasek in Pauly-Wissowa, Real-Encycl., iv., col 1945). From the Dahan clan of the Parāvān was descended the Arghakhi dynasty which imposed its authority on the Pārthians (cf. Minorski, Transcassarides, J.A., 1930, July–Sept., p. 56).

The basin of the Atrak (the ancient Ἐξήγαι) is at the extreme limit of the lands described in the classical and Muḥammadan geographers. The sources mention several settlements in Dihistan but in a somewhat confusing fashion. As the analysis by Hoffmann and by Barthold has shown, a distinction must be made between: 1. the settlement on the seashore, 2. the town of Dihīstān and 3. the ribāb Dihīstān.

1. The first of these was built on a promontory (daňgha) behind which ships could shelter. Marquart, Erdmahr, p. 130, reads the name concealed in the variants in ʿāṯāk, p. 219, note b, as "Dihīstān Bayāsīn" which he connects with the district of Bayāšān mentioned (in Dājrūnā) by Ṭabāri, ii. 1330; Balāzī, p. 337 and Ibn Khur- ḏāḫīshūbī, p. 35. The Ḥādīd al-ʿĀsīr mentions a peninsula of Dihīstān-Sur on the coast of Dihīstān.

This may be an echo of the name of the Turkish (♂) princes ʿOmar (Hoffmann, p. 281) who attacked Dājrūnā from the north (ibn al-ʿĀṣīr, ii. 22). Lastly Ṭabāri, ii. 1325, locates an island of Buḥairā 5 farsākh from Dihīstān. Barthold identifies all these names with the cape of Ḥasan Kūl which shelters the bay into which the Atrak flows. (Cf. also the article TOḴĀN, on the Dīz-i Aḵān mentioned in the Diḵūnāma).
A difficulty is raised by Ištákhrî (p. 219) who puts at 50 farsaks and p. 226 at 6 nûrâfala (each of 80/9 farsâkhs) the distance between Abâs-kân (at the mouth of the river Dîjîdân, now Gümüş-tapa?) and the cape of Dîjîstân in question. If we follow this double indication literally, we ought (with Hoffmann, p. 279, who reads the name Dîjîstân—Tabâhirî) to move the cape of Dîjîstân considerably to the north, in the bay of Krasnowodsk, which is certainly a very important place. In this case the cape would be a different one from Buhaiya = Hasan Kuli (Hoffmann, p. 278).

2. The town of Dîjîstân, according to the middle Persian list of the towns of Erân, was founded by a certain Narsâkh-e Arshaâkîlî (Marquart, Erânîakhr, p. 73) and according to the Nuchât-âl-Kûlû, p. 166, by the Sâsânîd Kûbâd b. Firuz. According to Mughaddasî, the town of Dîjîstân was called Akhûr. Tabâri locates the town of Dîjîstân 25 farsaks from (the river of) Dîjîdân and, as we have seen, 5 farsaks from Buhaiya. This latter distance is by the way less than the actual distance between Hasan-Kûlî and Mâshîd-i-Mîsîrân.

3. The ruins of Mâshîd-i Mîsîrân (as the inscriptions on the mosque suggest) must correspond to the rîbât of Dîjîstân which Mughaddasî, p. 358 (cf. also p. 312, 367, 372) mentions distinct from Akhûr. This rîbât situated on the borders of the steppes had fine mosques and rich markets. Relying on Yâlû, i. 39, Barthold thinks that in the sixteenth century the rîbât (and not Akhûr to the east of the Dîjîdân-rîbât road) was the capital of the district of Dîjîstân.

(V. Minorsky)

MESÎH (originally Tâsî), an important Otu-mân poet of the time of Bâyâzîd II. Born in Fârshâtna (northern Albania), he came as a youth to Constantinople where he became a softa (theological student) and distinguished himself as a calligrapher. In the end he won the favour of the grand vizier Khâzîn-Allâh Pasha [q.v.] and became his divân-secretary. But his irregular life and carelessness in the performance of his duties frequently irritated his patron (Allâh Pasha called him Shâhr âghânî). He held his post, however, till the death of Allâh Pasha in 917 (1511) in battle against the Şîfî rebels under Şâh Kûlî. Mesîh wrote an elegy on his death, full of the deepest emotion.

His attempts to find a new patron failed. He had to be content with a miserable fief in Bosnia where he soon died in 918 (1512), poor and forgotten and still quite young.

According to Ahmad Pasha [q.v.] and Nidjîtâ (d. 914 = 1509), Mesîh was regarded as the third great Ottoman poet and the greatest lyric poet before Bahâî. He is a most artistic and original figure. His output was not extensive, but of lasting importance. His Divân has not yet been printed, a fate common to nearly all important Turkish poets. In his lyric poems he is above the average of contemporary poets. In addition to the grace and delicacy of his diction, there is a certain novelty in his style. New images and pictures are introduced with great boldness, perhaps a result of his Albanian blood. The best known of his poems, in Europe is his Ode to Spring (Murcebâvi) which Sir William Jones published with a Latin translation: Poëtas Asiaticae commentariorum libri sex, Leipzig 1774 and has been repeatedly reprinted (by Toderini, by Wieland in the Deutsche Merkur, by J. von Hammer etc.). His Divân is also of importance linguistically, for it bears the stamp of the original Gothic dialect.

Mesîh's most original work is his Methwâvi, Shâhr-ëngîz (the "Thriller of the Town"), which is also the most original work in Turkish literature down to Mesîh's time. It is original in subject also, as it did not have a Persian model. It introduced quite a new style of poems, which was frequently imitated. Shâhr-ëngîz represents the first attempt at humorous verse in Turkey, and its language is very close to the spoken speech. Here Mesîh could write Turkish to his heart's content, while in other forms he had to use the learned jargon. He laments in one passage that without Persian and Arabic there would be no room for him as a poet, even if he had come down from heaven.

Shâhr-ëngîz is a burlesque catalogue of the beautiful "boys" of Adrianople — it is interesting to note that they are all Muhammadan — and became popular on account of its unadulterated language.

As a product of his activity as a secretary, we have also a collection of inâhâ', elegant specimens of epistolary style, not without historical interest, entitled Gâlî 'Sâîl Berg (the hundred-leaved rose). I have a manuscript of this work, which seems to be rather rare, of 991 (1583) entitled Inâhâ'-î Mesîh.

Menzel)
METAWILA. [See MUTAWILÎ.] MELWALA HUKDIR, a title of the head of the Mawlavi Order [see Mawlavia]. The second word is the Turkish form of the Persian khudawand, the equivalent of maslalâ, which, according to Alâ'î (Sauces des Derviches Tonnneurs, i. 59) was bestowed on Djalâl al-Dîn by his father. Sâmi in his Turkish Lexicon states that the word, besides being used for “Sultan,” “King,” is applied to certain saintly personages, in such combinations as fir hukdir or mulâ hukdir. The underlying idea of such a title is probably that the saint has committed to him the government of the world, if he choose to undertake it, an idea elaborated by Ibn-Arabi (Futûhât Makhîya, i. 262; ii. 407), who regards such a saint as the true khâla. The title elâh is more generally recognized as that belonging to the head of the Mawlavi Order (Sâmi, loc. cit., p. 5108). (D. S. MARGOLIUTH.)

MEZZOMORTO, an Ottoman Grand Admiral whose real name was ḤUSAYN ḤUSAYN PAŠA. Hadžiđi Husein Paša, known as Mezzomorto, i.e. “half-dead” because he was severely wounded in a naval battle, came from the Barbaric Islands, if A. de la Montraye’s statement (Voyage, The Hague 1727, i. 206) that he was born in Mallová is right. He probably spent his youth sailing with corsairs on the seas off the North African coast. He first appears as a desperate pirate in the summer of 1682 in the Barbary States. When France was preparing to deal a decisive blow at the pirates of Algiers, whose arrogance had passed all bounds, he was handed over as a hostage to the French after the bombardment of Algiers, but managed to return there, to strike down with his own hand, in a mutiny of the mercenaries which he had stirred up, the Bey of Algiers Baha Hasam, who was ready to make peace and to fight his way to the head of the state (summer of 1683; cf. Zinkesien, G.O.R., v. 51 sq.). Husein Reis in the following year condensed with Louis XIV of France a truce for a hundred years, which however was only of brief duration. His own rule over Algiers was not long either (till 1688; cf. A. Bernard, L’Algérie, Paris 1929, p. 159). Ten years later, in Maharram 1107 (Aug. 1695), Husein Reis, who had already distinguished himself as commander of a galonne (kabun keşfûlân), was appointed Grand Admiral of the Ottoman fleet (kaptan-i derya) in succession to Amârîrâde Husein Paša, who was appointed governor of Adana after the taking of Chios. He owed his promotion to his skilful seamanship at the capture of Chios where he distinguished himself in the battle with the Venetian fleet (spring of 1695). In 1697 Husein Paša inflicted a disastrous defeat on the Venetian Captain General Alessandro Molino off the island of Lemnos, and in the following year, in a naval fight on July 6 with Molino’s successor, Giacomo Cornaro, near Mytilene it was very doubtful whether the Cresecnt on the Lion of St. Mark gained the victory (cf. Zinkesien, G.O.R., v. 183, from the account by the inquisitore Garzoni in his Istoria della Repubblica di Venezia. Venice 1705, p. 644 sqq. 691 sqq. 748 sqq. and 775 sqq.) Ottoman authorities and the historian Rashid (fol. 231: cf. J. v. Hammer. G.O.R., v. 635) credit the victory to the Ottomans. In 1113, Mezzomorto was dismissed from his rank and re-

placed by ‘Abd al-Fattâh Paša. He retired to Chios, where his adventurous life came to an end in the same year on the 13th Safar 1113 (July 20, 1701, according to Safvet, op. cit.), on the 14th Safar 1114 (t.e. July 9, 1702) according to others. J. v. Hammer, G. O. R., vi. 766 and vii. 624, gives the date as 15th Rabî’ 1113 (Aug. 20, 1701). One of these dates is probably that of his dismissal.

MIDHANA. [See MANAW.] MIDHAT PAŠA, Ottoman statesman, twice grand vizier. Midhat Paša was born in Stambul in Safar 1238 (beg. Oct. 18, 1822), the son of Hâdji Ali Efendi-Zade Hâdji Hâzim Mehmed Esh of Efendi, a native of Rûchîuk. The family seem to have been professing Bektashis and Midhat Paša also had a leaning towards them. His earliest youth was spent in his parents’ home at Wdlin, Loška (Bulgaria) and later in Stambul, where his father held judicial offices. In 1836 he was working in the secretariat of the grand vizier and later he filled confidential posts in various governorships (including two years in Damascus), in 1844 he came to Konya and in 1849 became second, in 1851 first secretary to the Council (muhterem valide). In 1854 the grand vizier Kâzî Mehmed Pasha gave him the difficult task of pacifying the provinces of Adrianople and the Balkans and cleaning them of robber bands. Here he displayed for the first time his special talents for administration, which were not unnoticed by the Porte and soon afterwards brought him the appointment of governor of the Danube districts (Wdlin, Silistra). In 1858 he spent six months travelling for study in western Europe, including Vienna, Paris, Brussels and London. In 1861 he was appointed governor of Niş and Prizren with the rank of vizier, where he earned distinction by his pacification of the country, so that, when the new organisation of wilayets was carried out in 1864, he was given the model province, Danube-Bulgaria (Thraki Wilayet). During his four years’ governorship, he raised the province to a level rate in Turkey, although it was only under his successor that the people learned to thank him for it. He built schools and educational institutes everywhere, created funds to make advances and to support useful undertakings, built hospitals, granaries, roads (2,000 miles) and bridges (400) and improved communications in every way. As he required money for all these progressive undertakings, which the government could not give him and he would not raise by abuse of taxation, he raised the necessary funds by “voluntary contributions” from the people. The Bulgars, with whom for nationalist reasons he had no sympathy, suffered not a little from the enterprising spirit and unrestrained love of work of the young governor who, of unyielding will and inexorable severity, was of a nature not attractive, but rather arrogant and conceited. At the same time he was quite modern in his views and had no scruples about

THE ENCYCLOPAEDIA OF ISLAM, III. 31
introducing absolute equality between Christians and Muslims in his province. He proceeded ruthlessly against agrarian rebels, dismissed incompetent officials and brought exhortations to book. His most rigorous steps were directed against the Russian Pan-Slav intrigues, the leaders of which he ruthlessly hanged. Although in a few years he made the Eunube province the richest in Turkey without it costing the state a pastré, in 1869 Midhat Paşa, who had incurred the hostility of the Russians, was deprived of his office and sent to remote Bagdad as governor and commander of the 17th Army Corps. Midhat Paşa was not dismayed, but went to work with renewed energy to develop his new governorship. He laid roads, started horse-tramways, built a technical school, founded a savings bank, instituted regular steamship traffic on the Tigris between Bagdad and several harbours on the Persian Gulf and urged the building of a “Euphrates railway”. Under the pretext that he had taken part in a conspiracy against the Sultan, Midhat Paşa, who had already earned the gratitude of the Bagdad province and also won Nedjî for the Ottoman empire, was summoned to Stamboul where his enemy, the grand vizier Mahmûd Nêdim Paşa, had chosen him for the office of wâli of Adrianople Instead of this, on the fall of his rival, Midhat Paşa was appointed grand vizier on Aug. 1, 1872, only to be dismissed on October 19. It was clearly shown that his real strength lay in provincial administration. All possible elements combined to bring about his fall: Sultan Abd al-Azîz could not endure him because he opposed his mad whims; the Old Turks regarded him as an infidel because he planned his measures regardless of dogmatic objections; he was most unpopular with the Russians because he had taken sharp measures to deal with the Slav Bulgarian intrigues. Midhat Paşa retired into private life as persona non grata. In the grand vizierate of Eşâd Paşa, he became minister of justice on March 15, 1873 and held this office still under his successor Shêrîmân-zâde Mehemmed Rûshdî Paşa till Sept. 29, 1873. In the following October, the governorship of Adrianople was given him, which he accepted with reluctance and held for barely three months. On Feb. 17, 1874 he was again dismissed and retired once more to private life. He used the leisure thus forced upon him to work out the schemes which he later unfolded and which meant a decisive change in the orientation of the Ottoman empire. In August 1875 his old enemy Mahmûd Nêdim Paşa, who had again received the imperial seals, appointed him minister of justice but by November he had handed in his resignation, which was accepted. The empire was then in a state of complete confusion rising, famine, an empty treasury, and half rebelled. Midhat Paşa then composed his famous memorandum of March 9, 1876, which was to have such momentous results. On May 20, 1876 he entered the cabinet of the grand vizier Murad-jîd Mehemmed Rûshîd Paşa as minister without portfolio. In the night of May 30, Sultan Abd al-Azîz was deposed and Murad V raised to the throne of his fathers. On July 15, a proclamation issued in the name of the new sovereign used for the first time the word “constitution”. Midhat Paşa was the soul of the new movement and he worked ardently with a few kindred spirits to give Turkey a constitution. Sultan Murad V became insane and was replaced by his brother Abd al-Hasîm; on December 18, 1876 Midhat Paşa became grand vizier for the second time, and five days later, the constitution was solemnly proclaimed. The reactionary party and a powerful camarilla never ceased its endeavours to bring about the fall of Midhat Paşa and to bring his progressive schemes to nought. Under the pretext of high treason he was dismissed on Feb. 5, 1877 and banished to Europe. He was put upon a steamer and went via Rome and Paris to England. He was only permitted to return in 1878 and then only to Cetie. In November 1878 under pressure from England, he was appointed governor-general of Syria. In 1880 he was transferred to Smyrna as governor. Here Abd al-Hasîm’s wrath overwhelmed him. In May 1881 he was arrested and brought to Stamboul. The ludicrous charge of having caused the assassination of Sultan Abd al-Azîz was brought against him. Midhat Paşa was condemned to death but the sentence was not carried out. He was banished for life to Tâif in Arabia. After repeated attempts to poison him, he was strangled on April 10, 1883 (Râdzâh 29, 1301) in prison. In this tragic fashion ended the life of one of the most notable and best statesmen of Turkey, perhaps the most important administrator that the Ottoman empire has produced in modern times. Midhat Paşa had a son, Ali Hüdâr Midhat Bey, who after his death conducted a campaign to clear his memory and wrote a very full life of his father.

Leipzig 1878, p. 82 sqq.; [Gg. Dempwolff], Seraif und Hohe Pforte, Vienna 1879, p. 237 sqq.; Carl, Geschichte der Machtverfall des Trieck, Vienna 1908, p. 372 sqq. But the western sources have mainly been used to have caution, as the very varying statements about his origin, date and place of birth show.

(FR. BARINGER)

MIDILLI, Turkish form for Mytilene, name of the island of Lesbos, which in the middle ages had already taken the name of its capital. The island is about 650 sq. m. in area and has two large gulls, the Gulf of Kaloni (Kalafka) and that of Jeros (Kelemia). When Venetian rule had become acquainted with the island, it belonged to the Byzantine empire. Its conquest in the reign of the emperors Alexios Comnenos in 1184 (1091) by the Emir of Smyrna, Tzachas, father-in-law of the Seljuk Kılıç Arslan I ib Sulaimān, was only temporary. After the conquest of Constantineople by the Latins (1204), the island passed for a time to the Venetians. In 1355, the emperor John Palaeologos, on the marriage of his sister with the Genoese Francesco Gattiluso, granted the island to the latter as a fief. It belonged to this family until Mehmed II the Conqueror took Constantinople in 1454. The Sultan paid to pay tribute to the Turks, to which the Gattiluso in the hope of retaining their position readily agreed; and when the grand vizier Hamza Pasha in 1456 anchored off Lesbos on the voyage to Rhodes, the prince Doino Gattiluso sent rich gifts to the Turkish commander through the historian Ducas. After the death of Dornoa, his son and successor Domenico sent an embassy under the same Ducas to try to gain the good graces of the Sultan, but the Turks imposed rather harsh conditions. In 1458 Domenico was slain by his brother Nicholas who had escaped from Lemnos and the latter seized the island. On the pretext that he had given shelter to the pirates who harassed the Asia Minor coast and had committed other acts hostile to the Sultan, Mehmed in 1462 set out against Lesbos. The grand vizier Mihamd Pasha conducted the siege of the capital. It was taken after 27 days' bombardment and the Sultan received the surrender of the island in person (Aşık Pasha Zade, ed. Giese, Leipzig 1909, p. 269 sqq.; Hājjī Khālīfa, Tāhli al-Mālik; Īmm al-Adīd fī Edrā al-Rūḥānī. Constantinople 1141 [1728-1729], fol. 66; Hammer, ii. 15, 67; Zinkelmann, ii. 226, 239 sqq.). A mosque in the citadel of Midilli was built by Fāthī; cf. Newton, i. 117; Köldewe, p. 11.

Attempts of the Venetians under Orsato Giustiano (1464) to take the island from the Turks failed (v. Hammer, ii. 81 sq.). An expedition against the island in 1500 of the allied French and Venetian fleets was thwarted by the Turkish forces (v. Hammer, ii. 327; Hājjī Khālīfa, op. cit., fol. 109). Since that date the island had been in undisputed possession of the Turks until during the Balkan War it was handed over to the Greeks on Nov. 24, 1912 and finally conceded to them by the Peace of London of May 30, 1913, although with certain reservations by Turkey.

The island, the largest in the Archipelago, belonged to the wilāya of the Archipelago (Dżeier-i Bahri-i sefiū) and formed in it the sandjak of Midilli with 5 kazas: Miilīa (with the capital, in the east of the island), Plemart (= Plomari, in the south), Mōlōva (= Molivos, the ancient Methymna, in the north), Sīghri in the west of the island; and lastly the Janda Islands (Moskonisi) of Midilli; cf. Sami, Kāmās dʾAm, vol. 1894, 4425; Ćinet, La Turquie dʼAsie, i. 449, 472; cf. also: Suleimān Fātīk, Ṭubād Dervis, i. (Stambul 1299), p. 55–59. — According to Baedeker 1914, the island had had 140,000 inhabitants of whom 6/7th were Greeks and 1/7th Muhammadans.

Bibliography: On the island in ancient times and most of the questions connected with it, see the very full article by Burchner on Lesbos in Pauly-Wissowa-Kroll, xii. (1923), col. 2107–2153.

A full description for the earlier Turkish period is given by the Turk Piri Reis in his Bahriye written in 1521; this section has been translated by Maximilian Bittner in Paul Kretschmer, Der heutige Lesbische Dialekt (= Schriften der Balkankommission, iii,1), Vienna 1905, col. 579–584 and in my ed. of the Bahriye of Piri Reis (Berlin and Leipzig 1925), chap. ix.: Midilla, text p. 21–26. transl. p. 32–42. — The most important later description is those of Foscoche, Description of the East, i,1, London 1745; Newton, Travels and Discoveries in the Levant, London 1864, i. 17 sqq.; A. Conze, Reisen auf der Insel Lesbos (1855) and R. Köldewe, Die antiken Bauwerke der Insel Lesbos. Im Auftrage des Kaiserlich-Deutschen Archäologischen Instituts unterrichtet und aufgenommen, Berlin 1890. This book gives details of early explorations of the island and accurate maps on a larger scale of sections of it.

(P. KAHLE)

MIDJARA, the center, from jara, "slowing coal", the Arabic name for the constellation of the Ather which bears south of the Scorpion (τηρίζων in Aratus, are in Cicero, Midjara etc.) or center (μεσοτόρας in Ptolemy, τιρνίων in Geminos).

MIDRĀR BANĀ. [See SIGJAMAČA]

MIHNA (Anc.), noun derived from the root m-n-h, appearing in the Arabic verbs maḥnus, "to smooth", and in some Archaic derivations, trial (e.g. the trials to which the prophets and e-specially the family of Muhammad, the Ālids, are exposed in this world, cf. Goldhauer, Vorlesung, n. p. 212–213, 261). Inquisition. In the latter sense it is usually applied to the Muftilite inquisition and persecution extending from 215–234 (813–838). On the use of the verb, "inquisitor", "to inquise", cf. e-specially Q. Iliad, "inquisitor de pluribus mundi ab", i.4, p. 81, note 10.

The first Muftilite inquisition was instituted towards the end of his reign by the ibn al-Maḥmūd al-Masān (9 v. 1195–1218 = 813–833), who was a Muftilite by conviction, e-specially with regard to the creation of the Kuran (cf. the articles A-KURĀN and MIHNAZIL). He sent a letter to the governor of Baghdād, ʿAbbās b. Ibrahim, ordering him to cite before him the kāfīs under his jurisdiction in order to test them 1865 in regard to their opinion on the Kuran (Tabari, in. 1112 sqq., transl. by Paton, ed. cit., p. 57–61; Kāfīs dūd, p. 338 sqq.; cf. Abu l-Maḥbūs, i. 636
MMIJA

sqq.: Fragmenta Hist. Arab., p. 465). Those who declared their opinion in conformity with that of the caliph, should cite the legal witnesses under their jurisdiction and institute a similar inquisition.

This letter was sent to the provinces. In Egypt little was done At Kufa the general feeling was against yielding to the order of the caliph. In Damascus, the latter, probably on his way to Asia Minor, personally conducted the testing of the doctors of the town.

In a second letter he ordered Ishāq b. Ibrāhīm to send him several of the leading theological authorities of Baghdād, that he might test them himself. The name of the chief champion of the orthodox view, Aḥmad b. Mūhammad b. Ḥanbal [q. v.], which was at first in the list, was cancelled at the instance of the chief kālī Aḥmad b. Abū Dūād [q. v.], the most vigorous advocate of the mīḥāna under al-Maʿmūn and his successors. Among the seven who were summoned to the court was Mūhammad b. Saʿd [q. v.], the secretary of al-Waḥīdī [q. v.], and author of the Kitāb al-Ṭabaḥī. All of them gave way to the pressure, assented to the view forced upon them, and were sent back to Baghdād, where Ishāq b. Ibrāhīm had them repeat their confession before the theologians (Ṭabarī, iii. 1116 sqq.; Kitāb Baghdādi, p. 343 sqq.). The success of the caliph moved him to cling to the method inaugurated by him. In a third letter which is interwoven with theological arguments (Ṭabarī, iii. 1117 sqq.; Paton, op. cit., p. 65 sqq.) he enjoined Ishāq b. Ibrāhīm to test all the kādīs under his jurisdiction, who in turn should test all witnesses and assistants in matters of law. Ishāq b. Ibrāhīm cited before him a number of the most notable doctors of Baghdād (Ṭabarī, iii. 1121 sqq.; Paton, op. cit., p. 69 sqq.), among them Aḥmad b. Ḥanbal. The result of the test was that some of them yielded and others remained steadfast; Aḥmad b. Ḥanbal belonged to the group of the latter.

In a fourth letter to Ishāq b. Ibrāhīm (Ṭabarī, iii. 1125 sqq.; Paton, op. cit., p. 74 sqq.), the caliph discussed the attitude of each of the doctors in connection with his character and way of life, and ordered those who had given unsatisfactory answers to be sent to his camp in Ṭarsūs. After a further examination by Ishāq b. Ibrāhīm two of them only remained steadfast, Aḥmad b. Ḥanbal and Mūhammad b. Nūḥ. They were sent to Ṭarsūs as prisoners. On the way thither the report of the caliph’s death reached them. They were sent back to Baghdād, Mūhammad b. Nūḥ died before he had reached the capital.

Aḥmad b. Ḥanbal remained in prison. Although he was urged to make use of ġahīra [q. v.] others had done, he stuck to his attitude. Cited before al-Maʿmūn’s brother and successor al-Muʿtaṣim (218—227 = 833—842), there originated lively debate on the nature of the Kurān and other theological subjects between him, the caliph, Aḥmad b. Abī Dūād and others, which lasted three days. No change, however, being brought about in Aḥmad’s attitude, he was scourged at the order of the caliph, and afterwards, from fear of an insurrection (for Aḥmad was very popular), set free. Little more is heard of the mīḥāna under al-Muʿtaṣim (Abu ʿl-Maḥāsin, i. 649; Paton, p. 115), who had neither the interest nor the training of his predecessor in theological matters.

His son al-Waṭāḥī b. Ibrāhīm (227—232 = 842—847) who succeeded him, returned to the methods of al-Maʿmūn (Abu ʿl-Maḥāsin, i. 683; Paton, p. 115 sqq.), although it is said that he had restrained his father from prosecuting the miḥāna any farther. He ordered the governors of the provinces to test the notables under their jurisdiction. Little is known of the consequences of this order. Aḥmad b. Ḥanbal in the meanwhile had become a favourite teacher; when, however, he heard of the renewed activity of Aḥmad b. Abī Dūād he refrained of his own will from teaching, and was henceforth left alone.

Al-Waṭāḥī personally interested in the trial of one person of note, the theologian Aḥmad b. Naṣr b. Mālik al-Khuṣaynī who had moreover taken part in a conspiracy (Weil, ii. 341; Paton, p. 116 sqq.; cf. Taḥāri, i. 1343 sqq.; de Goeje, Fragmenta hist. arab., p. 529 sqq.). Questioned about the Kurān, al-Khuṣaynī replied that he believed it to be the word of God. The trial had not proceeded much farther, when the caliph put an end to it and personally made an attempt to beseech his victim, in which he did not succeed without the assistance of one more skilled than himself (Shaʿbān 231 = 846).

Other persons of note who remained steadfast under al-Waṭāḥī were Naʿāmān b. Hammād and the well known Naṣr b. Yahya al-Buwaytī, the pupil of the Shāfiʿī and editor of some of his works (Paton, p. 110). Both died in prison. As an instance of the fanaticism of Aḥmad b. Abī Dūād it is related that, when in 231 (846) it was proposed to ransom 4,600 Muslim prisoners from the Byzantines, he proposed to abandon those who would not admit the creation of the Kurān; this was actually done (Ṭabarī, iii. 1351 sqq.; Fragmenta hist. arab., i. 532; Abu ʿl-Maḥāsin, i. 684; Paton, p. 120). It is said that al-Waṭāḥī gave up his Muʿtazilite views before his death. The mīḥāna continued to exist during the first years of the reign of his successor al-Mutawakkil (232—247 = 847—861), but in 234 this caliph stopped its application and forbade the profession of the creation of the Kurān on pain of death.

MIHRĀB, the seventh month of the Persian solar year which runs from Sept. 17 to Oct. 16 and therefore begins the autumn. Mihrāb is also the name of the 16th day of each month. To distinguish between the month Mihrāb and the day, the former is called Mihrāb Māh and the latter Mihrāb Kūz. On the 16th Mihrāb, the day when Mihrāb Māh and Mihrāb Kūz coincide, called Mihrāgān, one of the great feast days begins, which is also called Mihrāgan and lasts till the 21st of the month. The first day of the feast is called Mihrāb-i Şinna, the general Mihrāb, the last Mihrāb-i Ḥisgū, the special, proper Mihrāb. The associations of this feast partly relate to the beginning of autumn, partly to the sun, whose name the month indeed bears, and partly to heroic legend: Mihrāgān is the feast of Ferdīnān's accession after his victory over Daḥsh. On the rites observed at the sources mentioned below.

MIHRI MĀH SULTĀN, daughter of Suleīmān the Magnificent. Mihrā Māh (sometimes also written Mihrā-u-māh: cf. Karāčebīzilī, Karvāf al-Ebārī, p. 458) was the only daughter of Suleīmān the Magnificent [q.v.] as well as F. Babiner, in Meister der Poeti, 67, Berlin 1915, p. 39—63]. While still quite young she was married to the grand vizier Rustem Pasha (cf. F. Babiner, G. O. W., p. 81 sq.) in the beginning of December 1539 (cf. J. H. Mordtmann, in J. S. O., Year xxxii., Part 2, p. 37), but the marriage does not seem to have been a happy one. She used her enormous wealth — St. Gerlach in 1576 estimated her daily income at not less than 2,000 ducats (cf. Taageper, Frankfurt 1674, p. 266) — for many pious endowments. Among these the most important were the two mosques built by her, one in Constantinople at the Adrian Gate and the other in Ewliya, Seyyid İmam-ı Evliya, p. 165: Hüfif Hüseyn, Hadīkat al-Dīnāmī, i. 24 and J. v. Hammer, G. O. R., ix. 59, i) and the other (Mihrābā Māh Sultān Dīmā) of Ewliya, op. cit., i. 472 71; Hüfif Hüseyn, op. cit., i. 186 and ib. G. O. R., ix. 128. No. 741) near the landing-stage in Scutari. The second was the work of the great architect Sūnān [q.v.] who built it in 1553 (1547) and also erected a palace for Mihrāb Māh in Scutari near this mosque. After her husband's death (July 8, 1566) Mihrāb Māh Sultan intervened on several occasions; for example she continually urged upon her father that the conquest of Malta should be one of the main undertakings of the Holy War and offered to equip 400 galleys for this campaign at her own expense. She was still alive at the reconciliation with her brother Selim and his accession. The correct date of her death, Jan. 25, 1578 is given only by Gerlach. Taageper, p. 447: the date in Karāčebīzilī, op. cit., p. 458, namely Olu-1-Ka’dā 984 (Jan. 20—Feb. 18, 1577), is a whole year out. She was buried beside her father in his tomb (tombeau de Mihrāb) in Stambul. From her marriage with Rustem Pasha two sons and a daughter ʿAṣīha Khanum were born; the latter married the grand vizier ʿAḥmed Pasha.

**Bibliography:** In addition to the references in the text, cf. Mehemmed Thuriyā, Sīqūl-i ʿotmānīi, i. 53; J. v. Hammer, G. O. R., iii. 393, 425 and pass.: a description of the circumcision festivals of her sons Daḥshār and Bāyazīd is given in the Turkish MS., No. 34, fol. 433 sqq. in the Pruss. State Library (cf. W. Pertsch, Zeitschrift, 66).

(FR. BABINGER)

MIHRAZ (see also MASHID I, D. C). Derivation of the niche. The mihrāb niche has been given a two-fold origin by Orientalists and historians of art: from the Christian apsis and the Buddhist niche. "Tout ce qui reste de la basilique dans le sanctuaire de la mosquée c'est la qibla, sorte d'abside atrophie" says M. v. Berchem in his Notes d'archéologie arabe (J. A., vol. xvii., 1891, p. 427). The introduction of the niche mihrāb into the mosque is no doubt rightly ascribed to the Omayyads, who were the first to build mosques of any size, under the influence of the Christian architecture of their lands. The simple Arabian and Persian village mosques have no niches even at the present day. According to tradition, As-'Abd 1, when he visited the mosque built for him with the help of Byzantine masons in Medina, was reproached with having built the mosque in the style of Christian churches (Wustenfeld, Geschichte der Stadt Medina, Abh G. W. Goett, ix., 1861). When ʿOmar b. ʿAbd al-ʿAzīz in his Syrian buildings had the qibla made in the form of a niche, he provoked the opposition and anger of the zealots on account of the similarity which was thus produced between the mosques and churches. H. Lamennis has collected a number of references, in which the mihrāb is roundly asserted to be copied from the Christians and to have become naturalised only with difficulty and not till the second century (Zeydil, p. 94, note 1 quoted by C. H. Becker, Zur Geschichte des islamischen Kultur, Islam studien, p. 493). Perhaps the custom of placing several niches in the qibla wall of large mosques was also a gesture against the appearance of imitating the Christian custom. On the other hand it should not be forgotten that the semicircular niche was one of the most widely disseminated forms in Mediterranean architecture and its adoption was much more natural than an imitation of the much Christian apsis. The derivation of the mihrāb from the Buddhist or Hindu niche for idols has as much or as little in its favour as the other. For it was only exceptionally that the Indian idol stood in a niche, but regularly it was in a separate quadrangular cell. The separate phenomenon of the eastern polygonal mihrāb developed by the Turkic peoples, which was brought by the Seljuqs and other Turkic peoples to Asia Minor and is found in Mesopotamia from the end of the 13th century can only be explained satisfactorily as a deliberate creation of its makers. As the heart of the house of worship, the mihrāb forms the culminating point in the equipment of the mosque, and as the carrier of the varied forms of decoration and continually changing systems of Muslim decorative art through the centuries is of considerable importance in the history of art. As a metrical instrument of the art of the mihrāb, if properly read, shows the prevailing tendency of art and its changes as a result of social changes. The writing of its history is a task for the future and it can only be outlined here.

**History.** The qibla was originally indicated not by a niche but by some mark such as a strip of paint or a flat stone marked in some way. Ac-
According to Abū Hurairā, it was introduced into the first mosque of the Prophet in Medina: “In stead of a mihrāb or prayer niche a block of stone directed the congregation; at first it was placed against the southern wall of the mosque, and it was removed to the southern when Mecca became the Kiblah.” (R. F. Burton, *Personal Narrative of a Pilgrimage to Mecca and Medina*, 1874, ii. 72.) The oldest mosque of ʿAmr in Fustāṭ of 21 (642) had no niche, but the ʿibāda, accurately calculated, was marked (Corbett, *J.R.A.S.*, 1890, p. 757–800). The Arabic use of slabs to indicate the ʿibāda instead of a niche survived, alongside of the mihrāb and in spite of it, for several centuries within and without Arabia. The mosques in Arabia proper are still unknown and only a few buildings on the borders enable us to draw some conclusions. The ruins of the xith–xiith century on Baqī‘ (Diez, *Eine mittelalterliche Moschee auf der Insel Bahrein*, Jahrb. d. asiat. Kaut., 1925, II. Halsband) and the mosque of Kishmaki on Ṣirṭah (S. H. A., 1922, pl. iii.) show nothing of a type later well known. Such slabs of stone or stucco were frequently built into the front pillars of the ʿarḍān down to the xiith century to indicate the ʿibāda. They are to be found in Māz (Herzfeld, *Arch. Reis.*, ii. 277, 280) and they would certainly have been found in Bagdād for example had the old mosques survived there. They gave the caliph and his representatives the opportunity, so limited in Islam, of perpetuating their names and boasting themselves helpers of Islam by erecting such flat mihrābs. Examples are the richly ornamented stucco slab presented by the vizier al-Afṣal in the name of the caliph al-Mu’tasir (485 = 1092) to the mosque of Ibn Ῥūf in its counterpart ordered by Sulṭān Lūdūn (696–698 = 1296–1298) (illus. in F. Flury, *Die Orientamente der Moscheen und Afshar-Moschee*, 1912, pl. xvi.). When Muslim architecture is deliberately developed on a grand scale however we find the mihrāb in the xiith century as a semi-circular shell-shaped niche flanked by pillars, and this is the form that has survived essentially with local variations to the present day.

**Mesopotamia.** The oldest example here is the mihrāb of the Dāmī al-Khāṣṣātī in Bagdad. It consists of a single marble block 5’ 4” inches high and 3’ 1” broad with a semi-circular niche in it 12” deep. The columns have spiral grooves in them and Corinthian-like capitals upon which the hollow-shell-shaped shell is directly placed without any alabes. The niche, otherwise smooth, has in the central axis a perpendicular strip of ornament as its sole decoration, which is quite devoid of any structural function and is quite in the textile-like style of later Islamic decoration. Herzfeld supposes that this mihrāb was brought by water about 145 A.D. for the newly founded Baghdad from Nāth Syria or Dīyār Bakr and suggests for this and similar mihrābs of Northern Mesopotamia, the similar niches in Christian churches as models (ibid., 1. 35 sqq.). The Khāṣṣātī type of mihrāb is found again in the walls of Aμd, which were built in 297 (910) by al-Muqtadir (M. v. Berchem, *Inscr. Arab. der Safarzeit* coll. by Frh. von Oppenheim: Be Beyh., Prome et Samarra, fig. 43; v. Berchem-Strejowski, *Ameda*, fig. 12, 292, pl. 111 sq.) The change to the pointed arch however took place here probably by the tenth century, certainly in the xiith A.D. Instead of the semicircular we find also flat niches cut out in the form of a rectangle e.g. in the tomb of a holy man in Abū Hurairā (Sarre-Herzfeld, *Arch. Zeit.*, i. 133 sqq.). The use of stucco, which formed the development of the form of the niche in the xiiith century. In the mausoleum of the Forty Faithful (al-ʿAbaṣṣā) in Ṣirṭah there is a stucco mihrāb of 660 (1261–62) with a stepped arch in profile. The tomb of Zainal in Sindjār of about 657 (1258) contains a richly decorated stucco mihrāb completely covered with ornaments and scrolls (*Arch. Reis.*, p. 308 sqq., pl. iv.). This wealth of decoration may in turn have reacted on the niches of stone, as the rich mihrāb of the great mosque of 543 (1148) and other niches in Māzul show (*Arch. K.*, pl. v. xci. xcliii.). In contrast to Persia, stone remained the usual material here. We now find twisted little pillars with vase bases and vase capitals, zigzag arches and richly fluted bands with paneled decorations (mihrāb of Bād- al-Dīn in Māzul). The Muslims otherwise lost their naturalism by turning the spindles-like structure into ornament. The rectangular frame of the arch of the niche completed the adaptation of an originally Hellenistic type to the oriental spirit of architecture. In the vacant field below the arch we here frequently have a musel shell carved in relief. We find variations like the flat rectangular niches with the base of the couch protruding as in the Dāmī al-Omariya (*Arch. K.*, pl. cxxv.). When however we find in Pandjāh ’Ali in Māzul in 868 (1267) i.e. under the Ilkhan Arghu, a polygonal mihrāb with stalactite canopy, we have apparently eastern, ʿṢalṭān influence, which produced the abstract stereometric crystallisation of the details and general form. Their seeming structural function is taken from the flanking pillars by direct continuation around the arch. Finally we may mention the occurrence of corner mihrābs in Mesopotamia when the ʿibāda demanded it and it was not possible to orient the whole building properly. Such exceptions were confined to sepulchral domes (Masḥhad Imām ʿAwān al-Dīn in Māzul; cf. Herzfeld, *Arch. K.*, pl. cxxxi.)

**Syria.** The Mosque of the Omajyads in Damascus has twelve mihrābs in all (cf. the plan by A. Dücke, supplemented by C. Watzinger and K. Wulzinger, *Damasak, Die islamische Stadt*). If systematically studied, they would probably give a conspectus of the development of the mihrāb in Syria. Only the principal mihrāb appears, at least in its architectonic development, if not in its embellishment to go back to the time of the foundation of the mosque. The other niches were put up mainly in the xiiith century and later (*J. A.*, 1890, ser. viii, p. 185). The two favourite styles of decorating the walls in use among Byzantine workmen under Walī were *opus reticulatum* and glass mosaic. They must have been used almost exclusively for the early mosques along with carved mouldings. The description by Ibn Dībārī, who visited the mosque in 580 (1184) i.e. not till after the first great fire of 461 (1069), gives us an idea of the mihrāb as it then was, probably still predominantly Omajyad. The mihrāb wall was covered with marble slabs: the arch of the niche had inscriptions in gilt letters on a blue ground, probably in mosaic, and had a quadrate frame. The wedges between arch and frame were decorated with the famous “vineyard of Wāḥd”, as we may safely assume, in mosaic. The vaulting of the niche was probably adorned in the same way. The frame
of the mihrāb was crowned by a miniature arcading, a motive which with others was taken to Spain (see below) and above this the wall was adorned with views of celebrated towns and trees in mosaic, the Ka'ba in the centre. Remains of these mosaics still survive and the mosaics discovered a few years ago in the mosque by the French give us an idea of the splendour of their decorating. The mihrāb destroyed in the fire of 1863 had a miniature arcading (illustr. in Saladin, Manuel, fig. 35); it had also an arch encircling it above, which also suggests an Omayyad origin. (According to M. Qasri, La mosquée d’el-Walid à Damas et son influence sur l’architecture musulmane d’Occident, R. A., L., where the dependence of the mosque of Cordova on that of Damascus is discussed, in Damascus all arches were originally horseshoe-shaped — and as in the rebuilding — arranged in two stories as we see from old descriptions). Of the mihrāb of the Liyāmi al-Asūr we know that it was covered with marble in 882 (1187) by order of Saladin. It has a wide niche formed of segments, with a pointed arch. The two sets of pillars with acanthus capitals are earlier than Saladin (Saladin, op. cit., fig. 28). Le Bon mentions two peculiar mihrāb niches in the transept of the mosque (La civilisation arabe, p. 148 and fig. 68). Under the Ayyūbid this use of interlacing patterns in stone was popular in Northern Syrian architecture. They are sometimes textile, sometimes rounded interlacings of textile origin which were used on the fronts of doors and prayer niches either in profile or as bands of stone in alternating colours. The decoration of the mihrāb thus received a remarkable stimulus, as the prayer niches of the Madrasa al-Sultāniyya and the Dāmās and Madrasa al-Firdaws of 633 (1235), both in Aleppo, and the mihrāb re-destroyed by Barbars of the Kubbat al-Salisī in Jerusalem shew (picture in Creswell, The Works of Sultan Baibars, B. I. F. A. O., pl. xxvi, pl. 28, 29). Another peculiarity of the Syrian mihrāb is the occasionally found adornment of the vaulting of the niche with it is true very rounded arcs inopus sectile, as an example of which we may take the mihṭāb of the great mosque of Tripoli founded in 693 (1294) (in J. M. F. A. O., vol. xxv. 1909, pl. 5). The later Syrian mihrābs continued the traditional enserating with different coloured marbles to which Turkish influence added the stationalcic conch.

Egypt. The principal mihrāb of the oldest mosque that has survived in Cairo, the mosque of Ahmad b. Tūlūn, is thought to be the original one in its general structure. The mosaic frieze with inscription at the level of the capitals and the marble covering below belong either to the restoration by Kālāb or more probably to that of Lājin. Thus a type was created in Cairo in the middle of the third century which is characterised by the double stepping of the niche with two pillars on each side, in this case taken from old Christian buildings and by the skilful pointed arch and rectangular frame; this form became the Egyptian model. In place of the Neoroman, a niche of the niche was smooth and probably, as in Karawān, painted. The narrow top continued through the Fatimid period while the double recess of the niche with pillars gives all later Cairene mihrābs their character. A stucco mihrāb of the fourth (tenth) century, only the upper third of which has survived in its original form, of which there is a copy in the Arab Museum, had the same structure with two pairs of pillars. The conch was imposed later (Flury, Ein Stockmihrāb des IV. (X.) Jahrhunderts, S. R. P., 1925, fig. 21, ar. K). The stucco mihrāb of the sepulchral mosque of Dārwāza on the Muqattam in Cairo, a century later (478 = 1085) and particularly richly decorated, has a similar niche with a high pointed top (pict. in Flury, Ornamente loc. cit., pl. xvii., Springer, Halbch. d. Ky., vi., fig. 400). It is to be assumed that the original mihrābs of the Fatimid mosques of Hākin and al-Azhar also belonged to this group. The al-Akmar mosque, completed in 519 (1125) introduced a new motif in its façade, which was much imitated in Cairo, the placing of a row of ribs like the corrugation of a shell along the top of the niche. The stucco mihrāb already mentioned, a copy of which is in the Arab Museum, must have been embelished about this time by a musell shell. The mihrāb in the sepulchral chapel of Shadjarat al-Durr [q. v.] the widow of Sultan Sallāh Nadjīm al-Dīn Aṣyūl of c. 648 = 1250 (fig. in R. I. D., Some Cairo Mosques, London 1921, p. 32) shows this fashion in a much more decided and more advanced mugharnasised stage. Such variations were however the exception. On the other hand the stucco mihrāb survived down to the Mamluk period Cresswell, for example, ascribes the stucco mihrāb on the outside of the north wall of the mosque of Aṯm, rebuilt by Sultan Bābars, to the time of Bābars on grounds of style (658—766 = 1260—1277) (The Work of Sultan Baibars, B. I. F. A. O., 1901, 1926). The splendour of the exceedingly thick stucco ornamentation in relief is here increased by the mugharnas in the miniature arcading of the upper part of the niche. Stucco decoration thus reached its last effective possibilities. With the Mongol invasion of Syria, Syrian influence on Egyptian art was renewed (Cairo also benefited by the taking of Miṣr by the Mongols in 653 = 1255 and the resultant migration of the celebrated copper-smiths of Miṣr to Cairo, who had been left behind by the advance of the metal-worker flourished, cf. Creswell, op. cit., p. 182). Syrian influence also brought the Syrian mihrāb overlaid with marble slabs and stone mosaic to Egypt, where it drove out the other types and became predominant. The oldest prayer niches of this new kind appear in the buildings of Kālāb at the end of the viith (ixth) century. The flanking double pillars give them their Gothic grace and elevation. The arches are usually composed of alternating coloured wedge-shaped stones serrated in various ways. The wails of the niches are decorated with mosaic in geometric patterns between miniature arcading and the conch vaulting overlaid with light and dark strips of colour alternating (often zigzag). Exceptionally we also find glass mosaic, as in the masjid of the Maṣrijāt of Kālāb. Under the late rulers of the Cemal-Shahs, the decoration of the niche reached its height. The inlaying was done with all kinds of costly materials such as mother-of-pearl, turquoise, agates, ivory (Madrasa of Al-Abī Bakr b. Muḥṣir and al-Chāri; cf. Briggs, Muh. Arch., fig. 110 and 127).

A small group by itself is formed by the three portable mihrābs of the viith (ixth) century from al-Azhar, Saiyida Kuṣayya and Saiyida Naṣīsa which are now preserved in the Arab Museum. Maqbiḥ. The history of the mihrāb in the
western lands of Islam begins with the prayer niche in the great mosque of Kairawân. It was not the direct model for the later mihrâb—this was reserved for the portal of the library of the mosque—but with its wide semi-circular niche and the slightly rounded but still pointed arch it forms the transition to the western form of the niche. The pillars of motled red and yellow stone rest on late antique bases and support pseudo-byzantine porphyry capitals the abaciues of which are decorated with Kufic inscriptions. The wall of the niche is covered with marble slabs, some perforated, some carved in relief, the frames of which also bear inscriptions. Belund is a recess. The vaulting of the niche still shows traces of having been painted with vine tendrils arranged in curicular patterns, which remind one of Mshatta (pictures in G. Marqâs, *Coudeil et plaisons de la Grande Mosquée de Kairouan*, 1925, pl. viii.). The frieze separating the recess and the vaulting of the niche, and the surrounding walls are covered with the famous lustre tiles made, some in Bagdad and some by a Bagdad artist in Tunis, and presented in 284 (854) by Ishaq b. Aghlab. This remarkable mihrâb of the early period, when Islam was still in search of a style, thus contains all that the empire could prove in decoration, sculpture, painting, both richly brightened by gold and shining tiles. The fully developed western style is found a century later in the mihrâb of the Mosque in Cordoba. This mihrâb, built by Hâkim II about 970, consists of an isolated heptagonal space 12 feet broad and 23 to 26 feet high. One side is formed by the wall containing the door. The floor and walls are covered with rectangular pieces of white marble, above are a frieze of inscriptions and the cornice, on which a richly carved niche wall with clover leaf arch on marble pillars with gilt capitals forms the upper part, which again terminates in a richly decorated frieze and is covered by a single piece of marble in the shape of a mussel shell. In the inscription on the outer wall the artist is mentioned "the work of Badr b. al-Khiyâl." The historically important part here is the entrance wall to this chamber, which consists of a horseshoe-arch gateway with rectangular frames and miniature arcading at the top. This form of wall, which now becomes typical for mihrâb andportal walls in most lands of the Maghreb and shows its own course of development, has been traced to the portal wall of the library of the great mosque in Kairawân as the earliest model, or both go back to a common Syrio-Sasan original (cf. Marqâs, *Manuel*, i. 264 sq.). In Cordoba we meet with a special shape of the mihrâb recess, the origin of which is doubtless different from that of the niche and goes back to an original with special functions connected with the cult of relics and of the dead. According to tradition, a relic of the Prophet was actually preserved in this space and the believers used to pay reverence to it in a sevenfold circumambulation. A quite singular, similar, isolated mihrâb is found in the madrasa in Khargird, Khurasân (cf. Mahâjir and below Persia). (Whether here we have the influence of the *pradakshina* of the Indian cult of relics cannot be settled. The circumambulation of altars, tombs of saints, and other sacred objects was of course a widespread custom in northern lands also) Horseshoe-arches, multiple rectangular border and miniature arcade are the typical elements of the henceforth canonical mihrâb wall. The wedge-shaped stones of the horse-shoe arch are not serrated in complicated fashion, as in Egypt and Syria, but usually alternate in colour and are all smooth, as in Cordoba, or alternately smooth and carved in relief. In Cordoba the spandrels are still filled with palmbranches and acanthus-like tendrils in relief and the two borders decorated with Kufic inscriptions (cf. R. Amador de los Ríos, *Inscriptio arabes de Cordoba*, Madrid 1894). The niches of the miniature arcading with clover-leaf arches are covered with mosaic (pict. in E. Kühnel, *Maurische Kunst*, K. ii., O., pl. 13, 14). The wall of the pentagonal mihrâb niche in the great mosque of Tlemes of about 1125 A.D. is similarly formed (pict. in Kühnel, *op. cit.*, pl. 24). But we already find here in the spandrels the isolated rosettes which first appear on the mihrâb of the Aljaferia in Saragossa of the second half of the eleventh century (pict. in Marqâs, *Manuel*, fig. 215). The mihrâb wall of the Almohad mosque in Tin-mal in the Atlas (1153 A.D. shows, instead of the tendrils, a woven pattern such as is often found on carpets (pict. in Marqâs, *op. cit.*, fig. 216); and in place of the miniature arcading we find windows alternating with flat niches. A divergence from the canonical type is found in the mihrâb of the mosque in Tozeur built in 590 (1194) in the oasis of Djerid (pict. in Marqâs, *op. cit.*, fig. 218). It has a double arch and profuse ornamentation, on the wall of the niche also. Marqâs explains the divergence by saying that the mosque was built by a conqueror of Almoravid descent in the Almohad period by workmen from Andalus. The niche bears the stamp of hurried improvisation. The mihrâb here reproduced, in the Sidi Oghâ mosque in the Sibân oasis at Biskra which is considered the oldest mosque in Algeria, may be regarded as an example more in the popular tradition, therefore particularly interesting. The date is unknown. The decoration belongs to the field of Khânqâh-i. Under the dynasties which succeeded the Almohads from the xii.—xvth century the Cordoba type remains the model in principle. Only the proportions are more slender, the horseshoe arches more elegant and, instead of the miniature arcading, windows with coloured glass in a stucco framework have become naturalised. The isolated mihrâb chambers have given place to semicircular or polygonal niches. Examples are the maḥrâb of the mosques in Taza, Sidi el Yazid and al-Ulâd in and near Tlemes, in Fas and the Hamra of Granada. The latter covered with mosaic (pict. in Marqâs, *op. cit.*, fig. 336—338 and P. Ricard, pl. xiii.). In Tunis of the xv.—xvith century also the mihrâb with flat round niche and horseshoe-arch of alternately coloured and ornamented stones and rectangular frame continued to predominate. The plinths are usually covered with marble tiles, while the niche vaulings are slatted like a mussel shell.

Persia, Turkestan, Afghanistan. The two earliest prayer niches in Persia, so far as is known, are at the mosque at Noyin, east of Isfahân, of the x.—xii. century A.D. (Viollet and Flury, in *Syria*, 1921, pl. xxx. and S. Flury, in *Syria*, 1923) and in the *Zâbah* at Khargird, Khurasân, of the x.—xvith century (Diez, *Chrsanatische Baudenk-mär*, pl. 30).

In spite of their different ornamentation, these

two stucco mihrābs are very similar. Both are rectangular niches flanked by inset 3/4 pillars with leaf capitals, with pointed arches diagonally set and thickly decorated with tendrils in a rectangular frame. The back wall under the arch presents a repetition of the architecture of the niche so that we have a niche in a niche. In Persia therefore, if Flury is right in his early dating, perhaps as early as the third (nineth) century, a rich double framed style of mihrāb had been developed, which lasted down to the xivth century, as is shown by the next surviving monument of this group, the stucco mihrāb in the Masjīd-i Djam'a in Isfahān of 710 (1310) (Diez, K. d. isl. Volker, p. 109, 2nd ed., p. 85). In the interval however the decoration, as yet purely floral, had become mainly epigraphic, a transition that can be followed step by step from the xivth century. The stucco mihrāb of the mosque of Dijārāš in the Mukaţjam in Cairo of 478 (1085) is also of importance for this sequence of development (pict. in Flury, Ornamenta etc., pl. xvii).

But in Persia a second type developed alongside of the stucco mihrāb, the mihrāb decorated with lustre faience, with which this part of the decoration of the mosque and with it Persian faience reached its zenith. The lustre mihrāb of Kāshān of 624 (1226) in Berlin (pict. in Springer's Kunstgeschichte, v. 438) and a similar niche from Warāmin in the possession of the firm of Kelekian (Cat. of the Exhib. of Persian Art, London 1931) may be quoted as examples. These mihrābs show the same double niches as their stucco counterparts but are flatter, more framework than niche. In place of the curved arch, the canopy is a rectilinear gable, a change in shape probably mainly due to the material. The colours are predominantly a light blue ground with letters in dark blue relief and decorations in brown lustre. By the combined effect of the colours and the profuse ornamentation, these mihrābs have a truly fairlike suggestion and reach the highest ideal of Islamic decorative art. The mihrāb assumed a new form in the Timūrid period. Instead of the semi-circular or flat rectangular niche we now find under Turkish influence the polygonal 'pentagon constructed out of an octagon - of larger dimensions than previously, broader and deeper. The ornamentation proceeds parallel with the usual Timūrid wall decoration. In the same way the plinth is covered breast-high with polygonal tiles and the walls above usually with flat miniature arcing, which pass into vaulted mahārāna painted or covered with tiles. Finally the frames and the scrolls of inscription filling them are frequently inlaid with that finely executed tile-mosaic which forms the glory of Timūrid architectural ornament. As examples may be mentioned the mihrābs in the praying chambers of the madrasa in Khargīrd (Diez, Chir. Bandkämmer, pl. 33, 1), the mihrāb of Žiyād Abī Walīd near Herāt (Niedermeyer-Diez, Afghānistan, fig. 174), the splendid prayer niche in the mosque of Djiwarādāne in Mashhad (Diez, K. d. isl. Volker, v. fig. 146 and 108) all of the xivth (xvith) century. The mihrāb in the splendid medrese in Herāt, now destroyed, must have been similar to that in Meshhed, here reproduced, having been founded by the same princess and probably built by the same architect (cf. above ill. p. 387b). In the Safawīd period, we find alongside of mihrābs with mosaic and mahārāna also painted niches, which show intertwining tendrils standing out in white from a brick red ground. Mihrābs like this are to be seen in the ruins of the Musalla outside Isfahān and in Reshāh, Khurāsān (fig. Diez, Chir. Bandkämmer, pl. 22, 3). They seem to have been very widely disseminated. It may be mentioned in conclusion that in place of a prayer niche in the Kišī-iwān of the Timūrid madrasa in Khargīrd, there is a rectangular windowless niche, accessible by a doorway through the iwan. The similarity with the mihrāb chambers frequently found in the Magḥrib is remarkable and is discussed under Spain.

In India. No mosques earlier than the xivth century have survived in India. In the mosques of the xivth-xvith centuries the prayer niche is in Indian fashion, that is to say flanked by decorated Indian pillars and adorned with Indian ornamentation. The gable-shaped panels over the niches are particularly ornamental. The wall of the niche is usually adorned in relief with a lotus rosette and a pendant vase out of which grow tendrils. Numerous niches of this kind are to be found in mosques of Gudjārat and Ahmadābād of the xivth-xvith centuries. An Indian peculiarity is the placing of three to five, sometimes even seven mihrābs in the kišīa wall in keeping with the architectonic units of the main building, each marked by a dome (Djumī Masjīd in Bhoresh, and Champaner, Gudjārat etc.). There are also mosques with mihrāb chambers, which we can assume with Havelot to be adaptations of the former cells for idol- (Dhokla, Gudjārat, Khāns Masjīd and Ahmadābād). It is therefore not impossible that isolated mihrāb chambers outside of India, as in Khargīrd, Persia, or even in the Magḥrib, should be traced to Indian influence, although this feature is not found in the earliest mosques in Adjmūr and Delhi. In Gudjārat however these chambers might have been used as mihrābs in the oldest mosque and provinces with a sea coast and international trade may have had influence abroad (cf. Arch. Survey of India, Western India, vol. vii, viii, Gudjārat, Ahmadābād). When Persian influence began to be felt under the Mughal emperors, the Indian elements gradually disappeared from the mihrābs and their place was taken by the polygonal niche in the wall incruste with coloured marble. Under Akbār Indian detail still survived. The back of the mihrāb of the great mosque in Fathpur Sikri, for example, are edged with a lacemwork of carved palmette friezes; the material is stone but the inlay work imitates the Persian tiled mihrāb (pict. in V. A. Smith, A History of Fine Art in India and Diez, K. d. isl. Volker, p. 229 and p. 141). In the court mosques of Agra and Delhi we find dazzling white marble mihrābs with coloured intarsia of flowers. The most splendid mihrāb in India and indeed in all the lands of Islam is the niche of the Friday mosque in Bhoresh, the former capital of the Ādī Shāhs in the Dehkan. The only rival that it can ever have had is Walī's mihrāb in Damascus. Framed by a gigantic arch resting on double pillars, the pentagonal niche recess constructed out of an octagon goes deep into the wall on whose surfaces the motif of the niche is three times repeated. The central of the three niche areas is mysteriously marked by a gilt eight-pointed star as the real kišīa. In gigantic letters of gold the two sacred names Allah and Muhammad in the spandrels of the arch impress themselves on the hearts of the worshipper, and chime in
afresh in the drumshaped flanking pillars, which, in Bijdâpûr decoration are frequently used as conventional ornament but are here of structural importance. Manâras and sepulchral domes crown the structure and their principal motive is again a niche in the centre. This imposing decoration is carried out in shallow relief and is painted with red, blue and black colours heightened with gold. In the rectangular fields on both sides and in the arches are inscriptions on bands and in medallions of which we give Cousens translation of one because it sums up Muslim philosophy in a nutshell: *Place no trust in life: it is but brief*. *There is no rest in this transitory world*. *The world is very pleasing to the senses*. *Life is the best of all gifts but it is not lasting*. *Malik Yağûb, a servant of the mosque and the slave of Sultan Muhammad, completed the mosque*. *This gilding and ornamental work was done by order of the Sultan Muhammad 'Abîd Shâh, 1045* (1636 A.D.).

Asia Minor, Armenia and Turkey. The mihrâb took a development quite of its own among the Seldûiks of Rûm. Instead of the descendant of the high, Hellenistic round niche, we find here a prayer niche which rather resembles a hearth and is probably to be explained as an adaptation of the prayer carpet to this form of building. The appearance of these niches, which are thus of no structural significance, is however made up for by their stereochemically crystal-lined cone-shaped vaulting formed of cells. The Turkish art of the Seldûiks brought as its dowry to the art of the Muslim world the Muğharat, the suggestion of which, it in turn owed to Buddhist art, for the Seldûiks came from Central Asia where Buddhist art had long prevailed. During the short period of Seldûik architecture in Asia Minor, the xiiith century, the form of the niches remained unaltered. They are low rectangular shallow niches with pillars built in without bases, which bear rhombohedral crystal bodies as capitals and come to a point with the conical cells of the vaulting. The spandrils and frames are inlaid with the usual Seldûik white, blue and black tile mosaic (pict. in Löytved, Sarre, Springer-Kuhnle and Dicz, *op. cit.*). The most important change undergone by this early Turkish mihrâb in Ottoman architecture was the raising of the supporting niche to its full height. The niche assumed polygonal form, i.e., it has three or five surfaces constructed out of the octagon, such as we find in India and Persia from the xvith century; it was however raised higher and was, more slender and regularly ends in a mugharat cone. The decoration consists mainly of marble and Turkish tiles. A moulded tinfoil frieze formed the usual framework for the whole. The combination of Byzantine and early Turkish elements, the hard forms and a certain rationalism in execution give these mihrâbs that cold appearance which is peculiar to Ottoman art.

Worthy of mention is the splendid mihrâb of the Ulû Djami in Wân in the Persian style with mosaics of glazed brick terracotta reliefs and inscriptions; a niche with a mugharat (xiiith—xixith centuries, pict. in Bachmann, *Kirden und Moschtes in Armenia*, pl. 62).

(E. Diez)

**MIHRBAN,** the name given by Muslim writers to the Indus (Sanskrit Sindha), called by the Greeks Sindâs and *Sindos*, by the Romans *Sindus* and *Indus*, and by early Muslim writers *Ab-i Sind* (the Water of Sind). The name is more particularly applied to the lower reaches of the river, after it enters Sind. Flury writes of "Indus, incolis Sindus appellatus". The Indus rises in 32° N. and 81° E., receives the Kâbul river almost opposite to Atak, and the Pandjâb, the accumulated waters of the five rivers of the Pandjâb, just above Mîhanhatk. Near Kash- mor, in 28° 20' N. and 69° 47' E., the river enters Sind, and below Bakkar is locally known as Daryâ, "the Sea". It falls into the Arabian Sea in 23° 58' N. and 67° 30' E. Its drainage basin is estimated at 372,700 square miles and its length at a little over 1,800 miles.

The courses of the Indus and its tributaries have undergone, even in historical times, extensive changes of which it is impossible to give details in this article, and which have misled historians who have disregarded them. They have been minutely and elaborately described in *J. A. S. P.*, vol. Ixi. (1892) by the late Major H. G. Raverty, who has illustrated his scholarly monograph by a series of admirable maps.

(T. W. Hâig)

**MIHRGÂN.** [See MIHR.]

**MIHR KHATUN** (originally Mihr-i Mîh), an important Turkish poetess of the end of the xvith and beginning of the xixith centuries. She belonged to Amâsia, which produced a number of poets, and spent her whole life there. She was one of the family of Pir Ilyâs. Her father was a kâdji and wrote poetry under the makûlîs of Belâî. She inherited from him her poetic gifts and also
received from him the poetic and theological training ascribed to her by Ewliyya.

Not much is known of her life. This is in part to be explained by the reticence of the East regarding women. That in the East boys rather than girls are sung of in love songs is due not so much to a preponderance of paederasty as to a disinclination to talk of women at all. She died in 912 (1506). Her tomb in Amasia is a place of pilgrimage. She belonged to the literary circle of prince Ahmad, the second son of Sulthan Bayazid, who was governor of Amasia in 886–918 (1481–1512). Of a circumcision festival in the konak of the prince in 914 (1505), it is recorded that Mihrī was the chief of the poets present.

In spite of the love affairs credited to her and sung by her (with Iskender, son of Sinan Paşa, with Mu'inayyid-zade [born 850 = 1456] and others), the Turkish biographers emphasize besides her beauty her virgin life, in spite of the glowing fervour with which she described her nights of love. Her nature was evidently not quite clearly understood by the tekkeredd. Contrary to the Oriental custom, Mihrī remained unmarried in spite of many wooers. It is not improbable that the experiences described by her are not quite inventions but evidence of her passionate nature which drove her to unfeathered love. Mihrī's great merit is that she did not suppress her femininity, so that in her poems she reveals a truly womanly soul. In this respect, she is the most personal among Turkish poets.

As a woman she found it doubly difficult, in view of the restrictions on her sex at the time, to win a place as a poet, as the study of the Persian poets was absolutely necessary for this. The energy with which she managed to achieve her aim is remarkable. Her chief model was Nadjattî (d. 914 = 1509), the most important poet of the period, with whom she tried to compete. Most of her pieces are written in Nadjattî's manner. She is not very original, but very few Turkish poets are. In language and in images she is conventional. But her freshness, directness and passionate feeling, in which no other poetess equals her, are remarkable. Her eloquence and brilliant style were proverbial.

She left a Divan (edition in preparation by Martinovitch) and several treatises in rhyme. A number of her poems have been made accessible to us by Smirnov. According to Ewliyya's statement (in MSS, not in the printed text), she also composed risâla's on fik and farâ'id.

(TH. MENZEL)

MIKAL, the archangel Michael [cf. Mal'k'i], whose name occurs once in the Kur'an, viz. in sûra ii. 92: "Whosoever is an enemy to Allah, or his angels, or his apostles, or to Gabriel, and verily Allah is an enemy to the unbelievers."

In explanation of this verse two stories are told. According to the first, the Jews, wishing to test the veracity of the mission of Muhammad, asked him several questions, on all of which he gave the true answer. Finally they asked him who transmitted the revelations to him. When he answered, Gabriel, the Jews declared that this angel was their enemy and the angel of destruction and penury, in opposition to Michael whom they said to be their protector and the angel of fertility and salvation (Tabari, Tafsir, i. 324 sqq.). — According to the second story, 'Umar once entered the synagogue (miyârâ) of Madina and asked the Jews questions concerning Gabriel. They gave of that angel as well as of Michael an account similar to the one mentioned above, whereupon 'Umar asked: What is the position of those two angels with Allah? They replied: Gabriel is to His right and Michael to His left hand, and there is enmity between the two. Whereupon 'Umar answered: If they have that position with Allah, there can be no enmity between them. But you are unbelievers more than asses are, and whosoever is an enemy to one of the two, is an enemy to Allah Thereupon 'Umar went to meet Muhammad, who received him with the words: Gabriel has anticipated you by the revelation of: "Whosoever is an enemy" etc. (sûra ii. 92; Tabari, Tafsîr, iii. 327; Zamakhshari, p. 92; Badawi ad sûra n. 91).

We do not know of any Jewish traditions which ascribe to Gabriel a hostile attitude towards the Jews. For the statements regarding Michael as confirmed above, there is sufficient literary evidence. In Daniel x. 1 Michael is called the great prince, the protector of the people of Israel; cf. Targum Conti- cutum, viii. 9: "Michael, the lord of Israel"; Daniel x. 13, 21 where Michael is said to have protected the Jews against the kings of Persia and Greece; further 1 Enoch xx. 5 where he is called the protector of the best part of mankind; Testamentum Levi, xv. 6; Test. Dan., vi. 2.

In Vita Adae et Evae, chap. xii. 294, it is Michael who orders Satan and the other angels to worship Adam. Although the story is mentioned several times in the Kur'an [cf. 113.1], there is no trace in Muslim literature of the role ascribed to Michael in Vita Adae et Evae; the only mention of Michael in the Muslim legend is that he and Gabriel were the first to worship Adam, in opposition to Iblis who refused to do so (al-Kisa'), p. 27).

Neither does Muslim literature seem to have preserved other features ascribed to Michael in Jewish Apocrypha (mediator between God and mankind, 1 Enoch xli. 9; Test. Dan., vii. vii. 2: 3 Baruch, xli. 2), or in the New Testament (Eph. Jude, vs. 9: Michael disputing with the devil about the body of Moses; Revelation xii. 7 sqq.). Michael and his angels
flying against the dragon and the final discomfiture of the latter). Perhaps a faint recollection of Michael as the protector of mankind (the Jews, the Christians) may be found in the tradition according to which Michael has never laughed since the creation of Hell (Ahmad b. Hanbal, iii. 224). Further, however, Michael is rarely mentioned in hadith (Tukhrî, Bad' al-Kalâb, b. 7, where he, together with Malik, the guardian of Hell, and Gabriel, appears to Muhammad in a dream; Nasâ'i, Isritžâh, b. 37 where Michael incites Gabriel to urge Muhammad to recite the Kur'ân according to seven āhruf). "Ya'kubî mentions a story of which we have no counterpart in Jewish or Christian literature either, which is not amusing, the story bearing an outspoken Shi'ite tendency. One day Allâh announced to Gabriel and Michael that one of them must die. Neither however was willing to sacrifice himself in behalf of his partner, whereupon Allâh said to them: Take 'Ali as an example, who was willing to give his life on behalf of Muhammad (the night before the hijrata; Ya'kubî, ii. 39).

Michael is further mentioned by name as one of the angels who opened the breast of Muhammad before his night journey (Tabari, ed. de Goeje, i, 1157-59; Ibn al-Ajurî, ed. Tornberg, ii. 36 sq.), and as one of those who came to the aid of the Muslims in the battle of Badr ( Ibn Sa'd, ii, 9-19).

In the text of the Kur'ân as well as in a verse cited by Tabari (ed. de Goeje, i. 320), the form of the name is Mikl as if it were a mîf'al form from wakal (Horovitz). A direct reminiscence of the Greek, probably also of the Hebrew and Aramaic, forms of the name is to be found in the tradition preserved by al-Kisa'i (p. 12), which calls Miklî the attendant of the second heaven, in contradistinction to Miklî, who is the guardian of the sea in the seventh heaven (p. 15). Other forms of the name are Miklî, Miklîl, Miklîl, Miklîn and Miklîl. It is hardly necessary to say that in the magical use of the names of the archangels that of Miklî is on the same level as that of his companions (e.g. Zwemer, The Influence of Animism on Islam, p. 193, 197).

MIKÂT (mîf'al form from wk-l-t, plural ma/wâkit) appointed or exact time. In this sense the term occurs several times in the Kur'ân (sura ii. 185; vi. 138, 139, 154; xxvi. 37; xlv. 40; lxi. 50; lxxviii. 17). In hadith and 'îqâm the term is applied to the times of prayer and to the places where those who enter the haram are bound to put on the thürâm. For the latter meaning of the term cf. hirâm, 1.

Although some general indications for the times at which some âlaqas are to be performed occur in the Kur'ân (cf. sura ii. 239; xi. 116; xvii. 80; xxiv. 29), it may be considered above doubt that during Muhammad's lifetime neither the number of the daily âlaqas nor their exact times had been fixed and that this happened in the first decades after his death.

A reminiscence of that period of uncertainty may be preserved in those traditions which apply a deviating nomenclature to some of the âlaqas. The âlaqat al-ṣuhr e.g. is called al-hadîd al-ṣuhr; the âlaqat al-maghrib, 'îsha'; the âlaqat al-išrâ, 'atama; the 'alaqat al-fajr, ghadî'at (Bukhârî, Mawwâkit al-Šâlat, bâb 13, 19). In other traditions the term al-ʿatama as applied to the âlaqat al-išrâ is ascribed to the Beduins and prohibited (Muslim, Masâ'idj, trad. 228, 229; Abû Dâwûd, Ṣaḥîh, bâb 78; Ahmad b. Hanbal, Masâ'idj, ii. 10 etc.); cf. on the other hand Bukhârî, Mawwâkit, bâb 20; Muslim, Šâlat, trad. 129 etc., where the term ʿatama is used without censure.

From some traditions so much may be gathered, that the — or at least some of the — Unayjads showed a predilection for postponing the times of the âlaqat (Bukhârî, Mawwâkit, b. 7; Muslim, Masâ'idj, trad. 166, 167; al-Nasâ'i, Imâma, b. 18, 55; Zaid b. 'Ali, Maḏmûn al-Fishâ, No. 113).

In opposition to this a âlaqat in due time is declared the best of works (Bukhârî, Ṣaḥîh, b. 1; Mawwâkit, b. 5; Muslim, Imâma, trad. 138, 139; Tirmidhî, Šâlat, b. 15; Birr, b. 2). In other traditions this is said of a âlaqat at its earliest time (Tirmidhî, Šâlat, b. 13).

This early state of things is reflected in several respects in a tradition according to which Umâr b. ʿAbd al-ʿAzîz once postponed one of the âlaqas and was rebuked for this by ʿUrwa b. al-Zubair, who related to him that al-Mughîra b. Shu'ba had once been rebuked for the same reason by Abû Masâd al-Ansârî, on account of the fact that Gabriel himself had descended five times in order to perform the five âlaqas at their exact times in the presence of Muhammad. Thereupon Umâr admonished ʿUrwa to be careful in his statements (Bukhârî, Mawwâkit, b. 1; Muslim, Masâ'idj, trad. 160, 167; al-Nasâ'i, Mawwâkit, b. 10).

Some early groups of traditions affect to reproduce reminiscences of the practice in Medina in Muhammad's time.

a. The âlaqat al-ṣuhr was performed at noon, when the sun was beginning to decline (Bukhârî, Mawwâkit, b. 11).

b. the âlaqat al-ʿāshr when the sun was shining into ʿÎsha's room, no shadows being yet cast there (Bukhârî, Mawwâkit, b. 13; Muslim, Masâ'idj, trad. 168). After this âlaqat people had still time to visit the remotest parts of the town, while the sun was still "alive" or "pure" (Bukhârî, Mawwâkit, b. 1, 13, 14, 18, 21).

c. the âlaqat al-maghrib was performed at a time when people could still perceive the places where their arrows fell down (Bukhârî, Mawwâkit, b. 21).

d. the âlaqat al-išrâ was sometimes postponed till a late hour, sometimes till the first third of the night had passed (Bukhârî, Mawwâkit, b. 11, 20, 21, 24).

e. the âlaqat al-fajr was performed by Muhammad at a time when a man could discern his neighbour (Bukhârî, Mawwâkit, b. 13); but the women on their way home could not yet be recognised (Bukhârî, Mawwâkit, b. 27).

In a second layer of traditions these general indications are specified by the mention of the first and the last limits allowed for the different
prayers (cf. e.g. Muslim, *Masūqīd*, trad. 176, 177). On one day Muḥammad performed:

a. the *ṣalāt al-ṣuhr* when the sun began to decline;

b. the *ṣalāt al-‘aṣr* when the sun was still high, white and pure;

c. the *ṣalāt al-maghrib* immediately after sunset;

d. the *ṣalāt al-‘idā* when the twilight had disappeared;

e. the *ṣuhr* at daybreak. On the following day Muḥammad performed:

a. the *ṣuhr* later than the day before;

b. the *‘aṣr* later than the day before, the sun being still high up;

c. the *maghrib* before the twilight had disappeared;

d. the *‘idā* when the first third of the night had passed;

e. the *fajr* when sunrise was near (asfara bikhā).

In a tradition communicated by al-Shāhī (Kitāb al-Cmm, i. 62) the fixing of the mawākiṭ just mentioned is ascribed to the example of Gabriel (cf. Zaid b. ‘Ali, *Maghārīr al-Fīlqh*, No. 109). These mawākiṭ have for the most part passed into the books of *fīḥh*. We cannot reproduce all details here. The following scheme may suffice:

a. *ṣuhr*: from the time the sun begins to decline till the time when shadows are of equal length with the objects by which they are cast, apart from their shadows at noon. The Ḥanafites alone deviate in one of their branches in so far as they place the ultimate term by the time when the shadows are twice as large as their objects. In times of great heat it is recommended to postpone the *ṣuhr* as late as possible;

b. *‘aṣr*: from the last time allowed for *ṣuhr* till sunset. According to Mālik the first term begins somewhat later;

c. *maghrib*: from the time after sunset till the time when the red twilight has disappeared. Small deviations only, in connection with a predilection for the first term;

d. *‘idā*: from the last term mentioned for the *ṣalāt al-maghrib* till when a third, or half of the night has passed, or: till daybreak;

e. *fajr*: from daybreak till before sunrise.

Side by side with these mawākiṭ we find in the books of *Ṭabīʿah* and *Law* the times on which it is not allowed to perform prayer, viz. sunrise, noon, and sunset (Bukhārī, *Mawākīt*, b. 30–32; Muslim, *Ṣalāt al-Musāfīrīn*, trad. 285–294; cf. al-Nawawī's commentary for controversies regarding this point, and further Wensiack, A *Handbuch* of Early Mkh. Trad., p. 192a). According to *Aḥṣa* it is only forbidden to await sunrise and sunset for prayer (Muslim, *Musāfīrīn*, trad. 296). In Makkah prayer is allowed at all times (Bukhārī, Ḥadīṯi, b. 73; Tirmīḏi, Ḥadīṯi, b. 42).

**MĪKĀṬ AL-SABBĀʾ, an Arabic author**

born of Catholic parents in Akko in 1784, was educated in Damascus and then came to Egypt. Here he joined the French expedition, had to leave the country with them and came to Paris. The State printing works employed him as a proof-reader and the Bibliothèque Nationale as a copyist of Oriental manuscripts; his irregular habits prevented him leading a comfortable or settled existence, although de Sacy and his pupils appreciated his thorough knowledge of his mother tongue. He himself only used it to compose ḥaṣīdas in the old style in praise of great men of the period and to make some money thereby. For example in 1805 he addressed a poem to the Grand Juge when he visited the printing works, in 1805 to Pope Pius VII, in 1810 to Napoleon on his marriage, in 1811 to the Pope of Rome, in 1814 to Louis XVIII. These poems were printed at the government press, those to Pius VII with a Latin translation by de Sacy, that to Louis XVIII with a French one by Granget de Lagrange. He also published a work on carrier pigeons entitled Kitāb Maʿṣūhabat al-Sīkāw wa ʿl-Ghamām fī Ṣalāt al-Hamām. La colonne messagère, plus rapide que l'éclair, plus prompte que la nue, par M. S. traduit de l'Arabe en français par Silv. de Sacy, Paris 1805; based on the preceding: Die blitzgeschwinden Brießpfosten, oder sinnvolle Kunst des Orients, Tauben zum Bestellen der Briefe abzurücken, nach dem Arab. des M. S. Herborn 1806; Beschreibung der Kunst der Tauben post, welche seit der Zeit der Erleuchtung gebrächt wird, aus dem Arab. von Dr. Th. J. K. Arnold, Frankfurt 1817; La colonne messagère role più del lampo, trad. di S. A. Catanese, Milano 1822; Die Briefbrust schneller als die Blitze, aus dem Arab. von C. Lepre, Strassburg 1879. — He lived in manuscript a history of the Arab desert tribes of Syria, a history of Syria and Egypt and, important for its lexicographical information: al-Kiṭāb al-fāmāma wa Ḥalām al-ʿAmma wa ʿl-Maṣūhabat fī al-Wāḥīl al-Kulām al-dāriḍ, M S. Grammatik der arab. Umgangssprache in Syrien und Agypten, nach der Munchener Hs. heraus. von II. Thorbecke, Strassburg 1886.

**Bibliography:** Hunter, Anthology Arabic, p. 291 sqq; *Biographie Universelle*, xxxix. 427. (C. Brockelmann)

**MĪKĀṬ-OL-GHUL, an old Ottoman noble family.** This family traces its descent to the feudual lord Köse Mīkāṭ 'Abd Allāh, originally a Greek (cf. F. A. Geoffroy in Ch. Schefer, *Petit traité de l'origine des Turcs par Th. Spankow Cuca- casien*, Paris 1666, p. 267; L'oriz dedisce Grece etat nommé Michalian... Du: Michalos sont descen- dancs les Michalezis), who appears in the reign of ʿOthmān I as lord of Chirmenika (Khirmandjik) at the foot of Olympus near Edrensos, and later as an ally of the first Ottoman ruler earned great merit for his share in the latter's expansion (cf. J. v. Hammer, in G.O.R. ii. 48, 57, following Idris Bitlis and Nešić). Converted to Islam, Köse Mīkāṭ appears again in the reign of ʿOthmān's son Erkan. The rank of the family of the kümmīs [q.v.] became hereditary in the family of Köse Mīkāṭ,
which is even said to have been related to the royal house of Savoy and of France (cf. Paolo Giovio: *Michaloghi di sangue Turchesco e per via di doni si fa parente del Duca di Savoia e del Re di Francia*; in this case Mikhāl [Maksā] alias Kose Mkhāl must have been descended from the Palaeologi; cf. J. v. Hammer, *G.O.R.* i. 584), and along with the Malkoč-Oghlu (properly Malković, i.e. Marković), the Ewrenos-Oghlu [q. v.], Timurtash-Oghlu [q. v.] and Turašan-Oghlu [q. v.] was among the most celebrated of the noble families of the early Ottoman empire. Kose Mkhāl, called ʿAbd Allāh, died in Adrianople and was buried in the mosque founded there by him in the western Yildırım quarter. As Adrianople was certainly not conquered till 1361, see F. Babinger, in *M.O.C.* ii. 311) he must therefore have lived into the reign of Murād I. What J. H. Mordtmann has said in the article ʿEwrenos [q. v.] would therefore be true about his remarkably long life. Kose Mkhāl had two sons, namely Mehemmed Beg and Yakhshī (Bakhshī?) of whom only the former acquired some renown. He was vizier under Māsā Celebi and a close friend of Sheik Bedr al-Dīn of Siwa (q. v.). Under Māsā he was Beglerbeg of Rūmeli, and died in 825 (1422) at Isığk at the hand of the judge Tādż al-Din-Oghlu and is said to have been buried at Feleva in Bulgaria (cf. Euliya Celebi, *Siyāḥat-

The following genealogical table shows the order of succession of the Mkhāl-Oghlus:

</table>

According to the genealogy published by Ismāʿīl Ḥakki, *Kiλbeler* (Stambul 1345 = 1927), p. 25 which is based on a *Sīlātenāme* in the Ewāfī- of *Waṣīfīye Deyṣerī*, NR. 247, in Siwa, the genealogy of the Mkhāl-Oghlus is as follows:

| Ghāzi Mkhāl-Beg |
| ʿAlī-Beg |
| Mehemmed-Beg |
| Yahyā-Beg |
| Khādīr-Pasha |
| Mehemmed-Pasha |
| Yurkūṭ-Pasha |
| Sinān-Beg |
| Barak-Beg |
| Kāsim-Beg |
| Mehemmed-Pasha |
| Khādīr-Beg |
| Suleiman-Pasha |
| ʿAlī-Beg |
| Mehemmed-Pasha |
| Muştafa-Beg |
| Ikender-Beg |
| Mehemmed-Pasha |
| Khādīr-Pasha |
| ʿAlī-Beg |

If we compare the article *Yurkūṭ Pasha* in 1, where the descendants of this general are given, *Mehemmed Suraiya*, *Sīlāte-i ʾosmāni*, iv. 652, 1, we get a different picture of the genealogy.

---

1) According to Mehemmed Thuraiya, *Sīlāte-i ʾethmāni*, iv. 101, Iskender-Beg had four sons, ʿAlī, Mehemmed, Khādīr and Suleiman. This must be wrong and the genealogy is as above.
name, iii. 305), after being previously (1816 = 1413) detained as a state prisoner in the castle of Bedestân Cardak near Tokat. His son was Khiýr-Beg who distinguished himself in the wars of Murad II's reign. He died in 870 (1465) and was buried at Adrianople beside his ancestor Kose Mîkhâl. Khiýr Beg seems to have had three sons, namely Ghiyâsh 'Ali Beg, Ghiyâsh Iskender Beg and Ghiyâsh Bâli Beg, of whom only the first two are of any historical importance. Ghiyâsh 'Ali Beg in 1461 distinguished himself in the battle against Vlad (see J. v. Hammer, ii. 64), in 1473 ravaged the lands of Uzun Hasan [ibid., ii. 115], invaded Hungary in 1475 [ibid., ii. 144] with his brother Iskender Beg, in 1476 [ibid., ii. 156] was in command of the ašûtûn before Scutari in Albania and appears once again in Transylvania [ibid., ii. 172]; in the next 13 years nothing is heard of him. In 1492 he seems to have met his death at Villach in Carinthia, defeated by Count Khevenhüller, although other sources mention him at a still later date. According to them, he died in Plevna. His brother Iskender Beg in 1476 commanded the light cavalry at the siege of Scutari, as sandjakbey of Bosnia (880, 885 and 890) [J. v. Hammer, G. O. R., ii. 156]; in 895 (1490) in the Karamanîn campaign, in which he lost his son, the governor of Kağıriya Mîkhâl Beg (see J. v. Hammer, G. O. R., iii. 293), who was taken prisoner and sent to Egypt. He seems to have lived till 903 (1498). The military exploits of Ghiyâsh 'Ali Beg were celebrated by Sûrî Celebi (d. 930 = 1530 at Prizen; cf. F. Bahinger, G. O. W., p. 34 sq.) in a long epic, (said to have been 15,000 couplets) fragments of which have recently been discovered (one in Berlin, MS. Or., No. 1468 containing 1,700 baits and the other in Agram, South Slav Academy of Sciences, Coll. Bahinger, No. 554, l. with 212 baits). In some sources a Mehemmed Beg, who was distinguishing himself at that time, is described as a fourth son of Ghiyâsh Khiýr Beg; in others however, he appears as the son of Ghiyâsh 'Ali Beg, which is improbable as he probably was twice governor of Bosnia, namely as early as 897 (1492) and again in 949 (1542) and did not die till 950 (1543). The family of the Mîkhâl-oghlu now begins to fall into the background. About the middle of the xvîth century an Ahmed Beg is again mentioned, perhaps as the last of the Mîkhâl-oghlu holding the hereditary office in the family of leader of a body of ašûtûn (see J. v. Hammer, G. O. R., iii. 293), and lastly a Khiýr Pâshâ is mentioned in history as a descendant of Kose Mîkhâl (see J. v. Hammer, G. O. R., iv. 512). The family had, at a later date had estates in Bulgaria (around Ihtiman) [cf. Ewliya Celebi, iii. 390 and Ç. Jiricek, Das Fürstenthum Bulgarien, Vienna 1891, p. 138 and Philippopolis, ibid., p. 379 sqq.] and survived down to modern times. As we learn, however, from the Sâlnâmé of Adrianople for 1309, p. 82 sqq., the Mîkhâl-oghlu had already at an early date large estates around Adrianople. They had the country round Buñar-Hisar, Tarnovo, Kîrk Kilise and Wiza as a hereditary fief. The Anatolian district of Mîkhâl-oghlu (Mîkhâl-oghlu, Mîkhâl-oghlu in Chalkondyles, p. 225; cf. Ewliya Celebi, 293 sqq.; W. Tomasek, Zur geschichtlichen Topographie von Kikianiou im Mittelalter, in S. H. W., Philhist. Kl., xxviii. 1925, p. 93 and J. H. Mordtmann, in Z. d. d. M. C., vol. lxxv., 1911, p. 101) seems to be connected with the family of the Mîkhâl-oghlu.

**Bibliography:** The well-known histories of J. v. Hammer, Zinkleisen, Jorga. Under the title Ašûtûn Ghiyâsh Mîkhâl (pr. Stambul 1315; cf. F. Bahinger, G. O. W., p. 35, note 1) Nuzhet Mehmed Pasha published a work glorifying a Köse Mîkhâl and his descendants. — Al. A. Olesnîckj in Agram is preparing an edition of the work of Sûrî Celebi and at the same time a history of the Mîkhâl-oghlu. (Fr. Bahinger)

**Mîynâs.** [See Merkez.]

**Mîkyâas,** any simple instrument for measuring, e.g. the pointer on a sundial; in Egypt the name of the Nilometer, i.e. the gauge on which the regular rise and fall of the river can be read. To get an undisturbed surface, the water was led into a basin; in the centre of this stood the water gauge, a column on which cills and fengers were carefully measured off. The level of the water was ascertained by an official daily and proclaimed by criers.

Originally the rising of the Nile was measured by the gauge (al-rukab). According to Ibn 'Abd al-Ḥakâm, al-Ḳâfâ'î, and others, Joseph, the son of Jacob, built the first Nilometer at Memphis; at a later date, the “aged Dalûkî” built Nilometers in Aḥnim and Arṣûn (Antinoe). These were the Nilometers in use throughout the Greek period till the conquest of Egypt by 'Amr b. al-Āṣî. The latter erected a Nilometer at Assuan and a second at Dendera. Others were built in the reigns of Muṣwîyiwa and 'Abd al-Ḳâfâ. Finally the Caliph al-Muṭawakkîl had a large Nilometer built and instead of the Christian officials appointed Abu l-Raddâd to look after it, and the office remained hereditary in his family down to the time of al-Mâkzen (d. 1442).

The ancient Egyptians are said to have drowned a virgin in the Nile at the beginning of its rise as a sacrifice. 'Amr compelled the Nile to rise and fall at God’s command by means of a writing which he threw into the water.

**Mîlād (A.).** According to some Arabic lexicographers the meaning of this term is time of birth in contra-distinction to mawlid which may denote also “place of birth.” The latter is the usual term for birthday, especially in connection with the birthday of Muhammad and Muslim saints [cf. the art. Mawlid]; milâd denotes also Christmas. For other special meanings, cf. Dozy, Supplement aux dictionnaires arabes, ré. [v.]

**Bibliography:** the Arabic lexicons.

(A. J. Wensink)

**Mîlas.** The ancient Mylasa, capital of Caria and famous in antiquity for its sanctuaries of the Carian Zeus (in mediaeval and modern western sources: Milaso, Milaxo, Melaso, Melaxo), a town in S. W. Anatolia, 15 miles from its seaport, Kulluk (on the Gulf of Mendelia). It is the capital of the kaza of the same name in the Wilayet of Mugla (formerly the sandjak of Men...
TESHE) and has 7,346 inhabitants (census of 1928) compared with 7,261 (of whom 3,206 were Greeks who were removed by the exchange of 1922, 739 Jews, who still flourish, and 71 foreigners) in 1908 (Szlámü Acsia, of 1326 A.D.).

Milaš lies on a low eastern spur of the Sodra Dağh (Gr. St. Elias) in the centre of a very fertile plain surrounded on all sides by hills, and watered by the Sari Çay which flows round the Sodra Dağh on north and west. The road to the sea however does not follow this marshy water-course but crosses the hills south of the Sodra Dağh, here commanded by the once powerful mediaeval fortress of Pećin (three miles S. of Milaš).

The bay itself was in the middle ages defended by the island citadel of Asf Kafesi (Judieh, Kasos; Atien. Miletii, iv. 139) and later by a castle at the harbour built by Mehemed II (Piri Keşbs, Bâkırî, ed. P. Kahle, chap. 21). At Milaš met the old and, although difficult, only roads to the west to the important mediaeval port of Balat (Miletos), to the north into the fertile plain of Karpuzlu Ovası and Cine and into the Maeander valley, and eastward to Mughla, the other important town of the district. This and its protected situation near the sea within a broad fertile plain destined the town to be once more a capital when the region again attained political independence under the Turkish dynasty of the Mentešhe [q. v.].

The region first passed temporarily under Turkish rule when, after the victory of the Selbdsïs at Manzikert in 1071 the western Anatolian coast with Nicaea, Smyrna and Ephesus and even islands like Samos and Rhodes were occupied by the Turks. Although we have no definite information about Milaš itself we know that the monks of the neighbouring Latmos had to leave their monasteries on account of the Turks (in 1079; cf. Th. Wiegand, Milet, i, 185). But Byzantine rule was soon restored. It was only when the centre of the imperial government was withdrawn to Constantinople after the victory over the Latins in 1261 that this region finally passed into Turkish hands. When and how the final conquest took place we do not exactly know. Melanudion, which with Milaš formed a theme from the period of the Comneni (W. Tomascher, Zeit. Topographie Kleinasiens im M.A., Vienna 1891, Abb. d. Ak. d. Ws., p. 38), and is therefore to be located in the neighbourhood of Milaš and was Byzantine till 1273 at least, was again taken for a time from the Turks of Mentešhe in 1296, so that it must have been occupied by them a few years before (Wiegand, op. cit.). That Mentešhe is called Xélauxis (= Sahîl ilâhi, Emir al-Sawaîlî) in Pachymeres (i. 472; ii. 211, Bonn ed.), in Sanudo (Hopf, Chronografia Romanica, p. 145) Turquenomadar (read: Turquenomadar = ÒTurkoman of the seaÓ) suggests a conquest from the sea. There is no longer any record at this period of the bishopric of Milaš, which as a church of the eparchy of Caria (see G. Parthey, Hierosolyma Sancutum et nothing gracae episcopatum, p. 32, 112 etc.) was under the metropolis of Stavropolis, which still existed in the 14th century (A. Wächter, Diet Verfall des Græchentums in Kleinasiien am 14. Jh. U.P., p. 34 sqq.) (Stavropolis, the ancient Aphrodisias at the village of Gerî, twenty miles west of Denizli).

Milaš appears as the capital of the principality of Mentešhe about 1330 in al-Umarî (ed. Taeschner, p. 21) and Milaš (Fākeh = Fâquēa which appears as a capital in the Genoese report, ibid., p. 47 is probably an error of the writer and is not to be corrected to Mughla) and in Ibn Battûta (ed. Defrémery and Sanguinetti, ii. 278 sqq.) also, who here enjoyed the hospitality of the Akhi gild (on a Fotisîcune of written in Milas at the end of the 14th century see Taeschner, in Islamica, iv. 40) and admires the wealth of the town in gardens and orchards and gives the name of the lord of the country as Shuja al-Din Urkhan b. Mentešhe, whom he visited in his capital Pećin, not far Away. The Mentešhe built very little in Milaš as they were engaged in embellishing their residence. It is noteworthy that the two mosques of this period lie outside the old town, still largely enclosed in its old walls; one to the south, in the Hâdjî Dhîs quarter, the little Sâlah al-Dîn Djâmî with outer court and stepped minaret, built under Urkhan Bey in 1330; the other just outside the walls to the east, the mosque of Ahmed Ghaïû built in 1378, which with its entrance in the narrow side (without an outer court) and the stepped minaret built above it (Ismîlî Hâckî, Kitâbeler, Istanbul 1929, fig. 47) looks as if it had once been a church (cf. Wulzinger, Die Perzisch-Mongolische Milas, in Festscr. d. Techn. Hochschule in Karlsruhe, 1925, p. 10 of the reprint). The minbar of this mosque also dated 1378 (1378) is now in the Çini Kiosk in Constantinople. From the position of these mosques, it may be deduced that the old town remained in the occupation of the Christians, who still held the most of it in quittance in recent times. The only mosque in the old town, just in its centre, and in the highest part of it, the Bulel Djâmî, seems also to have been a church and was probably used by the garrison, if it is old. The medrese of Khoja Berî al-Din, which dates from the period of the Mentešhe, unfortunately cannot be exactly dated (Rev. Hist., v. 58).

Milaš received its first important building from the first Ottoman governor Firuz, whom Bâyâzid I appointed over Mentešhe-ili (Dusturname-i Euweri, ed. Meşrûm Hâlî, Istanbul 1928, p. 88) after the conquest (792 = 1390) (the date given by most Turkish sources is probably Bâyâzid’s confirmation of the Venetian privileges for Balat of May 21, 1390, Diplomaturium Veneto-Levantinum, Venice 1899, ii. N. 134). The Mentešhe who fled to Egypt (Dusturname, i. c.) was probably the prince of the house ruling in Balat, while the senior Ahmed Ghaïû may have held out in Milaš and Pećin till July 1391 (according to his tombstone he died in Pećin in Şabân 793 as shahîl). In 1394 Firûz built to the north of the old town and outside of it a splendid mosque in the style of the Brusa private mosques (cf. Wulzinger’s monograph). Ottoman rule was interrupted by Timûr who passed through Milaš on his return from Smyrna in the winter after the battle of Ángora (1402) (Ducars, p. 76, Böam ed.), for about twenty years by the restoration of the former dynasty. This last period of the Mentešhe-oglu has left no memorials in Milaš or Pećin. The Bâyâzidian Ottoman commanders then made their headquarters in Pećin after which this kind of the Mentešhe sandjik was long called (Ahî Bakr b. Bahrîm in Hâdîh al Khalfi, Djâkân-nâmâ, p. 638, i.e. the second half of the 16th century) and only moved
to Milas at a later date, when a magnificent official residence was erected, with defensive towers, and is still partly inhabited.

From the second half of the xviith century we have Ewliya's description of the town (in the unprinted vol. ix. of his Sīyāḥet-nāme, Ms. Beşhişt Agha, No. 452, fol. 51) He says the town had 4 mosques, 3 madras and two large khāns. At this time the garrison was still in Pećin. He praises the gardens of the town but rightly describes the climate as unhealthy. Among the products he mentions tobacco, with which Milas supplied the whole of Anatolia. Among the holy places mentioned by him, we may note that of Shaikh Shuhreti because it probably belongs to the Baba al-Shuhreti met here by Ibn Batūta. Ewliya's description of the old ruins is much exaggerated, although he saw a good deal more than now exists. Pococke (Travels, ii. 2, ch. 6) at the end of the eighteenth century was still able to sketch a temple of Augustus and Roma here. All that now survives in addition to the town walls is the Balta Kapu (a Carinthian gateway with the Carian double-axe) and a mausoleum called Guvmarğa (filigree-worker) (Choiseul-Gouffier, Voyage dans l'Empire Ottoman, i. 234 sqq., pl. 84—92). In the adjacent village of Shuhreti köy is the turbe of Shaikh Bedr al-Din b. Shaikh Kasım, who died at Brusa in 884 (1479) and is buried here, a khalīfa of Saiyid Muhammad al-Bukhari (see Rev. Hist., v. 311 sqq.), on the site of a church of St. Xene, who died here (Bulit. de Corr. Hell., xiv. 616 sqq.).

The capital of the Mentege, already mentioned several times, Pećin (Gr. Petsoa) consists of an imposing citadel built over ancient foundations and Byzantine masonry and an extensive town lying south of it. The citadel with its walls and towers crowns a steep rock that rises out of the southern end of the plain of Milas (Ismā'īl Hakki, fig. 40) and is accessible only at the south side by a great door flanked by a tower adorned with lions' heads. Inside the fortress, where there now is a miserable little village, the only architectural remains are the foundations of a church. Opposite to the entrance to the citadel, on a plateau surrounded by walls, some of which still stand, lie the palace and its annexes, now mostly in ruins. All that survives is the charming medrese built, stone of Ahmed Ghażi of 777 = 1375 (Ismā'īl Hakki, fig. 51—54). In the İdwān, the arch of which is flanked in the spandrels by reliefs of lions holding flags, the founder is buried (see above); opposite the medrese stands a mosque built by Urkhan Bey in 752 (1352), in ruins except for the gateway of Byzantine doorm_frames and fragments of mosaics (the inscription is given in Ewliya's), probably the one that Ibn Batūta saw being built on his visit to Pećin (Bardżin). There is also a mosque and medrese, a bath and a palatial serai, all in ruins. Exceptionally finely carved tombstones give the names of important people who lived here down to the xvth century. Ewliya, who still found about one hundred houses here, thought there must once have been a great town here. Pećin is mentioned by Kaṣğābāna, Şāh-al-Ďayhā, viii. 18, as the possession of a certain Emir Mūsā, lord of Balaš and Bardžin (şēş) who is known from a coin in the collection of J. H. Mordtmann. A native of Bardžin was Mahmūd b. Meḥmūd, who about the middle of the xviith century dedicated his "Book of the Falconer" (Bāsāmīn) written in Turkish to a Mentege-oglu (v. Hammer, Folk overweight, Vienna 1840, Thury, Türkîk nylevemlekâ x. i., p. 29). On October 17, 144 in Pećina the Mentege-oglu Ilâs Bey concluded a treaty with the Venetians (Diplomatium Veneto-Levantinum, ii, No. 166).

Texier, Asie Mineure, Paris 1872, p. 648; Heyd, Gesch. de Levantehande im M.A., i. 584 (Fr. ed., i. 553). I was unable to consult the work mentioned by Hasluck, Christianity and Islam, ii. 596 entitled I. Koukoulis, Ta Nêa Mivarz, in Ezhحار, iii. 448 sqq. For the Muslim inscriptions see A. Tewyld, in Rev. Hist. (Constantinople), ii. 761; iii. 1146, also Haš Ės Url (ibid., v. 57, 308) and Isma'il Hakki, Kitâbeler, Istanbul 1929, p. 155 sqq.

(P. WITTERN)

MILK (.), possession, property. The word is not found in the Kurān, but is in regular use in legal terminology. The double meaning of the word shows that the usual distinction in our legal language between the conceptions of possession and property are not found in the fikr. There is, it is true, a special term for the actual power over a thing, what we call possession in the narrower sense, namely yâd, lit. "hand", but the distinction between a judicial ownership and the actual control is not found in Muslim jurisprudence and there is not a word for property which takes into account the actual ownership, either from the positive or the negative point of view. As a result we find, for example, that the ownership of a thing passes directly by agreement if this was intended, even if the thing in question is not at once handed over. On the other hand, not only things but also rights can be owned.

The following are excluded from the possibility of being property and subject to legal regulations: 1. useless things (e.g. wild animals); 2. things the use of which is prohibited by religion (e.g. wine-grapes); 3. things which are ritually impure or have become polluted to such an extent that they cannot be purified (e.g. swine, dung et. seq). As long as they are not essential parts of a pure or permitted thing. If such things, however, are acquired, one talks not of milh but of tâzı̇ba, a special claim upon them; legal transactions relating to such things have a special vocabulary of their own.

Kumāl al-milk is a necessary preliminary for the property of an owner being liable to zakāt (q.v.).

Bibliography: The articles "BAR, BAT, MĀL, SHIRKA, TâGARA and the literature there given; Juynholl, Handbuching (1939), 560 and the references there given; al-Ghazzali, al-Wāfas, i. 85 sqq.

MILQA (.), religion, rite. However obvious it may be to connect this word with the Hebrew and Jewish and Christian-Aramaic milā, melā, "utterance, word", it has not been satisfactorily proved how and where it received the meaning which it is taken for granted in the Kurān or not. It is known whether it is a purely Arabic word or a loanword adopted by Muḥammad or others before him (Noldke, Z. D. M. G., iiv. 413 seems to hold that it is Arabic for he refers to the 4th form amīla or amāli to dictate""). In the Kurān it always means (even in
the somewhat obscure passage, Sūra xxxviii. 6) "religion" and it is used of the heathen religions (vii. 86 sq.; xiv. 16; xviii. 19) as well as of those of the Jews and Christians (ii. 114), and of the true religion of the fathers (xii. 38). The word acquired a special significance in the Medina sections where the Prophet in his polemic against the Jews speaks of "Abraham's minā", by which he means the original revelation in its purity, which it was his duty to restore (ii. 124; iii. 89; xvi. 124; xxii. 77 sq.; cf. iv. 124; vi. 162; xii. 37). Muslim literature follows this ḫurānic usage but the word is not in frequent use. With the article, al-minā means the true religion revealed by Muḥammad and is occasionally used elliptically for al-il al-minā, the followers of the Muḥammadan religion (Ṭabarī, iii. 843, 19, 853, 4), just as its opposite al-djinna is an abbreviation for al-il al-djinna, the non-Muḥammadans who are under the protection of Islām; e.g., Ibn Sa'd, iii.1, 235, 2; cf. also the derivative milli opposed to djinna, client (Bahākī, ed. Schwally, p. 121 infra).

MiM, 24th letter of the Arabic alphabet, with the numerical value of forty. On different forms of the letter cf. Arābī, plate 1. In some dialects of Southern Arabia and of tribes coming from that region, mim is and was used as the article of determination, side by side with f. A well known tradition is put into the mouth of a man from Southern Arabia in the following form: Layn ana kābīrī am-ṣiyāni fi 'aš-ṣaf'īn. Ibn Ya'ish, ed. Jahn, ii. 1331; Landberg, Etudes sur les dialectes de l'Arabe méridionale, 1, 1910. 281—290.

(A. J. WensincK)

MiNā, later often pronounced Munā, a place in the hills east of Mecca on the road from it to 'Arafá [q. v.]. The distance between the two is given by Muḥaddasi as one parasang, while Wavell calls it five miles and says the continuation to 'Arafá is nine miles. Minā lies in a narrow valley running from west to east, 1,500 paces long according to Burckhardt, surrounded by steep barren granite cliffs. On the north side rises a hill called Ṭhābir. Travellers from Mecca come down into the valley by a hill path with steps in it; this is the Ḧakāba [q. v.] which became famous in connection with Muḥammad's negotiations with the Madinians. The town consists of stone houses of fair size which form two long streets. Close beside the Ḧakāba is a rudely hewn short pillar leaning against a wall: this is the "great djamra" or the "Ḫāba djamra", at which the pilgrims cast stones [cf. DJAMRA]. A little to the east in the middle of the street is the "middle djamra" also marked by a pillar and lastly at a similar distance the third (the so-called "first djamra"). As one approaches the east end of the valley, there is on the right of the road a square mosque surrounded by a wall, the Ḥadji al-Khāfīr, which was rebuilt by Saladin and in 874 (1467) reconstructed by the Mamlūk Sultan Kā'īr Bey. Along the west side of the surrounding wall is a colonnade with three rows of pillars, but there is none on the other sides. It was different earlier, for Ibn Rusta (c. 300 A.H.) tells us that the mosque had 168 pillars of which only seventy-eight supported the west wing. The north side of the wall is pierced by several doors. In the centre of the court of the mosque is a little domed building with a minaret built over a fountain. There is another dome over the colonnade on the west side (see the illustrations, ii. 256).

The most striking feature of Minā is the very great difference, noted already by Muḥaddasi, between the quiet and empty streets of the greater part of the year and the tremendous throng and bustle of the pilgrimage month when, as Wavell says, half a million people with heavily laden beasts of burden hope to cover nine miles in the period between sunrise and 10 a.m. Every spot in the valley is then covered with tents in which the pilgrims spend the night. Muḥaddasi talks of fine houses built of brick and stone (among them was a frequently mentioned Ḍār al-Imāra), and large stone buildings are still to be found in Minā; but these are usually empty and are only let at the pilgrimage to the more wealthy pilgrims and even among these many prefer to live in tents. This depopulation of the city has been a subject for discussion among the geologists, for some held that this circumstance enables MiNā and Mecca to be regarded as one city (mīyār), a view which others reject. But another circumstance must have contributed to prevent a permanent settlement of the town, which is also true of other places on the pilgrims' route, namely the incredible filth and dreadful stench which is caused by such masses of humanity at the Ḥadji. Complaints are made even of the uncleanness of the Ḥadji al-Khāfīr and at Minā there are further the decomposing remains of the countless animals sacrificed. The Ḥadji djamra symbols in Minā date back to the old pagan period [cf. ḤADJĪ], for Muḥammad, as usual in taking over old customs, contented himself with cutting out the too obviously pagan elements, the result being that we can no longer reconstruct the old forms with certainty. The old poets make only passing references to them [cf. DJAMRA]; that they were similar to the Muslim practices is evident, for example, from an interesting passage in the Medina poet Kāb. Khatim (ed. Kowalski, No. 4, p. 1 sqq.) where there is a reference to the "three days in Minā" and where we further learn that the festival held there offered an occasion for entering into and carrying on love-affairs. The stone throwing is certainly very ancient; its significance is quite unintelligible in Islam, although it is difficult if there were already three heaps of stones in the pre-Islamic period [cf. DJAMRA]. It is also clear that the ceremonies in MiNā formed the conclusion of the Ḥadji even in ancient times. Muḥammad however made some serious alterations here, for he inserted a visit to Mecca before the stay in Minā, whereby the ceremony first received its legitimate Muḥammadan character; but the old elements remained the important factors, for the Ḥadji ends not in Mecca but, as before, in MiNā, to which the pilgrims return after the digression to Mecca. A survival of the pagan period probably exists in the slaughtering place preferred by the majority on the southern slopes of Ṭhābir "the place of sacrifice of the ram" (cf. Sūra xxviii. 101 sqq.), as its association with the story of Abraham probably enabled an old pagan sacred spot to be adopted into Islām. From Burton's description it is a square rocky platform reached by a few steps. Muḥammad himself did not directly forbid the use
MINÄ — MINBAR

MINBAR (A.), pulpit [cf. Masjid]. On the origin of the form of the minbar the reader may be referred to C. H. Becker's exhaustive study, Die Kanzel im Kultus des alten Islam (Noldeke-Festschrift und Islamstudien). Becker refers to the earliest historical statement which says that the Prophet in the year 7 A.H. made his minbar on which he used to preach to the people; it had two steps and a seat (maṣṣa’d). The minbar was therefore originally a raised seat or throne. On the morning after the death of the Prophet, after stormy disputes, Abū Bakr took his seat on the Prophet's minbar in a solemn assembly and received the general homage here. The later caliphs followed this tradition, as did the governors, who ascended the pulpit on their accession to office and on their resignation. The minbar in the early period was therefore not at all specially associated with worship but was the seat of the ruler in the council. The pulpit only gradually grew out of it with the development of public worship. According to Becker, the date of the change from the ruler's or judge's seat to the simple pulpit coincides with the end of the Omayyad dynasty. In 132 A.H. all the mosques in the provinces of Egypt were provided with minbars, about the same time period probably in the other lands of Islam also. At the beginning of the Abbāsid period the minbar was already a pulpit exclusively. The first tendency to its use as a pulpit is seen by Becker in the introduction of the minbar into the divine service at the Muṣallā in Medina, which is ascribed to Mu‘āwiyah or to his governor. The Prophet did not have a minbar at the Muṣallā and nothing but divine service could have been held there.

The typical form of the minbar as a pulpit, which is placed to the right of the mihrāb and of the spectator, is an erection on steps with a portal or without a door at the entrance to the steps and a ciborium-like canopy to the platform. This form is peculiar to the minbar of wood, which is the most usual. The variants in stone and brick are more simple and frequently are only a bare platform reached by three to five steps. The fine series of minbars of wood begins with that most famous of all in the history of art, the minbar in the great mosque in Kairawān. On the occasion of the extension of the mosque by Ibrāhīm II Ibn Aghlab (261–289 = 874–902) it is said to have been bought with the lustre tiles of the mihrāb wall from Baghdad and set up. It is made of plane-tree wood and is in the canonical minbar shape with a staircase here of 17 steps — to the preacher's platform. The pulpit, however, has not yet the stylized structure of the later wooden minbars. It has not the portal nor the canopy at the top. Its composition of about 200 carved panels and narrow strips of unequal size, is simply a primitive agglomeration of profuse ornamentation, still very nomadic in feeling, such as would hardly ever have been found in Baghdad, and even in Kairawān can scarcely be regarded as original. Saladin has pointed out that the pulpit must have been restored after Kairawān had been sacked by the troops of the Fātimid Mustanjīr Abū Tamim in 441 (1054). In any case it has several times suffered damage and undergone restoration so that its present general appearance cannot be dealt with critically until we have a thorough monograph based on exact investigation on the spot. The ornamentation, as Kühnel observes, be regarded as Omayyad (Springer's Kunstgeschichte, vi. 385).

The vine branches of the frame-strips and the panels filled with floral patterns and leaves resemble the decoration at Maḥātī (q.v.) and some of the geometrical patterns, which are of all imaginable combinations, are already found on the shafts of
pre-Islamic columns in Diyarbakr (cf. van Berchem-Strygowski, *Amide*). The archaic combination of designs on the minbar has no connection with the decoration which since Sāmarrā we call ‘Abdāsid. We have here a phenomenon comparable to Ṭaḥtā′ since here also ornamentations from different sources are combined to form a general scheme whose common denominator is formed by the formal quality of the chiaroscuro common to them all. We do not even know how long the nucleus of these carved strips and latticed panels may have previously existed in Bagdad and they may have there belonged to an Omayyad minbar before the pieces were brought to Kairawān and supplemented by copies and additions of local workmanship.

The few pulpits that have survived from the Fāṭimid period follow the Syro-Egyptian style of woodwork of the period with their system of frames filled with foliage. The tendrils were prevented from over-running the whole surface by being placed within small polygonal areas which were grouped together in cassettes (Kühnel, Springer’s *Kunstgeschichte*, vi. 406). The wooden mīhrāb of the xith century from Cairo illustrated in the article mīhrāb illustrates this style, which is also represented by the minbar made in 1091 A.D. for the mosque in ‘Askālan and now in Hebron, and by the pulpit of 1155 A.D. in the mosque of ‘Amr in Kūt on the upper Nile.

During the Fāṭimid period the pulpit developed its canonical form as represented in the minbar of the Masjīd al-Aqṣā in Jerusalem, which was gifted in 1168 A.D. by Nūr al-Dīn to Aleppo and later taken by Saladin to Jerusalem (Saladin, Murād, 228). It henceforward took up the way and the domed canopy. The main decorative motives are 8-pointed stars and the polygonal and star-shaped subsidiary panels show carving in relief inlaid with ivory and mother-of-pearl. Of the minbar of Suṭlān Lādin in the mosque of Ibn Ṭūlūn of the year 1269 A.D. little more is left than the framework, while the panels are preserved in the Arab Museum in Cairo and in the South Kensington Museum (cf. Descriptive Catalogue of the Arab Museum, Cairo). That wooden pulpits were sometimes copied in stone is shown by the stone pulpit in the mosque-madrassa of Suṭlān Ḥassān (757—764 = 1356—1363). The mukarnas on the door case and soon after found on the dome also, here as in the mīhrāb goes back to Turkish influence transmitted through Syria. Like the mīhrāb, the minbar also attained its finest workmanship in Cairo under the second Mamlūk dynasty in the xviith century and later. No essential alteration was later made in its canonical form and its embellishment remained standardised and varied only in details. A fine example of this fully developed Cairo type is in the South Kensington Museum. According to the inscription, it was presented by Ka’īt Bey (1468—1495) and has finely carved ivory panels and traces of painting on the wooden parts. The usual star pattern is replaced by a smooth surface. The gilt onion-shaped dome with its finial and crescent on the stalactite cornices are, as Briggs observes, characteristic of the period (Briggs, Mukam. Archit. in Egypt and Palestine, p. 217).

After the Turkish conquest, the general deterioration in craftsmanship in Cairo affected the minbar also, but exceptions, like the finely-worked pulpit of the mosque of al-Burdaein, however show that the good old tradition still survived. Hakam II’s minbar in Cordoba has not survived but from the descriptions of the Arab writers it must have been a peculiarly valuable piece of work, for according to al-Maḳkātī it cost 35,705 dinars. It could be moved on wheels and contained the caliph ‘Omar’s Kurān. In the mosque of ‘Alā’ al-Dīn in Konya is a minbar of hazelwood, according to an inscription on the posts supporting the upper part, the work of an artist of Aḵīlāt of the year 550 (1155). Two inscriptions on the pulpit mention Suṭlān Mas’ūd I (510—551 = 1116—1156) and Ǧūḏlī Jārslān II (551—584 = 1156—1188) (cf. J. H. Laytved, Konia and F. Sarre, Seldschusische Kleinkunst, p. 27 sq., pl. vi.—viii.). Inscriptions from the Kurān decorate the frames of the balustrades of the steps. The pulpit is of the traditional Syro-Egyptian form, but is, however, distinguished from them by its vigorous structure. Polygons and star-shaped panels fill the sideframes, together with the same tendril patterns symmetrically interwoven, as we find naturalised in all the eastern lands of Islam from the beginning of the eleventh century (detailed illustration in Sarre, op. cit., fig. 24).

In Persia and Afganistan all the old minbars seem to have been destroyed during the Mongol invasion. On the other hand, the minbar illustrated here in the mosque of Djiwar Shāh Agha in the sanctuary of the Imam Riḍā in Meşhādeh which was built about 840—850 (1436—1446) is original in ornamentation and an example of the Timūrid minbar. The structural motive is thrust into the background by the profuse covering of small pentagonal and star-shaped wooden panels with tendrils carved in relief after the style of its contemporary tiles; the effect is that of a carpet. Nothing is known of old minbars in Turkestan. In India, pulpits were built almost exclusively of stone. Many, some of them richly carved, still exist in the Muslim provinces and towns of India. The pavilion on four pillars, common and popular in India, which gives a charm to buildings for Muslim worship as a decorative finish to the roof, was also used here for the stone minbar. Indeed one might even wonder whether this originally Indian structure was carried by the Eastern Turks to Central Asian lands and adopted by them for the minbar. Minbars with such canopies are frequently found in the mosques of the province of Gujrat and in Aḥmādābād (cf. these volumes in the Arch. Survey of India, Western India). The mosque of Hīlāl Khān Kādī of 1333 A.D. in Dholka, for example, has a stone minbar with seven steps and a canopy on pillars on the roof, but no entrance gate. The triangular side walls are divided into square areas which are carved in relief (Arch. Survey of India, Western India, vol. viii., Gujrat, pl. xxviii., xxx.). In Haidarābād, the Muslim state of the south, on the other hand, the minbars are more simple and heavier, and have no canopy (cf. illustration from Osmania).

MIN TA KA

MIN TA KA or MIN TA KA al-BURUJ also MIN TA KA Falak al-BURUJ or (more rarely) NITA K al-BURUJ means, like the technical term FALAK al-BURUJ most frequently used in scientific literature, the circle (min t a k a) of the twelve signs of the zodiac ("towers", Greek πύργοι), then the zone of the ecliptic formed of the twelve signs each covering 30°.

The KU R A N contains references to min t a k a in three different passages, viz:

Surat xv. 16: "We have placed towers (bura Tj) in the heavens and adorned them for the spectators'.

Surat xxv. 61: "Blessed be he that placed towers (bura Tj) in the heavens and who placed a lamp in them and a light-giving moon'.

Surat Ixxxi is entitled al-Bura Tj and verse 1: "By the heavens with its towers (bura Tj)'.

Babylonian may with great probability be assumed to be the original home of the zodiacal circle. The period of its origin cannot be fixed with certainty: the first attempts at a grouping of the constellations on the path of the sun and the planets, however, date from before the period of Hammurabi and in any case into the third millennium B.C. Almost all the names familiar to us are already found in Sumerian inscriptions. The Bogaz-Kalil list of about 1300 B.C. gives all the signs of the zodiac with the exception of Leo and Libra.

The only pictorial representation of the zodiac constellations is the zodiacal map of the early Muslim period, the fresco on the dome of Qasir Amra shows the ecliptic as a broad band, along which are arranged the twelve bura Tj; it also shows the poles of the ecliptic and the 12 (ecliptical) degrees of longitude, as well as the equator and a series of parallel circles. The peculiarity of the arrangement of the constellations with considerable southern latitudes shown beyond the equator on the hemispherical inner surface of the dome results in the equator and ecliptic not being shown as the largest circles. The method of representing the separate constellations on the fresco, especially the min ta k a, is, broadly speaking, the same as that on the Al-Assas Papyrus. (N.B. It should be noted that the fresco of Qasir Amra represents the heavens reflected as in a mirror.)

The twelve Buruj. Preliminary Note:

The names of the bura Tj are given in Arabic literature with many variations: those quoted below are the most usual. With the fixed stars a distinction is made between those which form the outline of a constellation (Kawakib min al-bura Tj), i.e. the essential stars and such as "go beyond the constellation" (bura Tj al-wa l'), and are regarded as only being loosely connected with it, i.e. the unessential stars.

The account given is based on its main features on the statements in the first part of al-Kazwini's Cosmography.

1. al-Hamal or al-Ka'b, the Ram (Aries). It consists of 13 essential stars, 5 unessential lie in its immediate vicinity; its fore-part is turned to the west and its hind-part to the east. It has its face on its back. The two bright stars on the horn (β and γ) are called al-Sharafani or al-Na'ib ("the butler"); they form at the same time the first of the 28 stations ("mansions") of the moon (masili). According to another reading the name al-Na'ib is given to the unessential star. Aries is situated above the figure of the Ram. The three stars ε, δ and ρ Aries form the second station of the moon and are called al-huqaiq ("little paunch").

2. al-Thaur, the Bull (Taurus). 32 essential and 12 unessential stars; its forepart faces the east. The bright star at the point of the northern horn (presumably β Tauri) is also included in the Waggoner (Auriga) as well as in the Bull. α is called al-Dabarun, 'Am al-Thaur, Tal' u Na'igim, Ḥadi 'l-Naqdim and al-Fanik ("large camel"); while the Hyades which surround it are called al-Kisr (the "young camels"). The Pleiades are called al-Thura riyya, x and u together al-Kalbani ("the two dogs") of al-Dabarun. The Pleiades form the third, al-Dabarun and the Hyades together the fourth station of the moon.

3. al-Tawamun or al-Quwar, the Twins (Gemini). 18 essential and 7 unessential stars. The Twins are in the form of two men whose heads are turned to the northeast and feet to the southwest. Castor and Pollux (α and β) are called al-Dhari al-munabiya; they form the seventh station of the moon. γ and ζ are called al-Han'a; together with three other stars of the Twins they form the sixth station of the moon. The name of γ and μ Geminorum is al-Bakhtiti.

4. al-Sarafan, the Crab (Cancer). 9 essential and 4 unessential stars. ε Cancri with γ and δ form the eighth station of the moon and have the peculiarly Arabic name of al-Nathra ("the cartilage of the nose") or in keeping with the Almagest, al-M'laf (= precept). The star β on the south hind-foot is called al-Tawaf ("the extremity"). ζ Cancri and λ Leonis form the ninth station of the moon, al-Tawf (= the glance).

5. al-Asad, the Lion (Leo). 27 essential and 8 unessential stars; he is conceived of as looking to the west. α (Regulus), γ, ζ and κ are called al-Djasha ("Forehead of the Lion") and form the tenth station of the moon; ζ and δ are the eleventh station of the moon, al-Zubra ("back-hair" or "mane of the Lion") or Khallil al-Asad. β Leonis is called Kunb al-Asad or as the twelfth station of the moon al-Sarfa. According to another reading, the name Kunb al-Asad is given to small stars in the vicinity of al-Sarfa.

6. al-Adhra (only in the catalogue of fixed stars taken from the Almagest), the Virgin (Virgo) or al-Sunduqa, the ear of corn. 26 essential and 6 unessential stars; the head of the Virgin lies south of β Leonis, her feet west of α and β Librae. The five stars in the shoulders β, γ, δ and ε Virgo, form the thirteenth station of the moon of al-Orwa; α Virgo forms the fourteenth station of the moon, al-Sinaak al-azal or al-Sunduqa (cf. Spica) which name is applied to the whole constellation of the Virgin. (N.B. The name Fahr al-Takr or α Virginis is not quoted as a name of the fourteenth station of the moon.) The fifteenth station of the moon consists of the stars δ1, γ, α and λ on the left foot; it is called al-Qahf.

7. al-Mizan, the Scales (Libra). 8 essential and 9 unessential stars. α and β Librae on the pans of the balance form the sixteenth station of the moon which is called al-Zubhun or Za baniya al-θ-skrab ("claws of the Scorpion") (cf. Sumerian ZILLA AN.NA., Akkadian Zibanita as the name of the constellation Libra).

8. al-θ-skrab, the Scorpion. 21 essential and 3 unessential stars; it has its head to the west and its tail to the east. β, γ and α Scorpii mark the seventeenth station of the moon al-
Ikthi, the eighteenth station of the moon in 1 Kelb al-Äkrab, and v the nineteenth station of the moon in 1 Kelb al-Shawala ("Sting of the Scorpion"). The stars ρ and τ to the right and left of 1 Kelb al-Äkrab, are called al-Niyât.

9. al-Rími, the Archer (Sagittarius) or al-Kawa, the Bow or al-Sabn, the Arrow. 31 essential and no unessential stars; the face with bow and arrow is turned to the west, the hind-part of the horse’s body to the east. (The fresco on the dome at Kásr 1 Amra on the other hand shows the upper part of the body of the archer turned towards the hind-part of the horse’s body, and aiming with the bow over this to the west. The stars σ (on the point of the arrow), δ (on the bow-grip) θ (at the south end of the bow), γ (on the right foot) are called al-Nā‘am al-warid, σ (on the left shoulder), φ (on the notch of the arrow), τ (on the shoulder blade) and ζ (under the shoulder) αl-Nā‘am al-sâdir. Both constellations together form the twentieth station of the moon, in al-Na‘īm. μ and λ Sagittarii on the northern bend of the bow are called al-Zalimáni, α (on the knee), and β1, β2 (on the shin-bone) are together called al-Suradáni. The space almost void of stars at π Sagittarii marks the twenty-first station of the moon, in al-Balad or Baidat al-Thaláb.

10. al-Díyad, the Goat (Capricornus). 28 essential, no unessential stars: the figure is conceived of as looking to the west. α and β on the eastern horn form the twenty-second station of the moon 1 Sád al-Dhâbîh γ and δ on the tail are called al-muhâbiáni.

11. Sâbîb al-Maw or al-Sâbît, the water-carrier (Aquarius) or al-Daw, the pail. 42 essential and 3 unessential stars; the head of Aquarius points to the N. W., the feet S. E. α and ν on the right shoulder are called Sâd al-Ma‘lih or Sâd al-Ma‘lik. The two (or three) stars on the left hand (μ, ν or μ, ν, σ) form the twenty-third station of the moon. Sâd al-Bula, ρ and ζ υ in the left shoulder together with ρ, and κ Capricorni form the twenty-fourth station of the moon Sâd al-Sâ’âd. The four stars γ, ζ, π and ν on the right-forearm and the right hand are called Sâd al-Akhâiya and form the twenty-fifth station of the moon.

12. al-Samaka‘âni, the two Fishes (Piscis) or al-Hatt, the Fish. 34 essential and 4 unessential stars; the figure is conceived as two fishes, the western in the south of the back of Pegasus, the eastern in the south of Andromeda. The two fishes are connected by a band of stars. al-Kawáni does not mention any outstanding stars.

It is evident, then, that by far the greater part of the 28 manâsil fall into the area of the 12 Burúdî and form part of them. Only the following four do not belong to them: N° 5 al-Hok’â (α, φ, μ, η Orionis), N° 26 al-Farb al-abual (α Pegasi), N° 27 al-Farb al-thâln (γ Pegasi, α Andromae). N° 28 Bâr al-îl Há or al-Râshîb (a large number of stars forming a fish in the neighbourhood of β Andromae). The zodiacal figures N° 1, al-Hamal, N° 4, al-Sarafân, N° 7, al-Misân and N° 10, al-Díyad are known together as Burúdî manâkib, Greek Καθα μονακία; N° 2, al-Thawr, N° 5, al-Asad, N° 8, al-Äkrab and N° 11, al-Daw under Burúdî dhâbîh, Κάθα στηθ; N° 3, al-Djawa’, N° 6, al-Ädrâ’, N° 9, al-Rími and N° 12, al-Sama- kâni under Burúdî Dhawât al-Djasadâin, Κάθα διαμ (i.e. "Signa bicornis", "Double figures": Twins, Virgin and Ear of corn, Archer with Horse’s body and the two Fishes).

al-Kawáni gives from Ptolemy the extent of the Minâkâ as 486.259.7211/3 Mil, the length of each Burúdî as 39.388.3101/3 Mil, and the breadth as 1.322.9431/3 Mil.

**Minâkâ in Astrology.**

**Muthallathât.**

By al-muthallathât (sg. al-muthallathâ) are meant in Arab astrology the Greek τρίγωνα, Lat. trigona or tripeta, which in the middle ages were usually translated by tripilcides.

The twelve signs of the zodiac are here arranged in threes at the angles of four intersecting equilateral triangles of which one is allotted to each of the four elements. Each triangle is given two of the seven planets as its rulers (rabī, pl. arbah, Greek ἀριστεράτον or τριγυνάκτορας, one for the day and another for the night; a third is associated with the two others as "companions").

The arrangement is as follows:

1. **Muthallathât — Element: Fire.**

   **Zodiacal sign:** al-Hamal, al-Asad and al-Rími (N° 1, 5 and 9).
   **Ruler:** by day al-Djams (Sun), by night Muhšâri (Jupiter).
   **Companion:** Zu’kal (Saturn).

2. **Muthallathât — Element: Earth.**

   **Zodiacal sign:** al-Thawr, al-Ädrâ’ and al-Díyad (N° 2, 6 and 10).
   **Ruler:** by day Zuhara (Venus), by night al-Kamor (Moon).
   **Companion:** Minribh (Mars).

3. **Muthallathât — Element: Air.**

   **Zodiacal sign:** al-Djawa’, al-Misân and al-Daw (N° 3, 7 and 11).
   **Ruler:** by day Zu’kal (Saturn), by night ‘Ufarîa (Mercury).
   **Companion:** Muhšâri (Jupiter).

4. **Muthallathât — Element: Water.**

   **Zodiacal sign:** al-Sarafân, al-Äkrab and al-Sama- kâni (N° 4, 8 and 12).
   **Ruler:** by day Zuhara (Venus), by night Minribh (Mars).
   **Companion:** al-Kamor (Moon).

The distribution of the Muthallathât has been settled since the time of Ptolemy (τρίγωνα). Wuğûh or Suar. By dividing each Burúdî into three we get 36 decans each of 10°, which in Arabic are called wuğûh (sing. wağûh), Suar (sing. šâr), or darâkân (from the Indian dreykâna, a loanword from the Greek or dakâd (Pers.), in Greek δακάδ or πυρώρα), in mediaeval Latin facies, more rarely decani. The astrological significance is the same as with the Greeks, who in their turn go back to Egyptian models. The decans are not mentioned in Ptolemy. al-Suar means properly the paranatellonta of the Babylonian Teukros, the constellations which rise at the same time as the separate decans according to his list, Abu Ma’shar and other Arab authors took over the list of the paranatellonta from Teukros un-
MINTCHA

501

altered, but not the astrological interpretations associated with them.

Buyut. The Greek διάωρος or τόπος, Lat. domicilia or (mediaeval) dominus, are called in Arabic buyūt (sg. būt) according to one sign of the zodiac; each of the other five planets rules over two signs at the same time, according to the following scheme, also already laid down in the ṕerāḥibālāq:

- Lion — Sun
- Crab — Moon
- Bull
- Scorpion
- Ram

Scales { Venus
Goat
Water-carrier
Virgin
Twins

Archer { Jupiter
Fishes
Saturn
Mercury
The burūdı from the Lion to the Goat are day-houses, the rest night-houses. If a planet is in its day-house during the hours of day or in its night-house at night, it is credited with particularly powerful astrological influence.

Sharaf and Ḥubīt. By sharaf (pl. ašwar) we understand the ūnoum of the Greeks, sublimitas of Pliny, altitudo of Firmicus Maternus, exaltatio in mediaeval Latin; Ḥubīt is the Greek ταυτίωσις, ταυτίωμα, more rarely κωλίμα, class. Lat. directio, med. Lat. causas.

A planet attains its maximum astrological influence in its sharaf; its influence is least in the Ḥubīt, i.e. the point in the heavens diametrically opposite the sharaf on the circle of the ecliptic.

The only inaccuracy in the list of exaltations, already fixed in ancient times, is giving 20° instead of 21° to the Scales for Saturn, which however goes back to a very old error; it is also found in Pliny, Firmicus and in the Hindu astronomer Varaha-Mihira.

-al-Balʿami assumed that at the time of the creation of the world the planets were in their ašwar.

Various Arab writers since Abū Maʿṣhar also ascribe exaltations and dejections to the nodes of the moon (ḥabītuni or ḥuklatānī, scil. al-kamar): ascending node (raʾa) as sharaf the Twins 3°, and as Ḥubīt, the Archer 3°; vice versa to the descending node (ḏamāb) as sharaf the Archer 3°; as Ḥubīt the Twins 3°. This allocation is not known to the Greek astrologers.

Ḥudūd. Each of the five planets (excluding the sun and moon) possesses in each of the 12 burūdı a sphere of influence covering several degrees (Arab. ḥudd, pl. ḥudūd, Greek ὅψων, Lat. fines, med. Latin terminus) which has the same astrological significance as the planet itself and can represent it at any time in horoscopes. On the distribution of these spheres of influence within the zodiacal circle opinions differed widely and unanimity could never be attained. Ptolomy added one more to the Egyptian and Chaldaean divisions already in existence. (The various systems are fully expanded in the ṕerāḥibālāq, i. 20, fol. 43.) Boll has studied this question very fully in Neues zur babylonischen Planetenordnung, Z. A., xxxviii. [1913], p. 340 sqq.). The Arab astrologers used almost exclusively the Egyptian system, which makes the different spheres of very unequal sizes.

**MINTCHA in Astronomy.**

The Minṭakā is, as in the Greek astronomy, the fundamental basis for all calculations. It is divided into 360° degrees (ḏiʿa, pl. adʿa or dāraḏa, coll. daraḏ, pl. daraḏāt) each degree into 60 minutes (ḏakāk, pl. dākāt), each minute into 60 seconds (ṯamin, pl. ṣawān), each second into 60 thirds (ṯābita, pl. ṣawāt) and so on. The points of intersection of the ecliptic with the equator (ḏaʿira or falab muʿaddil al-nakhar) define the two equinoxes (al-ʿīšālām), the points of the greatest northerly and southerly declination the two solstices (al-īnḥātām). The position of a fixed star or planet with respect to the Minṭakā is defined by its longitude (fāl, pl. aṭfurūl or in al-Battānī al-ʿaṣab allāḏā išā išī al-kaṣab) and latitude (ʿard, pl. aʿrāh). The longitudes are numbered from the vernal point (al-ʿwāṣīt al-rajīla). The axis erected perpendicular to the plane of the ecliptic meets the sphere of the fixed stars in the two poles of the ecliptic (ḥubīt dīʿarat al-burūḏ). On Arab star-maps and -gloves, we frequently find a mixed ecliptical and equatorial system of coordinates used (cf. the remarks above on the fresco on the dome at Kusair 'Amra), which consists of equatorial circles of longitude in the poles of the ecliptic and equatorial parallel circles.

**Precession** (in al-Battānī Ḥarakat al-kawākib al-ṭabīha, in later authors more precisely Muḥad-darat muʿaddil al-ṭīlāt). Among the Arab astronomers supporters were found for the theory of Ptolemy, who explained the precession as a continual revolution of the whole heavens around the pole of the ecliptic with a period of 26,000 years, as well as for that handed down by Theon of Alexandria (Thawun al-Iskandarānī) from older sources, according to which the process of the precessions consisted of an oscillation to and from around the "nodes of the path of the sun". The greatest amount of the precession, according to this theory is 8° west or east of the nodes; the retrogression amounts to 1° in 80 years so that the whole phenomenon repeats itself after 2,560 years. The latter theory found particular approval in India and was further developed there. Thabit b. Kura gave an explanation for it which at the same time took into account the (more suspected than observed) diminution in the obliquity of the ecliptic and calculated the length of the period at 4171/2 years. al-Battānī attacked and refuted this oscillation hypothesis of Theon and of the Ḥabīb al-ṭīlāmāt (Abū al-walid), on a basis of new and comparative observations he found that the precession amounted to 1° in 66 years, which corresponds to a period of 23,760 years, which is roughly 10% too small. The very accurate estimate of 1° in 70 years is also occasionally, if rarely, given in Arabic literature, according to E. Zinner, Geschichte der Sternkunde, p. 289.

**Obliquity** (Maʿlul faṭāb al-burūḏ, very frequently al-mail kulkhu or al-kullu in contrast to al-mail al-ḏiʿa, "declaration of the separate points in the Minṭakā"; cf. al-Qhālīwī, p. 21). The pro-
blem of estimating the obliquity of the ecliptic was during the classical period a centre of interest for the Muslim astronomers. As a first attempt at an exact estimate in the Muslim period, Ibn Yūnus (ch. ix., p. 222 of the Leyden Codex or of the Paris Codex, No. 4247) mentions an observation of the period between 778 and 786 which gave the value $\varepsilon = 23^\circ 30'$. We have an unusually large number of observations of later dates. (For details see Nallino’s notes on al-Battānī’s *Opus Astronomicum*, i. 157 sqq.).

al-Battānī in his observations used a parallactic ruler (triqurum, iṣṭāda ṣawwāl) as well as a finely divided wall quadrant (ilīma). He ascended with these instruments in al-Raḥṣa the smallest zenith distance of the sun at 12° 26', the greatest at 59° 36'; this gave $\varepsilon = \frac{470^0}{2} = 23^\circ 35'$. This value is at the basis of all al-Battānī’s calculations and tables and has been adopted by many other Arab astronomers.

The question whether the amount of obliquity remains constant at all times or is subject to a secular diminution was answered in different ways by different students. As a matter of fact the degree of accuracy of observation was not sufficient to settle this point and the old Hindu value of $\varepsilon = 24^\circ$, on which these investigations were often based, was based not on observations but only on a statement of Euclid’s according to which astrologers of his time used to estimate the obliquity as a fifteenth part of the circumference of the circle.

The following table gives a survey of the Arab values for the obliquity of the ecliptic (cf. Nallino, *al-Battānī, Opus Astronomicum*, loc. cit.). The column “average obliquity” gives by Bessel’s formula:

\[
\varepsilon = 23^\circ 28' 18''.0 - 0''.48 368.8 t - \\
0''.000 002 722 95. t^2 (t = years after 1750)
\]

the true values calculated for the periods in question. The years given in brackets are only approximate, i.e. not given by the authors themselves.

**Comparative table of the Arab values for the Obliquity of the Ecliptic**

(Willy Hartner)

**MINICOY**, a coral island in the Arabian Sea midway between the Laccadive and the Maldives islands; it belongs like the former to the Ali Rājā of Cannanore but ethnographically and geographically has more claim to be attached to the Maldives group. It is six miles long but very narrow, being only 12/4 square miles in area. The population is about 3,000. The people, who are probably of Singhalese origin, have been Muslims since the sixteenth century. The language is Malh but the Arabic character is used. They are strictly monogamous. A girl’s consent is required for her marriage and she brings no dowry, but receives presents from the bridegroom. The women go unveiled. There are three castes in the island. The inhabitants all live in one village which is divided into ten quarters in each of which the men and women are separately organised with their own headmen and headwomen. All work on land is done by women. The men are sailors and fishermen. Most of the island’s food supply has to be imported. The chief exports are cocoanuts, coir, cowries and dried fish. The important position held by women in Minicoy has suggested its identification with Marco Polo’s “Female Island” (ed. Yule, ii. 404).
MINICOY — MĪRĀDJ

MĪNŪCHRĪ, ABU L-NAJDĪ AHMĀD B. YĀKŪB, Persian poet, nicknamed Šash-i-gala = "sixty-herds", because of the wealth he accumulated in horses and cattle; but some say the name should be read Šash-kul or Šash-kul i.e. "crooked-thumb". He was a native of Dāmghān, calling himself "Dāmghānī" in his verse although Dāwlatshāh says he came from Balkh. He was a younger contemporary and imitator of Ūnsūrī [q. v.], but he is considered to have excelled his model in poetic power. After completing his studies under Abu l-Farajī of Sīstān (d. circa 902) he enrolled himself in the service of the Amir Minūchrī b. Khābūs b. Washghnīr, ruler of Dīrūdān and vassal of Maḥmūd of Ghāzna, and from the name of this first patron he took his takhallūs. Presumably through the influence of Ūnsūrī he later became attached to Maḥmūd's entourage of literary men at Ghāzna, and wrote kashidas in praise of his new patron and of his sons Maḥmūd (who reigned for less than a year) and Masūd who succeeded to the Ghāznawī throne. The latter was assassinated in 432 (1041), and Minūchrī did not long survive him (Kīz-kūl Khān, Maḥmūs al-Faṣfaṣī, i. 543, says he died in the same year and quotes 'Abbās as having called him "short-lived"'). In his work Minūchrī shows himself to be a skilled versifier, displaying a clever felicity of rhyme and very often a refreshing simplicity and straightforwardness of language. Also he did not hesitate to use new forms for his verse, and he is the earliest Persian writer we know of to have used the strophic form of the masnammat, which, as used by him, consists of a series of mirā's or stichoi, in groups of six. All six may rhyme together, or only five; in the latter case the last line rhymes with the last line of the other strophes. In spite of his qualities as a versifier, Minūchrī cannot be regarded as a great poet of his day for his themes, — wine, love, springtime and the virtue of patrons — are of the stock pattern, and his kashidas are deliberately moulded on the Arabic form, with all its artificialities. In flattery of his patrons he is as servile as any in the whole range of Persian panegyrist and his conceit of himself as it appears in his work is sometimes ludicrous in its effect (cf. No. 48 in Biberstein-Kazimirski's edition, Paris 1886).

Bibliography: works quoted above and Ethē, in Grundriss d. iran. Philologie, A Tihrān ed. of the Divān was published in 1399 A. H. (R. Levy)

MĪR, a Persian title abbreviated from the Arabic amīr and approximating in meaning both to it and to the title mirā [q. v.]. (For the dropping of the initial aīf, cf. Bū Sahl for Abū Sahl etc.). Like amīr the title is applied to princes (Minūchrī, ed. Biberstein-Kazimirski, 1886, p. 96, speaks of Mašīd, Sultan of Ghāzna, as "Mīr"), but it is also borne by poets and other men of letters (e.g. Mīr 'Alī Shīr, Mīr Khwādān, Mīr Muḥṣīn; cf. the following art.). In India, Saiyids sometimes call themselves by the title. As a common noun, it is used as an equivalent of ẓāḥib, e.g. mir pandār.

mir ʿākwār. In Turkish there was derived from it the colloquial adjective mirā ("belonging to the government"), which gave rise to al-mirā ("the government") in the colloquial Arabic of Trāk. (R. Levy)

MĪR, the poetical designation of Mīr Muḥammad Taḵī b. Mīr ʿAbd Allāh, was a native of Akbarābād. After the death of his father he went to Dhiḥi during the reign of Shāh ʿAlam (1173-1221 = 1759-1806) and became a pupil of Sirāḏī al-Dīn Āli Khān Ārzū. In 1190 (1776) he left Dhiḥi for Lucknow, where he spent the remaining portion of his life. He is recognised to be the most eminent poet of the Urdu language. He died at Lucknow in 1225 (1809) when he was nearly 100 years old. He is the author of six dīrāms which have been repeatedly printed in India, and a biography of Urdu poets, entitled Nūkāt al-Shurārā. (R. Levy)

MĪR AMMĀN, [See Ammān.]

MĪR DJUMLA, [See Muhammad Saʿīd.]

MĪRĀDJ (a.), originally lādār, later "ascent", especially Muḥammad's ascension to heaven. In the Kurʾān, Sūra lxxxi. 19-25 and liii. 1-12, a vision is described in which a heavenly messenger appears to Muhammad and Sūra liii. 12-18 deals with a second message of a similar kind. In both cases the Prophet sees a heavenly figure approach him from the distance but there is no suggestion that he himself was carried off. It is otherwise with the experience alluded to in Sūra xvii. 1: "Praise him, who travelled in one night with his servant from the Masjīd al-Ḥaram to the Masjīd al-ʿAṣqā, whose surroundings we blessed, in order to show him our signs". That Muḥammad is meant by the "servant" is generally assumed and there is no reason to doubt it (Schrieke, Islam, vi, 13, note 6; Beveridge, Z. A. T. W., xvii. 53 n.); that the Masjīd al-Ḥaram is the Meccan sanctuary is certain from Kurʾānic usage (Horovitz, Korān. Unterr., p. 140); but what is the Masjīd al-ʿAṣqā? According to the traditional explanation, but not the only one recognised in Ḥadīth (see Schrieke, op. cit., p. 12, 14 and above, s. v. ISRĀ) it would mean Jerusalem, but how could Muḥammad, who in Sūra xxx. 1 speaks of Palestine as adnā l-aʿrāf, call a sanctuary situated in Jerusalem al-masjīd al-ʿaṣqā? The age of this explanation is not quite certain; perhaps it was already known to ʿAbd Raḥmān b. ʿAbd Raḥmān (ed. Schwarz, xxi.) and Abū Saḥkr (Lieder der Hadsch-bitten, ed. Wellhausen, cxxiv. 24); but even these belong only to the Umayyad period (contrary to Lamsæn, Sanctuaires, p. 72, this is true also of Abū Saḥkr, who according to Aghānī, xxi. 94 was a partisan of the Bahri Marwānī and panegyrist of ʿAbd al-Malīk). Muḥammad probably meant by al-Masjīd al-ʿAṣqā a place in heaven, such as the place in the highest of the seven heavens in which the angels sing praises of Allāh and we would then have in Sūra xvii. 1, evidence from the Prophet himself about his nocturnal ascension into the heavenly spheres (Schrieke, op. cit., p. 13 sqq.; Horovitz, Isl., ix. 161 sqq.), testimony which is however content with the mention of the experience itself and says nothing about its course. The question
of the possibility of an ascent to heaven is several times touched on in the Kur'ān. In Sūra xl. 38 Fir'awn gives Hāmān orders to build a palace so that he can reach the cords of heaven and climb up to the god of Mūsā (cf. also Sūra xxviii. 3). In Sūra lii. 38, the calumniators are asked whether they had perchance a ladder (zulam) so that they could hear the heavenly voice and in Sūra vi. 35 the consequences are considered which the signs brought by the Prophet with the help of a ladder to heaven might have on his hearers. The old poets also talk of ascending to heaven by a ladder, as a means of escaping something one wants to avoid (Zuhahir, Malālahā, p. 54; Aʿshā, xv. 32).

Hadīth gives further details of the Prophet's ascension. Here the ascension is usually associated with the nocturnal journey to Jerusalem, so that the ascent to heaven takes place from this sanctuary. We also have accounts preserved which make the ascension start from Mecca and make no mention of the journey to Jerusalem. In one of these the ascension takes place immediately after the "purification of the heart" (see Bukhārī, Sahīh, bāb 1; Ḥadīth, bāb 76; Manākīb, bāb 42; Ahmad b. Ḥanbal, Musnad, iv. 207; v. 143; Tābari, ed. de Goeje, i. 1157 sq.) In the last mentioned passage we read: "When the Prophet had received his revelation and was sleeping at the Ka'ba, as the Kurāsīḥ used to do, the angels Gabriel and Michael came to him and said: With regard to whom have we received the order? Whereupon they themselves answered: With regard to their lord. Thereupon they went away but came back the next night, three of them. When they found him sleeping they laid him on his back, opened his body, brought water from the Zamzam well and washed away all that they found within his body of doubt, idolatry, paganism and error. They then brought a golden vessel which was filled with wisdom and belief and then his body was filled with wisdom and belief. Thereupon he was taken up to the lowest heaven": The other versions of the same story show many additions and variants; according to one, for example, Gabriel came to Muhammad through the roof of his house which opened to receive him; according to another, it was Gabriel alone who appeared to him and there are many similar variants. All these versions however put Muhammad's ascension at an early period and make it a kind of dedication of him as a Prophet, for which the purification of the heart had paved the way. Ethnographical parallels (Schrieke, op. cit., p. 2–4) show other instances of a purification being preliminary to an ascension. Similar stories are found in pagan Arabia (Horovitz, op. cit., p. 171 sqq.) and also in Christian legends (op. cit., p. 170 sqq.). Another story (Ibn Sa'd, vi. 143) says that the ascension took place from Mecca although it does not associate it with "the purification of the heart" which it puts back to the childhood of the Prophet [cf. ḤALIMA].

There is something about this, obviously the earlier, tradition of Mecca as the starting point of the ascension was ousted by the other which made it take place from Jerusalem? The localisation of the Kurānīc Masjid al-ʿAlṣṣa in Jerusalem is by some connected with the efforts of ʿAbd al-Malik to raise Jerusalem to a place of special esteem in the eyes of believers (Schrieke, op. cit., p. 13; Horovitz, op. cit., p. 165 sqq.; do., in Islamic Culture, ii. 35 sqq.) and in any case it cannot be proved that this identification is older than the time of ʿAbd al-Malik. It might all the easier obtain currency as Jerusalem to the Christians was the starting point of Christ's ascension and from the fourth century Jesus's footprint had been shown to pilgrims in the Basilica of the Ascension; as now, perhaps as early as the time of ʿAbd al-Malik, that of their Prophet was shown to Muslim pilgrims (Horovitz, op. cit., p. 167 sqq.). The idea of the "heavenly Jerusalem" may have had some influence on the development of the isrā' legends; when Muhammad meets Ibrāhīm, Mūsā and ʿĪsā in Jerusalem, the presence of these prophets in the earthly Jerusalem is not at once intelligible, but it loses any remarkable features if Bait al-Makdīs (Ibn Hishām, p. 267) from the first meant the "Heavenly Jerusalem" (Horovitz, op. cit., p. 168, another explanation cf. ii. 604). Perhaps also the phrase allādhī bārakāna halālahu was taken to support the reference to Jerusalem; when these words occur elsewhere in the Kurān they refer to sites in the holy land (Lammens, op. cit., p. 72, note). While the stories quoted above only say that Gabriel took the Prophet up to the heights of heaven, but are silent as to how, others add that a ladder (mīrādī) was used for the ascent (see Ibn Hishām, p. 268; Tābari, Tāfsīr, xv. 10; Ibn Sād, vi. 143); this ladder was of splendid appearance; it is the one to which the dying turn their eyes and with the help of which the souls of men ascend to heaven. The ladder is probably identical with Jacob's ladder in Genesis, xxviii. 12; the Ethiopic Book of Jubilees, xxvii. 21 calls this mēʻāreg and Sūra lxx. 3, 4 calls Allāh Dhu' l-Ma'ārīfīrī "to whom the angels and the spirit ascend" (tārādī). According to Sūra xxi. 4, the anvr rises to Allāh; according to Sūra liiv. 4 and xxxiv. 2, Allāh knows "what descends from heaven and what ascends to it", and in Sūra xliii. 32 there is a reference to steps (maʻārīfīrī) in the houses of men. Muhammad therefore already knew the word, which is presumably taken from Ethiopic (Horovitz, op. cit., p. 174 sqq.). Among the Mandaens also the ladder (sumhitē) is the means of ascending to heaven (Ginsa, transl. Lidzbarski, p. 49, 208, 490) and there are parallels to the ladder of the dead in the mysteries of Mithras (see Anderson, Cults of the Far West, 185; Wauters, Pba., p. 114, note 2); the Manichaean amūd al-sābb (Fkrīst, p. 335, 30) by means of which the dead man is taken to the sphere of the moon is a more distant parallel (Bevan, op. cit., p. 59).

Just as the mīrādī is associated with the ascension, so Burāk is originally connected with the night journey to Jerusalem; it found its way however at an early date into the legend of the ascension (see Bukhārī, Manākīb, bāb 42; Ahmad b. Ḥanbal, Musnad, iv. 207; v. 387; Tābari, Tāfsīr, xv. 12). The prophets earlier than Muhammad had used Burāk as their steed (Ibn Hishām, p. 263; Dīyārīkīt, Tarīkh al-Khdīsī, i. 349); in particular, it is included under the "dajjał" in the mystical traditions (Ibn Ḥaqqānī, tarīkh, xv. 48–52; Ṭabarī, Tāfsīr, x. 5; Ṭalḥābī, drā'iś, p. 63; Ḥabīb, i. 369). This idea of one animal used by the different prophets is borrowed; according to the Midrashic statement, late it is true (Yaḥṣūb on Zachariah, ix., No. 875; Pirḳe de R. Elīceez, xii.), the ass which Abraham rode (Genesis xxii. 3) is the same as that used by Zipporah and her sons (Exodus, iv. 20) and is that on which
That Muhammad appeared before Allah's throne in the seventh heaven and that the conversation about the obligatory prayers took place there, is already recorded in the oldest stories (see above) but only rarely do they extend the conversation between Allah and the Prophet to other subjects (Tabari, xxvii. 26; Munsud, iv. 66 as a dream; Andrae, p. 70). But objection was raised to the assertion that Muhammad on this occasion saw Allah face to face (Andrae, p. 71 sqq.), and the question was also raised at an early date whether the ascension was a dream or a reality, whether only the soul of the Prophet was carried up or also his body (Caetani, Annali, Instr. § 320; Andrae, p. 72; Bevan, p. 60; Schrieke, p. 13, note 1).

The Hadith contains, besides these, other details which Asin (Escatology, Madrid 1919, p. 7—52; do., Dante e il Islam, Madrid 1927, p. 25—71) has discussed. In developing the story of the Prophet's ascension Muhammad writers have used models afforded them by the Jewish and Christian Apocalypses. A few features may also come from the Pseudepigrapha. (cf. the works already mentioned by Andrae, Bevan, Schrieke, Horovitz and W. Bouisset, in A.R.W., iv. 136—169.)

Later accounts (Chauvin, Bibliographie, xi. 207 sqq.; Asin, Escatology, p. 53 sqq.; do., Dante etc., p. 72 sqq.; Nallino, in R. S. O., vii. 802) collect and systematise the material scattered in the older sources; they only increase the matter without however increasing the depth of its thought.

Among the Mirādī-books which have become popular in modern times that of al-Ghātīṣī may be mentioned (this is the correct form, see Nallino, op. cit., p. 813) on which Dardir (d. 1201) wrote a ṣāḥīḥīya; also that of Barzanjī (d. 1179). In the non-Arab lands of Islam, Persian, Turkish, Hindustān and Malay versions of the legend have contributed to its dispersion (see Chauvin, loc. cit.).

The ascension of the Prophet later served as a model for the description of the journey of the soul of the deceased to the throne of the divine judge (Asin, Escatology, p. 59 sqq.); for the Sūfis, however, it is a symbol of the rise of the soul from the bonds of sensuality to the heights of mystic knowledge. Ibn al-'Arabī thus expounds it in his work inrār al-irrā' ilā Ma‘ām al-irrā‘ (Asin, p. 61 sqq.; Andrae, p. 81 sq.) and in his Fisalātī, ii. 356—375 he makes a believer and a philosopher make the journey together but the philosopher only reaches the seventh heaven, while no secret remains hidden from the pious Muslim (Asin, p. 63 sqq.). Abu l-'Alā al-Ma‘arī’s Risālāt al-Ghāfṣīfān is a parody on the traditional accounts of the Mīrādī (Asin, p. 71 sqq.). Asin in his two books quotes has dealt with the knowledge of Muslim legends of the ascension possessed by the Christian middle ages and their influence on Dante. In a separate work (La escatologia musulmana en la divina comedia, Madrid 1924) he has collected and discussed the literature produced by his Escatology down to 1923.

According to Ibn Sa‘d, i. 1. 147 the irrā‘ took place on the 17th Rabī‘ I, the ascension on the 17th Ramadan. For centuries however, the night before the 27th Rabī‘I — a date also significant in the history of Mecca (see Snouck Hurgronje, Mecca, ii. 71) — has been regarded by the pious as the Lailat al-Mirādī, and the eve is like the Mawlid al-Nabī devoted to reading the legend of the feast.

the Messiah will make his entrance (cf. also Ibn Sa‘d, i. ii. 176). The recollection that this steed was an ass survives in Muslim tradition so that Burāq is described as “smaller than a mule and larger than an ass” (Bukhārī, Ma‘nākī, bāb 43; similarly Ibn Highm, p. 264; Ibn Sa‘d, i. 143). Ibn Sa‘d already describes Burāq as a female beast and, as early as a story attributed by Ibn Isha‘q to al-Ḥasan al-Basri, Burāq is given wings (Ibn Highm, loc. cit.) and he seems to be the first who speaks of Burāq’s human face (in Ḥalābī, i. 370); in the miniatures that are illustrated by C. Arnold, Painting in Islam, p. 118 sqq., al-Burāq usually has a woman’s head.

At the gate of each of the seven heavens through which he wanders with the Prophet, Gabriel is asked for his own name and that of his companion (Bukhārī, Sahīh, bāb 1, Tabari, Taṣfīr, xv. 4; Annāles, ed. de Goeje, i. 1157). After he gives these he is next asked if Muhammad has already been sent as a prophet (awwad ba‘itha ilākhī, correction for the original awwad ba‘ithu found in Tabari, Annāles, i. 1158; see Snouck Hurgronje, Isl., vi. 5, note 4); this also indicates that the ascension originally belonged to the period immediately after his call (Schrieke, op. cit., p. 6). In each heaven they meet one of the earlier messengers of God, usually Adam in the first, Yahyā and ‘Īsā in the second, Yūsuf in the third, Idrīs in the fourth, Hārūn in the fifth, Mūsā in the sixth and Ibrāhīm in the seventh heaven; there are also variations and Adam appears as judge over the spirits of the dead (Andrae, p. 44 sqq.; Schrieke, p. 17; Ahmad b. Ḥanbal, Munsud, vi. 145; cf. Apoc. Mosi, p. 37). Of the other messengers of God we are only told that they have a description of their personal appearance — that they greeted Muḥammad; Mūsā is an exception who explicitly says that Muḥammad is higher in the esteem of Allah than himself and that the number of his followers surpasses his own (Tabari, Taṣfīr, xv. 11). On another occasion, Muḥammad engages in a conversation with Mūsā after Allah had imposed upon him 50 ṣalāts a day as obligatory prayers for the faithful. On Muḥammad’s advice, Muḥammad asks several times for an alleviation and each time Allah grants it; but when Mūsā says 5 ṣalāts are still too many, the Prophet refuses to ask for less (on Genesis, xviii. 23 sqq. as the prototype of this episode; cf. Goldziher, Studien, i. 36; Schrieke, p. 19; Andrae, p. 82). According to some versions, Mūsā dwells in the seventh heaven and the conversation seems to be more natural there. To the ascension belong the visits to paradise and to hell. Paradise according to many versions is the seventh heaven, according to others in the first; in some it is not mentioned at all. The statements about its rivers are contradictory (Schrieke, p. 19; cf. above Kawkabār), the Sidrāt al-Muntahā is usually placed in the seventh heaven (Bevan, p. 59; Schrieke, p. 18). In one description hell is put below the first heaven (Ibn Highm, p. 269; Tabari, Taṣfīr, iv. 10). According to another, the place of punishment of the damned is on the way between heaven and earth and Muḥammad sees it on his journey to the Bait al-Ma‘kdis (Tabari, xv. 101, also Ahmad b. Ḥanbal, Munsud, i. 257; ii. 353; iii. 120, 180, 224, 231, 239). On the punishment in hell cf. Schrieke, p. 17; Andrae, p. 44; Horovitz, p. 173; Reitzenstein, Das mandäische Buch der Großen, p. 81 sqq.; Litzbarski, Johannismut, p. 98 sqq.; Ginza, p. 183.
(see al-‘Abdari, Muddhakhl, i. 143 sqq.; Herklotz, Qanoun e Islam², p. 165; Lane, Manners and Customs, London 1806, 474 sq.; Snouck Hurgronje, The Achekhete, i. 219; Asin, Estatologia, p. 97).

(J. Horovitz)

MIRANDJI, whose full name was Mir Muḥammad b. ʻAbd-Allāh b.'Abd-Kalantar, commonly Mīrzā Mir or Mīrāndji, born 928 (1523) in Siwās, Sīstān. He traced his origin to the caliph 'Umar and spent the last 60 years of his life in great sanctity at Lāhīj. He died in 1045 (1635). But according to the Šadšah-Nāma of 'Abd al-Ḥamid, i. 330, his death took place in 1044 (1634). Shāh Dījāwī repeatedly visited the saint and Prince Dārū Shīkūh erected a splendid dome over his tomb. The Prince also wrote a work called Sofmatat al-ʻAwliyya in which he described fully the lives of this Indian saint and his disciples.

Bibliography: Sofmatat al-ʻAwliyya, p. 70; Khasmat al-ʻAtīyya, p. 154; 'Abd al-Ḥamid, Badshah-Nāma, i. 329; Rieu, Cat. Persian MSS. British Museum, i. 538.

(M. Hidayat Hosain)

MIRĀN MUHAMMAD SHAḤ I, son of Khāndes, was the eleventh prince of the Fārūḵī dynasty. He belonged to the younger branch of that line, which had taken refuge in Gudjārat, and his ancestors had lived in that kingdom and had married princesses of the Muḥfazzār family until Maḥmūd I of Gudjārat had, on the extinction of the elder branch of the Fārūḵīs, placed ʻAdīn Khān III, Muḥammad’s father, on the throne of Khāndes. Muhammad, who was, through his mother, the great-grandson of Maḥmūd, and the grandson of his son, Muḥfazzār II, succeeded his father in Khāndes in 1520, and in 1527 incastiously intervened in the cause of ʻAla’ al-Dīn Ṣiyāḥ Shāh of Bārār by aiding him against his enemy, Burūhān Niẓām Shāh I of Ahmādanag. He was defeated and driven back into Khāndes, but succeeded in persuading his uncle, Bahādur of Gudjārat, to intervene, and with him invaded the kingdom of Ahmādanag. The campaign was only partially successful, but Muḥammad was indemnified by Burūhān I for his losses. He accompanied his uncle in the campaign which ended, in 1531, in the capture of Māndū and the annexation of Malwa to Gudjārat, and on Bahādur’s death in 1537, was summoned, in his mother’s right, to the throne of Gudjārat, but died on his way to Ahmādanagāb.

(T. W. Haig)

MIRĀTH (m.), inheritance (pl. mawārīth), mawārīth legator, wāṣīth heir.

1. The law of inheritance (ilm al-farā’īd, the science of dispositions), i.e. of the quotas laid down in accordance with Sūra iv. 16, which is called after its most important and most difficult part) is one of the branches of Muḥammadan law in which Muḥammad more deeply modified earlier practice by legislation. Although the Korānic regulations are fairly detailed, the task of deducing all necessary conclusions from them, to which lawyers turned with particular enthusiasm, gave rise to a great mass of traditions and considerable divergences of opinion on questions not expressly decided in the Korān. In the law of inheritance we can also still trace fundamental old Arabian pre-Islamic features.

2. In the period before the rise of Ḳūṣān, in keeping with the patriarchal system prevailing among the Arabs, the estate of a deceased tribesman went, if he died intestate, to the nearest male relative(s); the order of succession in which these relatives, the so-called ‘aqāba (corresponding to agnati), were called upon to inherit survives systematized in its order in the Muslim law of inheritance (cf. below). Minoros were, as incapable of bearing arms, excluded from the succession as were female relatives; widows also were not entitled to inherit, and originally no doubt themselves formed a part of the estate, a view which survived in the levirate marriage usual among the Arabs, to which Sūra iv. 23 (cf. below) refers in forbidding it. There is no evidence of any preferential treatment of the first-born, which we find elsewhere in Semitic law. This, the original legal position, had by Muḥammad’s time most certainly altered somewhat in favour of women; in cases where the deceased left no male relatives his daughters seem frequently to have obtained the estate: but woman had by no means equal treatment with man, as is clear from Muḥammad’s regulations. In addition to these principal heirs the pre-Islamic Arabs had also secondary heirs who correspond to the later so-called quota-heirs (dhawu ḫarāḍ) and received a part of the estate, the bulk of which went to the ‘aqāba. From Ḳūṣān ii. 176 and iv. 37 which confirm this arrangement, we can see that these included the parents, the “relatives” apparently so far as they were not ‘aqāba — and the so-called confederates (ḥalif, plur. ḥalafā) : the settlement of the portions falling to them was done in accordance with Sūra ii. 176 — at least in part according to the last will of the testator.

3. Muḥammad modified this system considerably in details, the main point being the improvement in the treatment of women as in his innovations with regard to the laws of family life generally (cf. Ṭaḷāk); at the same time there is a clear endeavour to fix in legal form the practice which had varied considerably in heathen times. The main lines of the system and the general conceptions as above briefly outlined were retained by the Prophet. One provision which had been made under special circumstances he was not able later to keep in force; immediately after the Ḥijrā, he had ordered that those who migrated with him (the mukhāfīrīn) and the believers in Medina (the anṣār) should regard themselves as brethren and therefore able to inherit from one another, while all bonds of relationship between the mukhāfīrīn and their relatives left in Mecca, even if they were believers, were to be regarded as broken (Sūra viii. 73, with the limitation imposed in viii. 75); but this was expressly revoked by Sūra xxxiii. 6. Tradition regards this fraternalization as a special case of confederacy (ḥalif/dom; cf. above, section 2). For the rest, Muḥammad in his first Medina period confirmed the system of secondary heirs and the whole general practice in regard to inheritance (cf. tāḥ; Sūra ii. 176 is probably to be dated in Ṣaḥiḥ of the year 2, and iv. 37, of which the first view in
al-Baidawi is undoubtedly the right one, cannot
be much later); that in ii. 176 he expressly makes
the fair treatment of the secondary heirs a duty,
already reveals the direction which later ordinances
were to take. Connected with this is the probably
contemporary ii. 241 sqq. which secures the wife, if
she survives her husband, a legacy of maintenance
for a year. Not much later, about the year 3, is
Sura iv. 23: "Ye, who are believers, are not per-
mitted to inherit women against their will"; this is
a prohibition against the *azaba forcing the
widow of the deceased into a levirate marriage
and generally assuming the position of *walî over
her which belongs only to her male relatives; this
is not meant as a regular legal ordinance but is part
of Muhammad’s endeavour to improve the position
of women [cf. Tal.]. Very soon after the battle of
Uçud, when numerous Muslims had fallen, we
have — as a result of it — the final Qur’anic
ordinance of Sûra iv. 8—18: “To the men belongs
a share of what their parents and relatives leave,
and to the women a share of what their parents
and relatives leave — whether it be much or little
— as a definite share. 9. If the relatives
(not entitled to inherit), the orphans and the poor
are present at the division, give them some of it
and speak kindly to them (verses 10 sqq. go on to
deal with the treatment of orphans). 12. Allâh
commands you, as regards your children, as follows:
to the boy belongs as much as the share of two
girls; if however there are (only) girls (and) more
than two, two-thirds of the estate belongs to them
and if there is one (girl) to her belongs the half.
And the parents shall each have a sixth if (the
legator) had children, and if he had no children
and (only) his parents inherit from him, his mother
shall have a third. If however he has brothers, his
mother shall have a sixth. (All this) after deducting
any bequests he may have made or a debt. Ye
know not whether your parents or your children
be of greater use to you. (This is) an ordinance of
Allâh and Allâh is all-knowing and wise. 13. To
you belongs the half of the estate of your wives,
if they have no children; but if they have children
you shall receive a fourth of their estate — after
deducting any bequest that they may have made
or any debt. 14. To them belongs a fourth of
your estate, if you have no children; but if you
have children an eighth of your estate belongs to
them — after deducting any bequest that you may
have made or any debt. 15. If distant relatives
inherit from a legator, male or female, and he has
a brother or a sister, each shall have a sixth; but
if there are more, they shall have a third among
them after deducting any bequest which he may have
made or debt. 16. Without prejudice (this is) an
ordinance of Allâh. Allâh is all-knowing and gracious”
(Verse 17 sqq. contain promises and threats). As the
settlement of the succession in indirect lines left
questions undecided, Sûra iv. 175 supplemented
the above: "They ask thee for a decision. Say:
Allâh gives you the following decision for remoter
kindred: if a man die childless and have a sister,
half of what he has is hers and if she die childless,
he is her heir; if there be two sisters, two-thirds
of the estate belongs to them; but if there be
both brothers and sisters, the brother shall have
as much as two sisters...”. The object of these regu-
lations is simply to supplement the law regarding
the rights of the *azaba; they are not a reorganisa-
tion of the whole law. Each of the persons named is
therefore only allotted a definite portion. The
remainer, and this as a rule the major portion,
of the estate falls as before to the *azaba. There
is a distinct tendency to give female relatives half
the share of male relatives of the same degree;
even in the case when there are daughters but no
sons (and correspondingly sisters but no brothers),
they do not receive all that would belong to the
sons or brothers; but as regards a few smaller
portions the two sexes rank equally. The quotas
here given abolished the testamentary settlement
of the portions usual in the heathen period, which
was still approved by Sûra ii. 176; this is the
historical starting point for the tradition — early
interpreted in another sense — that a legacy in
favour of the heirs is not valid. Sûra ii. 241 sqq.
(cf. above) is probably rightly regarded as abrogated
by the settling of the widow’s portion in tradition.
There is a slight difficulty in interpretation only
in iv. 15; but there can be no doubt that this verse
refers to half-sisters on the mother’s side, as indeed
it has always been interpreted; the text of Ubâi
even inserts an addition to this effect (cf. Noldeke-
Bergstrasser, Gesch. des Qorâns, ii. 85, 93,
note 5). The verse iv. 175 on the other hand
refers to full sisters; how the Qur’ân wished half-
sisters on the father’s side to be dealt with, is
difficult to say. In iv. 12 "more than two" (girls)
is to be interpreted, as the sense requires, as "two
and more"; similarly, in the case in which the mother
is allotted a third of the estate, it is presumed
that the father gets the other two-thirds.
4. The full details which tradition is able to
give regarding the causes of the revelation of the
regulation of the law of inheritance are not
historical; on internal grounds all we can say is
that it took place soon after the battle of Uhud
(cf. above, section 3). The numerous hadiths which
simply repeat the Kur’ânic regulations may be
neglected here. Tradition can only record very
few actual divergences from the prescriptions of
the Qur’ân: one of these is that a woman received
back as her inheritance a slave whom she had
presented to her mother and who repented to the
latter’s whole estate (in a parallel case it is a
man who has given his mother a garden; by this
alteration the divergence is disposed of). According
to another story, the Prophet is said
to have laid it down that the wives of the muhâajirûn
should inherit the houses of their husbands;
according to the wording, it cannot have been a
temporary arrangement which was abolished by
the final settlement. While nothing can be quoted
in favour of the first hadith, the second, which
does not seem to be intended as a foundation for
any legal clause, may have a grain of historical
truth in it.
5. As the prescriptions of the Qur’ân are supple-
mented and developed in countless traditions
among which a comparatively large number relate
not decisions of the Prophet himself, but of his
Companions (we may cite Ibn Hanabî, iv. 279 sqq.,
as a typical mixed form); in reality they must
not for a moment be regarded as fact, but
only as anonymous evidence of the first develop-
ments of the Qur’ânic law of inheritance. At this
stage of development it is already firmly established
that an unbeliever cannot inherit from a Muslim;
the right of a Muslim to inherit from an un-
believer is finally also denied, although there is
some opposition to this view; on the question
of inheritance of a murādād, unity was not attained. Excluded from the right of inheritance is also one who has killed the legator; according to one view always, according to another only if the slaying was deliberate (with 'āmid; cf. article KATL). That a slave has no right of inheritance is taken for granted. Legal relationship is necessary for the right of inheritance; thus illegitimate children or those whose paternity has been disputed by īśān [q.v.] have no legal claim on the estates of their father and his relations. The patron (mawāla, q.v.) is included among the 'ażaba, who are placed in the order which had been handed down from the pre-Islamic period and continued to hold good: the patron and the mansumitted slave inherit from one another and according to one view, the same right is granted to the mawāla, meaning the man before whom the person concerned has adopted Islam. After the mawāla come — although some oppose this — the dhauw l-arbām, i.e. persons related to the legator in the female line, whose representative is usually the kādī or maternal uncle. In case all these heirs should not exist, the fellow-tribesmen are named. The law in Sūra iv. 14 is also extended to the widow whose husband dies before the consummation of the marriage; on the question what should be the share of two daughters, we have the answer two-thirds, doubless in keeping with the sense of Sūra iv. 12, but also that based on the literal interpretation (the half); finally half-brothers on the father's side, about whom the Qur'ān lays down nothing definitely, are excluded from inheriting by full brothers. With certain modifications which occur again in the later teaching, a son's daughters are treated like daughters and grandparents like parents, but this regulation only won recognition after opposition and varying practice in details. Here arises the problem of the different shares of the grandfather along with the brothers when he appears with them as 'ażaba, which goes back to his varying position in the series (cf. below sect 65); along with other views we find quoted also the one that later prevailed but it does not seem to be the earliest. The Qur'ān lays it down that before dividing the estate the amount of any legacies and debts should be deducted, and there is no doubt that in early times, probably in literal interpretation of the Qur'ānic passages the legacies often were given preference to debts; after some opposition the opposite teaching prevailed. The diya [q.v.] to be paid for a slain man was in itself subject to the usual laws as part of his estate; but in early times the wife was not allowed a share in the diya of her slain husband, which goes back to old Arab conceptions of the family; the other view ultimately prevailed. In addition there are numerous, often contradictory, views on separate points which show the eager interest taken in the matter. The interest taken in early Islam in the law of inheritance is reflected in Ḥadīth; there are traditions in which the Prophet orders the law of inheritance to be taught and learned, calling it "the half of knowledge" on account of its difficulty and expressing the fear that this subject, so difficult to remember, might in time disappear from the memory of his community.

6. The law of inheritance attained its full development in the system of fikh; the following are its principles according to the Shāfiʿī teaching (for the most important divergences in the other schools cf. below sect. 7).

a. The law of intestacy in general. According to Muslim law, there is no fusion between the property of the legator and that of the heir. The creditors of the estate can therefore only assert their claims against the estate; on the other hand, the heirs have no claim on the estate until all debts are paid. The fikh has therefore no special teaching on the rejection of legacies, the different ways of succeeding to an inheritance, etc. In addition to pledges entered into by the deceased, the debts of the estate include the funeral expenses and the religious duties omitted by the deceased so far as they consist of concrete things (e.g. unpaid zakāt) or can be atoned for by payment (e.g. neglected fasts [ṣawm]) or can be carried through at the expense of the amīn or a deputy after the death of the owner (e.g. the ṣafādād omitted without good reason); in the opinion of a minority of Shāfiʿī legists, omitted salāts may also be included in these. After the debts any legacies have to be paid (cf. WASĪYA); the remainder passes to the heirs. A necessary condition for inheriting is that the heir has survived the testator; in doubtful cases, when persons who would inherit from one another have died without its being certain which died first, as a rule no inheritance passes between them (this decision is already found in Tradition; there was a very old difference of opinion on the point). The heir must also have existed when the testator died; only in the case where a man leaves a pregnant widow or umm al-waṣīla, is a child's share reserved for the unborn child (Tradition is not agreed on this point). If a man is missing long enough to be considered dead, the kādī can declare him "presumably dead" at the request of the heirs after investigating the circumstances; the heirs thus receive the right to take possession of the estate for the time. Excluded from succession are the following: one who has caused the death of the deceased, the murādād, an unbeliever from the succession to a Muslim and vice versa, the karbī (the unbelieving member of a state with which the Muslim stands in no treaty relation) and the slave. As in old Arab law the succession of the 'ażaba is the basis of the law of inheritance in the case of an intestate; the 'ażaba are the usual heirs, inheritance by others is only an exception from the general rule; on the other hand, the succession among the 'ażaba cf. under b. If there are no 'ażaba, receive the whole estate and deduction of the portions set aside for the quota-heirs by the Qur'ān (cf. under c). If there are no 'ażaba, that portion of the estate which remains after the deduction of the portions of the quota-heirs goes to the state treasury (bait al-māl); a notable change from the view found in traditions — cf. section 5 —; even 'Omar II is said to have decided otherwise, cf. al-Dārīmī, Farāwīd, bab 56), it being presumed that this is administered according to law for the benefit of the Muslims; otherwise the Qur'ānic quota-heirs receive the remainder of the estate in proportion to their quota by the so-called law of reversion, with the exception of the widow or window if they are not also at the same time kin relations of the deceased (here also as in the case of the exclusion of the widow from sharing in the diya of her slain husband, the basis is the old Arab family law). Only if there are neither 'ażaba nor quota-heirs and the state treasury is not being administered in accordance with the law are the dhauw l-arbām — i.e. persons related to the deceased in the female line as well as those
female relatives who cannot be quota-heirs—called upon to inherit (there are two theories regarding their order of succession). If there are none of these relatives, any Muslim may take possession of the estate, if he is capable and ready to administer it for the general good of Muslims.

b. Rights of the 'āqāba. The 'āqāba are called upon to inherit in the following order which in essentials already existed in the pre-Muḥammadan period: 1. The male descendants of the legator in the male line, a nearer excluding the more distant relatives from the succession. 2. The nearest male relative in the ascending male line with the provision that the father, but not the grandfather (and remoter ascendant), of the deceased inherits before his brothers; the grandfather shares with the brothers (cf. below). 3. The nearest male relative in the male line in the descendants of the father: first the full brother, then the half-brother on the father's side, then the descendants of the full brother, then those of the half-brother on the father's side. 4. The nearest male relative in the male line among the descendants of the grandfather (as under 3) etc.; 5. lastly the mawāli, i.e. the patron (or patroness), if the deceased was a freed man, and then his 'āqāba. — The brothers of the deceased inherit only with the grandfather as 'āqāba in equal shares with him, but if there are more than two brothers there, the grandfather receives one-third of what is to be divided between him and the brothers. If there are also quota-heirs, the grandfather is allowed in addition at least a sixth of the estate (which he would inherit as a quota-heir; cf. below c). He can then choose the most favourable of the three arrangements. This rule seems to be a compromise between the two earlier contradictory views that the grandfather excluded the brothers or vice versa was excluded by them (cf. above section 5). — Female 'āqāba. If the deceased left sons as well as daughters they inherit jointly, the share of a son being twice as large as that of a daughter (according to Sūra iv. 12) while the quota allotted to the daughters (ibid.) is dropped, as is intended by the spirit of the Kur'ānic law. The daughter inherits along with a son is therefore also called 'āqāba, and in order to distinguish her from the male 'āqāba, the 'āqāba binafṣātī ("'āqāba by themselves"); she is called 'āqāba bi 'l-ghairī ("become 'āqāba through another"). The daughter of a son of the legator is similarly treated, inheriting along with the son of a son; and the full sister who inherits along with a full brother (by Sūra iv. 175); finally it applies also to the half-sister on the father's side who inherits with a half-brother on the father's side (the grandfather makes the full sister as well as the half-sister on the mother's side 'āqāba bi 'l-ghairī). — If the full sister and the half-sister on the father's side inherit along with a daughter of the deceased or of a son, they do not receive their Kur'ānic quota (Sūra iv. 175) which in this case goes to the rest of the estate after deduction of all quotas that have to be paid; they are in this case therefore called 'āqāba ma'a 'l-ghairī ("inheriting with one another as 'āqāba").

c. Rights of the quota-heirs (iḥāram 'l-farādī; cf. the article FARĀDĪ). The regulations in this connection are in general based on literal interpretation of the Kur'ānic regulations. It is true that here only the daughters, parents, husband and wife, and brothers and sisters are allotted a quota but (with some limitations) the rules holding for the daughters have been extended to the daughters of the son and those for the parents to the grandparents; in addition, a distinction has been made among the sisters between the full sister, the half-sister on the father's side and the half-sister on the mother's side. The total number of quota-heirs has thus been raised to twelve: 1. The daughter is entitled to half the estate, two or more daughters get two-thirds, but if daughters inherit along with sons, their claim to the quota drops and sons and daughters receive the whole after deduction of the quotas to be paid; in this case the daughter's share is half a son's. 2. The daughter of a son is subject to the same rules as a daughter; inheriting along with the son of a son she receives half as much as he as 'āqāba bi 'l-ghairī. As the son's daughter is related to the son through him, she is excluded from participation when a son of the legator inherits. A daughter on the other hand does not exclude a son's daughter from the succession; as however daughters and son's daughters together have only two-thirds of the estate as their quota, a son's daughter has only a sixth if there is one daughter, and nothing if there are two or more, unless she inherits in these cases along with a son's son as 'āqāba bi 'l-ghairī. 3. The father's quota is always a sixth of the estate; in addition he appears as 'āqāba and receives as his quota also any residuum of the estate after deducting all quotas, unless male descendants of the legator inherit jointly with him. 4. The paternal grandfather (in default of him, the remoter ascendants) also receives one sixth of the estate as his quota but is excluded by the father; he also appears as 'āqāba (like the father) if there are no male descendants nor father of the deceased. But if in addition to him there are also brothers of the legator, he appears with them as 'āqāba (on the share which falls to the grandfather in this case and in the case where there are also quota-heirs, cf. above b). 5. The mother by Sūra iv. 12, receives one-sixth of the estate if there are children, son's children or two or more brothers or sisters of the legator; otherwise a third (on the meaning of the Kur'ānic rule cf. above; in practice the father in this case as a rule receives two-thirds, i.e. according to the scheme, one sixth as quota-heir and the rest as 'āqāba; on the exceptions cf. below under 6). 6. The quota of the grandmother is always a sixth; from this the mother's mother is excluded by the mother, and the father's mother by the father and mother; all other female ascendants of the legator rank equally with the grandmothers on both sides if there is no father and mother, so far as they are not related to the deceased by a male descendant; not entitled to inherit (therefore for example the mother of the maternal grandfather inherits nothing). 7. A full sister receives half, two or more such sisters receive together two-thirds of the estate (Sūra iv. 175). Along with a full brother or grandfather she becomes 'āqāba bi 'l-ghairī and receives the half of the brother's share (Sūra iv. 175). Along with the daughter or son's daughter she becomes 'āqāba ma'a 'l-ghairī (cf. above b); sons, sons' sons and the father exclude her from succession. She has a claim to the quota only when the legator has died without leaving de-
scendants or male descendants. 8. The treatment of the half-sister on the father's side in general corresponds to that of the full sister; along with a half-brother on the father's side or the grandfather, she becomes 'aṣaba bī 'l-ğhairi, with the daughter or son's daughter 'aṣaba ma'ā 'l-ğhairi (cf. above 3); sons, sons' sons, father and full brothers exclude her from the succession. Full sisters exclude her only in so far as two or more full sisters receive together two-thirds of the estate, so that nothing is left for the half-sisters; if however, half-sister inherits along with one full sister they receive together two-thirds, the full sister getting a half and the half-sister a sixth; unless she in these cases inherits along with a half-brother on the father's side as 'aṣaba bī 'l-ğhairi (i.e. the same rule as with daughters and sons' daughters; cf. above). 9 and 10. The rights of the half-brother on the mother's side and of the half-sister on the mother's side are based on Sūra iv. 15: each of them receives a sixth, two or more together share a third among them; they are excluded from the succession by descendants and female descendants. 11. By Sūra iv. 13 the widower receives half of the estate, but only a quarter if there is a son or son's child; it is indifferent whether these are his wife's or his own descendants. 12. The widow, by Sūra iv. 14, receives the half of what a widower would receive under the same circumstances; if the deceased leaves more than one widow they share equally the quota allotted to the widow. During the 'idda (period of waiting; q.v.) after a revocable tālāk a man and woman are still regarded as man and wife for purposes of inheritance.

d. Exceptions from the general rules.

Although the quota-heirs can never all inherit together and in particular the collateral relations are excluded from their quotas by those in the direct line, the number of qualified quota-heirs may sometimes be so large that the sum of their shares is larger than the whole estate; in this case their shares are proportionately reduced (cf. 'AWL). Otherwise, the occurrence of a number of heirs makes no change from the main rules necessary, except in a few particular cases which have special names; these are cases in which, if the main rules were strictly carried through, the inheritances would be in a proportion to one another which would be contrary to the law; e.g. in the case of the so-called ḍharrīṭāna: if some one dies leaving a husband or wife and both parents, the mother would receive in this case a third, the father's share however, which is usually two-thirds (cf. above c 5), would be here reduced by the quota either of the widow i.e. a quarter or of the widower, i.e. the half; and thus reduced to five-twelfths or a sixth; according to tradition, it was 'Omār who decided in this case that father and mother should share, in the proportion of two to one, what remains after deducting the portion of the widow or widower, an arrangement which is doubtless in the spirit of the Kur'ānic rule. Another case, the so-called ṣaḥarīta: that is in which a wife leaves her husband, her mother, two or more half-brothers on the mother's side and also one or more full brothers; as the quotas in this case make up the whole estate, nothing would be left for the full brothers as 'aṣaba, and they are more closely related to the legator than the half-brothers; in this case, which is also said to have been decided by 'Omār, the law lays down that the full brothers have the same rights as the half-brothers so that all inherit in equal shares the third originally set aside for the half-brothers. On a third case of this kind cf. AKBĀRIYA.

7. The most important points of difference among the madhhabīs, including the early legists, are the following. It is unanimously agreed that an unbeliever cannot inherit from a Muslim nor a Muslim from an unbeliever; but Sa'īd b. Mūsāyib and Ibrāhīm al-Nakḥāt recognized the right to inherit in the latter case. Unbelievers who belong to different religions cannot inherit from one another according to Mālik and Ibn Ḥanbal, but they can according to Abū Ḥanīfa and al-Ṣāḥīfī. There are three views regarding ability to inherit from the murtaḍī according to Mālik, al-Ṣāḥīfī and Ibn Ḥanbal his whole estate goes to the state treasury; according to Abū Yūsuf and al-Shābizī it goes to his Muslim heirs; according to Abū Ḥanīfa what he has made while a Muslim goes to his Muslim heirs, but what he made after his apostacy goes to the treasury. If a legator has been deliberately (with 'aman) and illegally slain, his slave, it is unanimously agreed, is excluded from inheriting. Abū Ḥanīfa, al-Ṣāḥīfī and Ibn Ḥanbal, but not Mālik, also exclude one who has killed him without design (with ḥaṭa; q.v.). One who is a slave to some degree can, according to Abū Ḥanīfa, Mālik and al-Ṣāḥīfī, neither inherit nor bequeath; according to Ibn Ḥanbal, Abū Yūsuf, al-Shābizī and al-Muẓānī he can inherit or bequeath in the proportion he is free. According to Abū Ḥanīfa and Ibn Ḥanbal, if there are no 'aṣaba and quota-heirs, the dhār wa 'l-ṭarāḥām inherit; according to Mālik and al-Ṣāḥīfī (cf. above 6 a) as well as Zuhri, al-ʿAzaīṭ and Dāwūd al-Zāhirī, in this case the treasury steps in. If there are only quota-heirs, according to Mālik and al-Ṣāḥīfī the remainder goes to the treasury, according to Abū Ḥanīfa and Ibn Ḥanbal however also to the quota-heirs; according to Sa'īd b. Mūsāyib the quota-heirs along with the daughters. The relationship of muṣāba, which is produced by some one attaching himself to the tribe (usually on the adoption of Jaʿān by a non-Arab; cf. above, sect. 5) and which results in the patron becoming surety for the diya (q.v.) of the client, does not, according to the usual view, give any right to inherit. Ibrāhīm al-Nakḥāt and Abū Ḥanīfa take the opposite view but hold but it may be dissolved at any time by either side so long as the patron has not paid a diya for his client. The paternal grandmother is not excluded from the succession by the father, according to Ibn Ḥanbal only; in his view, in this case she inherits a sixth either alone or shared equally with the mother. Among female ascendants, according to Mālik, only the mothers of the two grandmothers inherit, likewise their mothers and so on, but according to Abū Ḥanīfa also the mothers of all male ascendants and their mothers again, and so on; both views are quoted by al-Ṣāḥīfī, but the latter is best known and has established itself in the madhhab. According to Mālik and al-Ṣāḥīfī, the female ascendants on the father's and mother's side share in equal portions the sixth allotted to the grandmothers who is nearer of the two to the legator. According to Abū Ḥanīfa, however, the nearer female ascendant on the father's side excludes the remoter on the
Oriental and Foreign Booksellers.

Agents of the Royal Asiatic Society, School of Oriental Studies, London; Asiatic Society of Bengal, Calcutta, Siam Society, Bangkok; etc. etc., can supply at shortest notice, and on favourable terms, all English, Foreign and Oriental books and periodicals. A large number of second-hand books on all Oriental subjects always in stock. Catalogues on application.

SOME NEW AND STANDARD PUBLICATIONS.

ELIAS (ELIAD A.) Modern Dictionary, Arabic—English. Second edit. revised and enlarged.

Roy. Svo. half bound, pp. 702. Price 18/6

SHERKATI (S.) An English—Arabic Vocabulary of the modern and colloquial Arabic of Egypt.
Third edition revised and considerably enlarged.

LEYDEN LONDON
E. J. BRILL LTD. 1932 L. LUZAC & CIE., G. GREAT KNEE
mother's side from the succession. Whichever of the two sides is entitled to inherit a quota inherits, according to Malik and al-Shafi'i, only on ground of "stronger" relationship, according to Abū Ḥanifa and Ibn Ḥanbal on ground of blood respects (this case, particularly frequent if the marriages of the Parsees, has been decided in various ways in Tradition; cf. al-Dārīmī, Farā'īd, bab 42); in the case of two cousins on the father's side, of which one is also the brother on the mother's side, the latter, it is unanimously agreed, receives a sixth and the remainder falls to the two as 'asaba in equal portions, while Abū Thawr and al-Islām of Baṣra make him inherit the whole. The estate of a child, whose paternity has been disputed by ḥumūr, as well as that of an illegitimate child, passes in default of other heirs, according to Abū Ḥanifa, entirely to the mother (a third as Kūrānic quota and the remainder as quasi-'asaba); according to Malik and al-Shafi'i the mother receives a third as Kūrānic quota and the remainder goes to the treasury; according to one view transmitted from Ibn Ḥanbal the 'asaba of his mother are regarded as his 'asaba, and receive the remainder; the other view corresponds to that of Abū Ḥanifa. In the special case of the son and another grandson (son's grandson), which agrees with that of al-Shafi'i (cf. above 62); this is also the opinion of al-Zuhri and of Sa'd b. al-Musayyib and others; according to Abū Ḥanifa and his fellows, Ibn Ḥanbal and Dāwūd al-Zāhirī, the full brothers actually receive nothing.

8 a. The law of the Imāmīs (Twelver-Shī'is) as regards inheritance is based on the same principles as that of the Sunnis but in its practice shows a number of features of its own, which already can form the most part be traced in the tradition, i.e. in the earliest post-Kūrānic development. Among the divergences — apart from differences in terminology and presentation — are the classifying of the 'asaba and the dhawr 'ar-hām together into one group of relatives, which is divided into three classes: 1. the ascendants in the first degree and the descendants; 2. the other ascendants and the descendants of the ascendants of the first degree; 3. the maternal and paternal uncles and aunts. Each of these classes excludes the fraction only from the succession, and within the two categories of the two first classes the relative of the nearest degree excludes all others of a remoter degree of relationship, i.e. for example the daughter excludes the son's son; within the third class a distinction is made between the uncles and aunts of the legator and their ascendants, the uncles and aunts of his parents, and their descendants etc., and here also the member of a nearer degree excludes those of a remoter degree. Within the same grade all (male or females) exclude all relatives on the father's (not the mother's) side, i.e. full sisters exclude half-brothers; the relatives on the mother's side are excluded only from a share in the residuary estate by all other relatives of the same degree. If relatives whose relationships with the legator is traced through several persons inherit jointly, the proportion of their shares is settled by the (hypothetical) shares of the persons through whom they are related to the deceased. If, for example, paternal and maternal uncles inherit together, the former divide two-thirds of the estate (i.e. the father's hypothetical share), the latter a third (i.e. the mother's hypothetical share); correspondingly, son's children and daughters children, children of brothers and children of sisters, and ascendants on the mother's and father's side. The rules applying to the brothers and sisters of a legator are also applied to his father's brothers and sisters and so on, in the order of their willingness to inherit; if, for example, father's full brothers and sisters (uncles and aunts), and father's brothers and sisters on the mother's side exist together, the latter are not excluded by the former but receive a third (if there is only one, a sixth) which is divided equally among them (Surah iv. 15), and the former receive the remaining two-thirds (or five-sixths as the case may be) of which each uncle gets twice the share of an aunt; the process is to nilar when their children take the place of uncles and aunts; the grandfather (and if the case arises the remote ascendants) also inherits equally with the brothers of the legator. Within similar groups the male inherits double as much as the female, so far as there are no special regulations to the contrary (cf. above); for the rest the male relative on the father's side is not specially privileged before the others, as among the Sunnis. Besides these heirs by blood, there are "heirs for special reasons", i.e. the husband and the patron (marzā), namely

1. a patron who has released the legator from slavery;
2. a patron before whom the legator has become a Muslim, or who has pledged himself to pay the diva for him;
3. the imāmī, who here takes the place of the state treasury, and who, as the general protector of all Muslims, is entitled to inherit in the last resort. — In both main groups there are simple heirs and such as have a claim to a Kūrānic quota. If the estate does not suffice to satisfy all the quotas, the shares are correspondingly reduced to the paternal relatives only, never to the maternal. What is left over after satisfying the quotas is given to relatives by blood according to the above rule; but if there are no blood relatives entitled to inherit, the quota-heirs, with the exception of the husband or wife, receive the residuum also by the residuary law (cf. however above); if there are no heirs by blood the patrons come in, in the order given, so that the imāmī, i.e. the treasury, inherits only in the last resort. — These general rules are sufficient to cause the distribution of an estate to look very different among the Shi'is from among the Sunnis. But there are in addition differences in detail, of which the most important are the following: The Muslim can inherit from the unbeliever (and apostate); even the remotest Muslim heir of an unbeliever has a preference over all non-Muslim heirs; unbelievers of all sects inherit from one another; the succession of the heirs to the estate of an apostate who was born a Muslim begins from his apostasy. The accidental killing of a legator does not exclude the slayer from inheriting. If the sole existing heir is a slave, he is purchased at the expense of the estate (his owner cannot refuse to sell him), thus becomes free and inherits what is left, if the parents of the legator are slaves, they must in all cases be purchased at the expense of the estate, according to some the children also (this is disputed) and according to others every heir (this has not been accepted). The part-slave inherits to the degree in which he is free. One who has a claim to an inheritance from two sides inherits on both grounds. Of the estate of a child whose paternity has been disputed by ḥumūr, the mother receives a third as the Kūrānic quota.
and the remainder as quasi-‘ṣaba, according to the more usual view; according to the other the remainder goes to the imām. There are no legal relationships between an illegitimate child and his ascendants (including his mother and her relatives), only between him and his descendants; if there are none, the estate goes to the imām. In the special case of the so-called gharbātān (cf. above 6 d), there is no divergence from the general principles. — On the whole then the Shī‘a law of inheritance represents an independent systematisation of the common principles found in the Kur‘ān and Tradition but diverging further from the old Arab pre-Islamic principles; whether and how far it the Sunni system already presupposes (as has been proved for the Zaidis; cf. Bergstrasser, O. L.Z., vol. xxv., p. 124) has not yet been investigated.

c. The most important peculiarities of the law of inheritance among the Khārijī Ḩudairis are the following: the paternal grandfather inherits as qua‘a-heir a sixth of the estate if there are descendants of the legator; otherwise he inherits as ṣaba, thus excluding the brothers, just as he himself is excluded by the father. The grandmother is only excluded by the mother. Female descendants, like husband or wife, have no right to the residuum. Manumission confers no rights of inheritance; freedmen, negroes, Indians, Abyssinians or Nubians can inherit from another if there are no other heirs (cf. above, sect. 5). If there are no heirs at all, the estate is given away in charity. The special case of the so-called mu‘āwarah is settled as among the Šāfī‘is (cf. above 6 d). — The dependence of this system on the Sunni is apparent.

d. The law of inheritance, as a branch of family law and as possessing a peculiar religious character from its very full regulation in the Kur‘ān, has always been one of the chapters of Muslim law most carefully observed in practice [cf. ‘Inā‘ and šarī‘a]. As in the long run it must lead inevitably to the splitting up of even the largest estates, various endeavours have been made to avoid this result, which was considered undesirable. A plan, frequently adopted, was to constitute considerable portions of the estate religious endowments [cf. waṣf]; the proceeds of which could be disposed of by the grantor as he pleased; but most endowments in course of time became much broken up. Another way adopted in the Dutch Indies is, in keeping with the local ‘udai, to admit only a portion of the actual estate to division among the heirs; we also frequently find an estate divided already in a lifetime by gift or friendly arrangement, and not infrequently some member of the family, according to circumstances, simply takes over the estate and obligations of the deceased; lands here are taken out of the control of Muslim law. So far only a very few Indian modernists (notably Khdūr Būkhd) have dared to criticise the Muslim law of inheritance and demand its abolition. It is the general practice of Muslim lands and is used in the šarī‘a tribunals, which also undertake the distribution of the estate, a thing too difficult for a layman to attempt. The Muslim law of inheritance is also applied to members of other creeds, when they come with problems to be settled to the šarī‘a tribunals, which often happens in Muslim countries.

MIRDAS B. UDAIYA, Khārijī leader in Baṣra, killed in 61 (680–681). He belonged to the Rab‘ī‘a b. Ḥanā‘al b. Mālik b. Zaidamān (called Rab‘ī‘a al-Wusāṣ, Naṣā‘id, ed. Bevan, p. 185, 5 = 699, 11; Mufaddalīyāt, ed. Lyall, p. 123, 12, 772, 9), a branch of the tribe of Tamim which supplied so many leaders to the Khārijī movement. His father was called Ḥudair b. Ḥamr b. ‘Abd b. Ka‘b and Udaya was his mother’s or grandmother’s name; she belonged to the tribe of Muḥārid b. Ḥāṣāfa (Ibn Dura‘id, Kitāb al-Ihtī‘āk, ed. Wüstenfeld, p. 134; Ibn Ḥutaiba, Kitāb al-Mawāris, ed. Wustenfeld, p. 209; Ţabari, Muḥarrad, Baladhurī, cf. Bībī). He is often called by his kunya Abī Bīlāl.

His brother ‘Urwa b. Udaya had been one of the instigators of the Khārijī movement of secession at the battle of Siffin; he himself had taken part in the movement and had fought against the Caliph ‘Ali at al-Nahrawān (38 a. h.); after this defeat he gave up all political activity although, like his brother, he remained faithful to his old opinions; but he declared himself against armed insurrection, political assassination (istīrāḍ) and the participation of women in the Khārijī movement. These moderate views, which Miridās retained till the end of the caliphate of Maw‘īyā and which caused the extremists to class him among the ḫadā‘a (quietists) of the Khārijīs, made it all the more remarkable when he came out openly and actively against the excesses of the governor of Baṣra, ‘Ubaydallāh b. Ziyād, in his repression of Khārijīsm. A woman named al-Balid‘a or al-Balid‘a (the latter form, given by Ibn al-Athir from al-Balid‘hurst, seems to be wrong) had been cruelly martyred by the governor. Miridās’s indignation was so aroused that he left Baṣra with 40 of his followers and went to al-Ahwāz on the Fārs frontier, where he held out for a long time without committing any of those acts of fanaticism usual among the Khārijīs and confined himself to imposing a levying equal in the village to the pension
MIRJAM. [See Maryam]

MIR KHAWAND, historian, author of the Rewa'at al-Saf'ā" ("Garden of Purity"). He was son of Burhān-ud-Dīn Khwānd Shāh, native of Transoxiana, and, apparently, of Bukhārā. He lived much in Herāt and died there on June 22, 1498, aged 66. His work is a universal history in seven volumes, beginning with the Creation and ending at the death of Sulṭān Husain of Herāt in 1505. The last volume, however, is really the work of his grandson, Kḥānandāmīr [q. v.]. His work is not so interesting as his grandson's Ḥātif al-Sūr, for it is a compilation and wants the personal note. The style too is bombastic, and there is little historical criticism. But it is a work of great industry and has a high reputation in the East. It was lithographed in Bombay 1848, in Thirān 1852; a Turkish translation appeared at Constantinople in 1842; partial translations were made by Jenisch, Mitscharlik, Wilken, Vullers, Shea (O. T. F. series), Rehatsek (T. F. serie-), Jourdain and Silvestre de Sacy (Journal des Savants, 1837).

(HER. BEVERIDGE)

AMIRRIKH, the planet Mars. The etymology of the name is unknown. The sphere of Mars is the fifth in the order of the planets and on the outer side of the sphere of Jupiter, and its breadth is according to Ptolemy (xx. 376) 998 miles. Its period of revolution is estimated at 1 year, 10 months and 22 days. In about 17 years, after 9 revolutions, Mars comes back to the same spot in the heavens; it spends about 40 days in each sign of the zodiac and covers about 40
minutes each day. It is said to be one and half times the size of the earth.

Astrologers call Mars al-Naks al-aghar, the minor misfortune. It is the planet, which next to Saturn is credited with the most ominous omens and effects, war, revolutions, death, confusion etc. The character of those born under Mars is in keeping with this.

MIRZA or MIRZÄ, a Persian title, from Mir-sāda or Amīr-sāda, and originally meaning “born of a prince” (cf. Malik-sāda and Farhang-sāda, which occur in Sa’di etc.). The title, in addition to bearing its original significance, was also given to noblemen and others of good birth, thus corresponding to the Turkish Âğhâ. Since the time of Nâdir Shâh’s conquest of India it has been further applied to educated men outside of the class of mullah or ‘ulamâ’. In modern times the title is placed after the name of a prince and before the name of other persons bearing it: e.g. ‘Huṣain Mîrzâ “Prince ‘Huṣain”, whereas Mîrzâ ‘Huṣain is practically equivalent to “Mr. ‘Huṣain” (R. LEVY)

MIRZAPUR, a district and town in India in the Benares division of the Central Provinces: area 5,240 square miles. The population is nearly 1,100,000 of whom barely 79% are Muhammadans. The latter show a tendency to increase in proportion to the Hindus, owing to their greater vitality, containing as they do a smaller proportion of the very poor. The district is however a stronghold of Hinduism, and Islam makes little progress by conversion. Nothing is known of the early history of the district. It was occupied by Râjputs in the eleventh century a.d. and in the next century passed into the power of the Muslim rulers of Djasnâpur. Down to the Moghul conquest, the district played an important part in the military history of India, as it contained the great stronghold of Cunâr which guarded the gateway of the east.

At Râwa, near Abara, is a tomb of a Muslim merchant called Saiyid Aghrâ ‘Ali which is a place of pilgrimage. Near the gateway of the fort of Bijaiaghar is shown the tomb of Saiyid Zain al-Âbidin, the saint who miraculously took the stronghold for Sher Shâh. The town of Cunâr contains two mosques at one of which are preserved garments said to have belonged to Hasan and Huṣain. The tomb of the Afghan saint Shâh Kâsim Sulaimâni (1545-1606) with those of his family forms a group of buildings of architectural interest. His festival is celebrated on the 17th—21st Djam âdâ I.

Mirzapur city is the capital of the district of the same name. It has a population of 80,000 of whom six are Muslims. It is a Moghul foundation dating from late in the xviiith century: in the xviiith and early xixth centuries it attained great prosperity as a trading centre, being at the junction of important roads and at the highest point on the Ganges reached by the larger ships. In 1864 the opening of the East India Railway left the town isolated; since then it has declined, as the railway now carries the trade with which it used to deal.

Among the mosques is one founded in the middle of the xixth century by a Muslim lady named Ganga Banu who also left funds to build a sarai. The town contains the celebrated Hindu shrine of Vindeshwar, much visited by pilgrims and formerly held in special veneration by Thugs.

Bibliography: D. L. Drake-Brockman, District Gazetteer of Mirzapur, Allahabad 1911. (J. ALLAN)

MIRZA TAKI KHAN, Amir-i Niqâm or Amir-i Kâbir, was born at Farâhân of humble parents, his father having been first the cook and then the steward of the Kâtim Mâfâm, Mirza Abu ‘l-Kâsim, who ended his life as the first minister of Muhammad Shâh Kâdîr (1834-1848). In 1829, as a young menial, Taki Khan accompanied the Persian Commander-in-Chief on the Mission which was sent to St. Petersburg after the murder at Tirhân of the Russian ambassador Gershadoff. On his return to Persia after this visit to Europe, he was promoted to be a mîrzâ or writer, and subsequently was advanced to the rank of khan. By the time his master and patron died the young official had achieved distinction enough to be made wazir responsible for the army in Aḏharbâijdân. Still further honours came, when, during the negotiations at Erzerûm for the settling of outstanding disputes between Persia and Turkey, he was sent to represent his own country in place of the Mughûl al-Dawla, who had fallen ill after his appointment as plenipotentiary. On the conclusion of the Treaty of Erzerûm, Mirza Taki returned to Tirhân and was then commissioned to accompany the Young ‘Abd Allâh Mirzâ, to Tabriz, to which the latter was sent as governor of Aḏharbâijdân. In 1848, Taki Khan’s master became Shâh, and on the way back to Tirhân he appointed his lieutenant to the post of Prime Minister. It is said that either modesty or prudence caused him to refuse the title of Šad-i Aḏâm which is bestowed on the holders of the office, but, in any event, he contented himself with the less imposing one of Amir-i Niqâm, which he had held in Aḏharbâijdân as Commander-in-Chief. As a mark of the royal favour he was given the sister of the Shâh in marriage, and found in her a wife who displayed the devotion to him for the sake of his life.

In office he had the rare distinction in Persia of being inamenable to bribery, and he had a regard for his country which led him to resist interference from foreign powers in its affairs. Moreover, recognizing the reactionary influence of the ulamâ’, he attempted in such ways as were open to him to counteract their activities. He reorganised the army in spite of attempts by his enemies to rouse certain sections of the troops into revolt against him, he made efforts to improve the fiscal system of the country and he had some success in making the provincial treasuries self-supporting. Trade, both internal and external, was encouraged by him, and it was he that equipped Tîrbân with the fine bazars which it now has. As has been indicated, his period of office was not a peaceful one. In 1850 occurred the execution of the “Bâb” [9, v.] at Tabriz, the revolts of the Bâbis at Yazd and Zîndîân and the execution of the “Seven (Bâb) Martyrs” at Tîrbân. The risings were put down with great cruelty, and in consequence an attempt was made by the Bâbis on the life of the Amir-i Niqâm, whom they regarded as responsible. Almost from the begin-
ning of his period of office he had aroused by his influence over the Shāh the jealousy of the latter’s mother and of possible rivals, and their secret attacks were helped by his overbearing character. In November 1851 his enemies succeeded in securing his dismissal, after which the ill-judged attempt of the Russian ambassador to give the fallen minister his protection roused the anger of the Shāh who ordered him to retire in disgrace to Kāshān. There, on January 9, 1852, he met his death at the hands of the sovereign’s fārāsh-bāshī.

MISĀḤA (science of measurement, plane and solid geometry) is the name given by the Arabs to the science of comparing magnitudes and its methods. In the wider sense it covers the measurement of all things which can or need be measured, mainly lengths, areas, volumes, weights and numbers; in particular however, the ʿilm al-misāḥa deals with geometry, with definitions of solids and geometrical figures as well as the laying down of rules for the calculation of lengths, areas and volumes of the different figures in elementary plane and solid geometry. The conception misāḥa therefore includes only a portion of what we call measurement in the wider sense, or practical or technical geometry (i.e. the measurement of things having length, breadth and volume); in particular it excludes mensuration in the narrow sense, geodesy. The Arabs possessed special treatises dealing with the problems of geodesy. They therefore make the same distinction between theoretical and applied measurement, which had developed among the Greeks from the time of Aristotle and is most clearly expressed by Hero in his Metrica and Dioptra.

The definitions given by the Arabs themselves of the conception misāḥa are very varied. Some authors give a very wide one (e.g. al-ʿUmarī: “Measurement consists in ascertaining an unknown quantity by means of a known one. The result gives the amount of the unknown quantity in units of the quantity used for measurement”); most of them mean by it the measurement of length, area and volume. Al-Shinshawī makes a clear distinction between direct measurement, “the test of coincidence” (taḵṣīḥ), and indirect measurement by calculating from certain formulae.

We find treatises on geometry throughout the whole period in which the Arabs acted as the transmitters of the ancient culture with which they had become acquainted, from the earliest beginnings of their literary activity at the beginning of the ninth century A.D. to the decline of Arab mathematics about 1600. The purpose of such works was to give the future surveyor, architect or soldier the necessary equipment, the theoretical foundation for his profession. Three groups of these treatises can be distinguished according to their method of treatment:

(a) those which contain examples, completely worked out, illustrating the process of calculation (e.g. that of al-Baghdādī);
(b) those which only contain a series of fully worked out problems, and are a kind of exercise book (e.g. that of Abū Bakr).

On the method of exposition in these works it should be noted that we cannot of course speak of mathematical formulae in our sense of the word among the Arabs. They, especially the eastern Arabs, had no language of mathematical formulae; it was only late among the western Arabs and probably only in the field of algebra that a technical language was developed. The rules for measuring were always written out fully in words, sometimes even the figures occurring in the text.

The matter of the works on misāḥa, especially the larger ones, as a rule comprises introductory remarks, rules for calculating areas and volumes and the most important lengths found on them, and occasionally also practical exercises.

A. Introductory remarks. These are as a rule

1. Definition of the term misāḥa.
2. Explanation, description and systematic classification of the geometrical figures to be discussed.
3. Definition and list of the most common units of measurement.

B. Rules for calculation.

1. Plane surfaces (and the lengths occurring on them).
2. Triangles (equalateral, isosceles, scalene, right angled, acute-angled and obtuse-angled).
3. Polygons (regular, irregular, “drumshaped figure” (minṭābba), “hollow figure” (muṣṭawffe) “stepshaped figure” (μυδραράδ). “Drumshaped” and “hollow” figures are formed by the combination of two congruent trapeziums in such a way that in the former the shorter, in the latter, the longer parallel sides coincide; a number of varieties are distinguished. The stepshaped figure is formed by placing together a number of rectangles of the same length but different breadth, in which the proportions of the breadths form an arithmetical progression.
4. Circle, segments of a circle (semi-circle, segment, sector, circumference) and related areas (horseshoe or crescent (kiflījī), egg-shape, bean-or lentil-shaped, or oval figures).

The crescent is formed by the subtraction of two segments of circles of different radius with a common chord. egg-shape and bean-shape by the addition of two congruous segments which in the egg-shape are less, in the bean-shape greater than the semi-circle. The area of the oval (ellipse) is given by Savasorda as \(\frac{a+b}{2} \pi\).

II. Solids (and the areas, especially superficies, and lengths that occur on them).

1. Prism (ordinary straight and oblique prism, square column, rectangular column, dice, triangular prism, obliquely cut prism, corpus simile domui in Abū Bakr as translated by Gerard of Cremona).
2. Cylinder.
3. Pyramids (straight and oblique pyramids, sections of pyramids).

4. Cones (straight and oblique cone, section of cone).

5. Sphere and section of a sphere, hemisphere, segment, sector and zone.

6. Regular and semi-regular bodies (the five Platonic and two Archimedean are treated at any length only in al-Kāshī).

7. Other bodies [cylindrical vault (arzūjī and ṣīḵānī; the only difference between them is the length) hollow dome (ḫubba), roof-shape (corpus singuli cabrīr in Abū Bakr), wreaths and discus (hollow cylinder), terrace-shaped figures].

C. Practical exercises.

These are generally speaking rare in works on misāḥa. We frequently find exercises in dividing fields modelled on Hero and Euclid. Savasorda has a number of exercises on fields on slopes, in hollows and on summits and on the calculation of the heights of hills; al-Ḥanbalī has some on the measurement of inaccessible pieces of ground, the depth of wells and breadth of rivers. Of other problems may be mentioned, for example, the calculation of the number of pieces of stone or bricks required to build a house or a roof, the ascertainment of the height of a wall.

It must not however be supposed that the subject matter as above described is fully contained in any work on misāḥa. The individual works differ in subject matter according to the inclinations and abilities of their authors, just as our text-books of geometry do at the present day. We find works planned on a very comprehensive scale (by al-Ḥanbalī and al-Kāshī), alongside of very brief ones, often dealing only with portions of the subject (e.g. the anonymous Berlin MS. No. 5954 which contains only formulae for calculating plane surfaces), or even only a single problem (like the treatise by al-Shīnawī). We therefore often find expositions which are only put into works on geometry in order to show the author's special knowledge or results of his research in a particular field. The most remarkable examples of this kind are the insertion by Dīmashqī al-Kāshī in a work on misāḥa of a treatment of regular and some semi-regular bodies (the calculation worked out by him in sexagesimal fractions to the fifths is so accurate that it only begins to differ from the correct figure in the tenth decimal place); the formulae for the area of a surface given by al-Ṭūmāwī $F = \sqrt{a \cdot b \cdot c \cdot d}$ for trapezoids with a right angle and his improvement of Hero's formulae for the segments of a circle; the formula for an arc given by al-Karkhī; the formula $a^2 = \frac{1}{9} [n(n - 1) + 6] a^2$ where $d$ is the diameter of the circle around a regular polygon of $n$ sides of length $a$ given by the same author and al-Baghdādī (the same formula is found in Nemerārus and Regiomontanus and attributed by the latter to the Hindus; it is however, so far as we know, not found in any Hindu mathematical work yet published); also the application of algebra to geometry by Abū Bakr and Ibn al-Banna. The former uses the algebraic solution for problems of areas in order to show the application of equations of the first and second degree to the six cases distinguished by al-Khwārizmī; the latter uses combinatorial analysis to investigate the different possibilities of stating the problem.

The methods of calculating the volume are the same as we find among the Greeks and Egyptians. When it is not a question of matter that has been taken over from them, in which case the formulae are directly adopted, the obtaining of results is purely inductive and empirical. Al-Karkhī for example for the volume of a sphere gives, in addition to the formulae $a^3 (\frac{1}{3}a^3)$, on the method of obtaining which he says nothing, also $a^3 (\frac{28}{45})$ which he gets by comparing the weight of a cube of wax with the weight of a sphere, which is made out of the cube of wax and whose diameter is equal to the edge of the cube. al-Baghdādī deals with a method of ascertaining the volume from the weight and specific gravity. al-Kāshī knows the method of immersion of Archimedes mentioned by Hero. The direct method of measuring the length of areas by laying a thread along them is still recommended as the most reliable by al-Karkhī and Bahā al-Dīn. It is evident that such methods must lead to approximative results and formulae of approximation, the typical feature of practical geometry, continue to be used by the Arabs in measuring long after they obviously knew of their inaccuracy. Ibn Mammātī criticizes the usual formulae for the area of a triangle $\frac{1}{2} (a + b) \cdot h$, and $\frac{1}{2} (a + b) \cdot 2a_s \cdot 4a$, al-Baghdādī the formula for a quadrilateral $\frac{1}{2}(a + c) \cdot (b + d)$ which comes from the Egyptians.

The reasons for the long survival of such rules are partly that the formulae gave in practice quite useful results and partly that the practical men who were concerned with measurement in the exercise of their trade wanted values easy to calculate rather than great mathematical accuracy and took no note of slight errors, especially if they thereby avoided calculations with roots. For similar reasons and in keeping with the traditional practice, almost all works of misāḥa give no scientific geometrical proofs of the accuracy of the formulae they quote. Only the book of the Jew Abraham Savasorda, who may be reckoned among the western Arabs, gives logically worked out proofs in any number; we occasionally find references to early mathematicians (especially Euclid) in Ibn al-Banna and Ibn al-Hanbalī. Probably inspection was quite sufficient ('Abd al-Azīz for example draws plane figures in a network of squares each of one unit and counts the squares and their parts within this area) or a simple demonstration in some form or a calculation to prove the correctness of the procedure, which was frequently illustrated also by examples completely worked out.

A further peculiarity of Arabic authors was to give formulae which agree completely in substance in different algebraic forms. The Berlin MS. No. 5954 gives for example for the calculation of the section of the hypotenuse $q$ in the right angled triangle the following formulae: $q = \frac{1}{2} a + (c^2 - b^2) \cdot a = \frac{1}{2} a + (c + b) \cdot (b - a) \cdot a = \frac{1}{2} a + (c + b) : \sqrt{2a^2 + (c^2 - b^2)}$. This differentiation was probably only intended to give as many forms as possible of the relations between the known and unknown magnitudes so as to afford the practical man a choice of different correct formulae of which one might suit the special case better than another.

The sources of Arab geometry are to be sought among the Greeks and Hindus. The form and
substance of the rules are almost entirely Greek, especially in the older authors. Hero's "elaborations" in particular, which in turn go back to Egypt, seem to have been the model for Arab works on geometry. To Egypt may be traced the prefiguring of a metrological section (found in many books on misāḥa, the works on dividing fields, the formula for the trapezoid, the special name for the upper side of a quadrilateral (ra¿ al-ā']aru]) in the works of Khañzīm, the formula \( V = \frac{1}{2} a \cdot b \cdot d \), for the quadrilateral inscribed in a circle, the terms are, perpendicularly from the summit of an arc and chord, the marking of lengths in Hindu figures, the use of algebra to solve geometrical problems (equations, method of double error, combinatorial analysis). The chief teachers were however the Greeks, whose achievements the Arabs generally speaking never surpassed; the requirements of practical mensuration gave them no new problems and practical geometry remained down to quite modern times elementary, the majority of the problems of which had been finally settled long ago by the Greeks.

The services of the Arabs to geometry lie less in the extension of the field by ascertaining new, hitherto unknown facts, although in the misāḥa works we do find a series of new and novel rules, than in their enrichment of this science by new methods of calculation and teaching and especially in their preserving the inheritance of the ancients and handing it down to the western world. Although Hero's geometry first became known in northwestern Europe through Roman surveyors, it was mainly the Arab sources which gave new life to that subject which had become stagnant in its old form. Arabic original works were made accessible to the west in Latin translations. Leonardo of Pisa in his Practica geometriae, which remained a standard work for three centuries, depended closely on Savasorda, who most probably owed a great deal to Abū Bakr as there are striking similarities between the Liber embadorum and the Liber mensurationis; down to late in the xvith century we continually come across writings on practical geometry, which in form and content show what to what originals they go back.

H. SCHRIMK

MISAR B. MUHULHIL

Ahm al-Dulaf al-Khazānī al-Yanāqī, an Arabic poet who lived at the court of the Samānids Nasr II b. Ahmad (301—331 = 913—943) and in 331 was sent by his master, the Chinese empress, to bring back to her land and on his return visited India. He later gained the favour of the Buyid vizier al-Sāḥib al-Tūlānī (so al-Samānī, *Anṣāb*, fol. 365b) and lived in Baghdad (d. 585 = 995). To him he devoted a long kashda on the thieves' dialect of the Banū Sā'?ān, a work which he himself wrote a commentary upon it (extracts in Thā'labī, *Yatima*, iii. 176—194). The dates of his birth and death are nowhere exactly given. To his long journeys he alludes in his verses quoted by Thā'labī, *op. cit.*, iii. 174. The only authentic information has been preserved by the author of the *Filist*: on p. 340, 50 sqq. (where wa-kānā gawasalān is of course not to be translated as Fligel does [note 182] "there was a rumour current" but "he was a great traveller") he gives his account of a temple in Mukran said to be of gold, and on p. 350, 51 sqq. a description of the capital of China. A comparison of these with the corresponding account of his journey attributed to Ahmad Dulaf in Vāxšī, *Majām*, iii. 457, 451, 51 sqq. shows that at least a translation (cf. Marquart in the *Festschrift* for Sachau, p. 292). This is confirmed by an internal criticism of his statements. The first country to be entered after leaving Muslim territory is, he
says (Yaḥūt, iii. 449, 7), al-Kharga, i.e. as Marquart, S. B. B. A., 1912, p. 492 has recognised, the Persian translation of the Turkish name for Kāhgar, Ordunkad. Of this kingdom of the Boghrā-khāns however, this author (p. 447 sqq.) talks as if it belonged to the tribe of Boghrā, whose ruler was a descendant of ʿAli, as the East Turkish legend of Satok Boghrā Khān says of his grandson. The story is therefore compiled from various sources. Marquart (Sachau, Festschrift, p. 271—272) has also recognised that the alleged ruler of Sadjistān whom the author claims (cf. cit., p. 458, 4) to have met, ʿAbū Dāvjār Muḥammad b. Ahmad b. Laiḥ, son of Bānū, a sister of Yaḥūb b. Laiḥ, is identical with Khaļaf b. Ahmad son of Bānū, a granddaughter of ʿAmr b. Laiḥ, who was taken prisoner by Muḥammad al-Ghazni in 1002—1003 and died in 1008. The geographical information given by the compiler is therefore quite unreliable in detail. His story is also preserved in the second version of Kazwinī’s Cosmography in the Gotha Mss. 1506 (Möller, Nr. 2316) and has been edited from it by Schlozer.

(C. Brockelmann)

**MISBAḤA.** [See SUBH.]**

**MISKĪN, poor,** a loan word which has shown remarkable vitality. It goes back to the Assyrian miskinu, “poor” (in the Laws of Hammurabi it is a name for a class between those enjoying full citizenship and slaves; according to L. W. King: freemen who do not belong to the ruling race). In the meaning “poor” it has passed into Aramaic (miskín), Hebrew (miskín), North Arabic (miskín or, against analogy, misku), into Southern Arabic and Ethipic (miskín). It has passed from Arabic into Italian as mecenä and into French as misquin. In Arabic, on the analogy of the form ništ, it is usually of common gender but the feminine form miskina is also found with plural miskindū. Muhammad often uses the word in the Kurʾān in the list of persons whom it was a duty for believers to support. As in Sūra ix. 60 it is found alongside of fūkārā, commentators and jurists have felt that some distinction must be made between the two. They usually explain miskin as needy, but not absolutely without possessions like the fūkārā, and refer to Sūra xviii. 78, where there is a reference to poor people who possess a ship among them. How uncertain this is, is however evident from the fact that the Mālikis in opposition to the Shāfiʿīs to the other view to regard the miskinu as the most needy; cf. also the various definitions collected by Lane. Ḍhā Ṣṭārah in Sūra xc. 16 does not help us. From the meaning “poor” gradually developed that of “base, miserable”, also in the moral sense, e.g. Ibn Saʿd, iii/6 ut. where Abū Sufyān’s wife is called al-Misikīna. On the other hand, the word can mean “humble” as in the words attributed to Muhammad: “Let me live as a miskin and die as a miskīn and include me among the miskinu.”

**MIṣR, a. a proper name denoting the eponym of Egypt, the ancestor of the Berbers and the Copts. In accordance with the Biblical genealogy (Genesis x. 1 sqq.) Miṣr is called the son of ʿHām, the son of ʿNāḥī. The Biblical origin of the pedigree appears clearly in the form Miṣrāʾim or Miṣrān (cf. Hebrew Miṣrayim) which is found side by side with Miṣr. In some genealogies between ʿHām and Miṣr there is inserted Bakṣar, a name of which the origin is unknown to me.

There exists, however, also quite a different genealogy, according to which Miṣrān is a son of Tablīn, one of the early heroes (qatāhīra), who ruled Egypt after the Deluge.

b. a proper name denoting Egypt as a country. It may be supposed that Miṣr was already the name of Egypt among the Arabs in pre-Islamic times as it is used in the Kurʾān (e.g. Sūra x. 87; xii. 21, 100; xiiii. 50), where the Biblical form Miṣrān does not occur. It has remained the Arabic name of Egypt [q.v.] up to the present day.

c. a proper name denoting the capital of Egypt, i.e. at present and since its foundation Cairo, which with its full name is called Miṣr al-Kāhirah [cf. CAIRO]. Miṣr occurs, however, already as the name of the city or the cities situated southwest of later Cairo; when the name had been transferred to this city, the name Miṣr al-Kādira (Old Arabic) clung to the old settlement situated between the mosque of ‘Amr and the right bank of the Nile (cf. Butler, Babylon of Egypt, p. 16).

In the period between the Arab conquest and the foundation of Cairo the name Miṣr is regularly applied to the settlement just mentioned (Ibn Khurḍāḏbih, B.G.A., vii. 247, 251; Ibn Roshteh, B.G.A., viii. 115 sqq.; al-Bukhārī, Fārs al-Kāhir, bāb 13: Abū Dāwjūd, Ṣṭārah, bāb 74). We are, however, not able to decide which of its parts (Babylon, Fuṣṭāṭ or the Tūlūnī capital) is especially denoted by it. It may be supposed that the combination of Fustat Miṣr “Fuṣṭāṭ in Egypt” (cf. e.g. Maṣʿūdī, Tanbih, B.G.A., viii. 358; Maḥfūz, Kāhir, i. 288) opposes Miṣr Fuṣṭāṭ to and Miṣr forms the link between the appellation of the name Miṣr to the country and to the capital. After the conquest of Egypt by the Muslims there were two settlements only on the right bank of the Nile where it divides, viz. Babylon and Fuṣṭāṭ. The papyri never mention Miṣr as the name of either of these settlements. Yet in the latter part of the seventh century A.D. the application of the name Miṣr to one or to the other or to both
must have begun, as is attested by John of Nikiu who at least once uses Mesr as the name of a city, where he speaks of "the gates of Mesr" (p. 25). In other passages Mesr appears as the name of the country (p. 201, 209).

The statement that the name Misr as the name of a town arose after the Muslim conquest only, is in opposition to Butler, who maintains that at least since the age of Diodorean there existed on the right bank of the Nile, to the South of the later Babylon, a city called Misr (cf. Butler, Babylon of Egypt, p. 15; do., The Arab Conquest, p. 221 note). Caetani (Annali, A. H. 19, § 47) already pointed to the fact, that the traditions concerning the Arab conquest of Egypt do not give the slightest credit to the existence of a city bearing the name of Misr. Butler's reference to the Synaxary proves nothing, as this work was composed many centuries after the conquest. — The Coptic name of Babylon was Kemæ.

d. a common noun, denoting a town; it is used especially in connection with the capitals of the provinces in the times of the conquests, e.g. in the tradition: "The amār will be conquered at your hands" (Abū Dawūd, Dhiklah, bāb 28). Baṣra and Kūfa are often called "the two miṣr" (Buḫkhārī, Ḥadīth, bāb 13; Yaḵūt, Maḏqar, iv. 454). Further any town may be called misr (e.g. Buḫkhārī, Dhābbah, bāb 2; Aḵbār, bāb 15; Tawīm, bāb 25; Tirmidī, Nikūz, bāb 32 etc.). This miṣr is a genuine Semitic word, cf. Lišān al-ʿArab, s. v. and the Jewish-Aramaic miṣr, meyṭīm, which have the same meaning, viz. that of a house or a field as an exactly delineated and demarcated territory (cf. I. Levy, Chaldäisches Worterbuch; do., Neuherzüchtet-Talmudisches Worterbuch).

It may be supposed that the geographical name Miṣr (cf. above, a.—c.) comes from the same root and has originally a meaning akin to that of the common noun. (A. J. Wensinck)

MUŚRA, a term in Arabic prosody applied to a hemistich or half line (haft); the first hemistich is called ṣudr and the second "adīq. Each has two, three or four feet, taʿṣīra or ḥjūs. The last foot of the first hemistich is called araḍ and the last of the second ḥarb. As a general rule, and in the first verse of a poem, the araḍ foot should have the same measure (ṭajrī) and rhyme (taḫṣīs) as the ḥarb foot.

(Moh. Ben Cheyeh)

MUŚRĪ, [See NIVZEL.]

MUŠŠISH, arab. Al-Maṣṣaṣa, a town in Cilicia on the Dājjān.

In antiquity it was called Mæsalis or a name, which (like that of Mæsalis in the Cilician passes) is derived from the cult of the legendary seer Mopsos (cf. Meyer, Gesch. d. Altert., viii, 2, § 483). In ancient times, the town was chiefly famous for its bishop Theodorus (d. 428), the teacher of Nestorius and friend of the suffragan bishop and inventor of the Armenian alphabet, Maĝh-ṭoc (Peeters, Reine des Etudes Armèn., ix., Paris 1929, p. 210; on him cf. e.g. Al-Maṣṣaṣa, Tānūkh, ed. de Goeje, p. 152; Mich. Syr., transl. Chabot, ii. 3; Barhebræus, Chron. ecclesi., ed. Abu-l-Mamālī, i. 133; Theophanes, Chron., ed. de Boor, i. 77, 96). In the year 1452 a synod was held in Mopsuessa in June 550 to see that his name was removed from the diplomas of the bishops (Mansi, Acta Concil., ix., col. 275—280; Hefele, Konzilengeschichte, ii, 2, 832—834). At a later date the name of the town was usually called Mopsuṣṭissa (pronounced: Mopsuṣheista?; cf. Appendix ad Petri Siculi hist. Manic., ed. Gieseler, p. 53, r; Wilh. Schultze, Zeitschr. f. vergl. Sprachforsh., xxiii., new series, xii., 1895, p. 372; references in Geiger zu Georg, Kypr. 819; Syr. Mopsuṣheista: Noldeke, W. Z. K. M., iii, 1889, p. 356; Severus Antioch., Epist. v, 6, ed. Hoekoa, p. 338; Arab. Mopsuṣheiba in Ibn Khaldūnī, ed. de Goeje, p. 99). As early as the end of classical times we already find the popular forms Mopsuṣṭa (Tab. Peut.), Byzant. Maṣṣaṣa (Michael Glykas, Annali, Bonn. Corpus, p. 570; Anna Komnēna, ed. Reifferscheid, i, 140, 51; in Al-līrīs, ed. Gildemeister in Z. D. P. F. I., vii, 24: Monestra; the Byzantine work on "Towns with later altered names", ed. Burkhardt, Iter ICONIUM, Leipzig 1693, p. 62, Appendix I, No. 29, wrongly says: Kastāla Kaliusia ἢ vivi Maṣṣaṣa; the former is rather the modern Burdur Kafe, Masista (Theodorius, De situ terrae sanctæ, c. 32, ed. Geyer in Corp. Scriptorum, Lat., xxxix, 150, 6). In the reign of Justinian I the city was probably again called Kastāla Kaliusia (Novell. Antiochenæ, ed. Rahmän, I. Fasti della chiesa patriarcale Antiochenæ, Rome 1920, p. v.; Byzant. Zeitchr., xxxv. 74, 81), from which the Arabic al-Maṣṣaṣa. Armen. Miṣrīs and Turk. Miṣrā is Misāris have arisen.

The emperor Heraclius is said to have removed the inhabitants and laid waste the district between Antioch and Mopsuessa on the advance of the Arabs; in order to create a desert zone between them (al-Tabari, i. 2396; al-Baladūrī, ed. de Goeje, p. 165; between al-Iskandarān and Tharsus), and under the Omaiyads all the towns taken by the Arabs from al-Maṣṣaṣa to the fourth Aramaen (Tell Malaya) are said to have been left unfortified and uninhabited as a result of the inroads of the Mardaites (Theoph., ed. de Boor, i. 363, 17). According to Abu l-Khaṭṭāb al-Azdi (in al-Baladūrī, p. 164), the Arabs conquered al-Maṣṣaṣa and Tharsus under Abu l-ʿUbdā, according to others under Masṣar b. Masrūk, who was sent by him and who thereafter advanced as far as Zangī (in 16 = 637: Caetani, Annali dell'Islam, i. 805, § 511). Muʾawiya on his campaign against Ammūriya in 25 a. h. found all the fortresses abandoned between Anāṭkīya and Tharsus (see above). According to the Māḏṣi Malawī he himself destroyed all the Byzantine fortresses up to Anāṭkīya in 31 (651—652) on his return from Darawīya (Dynast., in Phenicia) (al-Baladūrī, ed. de Goeje, p. 164). After the Syrian rebellion against Abū al-Malik, the emperor Constantine IV Pogonatos in 65 (684—685 A. D.) advanced against the town and regained it (al-Yaḵūbī, ed. Houtsdra, ii. 321). Yaḥyā b. al-Khakam in 77 marched against Marj al-Shām between Malaya and al-Maṣṣaṣa (al-Yaḵūbī, ii. 337). It was only in 64 (703) that Abū al-Malik's son Abū ʿAlī al-Malika retook the town and had the citadel rebuilt on its old foundations (Baladūrī, p. 165; Yaḵūbī, ii. 466; Wāṣḵū in Tabari, ii.)
Ibn al-Atligh, ed. Tornberg, iv. 398; Theophan., Chron., ed. de Boor, p. 372, 41; Mich. Syr., transl. Chatot, f. 477; Elias Nisibeni, Opus chronologiae, ed. Brydges, p. 155; transl., p. 75; Seeck., Syr. chronica nitens, ed. Guidi, p. 232. transl., p. 176, under 1015 Sel. year: Weil, Gesch. d. Chalifen, i. 472). In the following year, he installed a garrison in the fortress, including 300 specially paid soldiers, and built a mosque on the citadel hill (Tell al-Hisn); a Christian church was turned into a granary (kourun, harvi = horreum, horrea); al-Baladhum, p. 165; Ibn al-Shihna, ed. Baflit, p. 179). To the same event no doubt refers the wrongly dated reference in the Chronicles of the Armenian Samuel of Ani of the year 602 A.D. to the fortification with strong walls of the town of "Mestia, i.e. Misia" by the Muslims under 'Abd al-Malik (Rafito temporum nosque ad suas actum pristivit Samuelem Antiochenus, in Euseb. Pamphil., Chron., ed. A. Mai and I. Zotra, Mediolani 1813, App., p. 57; Alisjahb, Sittenau, p. 256). Every year from 1,500 to 2,000 men of the corps (tawālid) of Anṭiliya used to winter in the town. According to Michael Syrus (transl. Chatot, iii. 478), 'Abd al-Malik died in 1017 Sel. (705 A.D.) in al-Massāja. 'Umār II is said to have intended to destroy the town and all the fortifications between it and Antioch and to have been either prevented by his own death (Baladhum, p. 167) or dissuaded by his advisers; according to this version, he then had a large mosque built in the suburb of Kafar baiya in which there was a cistern with his inscription. It was called the "Citadel Mosque" and kept up till the time of al-Mu'tasim (al-Baladhum, p. 165); but Kafar baiya was probably not real before the time of al-Mahdi or Hārūn al-Rashid; [see below], Yazid b. Djiabār (Wassī, i, τοῦ Χασέλ) in 704 A.D. attacked Sīs (π Σίσον κατον) in al-Tabar and Ibn al-Atligh; Sūsana in the Nāhiya of al-Massāja but was driven off by Heracleius, the emperor's brother (Theophan., ed. de Boor, p. 372, 23; A.M. 6196; according to al-Tabar, ii. 1185, and Ibn al-Atligh, iv. 419, wrongly not till 87 A.H.). Hārūn built the suburb (al-Khairat), Marwān II the quarter of al-Khuṣṣa east of the Djāhīn, which he surrounded with a wall with a wooden door and a ditch. The bridge of Djīsr al-Walid between al-Massāja and Adhâna, 9 mil from the former, was built in 125 (742-743 A.D.) and restored in 225 (840) by al-Mu'tasim (al-Baladhum, p. 168; Yūsūf, Mu'ākum, ed. Wüstenfeld, ii. 82; Saff al-Dīn, Marāfīj, ed. Juynboll, i. 255). In the first half of the viith century the caliphs al-Walid II and Yazid III brought the gipsy tribe of the Zaut, who had been deported to Basra by Mu'āwiyah in 670 A.D., and settled them with great heaps of buffalos in the region of al-Massāja in order to fight the plague of lions in the district of the Djalab al-Lukkam (al-Baladhum, p. 168; De Goeje, Bijdrage tot de Geschiedenis der Eigenaren, 1875, p. 17-22). The first 'Abbāsid, Abu 'l-Abbas al-Saffār, on his accession strengthened the garrison by 400 men, to whom he gave lands; the same estates were later allotted to them by al-Mansūr. The latter in 139 (756-757) restored the wall, which had been damaged by an earthquake in the preceding year, and increased with 8,000 settlers the much diminished population of the town, which he called al-Ma'mura (al-Baladhum, p. 166; Ibn al-Atligh, v. 382; Yūsūf iv 579, s.v. al-Ma'mūriya; Ibn Shihna, p. 179). On the site of a heathen temple he built a large mosque which far surpassed the mosque of 'Umar in size. When 'Abd Allah b. Tāhir was governor of Ma'arrat (see above), he was enlarged by al-Ma'mūr. Al-Mansūr increased the garrison to 1,000 men and settled in the town the inhabitants of al-Khuṣṣa, Persians, Slavs and Christian Arabs (Nabataeans), whom Marwān had transplanted thither (see above), and gave them allotments of land. It is probably that to the same event the story refers that Sālih b. 'Ali, when in the 'Abbadid period the inhabitants of al-Massāja, harassed by the Byzantines, resolved to migrate, sent Djiabār b. Yahya al-Baḍjali al-Khuraṣāni in 140 (757-758) to rebuild the town and settle it with Muslim inhabitants (al-Baladhum, p. 166; according to al-Tabar, ii. 135 in the year 141). Under al-Mahdi the garrison was increased to 2,000; in addition there was the Anṭiliya corps of almost the same size which wintered here regularly until Sulim of Burdur left here in 1082 and increased the garrison by 500 men instead. There is a brief reference in the Syriac inscription of 'Enesel to a raid by al-Mahdi to the Djāhīn (Syr. Giḥūn) in 780 A.D. (1091 Sel.: Chatot, in J.F., ser. ix., xvi., 1900, p. 287; Pognon, Insér. sémile de la Syrie et de la Mesop., p. 148-150, N°. 84). Hārūn al-Rashid built Kafar baiya or according to another story, altered the plans for this suburb prepared by al-Mahdi and fortified it with a ditch; he also built walls which were only completed after his death by al-Mu'tasim. In 187 (803) an earthquake laid waste the town (al-Tabar, iii. 688). In the following year, the Byzantines invaded and pillaged the region of al-Massāja and 'Ain Zarba and carried off the inhabitants of Tarsus into captivity, whereupon Hārūn al-Rashid attacked and defeated them (Mich. Syr., iii. 16). According to al-Tabar (iii. 709) and Ibn al-Atligh (vi. 135), the Byzantines in 190 (806) invaded 'Ain Zarba and Kanisat al-Sawad and took prisoners there; but the people of al-Massāja regained all their loot from them. If, as it seems, the curious story in the Byzantine chronicles (Theoph., Chron., ed. de Boor, p. 446, 13; Georg. Kedren, Bonn. Corpus, ii. 17) that in 777-778 (A.M. 6624) 'Abd al-Walid Badaūn, i.e. the Fadl b. Dinār, who had 500 Byzantine prisoners with him, lost 1,000 men and all hisbooty through a sortie of the Melleumestis refers to the same events, the latter would appear to be wrongly reported and wrongly dated.

On the 13th Haziran 1122 Sel. (811 A.D.) the walls and many houses in the town and three adjoining villages fell in a great earthquake; near al-Massāja the course of the Djāhīn was dammed for so long that the boats lay on the dry bed (Mich. Syr., iii. 17). In 198 (813-814) Thābit b. Nasr al-Khuṣṣā'ī was fighting in the Syrian marches of al-Massāja and Adhāna, Yaqūbī, ii. 541. On his campaign into Bilād al-Rim, al-Ma'mūn passed through al-Massāja and Tarsus in Muḥarram 215 (March 830): al-Tabar, iii. 1103; Ibn al-Atligh, vi. 294; Ibn 'l-Fidā, 'Anfās Muslim, ed. Reiske, ii. 152; Weil, Gesch. d. Chal., ii. 239). In revenge the emperor Theophilos in 216 (831) raided the lands around these two towns and slew or took prisoner 2,000 men (al-Tabar, iii. 1104; Ibn al-Atligh, vi. 295).

After the emperor's campaign against Zibatra (837 A.D.) in which he also defeated the Melleumestis (Const. Porphyrog., De castr., ed. ...
Bonn, p. 503; Vasilev, Visantiya i Arabi, in Zapiski iz-filol. fak. imp. S.-Pbgh. Univ., cast lvi, 1900, p. 85 sq., note 4), al-Mu'asim bi 'llah in the following year attacked 'Ammūriya; his general Bashir commanded a part of the army which included the Maṣṣaṣa contingents (Mich. Syr., iii. 96). In 245 (859) the town was again visited by an earthquake which destroyed many places in Syria, Mesopotamia and Cilicia (al-Ya'kubi, iii. 1440). The Caliph al-Mu'ādīd after restoring order in the Thughur al-Shamiyya (287 = 900) returned from al-Maṣṣaṣa via Funduk al-Hussain, al-Iskandariyya and Baghraw to Anṭākiyya, Halab and al-Kaṣṣa (al-Tabari, iii. 2198–2200; al-Funduk, a place in the Thughur near al-Maṣṣaṣa: Yākūt, iii. 918; Şafi al-Din, Marāṣīd, ii. 365).

When in 292 (904–905) the Byzantine Andronicus invaded the district of Mar'ash, the people of al-Maṣṣaṣa and Tarṣus met him but were defeated and lost their leader Abu 'l-Ridāj b. Abi Bakr (al-Tabari, iii. 2251); Ibn al-Ąţār, vii. 371; Vasilev, Zap. ist.-fil. fak. imp. S.-Pbgh. Univ., cast lvi, 1902, p. 154, note 2).

In 352 the emperor Nicephorus took Adana, the inhabitants of which fled to al-Maṣṣaṣa, and sent the Domesticus John Taimises (Yānīs b. al-Shimīshkī al-Dumistikī) against this town. The latter besieged it for several days but had to withdraw as his supplies were running short, and after laying waste the country round burned the adjoining al-Mallūn (Mālaqā) at the mouth of the Dijlā (Yahyā b. Sa'īd, op. cit., p. 791 sq.). The emperor himself came again in Dhu 'l-Kāda 353 (Nov. 694) to the marches (al-Thughr) and besieged al-Maṣṣaṣa for over 50 days but had again to abandon the siege owing to shortage of supplies and retired to winter in Kaṣirāyī. Finally the town was stormed by John Taimises (Arm. Kuči Čan) on Thursday the 11th Radjab 354 (July 13, 965). The inhabitants set it on fire and fled to Kafar brazil. After a desperate struggle on the bridge between the two towns the Greeks took this suburb also and carried off all the inhabitants into captivity (Yahyā b. Sa'īd, op. cit., p. 795; Ibn al-Ąţār, viii. 408–411; Abu 'l-Fidā', Ann. Musil., ed. Reiske, ii. 872 sq.; Mich. Syr., iii. 128; Elias Nisibeni, ed. Brooks, p. 218; transl. p. 106; Georg. Cedren., ed. Bonn, i. 362; Leon Diakon., ed. Bonn, p. 52 sq.; Mattēuēs Utshayect, ed. Dulaurier in Rec. hist. croat., Docum. Arm., i., 5; Step'an Anošik of Taron, Armen. Gesch., transl. H. Gelzer and A. Burchhardt, Leipzig 1907, p. 134, 24). They were, to the number of 200,000, it is said, led past the gates of Tarṣus, which at that time was being besieged by the emperor’s brother Leo, to terrify the people of the town (Ibn Shihna, Kavbād al-Manṣūṭ, in Freytag, Z. D. M. G., Elias Nisibeni, op. cit.). The gates of Tarṣus and of al-Maṣṣaṣa were gilded and taken as trophies to Constantinople, where one set was put in the citadel and the others on the wall of the Golden Gate (Georg. Cedren., ii. 253).

The town remained for over a century in the hands of the Byzantines; the Emperor Basil II Bolgaroktonos stayed for six months in the region of al-Maṣṣaṣa and Tarṣus before going to Armenia after the death (March 31, 1000 A.D.) of the Kouroplates Davīd of Tadjī to take possession of his lands by inheritance (Yahyā b. Sa'īd, Tarīqī, ed. Rosen, p. 39, in Zap. Imp. Akad. Nauk., xiv., St. Petersburg 1883). In 1042 the Armenian prince Ap'lagār, son of Hasan and grandson of Khaṭīk of the house of the Accruntans, was sent by his emperor Constantine Monomachus as governor to Cilicia (St. Martin, Min. sur l'Arm., i. 199). In 1055 A.D. Philelotos Ikrhoumos, who was appointed in Constantinople perhaps Sebastos (Mich. Syr., iii. 173) or at least Kouroplates (Mich. Atal., Bonn ed., p. 301) and whose ephemeral kingdom comprised the land from Tarṣus to Malatya, Urfa and Anṭākiyya, held al-Maṣṣaṣa (Mich. Syr., loc. cit.: Laurent, Byzance et Antioche sous le kouroplate Philiacite, Rev. des Est. Arm., ix., 1929, p. 61–72). Shortly before the arrival of the Crusaders, the Seldjūk Turks took Tarṣus, al-Maṣṣaṣa, ‘Ain Zarba and the other towns of Cilicia (Mich. Syr., iii. 179). About the end of Sept. 1097 the Franks under Tancred, who had been invited thither from Lombardy by Oshin III, took the town which was stormed on a day’s siege: the inhabitants were slain and rich booty fell into the hands of the victor (Albert. Aquens., iii. 15 sq., in Migne, Patrol. Lat., clxvi., pp. 446 sq.; Radulf. Cadom., Gesta Tancredii, c. 39 sq.). William of Tyre describes al-Maṣṣaṣa on this occasion (iii. 21, in Migne, Patrol. Lat., cci., p. 295): "Erat autem Manliistra una de nobilioribus eiusdem provinciae civitatis, muro et multorum incultu insignis, sedet optimo agro et gebe aerae et amo- nitate principi commendabilis.”

Count Baldwin, who had quarrelled with Tancred, followed him along with the admiral Winimer of Boulogne and encamped in a meadow near the Dijlān bridge; Winimer left him there and went with his fleet to Lādģijīia, while the two rivals had a desperate fight, after which Baldwin withdrew to the east (Albert. Aquens., iii., iii. 15, 59, in Migne, op. cit., pp. 446, 472). Tancred followed him, after he had improved on the city “plus paternas quam principis leges” (Radulf. Cadom., c. 44). The Byzantine general Tatikios, who had joined the Crusaders to take over their conquests in name of the emperor, left them in the lurch in the beginning of Feb. 1098 at the siege of Anṭākiyya and ceded to Bohemond the town of Tarṣol (Tarṣus), Maniistra and Anṭākiyya (Adana) (Raymond of Aguiles, in Borgongs, Gesta Del per Frances. Hanover 1611, p. 146, 2). Bohemond only took possession of the towns of Tarṣus, ‘Ain Zarba and al-Maṣṣaṣa in August (Will. of Tyre, vii. 2). After the town had again fallen to the Greeks for a period. Tancred again took it in 1101 (Rad. Cad., c. 143). But he had to hand it over to Tarṣus, Adana and ‘Ain Zarba to Bohemond on his return from captivity in 1103 (Will. of Tyre, vii. 2, in Migne, op. cit., p. 377). The following year however, Longinias, Tarṣus, Adana and MāΤšηε were regained for Byzantium by the campaign of the general Monasras (Anna Comnena, Αλεξις, ed. Reifferscheid, ii. 140, 5), who apparently did not recognise the identity of MāΤšηε with MāΤηου

Thoros II, the son of Levon who had escaped home from his confinement in Constantinople, was again able to cast off the Byzantine yoke. When in 1151 he took Msiis and T'lij (Tall Hamdan) from the Byzanines (Smbat, in Doc. arm., i. 619) and made their general Thomas prisoner, the emperor Manuel in the following year sent against him with 12,000 cavalry Andronicus Comnenos, whom he had appointed governor of Tarus and al-Maṣṣaṣa (Gregor. presb., in Doc. arm., i. 217 = Matth. Edess, transl. Daurulier, p. 334; Smbat, Chron., in Doc. arm., i. 619). Andronicus, who did not recognize Thoros as ruler of Asia Minor, advanced against al-Maṣṣaṣa but was surprised by the Armenians and put to an ignominious flight with his 12,000 men. Thus not only the town, which was very well supplied with provisions and military material of all kinds, fell into his hands, but also a great part of Cilicia (Gregor. presb., transl. Daurulier, p. 334-336 = Doc. arm., i. 217 sqq.; Smbat, op. cit.). The emperor, himself too weak to avenge the insult, twice induced by gifts the Sulṭān Kīlidj Arslān II (Gregor. strongly: Mas'ud) of Kūshīa to attack Thoros. The Sulṭān, who on the first occasion (1153 A.H.) did not content with the defeat of the Armenians and the return of the lands taken from the Greeks, again attacked al-Maṣṣaṣa, 'Ain Zarba and Tāl Ḥamdun (Arm. Tāl Hamtuny) in 1156 but could do nothing against them and had finally to retire after heavy losses (Gregor. op. cit., p. 338 = Doc. arm., i. 171).

The emperor Manuel himself passed through Cilicia in 1159 with a large army to the assistance of the Crusaders. Thoros had already retired to Vahka in the desolate mountains (Armen. Rhyme Chvorn., in Doc. arm., i. 505) when the emperor entered al-Maṣṣaṣa at the beginning of November, but he did no injury to any one there (Gregor. transl. Daurulier, p. 333 sq. = Doc. arm., i. 187). The Frankish kings led by Baldwin came to pay homage to him in the town or on the adjoining pratum pallium (as Will. of Tyre, xiii. 27 translates Mardj al-Dibâdî) where his court was held in camp for 7 months (Gregor. transl. Daurulier, p. 358; Rohricht, Gesch. d. Kgr. Jerusalem, p. 298). Thoros was also able with great tact to become reconciled with him, and on acknowledging Byzantine suzerainty and ceding several towns in Cilicia, was recognised as "Sebastos" of Msiis, Azarbars and Vahka (Doc. arm., i. 186; Smbat, ibid., p. 622). His brother Miel, who attempted his life while out hunting between al-Maṣṣaṣa and
Adana, was banished by Thores and given by Nur al-Din the town of Kürüs (Kyrhos; Smbat, loc. cit.). After the death of Thores of Mısır (1168-1169; Smbat, p. 623), Mleh (Arab. Malîh b. Liwun al-Armani) succeeded him and at first ruled only over the district of the passes (Büldəd dər-ůrub). In 1171 he surprised Count Stephen of Blois at Mamistra and plundered him (Will of Tyre, xx. 25-28). In 1178 (1172-1173), supported by troops of his ally Nur al-Din, he took from the Greeks Adana, al-Maṣṣaṣa and Tarsus (Ibn al-Athir, xi. 255; Kamal al-Din, transl. in Röhrich, in Beitritte zu Gesch. d. Kreuzzüge, i. Berlin 1874, p. 336).

When Mleh’s successor Rüpen III fell through treachery into the hands of Bohemund of Antioch, his brother Levon (I) obtained his release in 1184 by ceding al-Maṣṣaṣa, Adana and Tall Hamdun (Titlun) and paying 3,000 dinars; immediately afterwards, Rüpen retook these strongholds from the Franks (Mich. Syr., iii. 397; Doc. arm., i. 394).

Het’um, the nephew of the Catholicoi Grigor IV and son of Cortvan N Taron, who came to Cilicia in 1189 with his brother Shahinshah, received from Levon II (1185-1211) his niece Alice, daughter of Rüpen III, in marriage and the town of Mısı̇s, but died in the same year (Smbat, in Doc. arm., i. 629; Marquart, Sündernemien and die Türkenreisen, Vienna 1930, p. 481 sqq.). The Emperor Frederick II (1190) was about to go to Syria via Tarsus and al-Maṣṣaṣa when he met his tragic end in the Kalkyados (alleged?) letter of the Armenian Catholics in Ibn Shaddad, in Rec. Hist. Orient. des Crois., iii. 162): a portion of his army thereupon went to Antioch via Tarsus, Mamistrissa and Thoje (Hişn al-Muthakka; not Portella, the Syrian passes, with which Röhrich, Gesch. d. Kgr. Fertuna, p. 530, identifies it).

Wilbrand of Oldenburg who visited the East in the train of Duke Leopold VII of Austria and the Teutonic Grandmaster Hermann von Selen, came to Cilicia in 1212 to Mamistrissa which he describes as follows: (Wilbr., c. 18, ed. Laurent, Peregrinatus, Leipzig 1864, p. 175): "Hac est civitas bona, super humen sita, satius amoen, hummus habens circa se territum, sed antiquitate coronatus, paucos in quodam respecto habens inhabitationes, quibus omnibus rex illius terrae imperat et dominatur." In the vicinity lay "quodam castrum quo erat de patri-mono beati Pauli, sed nunc tempore possidetur a Graecis." "In hac civitate [Mamistrisse] habituer sepulchrum beati Pantalonic, lupa vero dicit a Canetilla (cf. Tomaschek, S. R. Ak. Wien, 1891, p. iv, p. 71) magnam dictam". Levon II granted the republics of Genoa and Venice the privilege of having their own trading centres in al-Maṣṣaṣa, which could be reached by the sea from the shore of the mouth of the Djahn became silted up (Alishan, Sisewan ou l’Armeeno-Cilicie, p. 287). The attempt of Raymund Rüpen of Antioch to seize the throne of Armenia after Levon’s death in 1219 failed; he was, it is true, able to take Tarsus and attack al-Maṣṣaṣa but he was taken prisoner by Constantine of Bartheb and died in prison in 1222 (Doc. arm., i. 514; Röhrich, Gesch. d. Kgr. Fertuna, p. 741 sqq.).

For a century the Rupenhids ruled almost unsettled in the town. Their glory reached its height under the splendid-loving Het’um I (1219-1270). Here were held the annual festivals of the Church at which numerous princes and nobles used to gather down to the last and difficult years of the king. Here was held the brilliant ceremony at which his 20-year old son Levon was dubbed knight. Hither the king brought the seat of government after the destruction of Sis (Alishan, Sisewan, p. 287 sqq.).

Baibars sent a punitive expedition against Het’um in 664 (1266) under al-Malik al-Manṣūr of Hama, who advanced as far as Kafr al-Anmūdān and into the district of Sis, while Saif al-Dīn Kīlibān took al-Maṣṣaṣa, Adana, Ayās and Tarsus (al-Maṣṭr, Hist. d. Sult. Mam., transl. Quatremeré, i. 34 sqq.; Abu ‘l-Fida‘ī, Annal. Musul., ed. Reiske, p. 158; al-Nuwayri, in Welsh, Gesch. d. Chal., iv. 56). Three years later (1269) the district of al-Maṣṣaṣa was visited by an earthquake (al-Suyūṭī, in Doc. arm., i. 1906, p. 772, note l). Baibars (Arm. Panitkhtar = Arab. Būnudūdār) himself in 673 (spring of 1275) took the field against Levon III, son of Het’um, laid waste the whole of Cilicia as far as Korikos and stormed al-Maṣṣaṣa and Sis, the former on 26th March. The inhabitants were massacred, almost all the houses burned and the great bridge destroyed (Armen. Kandarayn Masay, i.e. Kandarayn al-Maṣṣaṣa; cf. al-Maṣṭr, ii. 123 sqq. with note 154; Muḥammad b. Abu ‘l-Fadā‘ī, Gesch. d. Maṣṭranens, ed. Blochert, in Petrol. Orient., xv. 129; Barbeh, in Petrol. Orient., ii. 531; Smbat, Chronic, in Doc. arm., i. 653; Röhrich, Gesch. d. Kgr. Jerusalem, p. 967; van Berchem, C. J. A., i. 168, note 2). When in 697 (1297-1298) an army under the emirs Saif al-Dīn Kīlibān, the Nāʾib of Dimashq, Fāris al-Dīn Ilbeke al działalności of the Nāʾib of Saff, Saif al-Dīn Bizār al-Manṣūr and Saif al-Dīn ‘Azāz al-Sāliḥi invaded the land of Sis, al-Maṣṣaṣa is not specially mentioned among the unimportant places taken like Tall Hamdun, Hammūs (Humamīs), Kafr Nadjima, al-Maṣṣaṣa, Siftandak, Ḥadžar Shuglān, al-Nakṣar and Zandīdra (al-Maṣṭr, ii. 60-65; al-Muʿtaṣṣid, op. cit., p. 607; al-Nuwayri, in Blochert, ibid.). In 1322, the Egyptians crossed the Djahn by a bridge of boats, got behind the Armenians who had retired to Mısı̇s and inflicted a severe defeat upon them; among those who fell are mentioned the barons Het’um of Dīlkoc, his brother Constantine, Waḥram Lotik, ‘Oṣhīn, the son of the marshal, along with 21 knights and many men (Smbat’s Continuator, in Doc. arm., i. 668). This authority also mentions a raid by an Egyptian force against al-Maṣṣaṣa (Masuesta), Adana, al-Mallūn (Mlun) and Tarsus in 1334 (Doc. arm., i. 67; Tomaschek, S. R. Ak. Wien, 1891, part viii, p. 68). The last Egyptian invasion took place in 823 (1373-1374). Among the towns destroyed were Sis, Adana, al-Maṣṣaṣa and ‘Ain Zarba, and Levon had to surrender in 1375 after a siege of nine months in Ghaban (Doc. arm., i. 686, note 3). The town thus passed nominally into the Fūṭūḥa al-Djahnīya of the Mamlūk empire; but it had, it is true, by now sunk into insignificance and it is not mentioned, for example, among the towns taken by Shahuwar in 1467 (Alishan, Sisewan, p. 290).

Armenian sources mention 8 archbishops of the town from 1175 to 1170 (1175-1260 David, 1215 Johannes, 1266 Sion, 1306 Constantine 1316 John, 1332 Stephen, 1342 Basil, 1362-1370 unnamed; cf. Alishan, op. cit., p. 290). Michael Syrus knows only Job of about 800 A. D. (Chron., transl,
Chabot, iii. 23 sq., 451, Nö. 27) and the Frankish writers from 1100 onwards Bartholomaeus, before 1234 Radulphus and in the years from 1162–1238 three or four more unnamed bishops (Albert Aquensis, ix. 16; Will of Tyre, cit. from the Quinm, Oriens Christianus, iii. 1198–1200; Rohricht, Gesch. d. Kgr. Jerusal., p. 42, 202). On account of the many Egyptian invasions the Latin archbishopric was removed to Ayas by Pope John XXII in 1320 (Alişan, Sizosan, p. 290).

After the fall of the kingdom of Little Armenia, the power of the Karmash-oghlu and Dhu 'l-Kadr-oghlu gradually spread in Cilicia. Selim I on his campaign against Egypt in 922 (1516) and on his return also preferred to keep to the east of their land (Taschner, Anatol. Wegzüge, ii. 32). Missis had been Ottoman since that year, in which the decisive battle was fought on Mardj al-Dibâdî. In Kafaraya a khan was built for caravans passing through in 1542 and restored in 1830 by Hasan Paşa. The Djalâh bridge became useless in 1736 when the central arch collapsed; in 1766 this was repaired but it was blown up in 1832 on the retreat of the Turkish troops from the fighting at Baïlân in order to hold up the advance of Ibrahim Paşa's pursuing army. As late as the middle of the xixth century it could only be crossed by an improvised wooden footbridge.

In modern times Missis is mentioned only by eastern pilgrims and travellers who as a rule only spent a short time there. Thus it was visited in 1432 by the Burgundian Bertrand de la Brocquière ("bîne-sur-Téban"), in the xviith century by P. Belon, 1682 the Mecca pilgrim Mehemedd Edib, 1695 the Armenian Patriarch of Antiochios Marakos, 1704 Paul Lucas, 1736 Chevalier Otter, 1766 the Dane Carsten Egebhr, in 1783 Mac. Kennir, 1834 Acher Ebal, 1856 Colonel Chesney, 1840 Ainsworth, 1853 Victor Langlois, whose works are exhaustively used by Carl Ritter (Erkundige, i. 66–115). The "Merges Galles" visited by Ludwig von Rauter on July 8, 1568, is not (as in Rohricht-Meisner, Deutsche Pilgerreisen nach dem hl. Lande, 1880, p. 434, note 43) al-Maqṣūṣa, but Merkez Kal'esi on the Báb Iskandarûn (Cilic.-Syr. passes). Somewhat fuller descriptions of the modern Missis and its ancient and mediæval ruins were given in the xixth century by Langlois, Alişan and at the beginning of the xxth by Cousin (see Bibliographie).

The stretch of the Baghdad railway from Doruk south of the Taurus via Adana and Missis to Maľmur at the foot of the Amanos was opened on April 27, 1912. As a station on the railway (the station is actually 1½ miles N.W. of the place) the town gained a certain strategic importance in the Cilician campaign of the French in 1919–1920 (1919: settlement of about 1,2–1,500 Armenians; May 27–28, 1920: futile Turkish blockade of the town,xiv. 10; Le Quien, Oriensstrong; end of July: withdrawal of the troops to Adana; cf. E. Brémond, La Cilicie en 1919–1920, in Rev. Étud. Arm., Paris 1920, i, p. 311, 360, 363, 365). After the Turkish occupation the newly settled Armenians were probably exterminated in the usual way. The importance of the town has now passed to the neighbouring Dihânân.

According to the Arab geographers, al-Maqṣūṣa lay on the Djalân (Tiganoes, sometimes confused by the Byzantine authors with the Zepes, Arab. Salihân, with which it seems to have had at one time a common mouth: George Cedren., ii. 362; Anna Comm., ii. 147), 1–2 days' journey from Baïlân and one from 'Ain Zarba and Aţha, 12 li. from the Quinm, Oriens Christianus, iii. 1198–1200; Rohricht, Gesch. d. Kgr. Jerusal., p. 42, 202). From the Friday mosque in the town; in front of the town lay a beautiful fertile plain (the ancient 'Aravw. mûsâ). Al-Maqṣūṣa lying on the right bank was connected with Kafaraya by an ancient stone bridge built by Constantius and restored by Justinian. The country round was rich in gardens and cornfields, watered by the Djalât. According to Yâkût, the town originally had a wall with 5 gates and Kafaraya, one with 4 gates. A peculiarity of the town were the valuable fur-cloks exported all over the world. Ten miles from al-Maqṣūṣa, which is somewhat inaccurately placed by Ibn Khurdâd-Bih, Yâkût and others on the Djabal al-Lükkân (Amanos), was the plain of Mardj al-Dibâdî, which is often mentioned in the records of the fighting between the Mamluks and Little Armenia (probably the "ager Mosquettiae" on which Cicero encamped: ad fami., iii. 8). In it, N. E. of the town on the road to Sis, was the fort of al-Amûdîn (al-Makrîzî, ed. Quatremère, ii/ii. 61; cf. Ka'fî al-Amûdîn in Abu 'l-Fida, Ann. Musil., ed. Reiske, v. 18, located by Alişan, Sizosan, p. 225 sq. too far east in "Hemétêre-Kalési"). A field near Mardj al-Arâkhân is also mentioned near al-Maqṣūṣa (Yâkût, iv. 487; Saîf al-Dîn, Marâdîdî, ii. 74). Tall Hâmid, a strong fortress of the Thuhîr al-Maqṣūṣa, corresponds to the modern Hâmîdîye, now called Dijân (Z.D.M.G., xi. 191, 200; Yâkût, i. 866; Saîf al-Dîn, Marâdîdî, i. 211; Ibn al-Shînâ, Bâiritt, ed., p. 339). There also was Tall Hâm Yâkût, i. 867; Marâdîdî, i. 211; Ibn al-Shînâ, Ibid., exact site unknown). Al-'Ain at the foot of the Djabal al-Lükkân, over which went the Darb al-'Ain pass, was also one of the forts of al-Maqṣūṣa (Yâkût, iii. 756; Marâdîdî, ii. 293); on the frontier against Halab lay Bïka (q.; cf. van Berchem, Voyage en Syrie, i. p. 257, 5; Hisn Sînân (al-Balâdherî, p. 165; Yâkût, iii. 155) is probably also to be sought near al-Maqṣûsu. A pass called Thandiat al-'Ukhâbî, to be distinguished from that of the same name near Damascus, was in the region of al-Maqṣûsu (Yâkût, i. 936; Marâdîdî, i. 230). Even the remote fortress of Samâlû (on its site cf. Tomacheck, Festschrift f. H. Kipert, p. 144) was sometimes reckoned in the Syrian Thuhûr and located near al-Maqṣûsu and al-Tarsîs (Balâdherî, p. 170). Dhamâlû, Yâkût, iii. 416; Marâdîdî, i. 167; Byzantinâ to kôrûnê Sîmûlîbê) and al-Safaşî on the present Sugudîyû (Z.D.M.G., xi. 180; Reiske on Abu 'l-Fida, Annal. ii. 649, note 76 according to Hâdâyîd Khâlâfa: "Heîs Safashî, that is Sugud") is also reckoned by Yâkût (iii. 401) to the marches of al-Maqṣûsu. Not far from the town was a Syrian monastery, Gaûkâth (mentioned about 1200 a. d. Barhebr., Chron. eccles., ed. Abbélou-Lamy, i. 624; in Alişan, Sizosan, p. 295; Gaûkôth, probably identical with 'Aqshubâ). The neighbouring fortress of Amadômâ (now Thalûn-Kal'e) and Cambethfort ("in territorio Melonii", i.e. of Mûn, Arabic: al-Mallûnî) were according to Wilbrand of Oldenburg (op. cit.) about 1212 in the possession of the Teutonic Order (Allemann). The Venetians had a church in al-Maqṣûsu (Gestes des Chirops, in Doc. arm., ii. 831). Armenian authors mention there the churches of St. Sarkis, Thoros and Stephan (Alişan, p. 288 sq.).

The present Mississ, (frequently also written Misiss)
cf. Taeschner, Türk. Bibl., xxii, pl. 16 and 17), is an insignificant village lying on almost exactly 37° N. Lat. (pict. in Alishan, p. 283), which is stretches along the heights of the right bank of the Dijihan-cai. A stone bridge with nine arches (in Bae- deker, Konstantinopol, 1914, p. 303 wrongly: “five arched”) the foundations of which are in part ancient (pict. in Alishan, Sissawan, p. 289; Lohmann, In Kloster zu Si, p. 15), leads to the left bank where piers of walls and inscriptions mark the site of the ancient Mopsuestia. Here lay the medieval Kafarbaiya; while this form is in general use in Arabic texts and in modern authors, al-Idrisi (transl. Jaubert, ii. 153) and Haddi Khalfa (Dijihan-numa, Constantineople 1145 [1732], p. 602) have Kafarbaiya (Taeschner, Türk. Bibl., xxii, p. 145), as Langlois (Voyage, p. 402) and others apparently heard on the spot. The name is unknown there now (Heberdey-Willhelm, Denkschr. Ak. Wien, xiv. part vii, p. 11 sq.; the Turkish General Staff map in the German version of July 1918, Sheet Adana, calls the two halves of the town “Misis Nahjesi” and “Huranjie”). According to Ibn al-Shiha (Bairdt ed., p. 179), Kafarbaiya was also called Lih Le Baggidit.

Misis lines where the river emerges from a gorge with walls of yellow loess at which the last foothills of the highlands between the Sahin (now Saihun) and Dijihan (now Dijihan-cai) in the N.W. and the Djabal Naur (Nur Dagh, 2,200 feet; pict. in Alishan, p. 284), a part of the Djabal Misis (Stadiasmus mar. mag.; Nevs sqv.), in the southeast most. This ridge, which takes its name from the town, lying in the centre of the Cilician plain on the left bank of the lower Dijihan and linked up with the Amanos in the east, is celebrated, particularly in the Djabal Naur, for its rich flora, which was studied by the Austrian Theodor Kotschya on 24th-26th April 1859. On account of its medicinal herbs, Ibn al-Rumayn in his commentary on the book of Dioscorides says that many writers took al-Masiga to be the city of the wise Hippocrates (Ibuqraj) who, however, according to others, belonged to Himis (Mufadjal b. Abi ‘I-Fadali), in Patrol. Orient., xiv. 393; Ibn al-Shiha, Bairdt, p. 180).

Near the mouth of the Dijihan, which at one time was navigable for small ships up to al-Masiga, lay al-Mallin, the site of which is not known (Malla; now rather Bebelit than Karatash; cf. R. Kiepert, Form. orb. antiqui, viii, text p. 190). The Frankish writers also speak of a “portus de Malimastra” (Raimundus of Aiguelers, Historia Francorum, qui eburnum Jerusaleu, c. xii, cf. Doc. arm., i. p. xvi, note 1), probably of the “fauces fluminis Malimnstrae”, where al-Idrisi mentions the place al-Busah (Z. D. P. V., vii. 141; Tomasechek, S. B. Ak. Wien, xcviii, 1891, fig. viii, p. 69 writes al-Basah).

E. (HONIGMANN)

MISWAK (A.), a term denoting the toothbrush as well as the tooth-pick. The more usual term is siwak (plural swāwak) which means also the act of cleansing the teeth. Neither of the two terms occurs in the Kur‘ān. In Ḥadīth miswāk is not used, siwāk, on the other hand, frequently. In order to understand its use, it is necessary to know that the instrument consists of a piece of smooth wood, the end of which is incised so as to make it similar to a brush to some extent. The piece of wood used as a tooth-pick must have been smaller and thinner.
MISRÁK — MÍZAF

as appears e.g. from the tradition in which it is related that Muhammad one day received a visitor and kept the tooth-pick "at the end of his tongue" (Mír, Žákhrá, trad. 45).

Concerning Zaid b. Khálid it is related that he used to sit in the mosque keeping the tooth-pick behind his ear, "just as a writer will keep his pen" (Abú Dáwíd, Žákhrá, báb 25; al-Tímírdít, Žákhrá, báb 18). When Muhammd was in his last hours, there entered a man with a piece of wood fit for a sívwák; Êíshá took and chewed it, so as to make it smooth (Bukhráí, Mágížá, báb 83).

In general Hádíth emphasises the.value attached by Muhammad to the sívwák. When he entered his house, his first movement was towards it (Muslim, Žákhrá, trad. 43; Abú Dáwíd, Žákhrá, báb 27). His servant, Abú Aláílh b. Músáíd has received the epithet of žákhrá al-sívwák "the one who used to take care of Muhammad's sívwák" (Bukhráí, Físííb al-Sáhíhá, báb 20). When Muhammad awoke at night, he cleansed his mouth by means of the sívwák before he washed himself and performed night-prayer (Bukhráí, Adúhám, báb 8; Weríd, báb 73; Táhádídýud, báb 9; Abú Dáwíd, Žákhrá, báb 30; Muslim, Žákhrá, trad. 46. 47). When fasting, Muhammad also used the sívwák (Ahdám b. Ḥambal, iii. 445, 446).

The miswák is chiefly used before warídí as a preparation before the šáliút. It is said that this was the practice of Muhammad (Muslim, Žákhrá, trad. 48) who attached so great a value to it, that he would have declared it obligatory before every šáliút, were it not that he feared thereby to overburden his community (Bukhráí, Adúhám, báb 8; Muslim, Žákhrá, trad. 42; Abú Dáwíd, Žákhrá, báb 27; Tímírdít, Žákhrá, báb 18). In one tradition it is said, as a matter of fact, that the obligatory use of the sívwák before every šáliút was introduced by Muhammad as a compensation for the abolition of the obligatory warídí before every šáliút (Abú Dáwíd, Žákhrá, báb 25). In another tradition (Naṣõí, Qíjumá, báb 66) the use of the sívwák is called obligatory before Friday-service.

The appreciation of the miswák which appears from all these traditions culminates in the fact that it belongs to the customs of the "natural religion" (fíra: Abú Dáwíd, Žákhrá, báb 29) or to the ordinances of the Apostles (Tímírdít, Niśák, báb 1).

Nevertheless Fíkh does not declare the use of the miswák obligatory in any case. There is general agreement on this point. According to some traditions, however, the Záhirítes did declare the use of the miswák obligatory before the šáliút, but these traditions are not generally accepted. According to Fíkh the use of the miswák is recommended at all times, especially in 5 cases: in connection with the šáliút, under all circumstances; in connection with the warídí; with the recitation of the Kurán; after sleep; and as often as the mouth has lost its freshness, e.g. after long silence.

According to the school of Šáhí the use of the miswák is bálàmabále (makrúkh) between noon and sunset at the time of fasting; for the nasty smell (khúla) of the faster's breath is beloved by Allâh (cf. Naṣõí, Žákhrá, báb 6).

It is recommended to use a miswák of ará, wood of medium hardness, neither too dry nor too moist; to cleanse the palate as well as all sides of the teeth, beginning from the right side of the mouth, moving the miswák upwards and downwards in order not to hurt the alveoles.

Tooth-brush; the juridical points of view in al-Nawawí's commentary on the Šáhí of Muslim, Bulák 1290, i. 325; Wellhausen, Rest arab. Heidentumus, 2nd ed., p. 172; Goldziher in R. H. K., xliii. 15 sq.; Buhl, Das Leben Muhámmads, p. 354, note 94 (A. J. Wensinck) Míta. [See Muţa.] MÝTHKÁL (A.), the weight of a thing; this is the meaning of the word in the Kurán; a particular weight for weighing precious metals, jewels, drugs, etc., probably the oldest unit in the Arab Troy system. The mithkál corresponds to the Roman solidus of the Constantinian system which the Arabs adopted in Syria. Abú d-Málík took it over for his unit of gold when he reformed the currency in 77 (696). His dinár weighed a mithkál of 65.5 grains (4.25 grammes), hence mithkál is used as a synonym for dinár. The silver dirham weighed 1/40 of a mithkál and the mithkál contains 24 kíra. Slight variations in weight are found in the different parts of the Muhámmadan world. Bibliography: See the bibliographies to the articles DÝNÁK and ḤÁBBÁ. (J. Allan) MÝWÁDÍ. [See Ḥámár.] MÝZÁF, MÝZÁFA (A., plur. MÝází). Among the various classes of musical instruments dealt with by Arabic, Persian and Turkish writers on music is one which embraces those with "open strings" (awyr múnlka) such as the lyre or cithara, harp, psaltery and dulcimer. Among them are instruments grouped as mýází. Nówadays, this term refers to all stringed and wind instruments (M. F. O. E., vi. 28) but in the Middle Ages it had a more restricted meaning and stood for "instruments of open strings", Al-Djáwáhid (d. ca. 1003) and al-Sáfíhání (d. 1261) define them as "musical instruments which you beat upon as in the "ud" (lute), ţunbár (pandore) and the like", meaning by this that mýází were played with the fingers or plectrum in the same way as the "ud" and ţunbár were. The Žàidí al-Árás includes the tambourine among the mýází, but it is an erroneous deduction from the saying of 'Umár, margin b. ťábītí du'úfí ("he passed by the sound of the drum"), which has misled many writers (cf. Sachs, Reallexikon der Musikinstrumenten, s.v.). The author of Múlrín al-CLUmí (9th cent.) states that the mísáfa was "a stringed instrument belonging to the people of al-Írak" (p. 237), whilst al-Mútárisí (14th cent.) says that the mísáfa was "made by the people of al-Yaman", a provenance which Ibn Khúdrúžhib (d. 912) also gives the instrument (al-Máṣáíh, viii. 93). A more precise classification is allowed by al-Shállí, which includes the mísáfa among barbitons (barábít) and lyres (lárán), which agrees with our oldest authority, al-Ìilábí b. al-Múzafar (11th cent.), who says that both mísáfa and mísáfí were terms given to "an instrument of many strings", whilst al-Farábí (d. 950) specifically denominates mádásí as instruments of "open strings" (Kosegarten, Lib. cent., p. 77, 110). In the Kíláb al-Ághámí the mísáfa is rarely placed in the hands of the minstrels, probably because it was of inartistic merit. One performer on the instrument, Muhammad b. al-Háríb b. Bàshkír (16th cent.), was asked sarcastically if it was a rat-trap (Adhámá, x. 153).

Tradition avers that mázísí were "invented" by Dílát the daughter of Lamák, who was of the
seventh generation from Adam (al-Mas'udi, viii. 89). Since there was a hadith condemning maqāsīf as signs of the end of the world (al-Tirmidhi, ii. 33) it is quite likely that the stūkahā thought it consistent with policy to make Dīlāl or Dīlāl ("error, destruction") the originator of these ma-lāhi or "forbidden pleasures". On the other hand, we read that "David the Prophet had a mi'zafa on which he used to play when he recited the psalms" (Ibl al-Fāri'd, iii. 189), which was an echo of the Jewish tradition that he was an adept on the kinnōr (I Samuel, xvi. 19, 23). The name may be a survival from the days of belief in sympathetic magic. The voice of the djinn was termed the 'azf, and the spiritual world could be conjured by the sounds of the mi'zafa. In Islamic times musicians claimed that their music was inspired by the djinn. The Greek μαγάς was an instrument of the same class as the mi'zafa. It was of Lydian origin and the name is suspiciously like the Semitic one.

Lyre and cithara. Although we see these instruments in the hands of the ancient Semites on the monuments they do not appear to have had acceptance among the musicians of I-lāmic times except with the fallāḥīn, unless the seven-stringed wandāf (= sandj) of Khurāsān was such an instrument (al-Mas'udi, viii. 90). Both words are of Greek origin and they appear in Arabic as lūr and šīṭara generally. In Palestine and Egypt to-day, a primitive type of lyre is known under the name of ṣūnūra barbāriya or šīṭara (kissara) barbāriya. Villoteau (Descr. de l'Egypte, état mod., i. 918) and Saint-Saëns (Lavignac, Encyc. de la musique, i. 528) have shown how much of the ancient Greek method of lyre-playing still obtains in the modern Egyptian šīṭara-playing. It is worthy of notice that the Arabic word for striking the šīṭara strings is ḫarraba, and this is practically identical with the Greek χέρω.

Harps. Whilst we possess an actual example of a Sumerian harp with the sound-chest below the strings, this type does not seem to have had any vogue with the Arabs or Persians in artistic music, and is only found among the peasantry. In Palestine and Upper Egypt to-day it is called the ṣūnūra sunudāni and nanga. The harp with the sound-chest above the strings has been a far more important instrument with the Semites and is to be found in the Assyrian sculptures (cf. the Assy. word sanāš and the Ethiopic sanē); That extremely chatty Turkish writer Ewliyya'īn Celebi says that this instrument, which the Persians called the lang, was "invented" by Pythagoras to solace Solomon (Travel, ii. 227), and even al-Shalāji says that it was of Byzantine (Kūni) origin (fol. 15). Yet Ibn Khuradīdhab and al-Djawhari show that it was peculiar to the Persians and, indeed, the type may be found on the Sāsānian sculptures (Ker Porter, Travel, ii. 175).

The Arabs called it the djanq and/or sandj (cf. al-Djawalikī, ed. Sachau, p. 97). It may be that the djanq and sandj were different types of harp, the Persian and Arabian. There were certainly two types, the straight sound-chest and the crooked. In the Maṣūfīh al-'Ulām the Byzantine salūk (ṣawmōn) and fihr (ṣapi) are likened to the djanq and sandj respectively. Among the Arabs the djanq is mentioned as early as al-Ash'ā Malmūn (d. ca. 629). Al-Fārābī devotes a section in his Kitāb al-Maṣūfīh to maqāsīf, djanq and/or sandj, and other instruments "in which there is made to every note, according to its state, a solitary string", and he shows them strung with both fifteen (diatonic) and twenty-five (chromatic) strings (Kosegarten, l. c.). Both Ibn Sinā (d. 1037) and Ibn Zaila (d. 1048) deal with the sandj, whilst in the Kanz al-Tuḥaf (xivth century) and the works of Ibn Ghāibī (d. 1435) the lang is fully described. The oblique sound-chest was 109 cm. long, and the handle (dashū) 81 cm. long. From the sound-chest to the horizontal bar below twenty-five strings of gourd hair were stretched, being fastened to metal pegs (muṣālū). Some players even used thirty-five strings so as to embrace the scale of the Systematists. The face of the sound-chest was of skin, but the remainder of the framework was of vine or plum tree wood. The handle was placed under the left arm (cf. the pictures in MSS.) and the fingers of both hands were used in performance, plectra (zaḵmīn) being fastened to the finger tips. Nowadays the harp has fallen into complete desuetude among the Arabs and Turks. Even among the Persians it has become rare, and in its modern form it was little different from the occidental instrument (Advieu, La musique chez les Persans, p. 13), whilst the instrument shown by Kaempfer (xvith century), under this name was a zither. In 1638 Ewliyya'īn Celebi found only twelve players of the lang in Constantinople because, he said, it was a difficult instrument to play (Travel, i. 234). At this time the Turkish lang had forty strings, and a very large instrument of the xvith (not xvith) century is given by Engel (Mus. instr. in the South Kensington Museum, p. 59).

Although the "humped back" of the lang or djanq became a favourite theme for poets, and it was certainly the best known type, yet an instrument with a "straight back" was also to be found. A more pronounced "hump" existed in a type mentioned by Ibn Ghāibī and called, probably on account of this feature, the agē. It was strong similarly to the lang but had a wooden instead of a skin face on the sound-chest, and its tuning pegs were also of wood.

A Byzantine harp called the salūk (erroneously written sabaḵ, chaṣkaḵ [cf. the art. SHAHK], which clashes with the opinion of the present writer, Red.), or salbān in most dictionaries and MSS.) was also known to the Arabs. It was actually a survival of the old Greek κασῳδων and is described in the Maṣūfīh al-'Ulām as "an instrument of the Greeks (Vānnanīs) and Byzantines (Kūni) resembling the djanq" (p. 236).

According to Ibn Khuradīdhab it had twenty-four strings (al-Mas'udi, viii. 91: cf. Farmer, Byzantine musical instruments in the ninth century, p. 4 sq.). Ibn Sinā classes it with the sandj among the instruments with "open strings" stretched across a space.

Psalters. In describing those instruments with "open strings" stretched across a surface, both Ibn Sinā and Ibn Zaila mention a particular type named the 'anqā. Whilst the name suggests a "long necked" instrument, the details given of strings of different lengths but identically situated bridges (hamīlit), compel one to recognize in it a trapezoidal psaltery, one species of which was known later as the kānān. The word 'anqā also stood for "phoenix", and we know that the Greeks of old had an instrument called the θηνάξ. This

THE ENCYCLOPAEDIA OF ISLAM, III.
may account for both the instrument and the name among the Arabs. It is not mentioned however, after the 6th century.

The ܚܢܝܢ [q.v.], the present-day psaltery of the Arabs and Turks, is said by Ibn Ghālibī to have been invented by Plato, although the instrument as known in the 6th century is attributed to Abu-Farābī (Ibn Khallīkān, Biog. Dict., ii. 309). The word itself is derived from the Greek खαδάτι. Although the instrument is delineated in the various MSS. of the Syriac lexicon of Bar Bahlīl (vth century) sub “ख指望”, yet the name ܚܢܝܢ is not given. It is mentioned in the Thaumaturg and One Nights (ed. Macnaghten, 49th and 149th nights), and in one place is designated the ܚܢܝܢ ܡܪܝ ("Egyptian psaltery"). In Spain it was particularly favoured and al-Shākundi (d. 1231) includes it among the Andalusian instruments manufactured at Seville (al-Makki, Arab. Historia, ii. 143—144).

In the Persian Kanz al-Tawḥīf and in Ibn Ghālibī it is described in detail. The shallow, flat, trapezoidal sound-chest, 9 cm. deep, was made of vine or plum tree wood. The lengths of the bass and treble sides were 81 and 40.5 cm. respectively, whilst the oblique side was 74.25 cm. It was mounted with sixty-four strings (seventy-two in Ibn Ghālibī), arranged trichordially. Although the ܚܢܝܢ has fallen into disuse in Persia, it is still a great favourite in the Maghrib, Egypt, Syria and Turkey, where it is to be found strung trichordially with from sixty-one to seventy-five strings.

A rectangular type of psaltery of greater compass was the ܒܫܒܡ. It was invented by Ṣafī al-Dīn ʿAbd al-Muʿmin (d. 1294) and a design is sometimes to be found in his Kitāb al-ʿArūs (see Farmer, Arab. musical ms. in the Bodleian Library, frontispiece). Its features are also fully discussed in the Kanz al-Tawḥīf and by Ibn Ghālibī. Its dimensions were 74.25 × 54 cm., whilst the depth of the sound-chest was 27 cm., 178 strings were mounted on the instrument.

Dulcimer. Ibn Sinā and Ibn Zaila describe an instrument with "open strings" played on with beating rods (mazāfīr) which is called the ܒܫܒܡ (*"Chinese ܚܫܫ") is clearly the dulcimer, later to be generally known as the 穰.BorderFactory (also written 穰(Borderly)), a word derived immediately from the Arabic, and probably finally traceable to the Greek 穰(Borderly). Indeed, it is invariably found in the hands of Jews and Greeks. It is of similar structure to the ܚܢܝܢ, but with two of its sides oblique instead of one. The strings, which are mounted dichordally in Egypt, are of metal and are beaten with sticks (mazāfīr) instead of plectra as in the ܚܢܝܢ. We find it mentioned by Ibn Khaldūn (d. 1406) and al-Ḥaṭḥāmī (d. 1563), but its popularity was but slight among the Arabs. In the 6th century it is doubtfully acknowledged by Russell (i. 152) and Niebuhr (tympanum.) In Egypt, both Villeteau and Lane show that it was only to be found in the hands of Jews, Greeks and other foreign residents, whilst native writers like Musharka and Darwish Muhammad make no mention of it. To-day it is practically unknown in Syria and Egypt. In the Maghrib it is unnoticed by Host, Christianowitsch and Salvador-Daniel, and although it is dealt with by Delphin and Guin, it is scarcely known to-day. In Persia however, it obtained greater recognition. In the 6th century it is mentioned by Chardin, but not by Kaempfer, whilst Advielle in the 6th century gives both a design and a description. In Turkey, whilst the word is registered in the 6th century by Meninski, it is not mentioned by Ḥadījī Khālīfā nor described by Ewyīyaʾ Āṣifī, in their lists of Turkish musical instruments. In the next century however, it is recognised by Toderini, and to-day the 穰(Borderly) is one of the most esteemed instruments in the country, where it may be seen in two forms: the 穰(Borderly) and the 穰(Borderly) ܡܪܝ. The former, exclusively used by the Jews, has 160 strings, grouped in fives, giving thirty-two notes, a two octave chromatic scale. The latter, which is confined to the Turks, was introduced from the West about the middle of the last century by a certain Ḥilmi Bey. It is mounted with 105 strings, also grouped in fives, which are placed on the sound-chest in the Occidental way.

(4. O. Farmer)

AL-MIZĀN, the balance, is the nomen instrumenti from wannana "to weigh," which means to weigh in the ordinary sense and also to test the level of, like the Latin libra. Here we shall discuss:

1. The various instruments used for weighing in the ordinary sense; brief notes are added on the ascertainment of specific gravities. 2. Levelling instruments.

1. Balances.

The steelyard (al-karasfīf, q.v.) has already been dealt with; the general principles of the balance are also discussed in that article. — The usual balance with two arms of equal length had the same shape among the Muslims as in ancient times and at all periods of the west; this we know from extant specimens and illustrations in various works, notably in al-Khāzīnī, in a manuscript of al-Kāzmīn with reference to the constellation Libra (fig. 1), in a manuscript of Hartrī, in the ʿĀrīn ʿAlīhī of Abu l-Fadl (fig. 2). In the beautiful manuscript from which Ch. Schefer published the Sefar Nāmeh of Naṣīrī Khusrav,
on p. 88 in the illustration of the Masjid al-Aqṣā there is a balance labelled terasu (Sefer Naméh, Relation du voyage de Nassiri Khorau, ed. Ch.) and is contrasted by the ḥāhān al-ṣafū to the ḥabhān (steelyard), also taris from the Persian terūsū, then miḥmar for scales and ḥabba for beam and tongue. Mīḏjam means the tongs and also the beam. According to J. Ruska, ḥabba seems to be used for scales (for gold). On the expressions connected with karastān, see that article. Al-Maḳḍīsī mentions Ḥarrān as a place where balances were made, in his work Aḥṣan al-Taḥāṣim fi Maʿrifat al-ʿAqṣām, p. 141; in this town many very skilful mechanisms were engaged in making astronomical instruments. The accuracy of the balances made in Ḥarrān was proverbial.

The Arabs devoted special attention to the construction of balances used to identify metals and jewels from their specific gravity, to distinguish false from genuine and pure and to ascertain the composition of alloys of two metals by the use of the principle of Archimedes. They called these balances mīḏān al-māʾ, “water” (hydrostatic) balances. Of makers of these, al-Khāzīnī (c. 1100, q. v.) mentions: Sanad (Sīnd) b. ʿAlī (c. 250 = 864), Muḥammad b. Zakariyyā al-Rāzī († 320 = 932—933), Ibn al-ʾAmīd († 359 = 969—970), Yuḥannā b. Yūsuf (perhaps al-Kaṣṣ, d. c. 370 = 980—981), Ibn Sīnā († 428 = 1037), Aḥmad al-Faḍl al-Maṣṣāḥ (the “measurer”, also mentioned by al-Bīrūnī without the “Massāḥ”), Abū Ḥaṣṣ ʿOmar al-Khaṭībī (as the celebrated mathematician is never called Abū Ḥaṣṣ, it is doubtful whether he is the individual mentioned by al-Khāzīnī). The balances made by these men are still fairly simple as only two, or at most three, scales were used in them. A contemporary of al-Khāzīnī, namely Abū Ḥaḳīm al-Muẓaffar Ibn Ismāʿīl al-ʾAṣḥārī (d before 515 = 1121) added two more scales; these and other improvements made the scales much more convenient to use. Of him al-Baiḥaḵī says (E. Wiedemann, Beitr., xx., Einige Biographien nach al-Baihaḵī, in S. B. P. M. S. Erls., xlii, 1910, p. 17): “He constructed the balance of Archimedes with which one ascertains forgeries. The treasurer of the great sultan feared that his frauds would thus be discovered. He therefore broke the balance and destroyed its parts. Al-Muẓaffar died of grief as a result”. Al-Khāzīnī then took up al-Muẓaffar’s work and made the balance a

Fig. 1.

Schefer, Publications de l’école des langues orientales vivantes, ii. ser., i., Paris 1881). The common balance is called mīḏān but in the Kūrān we also find ḥūṣfās, which, according to al-Thaʿlabī, is a loanword. Other names are ṣḥākin, which does not only mean the beam and tongue of the balance

Fig. 2.

find ṣḥākin, which, according to al-Thaʿlabī, is a loanword. Other names are ṣḥākin, which does not only mean the beam and tongue of the balance

Fig. 3.
most accurate means of measuring; he called it the universal balance, al-mizān al-wājīmi. But, no doubt in memory of his predecessor, he called his book Kitāb Mīzān al-Iḥkām.

Here we shall describe somewhat more fully the "balance of wisdom" 1) of al-Khāzīnī.

A l-Khāzīnī gives the beam $A$ of the balance (fig. 5) a thickness of six cm. and a length of

---

1) H. Bauerreiss (Zur Geschichte des spez. Gewichtes im Altertum und Mittelalter, Dissertation, Erlangen 1913) has reconstructed the "balance of wisdom", as nearly as possible following the data of the original. Reproductions are in Erlangen and the German Museum in Munich. The illustration is taken from a photograph. In the original right and left are reversed.
two m. In the centre it is strengthened by an additional piece C, obviously intended to avoid any bending at this point. A cross-piece H ('arida) is let in here. Corresponding to it is a similar cross-piece F on the lower part of the tongis, in which moves the tongue D, itself about 50 cm long. The upper cross-piece E is hung by rings to a rod which is fastened somewhere. Pegs or small holes are placed at exactly opposite places of the cross-pieces B and F to which threads are tied or drawn through. The friction at an axis is thus avoided, which, in view of the great weight of the beam, is quite considerable. The knob visible below the beam under its centre is used to secure the tongue to the beam or to take it out in order to adjust it evenly. The tongue has for this purpose a peg at the foot which goes through a hole in the beam. Al-Khāzīnī also observes that one could also take shorter beams but then all the other dimensions must be proportionately smaller. The beam is divided not on one side only, as in the illustration, but on both. The scales are hung on very delicate rings of steel (ṣawāb) "ravens", the points of which fit into little niches on the upper surface of the beam. Five scales are used in ascertaining specific gravities, i.e. in investigating alloys and examining precious stones. Of these the scale H (fig. 5a) is called the cone-shaped or al-hākim, the judge, as it is used to distinguish false from true. It goes into the water and in order to meet with less resistance in sinking is cone-shaped and pointed below. The scale f is called the winged (muqannab, fig. 5b and 5c, side and top view). It has indented sides so that it can be brought very close to the adjoining scales. It is also called the movable (munakkal). There is also a movable running weight K (al-rumnāna al-sāyāra) which serves, if necessary, to adjust the weight of the lighter beam; it is therefore also called the rumnāna of the adjustment (al-sāyāra). The other scales are used to hold weights. Al-Khāzīnī attained an extraordinary degree of accuracy with his balance. This was the result of the length of the beam, the peculiar method of suspension, the fact that the centre of gravity and axis of oscillation were very close to each other, and of the obviously very accurate construction of the whole. Al-Khāzīnī himself says that when the instrument was weighing 1,000 mithkāls, it could show a difference of 1 haba = \(1/100\) mithkāl, i.e. about 75 centigrammes in 4.5 kilogrammes. We thus have accuracy to 1/100,000.

Al-Khāzīnī used his scales for the most varied purposes. Firstly for ordinary weighing, then for all purposes connected with the taking of specific gravities, distinguishing of genuine (ṣamīm) and false metals, examining the composition of alloys, changing of dhirams to dinārs and countless other business transactions. In all these purposes the scales are moved about until equilibrium is obtained and the desired magnitudes in many cases can at once be read on the divisions on the beam.

False balances. That as early as the time of Muḥammad balances showing false weights were used for fraudulent purposes is shown by various passages in the Kurān (Sūra xxvi. 182; vii. 13; xxi. 37). We read for example: "Weigh with the just (or upright, mustaṣṭām) balance", Al-Ḍawhari (middle of the xiiith century; cf. E. Wiedemann, Beiträge, iv., Uber Wagen bei den Arabern, in S. B. P. M. S. Erfg., vol xxxvii., 1905, p. 388) describes two such arrangements. In the one the beam of the balance consisted of a hollow reed closed at the ends in which there was some quicksilver; by a slight inclination of the beam this could be made to flow as desired to the side of the weights or of the articles and thus make the one or other appear heavier. A balance like this was used in Cairo in the time of E. W. Lane by a dishonest police inspector (muḥtasib). In the second pair of scales the tongue was of iron and the merchant had a ring with a magnetic stone. By bringing the ring close to it the balance went down to right or left.

The balance or the principles applying to it were used for many purposes besides weighing. Contrivances turning on an axis in which sometimes one and sometimes the other side becomes lighter or heavier, especially by the admission or release of water, were used to produce automatic movements; they are often called mīzān (cf. e.g. the writings of the Banū Mūsā and of al-Djazari; e.g. in F. Hauser, Über die Kulturgebiete der Mūsā’schen Schule, Abt. 2, Gesch. der Naturwissenschaften und Med., Heft II, 1922; E. Wiedemann and F. Hauser, Über die Uhren im Bereich der islamischen Kultur, in Nova Acta der Kais. Leop.-Carol. Akademie, vol. c., 1915, No. 5 and other passages). In the hour balance used to measure time, a container filled with sand or water is hung at one end of a lever poised with arms equal and has a hole in the bottom. The equilibrium disturbed by the gradual loss of sand or water is compensated by weights which move along the other arm. From their weight and position one can calculate the time that has passed (E. Wiedemann, Beiträge, xxxvii.: Über die Stundenwaage, in S. B. P. M. S. Erfg., xlvi., 1914, p. 27; a full description is given by Prof. F. Hauser in E. von Bassermann-Jordan, Die Geschichte der Zeitmessung und der Uhren).

Most artisans also describe as "scales" al-misāra, i.e. ruler, al-barkas, the compasses, al-khāniyā, set square and level, as they serve to show lapses from the straight etc. — Miṣqā’il, ell. chākin, kubān are "scales" with which one measures whether things are correct or over measure in business transactions (Ra‘īṣil lughāt al-Safā, Bombay 1305, i/ii. 128).

For a few further meanings of al-miṣāra see Dozy, Supplement, s. v.毽”室。— In mathematics the balance is used to elucidate certain mathematical processes. The steelyard is used to illustrate the inverse relation: the weights are in inverse proportion to the length of the arms (cf. e.g. Th. Ibel, Die Wäge im Altertum und Mittelalter, in Programm Forchheim, 1905—1906, p. 93; Ra‘īṣil
with the water displaced weighed \( P'_{3} \), so that from \( P'_{3} - P_{2} \) we get the volume of water corresponding to the mass \( P_{1} \), which is then calculated by al-Bīrūnī for a weight of 100 mithkāls. As almost always, in ascertaining the specific gravity the Arabs rely on the ancients, particularly on the work of Menelaus “on the artifice by which one ascertains the quantity of each of a number of mixed bodies”, Fi Ḥila ṣaltī yu'raṣu bi-hā Miktār kult māḥkīd min ʿIdā Adjīmā mukhātāli (from the Escorial MSS.) and Maṭrīsī Fāmīyāt ʿimārāt al-Adjīmā al-mukhātāli (according to Ibn al-Ḳifṭī, p. 321; Professor Dr. Würschmidt is giving an edition of this work in Philologie). In al-Bīrūnī’s work, Archimedes himself is mentioned and a certain Manāṭyūs (according to Noldeke, probably Maxwīlaq). The Muslims however did not slavishly take over the statements of the ancients. Al-Bīrūnī, for example, emphasizes that one can ascertained the composition of an alloy of two components but not of one of three, as Menelaus says. Among the Muslims it was certainly al-Bīrūnī who did most in this field, in his work “on the relations which exist between metals and jewels in volume” (Makāla fi ʿl-Nisāb ṣaltī bah al-Fīlīzāṣ wa ʿl-Dawāwīr wa ʿl-Ḥāṣaf, cf. also al-Bīrūnī, Chronology, text, p. xxxiv), which still exists, and also in another work, which only survives in fragments quoted by al-Khāzīnī. Al-Bīrūnī was induced to compose the first named by the difficulties encountered by goldsmiths in ascertaining the quantities of metals necessary to copy a given article. As predecessors he mentions Sand b. Ṣafī, Yūḥānā b. Yūsuf, Aḥmad al-Ṭaṣār al-Buḥārī. So far as we know he was followed and his results were used by: Abū Ḥafs ʿOmar al-Khayyāmī (see above), al-Ashīzarī (see above), al-Khāzīnī (see above), Fakhr al-Dīn Muḥammad Ibn ʿOmar al-Rāzī († 1210, Suter, Nö. 328), and Abu ʿl-Fazl Allāmī, Elyāh Misraḵī, a work ascribed to Plato which was composed in the time of ʿAbd al-Salāt al-Saʿūdī by a slave of a son of Sinān, a Turkish work by Ḥaḍafārī, and a Persian by Muḥammad b. Maṣūr (on these works, as on mineralogical literature in general, see E. Wiedemann, Beitr., xxx.: Zur Mineralogie des Islam, in S.P.M.S. Erł., xli., 1912, p. 205). We must also mention the study by Abū Maṣūr al-Nairṣī who is not to be confused with the commentator on Euclid, and the work on the measurement of bodies which are compounded of

---

1) It is to be noted that expressions like specific gravity and specific volume, which refer to the unit of weight and the unit of volume are not found among the Arabs. Al-Bīrūnī, for example, gives the amount of water displaced by 100 mithkāls of various substances corresponding to their volume and the weights of the metals which have the same volume as 100 mithkāls of gold and in the case of other substances the same volume as 100 mithkāls of blue ṣafīt.

The statements on specific gravities refer to: A. Metals: gold, mercury, bronze (zjur), copper, brass (ṣiyāṭ), iron, tin (raḥiṣ), lead (nurrūf and urṣūb). B. Precious stones: blue yāḥūt, red yāḥūt, ruby, emerald, lapis lazuli, pearl, coral, cornelian, onyx and rock crystal. C. Other substances: Pharaonic glass, clay from Siminān, pure salt, salt earth (ṣābāḥ), sandarach, enamel (mīnā), amber, pitch, wax, ivory, bakkam wood, willow wood.

The weights of equal volumes of liquids and the volumes of equal weights of liquid are sometimes found directly, sometimes ascertained with the areometer of Pappus. The former magnitude plays an important part in the liquids used in every day life like oil and wine. The second was of more scientific interest. It is especially interesting that the Arabs found that hot water and hot urine had a larger volume than equal weights cold. They also knew that ice had a larger volume than the same weight of water.

The facts ascertained with the areometer of Pappus for fluids refer to cold fresh water, hot water, ice (does not properly belong to this connection), sea water, wine, gar, wine, sesame oil, olive oil, cow's milk, hen's egg, blood of a healthy man, warm and cold urine.

Fig. 7 shows the areometer reconstructed by H. Bauerreiss from al-Khazinī. *X* is a massive cone used to make the instrument heavy. There are inscriptions corresponding to the Roman numerals. For details the reader may be referred to H. Bauerreiss's article. — The principle that floating bodies of the same weight sink in water to the same depth finds application in a juristic trick cited in the Kitāb al-Hīsāf fi 'l-Fīkḥ of Abī Hātim al-Kazwīnī. The weight of a camel is ascertained by putting it in a boat and noting how deep the boat sinks. The camel is then replaced by iron weights until the boat sinks to the same level (cf. J. Schacht in G. Bergstrasser, Beitr. zur german. Philologie und Linguistik). In medical works and treatises on weights and measures, figures are given for the weights of equal volumes of wine, oil and honey (cf. Bauerreiss, op. cit.).

So far as it is a question of particular bodies, the values as ascertained by the Arabs agree very well with those obtained by modern science and even surpass in accuracy those obtained by it up till the beginning of the last century.

**Bibliography:** This is given in the article AL-KARĀȘTĪN.

2. Leveling (waṣama, to weigh, corresponding to the Latin librare).

The Arabs certainly adopted a large number of methods of levelling and testing levels from other peoples, either the Byzantines or the Persians. The statements in Ibn Wālshīya (see below) about the making of canals etc. agree with those of Vitruvius, who in turn drew on Greek sources. The Arabs learned partly from Greek works; for example, we are told that according to Philoemen (according to M. Steinschneider: Philon), the inclined in canals must be at least $5:1,000$; but they also utilized data gained from the practical experience of land owners, canal builders etc. Whether the Arabs were acquainted with the standard works of Hero on this subject, the *Metrika* and the “On the Diorpra” (Hero, *Opera omnia*, ed. H. Schöne, iii., Leipzig 1903), is not known, for no corresponding title is found in the biographical or bibliographical works. But the writing mentioned in the *Fihrist* “On the use of the astrolabe” may have dealt with geometric problems. Many problems in the Arabic sources are very similar to those dealt with in the work “On the Diorpra”; only the Arabs use the astrolabe or quadrant instead of the dioptra.

Whether one or other of the methods described below was discovered independently by the Arabs and by whom, cannot be established from the authors on the subject, who were mainly practical men. They are described in the most different places.

In levelling, one is faced with two problems: firstly to make a surface exactly level and horizontal or to place a rod or a surface exactly perpendicular, and secondly to ascertain the point on the same level as a given one, or to ascertain the difference in height between two points.

1. A surface is made level and horizontal in the following way:

- A ruler with a straight edge is moved over the surface and one sees whether it touches it everywhere so perfectly that light penetrates nowhere between ruler and surface; in this case the surface is perfectly smooth (al-Shirāzī, see below).

That the ruler itself is straight is ascertained by seeing if a thread stretched along it and fastened to it at one end can be lifted the same height from the ruler along its whole length. Whether three rulers are straight is tested by putting them side by side and exchanging their sides (Ibn Yūnūs, in K. Schoy, see below).

To examine if a surface was perfectly horizontal, the following tests were adopted:

1. Water is poured over the surface and it is observed whether this flows equally in all directions; this is one of the most usual methods. The same plan is given by Proclus in his *Hypotyposis* (ed. K. Manitius, Leipzig 1909, p. 50, 51). According to him, one pushes supports in under a level surface on all sides till it shows no slope anywhere; this is the case when water poured on it remains standing without running to one side.

2. An object which can roll is placed on one side; if it does not roll off but only oscillates, the surface is horizontal (al-Shirāzī, see below).

3. Water is poured into a plate or dish (djaṣma, fig. 8) with an edge which is parallel to the surface and of the same height all the way round, and it is observed whether the water comes exactly up to the edges on all sides (Ibn Luyūn, see...
An exactly straight ruler is laid on the plate and one looks over this.

Ibn Sinā (Cod. Leidensis, No. 1061) in order to test whether the upper surface of the base of a theodolite is horizontal, makes a cavity in it with exactly perpendicular walls, pours water in and proceeds as in the case of the plate. To test whether a large ring is absolutely smooth, al-'Urdī used a process which he called al-asfādāin. This is not a ready made instrument but an apparatus to be put together from case to case. The ring to be tested is first of all placed exactly horizontal with the ground by means of the level (Fig. 9). Inside the ring on its concave side a circular gutter of potter's clay is built. Its outer edge comes up to the level of the surface of the ring while its inner edge is a little higher. The gutter is filled with water and some light ashes are scattered on it. If the water flows over the ring the depressions in the ring are filled with it, while the ashes remain on the raised parts of it. The inequalities in the surface of the ring are thus brought out (Fig. 10). Al-'Urdī emphasised that the test must be made in absolute calm.

Al-'Urdī also used the same method in order to see that the outlets for water in a distribution system at Damascus were all of the same level. In the centre of the reservoir he put a gutter like this and deepened or raised the bottoms of the channels running out of it until the water from the gutter spread equally over the channels which revealed any inequalities (Fig. 11). Cf. H. J. Seemann, in S. B. P. M. S. Erlg., Ix., 1928, p. 49, 81 and J. Frank, in Zeitschr. f. Instrumentenkunde, xlviii., 1929.

Fig. 9.

In the original the rod is at e, the rope at a, b, c mudjimatī, it is a triangle of wood, at d thread, at f ṭuṭkāla, weight.

4. A plumb-line (ṣāḥēl, baqal, balad [from ṭurq], ṭuṭkāl) is dropped from the apex (Fig. 12) of an isosceles triangle, made for example of wood, with its perpendicular marked; a piece is sometimes left open in the centre of the under side for the weight of the plumb-line. If the plumb-line coincides with the perpendicular, the surface is horizontal (the figures go back to al-Shirāzi and al-Khalkhālī). Such drawings have led to the erroneous idea that Muslim students were already acquainted with the pendulum (cf. E. Wiedemann, in Verhäl. d. d. phys. Ges., 1919, p. 663: the apparatus is called al-fādīn [e.g. in al-Shirāzi, al-'Urdī, see below], Dozy, op. cit., also al-fādīn).
In the architect's balance (fig. 13), according to Ibn Luyūn or al-Tūhānī (see below), a quadrangular piece of wood is placed on the beam a a to be examined; in the middle of it, a perpendicular line b a is drawn before which a plumb-line is hung; according to the original figure, it seems to be two parallel lines between which the plumb-line hangs.

Al-Marrākushi (see below) has described a more perfect form (fig. 14). In the figure a b, a c and d e are rods, and a b = a c and a d e is an equilateral triangle; d e is pierced in the centre. A plumb-line is hung from a through the hole. If the surface on which b and c are put is horizontal, the thread of the plumb-line goes through the centre of the hole.

Whether the levels and other similar instruments are themselves correct, whether for example the plumb-line from the apex to the base is perpendicular, is tested in this way: After the plumb-line comes to rest in one position of the level, the latter is put in various positions on some horizontal surface, particularly in one perpendicular to the first, and in one in which left and right have places exchanged. If the plumb-line always comes to rest the level is correct but if it only does so in the former case the error can be corrected by adjusting the position of the surface and that of the level.

The level here described is usually called kūnīya (γυνία); the word, however, is also used for the wooden set square, as used by carpenters (s. Maclauchlan, A History of the Sciences, 3rd ed., Vol. II, p. 255) and land surveyors like Abu 'l-Wafā (s. Abhandlungen zur Geschichte der Naturwissenschaften und Medizin, Heft iv., 1922, p. 98). A synonym is according to al-Shirāzī (Nihāyat al-Idrāk fi Dīvān al-Afāk, Mak. 2, chap. 13): afadān. From the same root we have in Ibn Wahshiyya (Cod. Leidensis, No. 1279, p. 527) fāwād, in Dozy (Supplément, ii., p. 246) fāsin and fādīn. Connected with this is fāwīd, dual of fāwād.

Sometimes one finds it stated that levelling is done with the šākūl; e.g. in al-Battānī (ed. Nallino, text, 1903, p. 137): mawsīn bi 'l-šākūl, and an exactly similar statement is made by Ibn Sīnā (Cod. Leidensis, No. 1279). A set square is either brought up to the plumb-line and a perpendicular dropped on the surface from it, or the šākūl is used for the level, the essential part of which is the plummet.

On larger surfaces, such as roofs, etc., a long rod (šākūl = cubitale) is first of all laid down and on it the apparatus for testing the level is placed; this is called mūsān al-tasīr (s. al-bunādīn of the architects; cf. Ibn Luyūn, see below).

5. At the apex of a three-sided pyramid, built on a surface by 3 rods of equal length, a plumb-line with a sharp point in the plummet is hung. This ought to hang over the centre of the surface (al-Khāzīnī, see below).

6. On the apexes A and B (fig. 15) of two sharp pointed tetrahedra of equal height A IH K, and B LM N; a rod of some length AB is laid on which is fixed a triangle with a plumb-line hanging from it or an arrangement such as is already described for the scale-beam, if the plumb-line or the tongue comes to rest, the rod and therefore the surface is horizontal (al-Marrākushi, see below).

The necessity of making surfaces exactly level continually crops up in building, and also in putting up astronomical instruments, and in constructing the Indian circle with which the meridian and then the direction of the kihi is a certain. In this case the level surface is usually not prepared on the ground but on a firm foundation, perhaps of stone. The construction for the Indian circle is already described in the Hypotyposis of Proclus (loc. cit.) in the same way as by the Arabs.

We now deal with the testis used to see if a thing is perpendicular:

1. The simplest method is to hang a plumb-line beside it. In the case of level perpendicular surfaces, this must touch it all the way down if its point of suspension is on it. This method is always recommended in working with the quadrant (s. also below).

2. If the point of suspension is a little in front of the surface the thread must be equidistant from it all the way down.

3. In the side of the gnomon, a perpendicular rod, often with a cone-shaped top, Ibn Yūnus (see below) cut a groove which ended in a hemispherical cavity. In the groove a thread is hung from the top of the gnomon with a ball shaped weight. If this comes to rest in the hollow, the gnomon is perpendicular.
4. The gnomon is moved backwards and forwards (turned about on its foot: *mubbell* or *naabdhir*); its shadow must only move so far on the level surface, on which it stands, as is in keeping with the movement of the sun during the turning (Ibn Yūnus, see below).

5. A circle is described at the foot of the rod and a pair of compasses used to test whether the distance of the top of the gnomon is the same from all points of the circle.

6. Ibn Sīnāア drills a small hole through the gnomon parallel to its base, puts it in a vessel with a horizontal bottom which is filled with muddy water and examines whether the surface exactly coincides with the level of the hole.

7. In order to examine whether a level surface is standing exactly perpendicular, two exactly equal parallelepiped blocks of wood (fig. 16) are placed on it, $L_1$ and $L_2$, one above the other. From the upper edge of $L_1$ a plumb-line is hung; one watches whether its thread exactly touches $L_2$; the best plan is to place a very thin ruler between $L_1$ and the plummets and test the position of the thread with respect to $L_2$ (al-Marākūsh, see below).

8. In order to ascertain the difference in height between two points $x_1$ and $x_2$ which are at a distance $a$ from one another, as is necessary in making a canal for example, one looks horizontally from $x_1$ with an apparatus which is at a height $h$ from the ground to a vertical rod at $x_2$ and ascertains the height $h_1$ at which the point observed is above the ground. A mark can be made on it (in modern mensuration, the rod at $x_2$ has divisions marked on it). The difference in height is $h_1 - h$. According to fig. 19, the Arabs, like Hero, seem to have used something similar. Ibn al-'Awwām (see below) uses a square board on which are marked a number of circles touching one another, which are distinguished by different colours or have different centres. In order to place the rods absolutely perpendicular, plumb-lines are hung beside them (fig. 17).

The horizontal line of vision is obtained in various ways:

1. A rod (e.g. an ell long) with square sides is put up in such a way that the upper surface appears horizontal to the eye and one looks along this surface.

2. The rod (*tubīfūl*) is put on the above mentioned dish or plate (fig. 8) and one looks along it.

3. At the end of the rod nails are fastened at the same height and their heads are pierced and one looks through the holes.

4. For a rough examination, one can put, at the two places, two tube-shaped bricks which for convenience may be made each out of two half-pipes (Ibn al-'Awwām, see below).

5. An astrolabe is put in a horizontal place such as the edge of a well or on its cover and one looks through the eyepiece.

Other methods of ascertaining differences of level are as follows:

1. An assistant is sent from the higher position to the lower holding a rod of a known length $l$ vertically until one sees just the end of it; if $h$ then is the level of the eye, $l - h$ is the difference in height. If the distance is too great for the top of the rod to be distinguished, a light is put on it, for example a lighted candle and the observation is made by night.

2. If it is a question of ascertaining whether a place outside a well is lower than the level of water in the well, the distance of the latter from the surface of the ground or from the edge is ascertained by letting a rod and thread down with a shining heavy object at the end and used in calculation.

Two apparatuses, closely connected with each other, are the following:

3. To a rod (fig. 17) the triangle with the plumb-line is attached. To its two ends two threads with weights at the ends are attached, $a$ and $b$.

Two posts $r$ and $z$ are erected at the points, the difference in level of which is to be ascertained. The one thread is fastened to the end of the lower post $r$ and the other hung along and over the post $z$ until its weight comes to rest. The amount of shifting of the thread measures the difference in height (al-Khāzīnī, see below).

4. The *murджīkāl* (the bat, fig. 18) consists of an equilateral triangle with a plumb-line which hangs from the middle of one side. The triangle is suspended by this side. Two rods, each an ell in length, are erected 10 ells apart; a rope is passed from the top of one to the top of the other and by two threads $a$ the *murджīkāl* is suspended in its centre. If the plumb-line goes through the apex of the triangle, both places are on the same level, if not, one is raised by putting stones below it for example; but the end of the rope can, as in 3, be moved along (Ibn Lu'yūn, see below).

5. In the Paris manuscript 2468, an unknown author describes 3 apparatuses for levelling (fig. 19a–c). In the first (al-murjẖārī, the known) a rod of wood an ell in length is bored through its entire length and tongs with a tongue suspended from its centre (fig. 19a). Through the hole a rope some 15 ells long is drawn which is fastened to the two vertical rods already mentioned. The second apparatus (fig. 19b; al-zabība, the similar) corresponds to the *murджīkāl*: only the two threads $a$, $b$
and Bahāʾ al-Dīn but not described; it probably corresponds to our canal-level, a communicating pipe filled with water, such as is very fully described by Hero (Dieoptra, p. 197 and loc. cit.); but he gives it no particular name, probably because it is associated with a dioptra. On the plum-line of the figure is written ख्याल (cf. E. Wiedemann, Beitrag, xxxiv, see below).

Ṭihgnārī mentions another instrument called میسان al-کاف̣, Ibn Wahshiyā (see below) one of brass called کافار or کاف. Neither are described however. Arabic authors who give full descriptions of Arab instruments are the following:

3. Ibn al-ʿAwāmān (c. 1350) in Kitāb al-Falāḥa (cf. E. Wiedemann, Beitrag, x., see below).

4. Abū ʿOthmān b. Lūyūn (c. 1048) in Kādārā ḵāl al-Falāḥa, deals with levelling ground etc., and gives notes on al-Ṭihgnārī and others (cf. E. Wiedemann, Beitrag, x. 317 and Đozai, Supplemente, i. 302 and 579).

5. Bahāʾ al-Dīn al-ʿĀmilī, Ezess der Rechenkunst, ed. F. Nesselmann (1547-1622, s. E. Wiedemann, Beitrag, x., 319).

Full details of levelling are given in the astronomical books in discussing the ascertainment of the meridian, e.g. in Kūṭb al-Dīn al-Ṣhirāzī (d. 1311; cf. E. Wiedemann, in Zeitschr. für Physik, vol. x., 1932, p. 267), al-Khalīghī etc. Many books on the astrolabe give information on the subject in discussing surveying problems, e.g. al-Bīrūnī (cf. E. Wiedemann, Beitrag, xviii. 59 sqq.).

I give once again the names of the levelling instruments:

میسان, میسان al-حمن, میسان al-کاف, میسان al-یسر, کافار, کیییا, فاسین, کادین, افادان, دیفنا, مرگیکح, کاف.

I know of no comprehensive treatise on levelling in connection with canal building etc. in the early Muslim period. For the literature see my Beitrag, iii. 229; xviii. 26 and H. Schmeller, loc. cit., p. 41. — For knowledge of these matters in ancient times see C. Merkel, Die Inventur-technik im Altertum and H. Diesl, Antike Technik, Leipzig 1920.

** Mizmār means literally *an instrument of piping*. In the generic sense it refers to any instrument of the "wood-wind" family, i.e. a reed-pipe or a flute. In the specific sense it refers to a reed-pipe (i.e. a pipe played with a reed) as distinct from a flute, as we know from Ibn Sinā (d. a.d. 1037) who describes the mīzmār — a reed-pipe — as an instrument "which you blow into from its end which you swallow", as distinct from an instrument like the yarrā — a flute — "which you blow into from a hole". Ibn Zaila (d. 1048) writes similarly but substitutes the Persian word ньā for the Arabic word mizmār.

In Ibn Sinā's Arabic treatise al-Nadāǧūt we read of the mīzmār, but in the identical passage in his Persian Dānjīn-nāma the word is ньā. Further, the Maṣṭāth al-ʿUlūm says, "the mīzmār is the ньā" (p. 236). For the present purpose, "wood-wind" instruments (nāṣim) may be divided into: i. reed-blown types; and ii. pipe-blown types. Among the former we have single reed-pipes of the clarionet, oboe, and saxophone types, as well as double reed-pipes, the bagpipe, and the чéřèng. Among the latter we have the flute and recorder, as well as the panpipes.

a. **Reed-blown types.** Single reed-pipes occur in ancient Semitic art and literary remains (Lavinac, i. 55 sqq.). Hoary gossip attributes the "invention" to the Persians (al-Masūdī, Mūrūdī, viii. 90), whilst Djamshid himself is claimed to have been the actual "inventor" (Ew-liyā Ǧelebi, i. 641). With Islamic peoples, reed-pipes are found with a conical or cylindrical tube (nāṣāb) pierced with finger-holes (ṭhūbāb), and played with a single or double beating reed (kā-ṭaba, kāṭāha). Among the Arabs of the 7th century, the mīzmār finds a place at convivial
parties (Mufid al'iyat, xvii.), and in the viith century it is one of the martial instruments of the Jewish tribes of al-Hijáz (Aghani, ii. 172). When Islam came, an anathema was placed on reed-pipes mainly, it would seem, on account of the female reed-pipe player (summârî) who, as was common in the East, was looked upon as a courtesan, and, indeed, the terms summârâ and zuhira became almost synonymous. It is improbable that the Prophet Muhammad could have referred to a reed-pipe (mîzmûr) in the well-known hadîth in praise of the chanting (kir'a) of Abû Mûsâ al-Asghâri. The reference was rather to a mismâr (Hebr. mismâr “psalm”) from the msâmâr of the House of David” (cf. my Hist. of Arabian music, p. 33). In early days, what the Arabs called the mismâr, the Persians called the nār, and the latter distinguished the flute by the name nār narm (soft nār). Later they called the reed-pipe the nār sâfîd (white nār) and the flute the nār safîd (white nār) because of the colour of the instrument. About the beginning of the viih century, a musician at the 'Abbâsid court named Zunnâm invented a reed-pipe which was named after him the nār zuhnâm or zuhnâm (Tâdî al-Ârâs). What the invention was we can only conjecture. It may have been the cylinder used for altering the pitch of the instrument, or perhaps it was the introduction of a conical tube (see my Studiis, p. 79, 82). At this period we have no information whether the various reed-pipes had cylindrical or conical tubes or whether they were played with single or double beating reeds. The word zuhnâm was accorded little recognition in the East, whatever favour the invention itself found. In the West, where the name eventually became vulgarized into zuhnâm, it became the most important reed-pipe not only in Spain as we know from al-Shakundi (d. 1231; al-Mâkârî, Mak. Dyn., i. 59), but also in the Maghrib (Ibn Khaldûn, ii. 353). It became the zumân of the Spaniards (see also Schiaparelli, s. v.).

The mîzmûr (mismâr wa'dhîk) is described and delineated by al-Fârâbi (d. 950). It had eight holes for fingering, giving a complete octave. He also describes a smaller reed-pipe called the suryânâ (Kosepârt. p. 95; Land, p. 122; D'Erleranger, p. 262). One special feature of this instrument was called the shâtrâ. In the Mâsâ'îl al-Chânî (p. 237) we read: “The shâtrâ of the mîzmûr is its head, and it is by which it is made narrow and wide [in compass]”. It was actually the cylinder inserted into the head of the instrument which lowered the pitch when required (see my Studies, p. 82), a device called later the tâfik (Kans al-Tuhaf) or fašt (Villotet). It was called the shâtrâ perhaps on account of the button at the top of the cylinder which was turned round. The word suryânâ came to be modified into surnây and then surnâ. Popular etymology opined that the word was derived from sâr “fête” and nây “reed”, but this form only appears in the lexicons (Surhâni, shâri). Some modern even write surnây. The surnây found its way into martial music as early as the beginning of the ixth century (Aghâni, xvi. 139: the text has surnâh). In the viith century, Ibn Zaila shows how, by devices in the fingering and embouchure, other notes were obtained on the reed-pipe (Pers. nây). In the Persian Kans al-Tuhaf (sixth cent.) the mîzmûr, also called the nây sâfîd, is both de-
scribed and delineated. More valuable is the explanation of the actual making of the beating reed with which the instrument was played, from which we learn that it was a double reed. In the next century a Turkish author Ahmad Uğlü Şukurullah wrote extensively from this work (Lavignac, i. 3012). Ibn Ghâbi (d. 1435) says that all the notes could be obtained on the surnây nây by accommodating the fingering and the embouchure. The smaller instrument, the surnâ, was defective in the upper octave he says. A similar type of reed-pipe to the latter called the kalâban is also mentioned by him. Ewliyâ 'Celibi says that it came from Shîrâz. In the Muhammâd b. Murîd Treatise (xvith cent.) we learn that the nây arsad (≈ nây sâfîd ≈ mîzmûr) was 27 cm. long.

With the Turks, the Persian word surnây had been altered to surnân and the term had become common to both the suhr (mîzmûr) and surnân in the East Ewliyâ 'Celibi (xvith century) mentions among the Turkish reed-pipes of his day the kabs sürnân or sayîm sürnberg, the 'arabî sürnberg, the aqash sürnberg, and the zühâr sürnberg (a Mesopotamian reed-pipe). He also speaks of the sample of the suhr with which he says, was an English invention (i. 642). If this is the same as the surnaye, it was the clarionet, an instrument which Denner is said to have “invented” about 1690, which is after its mention by Ewliyâ 'Celibi. The Persians still continued to call their reed-pipe the surnân, and a xvith century design of the instrument is given by Kaeumper. Both Russell in Syria (i. 155) and Villotet in Egypt (i. 356 sq.) refer to several kinds of reed-pipes in use in the xvith century.

The latter delineates these and describes them fully. They are three, the kabs sürnân or sumâ al-kabîr, the suhr or sürnberg, and the surnân djûrâ or surm al-suçhüvîr, the first being 58.3 cm. and the last 31.2 cm. in length. The modern instrument is also delineated by Lavignac, p. 2793; Sachs, p. 428. For specimens see Brussels, Nos. 122, 355, 357; New York, No. 1731.

In the West also we find a new name, or instrument, the ghaîta or ghâyya [q. v.]. It is said to have been introduced by the Turks (Delphin and Guin, p. 48) but the name is mentioned by Ibn Raitta (d. 1377) who likens the Mesopotamian surnây to the Maghribian ghaîta (i. 126). There are, however, two kinds of ghaîta, one — a cylindrical tube blown with a single reed, and another — a conical tube blown with a double reed. This may explain why ghaîta does not always equate with surnây and mîzmûr in the West (Tâdikirât al-Nîṣâm, p. 93; Muhammâd al-Šâhîrî, p. 34). The cylindrical tube instrument is known in Egypt as the ghîta. For details see Bû 'Alî, p. 103; Delphin and Guin, p. 47. For specimens and designs see Host, p. 261, tab. xxi.; Brussels, No. 351; New York, Nrs. 402, 2824; Lavignac, p. 2921.

A reed-pipe that became quite famous in Western Europe was the kâg played with a reed. The original kâg [q. v.] was a horn or clarion, and was made of horn or metal. Pierced with holes for fingering, and played with a reed, a new type of instrument, somewhat similar to the modern saxophone, was evolved. In the xvth century, this kâg was “improved” by the Andalusian Caliph al-Hakam II (Bibli. de autores latin., li. 410). Ibn Khaldûn, who describes it, says that it was the best instrument of the sumâr family (ii. 353). Ibn Ghâbi,
in his h hologram MS. in the Bodleian Library, writes bāš, but adds, “also called bāš”, but the latter remark has been deleted. It appears in the Cantigas de Santa Maria (Kiaño, fig. 41, b).

Another interesting instrument is the ḥisābīya or ṭrāṭbīya, which may have been the forerunner of the European racket. It has a cylindrical pipe and is played with a double reed. It is probably the descendant of the Nāy al-ṭrāṭbīq that al-Ghazāli (d. 1111 A.D.) speaks of. It is delineated and fully described by Villoteau (i. 943 sq.). Examples are given at Brussels, No. 124; New York, No. 2861.

With Islamic peoples, reed-pipes belong to outdoor music. Just as we see them in the Af Lāla or Lāla as being essential to folk, ceremonial, processional, and martial music, so they are today, and probably have always been.

Double reed-pipes. Ibn Khurdaḏḏbih says that the Persians “invented” the double reed-pipe called the diyāmīlī (al-Maṣūdī, Murūḏī, viii. 90), the earliest instrument of this type that we know by name in Arabic literature, although it appears in the viiith century frescoes at Ḥusār ʿAmrā (Musil, pl. xxiv.). It has been suggested that the word should be dūnīya, but diyāmīlī is also given by al-Fārābī (see my Studies, p. 57), who describes and delineates the instrument which, he says, was also called the muṣūmār al-muḥdānī or muḥḍānī. The two pipes were of equal length and each was pierced by five finger-holes, which gave an octave between them. Probably the instrument known in the Middle Ages as the sūmmāra (vulg. sūmmāra) was actually the old diyāmīlī, although it merely equates with ṣāḥula in the Glossary Latino-Arabicum (xith century) and the Vocabulista (xiiith century). As early as the xith century we read of the muṣūlī in Egypt (al-Maḵṭūṭī, f. 136). The name itself means “joined” (see my Studies, p. 78), and it was doubtless a double reed-pipe. Since the viiiith century at least, sūmmāra has been the name for this instrument in the East (cf. Niebuhr, i. 145), and Lane (p. 397) describes and delineates it. It has cylindrical tubes and is played with a single beating reed. It is to be found with a varying number of finger-holes and is named accordingly (Sachs, p. 433). In the Maghrib it is called the muḥraḏūn and mahriūn (Lavignac, p. 2793: R.A., 1866), whilst in Syria it is given a vulgarized or metathetical form of the old muṣūmdwj (cf. Sachs, p. 257; Dalman, Pal. Divan). For specimens and descriptions see Brussels, Nos. 115-118; New York, Nos. 2167, 2633; and Z.D.P.V., 1927, p. 19. Specimens in my collection range from 18 to 43 cm. in length.

Another type of double reed-pipe has only one pipe pierced with finger-holes, whilst the other serves as a drone. This also carries the name sūmmāra when the two pipes are of the same length (cf. Niebuhr, i. 145). When the drone pipe is longer than the chanter pipe it is known as the arghūli (arghūli, Mushākra, p. 29; ṣūmūn, Lavignac, p. 2812) in modern times (cf. Freytag, Christ. Arab., 1834, p. 34) in Egypt and Syria. Villoteau (i. 962) gives a detailed description with scales and designs of three sizes, 107, 82.6 and 38.6 cm. in length. (In South Kensington Museum there is one 144 cm. long.) Like the preceding instrument it is played with single beating reeds. The drone pipe is furnished with additional finger-holes (ṣydāf) which are affixed to lower the pitch. In Syria the smaller type of arghūli is named the mahriūn, a most significant name, in spite of it being ignored in the lexicons. Lane (p. 367) figures a six finger-holed instrument which, he says, was used at ḍāhirs, and by Nile boatmen. For specimens see Brussels, Nos. 342—346; Z.D. P.V., 1927, pl. 2.

Bagpipe. An ancient instrument in the Orient. Just prior to Islam we have it figured on Sasanian sculptures (Ker Porter, Travels, ii., pl. 64). We do not know its ancient Semitic name, but Ibn Simʿa and Ibn Zālīa mention it as the mizmār al-ǧīrāb, describing it as being played by “an artificial contrivance”. Although Niebuhr (i. 146) calls it the sūmmār al-kūrlī, and Lane, p. 358, names it the sūmmār bīṣṭān, the more general term used in Arabic speaking countries is sukrā, although we find mizwād used in Tunisia (von Hornbostel, p. 4). The word sukrā is given variations by some European writers as in the suqāra of Villoteau (i. 970) and the sukara of Rouanet (Lavignac, p. 2812). In Persia, the bagpipe has long been known as the nāy anfūn and nāy maḏakhir or maḏakāh (Burhan-i maḏakh) from whence the Hindūstāni name maḏakhir (Tagore, p. 24; Day, p. 151). In Turkey, the older word was tūlūm, tūlūm or tūlūm (Meninski, Sachs; cf. Ewliya Čelebi, i. 642: tūlūm daḏik), but gūstā would appear to be equally popular. It is to be found throughout the Balkan countries (cf. Arab. gūstū; Span. gaix; Engl. waygheet).

The bagpipe used by Islamic peoples is generally equipped with a chanter pipe (with five or six finger-holes) and mouthpiece, but rarely with a drone pipe. The chanter, terminating in a horn bell (Schallstücker), is often double, a feature which was probably the original reason for the term sūmmāra being used with the bagpipe. The woodwork is sometimes inlaid with metal, whilst another feature is the adornment of the instrument with tassels, beads, shells, and other frippery. Designs may be found in Niebuhr (tab. xxv.) and Sachs (p. 434), and actual specimens in Brussels, No. 372.

Instrument of free reeds. The Chinese chūn is such an instrument. Probably it was not used by Islamic peoples although known to them. The chūn is described in the Majāṣf al-ʿUṯm as follows: “The muṣūf is a musical instrument of the Chinese. It is made of compound tubes (anōtīb), and its name in Persian is bišt maḏakhir” (p. 237). We get a little more information from Ibn Ghaibī who informs us that the ṣufī or maḏakhir-i ṣīzhī, was made of tubes of reed joined together. It was blown through a tube and the notes were obtained by finger-holes. For description and designs see Van Aalst, Chinese Music, p. 80.

Pipe-blown types.—The flutes of the Arabs, Persians and Turks, unlike those of Western Europe, are played vertically, a current of air being blown across the orifice (muṣaf) at its head. Ewliya Čelebi (f. 623, 636, 642 read چرخ) is not sure whether it was Pythagoras or Moses who “invented” the first instrument of this type, the shepherd’s flute, called the ḍawāl (cf. ʿuṣīf). Ibn Khurdaḏḏbih says that it originated with the Kurds (al-Maṣūdī, viii. 90), and Ibn Ghaibī (Shāḥr al-ʿAdwār) says that this instrument was the nāy abyafa (white nāy). We know from Ibn al-Aṣālī (d. 846) that the Arabs called
this flute or reed-pipe the ḥiya. A characteristic of the Arab flute was its length, hence the ancient Greek proverb which likened a talkative person to an Arabian flute (Meunardi Fragm.).

In the early days of Islam, the Arabs called their flute the kuṣṣāba (later modified into ḏaṣṭa), and this is the name used by the poets al-ʿAṣba (d. 629) and Ṭuba b. al-ʿAdīǧīyāī (viii century). These terms fell into desuetude in the East when Persian musical influences were at their height. The Persians called their flute the nay norm (soft nāy) so as to distinguish it from the nāy proper and the sarīnāy, which were reed-pipes, and so the Arabs of the East called their flute the nāy, although in the West the old word kuṣṣāba or ḏaṣṭa was retained. Another term for the flute in early days, perhaps a different kind, was yarā (Mafāth al-ʿUlm, p. 236), and in the xii century Glossarium Latino-Arabicum it equates with zalama. In the xiii century it was still a common name with Saft al-Din ʿAbd al-Muʿmin (p. 9) in the East, and with al-Shaḳkandī in the West (al-Maḳḳari, i. 50), raised yarā not barā. In the contemporary Vocabulary in Arabico it (yarā) agrees with “yarā.” The words håra and hara (al-Dhawarī, al-Faruḥadābī) would appear to be vulgar forms of yarā.

Whilst the diminutive ḏaṣṭa (ḥar-ḥaṣṭ) sometimes occurs in reference to a small flute, ḏaṣṭāba and ṣhabīb (V ḏaḥa “to grow up”) are the more general terms used in Irāk (Īkhwān al-Safira, i. 97), Egypt (al-Maḳḳī, i. 136), Spain (al-Shalhābī, Ṭarāb, i. 352), and the Maghrib (Ibn Khaldūn, ii. 352). It became the cavaquha of Western Europe. Another name for a small flute was ḏawī.mk, and this word also found a place in the Latinas as the joch (Du Cange). In Persia, the small flute was called the pīhta (Kanz al-Tāhuq), hence the Balkan pisot and pisot. We read of the nāy in the Aḥānī (ix. 71) but we cannot be sure whether it was a flute or a reed-pipe. Al-Farābī (Rosengarten, p. 45) ignores the flute (nāy) and says that it was inferior (muḥqr) to the mizmar (reed-pipe), but it soon gained wide recognition in chamber music probably by reason of ṣafī appraisement and the ṣafī of the darwīk. Saft al-Din ʿAbd al-Muʿmin (d. 1294) describes the nāy with eight holes for fingering, the thumb-hole at the back being called the ṣdākū (“vehement”), its name revealing its function. In the Persian Kanz al-Tāhuq (xvith cent.) we find two very small flutes mentioned, but in the Shāh al-Adwār (xvith cent.) we find that the nāy abīyad was normally 67.5 cm. long. Five larger sizes are given, the longest being 99 cm., with two smaller sizes, the limit being 31.5 cm. Ibn Ghaibī also registers several varieties including the nāy hamn of 67.5 cm. approximate in pitch to the hamn string of the lute, and the nāy wir of 33.75 cm. approximating to the wir string. Ewyālī Čelebi (xvith cent.) gives the names of a group of Turkish flutes (i. 623) including the šak maṭṣur, the dawī.mk, and the kalɛng. Vivaldo (i. 594) describes and delineates the Egyptian instruments of the late xvith century. The largest, 77.9 cm. long, was the nāy šah (ḥaṭ ṣhān), and the smallest, 48.8 cm. long, was the nāy ḏiraf, the kīraft of modern Syria (Mush̲aṭ̲a, p. 29). Other flutes named by him are the nāy muṭlaq, the nāy ṣuṭurda (ṣuṭurda), the nāy muṭlaq, and the nāy ḏurā. In Turkey the ṣuṭurda is the smallest flute used in chamber music (Lavignac, p. 3019). Turkish and Egyptian flutes are usually well made, with a head to support the lips. In Palestine and the Maghrib they still retain, more or less, a primitive appearance, and although the seven holed flute is common (Christianowitsch, pl. 2), the five and six holed instrument has acceptance (Delphin et Guin, p. 45; Z. D. P. V., 1927, pl. 1). In the Maghrib the flutes in the orchestras still retain the name of ḏaṣṭa (vulg. ḏaṣṭa), and they are generally about 40 cm. long, whilst the ḏawī.mk or ṣhabīb ( ṣhabīb) is smaller. In the interior, longer flutes like the gībī and ṣuṭṣulā may be found. Delphin and Guin give an account of these.

The recorder, or flute à bec, also found favour in the East. This is the Arabic nāy ṭabak (mouth nāy), the Persian ṭūt, the Turkish ḏūdūk, and the Hindūstānī alchargā. As early as the Ikhwān al-Safira and the Mafāth al-ʿUlm (xvith cent.) we read of the ṣafīrā, which was doubtless a flute à bec (see my Studies, p. 83). Vivaldo (i. 951) says that it was an instrument of this type in his day in Egypt. The ḏūdūk or ḏudūk is mentioned by Ewyālī Čelebi in nine different species (i. 642), and is also mentioned by Ḥāḍḍī Khālīfa (i. 400). The ṣhāhīn would appear to have been a small three-holed recorder such as was common with pipe and tabor players in Mediaeval Western Europe. It was played with the fingers of one hand, the other hand being used for beating the tabl or drum, hence the phrase in al-Ghazzālī: “the ṣhāhīn of the drum (rabīka)!”

Panpipes are also common to the folk. Both Pythagoras and Moses are credited by Ewyālī Čelebi (i. 624, 636) with the “invention” of the mūṣkār or panpipes. Although the word stands for “composer of melodies” in the Mafāth al-ʿUlm (see also Meninski), it referred to a musical instrument in the xvith century (N. E. xiv. 312). A contemporary writer, Ibn Ghaibī, says that “the mūṣkār is one of the wind instruments with free pipes. Its notes are determined by size [of pipes]. The longest have the low notes, and the shortest the high notes”. We find the instrument called mūṣkāl (Farhang-i Šahīrī) whilst Ḥāḍḍī Khālīfa (i. 400) has mūṣkāl, and Toderī (i. 237) mescal, which probably gave birth to the Roumanian muscal. The term mūṣkāl survived up to modern times (Vivaldo, i. 963), but the more general word used today (Mush̲aṭ̲a, p. 29) is ḏunā. (Pedro de Alcalā [1503] mentions a harp by this name, but perhaps he confused the name with ḏunāk). Russell (The Natural History of Aleppo, i. 156) writing in Syria in the xvith century says that panpipes were to be found with from three to twenty-three pipes. Kaeunder, p. 743, delineates a xvith century Persian instrument.

The names of instruments in the masāmīr group in Arabic are legion. Many of those not mentioned in this article are regional and are of folk origin, their source being often discernable, such as in the zamāṣa and zamākhar, to name only two. More interesting however, are the older words like ḥuṭbīk, ṭabak, and zamākhar. The first two occur in al-Faruḥadābī (d. 1414), and mūṣkāl, which equates with mizmar, reminds us of the much debated passage in Esekhiel, xxvii. 13. Zamāḥīk occurs in al-Azhari (d. 981) and even earlier (cf. Lane). The Greek sas̲p̲h̲a and the Latin sambūca were stringed instruments, and Isidore of Seville’s samb̲u̲ca as a “wood-wind” instrument has long been
suspect, but since ṣambak is to be found in Arabic equating with samnara and mismar there would appear to be good reason for accepting Isidoire of Seville.

**MÖBEDH, a Persian word which passed into**

Arabic in the form مُبِد١ or مُبِد٢; we also find in Arabic the Persian plural, möbeṭhān, but usually combined with möbedh in the expression möbeṭhān möbedh, which means “chief of the möbedh”, “grand möbedh”. It is also found alone (möbeṭhān) standing for möbeṭhān möbedh. The Arabic plural is mājūfat. Möbedh is derived from the Levantine majūf, which means “chief of the majūf” and therefore indicates a priestly office: according to al-Mas'ūdī, Kītāb al-Tanah wa l-Iṣrafi, *F. G. A.*, vii. 103, the word would mean ḥāṣ al-din and be derived from mu = “religion” and ḍāh = “protector”, and according to al-Ya'qūbī (Ṭarīq, i. 207) ʿalīm al-ʿalamā. In Armenian texts the word is rendered by magapat, in the Greek acts of martyrs by μαύστρα μαύστρας μαύστραν; in Syriac and especially in the acts of the Persian martyrs not only by مَجَأَبَت but also by مَجَأَبَت; in one passage (Hofmann, *Auszüge*, p. 88, cf. below), the word مَجَأَبَت is used immediately before مُبِد٢. The Syriac has also rīz ṭēğul or ṭēğūlahygh corresponding to the Greek ἁγιος ἁγίους του μαγίων. We have no satisfactory information regarding the functions of the möbedh; we know more about those of the chief of the möbedh or möbeṭhān möbedh. The information given below relates to the Sasanian period, a period in which the clergy were reorganised and which is reflected in the Arabic and Persian Muslim sources.

In the later Avesta we find references to the sacerdotal organisation but the names do not agree with those of the Sasanian period; for example, the principal office, that given in the Sasanian period to the möbeṭhān möbedh, is called Zara-thustretem, and had judicial functions like the chief of the möbedh. The term magapat is only found in the Pehlevi commentaries on the Avesta. The sources from which we can extract information about the möbedh, and the möbeṭhān möbedh or chief of the möbedh, are of course Pehlevi or go back to Pehlevi texts. Among the former which have come down to us is the Bundahish which among other things contains a list of möbeṭhān möbedh; the Ardā Wiraf Namak; the Karnamak-i Ashashtir-i Pāpakān (transl. by Noldeke in the *Benfey-Festschrift* = Beiträge zur Kunde der indogermanischen Sprachen, iv. 1878, and by Pagliaro in L'Indo-Italico nel Medio Evo persiano, Florence 1927; a part of the text 1—3 is reprinted in the *Hilfsbuch für das Pehlevi by Nyberg*; the Māthān-i hasār Dāte-
MÖBEIH

stan, a legal work studied by Bartholomae in Zion sasanischen Recht. Sitzungsber., d. Heidel. Akad. d Wissenschaft. 1922, is valuable for our knowledge of the judicial function of the möbedis and moldedis möbedis, a few short moral treatises preserving traces of law (cf. Pagliaro in R.S.O., x, 1925, p. 468—577) etc. The numerous references to the möbedis and the möbedis möbedis which we find in Persian and Arabic sources come from lost Pelevi sources or Arabic and Persian versions of them. Thus the Book of Kings especially in the latter part contains some information about the möbedis but nothing very full or precise about their functions; the matter of the Sāhānān is taken, as we know, from a Persian prose version of the Kavadātārāmāgh. The version which we have of the letter of Tansar (publ. and transl. by Darmesteter in Z.A., 1904, i.) gives very interesting information about the Sāsānian hierarchy and about the möbedis; it comes from a Pelevi document which, according to Christensen, goes back not to the time of Ardashir but rather to that of Khosrow the Great (cf. Empire des Sassanides, 111—112, and more recently Abdussam et Tansar, in Acta Orientalia, x, 43 sqq.).

The numerous writers in Arabic and Persian whose works give us no information on the möbedis derive their matter, as regards Persia, from information supplied directly by contemporary möbedis or grand möbedis, from Pelevi works translated into Arabic (especially the translations of Ibn al Mukaffa) which no longer exist, such as the Kavdānāmāgh at the Abūl-Fazl, or the Kavdānārāmāgh (cf. below). Of great importance is the Kīdār al-Tādīs or Akbār al-Mudāliq by al-Dhāīqī (cf. F. Gabrieli, in K.S.O., x, 1928, p. 232—308) and others written by al-Dhāīqī himself and the Kīdār al-Mashā'in wa'l-Addād which is attributed to him; very important also are the works of the historians, chroniclers, geographers and polygraphers or men of letters like al-Ya'qubi, Ibn Khaldun, al-Dinawari, al-Tabari, al-Mas'udi, Ḥamza al-Iṣṭahārī, al-Tha'labi, al-Nuwairi, al-Shahrestānī, etc.

Of course all these sources bear different relations to the Pelevi originals or their mother and they differ greatly in value, apart from the fact that they frequently combine legendary matter with accurate statements, e.g., some concerning certain of the functions of the möbedis.

Information of value can also be extracted from Syriac, Greek (especially Acts of Martyrs) and Armenian (historians etc.) sources.

Even by combining all these sources it is not possible to give a precise account of the offices of the möbedis in the Sasanian ecclesiastical hierarchy as laid down in the organisation of the kingdom attributed to Ardashir (cf. Kīdār al-Tādīs, p. 23—30) nor to follow its developments (cf. the letter from Tansar, al-Mas'udi, Tābīkh, p. 103—104 and Maqārid, ii, 156; al-Ya'qubi, Historian, i. 202; al-Shahrestānī, ed. Curzon, p. 192), transl. Haarbrucker, i. 292). Nothing definite can be deduced from the Parsi hierarchy of the present day as the ecclesiastical organisation has profoundly changed. But we may assume that high priests regularly called möbedis were given the task of supervising in the different divisions of the empire (one might say dioce-e) the very varied work of the hereditary clergy, the magi, who had so great an influence over the lives of the Persians; that is to say not only the very elaborate ceremonies of worship, the sacrifices, the care of the pyres, but also the cure of souls and the education of the people. These möbedis and their chief (cf. below) were like all priests the repositories of learning, profane as well as sacred (cf. Tābīkh, p. 97), where there is an allusion to the unbounded knowledge of the möbedis and hārēbēd, and the Arab writers must also have obtained information from möbedis (cf. Inostranetz, Études sasanides, p. 10). The möbedis had also judicial functions (cf. below); in the Acts of the martyrs they appear vested with executive power; but since courts of inquiry were composed of lay officers and priests, it is probable that this power was exercised by the whole college or by delegation. It is also certain that the title of möbed is not applied exclusively to these heads of administrative divisions or dioceses (of whom it is nevertheless characteristic) because at the court of the king, according to the sources, especially the Sāhānān, there were many high priests called möbedis or hārēbēd who formed a kind of council around the grand möbed (cf. below) or who had other special offices. Gradually the name möbed must have come to mean, as at the present day, a priest fully qualified to do everything in connection with worship. The other terms for Persian priests seem to refer rather, either to their dignity (e.g., distir) or to functions occasionally performed by them (cf. Zoroastrianism). Kāt and maguspat are sometimes put on the same level. The relation of the hārēbēd to the other degrees of the hierarchy like the kīdārū (another office of the same order having control over a body of priests, is not clear. Al-Mas'udi says in the Tābīkh, p. 103, that hārēbēd were lower in rank than möbedis.

At the head of the hierarchy of priests were no doubt the kīdārū hārēbēd or chief of the hārēbēd and the möbedis möbed or chief of the möbedis. Tansar, the writer of the famous letter, is called by the Dinbāri; kīdārū hārēbēd, according to Darmesteter “chief of the religion”, while al-Mas'udi (Tābīkh, p. 99) calls him better the möbed of Ardashir. Indeed it is quite certain from our sources that the supreme head of the ecclesiastical organisation of the Sasanian möbedis (möbedis möbedis) who was also the first dignitary of the court; all the power of the Zoroastrian clergy which constituted a state within the state was concentrated in this pontiff. Al-Mas'udi in the Tābīkh, p. 103, says of his rank that it was almost equal to that of a prophet.

In accounts of the ceremonial of the Sasanids, he is always given first place and he frequently appears surrounded by a council of high priests, hārēbēd or möbedis. Besides all the functions which he exercised as head of the clergy, i.e., the supervision of the whole religious life of the country, the settlement of theological questions, of problems of ecclesiastical policy, the appointment and dismissal of ecclesiastical officeholders, he had others which we must outline. Christensen thinks he can deduce from several sources (letter of Tansar, al-Mas'udi, Tābīkh, p. 103—104; Ya'qubi, Historiae, i. 201—202), that four or five high officials formed with the king a kind of ministry, the composition and number of members of which perhaps changed from time to time but which always included the möbedis möbed (cf. e.g., the Sāhānān, ed. Mohl, vii, 215 where the möbed is called the king's vizier). But he was also supreme judge as head of the möbedes of the administrative divisions, as the latter were the
judges of higher degree in their respective areas. It is evident from the studies of Bartholomeae on the Formal texts (and especially on the Aṣaṣṣar Dātānā; cf. Zum Sarandānischen Recht; p. 34, etc.) that in the different districts there were judges of first instance and of two degrees (as lower, mas higher), above whom was the mābedh of the district. The supreme judge was ultimately the mābedhān mābedh whose final sentence could not be disputed. For the judicial functions of the mābedh it is interesting to consult the acts of the Persian martyr in Syria and Greek (cf. Hoffmann, Auszüge aus syrischen Akten persischer Martyrer, Leipzig 1880; the texts of Beşan, etc., in Patrologia Oriental., etc.). The Arab writers also give us a pretty clear idea, especially as regards the mābedhān mābedh, for example in Tabari, i. 352; Noldeke, Gesch. d. Perser u. Araber, p. 230, the mābedhān mābedh in advising the king in the matter of the son of Dāh Yazan, lays particular stress on the young man's right to have his prayer granted; al-Masudi, Maruqī, i. 156 and Tanbih, p. 103, calls him ḍāfi' l-fūgārī; in the Maruqī also (ii. 211) we are told in connection with the abuses of Hurmuz son of Khurasan that, having abolished the jurisdiction of the mābedh, the good old tradition and the ancient laws fell into desuetude. In al-Tha'alībi, Hist. Pers., p. 506-7, we find two answers which are interesting in this connection; they were given by the mābedhān mābedh to the king, who had consulted him with regard to the sentence of death to be pronounced against his chief wife and her cook; in the Kitāb al-Tādīb, p. 78, it is related that king Kavād's full of admiration for a subtle answer given by the mābedh exclaimed: 'It is with justice that kings have given you the first place and that they have entrusted you with the control of jurisdiction.'

Some Arabic sources also allude to the court of justice which was held on the occasion of the great festivals of the Anvarī and the Mērzān (e.g. Kitāb al-Tādīb, p. 159-63; al-Maḥṣūn wa l-Aṣṣar, p. 359-65; al-Hirunī, al-Ādhar al-Ālāba, ed. Sachau, p. 215-219, 222-233; Sināt-e-nāmā, ed. Schefter, p. 38-40, etc.). According to these stories, the people on those days had the right to bring any complaint against the king before a commission of which the grand mābedh was the most important member; the first complaint was judged by the grand mābedh who thus had the right to condemn the king, the latter having pronounced a formula of submission, kneeling before him. The complaints that followed were judged by the king. According to al-Nuwaibī, the mābedh also offered to the king on these ceremonial occasions a basket of fruits over which he had uttered a prayer. Tarsar's letter (J. A., 1904, p. 544-545) informs us that in the procedure laid down by Ardashir for designating the heir to the throne the grand mābedh played the most important part, that is to say he proclaimed the new heir chosen by divine inspiration should it happen that the other dignitaries summoned to deliberate with him were not in agreement. The position of the grand mābedh as intimate councillor and mentor of the king who placed complete confidence in him (he is often called 'counsellor of the king') is very clear in the Shāhānāme as well as in the Arabic and Persian sources (cf. al-Tha'alībi, p. 504-505; al-Maṣūdi, Maruqī, ii. 171 where Bahran son of Bahran, son of Hurmuz, addresses the grand mābedh: 'Thou, support of religion, counsellor of the king and the man who directs his attention to affairs of state neglected by him').

Among the details which are preserved in the sources about the grand mābedh, we are told that he was one of the three who shared the king's table in time of war when the royal meals were very frugal; and that when a victory was won, he along with other dignitaries pronounced a discourse (Kitāb al-Tādīb, p. 173-174). A very marked feature in the sources is the wisdom of the grand mābedh and indeed of all the mābedhs (cf. below). In the Shāhānāme (we pick out only a few of the more interesting episodes) the Byzantine ambassador who was, the grand mābedh tells Khurasan, of the school of Plato, put seven questions to the mābedh which he answers (Mobh, vi. 3 sqq.) and thus excites the admiration of the king. In this story, as usual, the grand mābedh appears surrounded by other priests called mābedhs or mawrads as the case may be, and he is also given the title dāstān. Cf. also the questions put by the grand mābedh to Khurasan Anūharwān (Mobh, vi. 394 sqq.) and the assembly of the mābedhs under the presidency of the grand mābedh to put questions to Hurmuz son of Anūharwān (ibid., p. 424-430). Another passage (Mobh, vi. 442 sqq.) describes the heroic piety of the grand mābedh who consoles a high official, a victim of King Hurmuz, and is poisoned by the latter. The grand mābedh is also represented as interpreting the language of birds (cf. also al-Maṣūdi, Maruqī, ii. 169-170: the dialogue of the owls denouncing the cruelty of King Bahram son of Bahram son of Hurmuz [276-293 A. D.]), and in al-Ṭabarī (i. 905; Noldeke, p. 250) he explains the invasion of jackals in the reign of Khurasan as a punishment for the impiety of the land.

The story is very well known among the Arabs of the dream of the grand mābedh in the night of the birth of the Prophet and his interpretation of other marvellous happenings of the same night (al-Ṭabarī, i. 982 sqq.; Noldeke, p. 253: Amīr al-Dīn Īlam, i. 150); Ḥamza al-Īṣām (ed. Gottwaldt, p. 27) quotes a list of Saʿādīan kings drawn up by the mābedh Bahram son of Mardangāh (Noldeke, p. 401). In religious discussions the steps to be taken against heretics, in the persecutions and inquisitions against the Christians, the mābedhs and the grand mābedh are always most prominent (Hoffmann, Auszüge aus Beşan, Patrologia Oriental., etc.). Cf. also the articles MĀBEDH in ASIA, A.A. A list of grand mābedhs in the Saʿādīan period and of mābedhs contemporary with the last editors of the book is found in the Pundakānān, ch. 33 (Christensen, Empire des Sassanides, p. 35). The first grand mābedh appointed by Ardashir was, according to Tabari (Noldeke, p. 9), a man named Pahr (cf. The mābedhān mābedh Aturpašt Zartushtān lived, according to the Pelevi sources, 150 years and was grand mābedh for 90. Elisee (Langlois, ii. 230) mentions a grand mābedh, who had the honorific title of Ḥamdušān ("the who knows all religion") on account of his vast theological learning; this title seems to have been often given to the
A number of names of grand mōlēthas are given in various sources, among them the Acts of the Martyrs in Syria, Greek and Armenian; some are also preserved on the seals published by Herzfeld in his work on the monument of Paikuli. Mazākas was according to some texts mōbēdh or even grand mōbēdh. In Ibn al-Fakhrī, p. 216, we hardly have an inscription in verse of pictures representing, with other dignitaries "their mōbēdh and their hārida" who judges ignorantly and iniquitously.

On the zondāch cf. the article ZOARASIANISM and Goldziher, Muḥammadiānātul Siyāsāt, i. 170 and al-Dārijī, Bayān, ed. Sandallā, Cairo 1927, iii, 7, on al-Sūr ʿalāw. It is known that the Zorastrian clergy played an important part in the Sūr ʿalāwīya movement (Ioannidēs, Ἐπίσκοποι, St. Petersberg 1909, p. 10–15).

After the Muhammadan conquest the importance of the grand mōbēdh and of the mōbēdh diminished as Islam spread; our sources of course continue to mention them and Arab writers give information obtained directly from mōbēdh (al-Tabari, i. 2874, year 31 A.H.), mentions the mōbēdh who advised the governor Māwaḥīdh not to kill king Yazdīrī; al-Māsīḥī, Kitāb al-Tuhhī, p. 104 gives the name of the mōbēdh of all Persia in 345 A.H. etc.

The organisation of the Parsi at the present day is different; mōbēdh means a priest qualified to perform all the offices of worship. This, however, is beyond the scope of this article.

MODON, a town on the south-west point of Messenia, about 20 miles N.W. of Cape Arkaita, opposite the island of Sapientia at the foot of Mount Teneus. Modon is frequently mentioned in ancient times under the names Mēśōn and Mēšōnv; from the latter comes the Italian name of the town, Modon, under which it has been known since the middle ages in Europe. In the middle ages it was of much greater importance than in antiquity. The good harbour of the town, sheltered by cliffs of varying heights, has long been a haven of refuge and of supply for ships going from the west to the Levant. Hence pilgrims frequently mention the town and their accounts of their travels even contain maps.

The Arab Idrisi, in his geographical work finished in 548 (1153) for Roger II of Sicily, enumerates many seaports and towns on the mainland of Greece. Among these is Modon of which he records that it is a fortified town and has a citadel which commands the sea (Geographie d'Éditis, ed. A. Joubert, Paris 1846, p. 305). By the treaty of 1199 with the Byzantine emperor Alexius III, Venice was allowed to trade freely in Modon. The town had suffered severely at the hands of the Venetians in 1125 and again of the Normans in 1146 but was recovering again slowly. After the taking of Constantinople by the Crusaders (1204) and the division of the lands which had previously formed the Byzantine empire, Modon fell to the Venetians, under whose rule it remained for nearly three centuries. It is this period that marks the golden age of the town, which, carrying on her trade with foreign mercantile, developed a new prosperity and became an important and secure centre for trading with Egypt and Syria, while previously it had often been a nest of pirates. In the xvth century the population of Modon was a mixed one of Greeks, Jews, Albanians, Turks, Gipsies and Western Europeans. The Turks of the neighbourhood reared swine which they sold to the townspeople. According to some sources, at the end of the xvth century five thousand swine were exported annually from Modon to Venice. About the same time a settlement of gipsies in Modon is mentioned, who came from Gyppe, a district about forty miles from Modon, from which they said they had fled— for the sake of the Christian faith — and were seeking refuge in all lands with a letter of recommendation from the Pope (cf. Die Pilgerfahrten des Ritters Adnold von Hanf, ed. E. v. Groote, Cologne 1860, p. xxviii, 67 sq.; Z.D.P.V., xvii, 1894, p. 144). The fact is, however, that the gipsies of Modon after 1500 went over en masse to Islam, about the end of the xvth century were again mainly Christians, outwardly at least, after 1715 again became Muslims and finally after 1821 became Christians again.

During the second half of the xvi century the population of Modon increased considerably for many Christians and Jews of the Peloponnesus, seeking to escape the Turkish yoke, took refuge here. While the town itself was immune, the country round, which was flat, suffered a great deal from the Turks. Thus for example about 1480, the Turks raided this plain and destroyed by fire the olive-trees there. In the last decades of the xvi century, the Venetian republic had much anxiety about Modon and her other possessions in the East, which the Turks had long coveted. In 1499 the Admiral Antonio Grisani was ordered by his government to move to the defence of Modon against the Turks. In July of this year, the Turkish fleet came to the vicinity of Modon and soon afterwards several naval encounters with the Venetian fleet took place In a naval battle fought on Aug. 8, 1499, outside Modon, the heroic Venetian Andrea Loredano, governor of Corfu, was taken by the Turks and put to death. Another Venetian admiral, Melchior Trevisano, was now entrusted by the Venetian republic with the defence of Modon and her other possessions in the East. At the same time the republic endeavoured to make peace with Turkey, but the negotiations broke down in face of the impossible conditions laid down by Bayazid II. Among other things he insisted on the surrender of Modon. In the meanwhile on March 23, 1500, the Turks had occupied Merona, a little town near Modon. Marcus Gabrieli, the commander of Modon, had previously, on February 18, 1500, reported to the Venetian government the great straits of the town. According to his report, the garrison was not sufficient to defend the town against the Turks, and for a successful defence it would require four thousand trained men, in addition to artillery, arms, munitions and gunpowder, which the town lacked. In spite of her difficult financial
situation, Venice managed to provide the town with money, troops and artillery. But the Turkish fleet again appeared before Modon while Bâyazid II advanced on the town by land at the head of a well-equipped army. An attempt by the Venetian fleet under Admiral Hieronymus Cancel to raise the blockade on July 24, 1500 failed with heavy loss. The Turkish fleet, according to the Venetian admiral, had very good artillery. In the meanwhile famine had broken out in the garrison so that they could hold out no longer. Four Venetian galleys were able to steal through the Turkish fleet into the harbour and bring the garrison food, munitions, and men, but this could not avert the fate of the town. After a siege of twenty-eight days during which the town was bombarded by heavy artillery, the Turks stormed it. On Sunday, August 9, 1500, the Venetian garrison had to yield to this onslaught.

The lot of the surviving garrison and other inhabitants of the town was a hard one. They were either massacred in most inhuman fashion or sent into slavery. Very few of them succeeded in escaping. But the number of people captured did not come up to the expectation of the Turks, because the Venetian authorities had earlier sent thousands of old men, women and children from Modon to Cete and Zante. Among those who fell at the capture of the town was the Roman Catholic bishop of Modon, Andreas Falcus, a number of prominent Venetians and high officials of other origin. When the news of the capture of Modon by the Turks reached Venice, it was plunged into deep mourning. This is reflected in a letter which the Doge Augustino Barbarigo sent on September 7 to the Pope and several European rulers with reference to the cataclysm. The sole consolation of the Venetians was the deceitful hope that their fleet might succeed in retaking Modon. The Venetian Senate at once saw to the settlement of a number of the refugees from Modon in Cephalonia. Sultan Bâyazid II regarded the conquest of Modon, at the fortifications of which he was rightly angered, as a gift from God. When he entered the town as a victorious conqueror, it had already been partly consumed by fire which had been begun by the defenders themselves. The fugitives from Modon, who had taken refuge in Zante, watched the flames that were destroying their homes burn for several days. Sultan Bâyazid II promoted the first janissary to leap over the walls of Modon to the rank of Saray-bey. He had two towers built of the skulls of the fallen and massacred Christians and turned the cathedral of the town, the venerable church of St. John, into a mosque. On August 14, 1500, he went to the new mosque to return his thanks in prayer. He then saw to the resettlement of Modon, the walls of which were rebuilt. By imperial decrees, each Peloponnesian village had to send five families to become permanent settlers in Modon, the revenues of which were allotted to Mocca. After a brief stay, Sultan Bâyazid left his new conquest. He took with him as a prisoner the last Venetian defender of the town, Marcus Gabriel, whose life he had spared with the intention of using him for his own purposes later. The historian Safati, a native of Sinopi, wrote some time before 1521 an account of the taking of Lepanto (Naupactus) and Modon (Pelekaniou, Anastabashi we-Modon). The brief description of the capture of Modon written by Muslih Seiyid Mehemd also gives details of the sultan’s treatment of the town (cf. F. Babinger, G. O. W., Leipzig 1909, p. 49).

In 1531 the Knights of St. John endeavoured to take Modon from the Turks and to establish themselves there. To do this they equipped a small fleet under the command of the Abbot Fra Bernardo Solbiati, a nephew of Pope Clement VII. The Greeks employed in the harbour of Modon and Johannes Skandalis, a Greek from Zante, whose father was a customs officer in Modon, were to assist the enterprise. The fleet, led by Solbiati with two merchant ships, which also concealed soldiers, sailed for Sapenza. The war-ships were hidden in the vicinity of this island, while the two merchant ships under the guidance of Johannes Skandalis, made for the harbour of Modon. Permission to land was given without trouble to the crews of the two ships, who gave themselves out to be some merchants and some janissaries, and they were allowed to spend the night in the tower at the harbour. Johannes Skandalis and his little body of followers then succeeded in overpowering the Turkish garrison at the tower and taking nearly the whole town. The rest of the Turkish garrison shut themselves in the palace which had once housed the Venetian governors of the town, and offered a stubborn resistance. In order to overcome the Turkish garrison on the war-ships hidden at Sapenza were necessary. These now came up, although very late, and bombarded the town with their guns. Scarcely had they begun when a strong Turkish fleet appeared. The Knights and John Skandalis therefore abandoned Modon but not without carrying off some sixteen hundred prisoners.

The years 1534-1534, during which a Spanish force in the service of Charles V occupied the adjoining Coroni, were a critical period for the Turks in Modon. But after this, it was left in peace for a considerable period. The Tratels of Evliya Celebi who visited the Morea in 1667 to 1668 contain valuable notes on Modon and its vicinity, while Hâdıji Khalifa (d. 1658) contains nothing essential.

During the war which broke out in 1684 between Turks and Venetians in which Germans, Poles and Russians also shared as allies, Modon with the whole of the Morea was restored to the Venetians. General Francesco Morosini in 1686 broke the resistance of the Turkish garrison with the help of Greek and German troops and secured it for the Adriatic republic. The chief mosque of the city, i.e. the old cathedral, was once more dedicated to Christian worship. Only in 1699 after the peace of Carlowitz, did the Turks recognise the Venetian claim to Modon. Venice now did her utmost to restore the city which, with its commerce, had much declined during the Turkish occupation. Of the seven administrative divisions (camera) into which the Venetians had divided the Morea, the third was that of Modon. This district was again divided into four areas (Fanari, Arcades, Navarinou and Modon). From a Venetian record of September 29, 1690, giving the results of a census by the Venetian officials, we see that the district of Modon had been populated to an incredible degree. The 218 villages detailed in this list were inhabited only by 11,202 souls. Modon itself, including the citadel, had only 236 inhabitants of whom some must have been Muhammadans. A large number of villages which at the turn of the xvith—xviiiht centuries belonged to the district of Modon, have
Turkish names, some of which survive to this day. These villages were originally fiefs granted to Turks whose names in time passed to the village (cf. S. P. Lambros, in Delton, publication of the Historical and Ethnological Society of Greece, vol. ii., 1885, p. 686—710. pl. vii.; thereon Ιστορία Μιλέτουμα, Athens 1894, p. 114 sqq.; Pier Antonio Pacifico, Breve descrizione corregrifica del Peloponese o η Μού, Venice 1704, p. 125 sqq.).

After the conquest by Morosini whose services to Modon are commemorated in inscriptions still in existence, the town remained for some nineteen years under Venetian rule. In 1715 the grand vizier Ali Kamurri with the help of a number of Greeks took not only Modon but almost the whole of the Morea from the Venetians in a very short time. The Venetian garrisons of Navarino and Coroni as well as the inhabitants abandoned them when the Turkish army approached in the summer of 1715, in order to take refuge in Modon, which was much more strongly fortified. Soon afterwards the Turkish fleet and army began the siege of the town. After a brief resistance Modon surrendered voluntarily. After the capture of the town the grand vizier ordered a general slaughter of the Christians. Many in the district thereupon adopted Islam in order to save life and property in this way. The Turks who had formerly owned property in Modon or the neighbourhood were allowed by imperial edict to resume possession of it. The peace of Pessarowitz (1718) finally ceded Modon to Turkey. The town recovered from the catastrophe of 1715. From 1725 onwards a busy trade developed between Modon and the lands of North Africa, especially Algeria and Tunis; this trade had existed previously but not to the same extent. Modon played a certain part during the war between Turkey and Russia in 1768—1774. The Russian vice-general Georg Vladimir Dolgoruki in 1769 with 500 Russians, 150 Montenegrins and 100 Greeks (mainly Macedonia) besieged Modon. The Turkish garrison of Modon consisted of 800 janissaries and a large number of Turks of the town and vicinity able to bear arms. The walls of the citadel were in good condition, and the supply of food and munitions ample. The siege lasted a long time; the fighting was conducted mainly by the artillery on both sides. The Russians had also two warships co-operating on the sea. At the end of May 1769, Turks and Albanians from the interior of the Morea came to the help of the besieged who undertook a valiant sortie, when they learned of the approach of help. In the battle that now developed the Russians suffered heavily. They were forced to abandon most of their artillery and to escape to Navarino, from which they sailed with the rest of the Russian army and a few Greek notables. A few years later, the Turks in Modon were still displaying the guns which they had taken from the Russians in 1769. According to reliable sources, the Turkish population of Modon about 1820 was four to five hundred fighting men. About the same time Ali Agha was prominent among the Turks of the town for his wealth and in other respects also. The vicinity of Modon was almost exclusively inhabited by Greeks who cultivated the land, which mainly belonged to the Turks, and were despised by them as contemptible menials. During the Greek War of Independence of 1821—1827, all the attempts of the Greeks to take the town failed. At the end of March 1821, a Peloponnesian force led by the orthodox patriarch of Methone, named Gregory, and other notables, besieged Modon and the adjoining towns of Koroni and Neokastron. The besiegers were joined in the spring by Greeks from the Ionian islands and later by Philhellenes from Europe. On May 18, 1821, Greek ships, under the captains of the Spezios, Nikolaou Mousias and Anastasios Koladrutos blockaded Modon. But neither the Turkish garrison nor the armed Turkish civilians in the town were the least dismayed. On the contrary, they undertook raids in all directions and did their best to impede the progress of Greek emancipation. Many fierce encounters took place between the Turks of Modon and their besiegers. In July 1821, Turkish ships re-provisioned Modon but they were not successful in their attempt to re-provision Neokastron, the garrison of which was in dire straits from want of food and even water. On August 8, 1821, the Turks of Modon decided to attempt the relief of their compatriots in Neokastron, who had in the meanwhile been forced to capitulate to their Greek besiegers. On the road between Modon and Neokastron a battle was fought on August 8, 1821, in which the valiant chief Constantine Pierrakos Mavromichalis, a member of a notable Mainote family, fell. On the same day, the Greeks took Neokastron; but they gradually abandoned the siege of Modon. The town was able to continue to hold out, only, however, with the frequent help of the Turkish fleet.

When Ibrahim Pasha, the adopted son of Mehemed Ali, undertook to suppress the Greek rising and to pacify the Morea, Modon and its neighbourhood formed his main base. There he landed troops on February 24, 1825, and dug entrenchments. Modon became an important base for Ibrahim Pasha's operations. On October 8, 1825 the town was taken from him by the French General Maison. Not before 1833 the French left Modon and has since then belonged to the Greeks.

MODON — MOGADOR

1602, p. 22 sqq., 43; G. Cogo, La guerra di Terra conti i Turci (1499—1501), in Nuovo archivio Veneto, vol. xviii. (1888), p. 25 sqq.; Spadanino in C. N. Sathas, loc. cit., vol. ix., p. 193—194; G. Buchon, La Grèce continentale et le Maghreb, Paris 1843, p. 97 (Nikos A. Beka [bks] MOGADOR, a town in Morocco on the Atlantic coast. The Bay of Mogador, protected against the north winds by the rocky promontory on which the town is built, is a fertile oasis, not large and inaccessible for ships of large tonnage, has however the merit of being accessible at all seasons, an advantage which secures it a favourite place among the anchorages of the Atlantic coast of Morocco which is, generally speaking, inhospitable. This favoured situation was taken advantage of at a very early period. In spite of the lack of precision in the sources, it is probable that we should seek at Mogador the site of one of the five Phoenician colonies founded by Hanno (260 B.C.). The island seems to have been known as the island of Hera or of Juno. Pliny records that at the end of the first century A.C. the king Juba II founded purple dye-works on the Purpuraria Insulæ, islands in the Ocean. "opposite the Antioche", a Getulic people who lived in the north of the High Atlas. Getulic purple, which was celebrated at Rome, was supplied by the molluscs abundant on this coast. It is only at Mogador that we find an island and islands which can be identified as the Purpuraria Insulæ, but an archaeological discovery has yet been made to confirm the deductions made from the ancient geographers.

In the xii century of the Christian era, according to al-Maskić (who finished his book in 1068) Anogdil, a very safe anchorage, was the port for all the province of Safi. We see in the name of that of a local saint, Sidi Mogadil, still venerated in this region, whose tomb is on the lawn near the mouth of the Wadi 'I-Kob. It is however possible that the saint of whom we know nothing, gets his name from an old Berber place-name. Mogador is only a Spanish or Portuguese transcription of Mogadil, though the names Mogodil, Mogador, which we sometimes find in the texts. The harbour and the island bear the name of Mogador or Mogodil on a series of ports of the xivth and xvth century (publ. by Ch. de la Roncière, La Découverte de l'Afrique au Moyen-Age, 1925) but there was not a town here, when in Sept. 1506, the king of Portugal Dom Manuel I commanded a gentleman of his court, Diogo d'Agambua, to build a fortress here which was called Castello Real of Mogador. Built with great difficulty in face of the hostility of the natives, the Portuguese stronghold did not long resist them. While at Safi and Santa Cruz of Cape Guer, (Agadir), the state of anarchy in which the tribes lived favoured the rapid progress of the Portuguese, it seems that at Mogador they came up against strong resistance probably organized by the old Berber marabout body of the Karkiyà. The garrison had to remain blockaded in Castello Real, revictualled with difficulty from Portugal and Madeira, until in October or November 1510, the tribes were strong enough to seize the fortress in circumstances which we do not know.

A sketch of the xviith century and plans of the xvith leave no doubt as to the site of Castello Real. It was situated, not at the mouth of the Wadi 'I-Kob, where it is now shown an alleged Portuguese fort which however dates from the end of the xvth century, but on the shore of the northern passage opposite the island, on the rocky point which supports the mole west of the present harbour. Sometimes abandoned, sometimes more or less restored by the rulers of Morocco, who from time to time kept a small garrison there, the old Portuguese castle survived till 1764 or 1765 and was only destroyed when the town was built.

In spite of the lack of success of the Portuguese attempt, this privileged situation continued to attract the envy of European nations. At the beginning of the xviiith century, Spain, fearing that Moorish, Algerian or even European corsairs would establish themselves at Mogador, thought of seizing it herself to protect the route to the Indies. At the same time, English agents were thinking of making Mogador a base against Spain. The Sultan-Mawlay Zaidan in 1611—1612 and his son 'Abd al-Malik in 1628 drew up a scheme to fortify the place to prevent foreigners from establishing themselves there. This was the time when in France Richelieu and Père Joseph were drawing up schemes for a colonial policy. The Chevalier de Razilly in 1626 suggested to the occupation of Mogador and the organisation of a factory and f-herres there. He had it reconnoitred in 1628 but found it impossible to take it by surprise.

In spite of so many projects and attempts against it, the island and the shores remained practically deserted. Ships however frequented the roadstead. It was through Mogador that in the first quarter of the xviiith century, the greater part of the trade between Marrakûsh and Holland took place. Later, in the time of Mawly I-mâîl, the harbour was mainly used as a refuge for corsairs who came there to rest and repair their vessels.

In 1751, Sidi Muhammad b. 'Abd Allâth, then khalîfa of his father for the district of Marrakûsh, desiring to develop commercial relations between his subjects and Europe, ceded the island of Mogador to a Danish company, which however preferred to establish a centre at Agadir and was not successful there. A few years later on becoming sultân and having made Marrakûsh his capital, Sidi Muhammad decided himself to found a town at Mogador and to conduct all the commerce of
the south of his kingdom through it, to the greater benefit of the royal treasury, which would obtain not only the customs from this increased trade but also profit by the rents of the buildings, most of which had been built by the sovereign and were his private property. The harbour also served as a base for the corsairs who, through the menace they offered to the fleets of Europe, forced the Christian nations to conclude treaties with the Sultan by which he received valuable presents and even sums of money. In order to populate the town and start business in it, he demanded that European consuls and merchants should settle there and have houses built at their own expense.

By 1760 he had begun work but it is from the autumn of 1764 that the foundation of the town really dates; it was given the name al-Suwa'ira (Souia), the little fortress, by which it is known to the natives; the name Mogador is only used by Europeans. We also find a Berberised form (Taourirt). The Sultan went in person to choose and distribute the sites for the buildings. He had asked the English to send him an architect. They sent him a French "engineer", a native of Avignon, called Nicolas Cournot, who had made the plans for the fortifications of some places in Roussillon. He was an adventurer who, after working in France as a contractor, had entered the English service during the Seven Years' War. He was living at Gibraltar where he entered Sidi Muhammad's service. The Sultan did not gain much by his services and sent him back to France at the beginning of 1767. None of the present buildings in Mogador can be attributed with certainty to Cournot, for after him a number of European architects and masons worked for the Sultan, notably a Genoese architect who built the battery called the skala situated on the western rampart facing the sea. Mogador owed to its builders the narrow streets, massive gateways and bastions of European type, the like of which cannot be found in other Moroccan towns and which give it quite a specific character. Sidi Muhammad also built outside the town a country palace which still stands half buried in sand opposite the little village of Diyabat.

The dreams of the Sultan were only imperfectly realised. The merchants, attracted to Mogador by the promise of a reduction in the export duties on goods, were soon undeceived when they saw that the sovereign did not keep his promises but constantly imposed new burdens on trade. The prosperity of Mogador remained insignificant under Sidi Muhammad and declined under his successors. The situation of the town, a long way from great cities and main roads, made it frequently used in the 17th century as a political prison and compulsory place of residence for high officials in disgrace. Mogador remained however the starting place for the caravans to Sissi, Mauritania and the Sidi Annas and has retained from this position a certain commercial importance, to which the opening of the port of Agadir to commerce will now do considerable harm.

On August 15, 1844, after the battle of Ily, a French squadron commanded by the Prince de Joinville, who had just bombarded Tangier, came and bombarded Mogador. It was intended to make an impression on Sultan Moulay Abd al-Rahman by striking at a town which belonged to him personally and from which he drew considerable revenue. A three hours' bombardment silenced the batteries; the French army then disembarked on the island, the garrison of which, entrenched in the mosque, made a vigorous defence until the next morning. On August 16, a detachment of 600 men went to spike the guns, throw the gunpowder into the sea and destroy the last defences of Mogador. The town, which had suffered very little from the French shot, but had been evacuated by the inhabitants, was burned and plundered by the tribes of the country round (Shayadna and Hala). Mogador is now the headquarters of a contreband. It had 18,401 inhabitants at the census of 1926. The Jewish element is particularly large, numbering 3,020.

The extremely temperate climate is remarkably beautiful; but it is spoiled by the wind which blows almost incessantly, laden with the sand from the neighbouring dunes.

MOGHUL [See MUGHAL.]

MOHUR, an Indian gold coin. The name is the Persian mahr, which is a loanword from the Sanskrit muvari, seal or die. The earliest occurrence of the word on coins is on the forced currency of Muhammad b. Tughlaq where it has the literal meaning of "sealed" or "stamped." By the 11th century it had come to be used as a popular rather than precise name for gold coins in general.

Very little gold had been issued in India for two centuries before the reign of Akbar. One of his reforms was the issue of an extensive coinage in gold. In addition to many pieces which had only a brief circulation, he revived the old gold tanka [q.v.] of the Sultans of Delhi on a standard of 170 grains (1102 grammes) to which he gave the name mohur. That the name at first could be applied to any gold coin is shown by Djabangir's reference in his Mima'am (transl. A. Rogers, P.T.P., vol. ix., p. 10) to mohurs of 100, 50, 20, 10, 5, 1 rup. After the numismatic experiments of Akbar and Djabangir, only one gold piece was struck, occasionally with subdivisions so that the general name acquired a particular meaning, especially among the English merchants in India. Mohurs continued to be struck to the end of the Mughal Empire and by the states into which it broke up in the 18th and 19th centuries. Akbar and Djabangir issued
square as well as round pieces and the former also struck a few mbhit pieces, so called from their shape. The numerous large denominations recorded by Abu al-Fazl and Dāhā ngir, only 5 half pieces of Akbar and of Dāhā ngir are known to exist. As the silver rupee was the standard unit of India the value of the mohur fluctuated with the price of gold. In the latter half of the xviiith and xixth centuries, the East India Company endeavoured to make gold the standard of India and introduced mohurs (called gold rupees) in Bombay with the legends of the Moghul Emperor. None of their attempts to keep gold and silver in currency at a fixed rate were successful. When in 1855 a uniform currency was introduced for British India a gold mohur or 15 rupee piece with English types was struck in name of William IV but never trained general circulation; this was the last attempt to restore the mohur to circulation. The mohurs occasionally seen of Victoria of 1861, 1862 and other dates are patterns.

(J. Allan)

Mokhā, a small seaport on the Arabian coast of the Red Sea in 13° 15' 50" N. Lat. and 43° 12' 10" East Long. (Greenwich).

The once imposing town lies on a small bay between two promontories with forts on each about one and a half miles apart. The wall which surrounds the town in a semicircle is pierced by four gates. In the north the Bāb al-Hamūdiyya leads to the citadel of the town and to a tongue of land which runs out into the sea; in the east roughly in the centre of the wall is the Bāb al-Shādhili through which the fort of al-Burāḍh is reached and to the east the road to the Taiz is reached, while the road to the Hodedea runs north via Bāb al-Fakh. In the south the Bāb al Sunníd admits to the port of al-Bahār and the road to 'Aden; in the west through the Bāb al-Bahār the harbour is reached; its stone breakwater is now much decayed. This also holds of the wall which connects the various gates. Seen from the sea the town, which covers an area of about half a square mile, still looks very fine; the white mass of houses stands brightly out from the dark blue waters of the Red Sea. But as one approaches, the damage which wars, dilapidation and turbulent times have done to the often sore tried town, is apparent; the houses are for the most part deteclted, the inhabitants, consisting of Arabs, Somaliis, Danakilis, and a few Parsees, have settled in huts outside the town. East of the Bāb al-Shādhili, for example, there is a large group of huts, inhabited by Arabs, south of this another group belonging to Somaliis, while farther south and on the other side of the Wadi al-Kebr is the Jewish quarter (Kāf al-Yahūd).

In the north lies the great cemetery and a whiteashed mosque which contains the tomb of the patron saint of the town. Shaikh 'Ali b 'Umar al-Shādhili; in the east of the town is a second important mosque with a minaret 118 feet high, which forms a landmark visible from a considerable distance, along with several smaller ones. The country round is barren. Drinking water is brought by a conduit from the Mawṣā twenty-four miles to the north. The population has varied considerably in the last hundred years. In 1824 it was 20,000, in 1878–1879: 5–8,000, in 1882 it was put at 1,500 inside the town and in 1901 it had sunk to about 400.

Mokhā is briefly mentioned by al-Hamdānī in connection with al-Mandab as lying in the land of the Banū Madjid; al-Masudi also refers to it briefly in his geographical work. The Portuguese gave the town the name by which it has become known in Europe: Moça. P. Manoel d'Almeida calls it Megyu in his Historia geral de Ethiopia a seta no Esteres Telles (Coimbra 1660).

About 850 years ago Mokhā was an insignificant village, but rapidly grew in importance when Shākh Shādhili discovered the peculiar qualities of the coffee bean and introduced the habit of drinking coffee. In 1513 Alfonso Albuquerquque found Mokhā still a modest place but by 1610 it had become the most important port for trade with Abyssinia, and England was endeavouring to trade with it while the Dutch had a factory here. Coffee was the chief article of export along with other specialties of the Yemen, and received its name from the town. As late as 1763 Nieuhof found the town very prosperous; but the capture of 'Aden by the English put an end to its prosperity. 'Aden and al-Hodeida attracted all the trade of Southern Yemen. Under Turkish rule Mokhā was a kādā in the sandjak of Taiz but its trade was insignificant. In 1916 for example, only about £10,000 worth of coffee was sent to 'Aden. There is a minimum of industrial activity and that only to supply local needs. Indigo dyeing and the manufacture of spirits may be mentioned; the latter is in the hand of Jews. Mokhā is connected by telegraph with San'a' (via Taiz), al-Hodeida (via Zabid), Shaikh Safīd and Petim. Mokhā has acquired a new importance by the creation of the Imāamate of Yemen and is now beginning to share the trade with al-Hodeida.

(A. Grohmann)

MOLĀ. [See Mawā'.]

MOLĀ KHUSRAW. [See Muḥammad b. Fārāb.]
to the Indian Ocean. This peculiarity of its situation suggested to the late W. E. Taylor the derivation of the name Mvita (the "Curtained Headland") from *vita* "point". The more usual derivation from *vita* "war" seems inadmissible on phonetic grounds; another explanation connects it with *vita* "hidden", either from its hidden position, or from the inhabitants, as it is said, having hidden themselves in the bushes during a raid from Pate.

The town of Mombasa is situated at the eastern end of the island and, being the terminus of the Uganda railway and the only port of the colony, is of considerable commercial importance. The population, according to the latest information available, is something over 44,000, of whom 26,906 are classed as "Africans" (i.e. the permanent residents, mostly Swahili, and a floating contingent of labourers belonging to other tribes). The remainder includes 7,523 Arabs, 7,556 Indians, 1,000 Europeans, and a proportion of "other races". The Arabs, Swahili and many of the Indians are Moslems; the two former chiefly Sunni of the Ṣafī'ī sect, though a few of the older men belong to the Ḥanīfī. These are the real inhabitants of the island, and on the plain buildings, as a rule, and devoid of minarets; the *mudawdūn* stands on the flat roof to give the call to prayer. The largest and most imposing of these structures is that belonging to the Khodjas.

The origin of Mombasa is involved in some obscurity. It is certain that Arab trading stations existed on the East African coast at the beginning of the Christian era, and we learn from the *Periplus of the Erythraean Sea* that the traders frequented married native women. This indicates a fairly early origin for the Swahili race. The first permanent settlements, however, seem to have been post-Islamic: 69 (685) is given as the date for the settlement of Pate; and, as Lamu is said by native tradition to have been founded by colonists sent out by ʿAbd al-Malik b. Marwān (A.D. 684–705), these two towns were no doubt contemporary.

There is no mention of Mombasa in the traditions of Lamu or Pate, at this period, except for a statement made to the late Captain Stigand (Tow of Zanzib., p. 29), that ʿAbd al-Malik sent out Syrians, who "built the cities of Pate, Malindi, Zanzibar, Mombasa, Lamu and Kilwa". Other authorities place the founding of Kilwa much later, viz. 365 (976). The *Chronicle of Kilwa* states that ʿAli b. Ḥasan al-Shirazi, the founder and first ruler of Kilwa, installed one of his sons as ruler of Mombasa, no doubt the first of the "Shirazi Shilhāq", the last of whom was deposed by the Portuguese. It would appear that Mombasa was for some time under the suzerainty of Kilwa; but how far the "King of the Zandi" described by Idrisi and, later, by Ibn Saʿīd as residing at Mombasa, was independent, is not clear. The names of the twelve tribes (called indifferently *kaṭiba* or *fāṭīf*) said by native authorities to make up the Swahili population indicate a composite origin and possibly a late one, as the bulk of the people came from settlements already founded. It is possible that the Wanzurua (who either take their name from the city or gave theirs to it) go back to the alleged foundation under ʿAbd al-Malik; but against this is the assertion, repeatedly made, that the Wachangamwe, Wakiindini and Watangana are the *rafa tatu*, "the three" — i.e. the three aboriginal — "tribes". Some native authorities give these three as "Kilindini", separate from Mombasa.

Mombasa is a village on the mainland, a mile or two from the crossing at Makupa; Kilindini (now important as the principal harbour for steamers from Europe) is at the western end of the island. Tradition says that Kilindini was a city before Mombasa existed, and, in fact, the jungle near the present port contains numerous ruins of uncertain date, which, so far as I know, have not yet been competently examined. Tanganyika is on the island of Mombasa and is now included in the town. The remaining tribes are those of Kilifi (1) (a town to the north of Mombasa; its inhabitants are said to have come from "Shirazi"), either Shirazi in Persia or a town of the same name in Tanganyika Territory, a colony from the original Shirazi, Pate, Paza (or Faza, in the island of Pate), Shaka (a Persian settlement near the mouth of the Tana), Mtwapata (between Mombasa and Takaungu), Jomvu (on the creek known as Port Tudor), the Wagunya (the people on the mainland north of the Lamu archipelago) and the Wakatwa (the Somalis).

Another account omits this last name and substitutes that of the Wamalindi. Krapf (*Dictionary*, p. 240) mentions a tradition that the town was built (on or near Kilifi) in 69 (685) under the direction of Ibn Batūtā. One of his companions, he says, named himself after Bani Marwān, but his reference to the ʿAbd al-Malik foundation must be understood. Ibn Batūtā, who spent one night there, describes it as a "large island, two days' journey by sea from the Sawahi country. It possesses no territory on the mainland. They have fruit-trees on the island, but no cereals, which have to be brought to them from the Sawahi. Their food consists chiefly of bananas and fish. The inhabitants are pious, honourable and upright, and they have well-built wooden mosques". This would imply that the coast opposite Mombasa was not reckoned as part of the Sawahi. Present-day Sawahis restrict the term "Sawahili" to the strip of coast between Malindi and Lamu, which they look upon as the cradle of their race and this might be taken as intended by Ibn Batūtā, but for his reference to cereals being brought from "Sawahil", which would place it in the south, since the dhows laden with millet come up from that quarter with the S. W. monsoon (cf. Taylor, *Aphorisms*, § 128).

The first European to reach Mombasa was Vasco da Gama, who touched there, April 7, 1498, but did not land, owing to the real or suspected treachery of the Arab pilot sent by the Shaikh. He went on to the rival state of Malindi and established friendly relations with its ruler, who hoped to find in him an ally against Mombasa. Mombasa — after the city had been repeatedly destroyed, in whole or in part, by Almeida in 1505, by Nuno da Cunha in 1528 and by Continho in 1589 — was rendered tributary to the Portuguese in or about 1590, after the adventurer Mir ʿAli Bey had induced the Shaikh to tender his allegiance to the Turkish Sultan and had been

1) In these names of places, I omit the *war*, which is the prefix indicating plurality of persons.
driven off by Continho’s fleet. At the same time occurred the invasion of the Zimbabs, an unidentified tribe who had spread desolation on their march north-eastward, “probably from some locality on or near the West coast” (cf. Theil, i. 352). From Mombasa they passed on to Malindi, where the Portuguese garrison, with the help of native allies, effectually resisted them, and, if not exterminated, they ceased to exist as a tribe. The fort, still in existence, was erected between 1593 and 1596, and Mombasa was held by the Portuguese for some sixty years. The last Shirazi Shaikh, Shaho Mshahom b. Hisham, was deposed and the Shaikh of Malindi, Ahmad, installed in his stead with the title of Sultan. Immigration from Portugal was encouraged, but in 1615 the settlers, apart from the garrison, only numbered 50 (cf. Stranies, p. 173). In 1605, a convent of Augustinian monks was founded, which, with other ecclesiastical establishments, was under the jurisdiction of the Archbishop of Goa till 1612. In that year a separate diocese of Mozambique was created. Shaikh Ahmad died in 1609 and was succeeded by his son Hasan, whose treatment by the Portuguese authorities ranks among the scandals of Colonial history. He was finally murdered, at the instigation of the Governor, De Mello Pereira (1615). His son, Yisuf, aged seven, was sent to Goa to be educated and thereafter baptized by the name of Geronimo Chingulun. After an inquiry held at Lisbon in 1618, the highest ecclesiastical tribunal in Portugal pronounced Hasan innocent and decreed that Yisuf should be restored to his inheritance. In 1630 he was sent home and installed as Sulthan. continued for a time to profess Christianity, but, being accused of apostasy because he had been seen praying at his father’s tomb and apprehensive of being sent to Goa (the seat of the Inquisition), revolted, openly declared himself a Moslem and massacred all the Portuguese in Mombasa (cf. Faria y Sousa, vol. iii., iv., i., p. 391). His example was followed by Tanga, Mtangata and some other towns (1631). Mombasa was besieged for three months by F. de Mowra, with a fleet from Goa, but without success. Yisuf, however, probably seeing that he would be unable to hold the position, retreated to Arabia after dismantling the fort and destroying the town. The new governor, Seixas de Calheira, subdued the revolted towns and repaired the fort, as recorded in the inscription still legible above the gateway. The Portuguese rule becoming more and more oppressive, the Coast Arabs appealed in or about 1660 to Sulthan b. Seif al-Yaarabbi, Imam of Omman, who had already expelled the Portuguese from Maskat. He took Mombasa after a long siege and various operations; and though it was retaken shortly afterwards, the power of Portugal was already on the wane, and Seif b. Sulthan again captured Mombasa in 1698 and installed Nasyir b. Abd Allah al-Mazari as governor. Internal quarrels and a revolt against this governor laid the town open to a last Portuguese attack in 1728, when Luis de Mello Sampayo, one of the help of Iwana Tsun Mikan (Abu Bakr b. Muhammad), Sulthan of Pate. This occupation lasted but a short time and was terminated by another massacre, probably that commemorated in the tradition recorded by Taylor (Apologies, § 401). A period of anarchy ensued, which became so intolerable that not only the "Twelve Tribes" of Mombasa but the chiefs of the pagan Wanyika on the mainland, appealed to Seif b. Sulthan for help. He sent three ships and appointed a governor. In 1739 this office was held by Muhammad b. Othman al-Mazari, the first of a line who became practically independent rulers of Mombasa. When the Yaarabbi Imams were ousted by the Al Bii Saldi, the Mazri refused to recognise the new dynasty. They were left undisturbed for a considerable time, but the more energetic policy pursued by Sa’d b. Sulthan (1801—1856) induced them to seek British protection in 1823. This was provisionally granted by Captain Owen, but withdrawn three years later, as the Home government refused to sanction it. Sali’s finally gained possession of Mombasa in 1857, when the leading Mazri were captured by treachery and deported to Bander ‘Abbasi. From that time till the establishment of the British protectorate in 1890, Mombasa remained subject to the Saliyid (now called Sulthan) of Zanzibar, who indeed retains a certain jurisdiction over the ten-mile strip of coast leased from him by the British East Africa Company in 1887. The principal event in its history since that date is the rising of the Mazri in 1895, coincident with, but not caused by the proclamation of the British protectorate over the mainland territory, which was taken over from the Company by the Imperial Government. Since then the completion of the Uganda Railway and the harbour works al-Kilindini have noticeably changed the character of Mombasa, which is now a flourishing seaport, much frequented by European shipping.

The dialect of Swahili spoken at Mombasa was considered by the late W. E. Taylor “the truly central” language, “the best fitted for accurate statement and grave discussion”; though that of Zanzibar has now attained a wider currency. The art of poetry was, till recently, much cultivated there: the best known of the native poets are Muyuca b. Mwinyi Haji, Mwalimu Sikuva (died 1891), and Hemedi b. Muhammad b. Ahmad al-Mambassi, who was still living during the last decade of the sixteenth century (since deceased), Muhammad b. Ahmad, ‘Abd Allah Borashidi, Mwinyi Mugwama.

MONASTIR (pronounced Munastir, Mestir; ethnic Mystiri), a town in the Sheheli, the eastern coast of Tunisia, on the site of the ancient Rasina at the end of a cape which runs out to the south-east of Susa. The Arabic name raises a problem which is not yet solved. The name clearly conceals the Greek word monastérion which suggests that there was an important Christian monastery here at one time. This is however a pure hypothesis, supported by no text, although Tissot (Geographie comparée de la province d'AFRICA, ii, 165-166) seems to take it for granted. If on the other hand we remember that the Arab Monastir from the end of the eighth century was a great Muslim monastery and probably the first to be founded in the west, it is tempting to accept the explanation (suggested by St Hassan 'Abd al-Wahhab) that the name was given to the Muslim foundation by the Greeks of the country or Berbers speaking Greek, still Christians or recently converted to Islam.

It was in 180 (769) that Harthama b. 'Aiyâno, who ruled the province of Ifriqiya in the name of the 'Abbásid caliph Harûn ar-Rashid, founded the ribât of Monastir. This fortified monastery attained considerable importance in Western Islam. A century after its foundation, Hàfizîs were quoted which proclaimed its great importance and promised the highest rewards to those who came there to fight the infidel or to prepare themselves for the holy war. The Prophet foreseeing the foundation of al-Monastir is said to have said: "On the coast of Ifriqiya, there is one of the gates of Paradise which is called al-Monastir; one enters it by the grace of God's mercy and leaves it by the effect of his pardon"; or again: "He who keeps watch in the frontier town of al-Monastir for three days has the right to Paradise" (cf. Abu l-'Arab, Class des sanctuaires de l'Ifrîqiya, transl. Ben Cheneb, § 7, 9, 14, 15; Ibn Istîhâr, Bayânî, transl. Fagan, i, 11). In the 9th century al-Balki gives a description of Monastir, the existence of which is taken from al-Warrâq (d. 973) and which is not quite clear to us. It is a large fortress (kàfîr) he says, which contains a quarter (râbûbî) of considerable size. In the middle of this quarter stands a citadel (dhîn) which contains suites of rooms, oratories and castles (kârâb) of several stories. To the south of this citadel is a great court (qâmân) with khânqâs, called khêtâb gâmiân, around which women who wish to devote themselves to religion come to live. It seems that the fortresses was the town itself with its ramparts, still known by the same, common in Tunisia, of beld. Outside the beld the quarter is also encircled by ramparts and turrets in which we have the ribât. This occupies the north-east angle of this fâtâbgh; its walls and high tower called nadhûm dominate with their proud silhouette the shore and the country round. To the south is a courtyard with tombs; hence no doubt we have to locate the abodes of the pious women mentioned by al-Warrâq. The interior of the ribât shows traces of frequent attention and repairs which makes its plan singularly complicated. We can however perhaps recognize the general arrangements of which the ribât of Sûsa, founded twenty-five years later, gives us a clearer scheme on a smaller scale: a central rectangular court surrounded by two storeys of cells. On the first floor on the south side, the cells are replaced by a hall for prayer of no great height, very simple with cradle vaulting. It is probably the same as is mentioned by al-Balki: "On the first storey is a mosque where there is always a khâtîb of great virtue and merit, who has the direction of the community". The signal tower, circular in plan, occupies almost the same position as that which dominates the ribât of Sûsa. In addition to the dwellings of the marabouts there are reservoirs, baths and "Persian mills" in the monastery. Every year a great fair was held at Monastir on the 'Ashûra' day when the pious began their temporary withdrawals from the world. Some, however, shut themselves up for life and devoted themselves entirely to prayer and the defence of the lands of Islam. The people of Kairuân supplied them with provisions, in itself a pious work.

The ninth century was undoubtedly the golden age of the ribât of Monastir. Its importance however must have diminished somewhat as a result of the foundation in 821 of the ribât of Sûsa, which was the starting point for the expedition to Sicily. Al-Balki would regard the ribât of Monastir as a dependency on that of Sûsa. It was nevertheless, as well as the land around it, an auspicious place. We can date to about 1000 A.D. the building of the Great Mosque, close to the ribât, and that of the little mosque of the Saiyida, both of which have preserved mihrabs of a very curious transitional style. It is probable that the "Lady" whose tomb has given its name to the oratory of the Saiyida was a princess of the family of the Zîriids of Kairuân. Monastir was, especially after the Hilâl invasion (middle of the 12th century), the St. Denis of the Sanhâdja rulers. According to al-Idrîsî (11th century), the dead were brought there by boat (the roads were by no means safe at this time) from the town of Mahdiya. The tombs of this period are numerous in the cemetery in which the patron saint of Monastir, Sidi al-Mezari, is buried.

Although Monastir did not play a great part in history after this period, the town and the ribât continued to be an object of care to various Tunisian dynasties. From the Hashîd al-Mustanshir (1260) date the two gates of the beld: Bab al-Dirb and Bab al-Sir. As to the ribât, one of the gates was rebuilt by the Hashîd Ali Fâris in 828 (1424); another dates from 1058 (1648) and is the work of the Turks.

Monastir is at the present day a town of some 7,000 inhabitants. Three little islands, one of which contains a number of puzzling artificial caves, shelter the roadstead outside, which is frequented by a considerable number of ships at the tunny and sardine fishing season.

of Montenegro and the latter in the Mediterranean area around Lake Skutarí down to the coast. After the destruction in 168 B.C. of the Illyrian kingdom of the Ardiae whose last capital was Skutari, to which they, along with the Herzegovina, Southern Dalmatia and Northern Albania, had belonzed, they came under the rule of the Romans and later formed part of the province of Dalmatia. In the first century A.D., we find the two tribal areas replaced each by a towa organised on Roman lines, with the old tribal territories attached to them, but still defined: Docelea, at the corner formed by the junction of the Morače and Zeta, and Scodra, now Skutari, which latter, in the division of Dalmatia under Diocletian, became the capital of the provincia Praecta dinata or Praecala: and has maintained a dominating position almost down to the present time [cf. SKUTARI]. Docelea, on the other hand, is representative for Montenegro of the economic and cultural decline of south-west Europe since ancient times. In spite of the step-motherly nature of the country, we know from the ruins of public and private buildings being in the miserable desert of the Karst and from epigraphic evidence that it was once a prosperous city with considerable trade, with the interior across Lake Skutari and on the Bayana which flows out of it (Patsch. in Pauly-Wissowa, Realencyclopaedie der klass. Altertumsweisenschaft. v. 1254 sqq.). It suffered severely in 395 when the Balkans suffered so much at the hand of the Teutons at the time of the migration of the Visigoths, but in spite of the plundering of the Adriatic territory which followed at other hands also, it was still the see of a bishop in 602, in the period when the towns of the peninsula were finally destroyed as a result of the raids of the Avars and Slavs and the permanent settlement of the latter, who having no understanding of town life, retained in their new home their traditional poor and primitive mode of life, for the most part in family groups settled on the land and mainly engaged in cattle breeding.

II. Its situation and tradition, from traces in place-names, remnants of the old population and the city walls, now much decayed, preserved for the ruined town of Docelea which ituberto had held the position later occupied by Montenegro, its old ecclesiastical position — there is a record of a bishopric of Docelea subordinate to the Greek metropolis of Durazzo — and seem also to have given it a military and political preponderance, since the little Slav state which later grew up here bore after it the name of Doinča, Slav Didikia down to the 16th century. This originally comprised only southern Montenegro and the stretch of territory called Krania along the west bank of the Lake Skutari. The littoral itself (with Cattaro, Budva, Antivari and Ulcinj) and Northern Albania, with many Roman towns like Skutari and Drinovo, remained Byzantine on the contrary, as part of the theme (province) of Dyrrachion down to the 12th century, while eastern and northern Montenegro belonged to Serbia and the north-west to the principality of Travunia (capital Trebinje).

Of the early obscure pre-history of Doinča all that we have is a Byzantine seal of a ruler of probably the tenth century: ΠΤΩΤΩΝ ΧΡΗΣΩΝ ΔΙΟΝΙΣΙΟΣ; the country was then not only ecclesiastically and culturally but also politically under Greek influence like the larger Slav Adriatic state. From the 10th century our information is fuller, if not absolutely reliable.
Prince John Vladimir, a figure much obscured by legend, is inextricably associated with the last efforts of the Western Bulgar state. First a prisoner, then the son-in-law of the Czar Samuel (d. 1014), he was murdered (drowned in Lake Prespa) by the last Czar John Vladislav (1015—1018) in the Bulgar capital. Remembered in Montenegro as a saint by Christians and Muslims alike, he now rests in the monastery of Shen Jon near Elbassan in Central Albania.

In the years that followed, Byzantium, after the Bulgars, its opponents for centuries, had been finally disposed of by the Emperor Basil II. But by 1018, being again in possession of the greater part of the Balkan Peninsula, enforced its suzerainty to the northwest also. Dociolia, under three able rulers not only survived this danger but attained an importance never reached by Montenegro itself in its best days. Prince Stephan Voyislav — it is not known in what relationship he stood to John Vladimir — in spite of great opposition from the Byzantines (1036—1042) obtained Travunia (see above), Zachlumia, adjoining it (on the central and lower Narenta), almost the whole Adriatic coast between the Narenta and Boyana along with Cattaro and Antiwara as well as Northern Albania with Skutari and established the still existing Latin bishopric in Antiwara, out of political hostility to Byzantinism. His son Michael was the first to take the title of king; the choice of his son Constantine Bodin as Bulgar Czar by rebels in Macedonia (1075) ended however in a — temporary — humiliation of Dociolia. Michael and Bodin, who succeeded his father presumably in 1082, made an alliance with the Normans in Italy and supported Robert Guiscard in his fighting in the west of the Balkan peninsula (1081—1085) with Alexius I Comnenus. Bodin succeeded at the same time in extending his rule over Bosnia also (then practically only the territory on the lower course of the Bosna, the Vrbas and the Narenta) and Serbia or Raszia (in the modern north and eastern Montenegro, the sandjak of Novi Pazar in Serbia and S. E. Bosnia). The kingdom of Dociolia attained its greatest extent with the conquests of Stephan Voyislav — but only for a brief period. Bodin's good fortune faded away. After the restoration of Byzantine rule on the Adriatic, reprisals were begun (1085—1094) under the personal direction of the emperor Alexius. The king was defeated: the links that bound the various parts of his kingdom together were loosened and quarrels broke out within the royal family itself. In 1096 Bodin could still receive Crusaders in his capital Skutari: Provencals under Raymond of Toulouse, who had marched through Dalmatia and probably through the Zeta valley (cf. above) and were making for Durazzo in order to reach Con-stantinople from there by the old Via Egnatia. After this we have no certain information about him and his successors. All that is certain is that Dociolia was driven from the coast and out of Northern Albania by the Byzantines and became tributary to them, while Serbia, which had hitherto been politically insignificant in comparison, began to expand at the expense of Dociolia under the Grand Zupan Vikan, Bodin's governor, and his successors, especially after the Byzantine empire fell steadily into decline from 1180 onwards. The Grand Zupan Stephan Nemanya, a native of Dociolia, deprived it of the former possessions of Dociolia in Northern Albania and on the coast from the eastern shore of Lake Skutari to Cattaro, disposed of the last Dioclian prince Michael in 1189, and united his territory with Serbia. From the 13th century the old name of the country was replaced by that of the river Zeta (Latin: Zenta, Genta).

III. Under Nemanya's dynasty Zeta (with Northern Albania and the coast) remained for 170 years under princes, repeatedly by heirs to the throne. Widows of kings also had estates on this sunny strip of coast. A beneficess of the land as a builder was Helena (d. 1314), the French wife of Stefan Luč i (1243—1276) who had the towns on Lake Skutari restored, which had suffered severely from the Mongol storm which in 1242 had swept southwards along the Adriatic, and built and repaired numerous churches and monasteries in the predominantly Roman Catholic territory around the Lake and on the coast which was under the bishops of Antivari and numerous suffragan bishops, including also the great Benedictine Abbey of Ss. Sergius and Bacchus on the Boyana (now the ruins of Kisha e Shirijt), at which there was an important trading centre with much visited animal markets. St. Sava (d. 1236) created an Eastern Greek bishopric for the Zeta on the island of Prevlaka on the Gulf of Cattaro; the land also had many well-endowed monasteries of this creed on the islands in the Lake Skutari (like Vranyina), and what fertile soil existed elsewhere belonged for the most part to monasteries in Serbia, on Athos and in Jerusalem, granted by the, in this respect, extravagant Serbian ruler. The population received a considerable admixture, now completely absorbed, by the immigration of Wallachians and Albanians.

A grave danger to Serbia was the power of the nobles, which had increased out of all proportion as a result of the constant feuds in the royal family. When after the death of the Czar Stephan Dušan (d. 1355) a general collapse of the great but only loosely knit state began, the centrifugal forces led in Zeta also (1365) to the formation once more of an independent principality by the brothers Stracimir, George and Balsa, sons of Balsa, a nobleman of Wallachian origin, to whom the government of the country was entrusted.

IV. The break-up of Serbia took place just at the time when the Ottomans were vigorously extending their power in the Balkan peninsula. Their victories at Cirmen on the Marica (1371) and at Kosovo ("field of the blackbird", 1389) destroyed the independence of the petty Serbian states in Macedonia and reduced Serbia itself to the district of the Morava, where it however not only maintained itself till 1459 but, as a result of the Turkish defeat at the hands of the Mongols at Angora (1402), was able for a time to rise to considerable power again. In spite of the danger which threatened Zeta also, George and Balsa exhausted their strength in continual feuds with their neighbours over pieces of land, and in the reign of George II the turbulent nobles, among whom the most prominent were the Crnojević or Gyurjević between Budva, Cattaro and the lower Morava, broke the kingdom up into little baronies. The result was that when the Ottomans under Khair al-Din entered Albania from Macedonia, Balsa in 1385 lost a battle and his life north of Valona, and George II after fighting with varying
fortune, realising his own weakness, handed over
his Albanian possessions in the south and east of
Lake Skutari as far as Tuzi (S. E. of Podgorica)
for an annual pension of 1,000 ducats (1396) to
Venice, who thus became till 1479 the southern
defender of Zeta against the Ottomans. George
retained Dulegno, Antivari and Budna for himself
as well as the lands west and north of Lake
Skutari.

\[\text{Balša II (d. 1421)}\]

But even this reduced territory found no peace.
Under Balša II, the last of his warlike but un-
important house, two long and trying wars with
Venice were fought: during the second, the prince
died (1421) and left his lands to the despot (Duke)
of Serbia, Stephan Lazarević, who lost Dulegno
to the republic.

V. The second period of Serbian rule very soon
alienated the sympathy with which it was at first
received and had to fight increasing difficulties
carried, by the influent Crnovjević (see above).
In addition there was an inroad by the Turks in
1439 and the demands of Venice. The latter took
Antivari and Budna and appointed the voivod
Stephan Crnovjević its salaried governor in the
little mountain country now quite cut off from the
coast; he (1455) induced the people to take the
oath of fealty to the republic in the island monastery
of Vranjina (cf. above). The end of Serbia (1459)
seemed to secure Venice complete possession of
the lands round Lake Skutari, but soon afterwards
the Ottomans surrounded this land on all sides,
for the conquest of Bosnia (1463) was followed
(1466) by the annexion of the Herzegovina and
of the present Northern Montenegro as far as
Nikšić, which then belonged to it.

Like Stephan Crnovjević (d. 1465) his son Ivan
(1465-1490) who called himself Gospodar Zetski
(Jord of Zeta), was also a vassal of Venice, who gave
him at first little support in the wars with Muhammad II
over Upper Albania that, after the evacuation of
Skutari (1479), he had to fly to Italy, and Zeta
was occupied by the Turks, which was the beginning
of their long rule here. The contest for the throne
after the Sultan's death (1481) induced Ivan to return
and renew the struggle, which however ended in
1482 with the recognition of Turkish suzerainty. His
youngest son Stanis, a hostage in Constantinople,
adopted Islam in 1485, and took the name Skender
Beg. Ivan, also called Ivan Beg — his country was
also known as Ivanbegovina — resided in Cetinje
where he built a small monastery in 1484-1485,
to which the Eastern Greek bishop of Zeta (see
above) moved. The state suffered from the great
independence of the tribes, who had strong separatist
tendencies, like the Nyegysi, Biyelce, Oznikci, and
Čeklići; each formed a political entity with a
well-defined territory, its own chief chosen for life,
courts, tribal and family feuds, blood-vengeance,
etc., institutions which survived in Montenegro down
to the sixteenth century and existed in the north
Albanian highlands until quite recently.

Not even the greatest submissiveness earned for
Ivan's elder sons, at constant enmity with one
another, the goodwill of the Turks. George (1490-
1496) who introduced the printing-press into
Cetinje and in 1493-95 printed beautiful Cyrillic
ecclesiastical works, died in Asia Minor in exile.
Stephan (1496-1499) was interned in Skutari,
where he is said to have ended his days as a monk.
On the other hand in 1514, a separate sandjak with
capital Zahlyak (to the north of Lake Skutari) was
created for the Muslim Stanisa Skender Beg
Crnojević out of Zeta, which had been incorporated
in the sandjak of Skutar. The latter did not
deny his descent; he was also tolerant in matters
of religion, used his Slav mother-tongue in his
 correspondent and was in regular communication
with Venice, although their relations were occasion-
ally overloaded; in Venice Božidar Vuković of
Podgorica (d. 1540) and others from 1519 printed
Cyrillic ecclesiastical works. Skender Beg's title
Sandžak Crnogorski naturalised the name Crna Gora
for the country, which we find as early as 1455
and as Montenegro in 1496 for the highlands above
Cattaro. In 1528 all notices of this remarkable
Montenegrin-Turkish ruler are lost. Crna Gora again
becomes a kadii of the sandjak of Skutari.

Montenegro under Turkey, under the unassuming
ecclesiastical suzerainty of the bishop or Vladika
of Cetinje chosen by the tribal chiefs, formed five
nahiyas or districts in the shape of a small triangle
between Cattaro, Podgorica and the N.W. end of
Lake Skutari, which in 1614 contained 90 villages,
with 3,524 houses and 8,027 men capable of
bearing arms, of whom however only 1,000 had
guns. The poll-tax was readily paid and they
shared in the wars of the Porte against Venice
and in suppressing rebellions in the adjoining
lands, such as the closely related Bida, which had
much more desire for independence. This long
sterotyped monotonous did not change till 1688
when the Montenegrins with the Vladika Viskarion
placed themselves under the protection of Venice,
whose lands marched with those of the Turks,
and who since the failure of the siege of Venice had
been fighting with the Turks from 1684 to the
peace of Carlowitz (1699). After the failure of his
first attacks Sulaiman Pasha, Sandžak of Skutari,
as a punishment destroyed Cetinje in 1692 with
the support of a number of Montenegrin tribes.

VI. The process of liberation thus begun found
vigorous support in the warlike Vladika Danilo I
Petrović Nyeguš (1697-1735) 2 after whom the
dignity of bishop became hereditary in the family,
and its holder gradually increased his importance
at the expense of the tribal chiefs. In 1711 an
embassy from Peter the Great introduced relations
with Russia, which however were only occasionally
of benefit to the land. Even in the joint war on the
Porte which immediately followed, Montenegro
was left in the lurch at the peace of the Pruth
(1711). The protection which fugitive Montenegrins
found in Dalmatia was used in 1714 as a pretext
by Turkey for declaring war on Venice. In the same
year Nušman Pasha Koprulu laid waste Montenegro
entirely, Cetinje which had been rebuilt in 1704
being once more destroyed. As a result of the peace
of Passarowitz (1718) more peaceful conditions

1) The story that all Mohammadans in Monte-
negro who would not be baptised or leave the
country were put to death as partisans of Turkey
on Christmas Eve 1707 is however a patriotic fable.
began to prevail except for the almost daily guerilla fighting on the frontiers. Danilo took advantage of the peace to build up the country again after the overthrow of the Turkish administration, with the help of Venetian subsidies, so far as the poverty and the intractable nature of the people permitted. In 1724 Cetinje was rebuilt.

Under his incapable successor Sava Petrović Nyegiš (1735—1752), there was a complete relapse into the previous barbarism: no authority, clan and blood feuds, murders. No one dared to leave his house unarmed. The whole people lived by murder and robbery. In addition there were secret conspiracies against the Turks against their own countrymen, abject appeals to Venice and journeys of appeal to St. Petersburg, notably that of the able but powerless episcopal condutor Vasilije (d. 1766).

In the general distress the Vladika only thought of enriching himself. Some relief was afforded Montenegro in 1767 by the south Slav Šćepan Mali (Little Stephen), the Lažni (false) Czar, who was accepted as the Czar Peter III murdered in 1762, and received such general recognition, out of respect for Russia, that in spite of his unmasking by the mission of prince Yuriy Volodymirovych Dolgorukiy (1769), he was tolerated by Russia also until he was murdered by a servant in 1773. Able, unselfish, strict and just, he restored for a time unwonted order and security.

There was no considerable war with Turkey for a long period. All the more serious then were the relations with the suzerain in the reign of Peter I the Saint (1782—1830). The hereditary wazir of Skutari, Kara Mahmud Paša Buzhatli, taking advantage of tribal feuds, laid waste the whole country in 1785, forced it to pay the poll-tax again and burned down Cetinje. During the Austro-Russian-Turkish war of 1787—1792, there were only trivial encounters, for which in 1795 Kara Mahmud Paša again threatened serious reprisals. He was however defeated in 1796 at Slatina and later killed in the great battle of Kruse; his head was long preserved as a trophy in Cetinje, in keeping with the Montenegrin head-hunting custom which had become a regular practice in war. The consequence was that the tribes of Bijelo Polavci and Pripet, in the Brda east of the Zeta valley, joined Montenegro.

A welcome and more profitable change were the wars of 1806—1808 and 1813—1814 in alliance first with the inhabitants of the Bocche di Cattaro and the Russians, later with the English against the French, who had occupied Dalmatia under General Marmont after the peace of Pressburg (1805). Numerous ruins stretching as far as Ragusa still testify to the thirst of the Montenegrins for destruction and plunder even on Christian soil.

Peter I, a cultured ecclesiastic educated in Russia, full of good intentions, endeavoured throughout his life by legislative (1798 and 1803) and personal effort to unite his people, raise their moral tone and avert distress by introducing the potato, but in spite of great patience he met with bitter hostility, contributed to also by Russia, which only after being appealed to for a long time, in 1799 granted 1,000 ducats a year for public purposes but did not pay it regularly.

The first ruler over the Montenegrins, Gospodor Crnogorski i Brdski, was Peter II (1830—51), a highly gifted man of the world, bishop only in name, one of the greatest of Serbian poets and also of unbending vigour which did not hesitate at severe punishments and death sentences. The Radonjić family which claimed secular (governor) power for itself had to leave the country. Supported by Russia from 1837 by a grant of 9,000 ducats yearly and occasional gifts of grain, and on this account more highly esteemed by his covetous countrymen, he concentrated the government in his own hands. The powers of the tribal chiefs were restricted. A senate of 12 regularly paid members under the presidency of the Vladika henceforth formed the supreme governing body and court of justice: its authority was enforced by well-paid troops stationed throughout the country, the Gardiva, in addition to whom the head of the state had a bodyguard, Pervanici. The building of the first public school and a small state printing-press in the capital, the purchase of two cannons and the building of a powder mill, show the small scale of the state but mark the desire for progress. The innovations, and still more poverty and a great increase of population, as in earlier times led to the emigration of numerous families to Serbia and Russia.

Foreign politics were mainly characterised by troubles on the Austrian frontier, continual fighting, celebrated in song, with the neighbouring Muhammadans, especially in the Herzegovina, which was then ruled by 'Ali Paša Rizwanbegović (d. 1851) as a practically independent sovereign, under whom Smail Aga Čengić (d. 1840) distinguished himself in the fighting.

VII. Centralisation and reforms generally formed the programme of the next two reigns, which was firmly and successfully carried through in spite of much opposition. Under Danilo II (1852—60) the clan system was dealt a shattering blow, when the chiefs were replaced by captains of princely birth and legislation regulated by the code of 1855. His accession however marks the close of a period in as much as a hereditary secular power now replaced a theocracy. Danilo renounced his spiritual rank and with the approval of Russia and Austria had himself proclaimed Knyaz i Gospodar Crne Gore i Brda. The attempt of the Porte to obtain by force under Serdar Ekrem 'Omar Paša in 1852—53 recognition of her suzerainty thus threatened was vigorously opposed by Austria after giving ample assistance in 1853 through Feldmarschalleutnant Count Leinningen's mission to Constantinople. During the Crimean War (1853—56) Danilo remained neutral to the discontent of his people. On the other hand, he became involved in a war in 1858 because he supported the rebels in the Herzegovina; this ended in the defeat of the Turks in the valley of Grabovo (north of Risano) and in an enlargement of Montenegrin territory in 1859. In 1860 the ruler, who had previously had to put down conspiracies, some led by relatives, was murdered in Cattaro by a Montenegrin emigrant.

His able nephew Nikola I (1860—1918, d. March 1, 1921) who had been educated in Trieste and in France, son of the doughty Woivođ Mirko (d. 1867), completed the building of the state. By long steady work, first as an absolute and from 1905 as a constitutional ruler, and by very skilfully managing foreign relations, he created out of the ill-famed, unfertile, rocky little country a kingdom which was enlarged by the addition
fertile valleys with its own sea coast, good communications and post routes, a busy economic life, modest prosperity increased by emigration to America, more law abiding and secure since the institution of the civil code of 1888, with a good system of education and a well organised soldiery with modern equipment to be reckoned with in Balkan questions. Relationship by marriage, notably with Serbia, in 1875, gave reflected glory to the pretty little capital of Belgrade which had also become a centre of culture; 1910 crowned the work by raising Montenegro to a kingdom.

While interested great powers, notably Russia, gave grants of money, arms, munitions, etc., which were readily accepted and also requested, this development was conducted mainly at the expense of Turkey, with whom three wars were waged at longer intervals in addition to minor friction in 1859-1870, 1872, 1874-1875, 1895, 1898, 1911, 1912. The first (1862), a combined attack by Derwisch Pasha from the north and Serdar Ekrem Pasha from the south in the Zeta valley as a reprisal for the support given to the rising led by Luka Vukalovic in the eastern Herzegovina, forced Nikola by the threat to Cetinje to conclude an unsuccessful peace in Skutar. The second war was declared in 1876 by Montenegro in alliance with Serbia in order to profit by the new insurrection in the Herzegovina which had begun in summer of 1875 in Nevesina. His victory over Muktar Pasha at Vrbica and at Bileca and the defeat of Serbs were followed by a truce and the intervention of Russia in 1877. Sulaiman Pasha succeeded at heavy cost in fighting his way out of the Herzegovina through the Zeta valley into Albania, but in 1877 Nikola took Niksic and Antivari and in 1878 Dulcigno. The Treaty of Berlin (July 13, 1878, Articles 26-33) recognised the independency of Montenegro and granted it, after cutting down very much the terms of the preliminary peace of San Stefano, a broad ring of land around the original land of Montenegro with Antivari, Niksic, Hanjani, Piva, Kolazin, Spuz, Podgorica, Zabljak and the district of Gusinje. The latter, as a result of the opposition of the Albanians, was exchanged for Dulcigno in 1880. The area was increased from 4,356 to 9,058 square kilometres with 327,000 inhabitants, including 12,500 Catholic Albanians; there was on the other hand a considerable emigration of Muslims from the new territories.

The third war with Turkey was the first Balkan War, which Montenegro began on Oct. 8, 1912, before its allies, Serbia, Bulgaria and Greece; but while the sandjak of Novi Pazar and Upper Albania were easily occupied, Skutar, the main objective, was only taken after a long siege and with the help of treachery on April 23, 1913. After the allies had quarrelled among themselves, Montenegro also took part in the second Balkan War against Bulgaria. By the peace of Bucharest (Aug. 10, 1913) it received the south-western half of the sandjak of Novi Pazar (with Pjiveve, Bule Polje and Berane), the greater part of the Metohia plain (with Peć and Gjakova), the valley of Gusinje and lands round Lake Skutar, increasing its area by 9,593 square kilometres to 15,017 square kilometres, with 437,000 inhabitants.

In the Great War, King Nikola reluctantly declared war on Austria-Hungary on Aug. 5, 1914. After the capture of the Lowcien (see above) the Montenegrin laid down their arms unconditionally on Jan. 16, 1916 and the country, which had gone back a great deal since 1912, was administered by an Austrian military general-governor. The king went first to Italy, then to France, never to return again, for after the War he was deposed along with his sons on Nov. 29, 1918 by an assembly in Podgorica on the charge of treachery.
MOORS, a rather vague name still applied in the sixteenth century to certain elements in the Muslim town population of various countries and especially to the inhabitants of the Mediterranean ports of North Africa. The word, presumably of Phoenician origin, corresponds to the ancient local name of the natives of Barbary reproduced by the Romans as Maures, Mauri and by the Greeks as Mauropoi (Strabo, vii. 2:25). The term Mauri used by the Romans in a general way for the Berbers passed into Spain in the form Moro, and it was by the name of Moros that the people of the Iberian peninsula throughout the whole period of Muslim rule knew the Arab conquerors and arabised Berbers who had come to settle in Spain from the other side of the Strait of Gibraltar. The name Moros passed into various European languages: French Maure, English Moors, German Mauren. At the time of the "Reconquista" the name Moriscos was applied in Spain to these Muslims (usually crypto-Muslims) who had remained in the country until their final expulsion in 1610. The Moriscos went mainly to North Africa, where they were known to the natives as Mandus while Christian travellers gave them the general name of Moors.

In modern times the Moors to the European were therefore the urban population of the North African ports, irrespective of the proportion of immigrants from Spain. Since then the word has been generally used with the meaning Muslim of the towns of the western end of the Mediterranean (cf. such expressions as Moorish bath, Moorish coffee etc.).

The name Moors has also been given to the Arab or Berber peoples, pure or mixed with negro blood, who live to the north in the Senegal in the province to which the French now give the ancient name of Mauritania (see below), and to the offspring of the marriages of Arabs from South Arabia and Cingalese who form an important Muslim colony in Ceylon (c. 200,000).

The land of the Moors is Mauritania or Mauretania. This name which has been derived either from a Phoenician word Maszarhm or the Western or with more probability from the name of a tribe living before the Christian era in North Africa, was applied in ancient times to northern Morocco (Mauretania Tingitana) and to the north-west of Algeria (Cassareen Mauretania). At a later date, by extending the application, Europeans have given the general name of Moors to the Arabo-Berber peoples of Mediterranean and Saharan Africa. Then gradually they came to distinguish out of this mass the groups with which they came more frequently into contact (Tripolitans, Tunisians, Algerians, Moroccans), so that the name Moors came to be limited to the people of Spanish (Muslim), Jewish or Turkish origin of North Africa and particularly to the nomads of the western Sahara, who traverse what Ahmad al-Shinâhî (in al-Wasif, Cairo 1329 A.H.) calls the "land of Shuniq"; from the name of its chief village; this country is bounded, says the author, by the Atlantic Ocean, the valley of the Sakiat al-Hasni, the plain of Ibn Haiba (plain of the Brâkna) on the right bank of the Senegal and by the two towns of Walata and Na'ma (Nema); if, like him, we take into account all inhabited areas, we ought to extend it to the east as far as the meridian of Timbuktu.

Mauritania, which now forms one of the eight colonies of French West Africa, is only a part of this vast area. It lies to the north of the Senegal between this river, the Atlantic Ocean and the marigot of Karakoro; to the north and east, a frontier settled by agreements separates it from the Spanish Sahara (June 27, 1900; Oct. 3, 1904; Nov. 27, 1912) and from the territories of the south of Algeria (agreement of June 7, 1905) and from the French Sûdan (decree of 25th April, 1913). It has an area of 835,000 square kilometres, 285,000 inhabitants, the density of population being 0.34.

Except for the banks of the Senegal, the country is steppe or desert, and only suitable for stock rearing. To be brief, it is a military frontier district defending on the north the more favoured lands of the Senegal rather than a country suitable for development by colonisation.

I. GEOGRAPHY.

A semi-circular range of hills of no great height, worn by erosion but often difficult of access, starts as it were out of the ocean to the south of the Rio de Oro and reaches the middle course of the Senegal after running round the contours of an ancient gulf of the quaternary period. The Adrâr Timar and the Tâgant separated by the depression of the Khât form as it were the cornerstones of this system and are continued to the north-west in the "petrified sea" (a plain scattered over with rocky islets) of the Tiris and by the arêtes of the Adrâr Suuf, to the south by the Rgaba and Asâba.

The interior of this gulf consists almost entirely of sands, brought from the desert by the predominating north-east winds. The dunes in the south are all fixed and are called "dead"; in the north they are "alive" and constantly changing. Like the other dunes of the western Sahara they run in the direction of the wind, N.E.-S.W., and are separated from one another by contours of firmer soil along which traffic can go.

The Shâmanah is a plain, formed of lands of alluvial origin, along the lower Senegal and as such particularly suitable for cultivation; as we go up the river it is known as Litauma and then as Gidimaka. Other plains, those of the Brâkna and the Gorgol, are more remote from the river; they contain permanent pools of water to which their girdles of high trees gave a characteristic appearance (zâmûr). To the north of the Shâmanah and the land of the Brâkna stretches a series of dunes among which may be mentioned those of Amatîsh. The couloir of the Inshîr continued by that of the Amaîga separates the latter from the similar ranges, the Aksar and the Azeifâl, which stretch to the Tiris; they are difficult to cross, but between them the Tijur supplies an easy route. Beyond to the north-west, the Tasiast and the Swîhel al-Abyad are great plains of denudation.

On their convex face, the Adrâr and Tâgant are prolonged to the north in the massif of the Kudiât Ijel and by that of the Zemmur, separated by the Tizel-kad, towards the north-east by the cliffs of the Dhar Adrâr and the Hânk and by the plateau of the Eglab, which stretches to the
great sand-dunes of the Igdah, to the east by the Dar Tichit which runs to Walata. Between these lines of rock, great ridges of moving dunes make passage difficult but provide good pasturage for the rocks; these are from north to south, the Erg al-Hamami, the Maghter, the Waran, the Aderar and the Aukar. Lastly, to the north of all these masses of sand, the Ghallaman, Kenet and Yetta are vast marshes without water, or hard and flat soil, which run as far as the Hammada of the Draa.

The coast consists of dunes and piazeaus with numerous sahâlas or salt lakes. There is usually a large sand-bar; nevertheless the sea, which is very rich in fish, gives a livelihood to a population of fishermen.

The Sahara in the proper sense of the word hardly extends beyond a line marked by Cape Tiznit, Mejriya (Moundjeria), the northern bank of the Tâgant (depression of Khat), the southern margin of the Aderar and Walata. It is especially dry on both sides of the Aderar: to the west in the region of Port Etienne and in the dunes bordering on the Tiris, and especially to the east where to the north of Walata, the Mraya, Liqt and the western part of the Erg Sêbakh, still almost unknown, form a waterless no man's-land; this district is visited only by antelopes, gazelles and ostriches, and by the nomad hunters who can manage to go for days without water and live like their game on green stuffs.

To the south of the line above given, the steppe gradually changes to forest as we near the river. The climate is very hot: the influence of the sea is not felt beyond a score of miles inland. Subtropical rains fall as far as the north of the Aderar.

II. POPULATION.

At the earliest period to which the chronicles and native traditions go back, Mauritania seems to have been peopled by negroes. Later, in the course of centuries, it received various immigrations of Berbers, especially Sanhagia and Zenata, Arabs and probably also of Jews. The Sanhagia came first, certainly before the Fatimids; later, the development of Trans-Saharan commerce brought to the few towns that had been built, merchants of varied origin (Arabs, Berbers, Zenata, Nafusa, Lwata, Natâwâ, etc.); at different periods, Jews came there to seek refuge from persecution, the last of which drove them out of Tâlaut at the end of the xvi century; lastly, the Arabs belonging to the Mâgli group in turn invaded the country from the xvi century onwards, bringing with them more Zenata or driving them in front of them.

The Jews have been completely absorbed into the Berbers (they form, it is believed, the foundation of the caste of smiths, machellem) or into the Arab, so that it is not possible to estimate their numbers at the present day. The negroes, who have been gradually driven towards the river, are represented by approximately 30,000 Libuss (Fâhir), 21,000 Sarakole and 13,000 Wolof, Fula and Bambara. The Arabo-Berber Moors number about 210,000.

III. HISTORY.

a. Prehistory. Such researches as have been made in Mauritania, notably in the Aderar and in the Aukar, have revealed there, as throughout the Sahara, the existence of important prehistoric sites; if it is not possible to date them, they are at least evidence of a very early population whose utensils seem to connect them with the negroes. These conclusions are further confirmed by the native chronicles and traditions, and perhaps we ought to connect with these remote inhabitants of the country the Bajara, to whom the Moors attribute the creation of the palm-groves of the Aderar and who are said to have built a town, the "city of the dogs," on the site of the present Azougui, ten miles S.W. of Aït. What seems probable in any case is that these black Mauritaniens were more or less subjects of the first kingdoms known to the southwest of the desert: that of Iakir, which ruled Senegalese Futa; that of Ghana, the capital of which was on the site of the modern Kumbâ, 100 miles S.W. of Walata and that of Lwata which succeeded them and ruled the whole of the western Sudan. To the north, the lands of the negroes do not doubt matched with the lands in which the Sanhagia and Zenata berbers led a nomadic life in the south of Morocco.

b. The Sanhagia invasion. We do not know what date the Sanhagia invaded Mauritania; but it was certainly a very early one. It is possible that expeditions by the Arab emirs to al-Maghrib al-Aksa, beginning in the later years of the seventh century, which marked the first contact of the Sanhagia with Islam, may have driven them to the south but their first incursions into the Tiris, into the Aderar and to the Tâgant were probably much earlier. Their conquest of the country, it is true, seems to have been fairly slow and it was not, it appears, till the 9th century that they succeeded in reaching the banks of the Senegal for the first time.

c. The first Sanhagia kingdom. At the beginning of the ninth century, a certain number of Sanhagia tribes among them the Lemtûna, the Gündâla and the Benna Wârëf, occupied the Aderar, with their advanced posts in the Tâgant, and made raids into the Haawi (Hadi) against the negro-soninke emirate of Ghana. The Lemtûna supplied them with chiefs at this time, and one of them, Tiltûn (d. in 839 or 837), succeeded in imposing his authority on all the berbers and making twenty negro kings pay tribute to him. The chief towns of his dominion were Azougui and especially Audâghast, forty miles N.E. of the site of the modern Kifân (Kif). Audâghast seems to have been founded in the seventh century by the Soninke and its name as a centre of trans-Saharan trade brought it a large foreign population, already in part converted to Islam; Berbers of different branches and Arabs. In spite of this brilliant start, this Lemtûna dynasty lasted only a short time and disappeared in 919. Each tribe then led an independent existence and the emperors of Ghana were able to extend their power towards the Tagant and to take Audâghast at the end of the tenth century.

d. The second Sanhagia kingdom. Towards 1029, the chiefs of the various Sanhagia tribes agreed to combine again as in the time of Tiltûn and thus to resist the encroachments of the Soninke. The power was placed in the hands of a Lemtûni called Taisnà, who seems to have been the first really Muslim Zâgri ruler. He went to Mecca and his enthusiasm as a new convert led him to a holy war on the negroes, in which he lost his life (1032). His son-in-law Yalîya b.
Ibrahim of the tribe of the Gudala succeeded him, according to the custom which made the supreme command go to the two tribes alternately. Like Tassina, he was a zealot and on returning from the pilgrimage, he brought from Morocco a holy man, 'Abd Allah b. Yasin, to whom he entrusted the task of educating his brothers, who were well acquainted with the principles of Islam. The saqat was at first well received by the Sahāda and he made them build the town of Aret-Neuma near the site of the modern Tishlt. But soon his commands appeared too difficult for the nomads, who rebelled against him. He sought refuge with his disciples in a niṣāb or fortified monastery on an island in the ocean (sometimes identified with Tidra) and they were henceforth known as the al-Murābiṭūn (the men of the niṣāb), a word which has been corrupted in Europe to Almoravids under which name they have become famous.

c. The Almoravids. Their reputation for sanctity spread very rapidly and attracted many disciples to them. When 'Abd Allah had gathered around him a sufficiently large body of men, he led them against their rebellious brethren and against the negroes. In a few years they subdued the whole of the western Sahara, from Tafilalt and the Dra to the Senegal. In 1050, Yahya b. Ibrahim died, and Yahya b. 'Umar, chief of the Lemūna, became the political head of the confederation, 'Abd Allah b. Yasin remaining the religious chief. While the first recaptured and plundered Audaghost, the second attempted the conquest of the Maghrib. But soon they were both slain, Yahya in a rising in the Adrar in which the negroes of the Takeri tried in vain to help him, and 'Abd Allah in fighting the Bargha-wātī heretics of the plains of Morocco. Abu Bakri, brother of Yahya, was then for some time supreme chief of the Almoravids, then to gratify his ambitious nephew Vassul b. Tahsin he handed over to him his conquests in North Africa, keeping only to himself the sovereignty of the south. He devoted himself to a holy war against the negroes and to their conversion to Islam. He succeeded in driving them back towards the river and in taking Ghana in 1076 and the capital of the Takrur in 1080, extending his teaching, the tradition says, as far as the lands of a Mandingo prince of the Upper Niger. He was slain in the Tagant in 1087 and his death marked the break up of the Sahāda confederation in Mauritania; each tribe regained its independence.

d. The Tashmuḥa and the negro reaction. Between this date and the end of the xvith century we know very little of the history of Mauritania. We only suspect that the influence of the negro kingdom of Mali must have extended up to the Adrar and Tagant and that a new Marabout Berber element formed by the Tashmuḥa of Gna came and settled in the country. The Tashmuḥa seem to have had at first taken up the mantle of the Almoravids and to have made themselves the champions of the qiyasid against the negroes. But after a few successes, they were driven back from the region of the river and fell back upon the Tiris and Adrar, where they gave up fighting and devoted themselves to study and religious devotion. The successes of the negroes then became serious: Wolofs, Soninkés and Tuaregs recaptured a whole part of Mauritania and might perhaps have succeeded in subjecting the Berbers, who were exhausted by their campaigns of conquest in the Mediterranean region, if the coming of the Maqṣil Arabs had not checked them.

e. The Maqṣil invasion. It is not possible to date this new invasion exactly; it is, however, certain that it was not a single effort. It went almost down to the nineteenth century with little groups filtering into the Sahāda encampments and at length submerging them.

Setting out from Egypt, the Maqṣil passed along the northern border of the desert and reached the Ocean to the south of Morocco in the first half of the xiiith century. They then entered the service of the Marinid rulers of Fas, who used them to keep in subjection the provinces beyond the Atlas and to collect taxes. These undisciplined nomads very soon took advantage of their privileged position. Measures had to be taken against their brigandage and their threats to overrun Morocco, and military expeditions were sent against them. Either as a result of these reprisals, or because they were called in by the Sahāda to help them against the negroes, or because a year of drought drove them in search of new pasturage, some of them, belonging to the confederation of the Diw Hasan or Beni Hasan, went down towards Mauritania. But the chronicles do not say why. In any case, having helped to drive the negroes back towards the river, supported by the Zanata Kunta who came from Tuat at the same time as the first of them, they reduced to vassalage the Sahāda of Upper Mauritania (Ijel and Zamzum) in the xvith century, Western Mauritania, Wadan and Tagant in the xviith and the Adrar and Lower Mauritania in the xvith century. Throughout the long period from the xvith century to the present day, we find the authority in the hands of a certain number of Udaya tribes: the Ulid Rug, the Mghātā Ulid Muluk, the Bra'lena, the Tārza and the Ulyd Yahya b. 'Umu'man. Other Beni Hasan also went south, but barely reached Mauritania. The Ulid Dilm have always remained in the desert zone and the Brābiṣi seem to have passed some years a little to the north of the Senegal before migrating to the region of Timbuktu.

f. The Maqṣil and the Sultanats of Morocco. From their first sojourn in the south of Morocco, these Maqṣil long retained the character of Makhen tribes; under the Sa'dian and Alawis, many of them supplied contingents to the gītā tribes. This status gave their migration southwards the appearance of a conquest in name of the Sultanats. This was no doubt the legal justification of the tribute which they exacted from the conquered Bedouins; it also explains why the rulers of Fas or Marrakesh sometimes claimed as theirs the territory of Mauritania, why they sent several expeditions there in the xviith and xviiith centuries, why they granted investiture to certain chiefs and lastly why the author of al-Harīf, after consulting several learned men, thought that the 'Hadd of Shindī' was mixed with the Maghrīb and not with the Sudān.

i. The Sahāda reaction. Whatever was the actual success of the Arab conquests in Mauritania, it was not effected without violent reaction on the part of the Sahāda. The poverty of the Tashmuḥa, the negro danger and the looseness of links between the various bodies of invaders facilitated the settlement of the early Arab invaders. But the tyranny of the Maqṣil towards the Berbers...
brought them in the xviiith century to such desperation that a general rising broke out in the form of an attempted restoration of the Almoravids led by Nâṣr al-Dîn, a marabout descendant of the Lémina. This individual, who lived in western Mauritania, first preached a holy war there against the negroes, being sure of re- uniting the various contingents against the traditional enemy. Then having given the troops sufficient training in a campaign which brought them across the river to plunder the left bank, he turned openly against the Arabs. This was the celebrated “War of Eldalah”, in the course of which the Arabs were held in check for thirty years; but in the end, getters within the Sanhaqis ranks destroyed their strength and in 1674 the defeat at Tin Yeflad doomed them to vassalage.

In much the same way in 1745 the Idebrehi Berbers of the Adrar had to bow before the Ma’dil and at the end of the xixth century we find them again rising against the Arab amir and assassinating him. Finally in the Tagant, the Sanhaqis Idrissi well led by their chief Muhammad Shein regained their independence at the end of the xvith century. They almost succeeded in seizing the Adrar in 1932, drove the Zanata Kunta out of the Tagant and extended their power to the Senegal, under the able rule of amirs who are still reigning and claim to be the descendants of the Almoravids.

2. The rule of the amirs. All over, from the xvith century, the political situation of the tribes became stabilised, and regular little nomad states seem to have been formed, usually under Arab chiefs. Thus we now find the dynasty of the Ulâd Ahmad b. Daman ruling among the Tierara with distinguished sovereigns like Ab Li Shuđara (1705-1727) who, supported by Sultan Mawâl ibn Ismail, delivered his tribe from Brâkânia domination, and especially Muhammad al-Jâlibb (1827-1860) whose long reign is marked by the first Moorish resistance to European penetration. Among the Iblekina also, the Ulâd Abîd Allah amirs played a preponderating role after the war of Babalh and their possessions extended from the Tagant to the Atlantic Ocean. Later, and particularly from the xixth century, their power declined, in spite of the brillant reign of Ahmadudda I (1848-1851), and their defeat in resistance to the advance of the French caused them to disappear from the political scene. In Adrar the Ulâd Ya’qub b. al-Idman also furnished great leaders: Ahmad ulid Muhammad (1871-1891) who was able to keep his turbulent subjects at peace with their neighbours and who tried to develop trans-Saharan commerce, and Ahmad ulid Sulîn Ahmad (1891-1899) who by his military successes earned the title of “amir of war”. Lastly in the person of Bakar ulid Ahmad, a descendant of Muhammad Shein, the Tagant produced the greatest Moorish ruler of the xixth century.

The rule of these amirs was continually beset with great difficulties, produced by their rivalries, the lack of discipline, rebellion and intrigues among their subjects, by the warlike raids of the Tuaregs and particularly by the efforts of Europeans to establish their rule on the Atlantic coast and on the banks of the river.

3. European rivalries on the coast of Mauritania. It was in the first half of the xixth century that the Portuguese visited the coast of Mauritania and the mouth of the Senegal for the first time. At the instigation of the Infante Henry the Navigator, expeditions followed which brought back slaves, gold and gums. After Joao Fernandez had gone to Wadjan in the eastern Adrar, where he spent some months among the Sanhaqis in 1446, a permanent settlement was founded in 1445 on the island of Arguin, which afforded excellent conditions of security. From there the Portuguese endeavoured to extend their power into the interior and to command the great caravan routes which led from the Sudan to Morocco; to them are attributed the fortresses, now in ruins, near Wadjan and at Arzugi. But if it is certain that for a short time they extended their relations as far as the capital of the negro empire of Mali on the Upper Niger, it seems that they did not own factories for any length of time except on the coast.

The trade of Arguin flourished for two centuries in the hands of the Portuguese, then of the Spaniards and it extended as far as Lower Mauritania through Portendik (corruption of “Post d’Addi” from the name of an emir of Trarza), a not very good roadstead where barrier was carried on. The French at a later date established themselves at the mouth of the Senegal (1920), the Dutch were in war with Spain and took Arguin in 1618, which the English took from them in 1665 and a struggle for influence began among these three nations which lasted for a century. Arguin and Portendik continued changed hands, while France developed her trade along the Senegal by building factories. Finally the Treaty of Vensailles (Sept. 3. 1793) recognised her exclusive sovereignty over the Atlantic coast from Cape Blanc to the mouth of the Salam. The wars at the beginning of the xixth century brought the English back there for a time, and it was only in 1817, three years after the treaty of Paris, that France definitely took possession of the country. Arguin and Portendik had in the meantime been almost completely ruined as a result of these vicissitudes.

4. The French conquest. Down to 1857 England retained the right to trade at Portendik, which allowed the Trarza chiefs and in particular Muhammad al-Jâlibb to play off against one another the two nations who seemed to threaten their independence, and thus to gain a footing on the left bank of the Senegal. The position of the Europeans with regard to the natives was, however, difficult and trade with them was permitted only on payment of heavy customs duties. It was only in 1854 with the appointment of Flandin as governor of Senegal that a more vigorous policy was introduced into Lower Mauritania. In four years he reduced Walo on the left bank to submission and drove the Moors out of it and forced the emirs of Trarza and Brâkânia to sign a treaty, which if it did not abolish the customs, at least recognised that France had a right of suzerainty over the peoples living near the river and guaranteed the freedom of trade there.

For nearly fifty years, these treaties were respected and the Moorish chiefs, too much occupied in maintaining peace among their subjects and in defending themselves from the intrigues of pre- tenders, no longer thought of coming into conflict with French troops; commercial agreements were made which extended as far as with the Iblekina of the Tagant and one treaty was even made with the emir of the Adrar. This period also saw a great deal of exploration of the interior, after
Mungo Park (1795–1796), Caillé (1825), Caillé (1843) and Panet (1850), Vincent, Ibu el-Mugidad, Bounel, Alium Sal, Mage, Felcrand, Aube, Soleillet, Quroga and Cervera, Douls, Soller, Fabert, Donnet, Blanchet, Gravel and Chadeau contributed to our knowledge of this country and prepared the way for its occupation.

In the last years of the sixteenth century the troubles of which Lower Mauritania was the centre finally had repercussions on the trading centres on the river which became daily more serious. The insecurity hampered commerce and in proportion as the memory of the vigorous policy of Faishherbe became obliterated, marauders ravaged the country down to the left bank of the river, right into the administered country. The conquest of Mauritania had to be planned in order to protect effectively the colony of Senegal and with this object an enterprise was made to use the influence of the marabouts, tired of a perpetual warfare, of which too often they bore the expense. The diplomatic action of M. Coppolani, Commissaire Général of the government since 1902, judiciously supported by police operations, brought about the occupation of the Tafza country in 1903, of the Brakna country in 1904 and of the Tàqant in 1905.

This rapid advance, however, was checked before the anti-French propaganda of a marabout of the Hasso, Mâ al-Ainâin, on Muhammad Fâqil, who after spending a long period in Upper Mauritania, had been settled for some years at Smara near Sagiat el-Hamara. His prestige as a magician, supported by the veneration shown him by the Moroccan soulsan, was not long in winning him the support of the greater number of the Moors tribes, and especially of those of the Adrâr, the emir of which had been brought up in his entourage. At his instigation, Coppolani was assassinated and a cousin of the Sultan Mawlâl Idris came to lead the djihâd in Mauritanian. A success gained by him at Nyanlan led to nothing, but on the return of a delegation of Moorish chiefs who had gone to seek help from the sovereignty of Morocco, a general offensive was begun against the French troops (1905). To put an end to an agitation which threatened to become dangerous, Colonel Gouraud conquered the Adrâr in 1909 and his victory was completed in 1910 by the death of Mâ al-Ainân and in 1912 by the capture of Tízit and jointing up with the troops of the Hasso. The conquest of Mauritania by the French was thus practically completed. The march of el-Heiba, son of Mâ al-Ainân, on Mârâkesb in 1912 revived some inclination to rebel among the Moors, but the destruction of Smara in 1913 checked this, and France now only had to secure the protection of her colony from raiders from the Sahara.

IV. SOCIAL AND ECONOMIC LIFE.

The negroes are settled agriculturists who have their village—mainly in the Shamannah and the Gorgol and in the main they belong rather to Senegal than to Mauritania. The Moors have a few villages (the principal are Apar, Shangût, Wadan, Tijinaj, Tishît) with palm groves and a few farms in the Adrâr, the Tàqant and the Dhar. They are great nomads, who live under cone-shaped tents of camel-skin and follow the rainfall with their flocks. Those who wander in the zone of the steppes oscillate between the river and the desert, except the fàrza of western Mauritania, where, on account of the dryness of their country, move over a much greater area and sometimes even reach Tiris and Adrâr Suft. The people of the Adrâr go down as far as Tâqant, and on the north at one time were in contact with the Tekna of the south of Morocco around the Sagiat al-Hamara. Their supply of meat is very scanty and it is not an exaggeration when Pachari calls them "the most wretched of mankind".

Their groups have been much graded by the constant influx of Moroccans. Before French rule, the Hasan, pure Arabs, formed the noble and warrior class who protected the encampments and lived by cattle-rearing and trading. The Zouaoua and marabouts, generally Šâhâlâ or Zanâta Berbers, paid an annual sum called ghânfar to the Hasan for their security; they were likewise breeders of cattle, but also included among them merchants and men of letters who were regular travelling universities; the more or less open practice of sorcery served them as a means of defence against the exactions of the Hasan. The Zargu or tributaries (1902) of the Brakna country in 1904, of the Tâqant in 1905. The feudal dues which they paid to the Arabs (jumla) did not always exempt them from periodical payments to the marabouts nor from arbitrary sums levied upon them by one or the other. They were in part agriculturists. The Harâfin, freed slaves, formed tribes of serfs, usually better treated than the preceding. Finally the Hasan and the marabouts owned numerous slaves in which they did a busy trade. On the fringe of all these groups, the Mu'tâlima, the goutis (qâunan) and the Nmadi were respectively the workmen, poets and singers and hunters who supplied the encampments of eastern Mauritania with meat.

The barriers between these castes were in theory rigid. A certain number of marabouts, however, and even of Znâgâs succeeded in escaping from Arab tutelage, like the Idu'sâigh of the Tâqant, and devoted themselves to the adventurous life of the Nmadi hunter (gâmner) just as "penitent" Hasan sometimes adopted the pious life of the Zwaya (Tiyâb).

French administration has left this traditional organisation intact, only suppressing slavery; it has, however, checked the abuses of the Hasan by putting a stop almost everywhere to the payment of the horns and gharîs.

Economic Life. Mauritania has only one port, Port-Étienne, on the peninsula of Cape Blanc; it is, however, only a fishing centre. The course of the Senegal is used as far as Polder in the dry season, as far as Bakel in the winter months. No road has yet been made, but the important points are linked up by automobile or caravan services. The telephone is in use only in the south, but its place is taken by the wireless, which connects Mauritania with Dakar, Casablanca, Agadir, Bamako and Timbuktu.

The principal source of wealth of the country is stock-breeding: 51,000 cattle, 3,800 horses, 23,900 goats, 2,000,000 sheep, 2,000,000 goats and sheep, 66,000 asses. The abundant game (antelope, gazelle, ostriches, guinea fowl and bustards) supplies further food for the inhabitants. Among agricultural products, special mention may be made of the date-pains in the north (3,000 tons of date a year), along the river and in a few favoured valleys of
the plateaux, millet, rice, maize, wheat and barley. In the south gum is a traditional article of export (1,500–2,500 tons a year).

The natural resources of the country have hardly been investigated as yet. We may mention, however, the salt of the Sèkkhtat Ijel, which has for long supplied the caravans to the south; along the coast a few salt-panns are worked by the Moors. The annual export is 4,700 tons.

Industry is in a very rudimentary stage and confined almost entirely to the manufacture of leather goods which form the equipment of the camel-driver and the furniture of his tent. Fishing supplies the enclaves near the coast.

A certain number of caravans transport merchandise from the north to the south along the coast and through the Adrar and Tagant to the trading centres on the river and the Sudán. They take with them animals, gums, salt, dates, ostrich feathers, skins and leather, and bring back cloth, arms, powder, candles, sugar, tea, spices and cereals. Supply the markets of Targit, Simgit, Wadan and Tijjana. As a result of the insecurity in the desert there is no longer any regular trans-Saharan trade.

V. POLITICAL LIFE.

The negroes are ruled by their village headmen and chief of districts. The Moors are grouped into tribes under the authority of a shaikh assisted by a council of notables or Jemáa. Sometimes several tribes are combined in a hereditary amirate, the ruler of which surrounds himself with a regular court generally recruited from among the Znaga or Harratun. The shaikh or amir is practically all-powerful; only the right to judge in civil matters is not completely his; the kàdî exercises it. The amir further reserves to himself a kind of right to supervise the judgments through the intermediary of his private kàdî who forms a court of appeal.

The French administration has been superseded on this traditional organization. A Lieutenant-Governor, residing at St. Louis, on the right bank of the river, is the head of the colony and is assisted by a military commandant, an inspector of administrative affairs, a secretary for military and political affairs, a secretary for finance and a department of public works. The local administration carried out by adminstrators or officers is divided into eight districts (Trarza, Boutam, Gidilmaka, Aassala, Tagant, Adrar and Baie du Levant) and seventeen sub-divisions or administrative posts. It controls the native administrative and judicial organizations.

The Moors pay the Kurânic taxes (zakât and asbus) from which their ruling-camels and gums alone are exempt. The negroes pay a poll-tax and a tax on cattle. Indirect contributions are paid by the market, salt-panns, the carrying of arms, the exploitation of the woods and ferries. The Budget for Mauritania for 1935 was 14,623,000 francs.

VI. LANGUAGE.

The language spoken in Mauritania is Arabic, the tamoukal or language of the kebbt, the "whites". Some 5,000 Znaga in the south have retained a Berber dialect related to that of the dialects of southwestern Morocco. At Wadan and Tishit, the language amir (Azet) which is a form of Soninke is now spoken by only a few individuals. Lastly the negroes of the river have retained their own language.

VII. RELIGIOUS AND INTELLUCTUAL LIFE.

History does not tell us what was the religion of the Sanhadja before their conversion to Islam; we can only think that they had to some extent been influenced by a monothetic faith like Judaism or even Christianity. Their first contact with Islam probably dates from Ibn b. Nafi's expedition to the south of Morocco (681), but it is certain that their real conversion was much later and can hardly have been earlier than the energetic proselytising campaign of Abd Allah b. Yasîm. At the present day all the inhabitants of Mauritania are Muslims of the Málìiki rite, but many of them and more particularly the warriors and the Nmadí have only a very superficial acquaintance with their religion and take little interest in it; superstitions and sorcery further corrupt their Islam almost everywhere, revealing the primitive state of the people and negro influence. Islam is not really known and practised, except among the tribes of marabouts; amongst the latter, a mystical tradition and a fairly advanced culture have always made themselves felt, and for this reason they play in Moorish society the part of a kind of sacred body such as is found nowhere else in the Muslim world of the west. This is no doubt a remote consequence of the Almoravid movement, revived for a time in the war of Babalh, and of the peculiar situation of these Muslim nomads, who have here long been the advance-guard of the white race, face to face with the negro fez-hipsters of the Senegal and Sudán. Perhaps, like Renan and Pichon, we ought also to give credit to the influence of religious Christianity in the desert. In any case in thus assuming a kind of sacred character and surrounding it with a magic prestige, certain Berbers have had a regular revenge of their amour-propre on the pride of race of the Arab invaders and have opposed to their tyranny and brigandage a defensive weapon which has not been without effect.

The principal brotherhoods of Mauritania are those of the Tedjâniya and of the Kâdiriya: their influence extends into the lands of the negroes. The first are represented by the Ima Wali of the Trarza, the Tagant and of the Adrar, who claim to be shorfas and say they came from Tabelbala at the beginning of the sixth century. Since the early years of the sixth century they have been connected with the branch of the Tedjâniya in Fas. The second are much more numerous and influential; they have several branches: that of the Pekka ya dates from the sixth—seventh centuries and is represented from the bend of the Niger to the Tagant and Adrar by the tribe of the Kunta. About a century ago it received a fresh impulse in a new "path" and its autonomy in Lower Mauritania was secured by the great prestige of the Şahîb Sidiya, of the Ulud Bii (d. 1924). We may also mention the branch of the Kâdiriya, founded in the early years of the sixth century, which enjoyed particular fame some 20 years ago under the direction of Ma' al-A'inin and his brother the Şahîb Sa'd Bii. These two branches have lost their importance since the deaths of the famous individuals. Lastly the Kâdiriya are still represented by the some 600 members of the
Ghafīya brotherhood, whose practices are regarded as heretical by the other Muslims.

Shingiț, benefiting by its situation on the route of the caravans which came from western Morocco or Selīkhet Idrī down to the Haḍr or the Senegal was at one period an intellectual centre, the reputation of which extended to all the western Sahara and to the Sudān. We see this in the fact that it was able to give its name to all the Moorish tribes (Shingița) and to the territory in which they led their nomadic life and that the tradition of the country makes it one of the "seven holy cities" of Islam. It has now lost its old prestige. In the xviiith century the fame of the medersas of Timbuktu must have offered serious competition to it. At the present day Shingiț is seriously threatened by the sands of the Warān and its trade is much reduced. Aṭar is assuming an increasing importance; the insecurity and eccentic development of North Africa and the Sudān have led to the almost complete disappearance of the trans-Saharan trade by which it lived and in particular, as is natural in a land of nomads, it has been rather under tents and particularly in the marabout encampments of western Mauritania that intellectual culture has developed. Universities have been created there where the teaching of the Kur'ān, theology, law, grammar and logic still flourishes. Some of them have known outbursts of glory under famous teachers, who have sometimes created schools of mystic initiation, like those directed by the Shāhiṣh Sīdīya, Mā' al-'Ainīn or Sa'd Bū like that of the Aḥb Muḥammad Sālīm, which is a kind of university in the Tiris which produces almost all the jurists of Mauritania.

A whole original literature has been able to develop. Kur'ānic matter, Hadīth, law according to Sūdi Khalīl and his commentators, are its essential elements, with the doctrines of the Sūfis and their mysticism. But historical studies have also had and still have their eager followers, especially among the tribe of the Ulīd Dāman (Trārza). Lastly poetry is held in honour among all the tribes, warrior and marabout alike, and supports a whole caste of troubadours, the griots, who enjoy the favour of the courts of the emirs.

(MORADABAD (Murādābād), a district in the Rohilkhand division of the United Provinces of India and also the chief town in it. The district has an area of about 2,300 square miles and a population of 1,200,000 of whom over 420,000 are Muhammadans. Nothing is known of the early history of the district. In the Muhammadan period it was successively ruled by the Sultān of Delhi, from whom it was occasionally taken by the Sultān of Dehli and the Moghuls, the Rohillas, and the Nawābs of Oudh until it was ceded to the British in 1801. Murādābād is the principal town in the district; it is situated on the Delhi-Bareilly road and on the main line of the Oudh-Rohilkhand railway. It has a population of 75,000 of whom over half are Muslims. The town is a Moghul foundation of the second quarter of the xviiiith century. Its founder was Rustam Khān who also built the Dāmī Masjid, as an inscription testifies, in 1632. The town takes its name from Muḥammad Bākhsh, the ill-fated son of Shāh Dāmīn. It rapidly ousted Sambhal from its place as the chief town of the district. Its industries are flourishing (chiefly textiles and brass-work). It was a mint of the Moghul Emperors and also of Ahmad Shah Durrānī during his invasion of India in 1760. Sambhal is a very ancient site but has lost much of the importance it possessed in mediæval times. It has an old mosque, an interesting example of Pathan architecture which has even been claimed as a converted Hindu temple. It is said to have been built by Būsūr but it is undoubtedly earlier. Amroha is the great Muhammadan centre of the district, the majority of its population being Shaikhs and Sayyids. The chief saint of the Sayyids is Shafīr al-Dīn Shāh Wāfīyāt, a descendant of the tenth Imām, who came here about 1500. His tomb is still shown here. The Dāmī Masjid is a Hindu temple converted into a mosque in the reign of Akbar. It is much visited by pilgrims, mainly Hindus who seek relief from mental diseases through the power of Sadr al-Dīn, a former mu'allimulān of the mosque, whose virtues are still believed to be efficacious. There are over a hundred other mosques in the town.

MOREA is the usual name in mediæval and modern times for the peninsula of the Peloponnesus, which was regarded in ancient times as the 'exile of Greece. The name Morea is first found in 1171 A.D. in the subscription to fol. 143r of the Greek manuscript Brit. Mus. Add.
with the mulberry-tree. This is evident for example from Joh. Leunclavius (Annales Sultaniarm Othomandarum a Turciis sua lociscripti, 1596, p. 63): “Nomen ipsum (= Moreas) derivat Graeci numque ab arbore nobile qua tota regione scilicet arbore haec frequens est”.

In the mediaeval Muslim writers there is a confusion between Amoría (= Amorion in Phrygia and Lamoría = Moreas, Peloponnese. But Amuríada or Amoriáda, Amuríða, Amoriáda etc.) in Abu ‘l-Kásim Firdawsi can only be Amoría, which used to be described as the capital and “eye of the kingdom of the Kúmr. In the geographical table of Nasır al-dín al-Ṭúsí (middle of the xivth century) and of Luzzu Bag, Amoría should rather be identified with Amoría than with Moreas = Peloponnese (cf. P. Karolidis, in Wissenschaftliches Jahrbuch [Festgabe] der Universität Athen, iii. 1909, p. 288–297; A. Hantsiz, in Byzantinisch-Neugriechisches Jahrbuch, ix., 1931, p. 65 sqq.) In the little map by the Arab Idrisi, of the year 1126 A.D., Belbínum = Peloponnese is given (i.e. the old classical name of the peninsula). On the other hand, we find Moría = Moreas = Peloponnese (i.e. its mediaeval and modern name) in the Arabic geographical table of the Paris MS. 2214, which is supposed to contain the cosmography of Ibn Sa’d of the year 1276 A.D. based for the most part on Idrisi (1154 A.D.; cf. K. Miller, Montre Arabe, i. 1926).

The Muslim peoples really only became acquainted with the Moreas in the xivth century A.D. Hellenistic culture was long extinct there and Christianity had become predominant. At the end of the fourth century (395 A.D.), Alaric had almost the whole of the Moreas waste and destroyed many towns and sanctuaries famed in ancient times. About two centuries later, c. 580, the Avars (a Turkish nomadic people) allied with Slav tribes are said to have invaded the Moreas and settled permanently. It should be expressly noted that it is only late and tendentious sources which tell us this. What scholars of the sixth century put forward as a historical fact, namely that an independent Avar or Avar-Slav kingdom, intractable to Byzantine or Greek Christian influence, existed in the western half of the Moreas for 218 years (580–807), must be relegated to the realms of fable (cf. E. Curtius, Polychronia, i., Gotha 1851, p. 86). It is certain, however, that considerable ethnological changes took place in the middle ages in the Moreas. In the xivth century in the reign of the Byzantine emperor Constantine V (741–775), if not earlier, numerous Slav tribes had pushed their way into the Moreas, which had been much depopulated from 746 by a terrible pestilence. This epidemic had also made great gaps in the population of Constantinople, which Constantine V is said to have endeavoured to fill with people from the Moreas; this imperial edict must have further contributed to reduce the Greek element in the peninsula. It may be assumed that the Slavs who at this time were settling mainly in Arcadia and Messenia, Elis and Laconia, sought and found new homes in the Moreas, which had been favoured by nature with a milder climate, not only as hostile robber hordes but also as peaceful colonists from the north.

According to Schafarik (Slavische Altertümer, German transl. by Wuttké, vol. ii., p. 192), the spread of the Slavs over the Moreas can be fixed
between 746 and 799. Nevertheless there can be no question of a complete slavisation of the country nor of a complete annihilation of the Greek element in it — as Fallmayer and his followers hold. The immigrant Slavs in Greece proper cannot have been very numerous. They were really nomad herdsmen and peasants, who settled here and there in the open country. Their level of culture must have been very low. On the other hand, the Hellenic element in Greece proper and no less in the Morea had always had control of the coasts and of the towns and fortresses in the interior, and it was moreover strong enough as regards culture to assert itself through the centuries and even to leave its mark on the foreign Slavs. The Slav settlers often caused trouble to the Byzantine government, so that the latter found themselves forced to send expeditions against them. For example in 753 A.D. the Athenian empress Irene ordered the Patriarch Staurakios to punish the Slav tribes of the Morea and the rest of the mainland of Greece. He appeared to have had numerous troops at his command and was able to carry out his task satisfactorily in a few months. He subdued the Slavs and forced them to pay an annual tribute to the imperial treasury. He returned to Constantinople with many prisoners and considerable booty and celebrated a triumph in the Hippodrome there.

After some time, the Slavs again rose in the Morea against Byzantine authority. They became a great danger and even threatened the towns on the coast. Supported by Saracens from Africa, the Slavs in 807 (805 by another reckoning) blockaded Patras from the land. The citizens of this important town defended themselves bravely in spite of a shortage of provisions, water and other supplies. When the help sought from the imperial strategos in Corinth did not come, the citizens of Patras made a vigorous sortie. They put the enemy to flight and drove them far from their town. Greek superstition seems to have ascribed the victory won at Patras over the Slav hordes to St. Andrew, the patron saint of the town. Nothing is recorded of the fate of the Saracen allies of the Slav besiegers of Patras. It is supposed that it was they who ravaged not only Patras but also Rhodes and other islands by the caliph's order in 807 A.D. With the defeat at Patras the strength of the Slavs of the Morea was broken. It is true that they again and again attempted to win their independence of the Byzantines by force of arms but without success. In 860 A.D., the doughty Byzantine general Theoktistos Bryoutos subdued all the Slav districts of the Morea as far as the mountains on the Tagetos and Parnon, where two rebel Slav tribes, the Ezerites and Melinges, had settled. These two tribes survived longest, sometimes as vassals of the Byzantines and sometimes as their open enemies. As early as the ninth century A.D. began the conversions of the Slavs to Christianity to which is due also their gradual hellenisation. The intermixture of the Greek Moreotics (Turk. Moralis) with the Slavs undoubtedly contributed considerably to the former process.

The Normans in Sicily in the following period disturbed not only the coasts of the mainland of Greece but also the interior of various Balkan provinces of the Byzantine empire. The Norman king Roger II in his campaign in 1146 against Greece sailed round the Morea and occupied with-out a blow — after successfully storming the strongly fortified Malvasia — Corinth, celebrated for and prosperous from its trade and industry. It was for this very king, that the Arab Idris composed his Nuzhat al-Majalis, finished about 1153 A.D. According to this work, Morea (Belonech), a flourishing and prosperous island of the Mediterranean, had 13 large and important towns, many citadels or fortified places and villages. Of the towns of the Morea Idris mentions the following among others: Corinth, "a large and populous city"; Batta (=: Patras), "situated on a promontory", has a "famous" church (of the apostle St. Andrew); Arcadia (=: the ancient Kythrassia), "a large and thickly populated town", whose harbour is visited by many ships; Irouda (=: Navarino) "a very commodious harbour"; Motonisia (=: Modon: q.v.), "a fortified town"; it was protected by a fort which commanded the sea; Coronia (=: Koroni), "a little town" with a citadel commanding the sea; el-Kalemounia (=: Lacedaemonia, the mediaeval Sparta), "a flourishing and important town, six miles from the sea"; Malasas (=: Monemassia, Malasia), "a town defended by a very high citadel commanding the sea, from which the island of Crete can be seen"; Argo (=: Argos), "a famous place and beautiful country"; Anaboli (=: Nauplia, Napoli de Romania). According to Idris, Morea (the extent of which he puts at 1,000 miles) is connected with the mainland "only by an isthmus, the length of which is six miles" (= Hexamilon, cf. below). Only small ships could be taken through the isthmus from the Gulf of Corinth into that of Saron; ships of larger size had to sail all round the peninsula of Morea. The confusion in Idris between the promontory of Malea and Talarnon is not peculiar in mediaeval works. Idris's statements are not based to any extent on his own observations (cf. Geographie d'Edrisi, transl. by A. Joubert, ii., 1840, p. 122 and also Th. Luc. Fc. Tafel, De provinciis regni byzantinii liber secundus: Europa, Tubingen 1845, p. 27 sqq.).

We get much and varied information supplementing the Arab geographer's account of the Morea from various 13th century sources, e.g. the Travels of Benjamin of Tudela (d. 1173) who starting from Saragossa visited the Greek east and other lands in order to become acquainted with the Jewish diaspora.

The conquest of Constantinople by the Latins in 1204 and the resulting division of the Byzantine empire, which had now collapsed, had a great influence on the future of the Morea. Boniface of Montferrat in 1204 founded the kingdom of Thessalonica in Macedonia which he took in exchange for Asia Minor allotted to him by treaty. By a comparatively slight effort he was able to conquer within a year a great part of the mainland of Greece as well as the Morea. Two knights, William of Champlitte, Count of Champagne, and Godfrey of Villehardouin the younger, may be regarded as the men who brought the Morea under Frankish rule. When William of Champlitte had to leave the Morea in 1209, Godfrey of Villehardouin continued the work of conquest alone and organised the Frankish administration of the country which was henceforth known as the principality of Achaea to Europeans. Soon after the Frankish occupation of the country, it was reorganised on western lines. But the feudal system did not find
its way into the Morea only after 1204. It had already existed in the country in the time of the

The Frankish rulers built new citadels and forts in the plains and on the mountains, most of which survived into the period of Turkish rule. A number of fiefs which were formed by the Franks in 1205 became after the middle of the 16th century hereditary possessions of the Ottomans.

It must also be pointed out that the Venetians after the Fourth Crusade had secured important trading centres and depots in the Morea. The Republic in this way acquired the province of Lacedaemonia, Kalabryta, Modon and Patras, and in the case of the last two seaports, some of the surrounding country including the possessions of a number of distinguished families of the Byzantine aristocracy. During this period, Venice succeeded in extending her territory and commercial influence and privileges further in the Morea and even in taking possession of the whole of it (cf below).

The fourth prince of Achaia (Morea), William of Villehardouin (1245—1278), the second son of the above-mentioned Godfrey, had vigorously completed the conquest of the country. In 1245 he forced Monembasia, which had so far remained independent in alliance with the Greek kings of Nicaea, to capitulate under certain conditions. The same ruler also conquered a number of Morean tribes who had shown themselves hostile to Frankish rule and who played a prominent part in later times when the Turks occupied the country. To keep in check the wild tribes of Zaconia and Laconia, William II of Villehardouin in 1249 built near the ancient Sparta, on a hill jutting out in front of the Taygetos, Mystira (Mystra), the fortress of the same name. A Frankish-Byzantine town soon grew up around this fortress which became a centre of art and classical studies. The town of Mystra was destined to be the capital of the later depots of the Morea, and even in the period of Turkish rule it did not completely lose its old importance.

Frankish rule in the Morea, which reached its zenith under William II, was destined to suffer a severe reverse within his reign. In October 1259 a fierce battle was fought between Castoria and Monastery (Pelagonia) at Longos Vorilla. In this battle fought the armies of the Despot of Epirus Michael Angelos and of the king of Nicaea and later Byzantine emperor Michael VIII Palaeologus. As a result of treachery on the part of an illegitimate son of the despot Michael Angelos, the Seboktihor Johannes, the troops and allies of the former suffered a reverse. Even William II of Villehardouin, safe in flight only to be shortly afterwards enticed from his hiding-place and captured. He was not released till 1262, after taking the oath of vassalage to the Byzantine emperor and ceding him four important fortresses of the Morea: Mystra, Maina, Geraki and Monembasia, as well as a considerable part of Laconia. The Byzantines thus gained important bases in S. E. Morea from which they were able to reconquer the whole peninsula, which was all the more necessary as William II of Villehardouin only kept his pledge of fealty for a short time.

Relations between the Muslim peoples and the Morea now became closer. At the end of 1262 the Seboktihor Constantine, a step-brother of the Emperor Michael VIII Palaeologus, landed in the Morea at the head of a large army which consisted mainly of Macedonians and Turks. This step-brother of the Emperor came to the Morea as administrator of the Byzantine lands there and occupied all the citadels which William of Villehardouin had been forced to cede in order to secure his release.

The Byzantine governor took up his residence in Mystra. Soon afterwards open war broke out between the Franks and Byzantines. To strengthen the latter there landed at Monembasia in the spring of 1263 a new Turkish army corps of 5,000 (according to others, 3,000) mercenaries in the service of Michael VIII Palaeologus, led by two men named Malik and Shalik. They had an accurate record of the name and descent of these Turkish chiefs, who, so far as we know, were the first to appear in the Morea. They must have been either Saudjags, or Turks of other descent who had no shame about selling their services to Christian rulers. The Turkish mercenaries under Malik and Shalik contributed greatly to the successes which the Seboktihor Constantine gained over the Franks at the beginning of 1262. Along with Greeks, mainly from Zaconia and other provinces of the east, Slavs from the Morea, Dasmuls (of Greek-Frankish descent), the Turkish mercenaries attacked from Lacoenia Elis, which was the capital of the Frankish principality. The bands of Malik and Shalik then pressed into the highlands of Skorta. Here they ravaged their will. With the approval of the Seboktihor Constantine, they plundered the country, carried off and slaughtered the cattle. In these circumstances the Skortians were forced to pay homage to the Byzantine emperor and to operate with his army against the Franks. Constantine's army, composed of so many different racial stocks, occupied the market-town of Veliogosti (near Megalopolis) and burned it, without however being able to take its citadel; they then conquered Kalabrya and burned the famous Latin monastery of Isova. But soon afterwards they suffered a terrible defeat not far from Olympia.

In the spring of the year following (1264), the Seboktihor Constantine continued the war on the Franks. He had no success and also quarrelled with his Turkish allies, whose pay was six months in arrears. Malik and Shalik at once led him with their men for this reason and retreated undisturbed to the district of Kayaia. Constantine tried to win them over again but they went to William of Villehardouin who accepted their assistance. Thereupon Malik and Shalik with their followers went over to the camp of the, as they thought, generous Frankish leader in the conviction that the latter would keep his word. By the accession to the Franks of this Turkish force, the tide was turned in their favour. The Turkish chiefs who were inspired by an ardent desire to avenge themselves in battle on their false employers, now advised William II of Villehardouin's knights to meet the imperial Byzantine army on the frontiers of Messenia and Arcadia. While the Frankish-Turkish army was going through the pass of Makryplagi (between Megalopolis and Kalamata, i.e. the line of the modern railway), they were attacked by an ambush of the Byzantine army, whose leader was no longer the Seboktihor Constantine but the strategos Alexius Phylus, Malvemos and Alexius Kabellaris. Twice the vanguard of the Frankish-Turkish force led by Anselm de Toucy had to give way before the numerous Byzantines who occupied the heights of the pass of Makryplagi, but finally they won the
hotly contested summit of the pass, from which they ousted the enemy. The Turks under Malik and Shalik followed up and completed the victory. The leaders of the army so disastrously defeated sought refuge in the neighbouring caves of Garilik where they were be-seiged by the Turks. The latter took the caves and led their occupants prisoners to William II of Villehardouin. The latter thereupon ordered the Turks to raid and plunder the districts of Morea previously occupied by the Byzantines, notably the districts of Zacoia, Helos, Vatika and Monemvasia.

After the battle in the Makryplagi pass came the news that Skoritians had again taken up arms against the Franks and stormed the fortress of Bachelet (Araklonov) and Karytaina. As the valiant Godfrey Brunieres, Baron of Karytaina, who had always been able to keep the turbulent Skoritians in check, was no longer in the Morea, William II of Villehardouin ordered the Turkish leader Malik and his men to go to Skorta to put down the rising. Terified by the ravages and cruelties of the Turkic mercenaries, the surviving Skoritians submitted to the Prince of the Morea and begged for mercy which was granted them.

The Chronicle of the Morea, which has survived in four languages (Greek, French, Catalan and Italian), is the only source which tells us of the activities of the Turkish mercenaries in the Morea (1262–1265). The same Chronicle adds that the Turks in 1265 sought permission to leave the Morea and to be allowed to return to their Asiatic home. Malik took his leave in the friendliest fashion from the Prince of the Morea and began his journey home. The Chronicle however specially mentions that individual Turks preferred to settle in the Morea. They were baptised and married morean women. About the first half of the sixteenth century, there were still descendants of Malik's followers there, baptised Turks settled in Ellis. It is natural to think that the modern villages in N.W. Morea of Malikti (Demos Vuprasion) and Turkochori (= village of the Turks", Demos Tritias) owe their names to the Turkish settlers in the time of William II of Villehardouin. This prince gave two of Malik's followers who remained in the Morea the rank of knighthood and even granted them fiefs. According to the Catalan version of the Chronicle of the Morea, Malik himself married a noble Frankish lady, a widow, through the intermedialy of William II of Villehardouin. It is a historical fact that Turkish-Moreote relations date from the second half of the sixteenth century. After the death of William II in 1278 we find a reference to estates which this prince had given to his Turkish allies and which were occupied about 1280 by the soldiers of Galerano d'Ivry, who acted for a time as governon of the Morea for Charles of Naples and Sicily. Charles I and his immediate successors in rule over the Morea had not infrequently Turkish warriors in their service. From the beginning of the sixteenth century it not infrequently happened that Muhammadan pirates from Asia Minor raided and plundered the coastslands of the Morea. Sometimes they had allies of the Christian faith, notably Catalans.

About the middle of the sixteenth century, an important change took place in the administration of the Byzantine possessions in the Morea. The Emperor Johannes Kantakuzenos in 1349 created an appanage for his second son out of these lands which he called the despote of Mystra and which lasted till the Ottoman conquest (1349–1380). In this period fell the rule of the first despots of Mystra, Manuel Kantakuzenos, the second son of the Emperor. He assisted the Morea to ward off the Turkish attacks, which had reduced the once flourishing Corinth and the country round to such misery that the Corinthians in 1358 were forced to send an urgent appeal for assistance to their sovereign, the titular Emperor of Constantinople and prince of Achaia, Robert II. The latter gave a ready ear to their appeal. On April 23, 1358, he gave the Florentine Grand Seneschal Niccolo Acciajoli and his descendants the extensive district of Corinth as a hereditary barony. The princely family of the Acciajoli survived in the Morea and on the mainland of Greece for two centuries, during which they had much to do with Muslim peoples. A series of circumstances, including the irruptions of the Turks as early as the middle of the sixteenth century and the advance of the Ottomans, whose strength was steadily increasing, brought to an end the Albanian rule in Greece. The first despots of Mystra, Manuel Kantakuzenos, had them settled in various desert regions where they became distinguished as warriors, agriculturists and as huntsmen. Thus we find them in Arcadia and Lacoia where they seem to have come in large numbers. Later another 10,000 Albanian families were peacefully settled by another despots of Mystra, namely Theodoros Palaeologos (1384–1407), son of the Byzantine Emperor John V. According to reliable sources, these 10,000 families left Thessaly and Acarnania with their cattle and goods and chattels on account of the Turkish raids and for other reasons and reached the isthmus. There they pitched their camp and sent messengers to Theodore I with the request that they might be allowed to settle in his Morean territory. Theodore I acceded to their request and allowed them to spread over a considerable portion of the Morea. The story of G. Bosio (Dell' Istorica della Sacra Religione et illustrissima Militia di F. Gio. Giero- seliotiano, vol. ii, Rome 1594, p. 126–129) to the effect that the Turks had occupied Patras by 1378 and conquered the Morea shortly before must be relegated to the realm of fable. About this time, there were again great changes in the Morea. The Company of Navarre, which in 1380 had entered the service of the titular Emperor Jacob de Baux of Constantinople and prince of Achaia and were seeking their fortune on Greek soil, became after the death of the Emperor in Tarso in 1383 absolute masters of a great part of the Morea. In 1386 the Company made Captain Pierre de St. Exupery ( Bordel of S. Superan) their leader. The latter was able to extend his power and influence in the Morea by inciting the Turks and also the Greek archontes against Theodore I. During the period 1396–1402 he even bore the title of hereditary prince of Achaia (which was given him instead of money by king Ladislaus of Naples). Sometime before, a vigorous and enterprising Florentine, Nerio I Acciajoli (Sept. 29, 1394), had been playing an important part on the mainland of Greece. This man, a nephew of the Niccolo I Acciajoli, already mentioned, had acquired considerable territory in the Morea, partly by inheritance and partly by purchase. Shortly before his death he attained the height of his glory when he was appointed by king
Ladislaus of Naples as hereditary Duke of Athens and the lands belonging to it. In 1389 the Venetians occupied the important fortress of Nauplion and set about the conquest of Argos. The despot of Mystra, Theodoros I Palaeologus, the son-in-law of Nerio I Acciajol, at his father-in-law's instigation anticipated the Venetians and occupied Argos. As a result, hostilities broke out among the Christian states, which could end only to the advantage of the Turks. The despot of Mystra replied to the demands of Venice to give up Argos by saying he could only do so with the Sultan's approval. Later the Venetians joined up with the Navarrese. Through treachery Boro of S. Superan succeeded in taking Nerio I Acciajol prisoner on Sept. 10, 1389. The latter remained for nearly a year in the hands of the leader of the Navarrese but in the end obtained his freedom.

An epoch-making event was the great battle on the field of the blackbird (June 13, 1389) at Pristina, which decided Turkish rule for centuries in the Balkans. A Turkish army appeared in the Morea at the end of 1392 under Ewenos Beg in order to aid, at their request, the Navarrese against the despot of Mystra. The Turks thereupon occupied a number of strongholds in the peninsula. Nerio I Acciajol, who had been appointed governor of the Morea, now pledged himself to pay tribute to Sultan Bayazid and to be his vassal. After the death of Nerio I Acciajol, a fatal quarrel broke out between his son-in-law Theodore I of Mystra and Charles Tocco, during which the Turks won important successes on the mainland of Greece. The fear of the danger from the Turk—probably induced Charles Tocco and Theodore I—to make up their quarrel, after long negotiations with the Greek national party in Athens, who hated the Latins. Turkish forces under the Pasha Timurtash entered Attica from Thessaly. At the end of 1394 or in the first seven weeks of 1395, the Venetians occupied Athens including the Acropolis, after driving back the Turkish besiegers. Theodoros prepared to advance against the Turks on the isthmus. The latter, however, defeated on Sept. 28, 1396 at Nicopolis the flower of the chivalry of Hungary, Germany, and France and thus laid the foundations for their dominion over the lands below the Danube. Bayazid thereupon decided to attack the remnants of the Byzantine empire as well as the little principalities of the mainland of Greece. He therefore sent his generals Vaqib, Pasha of Rumelia, and the already mentioned Ewenos Beg with an army of 50,000 men to cross the isthmus again. Vaqib occupied Argos; Ewenos Beg at the same time fell upon the Venetian possessions in Messenia. The prince of Achaea, Boro of S. Superan, and Theodoros I of Mystra found themselves forced as a result of the Turkish successes to pay tribute to the Porte. laden with incautious booty the armies of Vaqib Pasha and Ewenos Beg returned across the isthmus and in 1397 even occupied Athens for a brief period. In addition to Greek sources, Turkish writers record that the "city of the wise", as Athens is frequently called in Muslim works, was taken by Sultan Bayazid's men (cf. J. II. Mordtmann, in Byzant. Vorzeit. Fachb. 11, 1923, 146 sqq.). As a result of his troubles, especially the Turkish raids, Theodoros I of Mystra became utterly tired of his position. He therefore resolved to sell his towns and castles to the knights of St. John of Rhodes, who after negotiations readily purchased Corinth, Kalabryta and Mystra in the years 1400—1402. But they could not establish themselves permanently in the Morea, for the Greek national party in the country, especially in Mystra, rebelled against the sale, which the Sultan, the suzerain of Theodoros of Mystra, also declined to recognize. Theodoros therefore cancelled the sale and compensated the knights partly in money and partly by ceding the county of Salona and the barony of Zituni. Theodoros I had been able to take these lands from the Ottomans after their defeat at Angora in 1402.

Sultan Sulaiman I (1403—1411) abandoned any claim to suzerainty over the Morea. At this time the influence and power of the Venetian colonies in the Morea were increasing. In 1407 the Venetians occupied Lepanto. In the following year, they seized Patras and the country round it and from these two strongholds which lay opposite one another, the so-called little Dardanelles, they were able to keep in check the Turkish pirates who made the Gulf of Corinth unsafe. At an earlier date, the Albanian family of Spata had settled in Lepanto and had occasionally made common cause with the Turks. Patras at this time was ruled by the archbishop Stephan Zaccaria in name of the Pope. As he suffered a great deal from the Turks, he pledged the town and the country round it with the Venetian power together with the support of Astros in Zaccoia. They restored the fortifications of Nauplia and other strongholds in their possession. The Republic of St. Mark in 1396 and 1411 concluded treaties with Sultan Sulaiman I, by virtue of which they secured their colonies in the Morea and the East generally. But in the reign of Murad II (1421—1451) danger again threatened from the Turks. The Venetians were however able to take the necessary measures for the defence of their possessions in the Morea. In the districts of Nauplia and Argos as well as in their flourishing Messenian colonies they settled numerous Albanians who loved fighting. In Corinth and Attica also the Albanians were welcomed by the Acciajol. The Albanian element was therefore very strongly represented in the Morea in the first half of the xv century; later they spread to the islands around the Morea. In the wars of the Greeks and Venetians against the Ottomans, the Albanians frequently distinguished themselves; on the other hand, their morals left much to be desired. To this day we still can find descendants of these Albanian colonists in the Morea and in the adjoining territories.

After the battle of Angora, at the time when Frankish power in the Morea was declining, the Byzantines vigorously resumed their efforts to reconquer the whole peninsula. Theodoros I of Mystra had previously wanted, with Venetian support, to erect on the isthmus a great bulwark against the Turks which would make access to the Morea impossible for them. Manuel II Palaeologus again took up Theodore's plan and began to put it into execution with vigour. Not far from Corinth on the isthmus, which was usually called "Tinamlim" in the middle ages, he built a wall 24 miles long from sea to sea with castles at each end and in the middle and no less than 155 strong towers besides deep ditches. The building material was taken from older walls and defences. In the course of 25 days (April 8—May 3, 1415), i.e. at a most rapid rate, the great wall was completed which, like the
isthmus itself, was called "Hexamilion"; the greatest hopes were built upon it, but they soon proved deceitful. The Turks usually called the wall "Gez-
mekiar. In 1416. Manuel II left the Morea after reimposing his suzerainty upon the prince of Achaea Centurione II Zacarria and humbling several Greek archons of whom he carried off with him to Constantinople.

The peaceful relations which had existed between the Byzantine and the Ottomans under Sultan I and Bayazid suddenly ceased when Murad II ascended the throne. In 1423 he ordered the celebrated Pasha Turakhan to clear up the small states. With an army of 25,000 men, which was joined by the Duke of Attica Antonio I as the Sultan's vassal, Turakhan set out from Thessaly to obey his master's orders. The celebrated Hexamilion wall proved an insufficient bulwark against the onslaught of the Janissaries. Turakhan had the most of it destroyed and advanced into the Morea. The despot Theodoros II of Mystra could scarcely have checked the Ottoman flood which swept into his land, plundering and murdering the Lacedaemonians (on the Makrylagi pass) and other Byzantine and Latin towns fell into Turakhan's hands. But he suffered one serious reverse. The Moreots caught a portion of his army in the pass of Lonsari, where they were victorious and took much booty or, to be more accurate, recaptured their own property. In the Arcadian town of Tavia (the modern Davia, on the road from Tribolita to Wytina), the Albanians assembled and chose one of themselves as their leader and decided to attack Turakhan on his way back from the south. In the battle that followed, the Albanians did not stand their ground but fled. Turakhan pursued them and slew many besides taking some 500 prisoners. These he put to death and, according to the Turkish practice, built towers of their skulls. Heavily laden with plunder, Turakhan returned soon afterwards across the isthmus to Thessaly. He had however in 1423 not yet completed Murad's order to subdue the Christian states of the Morea.

Soon after the withdrawal of the Ottomans, Manuel II Palaeologus besought Murad II for peace and concluded a treaty with him, by which the despot of Mystra was to pay an annual tribute of 100,000 hyperpyra to the Sultan and further to declare his readiness to give up the Hexamilion wall. Venice, whose colonies in the Morea had suffered much from Turakhan's raid in 1423 and were continually troubled by Muslim pirates, recommended all the Christian powers interested to form a united front. This appeal for unity, however, fell on deaf ears. The various Christian rulers of the Morea quarrelled among themselves in spite of the critical times and even took up arms against one another. The Albanian inhabitants followed their own inclinations entirely and even began separatist movements of a political nature.

It is remarkable that the Greek political consciousness was strengthened in the Morea in this period of political confusion. Mystra became the centre of a kind of renaissance and a centre of learning and study of classical antiquity. In this period there appeared in the Morea a great scholar who was a philosopher of the Platonic school and also a fervent patriot of radical tendencies in social and political reforms. He was Georgios Gemistsos or as he called himself "Plethon". His teaching was of a mystical nature. It was directed against Christi-
the Turks of the Thessalian plain. An Albanian clan settled in Phthiotis, whose autonomy had been recognised by the Sultān, joined the victorious Palaeologoi. The latter also occupied the little town of Witrintra (on the Gulf of Corinth) which the Turks had ceded to the Venetians. He installed a chief of the Pindus Wallachians who lived in Fanar (at the foot of the Ithome mountains).

The battle of Barna (Nov. 10, 1444) brought a change in the Balkans which was fateful also for the Morea. The Turks reinforced once again turned their attention to the south. Nero II Accajoli of Athens found favour with Murad II after most humbly promising to be his vassal and to pay the usual tribute. In order to save their colonies in the Morea, the Venetians also made a treaty of peace with the Turks soon after the battle of Barna. It thus came about that the Palaeologoi were left to face the Turkish onslaught quite isolated, a danger which they apparently did not clearly realise. After Nero II Accajoli had again recognised Turkish suzerainty, Constantine Palaeologos with a large force invaded Attica and besieged Athens. The consequence was that Nero II Accajoli turned for assistance to Murad II. The latter demanded that Constantine should evacuate not only Attica but also all the Turkish territory which Constantine had seized in the course of 1444 on the mainland of Greece and in southern Thessaly. Constantine replied to Murad II through his ambassadors that he would keep the lands he had won. Murad II was furious at this manly attitude of Constantine II. Incited by Nero II and Turakhān, the Sultān resolved on a campaign into the Morea. By his command powerful Turkish forces were assembled in 1446 at Serres in Macedonia from Europe and Asia. Constantine Palaeologos and his brother Thomas also raised a very large army for that time which was assembled on the isthmus. In the winter of 1446, Sultān Murad II led his army from Macedonia to the isthmus, without meeting opposition. He encamped at Mingae (the modern Marzē) and began to get his artillery and other arms ready. On his able picked staff was the experienced old Turakhān who, as already mentioned, had been twice in the Morea and therefore knew the country and the people. According to the historian Chalcocypides (ed. Darke, ii. 114), Sultān Murad's camp on the isthmus was the best organised that had ever been known. A bloody battle developed for the gateway to the Morea. The Turks with their artillery bombarded the Hexamion wall for days. A Serbian Janissary succeeded in leaping over the wall under the eyes of the Sultān and others followed him. The defenders so far as they were not killed by the Janissaries took to flight in a panic. The wall was thus in the hands of the Turks, who entered the Morea either through the gates or through the breaches their guns had made. In the Chronicle of Georgios Phrantzes the date of the capture of the Hexamion wall, the "last bulwark of liberty in Greece", is given as Dec. 10, 1446. The Chronicle of Ioannīnus Catanaeus gives Dec. 14, 1446, a date which has been accepted as correct by most modern historians.

The reports of the Palaeologoi to pursue the Palaeologoi with 1,000 men and he himself with his army marched along the south coast of the Gulf of Corinth towards Patras. He burned the lower town, laid waste the country as far as Cleonaea and then turned eastwards to Corinth. In the meanwhile Turakhān had returned from his pursuit of the Palaeologoi with much booty and many prisoners. The Palaeologoi now began to negotiate for peace with the Sultān. They declared themselves ready to cede the lands in Greece proper and in Thessaly which they had acquired in 1444 and to pay an annual tribute. On these conditions the Sultān left them in possession of their lands in the Morea. The Emperor John VIII Palaeologos died on Oct. 3, 1448, and on Jan. 6, 1449 his brother Constantine, the despot of the Morea, was solemnly hailed as Byzantine Emperor in the Metropolis church in Mystra. Of course he ascended the throne with the permission of Murad II, whose tributary he was. An event of importance in the history of the world soon afterwards took place on the Bosporus. On May 29, 1453, Constantinople was taken by the Turks; the valiant Constantine died defending the city and thus the line of Byzantine emperors came to an end. When his brothers Thomas and Demetrius heard of the fall of Constantinople they sent envoys to Muhammad II asking to be allowed to retain their lands in the Morea, on payment of the usual tribute. After many humiliations, their request was granted them. The remainder of the period of Palaeologoi rule was a brief one and their authority only nominal. In 1453 50,000 Albanians in the Morea rebelled against the Palaeologoi. In July 1454 Venice sent Vettore Capello to the Morea, to settle certain business of the republic and at the same time to make peace between the Palaeologoi and the Albanians. But their effort failed. In the meantime Muhammad II had ordered Turakhān's second son Omar to intervene in the Morea on behalf of the Palaeologoi (end of 1453). He succeeded in putting down the Albanians. The Palaeologoi were now able to enjoy their lands as vassals of the Sultān. For a few years they paid their tribute regularly, then they refused to do so with various excuses. At the same time they endeavoured to form alliances with western rulers against the Turks, a thing to which the Sultān could not remain indifferent.

The rule of the Palaeologoi was gradually approaching its end. The west scarcely troubled itself about the brothers of the last Byzantine emperor, who were not united and yet had to gather their last forces against the Turks. When a fleet belonging to the Pope Callixtus III appeared in the Aegean, Thomas Palaeologos took courage and announced his refusal of tribute to Muhammad II. Already the latter had received no tribute from the Palaeologoi for the past three years in spite of repeated warnings. He therefore thought it was time to settle matters himself in the Morea and to teach his rebellious vassals a lesson. In the middle of May 1458, Muhammad II came to the Morea with a large army, laid siege to Taras, a village in two parts, N.W. of Nemea and N.E. of the Lake of Inion, and forced it to capitulate. The citadel of Rupeli in Arcadia, to which many Greeks had fled with their women and children, surrendered after two days' stubborn defence. Muhammad II turned from Arcadia to N.W. Morea. Patras, the headquarters of Thomas Palaeologus, was abandoned.
by its citizens. The garrison left in its citadel did not dare to offer resistance. The Sulţan treated the town of Patras very generously. By July 1458 Muḥammad II had reached Corinth after taking Bostâza (Aegaeon) on the way. On Aug. 6, 1458, its commanders left the citadel to negotiate its surrender with the Sulţan. The loss of Corinth to the Turks seriously alarmed the Palaeologoi. The negotiations for peace, which were now begun, were conducted by Mathaios Asasís. The Sulţan then made peace with the despots of Morea but the price was a high one. In the beginning of the autumn of 1458, Muḥammad II left the Morea to return to the north via Athens, which shortly before had passed into his hands. The sources do not agree regarding his activity in the Morea in this year. As a rule, Muḥammad’s campaign in the Morea in 1458 is regarded, by modern historians also, as one of destruction. It is true, he was generous to the people of Patras and left the Corinthians unharmed after taking their city. He carried off however a large number of Christians to Constantinople and its neighbourhood. These settled there as artisans and peasants and produced the productive element in the capital of the Ottoman empire.

In the year 1458 Muḥammad II for administrative purposes combined his possessions in the Morea with Thessaly and placed the newly constituted province under the governorship of Turâkhan’s son ‘Omar. The Sulţan had hardly left the country when the Palaeologoi again began to stir up trouble. Muḥammad therefore deprived ‘Omar of his office in Thessaly and the Morea and decided to go in person to the Morea again in order to be done with the Palaeologoi once and for all and make the whole peninsula a Turkish province. Demetrius Palaeologos was not the man who could defend and save Mystra. He did shut himself up in the citadel with the intention of defending it, but very soon surrendered it to the Turks. Demetrius after many adventures died as the monk Dorotheos in Adrianople in 1470 (cf. Th. Spandugino, I Commentari di... de l’Origine de principe Turchi, Florence 1551, p. 43 sq.). After disposing of Demetrius, the Sulţan turned his attention to his brother Thomas. After the Turks had occupied Mystra he had not dared to do anything to defend his lands. He was rather seeking to leave a way open to escape from the Morea, if necessary. One town after the other fell almost without resistance into the hands of the Ottomans. Thomas Palaeologos embarked with his family at Porto Longo (at Navarino) in Corfu, which he reached on July 28, 1459 but went on 3 months later to Rome where he died on May 12, 1459. After the disappearance of his chief opponent, Muḥammad II continued his victorious march from Messenia to Northern Morea. He left the Morea towards the end of summer 1460. The plan which he had decided on when he entered the Morea, was practically carried through. Except for a few places, the peninsula was now Turkish territory. Zaganos Pasha was installed as governor of the Morea by the Sulţan and entrusted with the reorganisation of the peninsula, which had become much depopulated and was a great deal poorer economically. In 1458 and again in 1460 Muḥammad II combined the Morea with Thessaly for administrative purposes. This union was later dissolved. As early as the xvth century we already find the Morea a sazda by itself with 109 ziamets and 342 timar. Down to about 1570, the residence of the governor was by turns in Corinth, Lendari or Mystra, then in Nauplion and in 1760–1821 in Tropoïdha (cf. below). The division of the country under Turkish rule, usual from the middle of the xvith century, into 22 or 25 provinces or beyliks is partly suggested by nature and partly a survival of the older Byzantine organisation.

There is no doubt that the Turks introduced their own feudal system after their occupation of the Morea. The Turkish-Muslim element in the country was thus able to expand. Even during the first period of Turkish rule (1458–1687), other factors contributed to this, like the immigration into the Morea of Muslims from other parts of the Ottoman empire, the conversion of Christian Moreotes to Islam, the carrying off of Christian women into Turkish harems, etc. While in the north of the Balkan Peninsula and in Asia Minor, countless Christians had adopted Islam either voluntarily or under compulsion, the Christian element in the Morea at the time of the Turkish conquest was morally strong enough to remain in the faith faithful to the Christian religion. The relatively few Moreotes became Muslims, and these were principally Albanians, who always adopted Islam more readily (cf. thereon: C. Jireleék, Studien zur Geschichte und Geographic Albaniens im Mittelalter, Budapest 1916). As in Asia Minor, Bosnia, Crete etc., so in the Morea also members of the nobility and middle classes, especially those of Frankish origin, had adopted Islam in order to retain possession of their estates. There were also in the Morea crypto-Christians, as well as people whose Islam was very superficial. These were usually called waqfât (impure) in the Morea. These superficial Muslims, who continued to retain much that related to Christian worship, lived mainly in what is now the province of Olympia and were almost all exterminated during the Greek War of Liberation (cf. the articles by Photios Chrysanthopoulos-Photakos in the Athens periodical Εθνικός, vol. ii., 1886, p. 1). The Bardiniots were also for the most part superficially Muslims. As to the survival of the Greek Moreote element, there are theories current in modern literature which can hardly be right. It is said for example that Sulţan Muḥammad II’s ordinance regulating the relations of the Christian subjects to the Ottoman empire benefited also the Christian Moreotes. But it is wrong to credit Muḥammad II with any such ordinance (cf. Fr. Giese, in I. E., xix., 1931, p. 264 sq.). It is however a historical fact that the Greek Orthodox Church contributed a great deal to maintain the Christian element in the Morea as in the East generally. The Christian clergy of the Morea were frequently able to maintain a privileged attitude towards the Turkish officials and to this further the interests of their co-religionists. The Christian Moreotes were also often cleverly able to avoid having their children taken by the Turks for the Janissaries. The Christians of the Morea held this, the “blood tax”, to be the greatest degradation they suffered under the Turkish yoke and a dreadful disgrace to their race. After the death of Sulţan Sulaimân the Magnificent (1566), the lot of the Christian Moreotes gradually became worse. Ownerless lands were confiscated by the Sulţan and given to his soldiers or allotted to the mosques as waqf’s or given to private individuals as gifts. During the
long period of Turkish rule in the Morea, the largest and best part of the land was in Turkish hands. As a rule, Christians were not allowed to own large estates. The peasants had to pay over annually the fifth of the produce of the land and pay all kinds of annual taxes, were never sure of their property, nor even of their wives and children, and suffered unspeakably in every way from arbitrary Turkish rule.

In view of the abuses of the Turkish authorities, the Christian Morcote preferred to abandon the fertile regions and retire to barren lands and into the mountains, where he could breathe more freely and more easily escape the despotism of his rulers and shape his course of life a little more pleasantly. We thus find that within the period 1360-1521 the mountains of the Morea were predominantly inhabited by Christians. Of the factors which contributed to the survival of Greek culture in the Morea during Turkish rule special stress must be laid on the political concessions which were made to them by the Ottomans. These lay mainly in the freedom to govern their own communities. Greek local government, as we find it during Turkish rule, is said to have been a continuation of old Greek institutions. In the period from 1715 to 1821, if not earlier, the freedom of the Greek community was not infrequently limited by the Turkish authorities. They interfered indirectly in the appointment of local officials and made propaganda for their favourites. It even happened that the Köşjabashe, through the influence of the Turks, were not only appointed for a number of years, but were also able to hand down their offices to children and granddaughters. Undoubtedly, those Morcotes were better off who lived in Turkish villages which were allotted to the sacred places of Islam or to members of the Ottoman imperial family. The town of Dimitzana in Gortynia for example was originally a waál of Mecca under the protection of the Sultan's mother.

The peace between their Turkish rulers and Christians could only be external. In the Morea also there were the so-called ‘Klefs’ who would not submit to the existing government and took up arms against it. Against them the Turks used the Armatuli force, a gendarmerie of Christians organised on military lines. In the period from 1715-1521 the Turks for the security of the country built watchhouses (derbent) in which a garrison was stationed to watch those who passed, especially at the passes. The Derbenekia (kaúrk derbent) between Corinth and Argos and the Derbenia of Lomati, the passes between Argiria and Messenia (Makriplagi; cf. above) were all very important. The Mainotes in their wild mountains felt little of the Turkish yoke which weighed heavily on the rest of the Morea. The Mainote tribes who were distinguished for their valour, were from 1460 to 1821 in constant rebellion against every foreign power. The Porte found itself forced to recognise officially the independence of Maima, in return for which the Mainotes were to pay tribute, but did not always do so. Although the Christians in the Morea were exempt from military service, the warlike spirit which they had so often displayed in the Frankish period continued to survive. An eloquent testimony to their love of freedom was the fact that they continually took up arms against their Turkish oppressors, sometimes alone, sometimes with allies.

For a long period after the year 1460, when Sultan Muhammad II had made the greater part of the Morea a province of his empire, this land became the scene of desperate fighting between Turks and Venetians, in which the latter had the majority of the Christian population on their side. The great champion of the Christians, Skanderbeg [q.v.], the leader of the Venetian mercenaries, died in 1468. Two years later, Turkish rule over Euboea was firmly established and they could record further successes in the Morea.

In the spring of 1499 a new war between Venice and Turkey broke out. On Aug. 29-30, 1499, Lepanto had to surrender to the Turks. In 1500 Sultan Bayezid II ordered Yağık Paşa to blockade Modon with his fleet, while he himself set out by land from Constantinople with a well-equipped army for the Morea. On Aug. 9, 1500 (according to Hâджî Khalîfa; on 14th Muḥarram 916), Modon [q.v.] fell after a long siege in the presence of the Sultan. Bayezid II turned the cathedrals at Modon and Koron into mosques and offered up thanks in them and gave these towns to Mecca as waâds. He then paid attention to the defence of the newly acquired towns and to the repopulation of Modon. In 1502-1503 Venice concluded a treaty of peace with Turkey in which she surrendered her Messenian colonies and also Maima, which had in the meanwhile been taken by a son of Krokodilos Kladas in name of the Republic. In 1532 the Morea became the scene of notable battles. The emperor Charles V had decided to intervene in the Morea. A considerable fleet assembled in Messina in June 1532. The Pope and the Knights of St. John, the Genoese and the Sicilians also showed a readiness to join in the expedition, the leader of which was Andrea Andreu (Turkish: Andreviâus). After repeated and costly attacks, the allies succeeded in taking a considerable part of the lower town of Koron. The Turks who had retired into the citadel of Koron were forced to capitulate. From Koron Andrea Doria turned his attention to Patras, which also capitulated. He then returned with rich booty. Sulaimân I, who was now on the throne, gave the sandjak of the Morea to Muḥammad Beg, a son of Yağık Paşa and commissioned him to reconquer the fortresses taken by Andrea Doria. Sulaimân I declared war on Venice in 1537. Kâsim Paşa, the sandjak-beg of the Morea, was commissioned to conquer the Venetian colonies in the Morea. Nîr al-Dîn Barlakos had inflicted several defeats on Venice in her colonies and she had besides every reason to complain of her allies, the Pope, Paul III and the Emperor Charles V. In the summer of 1540 Venice made peace with Sulaimân I in order to save what was left of her possessions. The majority of the Venetian colonies in the East, including Nauplion and Monemvasia, was the price paid. The Turks endeavoured to populate once more their new possessions in the Morea. About 1550, there were about 42,000 Christian families in the whole Morea. We know nothing definite of the Muslim population at this time. It may be assumed however that, then as later, Muslims were in a minority. Even when Ottoman power was at its height, the oppressed Moreotes, always desirous of liberty, rose against their oppressors. In the xvith century the lot of the Christians in the Morea was not unbearable. Two Turkish sources of the xivith century are of considerable importance for the history of the Morea. These are the ‘Survey of
the World” (Qāhiān-nāma) of Ḥāḍīḏī Khatībī (d. Oct. 1657) and the Travels (Siyāḥat-nāma) of Ewliya Celebi, who visited the Morea in 1668 and 1709. There is no fuller work on the Morea than the latter among Muslim sources. Ewliya Celebi’s narrative was based on personal observation and experience, and is distinguished by a vividness of description and to some extent by a tendency to exaggerate. In the treatment of the Morea, given in his vol. viii., it is hardly possible to trace his literary sources. What he tells us about Muslim buildings and religious orders is of importance, and his account of the Christians is also of value. He naturally takes the Ottoman point of view (cf. Ewliya Celebi, Siyāḥat-nāma, vol. viii., Stambul 1928; Fr. Lassinger, G. O. W., p. 219 sqq.; Fr. Taeschner, in sol., vol. xviii., 1928, p. 299 sqq.). When Ewliya Celebi visited the Morea, various Muslim orders and corporations had settled there. They included jurūjīr brotherhoods, dervish orders, some of which were anti-Islamic, and Shī‘ī Bekāšīye. The existence of such brotherhoods were widely propagated in the Greek east from the xv century, can be proved for the Morea as late as 1828 (cf. F. W. Hasluck, Christianity and Islam under the Sultans, vol. i.—ii., Oxford 1929).

At the end of 1685 another coalition against the Porte was formed by Venice, Poland, Germany, Russia and the Pope. Francesco Morosini was appointed by his government to begin operations against the Turks as speedily as possible. He was given command of the allied naval forces. After 42 days of fighting by land and sea, Koron was stormed by Morosini. In the period from the late summer of 1685 to July 1686 Morosini, Count Otto Wilhelm von Königsmark and Hannibal von Degengeld took from the Turks Old and New Navarino, Kalamata, Modon, Zarnata, Passava, Celefa and Višo as well as other fortified places in southern Morea. The Sereņšer İsmā‘il Paşa was defeated in several battles and had to retire to the interior of the Morea. Hasan Paşa, who was in Maina, negotiated with Morosini and surrendered voluntarily. The Turkish garrisons of many towns, on the other hand, offered a desperate resistance. It cost the Venetians and their allies much time and heavy sacrifices to take Nauplion. The capture of the latter contributed a great deal to increase their confidence. By the end of 1687 Morea up to Monemvasia was Venetian. Continual Turkish raids, however, continued to disturb the security of the peninsula. By the peace of Cullowicz (Jan. 26, 1699), the Porte had to cede the Morea to Venice. The seas of the Morea and of the mainland of Greece were now open to Turkey as well as to Venice. For the last period of Venetian rule in the Morea (1669—1715 or 1718), the reader may be referred to L. Ranke, Zur venezianischen Geschichte, Leipzig 1878, p. 277—361. The services of Venice to the peninsula in the period 1688—1714 must not be underestimated, especially as she had found it at a very low level.

The occupation of the Morea by the Venetians now attracted the attention of western scholars to the celebrated peninsula. The Turkish empire, which had been able to profit a good deal by the troubles in Europe at the beginning of the xvii century, resolved at the end of 1771 to reconquer the Morea. Many Greeks felt that the Venetians had not respected their rights, religious and family matters, were hostile to their own government; and even wanted the Turks back again (cf. De la Montray, Voyages, vol. i., p. 462). Except for a few larger towns which offered a resistance, the land was easily taken by the Turks and so the Morea once again became Turkish. The history of this conquest was written by several contemporary writers.

The peace of Passarowitz (June 10, 1718) ceded Morea finally to the Turks. We are most fully informed about the rule from 1718 to 1821. The extant sources, especially in Greek, enable us to study the period to the smallest detail. After 1715 many Christians again adopted İlim. A census taken in 1720 gave 60,000 male Christians of 11 years of age and over. The Muhammadan inhabitants are said to have been in the minority at this time. On the other hand, the Turkish element increased in the period 1769—1780 while the number of Christians diminished considerably, as did the total number of the population. From 1715 to ca. 1750 the Morea was governed by a Paşa, the Moreawali, who had three Pashas under him: first Pasha Murad; his person was fixed and inefinite. He was usually assisted by two other Paşas, who were under him and were granted two Kuids. A change was made in 1780. From this date to 1821 the government of the Morea was no longer given to a particular Paşa but to a simple mufti of the Porte, who was however given the title of Pasha. The higher offices were held by a muhallebi, a defterkuchaya and a Christian dragoman. Under the official system of administrative divisions, the Morea was divided into 22 districts. In this period Christian local autonomy gained more strength. After the many disappointments they had suffered from the western powers, the Moreotes now looked to Russia to liberate them from the Turkish yoke. From the time of Peter the Great the bonds between Greeks and Russians had been growing stronger. In the middle of the xvii century, Russian propaganda increased very much among the Orthodox of the Balkans. Under Catherine II, the Russians easily succeeded, with the help of Greek agents, in stirring up Greek notables and clergy in the Morea to rebel against the Turks. Among these the most distinguished was the influential and wealthy Panayotis Mpenakis of Kalamata. This secret propaganda did not escape the Turks. By 1767—1768 the Christians were preparing for rebellion. On Oct. 15, 1768, Turkey declared war on Russia. Russian fleets, whose equipment left much to be desired, appeared in the Mediterranean. On Feb. 17, 1776, Theodoros Orloff landed at Vitylo and received a warm welcome from the Maimotes; but, as the ships had neither sufficient men, guns or munitions, the first enthusiasm of the Greeks soon died down. On July 24, 1774, a treaty of peace was concluded at Kučak Kainardji between Russia and Turkey. Full religious liberty and other concessions were granted to the Christian subjects of the Turks. About three months later, the Porte granted a general amnesty to the Christians of the Morea and resolved to clear the land of Albanian bandits. After 1770 the Porte had confiscated a number of Christian estates in the Morea and granted them to mosques and imaretés. By the treaties of Kučak Kainardji and Kaimali Kanak (10th March 1779), the Turks now promised to return these or to compensate their owners, but the promises were not kept. Nevertheless, the Moreote

With twenty Plates and two Maps. 8vo, cloth, pp. vi, 309. Price 20s.

THE BUDDHA'S GOLDEN PATH
A manual of practical Buddhism, based on the teachings and practices of
the Zen Sect, but interpreted and adapted to meet modern conditions,

BY
DWIGHT GODDARD.
With three plates and a frontispiece. 12mo, cloth, pp. x, 214. Price 4s.

LATEST CATALOGUE ISSUED. BIBLIOTHECA ORIENTALIS XXXIII
Catalogue of New and Second-hand books on the Languages, Literature,
People, History, and Geography of the Far East. (Gratis on application).

LUZAC & Co. 46 GREAT RUSSELL STREET, LONDON, W.C. 1.
(OPPOSITE THE BRITISH MUSEUM)
Additions and Corrections

P. 432b, l. 11 at infra, add: According to Ibn al-Athir (ed. Tornberg, i. 314, 375, cf. Yatut, iv. 294) Kawadh destituted al-Mundhar b. Ms al-Sama because of his refusal to accept Mardakism and appointed in his place the Kindite al-Harit b. Amr, who had embraced the new faith. Whatever may be the truth, the relations between the king of Persia and the Arabs have been influenced by Mardakism.

P. 496b, line 11, 12 at infra, read: Timur who stayed in Balat (Milet) on his return from Smyrna in the winter after the battle of Angora (1402) (Cuneo, p. 76; ed. Bein, various readings).

P. 497a, srt. Mila, Bibliography; A complete discussion of the ruins of Pelit by R. M. Riechold will appear in An archaeological Journey in Southwestern Anatolia (discussion of the inscriptions by F. Wittke).

P. 505b, l. 19: instead of Nukai, read Nukai.

Christians benefited considerably by the treaties between Russia and Turkey; this was not however the case with the treaties later concluded (June 10, 1783 and Dec. 29, 1791). The Christians of the Morea to trade under the Russian flag contributed to their economic expansion in the period 1775–1821. Intellectual relations between western Europe and the Greeks of the Morea became closer and closer after 1790. A new generation grew up among the Greeks of the Morea and other provinces. Since the peace of Paris of 1815, the Moreots and other Greeks had become convinced that only their own national salvation could preserve them of the Turkish yoke. Careful preparations were in anticipation of the right moment. In the spring of 1821 open rebellion broke out among the Greeks of the Morea, when the Turkish governor Kurthas Pasha was besieging the rebel Ali Pasha at Yanina. Soon after the beginning of the rising, in which a prominent part was played by Theodoros Kolokotronis of a famous Kefal family, the Moreots were masters of the lowlands and even occupied several strongholds. The 1st of October, the Porte commissioned Ibrahim Pasha, the adopted son of Mehmed Ali of Egypt, to put down the Greek rising. Ibrahim Pasha landed his forces in Messenia. He was able to restore Turkish rule over most of the Morea, but he failed to put down the Greek rebellion. In the meanwhile, philhellenism had made progress in Europe and America, and it thus came about that the cabinets of Europe began to take an interest in the question of Greek freedom. On July 6, 1827, England, France and Russia concluded a treaty in London, by which the Morea and other parts of the Greek mainland were to form an independent principality but to pay tribute to the Porte. The Turks insisted on their point of view and declined the intercession of the great powers as regards the rebel Greeks. On Oct. 20, 1827, the combined fleets of the above mentioned powers destroyed the Turk-Egyptian fleet at Navarino. On Jan. 13, 1828, Johannes Kapodistrias came to Nauplion, having been elected President of the Greek Free State by the National Assembly at Troezen. On Aug. 6, 1828, England concluded a treaty with Mehmed Ali of Egypt for the evacuation of the Morea by the Egyptian troops. French troops, led by General N. J. Maucon, soon afterwards landed in Messenia by order of Charles X to drive the Turk-Egyptian troops out of the Morea. In the autumn of 1828 Ibrahim Pasha withdrew to Egypt after turning the Morea into a heap of ruins during his 3½ years in the Peninsula. After long diplomatic negotiations, much quarrelling among the great powers and disagreement between the Moreots and the other Greeks, Prince Otto, the second son of the philellene Ludwig of Bavaria, landed at Nauplion on Feb. 6, 1833 as the first king of Greece. Henceforth the Morea formed a part of the kingdom of Greece. During the rising of 1821–1827 and later, many Moreote Muslims adopted Christianity. To this day, many buildings, inscriptions and especially place-names recall the days when the Morea was under the Crescent.

**MORISCOS, (MORESCOS),** the name given in Spain to the Muslims who remained in the country after the capture of Granada by the Catholic Kings, Ferdinand and Isabella, on Jan. 2, 1492 and the dethronement of the last ruler of the Nasrid dynasty.

It is mainly from Spanish sources that we learn the history of the Morescos down to their final expulsion from Spain. Arabic texts relating to them are very rare; the only record at all detailed is that of the Maghribi al-Majzari, a contemporary of the exodus of the Morescos, in his *Nafa al-Thik*. In proportion as the Spanish *reconquest* proceeded, groups of Muslims gradually increasing in

**THE ENCYCLOPEDIA OF ISLAM, III.**
number found themselves under Christian rule. These Muslims for the most part remained attached to their religion and the largest bodies of them were in Aragon and the district of Valencia; they kept up relations with their co-religionists of the kingdom of Granada. But the latter were suddenly placed in the same position with the fall of the capital of the Naṣir kingdom. The treaty for the capitulation of Granada contained, it is true, a large number of clauses safeguarding the liberty and property of Muslims, granting freedom for their beliefs and for the practice of the Muslim religion. But these clauses were not long respected and very soon attempts were made to convert the people of Granada under the stimulus of the Cardinal de Cisneros and the Archbishop Henando of Talavera. Cisneros in particular began his work in 1499; he tried persuasion at first, then he tried to withdraw from circulation by burning them as many Arabic books as possible dealing with different branches of Muslim learning. His efforts did produce a few voluntary converts, but also caused a rising which began in Granada itself in the Albacin quarter (al-Bayḍalā) and soon spread throughout the country of Alpujarras (al-Bayḍār, q.v.) between the southern slopes of the Sierra Nevada and the Mediterranean, and spread to the towns of Almería, Baza and Guadix and the Serranía of Ronda. The result was in 1501 the promulgation of a law which gave Muslims a choice between leaving Spain and adopting Christianity. It does not seem however to have been strictly applied and the Moors of the kingdom of Granada, retiring to the mountains, enjoyed practical independence for over a half a century.

But this first edict brought about the conversion of the majority of the Muslims of Castile. As to the Moors of Aragon, in spite of a few restrictions on their status they were not much disturbed and orders were given to this effect to the Inquisition. Nevertheless in the early years of the xvth century we find the Muslims of Albarracín, Teruel and Manises being converted en masse. The reaction became stronger, encouraged by Joan the Foolish, then by Charles I. In 1526 the Moors of Valencia received their order of expulsion. The situation remained somewhat confused down to 1556, a date at which a series of vexatious measures were decided upon in Madrid and began to be applied against the Moors who still remained in Spain: the use of the Arabic language was forbidden then; it was in any case losing ground daily, even among the communities which remained Muslim; they were also ordered to abandon their worship, their costume and to modify their manner of life. This time the Moors of Granada and Alpujarras did not hesitate to rebel openly. The rising once again started in the Albacín of Granada in 1568 and spread to the mountains; it was at first led by an individual named Ibn Umniya, the Abenhumayya of the Spanish chroniclers and afterwards by ‘Abd Allāh b. ‘Abdū (Ahenaboo). It took costly expeditions to put down this movement, and the war lasted for several years, conducted successively by the Marquis of Modéjar and Don John of Austria.

The final decree of expulsion was not issued by Philip II although he had the intention of doing so in 1582. It was Philip III who signed it in 1609 and in this and the following years, a large number of Moors—estimated at half a million—had to cross the sea without hope of returning. Islam was definitely uprooted from Iberian soil.

According to the Arab authors, the great exodus at the beginning of the xvth century was a most cruel hardship for the Moors. A large number died on their enforced journey. Many went to France, from which they tried to reach Muslim lands. A few colonies of Muslims from Spain settled in Egypt and Constantinople. But the majority went direct from Spanish ports to North Africa, their nearest refuge, where they were known as Andalusis and where they were not always welcomed, at least in Morocco, with open arms. The principal settlements were those at Sa‘id and Rabāb on the one hand and Tetwān on the other, where their descendants still form the most prosperous and most industrious section of the population. The Andalus of the seaports of the Atlantic coast of Morocco soon began to devote themselves to piracy: the celebrated Moroccan corsairs were almost all Moors, who had retained the use of the Spanish language. On the other hand, the Moroccan Sultan organized corps of picked troops from the Andalus and they played a prominent part under the Sa‘idans, especially in the conquest of the South of Morocco, was also very keen on a large colony of Moors of Fās. In Algeria, a number settled in the towns of Tlemcenn, Oran and Algiers. At Tunis they were well received by the Dey Uthman: they settled together in two quarters which took their name (cf. Tunes, iv., p. 886). Those who had not been town-dwellers settled in little villages which soon became prosperous and still have a characteristic Spanish look. Such are the villages of Solmán, Grumballa, Djeideida, Zaghwān, Tebura, Testur and Gal‘et el-Andalis (Kal‘at al-Andalus).

(E. LÉVI-PROVENÇAL)
MOROCCO, a country and Muslim state of northern Africa. The name (Spanish Marruecos, French Maroc) is a corruption of Marrakush, the largest town in southern Morocco [see the article MARRAKUSH].

1. Geography.

Morocco occupies the western part of Barbary; it corresponds to the Maghrib al-Askā of the Arab geographers [see the article MAGHRIB]. Lying between 5° and 15° W. longitude (Greenwich) on the one hand and between 26° and 36° N. on the other, it covers approximately an area of between 500,000 and 550,000 square kilometres. On the North it is bounded by the Mediterranean, on the West by the Atlantic and on the South by the Sahara. On the eastern side it stretches to the Tell and to the plateau of Oran. The boundary which separates it from Algeria is quite conventional and fixed definitely only on the northern side, for a length of 80 miles, from the mouth of the Wāḍī Kis to Thenyet al-Sāsi.

Although Morocco forms one with the northern part of Africa it is chiefly oriented to the West. It is, one might say, the Atlantic slope of Barbary; it is nevertheless an oriental country. The coast does not lend itself to a maritime population; the Mediterranean coast is steep and inhospitable; the Atlantic coastline straight and lacking in natural shelters. The estuaries of the rivers are of very little value because of the sandbars which obstruct their entrances. The geological structure is somewhat complicated. Below the folds of the primary age, of which there still exists much eroded evidence covered by secondary deposits, have risen strata contemporary with the Alps. The actual relief which has resulted from these movements of the earth's surface and from these successive modifications consists of folded mountain chains, plateaux and plains. The chains are two in number, the Rif and the Atlas. The Rif is the continuation from the other side of the Strait of Gibraltar of the Betican Cordillera [cf. Rif]. The Atlas chain forms the backbone of Morocco. It breaks into the High Atlas oriented West-North-East, linked by the volcanic massif of Sirwā to the Anti-Atlas which lies more to the South, and also to the Middle Atlas running in a diagonal line from the South-West to the North-East, as far as the country of the outer foothills of the Rif, from which it is separated by the corridor of Tāfā [see the article ATLAS]. From these different chains stretch plateaux. Those of the east connect the High Atlas to the Saharan Algeria; those of the West gradually descend towards the Atlantic. Amongst the latter some are only the vestiges of the primary layer raised and eroded; others are composed of sedimentary deposits of varying origins.

In consequence of the oblique orientation of the Middle Atlas, which gradually draws away from the coast, the plains, which occupy in Morocco a more important place than in the rest of Barbary, lie mainly on the Atlantic side. They are composed of two series, the one stretching diagonally from the mouth of the Wāḍī Tensift to that of the Muluya (the sub-Atlantic plains, the plain of Sebī, the corridor of Tāzā, the plain of the seaport Muluya). The other stretches to the foot of the High Atlas (Hawz of Marrakush) and disappears in the heart of the middle Atlas.

Climate. The climate of Morocco has been defined as "an Atlantic variety of the Mediterranean climate" (Gentil). This however must not be taken to apply to the whole of the country; the different regions differ as much in regard to temperature as in the distribution of rain. On the Atlantic coast the climate is relatively mild in winter and cool in summer; only small differences are recorded between the coldest month and the warmest (57° at Mogador and 10° at Rabat). In the interior on the other hand, the seasonal variations and even the daily ones increase the farther one goes inland. They become excessive in character in eastern Morocco where the climate is distinctly continental. The rainfall is equally lacking in uniformity. Brought by the West and S.-W. winds, the rains are abundant in the autumn, the winter and the beginning of spring but they are very rare during the summer. The Atlantic coast has everywhere a copious rainfall although the quantity which falls decreases as one goes from North to South (Tangier: 32 inches, Casablanca: 16 inches). It also enjoys the benefit of an atmosphere which is saturated with moisture even in summer. The interior is not so well served. The rains diminish in quantity from West to East. The mountain massifs are always permanent. They condense the moisture in the form of rain and even snow which, although it is by no means perpetual, nevertheless covers the high summits of the Atlas mountains until the beginning of the summer. Eastern Morocco on the other hand, isolated by the barrier of the Middle Atlas, is not subject to oceanic influences and only receives, except in the immediate neighbourhood of the Mediterranean, rare and irregular downfalls of rain.

The flora reveals in striking fashion these variations of climate. Forests of evergreen oak, of oak and of cedar clothe the peaks of the High and the Middle Atlas and of the Rif. The cork tree is found in extensive forests in the massifs of the Za'īr and Zayān and as far as the region of the Atlantic (forest of the Ma'mūra). The thuya and the arganier (a tree peculiar to the S.-W. of Morocco) are already more disseminated. Poplars, willows, elms and tamarisks form a fringe of verdure along the wāḍi. The olive tree is met almost everywhere in its wild state. But, as the rain-fall decreases, the forest gives place to scrub where the jujube tree and the mastic abound, then to prairie and steppes. The prairie, which hardly goes beyond the limits of the maritime plains, is the home of plants which are used for fodder and of bulbous plants. The steppe is the home of shrubs and bushes (aretmusia, drun, alfa) which are adapted to a dry soil and to extreme variations in temperature. The steppes cover a part of the interior plains of Western Morocco and practically the whole of Eastern Morocco, where they extend to the neighbourhood of the Mediterranean. As regards the desert, it is devoid of vegetation in the hammaḍa [see AHARA], although the oases form spots of verdure in the midst of the general desolation.

Hydrography. The structure of the country and the relative abundance of rainfall affect the hydrography. Morocco is much richer in running streams and in subterranean waters than any other country in Northern Africa. Wāḍis (wells) are here more numerous; their courses are longer and their volume larger. A number of them even deserve the name of rivers. The waters flow in three different
directions: towards the Atlantic, towards the Mediterranean and towards the basin of the Sahara. The Atlantic rivers are in all respects the most important. They can be divided into three groups: those of the North (Lükko and Sebû), those of the centre (Bû Raggag and Umm al-Rabi'î), and those of the South (Tensift and Sûs). The Lükko drains the districts of the Gharb; the Sebû, those of the Middle Atlas, of the Zährûn, and the southern slope of the Rif. On emerging from the mountains it takes numerous turns and windings across the alluvial plain and reaches the ocean after a course of 500 miles through subject to considerable variation in volume, according to the season, it never dries up completely. It is even navigable in its lower course. The Bû Raggag and the Umm al-Rabi'î run for a part of their course through the Central Plateau, the Moroccan "Meseta". The irregularity of their courses makes them useless for navigation. The Tensift, to the North of the High Atlas, the Wâdi Sûs to the South, which are much less in volume approach more nearly to the classic type of wadi of Northern Africa. The watercourses of the Sahara (Wâd Gîr, Wâd Zîc, Wâd Dar'â) diminish in volume as they go farther away from the mountains and end by disappearing in the sand. The Dar'â alone reaches the Atlantic, but it only flows intermittently in its lower course [see the article Dar'â]. As for the Mediterranean rivers, they are only torrents with violent and rapid floods. The Mulya alone forms an exception. It collects water from the slopes of the Middle Atlas but only reaches the sea in much diminished volume on account of the loss it suffers in crossing the steppes.

Although the common characteristics of all the countries of Barbary are found in Morocco, the greater or less differences in relief, the differences in climate, the peculiarities of vegetation bring in their train a diversity more marked than in Algeria or Tunisia. The combination of these different elements determines the existence of regions which differ the one from the other in their configuration, their resources, the density and manner of existence of their population. We may distinguish six such regions: Northern Morocco, the basin of the Sebû, Central Morocco, the country of the Atlas, Eastern Morocco, and Moroccan Sahara.

Northern Morocco. Northern Morocco comprises a mountainous zone (the mountains of the Rif properly so-called which are to the North-West continued in the "domes" of the Djeballa as far as the Strait of Gibraltar) and regions less rugged in character which to the South-East and the West form the transition into the adjoining countries. The mountains, split into deep ravines by the courses of the wâdins, for the most part only leave between their last escarpment and the sea-shore a narrow strip, or a few bays enclosed between the rocky promontories. A few cuttings which run across the ranges afford communication between the two watersheds. The Rif, therefore, must seem to be a world very little accessible to influences from without. Arab influence has scarcely grazed it. The population has always vigorously opposed the political measures of the sultâns as well as the attempts of Europeans to settle themselves there. Condemned into a limited territory, since the highest parts of the mountains are useless, the Rifians find their chief means of subsistence in the cultivation of vegetables and fruits. A number of them gain from temporary emigration an addition to their resources. They are not nomadic but inhabit villages perched on the slopes. Towns are represented only by Shafâwân and Wazzin, religious and commercial centres, situated the one on the northern side and the other on the southern side of the Djeballa. Towards the South-East, plains interspersed with mountain masses extend as far as the Muluya. The lack of rain gives to these plains (Salwân, Gâret) the aspect of steppes more fitted to a pastoral life than to agriculture and a settled life. Towards the West the lowlying coastland, still a very narrow border at the strait of Gibraltar, increases considerably from the North to the South between the Atlantic coast and the last slopes of the Djeballa. This district commonly called the Gharb is a corridor. It still keeps in this respect its historical significance, but its economic value is diminished by the stagnation of its waters in the hollows in the flat bottoms of the valleys, and by the insecurity resulting from the proximity of the warlike tribes of the high mountains. A few townships have however succeeded in establishing themselves, either at the crossing of roads such as al-Kaṣr al-Kabîr [q.v.] or in proximity to the coast like Ceuta, Tangier and Larache [see the articles Tânîn, Ceuta, Tangier, al-Âlî]. The Rif flows intermittently in its lower course [see the article Dar'â]. As for the Southern Morocco, there (Zerbûn, Zâlîgh, mountains of Gerwân) offer no insuperable obstacles to communication. The high plains of Sâsîs and Meknes are contrasted with the lower plains of the Shråda and the alluvial plains of the lower course of the Sebû. The influence of the Atlantic is felt far into the interior and combines with the numerous streams that flow into the Sebû and its tributaries and the subterranean waters to promote the development of all forms of vegetation. Forests cover the higher slopes of the mountains; fruit-trees flourish on the sunny slopes and cereals on the high plains; the merjû, temporary marshes produced by the Sebû, in its lower course are used for grazing until they are sufficiently dry to be of use to agriculture. This combination of circumstances, so auspicious for human habitation, has made the valley of the Sebû a centre of intensive settlement. The most diverse ethnic elements have settled together and mixed there. All types of habitation are found there, as well as all degrees of attachment to the soil from a nomadic to settled town life. Human activities are displayed in the most varied forms (grazing, agriculture, arboriculture, commerce, industry). The country villages, douars of "nuwâlas" in the plains, villages of houses of clay in the mountains, are numerous, the towns are flourishing. Mawâli Idrîs is the sacred city of Morocco, Sebû on the borders of the plain of Sâsîs and the high limestone plateau lives by trading with the people of the mountains and the industry of its weavers and makers of slippers. Fâs and Meknes are among the great cities of Morocco.

The first of these towns has remained to this day the political, religious, intellectual and economic centre of Morocco. It has resisted all the usual
causes of decline. From all time the ownership of the high plains of the Sebu has been bitterly contested. Their possession has been the condition for the establishment and survival of the dynasties which have succeeded one another in Morocco. Their political significance and role in history correspond closely to their geographical position and economic value.

Central Morocco. Between the valley of the Sebu, the ranges of the Atlas and the Atlantic, covering about a quarter of habitable Morocco, lies the region called by the geologists the Moroccan Meseta. It includes districts of very different character, the only feature uniting them being the possession of a common substratum, the Hercynian pakenplains covered almost everywhere by sedimentary horizontal formations. Differences of structure and of climate distinguish clearly the various parts: the Atlantic plain, the plateaux of the centre, and the interior plain of the Hauz. The maritime plain lies along the Ocean from Rabat to Mogador. Very narrow at its northern and southern ends, it broadens near the centre (Dukkala, Shitwiya) to a width of 50 miles. To the rains and the constant moisture from the vicinity of the Atlantic, the abundance of running streams and subterranean waters, the natural fertility of the soil further adds to the conditions for prosperity. The irri or black lands which run in an unbroken line behind the coast from the Bu Ragrag to Tensift are admirably suited for the cultivation of cereals. The rural population, almost everywhere settled, is therefore considerable. The land of the Dukkala has 40 people to the square kilometer, a very much greater than that of the other districts of Morocco. The towns of the coast, Salé, Rabat, Casablanca, Mazagan, Azemmour, Safi, Mogador [q. v.], benefit by the richness of the hinterland. The exportation of agricultural produce has at all times been a branch of commerce, and has been much developed since the settlement of Europeans there. While facility for communications and the continual relations with the valley of the Sebu opened the plain to Arab influences, the ports of the coast maintained contact with abroad and permitted the infiltration of European influences.

The interior is much more broken. The ground rises gradually to a height of 2,000-2,500 feet. The predominant formation is plateaux terminating on the north in the very old masses of the Zafr and Zayân, which are real mountains in character, in the south in the equally old but less elevated massif of the Râhîmna. These plateaux deeply cut into by the course of the Umm Rabî overlook on the west side the low-lying coastslands from the top of cliffs, and slope gently on the S. E. to the plain of Tâdla. This, a depression, over 120 miles in length, running to the north into the heart of the Middle Atlas where it terminates in a cul de sac, while it broadens greatly in its southern part. A low pass enables communication to be made between the Tâdla and the Hauz of Marrakush, a basin shut in by the High Atlas in the south, the Middle Atlas in the east, the Ijilfi in the north and the hills of the Shiyâdima in the west. The economic value of this inner region is very unequal. On the mountains of the north the rains and streams support forests and the natives devote themselves to cattle-rearing. The plateaux of the centre covered with a surface of limestone have great stretches of bare rock and cultivation is barely possible. The Tâdla is no better favoured except in the zone adjoining the Atlas, watered by torrents descending from the mountains. The plain of the Hauz would also suffer disastrously from drought, if human industry had not averted this danger. An ingenious system of irrigation has transformed the country round Marrakush into a vast palmyrove and it is filled to a particularly dense population (100 to the square kilometre). Comparatively large towns (Amâsinir, Demnât, Tallâlât) and especially Marrakush [q. v.] have been enabled to rise and prosper. Between this region, already half Saharan, and the high lying plains of the Sebu, the plateaux of the centre and the mountains of the north which come down to within a short distance of the shore, interpose a barrier which the attitude of its inhabitants makes still more difficult to cross. The Zafrân, the Zafr, the Zemmât, over whom the authority of the Makhzen has never been very securely exercised, have more than once cut direct communication between Fès and Marrakush. These two cities have been at different periods the capitals of distinct and even hostile kingdoms.

The region of the Atlas. In spite of the marked differences between the different elements of the Atlas, the whole region nevertheless has general characteristics of its own. Between Atlantic Morocco on the one hand and Saharan Morocco on the other, the Atlas lies as an almost continuous barrier. Only the few transverse fractures in the Middle Atlas permit passage between the basins of the Sebu and the Saharan oases, while in the High Atlas, valleys running right into the heart of the massif give access to passes opening on the valleys of Sûs and the Wadi Dâra. Moister and colder, the Middle Atlas is covered with forests which are denser and more extensive than those of the High Atlas. Both however are great water-heds. From the Middle Atlas come the great rivers of the Atlantic slope (Sebul, Gign, Umm Rabî, Wûdi T'Addi), from the High Atlas the Tassât and the Tensît. The lands of the Atlas are nevertheless poor. The high mountains offer little to support mankind. Human activities are found mainly in the zones of contact between the mountains and the plains (dir) of the Middle Atlas and in some specially favoured valley of the High Atlas. Except in the Middle Atlas, where the nomadic mode of life results in the exodus in the bad season of the inhabitants who lead a pastoral life, and on the plateaux of the High Atlas on the Atlantic side (Hîs, Shiyâdima) the inhabitants of which are mainly engaged in cattle-rearing, the natives are settled. They live in villages perched on the slopes and terraces between wâïds or scattered along the valleys. There is nothing approaching a town in size. These regions, defended by the nature of the country, have almost completely escaped outside influence, they are still almost exclusively the domain of Berber tribes (Berbîrber in the Middle Atlas and Shîtûî in the High Atlas). The customs and institutions peculiar to this people [cf. Berbîs] have survived to a greater extent here than in any other region of North Africa. In particular their political organization is still most rudimentary : municipal republics administered by a âdâlmâ in the Middle Atlas, feudal lordships ruled in patriarchal and despotic fashion by a few powerful families in the High Atlas. The people of these regions have also always opposed vigorously the
central power; the authority of the Maakhir over the Berbers of the High Atlas has never been exerted except through the local chiefs. As to the tribes of the Middle Atlas they have retained to the present day almost complete independence. Even the most vigorous sultans have never succeeded in forcing them into obedience for any length of time.

Eastern Morocco. Eastern Morocco may be described as the continuation of the Central Maghribi of which it has the distinctive characteristics. In it, as in Orania, we have a tell zone and a zone rising by successive stages up to 6,000 feet. The upper valley of the Muluya separates them from the Middle Atlas. The monotony of these vast spaces is only broken by the outcrops of girt, flat beds of rocks cut up by erosion and by the depressions of the shuwall [q.v.]. Beaten by the winds, exposed to the rigours of an extreme climate, these lands are only fit for the pastoral life led by the nomads who raise sheep. The valley of the Muluya is no better favoured, except in the vicinity of the Atlas, where villages surrounded by vineyards with a settled population are found along the tributaries of the river. As to the Tell, hills of no very great height (the most important being that of the Beni Snassen which does not exceed 5,000 feet) divide it up into compartments occupied by plains (plains of the Aïwald Mansur, on the coast, of the Trifa, of the Angad which in the south reaches the cliffs in which the high plateaux end). The dryness of the climate frequently gives these plains a steppe-like character; only the western part of the plain of the Angad with a fertile and well watered soil lends itself to cereal cultivation. This is the key to procure grain. But this region owes its importance less to its natural resources than to its situation on the natural route between Atlantic Morocco and the rest of Barbary. Udjda [q.v.] which commands the pass, has thus been enabled to escape various causes of decay that have threatened it. A border district, eastern Morocco has always been a disputed region, a march for which the lords of Tlemcen and Fas have contended. The authority of the latter was never solidly enough established here to impose itself on the settled inhabitants of the mountains and on the nomads of the plateaux and uplands. Down to the French occupation the country was left to anarchy and disorder.

The Moroccan Sahara. The Moroccan Sahara is the N.W. corner of the Sahara. There we find the general characteristics of this desert region [cf. Saharan]]. Only the parts adjoining the Atlantic and the threshold of the mountains offer favourable conditions for man. In the plain of Suss [q.v.] shut in between the Atlas and the Anti-Atlas, the rivers and the irrigation canals enable shrubs to grow. The Darafa, Ziz and Gibr are in their upper courses fringed by a thin border of cultivated land, pasturage, vineyards, and in their middle course assure the growth of palmgroves of which the best known, if not the most prosperous, is that of Tafiltalt [q.v.]; only relative it is true — of these oases is in contrast with the desolation of the rocky plateaux (hammadas) which form the greater part of the Moroccan Sahara.

The natural conditions determine the mode of life of the inhabitants. Some lead a nomadic life and drive their flocks up and down the plateaux; others are permanently settled on the Suss, in the high valleys and in the oases. Suss contains numerous villages and even towns (Agadir, Tiznit, Toudaoudant); the oases have a settled population in the ksar. Those of Taflalt, Tamgrüt, Bu Dnib and Figgarg carry on a certain amount of commerce between Atlantic Morocco and the Sahara. But this very circumstance has prevented them escaping as completely as the lands of the Atlas from the political and intellectual influence of Western Morocco, especially Tafiltalt where considerable groups of Arab tribe have been long established in the midst of Berber populations. But, although the present dynasty actually came from Tafiltalt, the people of this region have frequently escaped Shanfan authority.

In the last years of the x16th century, methodically pursued since the French occupation, the scientific exploration of Morocco is not yet completed. From the results so far attained one thing is clear: the lack of uniformity in the country. Thus its geography may explain to some extent the historical development of the country.

II. History.

Morocco before Islam. Morocco, like the other parts of North Africa, has probably been inhabited from a very remote period. We know, however, nothing definite about its earliest inhabitants. The traces which they have left, weapons and tools of chipped flint, pottery, rock-paintings, some of which represent animals of the quaternary period, now extinct, megalithic monuments identical with those found all round the Mediterranean basin give us no information in this respect. At most, we may suppose that the primitive population consisted of emigrants from southern Europe, the Sahara and perhaps from Egypt. The fusion of these diverse elements gave birth to a race, the members of which, frequently different in type and physical features, were united by a community of language. The ancient writers called them Libyans and Moors. They were the ancestors of the present Berbers [q.v.].

The first historical fact known, and that only imperfectly, is the appearance in the 8th century B.C. of the Phoenicians on the Moroccan coast. The sale of Tyre and Sidon built factories there, where they exchanged goods of eastern origin for local products (cattle, wool, hides) and slaves. But Phoenician influence was exercised mainly through the intermediary of Carthage when it in turn had become the metropolis of a great maritime empire. The Carthaginians rebuilt the ruined factories and added new ones. In the middle of the 5th century, Hanno in the course of his celebrated "periplus" established on the Atlantic coast seven colonies of which one was at the mouth of the Sebu. Rusaddir (Melilla), Septem (Ceuta), Tingis (Tangier), Lixus (Larache), Sala (Sale) were the principal Carthaginian establishments, of which does not seem, however, that Hanno had sought to extend his power into the interior. She was content no doubt to conclude treaties with the native chiefs and to recruit mercenaries from the country. Morocco remained independent, but the tribes which inhabited it were not organised into states, except perhaps in the east, where ancient writers mention in the period of the Punic Wars the existence of a kingdom of Mauretania or Marusa, extending along both banks of the Muluya.

The destruction of the Carthaginian empire hardly altered this state of affairs. For two centuries Rome administered only the "Province of Africa" directly, and the other territories of Barbary in the hands of native chieftains under a more or less severe protectorate. Northern Morocco shared the fate of Mauretania down to the annexation of this kingdom in 42 A.D. The region to the east of the Muluya formed part of Caesarian Mauretania. The lands stretching from the Muluya to the ocean formed Mauretania Tingitana, an imperial province governed by a procurator. When the empire was reorganised by Diocletian, it was attached to Spain.

Roman Morocco never covered more than a small portion of the modern Morocco. On the Atlantic coast, it barely extended beyond the mouth of the Bô Rârag, and in the interior to the massif of the Zarhân. The plateaux and sub-Atlantic plains and the mountains of the Rif, Middle and High Atlas escaped the authority of Rome. It was the same with the Sahara. The expedition of Suetonius Paulinus, who in 43 A.D. advanced as far as the wâdi Gîr, remained an isolated incident.

To defend herself against the rebellions of her own subjects and to protect the country from Berber inroads, Rome had to keep in Tingitana an army of ten thousand men, to build strategic roads and to establish fortified posts on the sides of the triangle: Sala, Zarhân, Tingis. With the exception of Volubilis, the importance of which has been revealed by its ruins, methodically excavated in recent years, and which was undoubtedly a centre of influence of Roman culture on the people of the interior as well as a military base, the towns were all on the coast. They were Lixus and Tingis raised to the rank of "coloniae", and Ceuta. They owed their prosperity mainly to trade with Spain to which were exported oil and wheat, the two main products of the country. On the whole, however, Rome's influence on Morocco was superficial and has left little trace.

Without any really firm hold on the country, weakened by native risings and by the quarrels between the dominion and the orthodox, Roman rule was to collapse suddenly at the beginning of the 5th century. Germanic invaders, the Vandals, came from Spain and in 429 A.D. conquered without opposition Tingitana which they gave back a few years later to the Romans. Soon afterwards the western empire disappeared and the natives seized the opportunity to become independent. The Byzantines, who in the sixth century destroyed the Vandal kingdom, were content to re-occupy the two strongholds of Ceuta and Tangier. The rest of Morocco was in the hands of the Berbers. The latter were divided into a large number of tribes, of whom the principal were the Gâomâra on the Mediterranean coast, the Barghuma, and the Qadis [q.v.] on the Atlantic coast between the strait of Gibraltar and the mouth of the Sebu, the Minkâa in the central district, the Bâlûna, on the western slope of the High Atlas and on the coast from the Sebu to the Sûs; the Hikûra between the Sûs and the Dârâ; the Sanû and Iâmûna on the left bank of the Dârâ. These Berbers were all of Sanhâja stock; some professed Chri-tianity or Judaism but the majority still followed the old nature worship. The Arab conquest brought them a new religion: Islam.

The Introduction of Islam. The Arabs appeared in the extreme Maghrib at the end of the 7th century A.D. Tradition relates that Sîdî 'Oûkâ, the founder of Kairawan, in 684—685 undertook an expedition which carried him as far as the shores of the Atlantic Ocean. This raid, however, if it ever took place, was too transitory to have any permanent results. But at the beginning of the following century, Mûsâ b. Nu'sîr [q.v.] who had just completed the conquest of Ifrikiya, took Tangier, installed a governor there and set himself to conquer and convert the native. He succeeded without much trouble. Attracted by the hopes of gain, the Berbers adopted Islam and enrolled themselves in the armies which were invading Spain. They were not long, however, in
rising against the Arabs. Dissatisfied with the share allotted them of lands taken from the Christians in the Peninsula, and exasperated by the exactions of the governors of Tangier, they took up arms in 740 on the call of the porter Matsura [q.v.]. The rebellion was both religious and political in character. With the same readiness with which they had adopted Islam, the Berbers adopted Kharidist doctrines from the east, teachings which also appealed to their egalitarian tendencies and to their spirit of independence. The army sent from Syria to establish order was destroyed on the banks of the Sebût (742) and the extreme Maghrib was lost at one stroke to the caliph and to orthodoxy. Berber principalities were organised in the Rif [seemiddâma]; in the west, the Barghawata [q.v.] recognised the authority of a certain Sahh, founder of a rival religion to Islam, who had composed a Qur'ân, that is a sacred book, in Berber. None of these little states was strong enough to impose its authority on the others and to collect all the Berber tribes under one rule.

It was for a time as if the Idrisid dynasty [q.v.] were to play this part. Idris I and his successor Idris II, actually enforced their authority over the greater part of the tribes of northern Morocco and successful expeditions extended their kingdom from the shores of the Mediterranean to the High Atlas and from the Atlantic to beyond Tlemcen. Ardent champions of Islam, they imposed their religion on those peoples who did not yet practise it or who had abandoned it after once adopting it. The conversion of the extreme Maghrib to Islam is their work much more than that of the Arab conquerors. Zealous defenders of orthodoxy, in spite of their 'Aliid origin, they fought the Kharidjis with the same vigour but did not, however, succeed in completely exterminating the heresy. It is not without good reason that legend has transformed these rude warriors into saints, the one Idris I, patron saint of Morocco, the other Idris II, the patron saint of the city of Fas [q.v.] which he had founded. The building of this city had enduring results. It gave northern Morocco a religious, political and economic centre which it had lacked since the disappearance of Roman rule. Favoured by its position, Fas prospered rapidly. It survived all causes of decline, even the collapse of the Idrisid power.

The Idrisids indeed rapidly declined. The various groups which had recognised the authority of the founders of the dynasty were not long in casting it off and fighting with one another. These rivalries were taken advantage of by the Fatimids of Ifriqiya and the Umayyads of Spain, who during the tenth century A.D. disputed the possession of the Miknâsa, the Umayyads in the end remained masters of the country. They were in their turn ousted by the Maghrawa [q.v.], whose chief Ziri b. Attiya, abandoning the cause of the Umayyads, seized Fas where his descendants ruled for three quarters of a century.

The Almoravids and the Almohads. The extreme Maghrib seemed to be condemned to anarchy and to be broken up among small factions when the Almoravid invasion came [cf. ALMORAVIS]. After having first of all subjected all the lands south of the High Atlas, then established themselves solidly on the northern slopes, at the foot of which Yusuf b. Tashfin founded Marrâ-
kush [q.v.]. In 1062, these Saharan hordes turned to the centre, east and north of Morocco, sweeping everything before them: Fas, Tangier, the Rif, Oran and Ténès fell before them. The Berber principalities of the Maghrawa, the Barghawata and Banû Ifrîn disappeared. In less than twenty years, Yusuf b. Tashfin became sole master of the extreme Maghrib as far as Algiers. To these territories, already vast, was soon to be added half of Spain. Summoned by the Muslim emirs who were threatened by the king of Castile, Yusuf b. Tashfin checked the Christian advance at Zallaqa (1086), then possessed the petty Muslim rulers to his own advantage. Morocco was thus extended across the Straits of Gibraltar as far as the Ebro and to the Balearic Islands. The fortunes of the Almoravids were, it is true, as ephemeral as they were brilliant. In contact with Andalusian civilization, the Saharan rapidly became decadent. The rigid orthodoxy, which had been their strength, relaxed; they in their turn were regarded as infidels, "anthropomorphists" (mudâjjissimâ), whom it was lawful and meritorious to slay. The Almoravids were not the only group of Berbers to attempt the construction of orthodoxy that the Maşūmâ and the Himilâta of the High Atlas under the leadership of Ibn Tûmart and 'Abd al-Mu'min entered into the struggle against the Almoravids.

This struggle ended in the displacement of the Almoravids by the Almohads [see ALMOHADES and 'ABD AL-MU'MIN]. In seven years (1139—1146 A.D.) 'Abd al-Mu'min conquered all Morocco; Sidjlâma, Oran, Tlemcen, and Ceuta fell one after the other into his hands. Next came the turn of Salé, Fas, and finally Marrâkush, the gates of which were opened to him by the treachery of the Christian mercenaries. Muslim Spain was also conquered with the exception of the Balearic Islands. Even in Africa, the Hâmâhid kingdom of Bougie was conquered in 545—546 (1151—1152). A few years later (554—555 = 1159—1160) a new expedition led 'Abd al-Mu'min into Ifriqiya and secured him possession of the interior and of the coast, which he took from the Normans of Sicily who had occupied it some time before. Morocco in the strict sense of the word was now merely a province in the vast Berber empire. The unification of these territories under one ruler had important consequences for the Maghrib. It facilitated the diffusion in North Africa of the Hispânico-Moorish civilization, which was to be perpetuated in Morocco after it had disappeared from the Peninsula itself. Further it brought into the extreme Maghrib a new ethnic element: the Arab, 'Abd al-Mu'min, as well as his successors, on several occasions deported Ilîlî tribes from the Central Maghrib and Ifriqiya, where they continually created unrest, to the sub-Atlantic plains where other groups of Arabs joined them of their own free will.

The Almohad empire was too vast, it comprised regions of too different a nature, peoples too foreign to one another to last long united. The Almohad caliphs were powerless to restrain the separatist tendencies which revealed themselves on all sides. In the first half of the xiith century A.D., the Almohad empire broke up. Ifriqiya and the Central Maghrib recovered their independence; local dynasties set up in Tunis, Ifads and Tlem-
sen ('Abd al-Wâïdîs). The extreme Maghrib endured by slipping away from the descendants of 'Abd al-Mu'min who were replaced by the Merînids [q.v.].
The Merinids. Berbers of Zenata stock, driven by the Hilâli Arabs on to the plateau of Oran and into the central valley of the Muluya, the Banû Merin had at first entered the service of the Almohads, then turned against them, when the power of the dynasty began to decline. By repeated razzias they made themselves masters of almost all northern Morocco. After the death of the caliph al-Sâif, who had been able to arrest their progress for a time, their leader Abû Yahyâ (1243–1258) seized Fâs, Meknes, Rabat and Sidjilmisa. The capture of Marrakûsh (1269) by Abû Yusuf, successor of Yahyâ, marked the final triumph of the Merinids. Heirs of the Almohads, the first Merinids endeavoured to reconstitute the empire of their predecessors. In Spain, they enforced their authority on the Muslims of Andalusia. In Africa, they endeavoured to take the central Maghrib from the ‘Abd al-Wâdids. They were successful when Timessen, besieged seven times in sixty years, finally fell into the hands of Sultan Abu ‘l-Hasan (1337 A.D.). Ten years later, the same ruler took Bougie, Constantine and Tunis, but his hold on them was very uncertain. At the end of barely a year, Abu ‘l-Hasan, defeated by the Arabs, found himself forced to abandon Ifrikiya, the Hafsids returned to Tunis and the ‘Abd al-Wâdids to Timessen, while the sultan’s own son Abû ‘Inan rose against him in Morocco. Attaining to power, Abû ‘Inan renewed his father’s efforts. He re-occupied Timessen and Tunis, it is true, but could not retain them (1560 A.D.). The Hafsids and ‘Abd al-Wâdids recovered their kingdoms almost at once.

Separatist tendencies thus triumphed and on this occasion in a most definite fashion. The extreme Maghribi, the history of which had hitherto been so often that of Barbary, began to live its own life. The Merinid kingdom, while its boundaries in the east were still vague and changing, already corresponded roughly to modern Morocco and the Merinids may be regarded as the first strictly Moroccan rulers. Lacking the religious prestige of their predecessors, they endeavoured to secure the moral authority which they lacked by taking as their patron saints the apostles of Islam in the Maghrib. The cult of Mawlû ‘Idris in the xivth and particularly the xvth century assumed an importance which it has retained to the present day. No less characteristic is the development of intellectual life and the arts. The Iñsâno-Moorish civilisation never flourished more brilliantly in Morocco than in the Merinid period. The rulers attracted to their court the poets, men of letters and lawyers of the Iberian Peninsula and of the Maghrib. The university of al-Karaouyin attracted students from all the lands of the western Muslim world. Fâs, which the Merinids, abandoning Marrakush and Rabat, the capitals of their predecessors, chose as their royal residence, was given splendid buildings by them, palaces, mosques and madrasas. It was at the same time a commercial city in which African and Spanish merchants mixed with Christian traders.

This brilliant exterior, however, was quite deceptive. Merinid Morocco was never able to organise itself on a solid basis. The central power was very weak and did not succeed in imposing authority everywhere. The accession of each sultan was an occasion for outbreaks. The pretenders who arose always found supporters readily, either among the Arabs or the Berbers. Powerless in the interior, the sultans were no more fortunate in their enterprises against their neighbours of the Central Maghrib or against the kings of Granada. Their prestige and their authority could not survive these checks. The Merinids in the strict sense disappeared from the scene in 1465, after the assassination of the sultan by an Idrisid shairf. The Banû Wâq, descended from a collateral branch, the chief of whom seized the power in 1470, had themselves a wretched existence. Their kingdom broke up into a large number of independent little groups, principalities at Fâs and Marrakûsh, Berber republics in the Atlas, Marabout fiefs in the Rif, the Gharb and in Dar’s and Sûs. The sultans were quite powerless to prevent this decomposition.

The Christian offensive and the revival of Islam. Of all the causes which combined to enfeeble and discredit these rulers, the principal was undoubtedly their impotence against the offensive of the Christians against the Maghrib. In 1415 the Portugeese took Ceuta, in 1465 al-Kasr al-Sâbah, in 1471 Tangier, documents and collections of operations in the north while by the occupation of Aigâr and Anfa (Casablanca; q.v.) they secured a footing on the Atlantic coast. In the early years of the xvth century, they built fortified posts at Santa Cruz (Aqâdir) and Mazagan (q.v.) and took by force of arms Safi and Azemmûr (q.v.). Holding all places of importance except Larache [see al-Arâbîyyîn] they brought under their protectorate all the lands near the coast (Shawiya, Hîja, Dukkala), forced the natives to pay them tribute and to hand over to them strategic points up to the environs of Marrakûsh. Their expeditions had no other aim than plunder, no other result than to exasperate the inhabitants who saw their towns destroyed, their douars burned, their women and children massacred or sold as slaves.

Menaced in the west by the Portuguese, Morocco was threatened in the east by the Spaniards also. The latter completed the reconquest by the taking of Granada (1492). Thus free to go further afield, and still fired with the religious enthusiasm of Ximenes, they too went over to fight the Muslims on African soil. The occupation of al-Masrât al-Kabîr (1507) and of Oran (1509) and the establishment of a Spanish protectorate over the kingdom of Timessen constituted a serious danger to the Muslims of Morocco.

The threat from the Christians produced an awakening of religious sentiment. This remembrance of Islam in the xivth and xvth centuries, the results of which are still to be felt at the present day, is beyond question the great event in the history of Morocco since the Idrisid period. The way for it had, moreover, been prepared by the Sufi teachings imported from the east and by the development of the brotherhoods in which the adepts of these doctrines were organized. It also found a favourable soil owing to the persistence of maraboutism among the Berbers. The khulûl or the charlatan, who had always been an object of public consideration, became readily identified with the shairf, the preacher of the khulûl. Cooperating with one another, these pious individuals became the religious leaders of the people of Morocco. They strengthened orthodoxy, excited the zeal of the faithful, preached the holy war, and led the defenders of the faith into battle. The ascendancy
which they exercised, the wealth they accumulated in their zāwiya, made them independent of the sultan. They thus became temporal leaders also, all the more readily as the sovereigns could not fulfill their office of defenders of Islam owing to lack of energy and also of means. The activity of these religious leaders was always of a local nature; it was only effectively exercised within a limited area and did not extend over the country generally. The religious solidarity thus established, the kind of common conscience thus created, did not put a check to the political decline until the time when the Sa’di’ān shorfa took direction of the movement and exploited it for their own benefit.

The Sharīfian dynasties. A. The Sa’di’āns [q.v.]. The Sa’di’ān shorfa benefited by the prestige which the religious awakening had restored to the descendents, real or presumed, of Fātimah, the daughter of the Prophet. Coming from Arabia at the end of the xiv century and settling in the valley of the wādi Dā’a, while another branch of the family settled at Tafshelf (Hasan or Aflīd shorfa), they became long in acquiring a considerable influence over the tribes of the south. Thus were naturally led to support the people of the south, who were exposed to the attacks of the Portuguese of Santa Cruz. In 1511, the sharif of Tāmādāret, requested by the Muslims to put himself at their head against the Christians, agreed to do so. Supported by the marabouts who gave him valuable assistance, he began hostilities against the Portuguese. The holy war regularly waged to secure to his sons, Aḥmad al-ʿAraḍ and Muḥammad al-Mahdi, the possession of the whole of southern Morocco up to the ūmm al-Rabī’. The intervention of the Merinid sultan in the quarrels which broke out between the two brothers only resulted in his own downfall being hastened. Muḥammad al-Mahdi took Fās in 1550; the foiling of an attempt to restore the Merinids in 1554, with the help of the Turks of Algiers, secured the definite triumph of the Sa’di’āns.

The coming of the Sa’di’āns meant a regular reconstitution of Morocco. Muḥammad al-Mahdi and his successors imposed their authority on the whole country, protected it against foreign foes and increased the extent of their territory by distant conquests. They finally triumphed over the difficulties created by the Turks of Algiers, and at the battle of al-Kāṣr al-Kābir in 1578 arrested a counter-offensive of the Portuguese. Aḥmad al-Manṣūr (1578–1606) occupied Timbuktu (q.v.), and destroyed the Askia empire of Gao. For half a century the Moroccans were masters of the Western Sa’di’ān, from the banks of the Senegal as far as Bornū. The plunder taken on this campaign of conquest enabled the sultan to keep a splendid court, the hierarchy of which was modelled on the Ottoman court, and to adorn his capital Marrakesh with magnificent monuments.

To the same period also belongs the organisation of the maḥzen [q.v.]. The early Sa’di’āns had relied for support on the Arab tribes of the south. To these al-Manṣūr added the Arab tribes of the region of Tlemcen and Ujda driven into Morocco by the Turkish conquest. These ghurāqa, as they were called, received lands around Fās in return for the military service they were forced to give. Reinforced by a regular army formed of renegades, Spanish Moors and negroes, trained by Turkish deserters, the maḥzen provided the sultan with the means of preserving order and levying taxes; it was thus the essential instrument of sharifian government and tended to become the government itself.

This instrument proved sufficient in the hands of an energetic ruler but was inefficient in weaker hands and in moments of crisis. The Sa’di’āns were soon found out. The tendencies to disruption which had been held in check by the energy of al-Manṣūr broke out again on his death. The dispute for the throne set his sons against one another. One of them, Zā’di’ān, ended by triumphing over his rivals but could not prevent the break-up of the empire. Larache was occupied by the Spaniards; Fās cast off sharifian authority. The Andalus of Rabat and Salé [q.v.], enriched by their piracy, formed an independent republic. Finally the Sa’di’āns, although they had owed their elevation to the religious movement, now found the marabouts rising against them. Delivered from the restraints which the distrust of al-Mahdi and his successors had placed upon them, the latter began to gain more and more hold over the south. Thus were led to the run of the sharifian authority. Süs was in the control of one of them, Süli ʿAli; Tafshelf was under the Hasan shorfa, the Gharb under al-ʿAiyāshī, leader of the “volunteers of the faith”. In the centre, the power of the marabout of Dilâ (a zāwiya on the upper course of the Wādi L’Abid) increased. Muhammad al-Ḥāḍidj, their leader, victorious over the Sa’di’āns and over al-ʿAiyāshī, lord of Salé and Fās, seemed on the point of founding a new Berber empire from the Atlantic to the Mulaya. Incapable, in spite of the support given them by the English and Dutch, of disposing of the adversities, the Sa’di’āns now held only Marrakesh and its immediate environs. The last representative of the dynasty died in 1660, assassinated by the shaikh of the tribe of Shabbānāt.

B. The Hasan shorfa. The disintegration of Morocco was arrested by the coming of the Hasan shorfa. The latter had taken advantage of the disorder to assert their authority in Tafshelf, then by expeditions, which partook of the nature of brigandage as much as of warfare, they had conquered eastern Morocco. One of them, Mawāli Muḥammad, had even tried, without success, it is true, to take Fās from the Dilâ’s. His successor Mawāli al-Raṣḥid (1660–1702) was more successful. He took Fās, disposed of Ghailān, an adventurer who had established himself securely in the Gharb, destroyed the zāwiya of Dilâ, reconquered Marrakesh, thus rebuilding as it were piece by piece the sharifian empire. Installed by force of arms, the new dynasty recognised the necessity of securing the moral prestige which their origin could not give them. They therefore sought to attract to their side the sharifian families. They helped favours on the shorfa of Wazzān, whose patronage was a guarantee even for the rulers.

The work begun by Mawāli al-Raṣḥid continued and brought to a successful conclusion by his successor Ismā’il (1672–1729). During the first fifteen years of his reign, he did not cease to wage war on the rulers who disputed the districts of Marrakesh and Süs with him. While fighting his enemies, he was engaged in building up an army which would work his will. To the maḥzen formed by the Shrāğa and Uḍayā he added a body of black slaves, the ʿAbid al-Bukhārī (Bābkheer), the property
of the sultan; their children were specially trained for military service. The number of effectives in this corps by the end of the reign numbered one hundred and fifty thousand men. The sultan was thus able to reduce to obedience the Berbers of the Atlas and the upper Muluya. Defeated and disarmed, the latter were kept in control by garrisons placed in kasbas built at the exits to the valleys or commanding the lines of communication. The notables whom the sultan had taken into his service or united to himself by matrimonial alliances forced their tribesmen to live in peace. The bilâd al-maghârib, i.e. the country where tribute was regularly paid, extended over almost the whole of the extreme Maghrib. The pacification of the interior did not cause Mawli l Ismâ'il to forget the obligations imposed on every Muslim ruler to fight the infidels. He therefore continued the holy war against the Christians of the coast. He recaptured al-Mahdiya, Larache, Asâl, and Tangier, evacuated by the English in 1684, but could not take Ceuta from the Spaniards in spite of a siege or rather an uninterrupted blockade for seventeen years. He was no more successful in his enterprise against the Turks of Algiers, who disputed with the Moroccans the possession of the plains of eastern Morocco and the ksar of southern Oran. The expeditions which he directed against the Algerians ended in failure, and the lower course of the Muluya continued to be the boundary of the sharifian empire. In spite of his lack of success here, Mawli l Ismâ'il is nevertheless the great figure of the Hassani dynasty, the model the Moroccon sultans have set themselves to the present day. Morocco, however, remained what it was before, i.e. an aggregation of different groups, the cohesion of which depended on the personal energy of the sovereign. The processes of administration were in no way altered: the sharif enforced obedience by drastic executions; he squeezed his subjects to the utmost to get the money necessary for the building of his capital Meknes [q.v.], the palaces of which were built by the forced labour of the natives and of Christian slaves.

On the death of Mawli l Ismâ'il, a reaction set in. For thirty years his sons fought with one another. The real masters of the situation were the 'Abid who made and unmade sultans as they pleased. One of them, Mawli l 'Abd Allâh, was proclaimed and deposed six times. He succeeded, however, in triumphing over his competitors by playing the Berbers off against the 'Abid, the importance of whom gradually diminished with the years. The remedy, however, was not much better than the disease. This period was for Morocco one of misery and rain. The authority of the sharifs emerged much weakened from it.

Mawli Muhammad (1577—1792) succeeded, however, in restoring it. Inheriting the energy and vigour of his grandfather Ismâ'il, he brought the rebel Berbers back to their allegiance, and by the taking of Marrakesh in 1706 destroyed the last trace of Portuguese power on the Atlantic coast. Convinced, on the other hand, that the weakness of the central power was mainly due to a lack of financial resources, he endeavoured to procure money by encouraging the development of foreign trade. He inaugurated a mercantile policy, concluded treaties of commerce with Denmark, Sweden, England, and France and endeavoured to attract foreign merchants to his kingdom by founding for them the town of Mogador [q.v.] in 1764. Heavy taxes, however, severely impeded the progress of this policy. Morocco remained a poor country and did not open itself, as had been hoped, to European penetration. It also remained in a perpetual turmoil. Under Mawli l Vâjid (1792—1794) the country was once more handed over to anarchy. Mawli l Slimâ'n (Sulâmân) (1794—1822), after at first being able to restore order, had to spend the last ten years of his reign in putting down the continual risings of the Berbers of the middle Atlas; in the course of one of these expeditions he actually fell into the hands of the rebels. This rebelliousness caused the sultan much misgiving; he also wanted to prevent the infiltration of foreign and anti-Muslim influences which he believed would aggravate it. He forbade his subjects to leave the country and restricted to a minimum their intercourse with Christians. The diplomatic and consular agents were relegated to Tangier, and access to the interior was made almost impossible for Europeans. His successors followed his example. Down to the end of the sixth century, Morocco was more rigorously closed than it had been in the time of the Merinids and Sâ'dîs and even in the early days of the Hassani sharifs. In spite of this systematic isolation, the sultans had nevertheless to face the same difficulties as Mawli l Slimâ'n and had no more success than he in overcoming them.

For half a century the domestic history of Morocco was a series of rebellions which the sovereigns had great difficulty in suppressing. The regions remote from the centre, Rif, Tâfnât, Figûére, and even eastern Morocco, escaped the authority of the makhzen. In the very heart of the country, the Berbers cut communications between Fès and Marrakesh, forcing the sultans when they wanted to move from one capital to the other to make a great detour by Rabat. The empire broke up more and more. Mawli l-Hasan (1873—1894) postponed for a few years the inevitable collapse. His reign resembled that of Mawli l Ismâ'il. At the head of his army, the artillery of which had been reorganised by a French military mission, he was continually in the field raiding the rebels and tearing down kasbas. He re-established order in the region of Chérif, forced the people of Sûs to recognise his kâids, reduced to obedience the Zaâr and Zayân, endeavoured to extend the makhzen country by expeditions against the independent Berbers, endeavoured to develop his influence in the Saharan regions and to restore his authority in Tutân. But he died before completing his task and all had to be begun again.

Morocco and the Christian powers. The situation was the more critical that the fate of Morocco could no longer be a matter of indifference to the European powers. It increased the unpredictability of some and aroused the curiosity of others. In spite of their desire for isolation, the sultans had not been able to break every link with Europe. They had al-nâ to take account of the proximity of Spain, established for three centuries in the presidio of the Mediterranean of the French who had replaced the Turks in Algeria [q.v.]. The conquest of the old Regency, destroying all the sharifs' hopes of extension eastwards, had caused great irritation in Morocco.

'Abd al-Kâdir [q.v.] found followers among the peoples of this country and support hardly disguised on the part of the makhzen. This hostile
attitude resulted in the Franco-Moroccan war of 1911. The sharifian army was crushed at the battle of Isly, the ports of Tangier and Mogador bombarded. The moderation of France alone enabled the mahkzen to come fairly well out of this unfortunate ecapade. Henceforth the relations between France and Morocco remained peaceful, although the impotence of the sharifian government to guarantee security on its borders forced France to military demonstrations like the B. Snæssen campaign (1859) and the wâdi Gis expedition (1870). Spain in turn being unable to obtain satisfaction from the attacks directed against her garrisons decided also to resort to arms. The campaign of 1859–1860, ended by the victory of O'Donnell, revealed the military weakness of Morocco. The treaty of Tetwâna (1860) granted to Spain, along with some trilling territorial aggrandizement, an indemnity of 100,000,000 reals. To pay this debt, the sharifian government had to raise a loan in London on the security of the Moroccan customs and to accept the control of European commissioners. For the first time foreigners intervened in the domestic administration of the empire. The breach thus made was continually enlarged. The exercise of the right of protection, the erection of a lighthouse on Cape Spartel, served as a pretext for diplomatic negotiations and for the extension of international control. European ambitions were not dissimulated. In order to protect itself against them, the mahkzen tried to play one off against the other and confined itself to granting, as it did at the conference of Madrid (1880), concessions devoid of all practical significance. Mawlî al-Hassan excelled in this difficult game and the vizier Bû Almad, who directed affairs during the early years of the reign of 'Abd al-'Azîz, Mawlî al-Hassan's successor, displayed no less skill. Morocco was thus the object of a very keen struggle for influence. England wanted to maintain her economic preponderance along with the control of the Strait; France wanted to ensure the security of her Algerian possessions and of the roads leading to the Saharan oases occupied in 1901–1902; Spain appealed to her "historics rights"; Germany lastly was preparing to seize the opportunity to acquire openings for her commerce and emigrants. The Moroccan crisis and the establishment of the French protectorate. Such a position could not last. The imprudences of Sulîn 'Abîl-Îzîz precipitated the crisis. The whims of the sovereign and his immoderate desire for European innovations displeased the strictest Muslims. The modifications in the fiscal policy made by the tarîfîs disturbed the people already taxed to the utmost. Rebellion broke out everywhere. A pretender, the rûgî Bû Hamâmî, rose in the region of Tûzû and routed an army sent against him. It was in vain that France by the agreements of 1901 and 1902 endeavoured to organise the activities of the mahkzen against the rebels and to postpone the inevitable catastrophe. On the failure of this effort, France decided to arrange with England and Spain to settle the Moroccan question and prevent the dismemberment of the empire. In return for recognition of the protectorate de facto exercised by England in Egypt and the granting to Spain of a sphere of influence in northern Morocco, these two powers recognised the right of France to act as her interests best demanded. France hastened to propose to the sulîn a plan for reforming the sharifian administration. The intervention of Germany prevented its realisation. On March 31, 1905, William II landed at Tangier and in a sensational speech posed as the defender of the independence of the sulîn. On the advice of the German representative, 'Abd al-'Azîz appealed for the constitution of an international conference to study the reforms to be introduced into the Maghrib. The conference met at Algiers (Jan. 15—April 7, 1906) and affirmed the three principles of the sovereignty of the sulîn, the territorial integrity and economic freedom of Morocco. It did not, however, settle the Moroccan question. The two international bodies which it decided to set up, the police for the ports and the state bank, both capable of being of great service, could not take the place of the general reforms necessary for the salvation of the empire. Disorders continued, acts of hostility against Europeans in Morocco itself and acts of brigandage on the frontiers increased in number. Not being able to obtain satisfaction for outrages on its subjects, the French government ordered the occupation of Ujdâa and Casablanca in 1907. The country was then pacified around these two centres and order restored in eastern Morocco and in the Shawiya to the great benefit of the natives themselves. The Spaniards in their turn for similar reasons intervened in 1908 in the adjoining region of Melïlla and after a severe campaign in 1909 occupied Salwâa and a number of strategic points.

During this period war broke out between 'Abd al-'Azîz and his brother Mawlî 'Abd al-Hafîz, proclaimed sulîn at Marrakûsh. Supported by the anti-Moroccan party, the pretender was victorious. All the powers, including France and Spain, recognised him, after he had promised to respect the agreement of Algeciras, the international treaties and all the engagements entered into by his predecessors. France and Spain announced their intention of not prolonging their occupation of sharifian territory. The Franco-Moroccan agreements of March 4, 1910, and the Hispano-Moroccan of Nov. 19 of the same year, stipulated that the occupation should cease as soon as the mahkzen should have a force sufficient to guarantee the security of life and property and peace within its frontiers. This settlement seemed all the more desirable as there had been occasional friction between France and Germany which had only been smoothed over with great difficulty, the most serious being the affair of the deserters from Casablanca in Sept. 1908. A disquieting state of tension remained between these two powers, although France had endeavoured to give satisfaction to Germany in signifying, by the agreement of Feb. 8, 1909, her willingness not to impede the economic freedom nor hinder the development of German interests.

The aggravation of the situation in the interior hastened the dénouement. The sulîn's rule was no more effective than that of his predecessors; the exactions of the sharifian agents in the spring of 1911 provoked a rising of the Arab and Berber tribes in the region of Fas. Besieged in his capital and on the point of succumbing, the sulîn appealed to the French. They decided to send an expeditionary force to the help of the sulîn. France ordered its commander to accept any arrangement in the independence of the sulîn and any occupation of new territory. Vigorously commanded by General
Moinier, the military operations had the desired effect. Fès was relieved on May 21, and after certain police operations necessary to secure the peace of the district, the expeditionary force returned to the coast. But, while the danger was thus banished from the interior, unexpected complications arose in Spain, taking advantage of the occasion to take possession of the sphere of influence reserved for her by the agreement of 1904, established herself in Larache and al-Ḳasī, Germany, feeling the moment was decisive, claimed compensation in her turn and sent a warship to Agadir. This demonstration provoked the greatest alarm in France and in Europe generally. In the end, however, a peaceful settlement was reached. After four months of difficult negotiations, the agreement of Nov. 4, 1911 put an end to the dispute. Germany abandoned all political claims to Morocco and admitted with certain reservations, chiefly of an economic nature, the principle of the French protectorate. There was no longer any obstacle to the establishment of this regime, which the sultan accepted by the treaty of March 30, 1912. This diplomatic document stipulated the maintenance of the sovereignty of the sultan, the representation of and protection by French diplomatic and consular agents of Moroccan subjects and interests abroad, the carrying out, with the collaboration of and under the direction of France, of a number of administrative reforms, judicial, financial and military, intended to "give the shahifian empire a new régime, while safeguarding the traditional prestige and honour of the sultan, the practice of the Muslim faith and the institutions of religion".

The French protectorate now extends over the whole of Morocco, but the Spanish sphere of influence enjoys by the agreement of Nov. 27, 1912 complete autonomy from the administrative and military point of view, while Tangier and its environs form an international zone, the status of which is not yet definitely regulated.

The establishment of the protectorate was to have had as its first result the restoration of the authority of the shahif, whose support was essential for the carrying out of the reforms. This could only be attained by a considerable effort. The central power was weaker than it had ever been at the time when the conclusion of the protectorate treaty put an end to the crisis. The chief of the guerîs was almost non-existent. France had to conquer Morocco for the sultan. The name of Marshal Lyautey, appointed High Commissioner and Resident General, will remain inseparable from the history of the pacification of Morocco, like that of Bugeaud in the history of the conquest of Algeria. Very difficult in itself, for it brought the French into contact with warlike tribes, some of whom had never recognised the authority of the mahzen, the task was further complicated by events abroad. Order had hardly been restored around the chief towns, Fès, Meknes, Marrakûsh and communication restored between eastern and western Morocco, when the War of 1914 broke out. For a moment it was feared that the French were going to abandon the interior and fall back on the coast, but the progress of the pacification of the country was only slowed down, not interrupted. All the conquered positions were retained and the rebels held on all fronts. The counter-offensives of the rebels in the Târass corridor, along the Middle Atlas and in Sûs were crushed. The War finished, the offensive was resumed to reduce the districts still unsubdued (Middle Atlas, south of the High Atlas, upper valley of the Moulouya). Three years of difficult fighting (1921—1924) ended in the occupation of "all Morocco of value"; i.e. those regions of economic, political or military importance. The Rifian offensive in 1925 was the greatest, soups to compromise all the success achieved. A Rifian chief, Abd al-Karim, had gathered around him the greater part of the tribes of northern Morocco and inflicted serious reverses on the Spaniards and forced them to abandon a portion of the territory which they had occupied. Crossing the Spanish zone, he invaded the valley of the Wargha and threatened Fès. The resistance of the posts echeloned along the frontier gave reinforcements time to reach the scene of hostilities. Checked in the autumn, the Rifian advance was definitely crushed in the spring of 1926 thanks to the combined action of France and Spain. At the moment of writing, the conquest may be regarded as completed: only a few tribes of the Central Atlas and of the oases of the Sahara have not yet been reached by the French, but their reduction is only a matter of time.

The administrative reorganisation has kept pace with the pacification. The old machinery has been retained but submitted to a control which guarantees the natives against abuse of their power and excesses by the agents of the mahzen. Technical services have been created to give the country the works necessary for its economic life. The remarkable results obtained in all fields have been facilitated by the influx of European immigrants and capital. Morocco seemed condemned to regression. Now it is being completely transformed. A new epoch is beginning, very different from any that have preceded it.

be possible to estimate the total population of Morocco to within a few hundred thousands.

The total usually given is 5,000,000, of whom a tenth, 500,000, are in the zone of the Spanish protectorate. This population is very unequally distributed and its density varies with geographical conditions. The most thickly populated part is that of the plains of western Morocco between the massif of the Djebala in the north and the Great Atlas in the south: Gharb, Shâwya, Tâdla, Dukhâla and 'Abda. The density of the population also varies with the fertility of the soil. The population of this region is estimated at two fifths of the total. The mountainous regions, Djebala, Rif, Middle Atlas are not thickly populated, as we might have expected from the comparatively dense population of Kabylia, in another mountainous region of North Africa. As to the Sahara zone, outside the belts of oases in the Wâdi Gir, the Wâdi Ziz (Tâflâût) and the Wâdi Darâ (Dra), it is very sparsely inhabited.

b. Elements of the population. The population of Morocco consists for the most part of Berbers and Arabs, the former being the older element and the latter invaders. As to the Berbers, who do not seem to be a homogeneous race and whose origin is obscure, see the separate article on them. As to the Arabs, they are in a minority, but it is often difficult to attribute an exact ethnic origin to certain tribes or federations, so much have the Arabs and Berbers become mixed since the Muslim conquest, and intermingled either by peaceful or warlike methods. It will be more prudent and will give a more accurate result if we distinguish in Morocco between those who speak Arabic and those who speak Berber (see below VII. LANGUAGES). The former live entirely in the plains, while with the exception of the massif of the Djebala, the inhabitants of the mountains speak Berber.

1. Berbers. Three main groups may be distinguished among the Berbers of Morocco: in the north the Rifans and the Beni Zuâsîn; in the centre the Znîga (Sanhâjja) and the Harrâb (Harâbî); who form the population of the Middle Atlas; the third group is that of the Shâhî [cf. the article Shâhid] who occupy the western part of the High Atlas and of the Anti-Atlas, as well as the plain of Sûs. In addition to these main groups, we may mention the Djebala, arabised Berbers, to the N.W. of Fès, and the Harrâtîn (plur. of the Arabic Harâfîn), who seem to be regarded as an intermixture of Berbers and Sudânese and form the basis of the settled population of the zone of the Saharan oases.

2. Arabs. The early invasions at the time of the Muslim conquest do not seem to have appreciably modified the ethnology of the country. Down to the xiii

III. Population.

da. Total population and density. It is difficult to fix with any precision the total population of Morocco. The attempts made at a census in recent years in the parts subject to the shari'în mahzûn enable, it is true, comparatively accurate estimates to be made for the greater part of the country and corroborate for most districts the estimates made by European travellers before the establishment of the French protectorate. But the parts of the shari'în empire still outside the authority of the mahzûn and those whose southern boundaries are not exactly known have not been seriously investigated from this point of view, and until they have been scientifically studied it will not
plain, may be divided into two main ethnic groups: the Banû Hilâl [q.v.] and the Ma‘ālik. The latter occupies almost exclusively the valley of the Upper Muluya as well as the lands south of the Atlas. The Banû Hilâl occupy the sub-Atlantic plains and the steppes of Eastern Morocco.

3. Jews. There are about 150,000 Jews in Morocco, mainly living in the towns. There are also a considerable number among the tribes of the Great Atlas. They also form the principal element in the population of the two little towns of Debdû and Demnût [q.v.]. The origin of the earliest elements in this Jewish population is obscure: it is difficult to ascertain whether they were Jews who had migrated from Palestine or were judaized Berbers. The modern element is made up of Jews who fled from Spain to Morocco in the xvith century. The former call themselves *phishfitim* (Paisantinns) and are called *forasteros* (foreigners) by the Spanish immigrants, who are practically all settled in the towns of the coast and are rapidly becoming Europeanized.

Miscellaneous elements. The negroes, of whom there are considerable numbers in Morocco, do not however form a distinct group there. In the north we find many, who are almost all of slave origin. The predilection of the townsmen of Morocco for black concubines, noted for their domestic virtues, has brought into the population, especially in bourgeois circles, a very considerable amount of negro blood. To the south of the Atlas in the oases, the intermarriage of negroes and Berbers has produced the Haraţî. Finally the negroes of the Sûdân, since the Middle Ages, have always been esteemed as mercenaries to form the imperial guards, especially since the taking of Timbuctu by the armies of the Sa’dîan Sultan Ahmad al-Manşûr [q.v.].

Large numbers of Muslims from Spain, whether of Arab origin or descendants of Christian inhabitants of the Peninsula, have contributed to form the population of the towns at various times: Cordovans banished by al-Hakam I at the beginning of the third century A.H. after the "revolt of the suburb" and Muslims expelled from Spain at the "Reconquista".

We must not omit the influence that may have been exercised on the population of Morocco by Europeans (renegades, who had adopted Islam, mercenaries recruited outside Morocco and settled in the country), and finally we may note that frequently the sultâns have purchased women for their harems in Constantinople.

IV. Social and Economic Life.

a. Country. The population of Morocco, although for the most part rural, nevertheless has a larger proportion of town-dwellers than Central Barbary and, like the rest of North Africa, might be divided into nomadic and settled; this division does not at all coincide with that into Arabs and Berbers; there are still nomadic Berbers, while certain Arab tribes are becoming settled on the lands which they cultivate.

It has been shown that the nomadic or settled life of the country-people in North Africa does not depend, as was long thought, on ethnic factors, but is entirely conditioned by geographical considerations. It is the rule for dwellers in the mountains to be settled while the people of the desert steppes, forced to move about in search of pasture for their flocks, are nomads. There are however means between these two extremes and especially in Morocco, where we find many semi-nomads, who move only short distances, principally on the borders of the various mountains of the centre and south. But generally nomadism is the outcome of pastoral migration and its geographical extension to the rainfall and therefore to the nature of the vegetation.

It is in eastern Morocco, in the steppes which lie to the east of the Muluya, and to the south of the Great Atlas, towards the Sahara, that we find the principal groups of nomads in Morocco. In eastern Morocco, we may mention among the large tribes which lead a nomadic life the confederation of the Beni Gil, between Bergent and Figi; on the other side of the Atlas, the Ait Seddât, the Ait Lqâllâl, the Idrâû-hilâl, the Ait-â-Mribet; lastly to the south of the Drâa (Dra) country, the Rgilha, the Shkarna and the Awâl Dlim. As to the semi-nomads, we find them, outside the Middle Atlas, in the great plains of the Gharb, in the north, the Râhâmna and the Sbyadûna, in the south, where a pastoral life has not yet completely disappeared before a more settled state of society.

Nevertheless Morocco is, of the three countries of Barbary, that which has in its rural population the largest proportion of settled people, of fixed habitat and living not only in tents but also in houses. The latter are rarely found isolated in the country, but on the contrary are grouped into villages of more or less importance and more or less near one another, according to the density of the population.

The type of dwelling varies with the district. In the mountains the inhabitants build of unbaked bricks or stone with a gabled thatch or a flat roof. In the plains, the tent predominates, more or less fixed to the spot, and with it we find more and more the hut of branches, with a conical roof called *muccûl*. In the Saharan oases, the population collects within a walled area or *żiur* (sg. * żımur*, from the class *kṣm*); these conglomerations sometimes possess the elements of town-life. The villages are called *duar* (dâwûr) in the plains, and *dghar* in the mountains. In some hill regions we find survivals of cave-dwelling.

b. Town. Among the towns of his country, the Moroccan distinguishes a certain number that he definitely regards as cities (*hadâriyya*). These are Fâs, Rabat-Sâle and Tetwan, which have been more than others subjected to the influence of Spanish culture. It must however be noted that in the majority of the other towns we can still find traces of the existence of colonies formed by Muslims from Spain, especially from the xvith century onwards. The population of the *hadâriyya* towns is found to be composed of rustic elements but little urbanised. This is the case with Uджda and Mazagan (country Beduins) and also with Tangier (countrymen from the hills). Marrâkush and Meknès owe their special urban character to the fact that as capitals they have contained the courts of two Shâfi’i dynasties, both of Bedouin origin; they are *marakzâniyya* towns in which the standard of civilization does not reach the refinement of the *hadâriyya* Spanish towns. The ports of Tangier, Larache, Mazagan, Safi and Mogador were for long the only points of contact between Morocco and European influences, politically as well as commercially. Lastly in the mountains,
little towns like Sheshawan, Wazzan, Sefra, Debda, Demmat, and Debda. Demmat and Debda are mainly Jewish towns. As to Sefra, it seems probable that it is the survival of an old Berber town. We may also mention as towns of secondary importance on the Mediterranean coast, Ceuta, completely Europeanized for several centuries, on the Atlantic coast Azilal (Asaila), Casablanca, which owes its origin to the little port of Anfa, Aszmour, Agadir. In the interior, al-Kasr al-Kabir (el-Ksar, Spanish spelling: Alcazarquivir), Taza, Tarradant. Several ancient towns have now disappeared, e.g. Nakur and Bādis on the Mediterranean. Ti to the south of Mzagan, the two Agmat and Tinmalal to the south of Marrakush and several others, descriptions of which have been given by the geographers like al-Bakrī, al-Idrisī and Leo Africanus.

As a rule, the Moroccan town is grouped round a citadel or kasbah (pop. kalba) which is the seat of authority. Under the protection of the citadel lies the mellah or Jewish quarter. All around spreads the town proper or medina with its great mosque, markets and fàsir or rzāk (q.v.). It is surrounded by a rampart and beyond which there are usually the suburbs more or less rural in character. The town itself is divided into quarters (kaoune) with streets (zanka), alleys (zahr) and squares (rāba).

V. Economic Life. The country people, whether settled or nomadic, who form at least four fifths of the population of Morocco, live on the land, either by agriculture or stock-raising, most often combining the two. Those in the highlands grow cereals (wheat, barley), certain leguminous (broad beans, chick-peas, vetches) and fruit-trees. They also exploit their forests in a very primitive fashion (thuyas, cedars). The people of the plains devote themselves mainly to cereals and the raising of cattle, sheep, camels, horses and asses. In the oases of the south, the population cultivates the date-palm and understands the art of irrigating the land.

The rural industries are very primitive. They are limited to supplying the necessary implements of agriculture, and weaving wool into the material for garments, tents and carpets. The Berbers of Sās show a certain aptitude at metal-working (arms and jewels). Sās no longer exports the cane-sugar and copper, which formed considerable articles of trade under the Saadians.

Each tribe has a certain number of markets (sīk) which are held in the open country and bear the name of the day on which they are held. It is in the sīk that the peasant sells his produce and buys the manufactured articles that are brought by the merchants from the towns. Cereals are preserved in silos (moutirya); in the Great Atlas and to the south of it we find fortified storehouses, which belong to the community and are called āgardīr.

It is in the towns that we find industrial activity concentrated. Each trade, which originally formed a guild (hanta), is grouped in one street which bears its name. In it the articles are made and sold. The stocks are kept in the fondaks (Ar. fondāk) which correspond to the khān and wakilah of the east. Some products, like grain, oil, coal, wool, are sold in special places called rāba. The monopolies of exporting (ījār) corn and hides established by the sultāns at the end of the sixteenth century have now been abolished. Several European products have become of the first necessity in Morocco and form the subjects of an important traffic: cotton goods, tea and sugar and candles. For the history of the weights, measures and coins in use in Morocco before the establishment of the protectorate see the works by Massignan and Michaux-Bollaix quoted in the Bibliography. The very vivid picture drawn by Leo Africanus of the commercial and industrial activity of Fās in the Middle Ages is still very valuable.

The Jews, who devote themselves specially to certain trades that flourish in larger centres (goldsmiths, embroiderers), also play an important part as brokers. The citizens of Fās, who have a large number of converted Jews among their number, had almost a monopoly of the import trade of Morocco, especially from England, and for this reason had little colonies in the sea-ports.

The Berbers of Sās like to settle in the towns as grocers (baṣṣil) and having made their fortunes return to the country. Since the war of 1914—1918 a large number of them have migrated to France as labourers and they settle in groups, according to their original tribes, in the suburbs of certain large industrial towns.

V. Political Organization.

It is only at rare intervals and for short periods that Morocco has been entirely under the authority of the sultān; whence the distinction between the territory subjected to the government (bīlād al-makhzen) and the territory unsubjucted (bīlād al-saibā). As a rule, the makhzen territory included the towns, valleys and plains. The mountains, on the other hand, remained more or less independent, according to the degree of power possessed by the sovereign. For further details cf. the article MAHazen.

Outside the towns the population is grouped into tribes (kahila). Several are sometimes grouped together under a common name, without however being a confederation in the strict sense of the word; this is the case with the Qhumān in the north, the Hāša, the Dūkāla, the Shāwiya in the south. The tribe is subdivided into sections (rūk, khumay, fakhdha), which are subdivided into sub-sections comprising a certain number of villages of tents or houses.

The tribes who own the sultān's sway are governed by a kā'id appointed by the makhzen. His duty is to allot and levy the taxes, to raise contingents of soldiers and keep good order. He has under his command a shaikh for each section under whom are the maṣ'addam of the sub-sections.

For the distinction between makhzen, shaikh (vulg glīsh) and nība tribes see the article MAHazen.

In the tribes not subject to the makhzen, political activity is confined to the ġurna, i.e. an assembly of men, whose task it is to hear, argue and deal with all the business of the tribe, civil, criminal, financial and political. It administers justice following local custom (Arabic 'urf, Berber 'irf). It elect a shaikh (Berber amghar) who is only an agent to carry out its decisions. Alongside of the ġurna of the tribe, there are ġurna's of the sections and sub-sections but their powers are limited.

All the tribes of the bīlād al-saibā are divided into opposing factions or laff. When a tribe of
a certain laff is attacked, those neighbouring tribes who belong to the same faction take up arms and come to its assistance.

In the towns, the mahzen is represented by a governor whose official title is bi’id but in certain large towns he is often called bāghi. The title of ‘amīr has been sometimes given to the governor of Ugdja. The bi’id of the town, generally speaking, has the same functions as the bi’id of the district. He acts as judge in case of any violation of the law. He has an assistant or khalīfa. Alongside of him, the mawāṣis supervises the corporations, fixes their average prices and looks after public morals.

The bi’id has under his orders the mawāṣis and his police (mawāṣis) carrying out his instructions. Among the officials sent by the mahzen to each town may also be mentioned the nāzir or inspector of endowments (nijār), the trustee of vacant inheritances (sukkāl al-nūrābat, popularly bi-nawāṣis = abu l-nawāṣis), the collector of local taxes and market-dues (amin al-mustafā’). Lastly in the harbour and frontier towns, the customs are collected by officials called umāna (sg. amin).

Justice is administered by the bi’id or by the bāghi, as the case may be. The latter deals with questions of personal law; official reports on the cases are drawn up by the nāzir. In technical cases he appeals to experts: master-masons, agriculturists, veterinary surgeons (mawāṣis ‘an-nawāṣis, ardhīl et-turkā, faštān, batṣar). The legal opinions (fatawa) given by eminent jurists on the same question being often contradictory, the Sharifian government has recently created a council of appeal (mawāṣis al-as-andā’ī) at Rabat.

The landed property takes a number of different forms. In the first place, there are the state-domains; they are either managed directly by the mahzen (crown-lands) or they are allotted to gihā tribes in return for the military service for which they are liable; others of these lands may be granted in temporary or definite ownership to private individuals by imperial edict (sahīr or tarīfīn).

The kūbīs lands may be urban or rural. In the towns, they do not infrequently cover half the area. They are let out under special conditions which give the tenants some privileges, mawjūd as gāz (class. Ar. gazā‘). In the country, the kūbīs lands consist mainly of fields and orchards. In all cases, the revenue from these lands is set aside for the maintenance of buildings of a religious character or of public utility (mosques, colleges, schools, fountains) and for the payment of the officials attached to these establishments.

In Morocco, there are vast tracts of land which are not the property of any one individual, either as a result of the insecurity prevailing or of the sparsity of the population. These lands belong undivided to the whole tribe; they are called common lands (bi’id al-juma‘at).

Lastly, lands which have come to belong to foreign individuals (mulk) by inheritance or purchase have their character confirmed by a certificate of ownership (mulkīya).

The old Muslim imposts (sakīt and ‘ugrāf) have recently been merged into a single tax, the terīf. In addition to this tax, from which the state draws the essential part of its revenues, we may mention the duties levied at the gates of towns and in the markets (mukāḥ), unpopular with the people and not countenanced by religion, and the urban tax on buildings (tarīfī). In addition to these, the main taxes, there is the hādiya or present offered to the sultān on the occasion of the three great Muslim festivities. The hīya or poll-tax paid by non-Muslims and the mu‘āba or payment for exemption from military service by certain Arab tribes have been abolished.

VI. RELIGIOUS LIFE.

a. The Berbers before Islam. For lack of documents it is difficult to get any accurate idea of the religious beliefs and practices of the Berbers of Morocco, before their conversion to Islam and it is only from the survival of animistic cults which can still be observed in the country, that we can guess what the primitive religion was. The figures on two carved stones found in Morocco seem to be evidence of the existence of a solar worship. On animistic practices surviving in modern Islam in Morocco see below d. Islam in Modern Morocco.

b. Conversion to Islam. At the time of their invasion, the Arabs forced them in the districts around the towns the people were more or less under the influence of Jewish and Christian teachings; but there is little doubt that they did not practise these religions in their true form. It will be more correct to think of them as professing Judaism or Christianity rather than as real Jews or Christians. It seems evident that these influences had prepared the Berber population around the mountains to adopt the new monothetic religion, which the invaders imposed upon them. The two earliest invasions, that of ‘Uṣba b. Nāfi‘ in 640 and that of Mūsā b. Nūṣīr in 711, could result only in a very partial and superficial Islamisation, for very few Arab elements remained in the country. Islam, a town religion, was for long confined to larger centres. The Berbers generally became converted in the hope of escaping the vexations of the conquerors: but when the latter wanted to treat them simply as tributaries, they did not hesitate to apostatisate, on seven different occasions, if we may believe the Arab historians. One thing is certain, that while remaining Muslims, they were not long in trying to cast off the authority of the caliphs of Baghdad by adopting the heterodox doctrines of the Kūfrīs (q.v. and the article al-sūfīya). The Berbers of Morocco went even further when new local religions arose among them more or less based on Islam, with their own prophets and Kūfīs. After the attempt at rebellion by the Berber of Tangiers, Maisara (q.v.), which was quickly suppressed, the Barghawatī recognized as their prophet one of their number, Sāliḥ b. Tarīf, who gave them a religion and a Kūfī in the Berber language. This religion, the progress of which was opposed by the early Moroccan dynasties, seems to have been finally exterminated by the Almohad rulers of the 12th century. This Barghawatī movement was the most lasting; we also note that which was created by Hā-Mu‘āwī (d. 313 A.H.) among the Qumārī, near Tétouan.

In spite of these reactions, Islam, having become the official religion of increasingly powerful dynasties, gradually gained ground and penetrated slowly into the Berber mountains, but it is only from the death of ‘Abd al-Mu‘min, who destroyed the religion of the Barghawatī and put an end to the rule of the “anthropomorphist” (muḍassīmīn) Almo
ravid, that we can date the complete unification of Islam in Morocco. Till then, Islam had had in Morocco champions who were soldiers rather than theologians, and who after forcing the people to adopt Islam at the point of the sword, were little fitted to instruct them in it. It required a Berber of the Great Atlas, Ibn Tûmâr [q. v.], a theologian who had been educated in the east, to come back to his country and to secure the devoted support of a mass of followers in order to found the movement, which was political as well as religious, of the Almohads [q. v.] or "preachers of tawhir" [q. v.].

If the Almohad reformation was only temporary in Morocco, it was nevertheless strong enough while it lasted to obliterate in the country all trace of schism or heresy and to establish thoroughly in it the school of Malik b. Anas [q. v.] which it still follows.

c. Evolution of Moroccan Islam. From the time of the fall of the Almohad dynasty, Moroccan Islam rapidly acquired features of its own. Islam, defeated in Spain, was gradually driven out of it, then attacked in Morocco itself by the Christians of the Peninsula. The western frontier of the Dâr al-Islâm was brought back to its own territory and then thrust farther back. Islam in Morocco, attacked by Christianity and forced to dîjârâ, became an active principle. It required all the moral forces of the country, even those of which the orthodoxy seemed doubtful; in order to utilise them, it was not hesitate to absorb them by covering them with a more or less superficial veneer of orthodoxy. It was at this period that the cult of dead and living saints, and to a certain point Shariafism, which had hitherto only existed along side of Islam in Morocco, were adopted into it and received a kind of official recognition from the malikis.

Before the Marinids, Islam had required the constant assistance of the temporal power to maintain itself and advance. From the time of this dynasty, sprung from a Berber nomad tribe, the roles are inverted; it is now the sovereigns who utilise Islam to increase their own power, and try to monopolise it by creating official colleges for religious instruction (madrasa); the first of these (Madrasat al-Sufîn) was founded in 679 (1280) by the Sultan Abû Yûsuf at Fas, the capital of the dynasty, which made it the great centre of Muslim culture in Western Barbary [cf. FAS]. The immediate successors of the Marinids, the Banû Waqîs, established in the same town the cult of their founder Idris II. The mausoleum in which he is said to be buried was henceforth an object of great veneration. He is the earliest in date and the most important of the innumerable canonised Muslims who are the objects of a regular cult in Morocco, even on the part of the religious leaders and the aristocracy. When the cult of Idris was established, its descendants — more or less authentic — claimed the title of shurfa and soon played a preponderating part in Moroccan society, as a political and moral influence. The power of the Idrisid shurfa was soon reinforced by the claim of another shurfa descended from 'Ali through al-Hasan and this is the origin of the two great groups of shurfas in Morocco, the Idrisids and the 'Alids. To the latter belong the two Shari'ah dynasties, the Sa'dian and Fâhî, the latter still in power. From the moment of their accession to the throne, the influence of the shurfa on the destinies of the country became more and more preponderant.

The phenomenon of shari'ah is closely connected on the other hand with the development of religious brotherhoods [cf. the article ТАРИК]. Although we find evidence of their existence at the end of the Almohad dynasty (Hudjdjâd, Maghîrijîn, Amgaârîn), it is only as a result of al-Idrîsî's [q. v., d. 1645 A.D.] campaign in favour of dîjârâ against the Portuguese, that we find the principles of the brotherhoods, as we know them today, first coming into existence.

d. Islam in Modern Morocco. Here we will only give a survey of the principal points of detail in which the people of Morocco differ from the rest of the Muslim community as regards the practice of their religion. With the exception of a few isolated groups, still little studied, who are credited with heterodox or heretical practices (Zkârîa in the neighbourhood of the Bni Znîm, in eastern Morocco, Bâtâlwa, in the Gharb, not far from al-Ksar al-Kabîr), all the Muslims of Morocco are Sunnîs and since the Almoravid period have followed the Mâlikî rite, which prevailed in the west over that of al-Awzâî. It is in the last years that the power of the Sultan is not strictly the chief duties of the religion. The Beduins of the plains and the Berbers of the mountains are rather lukewarm Muslims. The Dâjâla, however, between Fas and Tangier, are very devoted to Islam, show great piety, and Kûr'ânic studies, are very much in favour with them; it is from them that are recruited a great number of schoolmasters who practise their calling in the Islamic states [cf. SHA'T]. It is also practically only among the hillmen of the north and south that we find a mosque in every village.

In spite of the great distance they have to traverse, the Moroccans like to accomplish the canonical pilgrimage. A considerable number settle in the east (there are Moroccan colonies in Alexandria and Cairo); the importance of these colonies had even induced the Sultan Abî al-Asif to appoint a Moroccan consul, amîn al-Maghârîba, for Egypt.

In addition to the two canonical festivals of Islam (Idcir hâbrîn and Idcir taghirîn), the Moroccans celebrate the festival of the Prophet (mi'âd, class. maszîhid) and that of 'Ablhârî (10th Mu-harram). The mi'âd, established in Morocco by the Marinids, has become a kind of national festival, since the accession to power of sovereigns claiming descent from the Prophet; this festival in Morocco almost surpasses in importance the two canonical feasts.

The peculiarities just mentioned would not be sufficient to give Moroccan Islam a special character, nor would its religious brotherhoods, if they were not confined to the practices of imitation or imitation of the faith and to satisfying the need for an elevated mysticism among their adepts. These religious brotherhoods are fairly numerous: Tîlā'i'ya, Darqâwîa, Taiyîbiya-Tuklîna, Kattâniya [q. v.] etc. But alongside of these brotherhoods, whose members are almost exclusively recruited from the literate or well-to-do classes of the towns and country, there are popular brotherhoods in considerable numbers, in which preoccupation with religion gives place to charlatanism practices and sanguinary displays. Such are the Dajâla, the 'Asâwâ, the 'Imdâgha, the Dâfûghîya. Some of these brotherhoods recruit their members ex-
clusively from a particular class of society; thus the ruāḥ (class. rūmāl) is a brotherhood of marksmen, and the Gañwa, a negro brotherhood. All these brotherhoods have this feature in common that their founder has become a famous saint (wali).

The cult of saints is highly developed in Morocco and undoubtedly was so before the introduction of Islām, which found itself obliged to tolerate it. There are however very different categories of saints, from the venerated patron saint of a capital or of a district to the local holy man whose name is forgotten, between whom comes the saḥīf who is marked by a ṣaḥbā (chapel surrounded by a dome), more or less elaborate. The more humble saints are recognised by the circular wall (ḥawš) which surrounds their tombs.

These venerated individuals, male and female, have attained sanctity by very different ways, in some of their lifetime, by their learning, devotion, asceticism, miraculous powers (baraka), sometimes even by more or less mystic mania (piyād-džiāf); the others, after their deaths, have been distinguished by miracle, apparitions etc. The warrior in the holy war (dījāl, rīfāt), slain fighting against the infidel is frequently beatified — hence his name of mutarrīfī or mutarrīf — French and English "marabout". But the early significance of this term was frequently lost sight of and the term mutarrīfī came to be generally applied to saints, who never took part in a dījāl in their lifetime. Mutarrīfī thus came into general use as a synonym of the other words used for saint in Morocco: wali, sa'yīd, šāhī. But it is the only one applied to the descendants of a saint, who possess the baraka of their ancestor. Among the Berbers, the saint is called agurum. The names of great saints have wawālī prefixed, the others the title šīh, while women saints of Berber origin are called fāla.

The saint to whom sanctuaries are most frequently dedicated — modest though they are (masāfūn, bižidīn) — was not a native of the country but the famous patron saint of Baghādād, ʿAbd al-Kādir al-Gillānī, popularly called al-Dījīlī, who was undoubtedly never visited Morocco. But the saint whose cult is surrounded with the greatest splendour is the famous Mawāli Idrīs, founder and patron saint of Fās. Among the other great Moroccan saints may be mentioned: Mawāli ʿAbd al-Salām Ibn Masjīb, patron of the Dījīlī, buried on the Dījīlī al-ʾĀlī, Mawāli al-Šāhīn, in the Ḥaibr; Mawāli Abu l-Ṣiḥāf al-Khawāṣir (Mawāli Būhshīfī), in the north of Fās; Sīdī Muhammad b. ʿĪsā, patron of Meknes and founder of the brotherhood of the Ṭiswā; Mawāli Abu Shuʿrābī (Būhshīfī), at Azemmūr; Mawāli Abū Yaḥyā (Būʾaṣṣāb), in the Tāḍāl; Sīdī Abu ʿAbd Allāh al-Shabītī (Sīdī Bel ʿAbīs), born at Ceuta and patron of Marrākūsh. All these and others less famous are the subjects of a hagiographical literature which will be dealt with later.

Devotion to individuals canonised in their lifetime or after their death is in Morocco not confined to Muslims. The Jews have also their saints, relatively as numerous as the Muslim saints. Some of the Jewish saints have acquired a reputation so great that even Muslims revere their tombs: e.g., those of the Rabbi ʾAmīn in Adjen, near Wazzān and of Rabbi Ben Zmir of Safi. On the other hand, the Jews of Morocco show a special reverence for certain of the great Muslim saints of the country.

The area, surrounding the tomb of each of the principal saints is sacred (ḥanūm) and hence regarded as an inviolable asylum; among the best known are the ḥanūm of Mawāli Idrīs in Fās and that of Mawāli ʿAbd al-Salām b. Masjīb in the mountains of the northwest. These pieces of ground are the exclusive property of the families who are descended or claim to be descended from the saint. They are exempt from state taxes: more than that, the descendants of the saints have the right to levy for their own benefit certain special dues, by a privilege officially recognised by the sultan. The levying of these dues is not the only way by which the saint's chapel benefits his descendants. The principal source of revenue is the offerings of pilgrims when visiting the tomb; this is the ṣiyār. In general once a year, there is a kind of patronal festival at the tomb of the saint which is called murāsh (class. M. mawsīn); a vast crowd, some of them from a considerable distance, gather there to pay their devotion to the saḥīf and to see the display of fireworks given in his honour. On this occasion the offerings flow in and are shared among themselves by the saint's de-scendants.

In these circumstances, it is usual for every sanctuary of any importance to be regularly organised. The chapel which contains the tomb and the buildings attached to it, an oratory and guest-house, is called the zāwiya. It is superintended by a ṭuḥāʾidūm who collects and distributes the revenues. These do not come entirely from the zāwiya. The zāwiya often owns lands, sometimes extensive, which are let out and the profits shared with the tenants. They are called ʿašā and the tenants are called ʿaṣābī. These farms, sometimes acquired by purchase, often come from bequests or donations (ḥiṣān) from pious private individuals.

We can thus see how certain famous and wealthy zāwiya may exert a moral and political influence in the country round them, independent of their religious influence. The latter is however also very important. The great Moroccan zāwiya are centres of orthodoxy and give life and vigour to Islām in the country. Some are centres of mysticism and they are always centres of religious instruction. This explains the enviable position occupied in Moroccan society by any group of descendants of a famous saint, or of marabouts. If their ancestor had, in addition to the virtues for which he was canonised, the honour to be a descendant of the Prophet, they are at the same time ẓorfi, which further increases their material privileges. The descendants of a saint who was not a shorfi try to claim this origin for him by inventing more or less fictitious genealogies. The marabouts who have in this way "infiltrated" into the social category of the ẓorfi are very numerous in Morocco. A Moroccan zāwiya is not only a centre of hagiolatry; it is also in the majority of cases a body of ẓorfi and the centre of a religious brotherhood or of a branch of one, or of a secondary order affiliated to a brotherhood. The zāwiya itself may have offspring. Many of the establishments of this name are daughters of a mother zāwiya and are sometimes at a considerable distance from it.

Hagiolatry, religious brotherhoods and sharīfi thus form three special aspects of Islām in Morocco, which are profoundly intermingled, and it is diffi-
cult to study them separately. For a detailed account of the principal families of ʃorfā in Morocco of genuine shafi'i origin or simply marabouts see the article ʃorfā. Here we shall only mention the principal ones whose origin is considered authentic by the Moroccan genealogists. They are descended from al-Hasan and ʿAbd Allāh al-Kamil through the latter’s three sons, Idris, Muḥammad al-Nafs al-Zakīya and Mūsā al-Ijawn. The descendants of Idris or ʿIrāsid are subdivided into ʿIrāsid (Shābīnīya, Ṭafīlīya, Ṭal główni, Ghabīnīya), Dabbāghīnīya, Kattānīnīya, ʿAlānīnīya (descendants of Mawlid Allāh ibn Sulaym ibn Muḥibn, buried on the ʿIrāsid, whence their names, and themselves divided into Shābīnīnīya, Ṭal główni, Kattānīnīya and Ghabīnīya). The descendants of Muḥammad al-Nafs al-Zakīya are the ʃorfā of Suljīmānīya or Fūlā (Fulīnīya; nisba from Ṭafīlīl). i.e. those of the reigning Sharifian dynasty; lastly, the descendants of Mūsā al-Ijawn are the ʃorfā ʿIrāsid, who take their name from the great saint of Islam ʿAbd al-Kādir al-Gilānī. We also find in Morocco, but in small numbers, Ḥusaynī ʃorfā, also descended from ʿAlī though al-Ḥusayn, the brother of al-Hasan; these are the ʃorfā called ʿIrāsid and Ṭal główne, who came from Andalus. The great marabout families are that of the Naṣira from Tāmgūrt in Darra, the Ṣahrīna [q.v.] in Tādla, the Darra and Wazzanīnīya to the northwest of Fès. The ʃorfā Wazzanīnīya (ʃarīfs of Wazzan), whose chief is also head of the great brotherhood of the Ṣahrīna-Tahama (cf. above), have for long played a considerable part in politics and have been the object of particular attention from the makhzen. Even more than the other representatives of the great marabout families, they have in fact rendered great services to the central power by using for its benefit the great moral and political influence which they possess among that part of the population, which is lukewarm or hostile to the makhzen. They have meditated in the most successful fashion between the sulṭān and the unsophisticated body of the people.

The ʃorfā are thus at the head of Moroccan society. Some have assumed the power, others are the auxiliaries of the ruler, and all have a great influence. We shall see that they have occupied a very high place in the intellectual life of Morocco since the end of the middle ages. Lastly shariʿism, an important social factor, has been able still further to strengthen itself by the support which maraboutism has brought it, by incorporating itself in it, and the religious brotherhoods which very frequently spring directly from it.

e. Survivals of Berber culture. The cult of saints, accepted and even recognised, as we have seen above, by Islam, is in Morocco much earlier than the introduction of this religion. Indeed, alongside of saints of note, there are others who are essentially popular, in the country as well as in the towns. In the large cities like Fès, the great saiyidens venerated by all classes of society with humble marabouts whose names show clearly their popular origin; these are Sidi ʿl-Mahfi (Rev. the Haddan One), Sidi Ama ʿl-Khasir (Rev. Good Evenings), or Sidi Kāthī Ḥāḏī (the reverend gentleman who procures what is wanted) and notices are given of them by hagiographers like the author of the Salwat al-.Infās (cf. E. Lévi-Provençal, Le Historiens des ʃorfā, p. 383 infra). The humble, often anonymous, khalīcuς, which abound in Morocco, undoubtedly are to be connected with earlier mythic individuals, already worshipped in the same place before the coming of Islam. Besides this devotion to popular saints, there are the animistic cult, which we see everywhere in Morocco observed by the lower classes of the population: worship of high places, of caves, springs, trees and rocks. These cults are now being seriously studied and the results will perhaps enable us to reconstruct without too great risk of error, the type of religion practised by the Berbers before the introduction into their land of the three great monotheistic religions.

It is hardly possible to separate from these animistic cults that of Mawlid Yaʿqūb in Morocco, who always has a ḥabba beside thermal springs, whose curative virtues are recognised.

Survivals of paganism in every case completely foreign to orthodox Islam may be found everywhere in Morocco; they are hardly distinguishable from what one finds in other parts of Barbary. The rites which accompany birth and the ceremonies connected with it (giving of the name and circumcision), marriage and death are now beginning to be well known. They constitute practices quite foreign to the prescriptions of the Sunna but they are not regarded by those who follow them as in any way heterodox. It is especially in the life of the country people that we see most clearly traces of pre-Islamic practices. Many of them are strangely like agricultural customs of the Romans. The Moroccan peasant has retained the use of the Julian calendar, no doubt introduced into the country by the Romans; it is of course much more suitable for the needs of agriculture than the Muslim lunar calendar. The names of the months are retained in their Latin form with little change: January = Januarius from the Latin Ianuari(m). The beginning of the solar year in Morocco is the occasion of a festival celebrated, especially in the country, under the name of hajī'ta; the festival of the summer solstice (tamra) is also celebrated and on that day it is usual to have fireworks. Similarly the agrarian rites, which are still observed every year, are chiefly observed by the peasants, and in Morocco are completely foreign to the canonical prescriptions of Islam. They are mainly ceremonies of inauguration (of death and rebirth of the land, first day of labour, first day of harvest); rites to protect the crops from the evil eye, or to preserve the baraka which they contain while standing, finally special rites to secure rain and good weather. These various ceremonies, to which ethnographers like Biarnay and Westermarc have already devoted detailed studies to which the reader may be referred, are sometimes closely linked up with ceremonies prescribed by Islam: thus the different pagan rites for producing rain (carnival processions, a large spoon dressed in women's clothes and solemnly carried round) do not exclude the worship of saints specially noted as rain-makers like Mawlid Bishāḥa, now the celebration of the orthodox ceremony of tājmīk. It is also in the worship of spirits (jāmīn, gāvor, dūn) that we find ceremonies of a strongly Islamic stamp associated with quite profane rites. This cult is especially practised by the lower classes of society, and in the town
particular by women. The djinns are regarded as supernatural powers, who have to be conciliated to avert their evil influence or fought when one is attacked by them. The rites which deal with them are either propitiatory or intended to overcome harm done. In spite of the many sacred formulas of Islam, which are found in the celebration of these two kinds of rites, one gets a strong impression of paganism from them; they undoubtedly remain practically what they were before the introduction of Islam into Morocco.

**VII Linguistic Survey.**

Two languages are spoken in Morocco: Berber and dialects of Arabic. Berber is the oldest language attested in Morocco and we have no evidence of an earlier language being used; as to Arabic, it was introduced by the Muslim conquest of the viith and viith centuries, but until the arrival in Morocco of the Banu Hilal and of the Sulaym (ixth century), it seems that Arabic, the language of an essentially urban culture, was spoken mainly in the towns while the country people continued to talk Berber; it was only after the occupation of the plains by the Arab tribes that their language spread there. With the exception of the region of the Jhala to be mentioned later, the highlands of Morocco alone have remained faithful to the Berber language, while the towns and lowlands are at the present day almost completely Arabic speaking.

In his Annuaire du Monde Musulman (p. 162) L. Massignon gives a proportion of 60% of Berber speakers (5,200,000 to 2,000,000). A. Bernard
thinks this exaggerated and reduces it to 40% (cf. Arabophones et Berbérophones au Maroc, 1924, p. 278).

A. Berber.

1. Berber dialects. According to the works of E. Destaing, the Berber dialects of Morocco can be divided into two main groups.

The first is the northern group which includes the dialects of the Rif, those of the Bni Znassen and of the Berber speaking tribes of the neighbourhood and those of the Ait Seghraigh-Shen, Marrësh, Ait Warain etc. to the north of the Middle Atlas. These dialects are characterised phonetically by their strong tendency to spirantisation of the dentals and palatals. In comparing these dialects with those which in Algeria the natives call Zmiriya, E. Destaing has been led to describe the group as the group of Zanita dialects.

The second or southern group includes, according to the same author, the remainder of the Berber dialects of Morocco; he distinguishes two sub-groups:

a. that of the Tamazight, the dialect spoken by the Berber of the Central Atlas, from the vicinity of Meknes to the edge of the Great Atlas; the dialects of the north are also distinguished from those of the south. It is with this sub-group that we should connect the dialect of the Sanhaja-d-es-Saâr, an important highland confederation to the northeast of Fas, and perhaps an office of the language of the sections of the Ghumara who still speak Berber.

b. Sub-group of the Taqtilhèth, the dialect once spoken by the Massouli of the Great Atlas and by the Shilh (usual French orthography: Chichih) of Sùs and the Anti-Atlas.

The three groups of Moroccan Berber dialects seem to correspond very exactly to the three main ethnic divisions of the Berbers of the country: Zanita in the N.E., Sanhaja-Zanaga in the centre and Massouli in the south. Going back to the old division of the Berbers given by Ibn Khaldûn, E. Destaing proposes to make the first group correspond to the But tribes and the two others to the Baraîtis tribes.

For the bibliography of Berber studies see the list of works given by E. Laoust at the beginning of his Mots et Choses Berbères, Paris 1920, p. xvii; since that date see the Moroccan bibliography annually published by Hejéro. A map showing the division of Morocco between Arabic and Berber is given in the articles by A. Bernard and P. Mousard, Arabophones et Berbérophones au Maroc (Annales Soc. Géogr., vol. 33, Paris 1924). For the north, there is a more accurate map by R. Montagne and Pennès published at the end of the Manuel de berbère marocain (dialecte rifain) by Justnard (Paris 1926).

There is no evidence of the existence of another language before Berber in Morocco. Very few of those "Libyan" inscriptions have been found which, although they are not yet read, are admitted to be in old Berber; one was found in the Roman ruins of Tamuda, a few miles S.W. of Tetwân, and is preserved in the museum of the latter town. Other Libyan inscriptions have been found in the region of Petitjena.

The earliest evidence of the use of Berber in Morocco is given by the Geography of al-Bakri (xth century) who says that the prophet Hâ-Mîm, killed in 927 A.D., had given the Berbers a Kurzâan written "in their own language". This can only refer to their Berber speech; the same author tells us that the Baraghwata had also a Berber Kurzân from their prophet Sâlih (d. in 750). For the beginning of the Almohad period, a passage in Documents inédits d'histoire almohade, p. 67, says that at this time Berber was spoken on the Umm Rabi'. It is in the same work that we find the earliest recorded phrases in Moroccan Berber (Tâqtilhèth dialect) transcribed in Arabic characters (cf. p. 26, 30, 36, 38, 39, 67, 117).

Ibn Khaldûn seems to have been the first to interest himself in the creation of a scientific system of trans-literation of Berber into Arabic characters. Using certain graphic methods used by specialists in Tâqtilhèth, he invented compound characters to render sounds peculiar to Berber (g, z [emphato], and ñ on isolated 3). Unfortunately Ibn Khaldûn, who in his Muqadima gives interesting chapters on the urban and Beduin Arabic dialects, does not seem to have devoted any attention to the Berber language; one of the few passages to be noted in his book, as far as Morocco is concerned, is his reference to the existence of Berber speaking peoples among the Sanhaja tribes settled in the valley of the Wargha and around the fortress of Amargû (cf. Histoire des Berbères, ed. de Slane, text, i, p. 273, l. 11). For the beginning of the xviith century, Leo Africanus (p. 28) gives us more detailed information. The five Berber ethnic groups (Sanhaja, Massouli, Zanita, Hawwâra and Ghumâra) have a special language which they call amarân (asamâmarân), i.e. "noble language" (cf. the present name of the Tamazight dialect) (ed. Scherer). Berber was still the language of a part of the Ghumara, for, he says, Arabic is used by almost all the people (op. cit. i, 29). It even looks as if the Shâwâyân ("Soava") of the Tâmasnân still spoke Berber ("African language") like all the other Shâwâyân of North Africa with the exception of some who lived to the south of Tunis (op. cit., i, p. 83).

We have to come down to the Danish Consul G. Host, in the xviith century, to find the first Moroccan Berber vocabulary collected from a tâbât of "Tamenart", a place probably in the region of Agadir (cf. Etrevervingen om Marokos og Per., Copenhagen 1779, p. 128—133).

2. Berber literature of Morocco. Although Berber was the language of the Moroccan dynasties who followed between the Ifrisids and the Sâhans, it does not seem that, contrary to what was done in Egypt for the Turkish of the Mamlûks, Berber was made the subject of grammatical studies in Morocco, nor that it was used for the purpose of literary expression. A passage in the Kirda recalls the fact that khvâbas were pronounced in Berber in the great mosque of Fas but the text of them has not been preserved. The celebrated Almohad reformer Ibn Tîmirî is said to have composed in Berber theological and legal treatises which have now disappeared. The Berber Kûran of the Ghumara and Baraghwata have also disappeared although al-Bakri has fortunately preserved some extracts in an Arabic translation. The only texts which we now have are translations of or commentaries on religious works of the type of the Kirda of Al-Kattâwânî or of the Makhtâtht of Khallîl; all these Berber texts come without exception from Sùs, whether because this region
had a more advanced culture or its dialect with a more oclusive consonant system and clearer vowel system was better suited than others for transcription in the Arabic alphabet. The Moroccan Berbers have a large stock of fables, legends, songs of love, war and work etc., many of which have already been collected by French and German students of Berber (on Berber literature, written and oral cf. Henri Basset, *Essai sur la littérature des Berbères*, Algiers 1920).

Among Arab authors the Berber language is *qājantya*, the non-Arab language; *barbariya*; *Berber; rujāna, "jargon"; in the *Documentum indicium* *d'histoire almohade* we several times come across the expression *al-ṭālān al-ghurri, "the Moroccan language"*. In Moroccan Arabic, Berber is usually called *kātib*.

b. Arabic

The *Arabic dialects*. The Arabic language was introduced into Morocco in at least two stages: first in the eighth century at the time of the first Muslim conquest, then in the xiith at the coming of the Banū Hilal and the Salūm. Down to the coming of the latter, who were brought to Morocco by the Almoravid ruler Ya‘qūb al-Manṣūr, Arabic seems to have been spoken almost exclusively in the large towns of the north, where it was used by a considerable Arab population who enjoyed a double prestige, religious and political. It was the language of religion and law. From the towns Arabic spread among the people of the surrounding country, and al-Idrisi (*Description de l’Afrique et de l’Espagne*, text p. 79, transl. p. 90) already notes that in the xiith century the Berber tribes of the southern hinterland of Fās (Banū Yūsuf, Fandālāwā, Bahīl, Zawāwā, Maggāša, Ghiyāṣa and Salāgīn) spoke Arabic.

It is this linguistic influence exerted by the towns on the country around them that explains the arabisation of the mountainous country of the Ṣābāla (plur. of ṣabāli, "highlanders") while the rest of the Moroccan highlands remained Berber speaking. The land of the Ṣābāla, in the wide sense, stretches in the form of a crescent from Tangier to Taza. It was surrounded by a cord of towns: Nakūr, Rādis, Tīgha, Tetwān, Ceuta, al-Kasr al-Šaghlu, Tangier, Arzīla, al-Kasr al-Kabīr, Barsa, Azdījan, Banū Tawwādī, Wallow, Fās, and Taza, which were the only ports or markets available for the tribes of the region; besides, the massif itself was traversed by the most important commercial routes of Northern Morocco: the roads from Fās to Tangier, to Ceuta, to Ṣābāla, to Nakūr and to Ghassāna; it was therefore natural that being subject to the direct and indirect influences of the towns, the highlands of Ṣābāla should be the first region of Morocco to be arabised. The process was further favoured by several other factors: 1. the existence in the mountains of numerous large villages, almost towns, which became secondary centres of Ḥrijāfic culture; 2. the settlement almost everywhere in the xith century among the Ṣābāla of Idrisiid sharifs who, driven from Fās by Mūsà b. Abī l-l-Aṭīfa al-Miṣkānī, founded independent principalities in the mountains, which bāre-coming of the main cultural life of Muslim urban culture; 3. the tribes of the Ṣābāla furnished a considerable part of the contingents which went to wage the holy war in Spain and returned home after being more or less arabised by contact with the great Muslim towns of Andalusia; 4. lastly the rebellions and civil wars which so frequently disturbed Muslim Spain, the emigrations or expulsions caused by the progress of the Christian reconquest, brought to Africa, from the rising at Cordova (in 814) down to the xvth century, an important element which settled in the region of the Ṣābāla either in the towns around the mountains or in the villages of the highlands (resettlement of Ṣabālū, foundation of Shafshāwān) bringing there along with the Arabic language, the prestige of their cultural, intellectual and material superiority.

This rapid sketch of the spread of the Arabic language in Morocco explains why, after studying the question, three categories of Arabic dialects have been distinguished.

a. Urban dialects; b. Highland dialects; c. Beduin dialects; and we may add: d. the Jewish dialects.

d. Urban dialects. In Morocco not all the town dialects are "urban dialects". There are towns like Casablanca, Mazagan, Safi and Mogadou (and to a certain degree Mīknās and Marrākūsh) the population of which is entirely or for the most part of rural origin and where the absence of an old nucleus of town-dwellers has not enabled them to become urbanised. The Moroccans however distinguish quite clearly such places from towns with a really urban culture, more or less influenced by Andalusi-an culture. The principal towns with urban dialects are Fās, Kābrī-Salē, Tetwān, Taza, al-Kasr al-Kabīr; Tangier, Wazzān and Shafshāwān also have urban dialects but these are much contaminated by the surrounding Highland dialects. Mīknās and Marrākūsh have been influenced by the Beduin elements introduced by the maḥṣūrīn groups into the dialects of these two old capitals. It is interesting to note the case of Azemmūr where the old town (Azemmūr al-Hadār) has an urban dialect, while the new town, which has in recent years grown up beside it around the sanctuary of Mawārāb Abī Shīrāb (wālī al-Bī Shīrāb), uses a Berber dialect. The urban dialects of Morocco form one group with those of the western part of the Central Maghrib, notably with those of Thlemek, Nédroma and Algiers. Their phonetic characteristics are the loss of the interdental in the classical language, the affricate pronunciation (κ) of (d), the frequent attenuation of (k) to ḥamza. In Fās, b, m, k, g and ġim assimilate the šīm of the article and are treated as "shals"; the simple ġim is pronounced like the French j (= Persian ʃ), but when it is geminated, it gives jy in Fās and dji in Tangier. The r is often pronounced very close to the French uvular r.

As peculiarities of the dialect of Fās, we may note the construction kētētī “she has written it” for kētēt - a, and the use of an invariable relative di representing the old dialectal dīn. Tangier and Tetwān have a preposition m- “to” which is used before nouns (m-lātīr “to the house”) but not before suffixed pronouns To translate “of”. Marrākūsh uses t-; the dialect of this town uses certain Berber adverbs: aškā “because”, hēlī “only”.

All the urban dialects use the characteristic prefix of the present indicative: ka- in the north, ta- in the south. Fās uses one almost as much as the other.

d. Highland dialects. These are at least as well known as those of the towns. In 1920 I published notes on that of the Ṣūkī and the
Brânes in the north of Taza; in 1922, E. Lévi-Provençal published texts, prefaced by a grammatical sketch, of the dialects of the middle valley of the Wargha; since then I have had an opportunity of studying those of the Bni Hôyèsar (near Tetwán), of the Me-tása (near Bades) and of the Ghaâwa (near Shaâfshâwân).

The highland dialects are of course more differentiated than the urban dialects. The tribes which use them belong to two political clans probably originally of different racial origin: the Ghumàra, the old inhabitants, and the Sanhadja, the invaders. In the present state of our knowledge it does not seem possible to make the dialects coincide with political or racial boundaries; but we can nevertheless recognise two main groups of highland dialects:

1. The northern dialects, extending from the Straits of Gibraltar to the south of Shaâfshâwân and embracing in the east the confederation of the Ghumâra;
2. the southern dialects, from Wazzân to Taza, used by two great classes of tribes: first, the Sanhadja tribes of the valley of the Wargha; Sanhadja of the Central Wargha, Sanhadja of the Sun and of the Shade, of Mo-bâdhi and of Gheïdor; secondly, the But tribes, more or less closely related to the Zanàta and occupying the lands south of the region of Taza: Mernissa, Brânes, Tsûl, Maghara and Meknès. It seems to be a historical fact that these Zanàta and Sanhadja peoples only settled in their present habitats long after the first Arab conquest; the Sanhadja of the Central Wargha certainly now occupy lands which before the Almoravid period were peopled by the Ghumâra. We should therefore regard these southern highland dialects as younger than those of the northern group. The slight differences noted between the two groups may then be due to two main causes: 1. an evolution of the neighbouring urban dialects which would have taken place during the period between the arabisation of the Ghumâra and that of the Sanhadja-Zanàta; 2. the decay of the Berber substrata.

To the two main groups, Benmara and Sanhadja-Zanàta, we may perhaps add two little islands in the south: the highlanders of the region of Scfrû to the south of Fâs (Bhind, Bni Yagha etc.), and the Ghiyûtra to the south of Taza: they probably constitute the last vestiges of a continuous Arabic-speaking blue which stretched to the south of the Fâs-Taza corridor, the existence of which in the thirteenth century we know from al-Idrîsî.

Phonetically, the Moroccan highland dialects are characterised by the profound changes undergone by the Arabic consonantal system as a result of the spirantisation of the dental and post-palatal occlusives. We find the interdental ð and ð̄, which do not reprent the classical interdentials tê and dê, have given in these dialects t and d respectively, which remain occlusive only at the beginning of the word or after a consonant or gemination, but after a vowel we have ð and ð̄: bêt "daughter", plur. bêtî and after a vowel also kêt is pronounced as a spirant like the z of modern Greek. The representative of the group  in the classical language is usually d, sometimes hardened to t, but among the Ghumâra we have ð (emphatic dê). The sound ð̄ is fairly common. The short vowels are commoner than in the towns; many of the short vowels i and u of the classical language are preserved: this is how we find a considerable number of imperfects îr1 îr2 îr3 and a few îr1 îr2 îr3.

As to morphology, the fem. personal suffixes -a (- assessment) and pl. -em (- assessment) are characteristic: they are the complement of the series begin by the masc. -a, -ô (- assessment). Among the northern Jbila we find the use of a suffix -êh marking the plural: it seems really to be a borrowing from Latin. The dual, reserved for names of parts of the body which occurs in pairs and for names of various measurements (of weight, length, volume and time) is in -êyôn: ghadîyôn "two months", tîdîzêh "his hands". The relative, pronoun and adjective, is ì. The classical construct state (îâyô) is very rare and is only found in a few stereotyped phrases: it is in general replaced by analytical constructions in which the preposition ì of is used, expressing possession as well as the material of a thing.

Almost everywhere the prefixes of the 2nd pers. com. and of the 3rd pers. fem. of the aorist are ì- (and not ì-): dêkêb "thou writest, she writes". The passive participle of hollow verbs is often of the type mîfîl: mîbûs "sold", mîwazîs "filled up". Finally we may note a few traces of a passive of the form fîl-fûl: kîth to be taken". As evidence of conservatism, we may mention that in these dialects we have the word ìsîr "mouth" which seems to have disappeared since old Arabic.

Just as the urban dialects of Morocco may be linked with a number of urban dialects of Algeria, so have the highland dialects of Morocco correspondents in the latter country. W. Marçais, who is the first to have isolated and described this group of Maghribi dialects and prefers to use the name of "parlers villageois" for them, classes along with the dialects of the Moroccan Jbila two other similar groups, also characterised by the defacement of the Arabic consonant system (liquidation, affrication, spirantisation), by the use of these dialects in syntax and structural forms taken from Berber and by the replacement in the vocabulary of Arabic elements sometimes strongly archaic and very abundant Berber elements. These are firstly the Oarn group of the Tîrâ in the country which extends from Lalla Maghânya to the ña, a mountainous country traversed by the roads connecting Tlemcen, the capital of the Bani Abd al-Wad, with the ports of Illan and Araghûn. It is with the dialects of the Tîrâ that the dialects of these Moroccan Jbila show most agreement.

The second group, which differs more, is that of the highland dialects of Eastern Kabylia, a mountainous region of the department of Constantine, traversed by the roads connecting Constantine with the ports of Djeddâ and Collo; this was also the old habitat of the Kutama, whom the support of the Fattimûd movement must have caused to be rapidly arabicized. Alongside of these three groups of highland dialects (Jbila, Tîrâ, Eastern Kabylia), W. Marçais classes a fourth in the villages of the Tunisian Sâbî, which lie in the coast zone traversed by the roads which connect Kairaûn with the ports of Sâs, Mahdia and Monastir. These Tunisian dialects, of which that of Takrûnû, studied by W. Marçais, is a specimen, are however much arabised and hardly seem to have been subjected in their phonetics, morphology, syntax and vocabulary to the profound
Berber influences which characterize the first three groups.

In spite of their divergencies, which are due mainly to pronunciation and to the local use of words and phrases corresponding to two very distinct forms of culture, the urban dialects and the highland dialects cannot be either historically or linguistically separated. The fundamental disparity is that which exists between the urban and highland group and the Beduin group. It is the townsmen who have taught the highlanders to speak Arabic, but the urban dialects, used by individuals whose intellectual activity is greater, have evolved more rapidly. They are also more sensitive to external influence, literary and political.

These facts added to the predominance of Berber blood in the highlands suffice to explain why the dialects of the Jbâla still seem coarse and quaint to the townsmen. On the other hand, the towns have been frequently repopulated, wholly or in part by people from the neighbouring hills. All this explains the family resemblance which the linguist finds between the dialects of the towns and those of the hills; perhaps the latter, being more conservative, are also the more interesting for the history of the language. W. Marçais regards them as valuable representatives of the Arabic spoken in the country district of the Maghrib before the coming of the Banî Hilâl and the Sulaim (cf. W. Marçais, Textes arabes de Tabrouna, vol. i, preface, p. xxviii).

The principal features which are common to the urban-highland group and which distinguish it from the Beduin group are the following:

- loss of the classical interdentalis;
- pronunciation of kaf as k or hamza (and not g as among the Beduins);
- tendency to the syllabic grouping R1 R2 in R3, when R2 is not a laryngal or non-syllabic;
- rarity of the construct state;
- suffix of the 3rd pers. masc. sing. in -n, -a (and not -ah, as among the Beduins);
- relative rarity of the addition of personal suffixes, but regular use of the analytical phrase with dovâl: el-dâr, el-dîl, “my house”;
- diminutive of R1 R2 e R3 becomes R1 R2 iyê R3: kîyyel, “little dog”;
- diminutive of adjectives of the types R1 R2 e R3 (< class.: afdal) and R1 R2; R3 becomes R1 R2; R3: hûmir, “little red”; kîler, “little large”;
- plural of the adjectives R1 R2 e R3 (< class. afdal) becomes R1 n R2, R3: kôdâh, “black” (plur.);
- reductions of the plurals C1 C2 C3 C4 to C1 by C2 C3 C4: mîfizâh, “keys”;
- use of a verbal prefix to mark the indicative present: ka- or na- in the towns and la- in the hills;
- in the singular of the perfect, the feminine person is in general used for the masculine: e.g. kûbitt, “thou hast written” (m.), whence we find in Rabat for the plural, an analogous form kûbitin, “you have written”;
- in the vocabulary, shiâtal, “how much?”; dîbat, “now”; ìba (Ìba, ìba), “to do”, are characteristic;
- in the imperfect of the defective verbs, the plural is formed on analogy of the singular: yebhùn, “they remain”; yebhûn, “they weep”.

1. Beduin dialects. These are in Morocco the dialects of the plains: the Atlantic plain from Arzila to Mogador with its continuations into the interior, the valley of the Mulûya, the plateaus of eastern Morocco and the region of the Moroccan Sahara (Wâd Ghrîb, Wâd Zîz etc.); they are still little known; only that of the Hawwâr of Sûs has been studied, but only in Europe and from authorities who had already travelled a good deal elsewhere. That of the Dukkala of the north (tribe Bî ‘Azîz, Ulîd Ibrîd), have myself examined it corresponds in almost all its details to the dialect of the Ulîd Brîmât of Sûnta (Oranîa) on which W. Marçais has written a monograph. There is no doubt that on examination one can divide the Beduin dialects into groups characterized by more or less conservatism; should those of the ‘Azîlî perhaps be separated from those of the Banî Hilâl? Perhaps a distinction should also be made between the dialects of the purely Arab tribes and those of the Atlantic regions where powerful Berber tribes (Jhâla, Raggâta, Dukkala, Barghawata) have been arabized and more or less submerged by the Beduin dialect. Least in the historical period the latter have been infinitely less stable than the tribes of Berber origin (speaking Arabic or Berber): whether because they were taken to form the gûlî, which guards each large town (environ of Fâs, Meknes, Rabat-Sale and Marrâkùsh) or because they were transported far from their original homes as a measure of repression (case of the Shûrûd), the Arab tribes of the Atlantic plains have become much broken up and mixed. The Beduin dialects which have most chance of having preserved their original character are those of the tribes of the Saharan steppes who have remained relatively stable and intact; Bâl Gît, Xhîba, Dhour Xnî, Ulîd Dîrî etc. In any case, the following are the main characteristics of these dialects: firstly the kaf is pronounced as g (as kaf mûkhdhir), and it is already this pronunciation which for Ibn Khaldûn characterizes the Beduin dialect of his time. The û, ûû, ûûû are retained, with their interdental value. The short vowels are indistinct; the sound i is almost completely absent and many short unaccented vowels sound practically like a labial e. Characteristic are the appearance of an extremely short transitional vowel of a character, which is developed after k, g and kû and placed before a consonant or an e, e.g. kûnir, “green” (plur.), igéirl, “the sits down”, êbûmêd, “tale”, ghsurî, “gazelle”, shkôrâ, “saddle-bag”, ngârây, “thin” (plur.). A similar sound is found after bb, m and hh, e.g. mmânhâ, “the cats”, mûnhô, “sound”; by analogy the combinations mm, mm are reduced to mm and f, e.g. bîmmânâ, “the (little) place”, lîmmâ, “the entails”.

The personal suffix of the 3rd pres. masc. is -ah. The dialectal preposition translating of “is” is ûû or ûûû, from the classical ma‘û, according as the word before it is feminine or plural, this preposition becomes ûûûû or ûûûûû (lûûûû).
It does not seem that the Beduin dialects know the use of the verbal prefix indicating the indicative present. In the plural personal forms of the defective verb, there is a selection of the diphthongs: gina-r, from the verb g3na- "to try"; nis-r,yama, from the verb ma-. "to forget".

We may al-also note the use of a preposition li, "to"; 3i-funa, "he told us".

From the point of view of vocabulary, some words are characteristic of Beduin dialects: daira, "to make do," hajki, "to wish," yema, "when," sinie, "yesterday," diwa wok, gilb, "now," from the classical diwa-waft. We may add the particle ma which used to indicate interrogation: ma3aft taft, "have you seen so and so?" and the phrase ma li ma, "he no longer comes".

3. Jewish dialects. The Jews who emigrated from Spain have as a rule retained the use of an archaic Spanish; many have also learned Arabic for business reasons. Alongside of the Spanish Jews, we have in the Berber highlands and in the towns of the interior Moroccans Jews of unknown origin whom the former call forasteros (Span. "foreigners"); according to the district, they speak Berber or Arabic, but in the towns their dialects have not yet been studied. They have a literature in an Arabic dialect written in Hebrew characters (and called, certainly wrongly: Jawa:i: or Arabic): piyautin, songs at family festivals (cf. Tadjouri, in Horizons, ill, 1923, p. 408-420), satirical songs and songs dealing with real happenings; some of these texts have been printed at Fez and Constantine; a newspaper written in an Arabic dialect and printed in Hebrew characters called al'aflisia, "The Liberty" has been published as a periodical for a number of years among the shari\us (in the plural). They have been divided into a number of groups.

4. Relations of the linguistic groups of Morocco to one another. Morocco appears to the philologist a wonderful field for the study of the influence of the substratum on an imported language, since the language of the substratum, i.e. Berber, is still alive alongside of the Arabic and quite well known. The results of the examination are very meagre: the phenomena actually ascribable to the action of the substratum alone are infinitesimal; this may, however, be due to the fact that Arabic, a Semitic language, and Berber, a proto-Semitic language, are not sufficiently differentiated.

From the phonetic point of view, there is hardly any sound change found in the highland dialects of the arabised Berbers, for which a corresponding change cannot be found in the dialectal phenomena of old Arabic; only, perhaps, their tendency to spirantisation should be connected with the identical tendency observed in the northern Berber dialects found in the confines of the Siha land.

If we consider the morphology, we see that in the highland dialects the verb has lost feminine forms of the plural of the old Arabic, which still survive in some Beduin dialects and are still found in Berber. A Berber origin has been sought for the use of the verbal prefix indicating the present of the indicative; but similar prefixes are found in Egypt and in Syria where there are very different substrata.

Certainy Berber is the scheme to -- -r which forms nouns indicating trades (ra-bennati, "trade of a ma:son") and names of abstract qualities (ra-brami-t, "roguey"), it is however curious to note that in modern Berber, this scheme has not this significance and is only used to form the feminine and secondarily the diminutive.

In the syntax of the highland dialects, we find indissoluble traces of Berber influence; plural treatment of singulars applied to liquids (water, urine), phrases translated or stereotyped, e.g. baina Kaddur, "Kaddur's brother", with retention of the Berber particle indicating belonging to, -in.

But it is in the vocabulary that the Berber substratum makes its influence most felt. Whether surviving in the highland dialects or borrowed in the Beduin dialects, many of the terms relating to country life are Berber (names of plants, animals, rocks, agricultural implements and tools); they have often retained in Arabic the Berber pseudoarticle a-, which, still felt to have its original value, makes them unfit to take the Arabic article also; alongside of the singular in a-, we usually have a Berber plural in a-3an also retained. It is curious by the way but intelligible to find in the highland dialects words of Arabic origin with the Berber article. These must be Arabic words borrowed and berberised at a time when the Jhala still spoke Berber and which have been retained just as they were in their Arabic dialect after being arabised, e.g. a-kfir, "ditch", plur. a-kfran; in Tangier the name of the mosque is called a-bait; at Rabat two words imported from Europe have a Berber form: a-haf, "the sultan's boat" and a-tay, "tea".

Some Berber words have survived in the administrative language of the Mahzen: afrag, "a wall of cloth surrounding the sultan's camp"; aga:la, "a pasture reserved for the sultan's animals"; asef, "lash to punish the guilty"; merzor, "syndic (nabk) of the shari\us (in the plural)."

The Beduin dialects naturally contain much fewer Berber elements than the urban dialects and still less than the highland dialects; their rustic vocabulary nevertheless made numerous borrowings from the technical vocabulary of the previous Berber tillers of the plains.

Within the Arabic area, the highland and urban dialects have borrowed a certain number of terms relating to the rural activities of the Beduins; they are as a rule revealed by the pronunciation of kaf as g. The Beduin dialects in their turn borrow from the towns their words relating to a more advanced culture; but, for economic, political and, to a certain extent, aesthetic reasons, they give more than they borrow.

Some words, which are used in the urban and highland dialects as well as by the Beduin dialects but unknown to the Spanish and Maltese dialects, are perhaps of "Hilali" origin; the principal seem to be gnaul, "horse", balluf, "boar" and sif:sif, "to see".

In addition to the Berber and Arabic elements, the Moroccan vocabulary contains a fairly important number of European loanwords. They come from the vocabulary of a higher culture and relate to the flora (in cultivation or its products), to agriculture, to food and dress, to furniture and housing, sometimes even to parts of the body. There are Greek or Latin borrowings of the oldest period, Romance or Spanish for later periods; but neither their meaning nor their phonetic treatment enables us always to be able to date precisely the time of their introduction and their origin.

These "European" loanwords are naturally found in larger numbers in Northern Morocco, which
has been more subject to Mediterranean influences, which, though refugees from Spain have been felt as far as the northern part of the Middle Atlas. The Beduin dialects have escaped these influences (cf. 1. Simonet, *Glossario de voces árabes y latinas usadas entre los Mozárabes*, Madrid 1888; 2. Schuchardt, *Die romanischen Lehmsprachen im Berberischen*, Vienna 1918; 3. G. S. Colin, *Etymologie maghrébines*, in *Hespéris* [1926 and 1927]; 4. A. Fischer, *Zur Lautlehre der Moränikisch-arabischen* [chap. ii., iii. and Ex. uxor], Leipzig 1917).

Between the two extremes marked by the most conservative Beduin dialects and the most characteristic highland dialects lies a whole gamut of intermediate varieties, which are in the transitional stages; they include the highland dialects whose characteristic features have been reduced through contact with the plains of the southern periphery of the massif of the Jbala, as well as certain dialects of Beduin type used in the Atlantic plains, notably in the non-ḥadīya towns. "But however extensive and deep may have been the interpenetration of the two types, it has not abolished their fundamental unlikeness" (W. Marçais).

In spite of the profound differences which separate them, the highland and Beduin dialects of Morocco (and of the Maghrib) agree in one essential and characteristic morphological feature: the forms sing. *n-* to *n-* in the first persons of the aorist. Now this fact is attested in the xiiith century for Almoravid Spain and Norman Sicily, i.e. in languages from which Hilālī influence is clearly excluded; it is also found in Maltese; it must then be admitted that the two groups of dialects have independently brought about this innovation, which seems to have remained exceptional in the dialects of the east. The two groups agree also in the loss of short vowels in open syllables; this phonetic peculiarity is also found in many eastern dialects; but it is curious that it has become general in the Maghrib while the dialects of Spain and Egypt do not have it.

It is in the Documents inédits d'histoire almohade that we find the first information about Moroccan Arabic [use of biGD, "in order that", māa, "of", first persons of the aorist in *n-* (sing.), *n-* (plur.); but we have to wait till D. de Torres to find a few phrases transcribed (cf. French translation, *Paris*, 1886, p. 241, 325, 339). Monette, who was captured by the Moors in 1670 and was for a long time a prisoner, has left us a *Dictionnaire arabesque* in French and Moroccan, in transcription (cf. *Relation de la Capitale*, Paris 1653, pp. 330–362). The first grammatical notes were collected by Host (cf. *Études maghrébines*, 1779, ch. 8, p. 202–510), who has also given us a Berber-Danish-Moroccan Arabic vocabulary (ep. cit., p. 128–133). It is to Fr. de Dombay that we owe the first monograph on Moroccan dialects, which is also the first serious contribution to the study of Arabic dialects; the dialect which he deals with is that of Tangier (*Grammatica linguae materiae- arabiar*), Vindobona (1800). Since then, there have been a number of studies: for works before 1911 see the bibliography given by W. Marçais in his *Textes arabes de Tangier*, p. 207–215; for later works see the bibliography in *Textes arabes de Rabat* by L. Brunot (now in the press).

2. Literature of the Arabic dialects.

Like all popular literatures, the literature of the Arabic dialects of Morocco is essentially poetical. The only texts in prose are those which have been collected recently by European students of dialects. In the Arabic poetry two periods must be distinguished: the first extending down to the beginning of the Sa'dian dynasty, the first known texts are those which Ibn Khaldūn gives at the end of his *Mubaddima* among the specimens of the poetry of the towns. To these we may add a mass of poems composed in honour of the Prophet (*Ma'ārekhiyat*) of which numerous collections exist in manuscript. Ibn Qusaymīs (ed. Schefer, ii, p. 150) says that under the Marinids, poets used to compose verses in "vulgar African" on the Mawild and also on erotic subjects. These poems were recited in the presence of the sultan, who gave prizes to the winners of the competition. From this group cannot be separated the poems which accompany classical Moroccan music, "Andalusian" music, many of which must have been composed in Morocco; these were collected and classified by al-Hā'ik, a musician of Spanish origin who had settled in Tetwān. All these poems belonging to this first period are written in the Spanish Arabic dialect, which after the great success of the Cordovan Ibn Qusaymīs (xiiith century) became the classical language of the new poetic genre called *zājīl*, which had this in common with the *makākit* dialect that, while employing like it new metres, its prosody was based on the classical metre on the quantity long or short of the syllables, but the *zājīl* differed from the *makākit* in that it was written in the Spanish dialect and not in the classical language.

The main characteristics of the poetry of the Moroccan dialects of the first period are attention to the quantity of each syllable as in Latin and the use of the Spanish dialect.

The second period, on the other hand, is distinguished by a system of prosody founded exclusively on the number of syllables in each verse (as in French) and by the use of a special language called *meltiàn*, a kind of *kafili* adapted to literary purposes, based on the Moroccan dialect but influenced partially by the Beduin dialects; it seems moreover that this poetry is of Beduin origin and it was under the beduinating dynasties of the Sa'dians and 'Abd al-Malik that it arose and flourished. The first known author of a *kafili* written in *meltiàn* appears in the xiiith century: he was Abū Fāris ʿAbd al-ʿAzīz al-Maghrawī, who was one of the poets of the Sa'dian Sulān al-Manṣūr al-Dhahabī (1578–1602). His fame is still great and preserved in the proverb: *Kull wašīd khitā, khar uwašma all-meltiàn* "Nothing that is long is of interest except the palm-tree and the Maghrawī". Other poets followed him. It was at this time that the saint ʿAbd al-Kuṣaymīs al-Madhjibī al-Dhakhārī (d. in 1569) wrote his mystic *rūḥīyya*, but many of his poetry of the verses now attributed to him are apocryphal. After these, we have the poets from Tetwān, an important centre of *meltiàn* poetry: first ʿAbd b. ʿAbd Allāḥ al-Mindīs al-Tihmāna, author of the celebrated ʿHā'īrīa, who left his native town to live at the court of the first ʿAbd Allāḥ Sulān, Muḥammad b. al-Shirīf (d. in 1664) and al-Raqīd (d. in 1672); a pupil of al-Mindīs, Ahmad b. al-Tunakhī, banished from Tetwān in 1672 by the Turks, also came to settle in Morocco among the Rai Zānen. But we have to come down to the xixith and especially the xiiith century for the coming of a whole school of poets writing in *meltiàn*. The three principal centres of literary activity were Fās, Mekecnes and
Marrakush. The subjects treated are most varied: love poems, mystic, erotic and satirical (discourse between a white woman and a negress, between a townswoman and a Beduin woman etc.), political (on the occasion of the French conquest and the establishment of the protectorate), didactic (manufacture of powder, target-shooting, falconry) poems or burlesques (parodies of ḥuṭbās declaimed by the students at their fetes).

Among the numerous authors we may mention: Si Muhammad b. Sulaimān, Si al-Thāmil b. al-Madaghri, al-Gandāz, al-Ḥungh; we owe humorous Ḷaṣidas to Si al-Madani al-Turkumāni of Marrakush; Si Khudur al-ʿĀlamī buried at Meknes specialised in mystical and medical poetry. The Durātī Muhammad al-Ḥaṭṭak of Tetwān (d. 1845) also wrote mystical Ḷaṣidas in mālān which are collected at the end of the lithographed edition of his Dīwān (Tunis 1331; Fās, n.d.). At the beginning of the xxth century, al-Saʿādī of Fās was composing political Ḷaṣidas.

Mālān poetry has completely replaced poetry in the Spanish dialect; it constitutes a very vigorous branch of literature, much in favour with all classes of society; we frequently find almost illiterate authors, and people say that their talent is a poetical gift given by God (mawākiḥ); on the other hand, even the rulers have not disdain ed this popular poetry and one of the last Ṣāliḥ Ṣulṭān, Mawlay ʿAbd al-Ḥafiz, wrote numerous Ḷaṣidas in mālān which have been collected in a Dīwān lithographed at Fās.

Alongside of this men's poetry, there are the songs of the women (songs of women working at the mill, songs of gossers, songs of family fêtes, lullabies), the children's songs which are often strangely conservative, epigrams and proverbs [cf. A. Fischer, Das Liederbuch eines marokkanischen Sängers, Leipzig 1918; C. Sonneck, Chants arabs du Maghreb, Paris 1902 (Nrs. 5, 6, 11, 12, 13, 14, 74, 84, 85, 88, 89, 94-97, 115 and 116 are Moroccan)]; E. Lévi-Provençal, Un chant populaire religieux du Dyabul Morocain, in Revue Africaine, 1918; H. de Castries, Les gnomes de Sidr, Abd el-Rahman al-Majdoub, Paris 1906; on the poetry mālān in general, cf. Abū ʿAli al-Gawthi, Ḳądī al-Ḳiṣṣa ʿan Abū ʿAli al-Qisw, Algiers 1904, p. 49-93; S. Barnay, Notes d'ethnographie et de linguistique nord-africaines, Paris 1924 (songs of women and children); L. Brunot, Proverbes et dictons arabs de Kabyl, in Hespéris, 1928 (with Moroccan bibliography of the subject).

III. Other Languages. A sketch of the languages of Morocco which only took account of Berber and Arabic dialects would be incomplete, for three other elements of secondary importance have to be considered:

a. Classical Arabic, the official language is used only in writing, for sermons, lectures and conferences; it is never the language of conversation. But as religious studies are considerably developed in the towns (especially Fās) and also among the Jūlad (Kūrānic studies and especially ḥārān), many words of classical Arabic have been introduced into the popular dialect by the educated classes. The phonetic peculiarity to notice in borrowed classical words is the retention of the short vowels of the classical language, as a result of the process of elongation; e.g. classical ǧāhir, plur. ǧāhir, "decreet of the sultan", borrowed by the popular dialect in the form ǧāhir, whence a dialect plural ǧāḥhar. Several Kūrānic expressions or phrases of exegesis hence passed into everyday language as adverbs: ḥālā ḥalē "guilty" (taken from Kūrān vi. 153), bêtālā biḥālī "slowly", lit. "in commenting on", ʿawālīs "perhaps". Morocoo, as a whole being little arabised, seems incapable of borrowing a part of the classical vocabulary and adapting it to its own dialect. Its borrowings from classical Arabic almost always look like borrowings from a foreign language.

b. Spanish was the only language spoken by many of the Muslims of Spain, who in the xvth century and especially in the xvi th took refuge in Morocco, mainly at Tetwān and Rabat-Salé. Mouette, who was taken a prisoner to Morocco in 1670, says that Spanish was as common there as Arabic; his remark is probably true only of the towns already mentioned. The descendants of these emigrants from Spain later learned Arabic and forgot Spanish, under the influence of Islamic culture. Not having been subject to the latter influence, the Jews of Spanish origin still speak an archaic Spanish, sprinkled with Arabic terms moulded to the flexions of Latin morphology.

c. At the present day, in the palace of the sultan, many servants of both sexes still speak Sudānese dialects, but these seem to have had no influence on the Arabic dialects of Morocco. No trace has so far been found of the existence in Morocco of secret languages; one could hardly put in this category the argots of certain guilds (butchers) nor those of the students, the originality of which consist simply in transposing certain letters of each word of the ordinary language and in the addition of certain prearranged syllables. (Georges S. Colin)

VIII. INTELLECTUAL LIFE.

More especially since the end of the middle ages, Morocco has occupied a place by itself, often important, in the history of Muslim civilisation. From the point of view of intellectual life, it was for long under the tutelage, more or less marked, of neighbouring countries, and it was only from the time it became an independent state with well-defined frontiers that it began to show independence in this respect also. The great activity at the centre of learning in Arab Spain down to the end of the xiii th century had undoubtedly an influence in Morocco, but it was after the return of the Iberian Peninsula to Christianity, that, owing to the migration of refugees from Spain to Morocco, where there happened to be ruling princes anxious to further Islamic studies, it was able to preserve the last and only centres of study in the Muslim west. In any case, in spite of the relatively large number of scholars which it has produced in various branches of ʿilm, this country is far from having inherited in the eyes of the rest of Islam the reputation and intellectual prestige, which Spain enjoyed when it was a Muslim country. However, it may be said that the towns of Morocco have always held in recent centuries a large proportion of men of letters, much attached to their traditional culture. Lastly, it may be noted that this culture, to the end of the xiii th century at least, never allowed the slightest place for modern sciences, the study of which, if it has gradually become more or less established in the Muslim east, has never interested the west.

The characteristic feature of this culture, which
is essentially founded on religion, is that it has remained unchanging. In this country, where only a few years ago tradition strictly regulated all acts of public and private life, it is not surprising that the intellectual ideal has always remained the same. It has already been remarked that the Moroccan faših of to-day, whether he be magistrate, teacher, or official of the Sharifian government, possesses the same stock of knowledge as a faših of the periods of the Marinids or Saʿdians. The same instruction has been given him and by the same methods. He has received first of all an elementary education in the Kurʾānic school [see Mafkar], he has learned the Kurʾān by heart, often completely, and some of the elements of grammar. Next he became a student (jaṭīb), and the faših al-ʿilām, which he studied, is governed by no rules or programmes other than the traditional ones.

He first of all studied the “mother-works” (um-mahār), compendia made to be memorised readily, on theology and grammar (usualy the Muḥāk Maʿmūn of Ibn Ādhir and the Aqīyrwānī). It was only then that he entered upon a more thorough study of more advanced texts, usually commentaries (sharīk) or glosses (ḥāṣiyā) on works (maṭaʿ) of established reputation and exclusively Islamic in character. The whole trend of his studies is toward a better knowledge of theology and law.

The result is that in most cases in Morocco men of learning are almost entirely jurists and that they differentiate between purely Islamic sciences (wilāma) and profane learning (fiṣāh) with some contempt for the latter. We understand also why the part played by Morocco in Arabic literature is primarily in the domain of subjects directly connected with the Kurʾān and the Sunna, theology, law and ʿaṣār.

The centres of learning have varied with periods and historical circumstances. The early ones seem to have been the points nearest to Spain, Ceuta and Tangier. The foundation of Fās and the building in this city of the great Mosque of the Kairawānīs (Qāmiṣ al-Karawīyīn) facilitated the establishment of a centre of culture in the interior.

A little later, Marrākch, the capital of the Almoravids and of the Almohads, became by desire of its rulers the centre of attraction for Maghribi scholars and even for a certain number from Spain. But it is from the Marinid dynasty, who saw in the development of educational centres in Morocco a means to make themselves popular in the country and to acquire prestige in the eyes of the Muslim world, that the rise of Fās as an intellectual centre dates: it was the metropolis of learning in the country from the sixteenth century. Not only did the Marinid princes make it the political capital but by the foundation of a series of colleges or madrasas (in Morocco: madaʿa) around the Qāmiṣ al-Karawīyīn and mosque of New Fās, they were able to attract to this city a host of students from all parts of the country and to give it the renown for learning, which it still jealously claims to-day. In the Marinid period, madrasas were also multiplied outside Fās: Mekez, Salé and Marrākch had their own, which shows that regular education was given in these towns.

In addition to the part played by the madrasas, there was the activity of the zāwiyyas, directly connected with the development of maraboutism and sharīfism in the country in the period when the Spaniards and Portuguese were trying to establish themselves in Morocco in the sixteenth century. The zāwiyyas, religious centres, headquarters of the ḍīḥād, naturally became centres of teaching. At the time when Fās could only with difficulty keep its character as the principal centre of learning in the country, the zāwiyyas, in which teaching was carried on, became more and more numerous, e.g. the zāwiyya of al-Dilā in the Middle Atlas, the zāwiyya of Tāmārt in the land of Darā and the zāwiyya of Wazzān in the north. The most famous scholars were frequently either heads of brotherhoods or šaṭīḥ, who taught in the mother-house of their order.

We do not intend here to give a detailed sketch of the Arabic literature of Morocco, but will be content with a few general indication-and names distinguishing where possible, between Islamic and profane sciences.

It was not till the Muslim west adopted the Mālikī rite that Morocco began to produce work in the domain of fiṣāh in close accord, a already mentioned, with the school of Spain. In this period of intellectual independence, the relations between the two countries were continued and the Maghrībī students, down to the eighteenth century considered a sojourn in Cordova, Murena or Valencia necessary to finish their course. The east did not yet seem to exert the attraction that it did later. This period, besides, the Islamisation and Arabisation of the berber masses was still too recent. Only a few names may be mentioned for this early period, Darās b. Ismāʿīl, of whom much is recorded is legendary; the famous reformer Ibn Ṭumār [q.v.], creator of the Almohad movement and author of several ṣaḥīḥ or ʿaṣār on his teaching; the ʿaṣār ʿIyād [q.v.], born at Ceuta in 476 (1083), d. at Marrākch in 544 (1149), author of numerous works on Muslim learning of which the most famous are the Kādāb al-Muḥājīr and the Maghārīb al-Muṣār with a collection of biographies of learned Mālikīs, entitled al-Muṣdārīk.

During the modern period, on the other hand, the number of learned Moroccans becomes more and more considerable. The best known are for Kūrāt: Ibn Barri (eighth century A. H.); Ibn Fakkāh (ninth century); the scholar of Meknūn Ibn Ghāzī (919); ʿAbd al-Kaḥmān Ibn al-Kaḥī (1082); ʿAbd al-Kaḥmān b. ʿIdris Mandār (1179); Muhammad b. ʿAbd al-Sālim al-Ṭāfī (1248); Ṣahīḥ: Vahāʾ al-Saʿrawādī (808); Sukkān al-ʿAṣārī (956); Ṣāḥib al-Dīrīnī (991) Muhammad b. Khāsim al-Kaṣārī (1012); ʿIdris al-Ṭarāqī (1228); for ʿaṣār: Abu ʿIṣāḥān al-Suṣuṭī, commentator of the Awnul-munawwīn; Ibn al-Ṭazīlī [q.v.] and ʿAlī ʿAṣārī and ʿAlī ʿAṣārī (ninth century) commentators of the Kūrāt of Ibn Abī Qalūb al-Kairawānī; al-Walāsī (995); al-Maḥfūz (995); ʿAbd al-Qaṭīr (1040); ʿAbd al-Qaṭīr (1072); for the science of the Mālikī law: al-Makki (1087); Ibn Zakari (999). Their works have for the most part been recorded and will be found detailed either in Broekelmann, G. A. L. or in Benchemen's work on the individuals mentioned in the Liqāsī of ʿAbd al-Ṣaʿīd al-Ṭāfī. Only a small number have found a place in eastern libraries; but on the other hand, they all form the foundations of the collections of manuscripts formed and preserved in the imperial palaces and mosques of Morocco.

Some Moroccan scholars have written works on ʿaṣār or collections of poems, in addition to books of a strictly Muslim character. None of
them can claim any great originality and purely literary dwains are rare. Poetry, as a rule — when it is not didactic (tulūs) — is religious or mystic. At the courts, there were always a few literary men maintained by the princes, who were the pomegranists, often very loyal, of their patrons.

It is at the courts also, especially from the xivth century, that we find the few historians who have given us original chronicles or compilations. Their works, planned on a singularly curious conception of history, have nevertheless the merit of giving us the only detailed information about the political history of the country in the period of the author or immediately preceding it. Those which date from the Middle Ages are however much the best. The kind of work not only did not improve later, but became simply dry chronicles in which events are related in a bare and colourless fashion.

The only historians of Morocco — if we except the Iberian genealogists about whom we do not know very much — are contemporaries of the Almoravid dynasty. A little later, the Almohads found a historian in the person of a companionship of the Marinid I. Tūmār, Abū Bakr al-Baidhāqī al-Sanhājī, the interest of whose memoirs contrasts strikingly with many later chroniclers. Alongside of the work of al-Baidhāqī may be placed the chronicles of Ibn al-Kaṣīf and of Abū al-Walid al-Marrakushī as of high value. But it was in the Marinid period that the historian found most favour in Morocco. Leaving out Ibn Khaldūn, whom Morocco is not the only one to claim, we may mention Ibn al-Dhahar, a scholar of Marrakush, to whom we owe a history of North Africa and Spain, the Bajān al-Mughribī; that of Ibn Abī Zarī, author of a history of Fās and the Moroccan dynasties, Rawḍ al-Kāfirī; Ibn Marrāk, author of the Muradd, a monograph on the sultan Abū al-Ḥasan ʿAṭī; Ibn al-Ḥāfiz of the family of the kings of Granada, the author of Rawdāt al-Nasirīn. Under the Saʿdīans, the principal historians were al-Fīsīḥaḍī, al-Ibrāhīm, author of the Nasbat al-Ḥādīth; finally under the ʿAlawīs, al-Zayyān and Aksūnī.

Geography is represented in modern Moroccan literature only in the form of rihās or accouts of the travels of pilgrims, in which the description of the country passed through only occupies an insignificant place. Nevertheless, the geographer al-Idrīsī [q.v.] and the great traveller Ibn Battūta were of Moroccan origin.

The biographical literature of Morocco is considerable. The collections of marāḥī [q.v.] of saints, monographs dealing with families of shūrfā or religious brotherhoods are abundant, especially in the modern period. There are also collections by town or century, some of which are of a certain interest, even from the point of view of history. All these biographies have been surveyed in E. Lévi-Provençal, Les Historiens des Chorfa. The most notable biographers down to the middle of the xivth century are Ibn ʿAskar, author of the Dawkat al-Naqīṣ; Ibn al-Kāfī, the author of the Durrat al-Muḥādīl the Mauhūt al-Ḥarith; the historian al-Ibrāhīm, author of the Sabūʿat man intaṣar; and al-Kāfī, author of the Naḥīr al-Makhtūnī and the Ilīsāt al-Durar.

As to medicine and natural science, Morocco down to the xivth century was closely dependent on Spain. The physicians of the Almoravid and Almohad princes were from Spain, like Ibn Bāḍja (Avenpace), Ibn Tufail and the celebrated Ibn Rushd (Averroes) and Ibn Zuhr (Avenzoar). In the modern period, we find at the courts of the sultans several physicians of Moroccan origin who have left works. The chief were, in the Saʿdīan period: Abū Muḥammad al-Kāsim al-Wazīr al-Qushānī, in the Alawī period: Ibn Shuṭṭrīn, Abū al-Walāḥ Maḥir Abū Darā', Abū Allāh b. ʿAzāz al-Marrakkushī, Abū al-Walāḥ Maḥir Abū Darā', Abū al Salah al-ʿAlamī. Finally, two famous Moroccans studied the exact science of the xivth century: Abū ʿAli al-Ḥasan b. ʻUmar al-Marrakushī, author of a treatise on astronomical instruments, part of which has been translated by Sèdillic, and Abū al-Rahmān al-Banātī, to whom we owe several works on arithmetic, geometry, algebra, astronomy, astrology and alchemy.

At the end of the xivth century, the reign of Mawlānī al-Ḥasan was marked by a kind of renaissance in Muslim studies in Morocco, particularly characterised by the need which writers felt of getting their works printed to make them more widely known. The lithographic presses of Fās acquired a certain importance at this time and became the means of widely circulating only in manuscripts. A little later, there appeared at Fās the three volumes of the Sallāt al-Anfās of Abū al-Qādir al-Kattāntī [q.v.], an excellent biographical dictionary of the celebrities of the northern capital. At the same time, there was published in Cairo the great Moroccan history of Abū al-Khālid al-Naṣīrī al-Salawi [q.v.] entitled Kitāb al-Iṣṭiṣāḥ li-Abbār Dusayl al-Maṣhirī al-Aṭābī.

The establishment of the French protectorate in Morocco and the remarkable spread of French civilisation in the large towns have already profoundly modified the intellectual ideals of the younger generation in Morocco. It is however still too early to foretell the orientation that Arabic literature will take in this country in the years to come.

MORÓN, Arab. Mawzār, a little town in the south of Spain, on the right bank of the Guadaira and on the foot of the Sierra de Morón to the S.W. of Cordova and S.E. of Seville. It was in the Muslim period the capital of a khāra
or district and an agricultural centre with numerous olive-groves. At the beginning of the tenth century, it was one of the centres of resistance of the famous rebel 'Umar b. Ḥafṣūn; its citadel was taken by the troops of 'Abd al-Rahmān b. ʿAbd al-Muṭṭalib in 311 (923). In the next century during the period of the petty kingdoms of the reṣa taṣfān, Morón was the capital of a little Berber dynasty, the Bābāl Dāmar, which ruled in the region of Gades in Tunisia. The first member of the dynasty to declare his independence in 433 (1041) was Muḥammad b. Nūh; his father Nūh b. Āba Tātīb had lived in Morón from 1031 without actually recognising the government of Cordova. Muḥammad b. Nūh soon joined the jealousy of the ʿAbbāsid of Seville al-Muʿtādī who made an attempt on his life. He died in 449 (1057). His son Maʿnād b. ʿAbd al-Dawla, who succeeded him, was soon besieged in Morón by al-Muʿtādī and in return for his liberty surrendered the town in 458 (1066). Morón and its territory were annexed to the kingdom of Seville and henceforth shared the fate of the capital.

**MOROS.** [See MOORS.]

**MOSTAGANEM (MOSTAGHNUM), a coast town in Algeria, eight miles E. of the mouth of the Šekel (S E. Long. [Greenwich]) does not occupy the site of any known ancient town. There is no natural harbour here; two capes, not particularly well marked (Kharaba and Salamander), leave vessels without protection against winds from the north and west. It is therefore not as a port that al-Bakrī (10th century) mentions Mostaganem for the first time. He describes it as a town situated "not far from the sea" (it is less than a mile away) living on the produce of its rich territory, notably the cotton plantations. From this time onwards it was surrounded by a wall which strengthened its defences. The old town occupies a triangular plateau formed by the sharp bend of the ʿAin Sefra and the wall runs along the top of the ravine. On the point of this natural stronghold, the Almoravid Yūsuf b. Tāšṭīn is said to have built in 1082 a fortress which was later called Burdja al-Majlāḥ, from the name of one of the tribes of the neighbourhood, and is now a prison. Like the other towns of the coast, Nedroma or Algiers, Mostaganem was probably given a small Almoravid garrison. Thus strengthened, the town would serve as a place of refuge against an attack from the sea and one could keep at a distance the Berber tribes of the hinterland, who belonged for the most part to the Maghrībī confederation. It must thus have developed to some extent. In the middle of the 11th century, Idrīsī tells us that it had bazaars and baths; he emphasises the abundance of the water which irrigated the gardens and orchards and drove mills.

The name of Mostaganem does not figure in history throughout all this period when the Almohads in theory held the central Maghrib. The decline of the Almohads enabled the Maghrawa to become completely masters of the country. In 1267 and 1271 the Zayyānī sultān of Tlemcen Yaghmorāsīn reduced these turbulent tribes and incorporated their lands in the empire which he had founded. In 1580 (1581) he entrusted the government of Mostaganem to one of his cousins, al-Zāmī b. Yāḥṣīb, a descendant of one of the collateral branches of the family of the Bābāl Zayyān, in spite of the lack of confidence he had in those relatives whom he had deprived of the throne. These fears proved well founded. Al-Zāmī, having roused the Maghrawa to rebel, declared himself independent. Yaghmorāsīn had to march on Mostaganem; he blockaded the town strictly and the rebel surrendered after obtaining permission to cross to Spain.

Like all the coast region, Mostaganem in 735 or 736 (1335–1336) passed to the Merinid Abu ʿl-Ḥasan, who was engaged in the siege of Tlemcen. In 742 (1340) the victorious sultān built a mosque in Mostaganem. We have an inscription attesting this foundation of the interregnum of the Moroccan princes. Regained by the sultāns of Tlemcen, the town suffered disastrously from their weakness. The Saʿwād Arabs of the great Zoghība confederation became undisputed masters of the whole district. Mostaganem led a precarious existence. Leo Africanus at the beginning of the 16th century says that it occupied only a third of its former area. He credits it with 1,500 hearths, however, tells us of the weavers and of the roadstead to which ships from Europe came. He says the river runs "through the city", which shows that in addition to the old stronghold on the left bank there were now quarters on the right bank. In the Turkish period we know of two suburbs: Tibdīt (the New) and Matmor (the Old). In 1516 Khabar al-Dīn [q.v.] considerably strengthened its defences. Shaw at the beginning of the 18th century speaks of the citadel (the Fort of the East) which, built on a height, commanded the town and vicinity. In 1830 the garrison consisted of some hundreds of Turks and Kologhīs. The French took them into their service and put them under the command of the Kādī l-jorāhim. Distrusting the loyalty of the latter and thinking he had an agreement with the Medjāhīr, an undisciplined tribe of the neighbourhood (general Desmichels occupied the town in 1833. The troops whom he stationed there were attacked by ʿAbd al-Kādir. The vaxuous results of the treaty signed by Desmichels with the Emir forced Clauzel to retake Mostaganem (1835). Under Bugeaud, Mostaganem became the point of disembarkation and the centre of operations against ʿAbd al-Kādir. It was there that in 1847 the first battalion of Algerian Tirailleurs (Turcos) was raised, and the town has since been an important centre for recruiting native troops.

Mostaganem has developed considerably since the early days of the French occupation; it has now over 27,000 inhabitants. Its harbour, which owes nothing to nature, has been improved by two jetties which still afford only a rather mediocre shelter to shipping.

MOSTAGANEM — MOSTAR

MOSTAR, the capital of the Herzegovina in the kingdom of Jugoslavia, one hundred miles S.W. of Sarajevo, on the Sarajevo—Mostar—Dubrovnik railway. By the new (Oct. 3, 1929) division of Jugoslavia into nine banats, Mostar passed to the coast banat, the capital of which is Split (Spalato). The picturesque town lies two hundred feet above sea-level on both banks of the Neretva (Narenta) between the slopes of the Podveležje and the Hum. The old quarters of the town (Konak, Caršija, etc.) are in the east, the new in the west. In 1929, the number of inhabitants was 18,938 (in 1931 a little more: 18,760). Mostar covers an area of 16 square kilometres, has 2,916 houses, 33 mosques, 2 Serbian Orthodox and one Roman Catholic church. Mostar has a district mutfaq and a žanar judge (žanj). Its trade is considerable as is its production of fruit, wine and tobacco. The climate is warm and windy.

In the time of the Roman empire, there was a colony in the town of Mostar, which was destroyed during the period of migrations. In the centuries following, the immigrant Slavs conquered the Zabunije district with its capital Blagaj (near the modern Mostar). According to the Dalmatian writers Ortinin and Lucarelli (both at the beginning of the xviith century), the new town of Mostar was founded in 1440 by Radivoj Gost, a vassal of Stefan Vukčić Kosača, afterwards Duke of St. Sava. In historical documents the earliest mention is in 1452 of the two forts on the Neretva bridge (de castelli al ponte de Neretva); the name of the town itself is not found till 1499. It was only after the Turkish conquest of the Herzegovina (1483; cf. v. Hammer, G. O. R., i. 628), which resulted in the decline of Blagaj that the new settlement began to develop rapidly, first as an important strategic point in the Neretva valley, then as a prosperous commercial town in addition. Since it grew up around a wooden bridge, it was called simply Most (bridge), Mostići or Mostar, properly Mostari (plur. “the bridges”). This “place of the bridge” was by 1522 the residence of the Turkish sandjak-beg of the Herzegovina, who had previously lived in Foča. According to Hādjiî Khašıf, the crossing of the Neretva was exceedingly dangerous: the wooden bridge, being on chains, had no piés and swung so that “one only crossed it in fear of death”. The inhabitants therefore petitioned Sultan Sulman to have a stone one built in its place. The architect sent by the Sultan, the celebrated Sinan (q.v.), is said to have declared impossible to build a bridge at this spot, whereupon a local architect built the fine bridge which crosses the river in a single bold arch, thirty yards in length and sixty feet high. This is said to have been done in 1544—1567. The two Turkish chronograms given by Ewliya Čelebi and Ževecen and Köprisli Bey, both given actually give this date. This bridge not only gave Mostar its name but formed its chief sight, as it still is. The French traveller A. Poullot in 1658 says that its “fabricque est plus hardie, sans comparaison, & des plus d’étrangeté que n’est celle de Rételle à Venise, que yzelle y se estimé est une merveille”. E. Grünzweig calls it Herzegovini (hereafter quoted as: Gl. s. m.), xx. (1908), 49.

A modern traveller regards the old bridge at Mostar as the finest in the whole world (R. Michel, Fahrten in den Reichslanden, Bilder und Skizzen aus B. und der H. [Vienna and Leipzig, 1912], p. 31). In his earlier book on Mostar he describes this bridge as a “crecent in stone”. The building of the bridge was often ascribed to the Romans and indeed its foundations perhaps date from them but the modern bridge undoubtly dates from the Turkish period and “is the work of Dalmatico-Italian architects” (J. de Asboth, An official tour through Bosnia and Herzegovina, London 1890, p. 257). Ewliya Čelebi visited Mostar in 1075 (1664—1665) and gives in his ituary a number of details about the town, e.g. that it has fifty-three maqṣālas, three thousand and forty solidly built houses of stone, three hundred and fifty shops and forty-five mosques. Of the latter he mentions eight by name: 1. Old mosque in the Caršija, built in 878 (1473); 2. Hādjiî Mehmëd-beg mosque, built in 905 (1505); 3. Masjīd of Hādjiî ‘Alî-beg in the Caršija, built in 1016 (1607); 4. Deftedar-pasha mosque, built in 1017 (1608); 5. Koški Mehmëpasha mosque, built in 1027 (1617); 6. Ibrāhīm-beg, built in 1044 (1634); 7. Rūznâmadeji Ibrāhīm-Efendi-mosque and 8. Hādjiî ‘Ali mosque. For the two latter mosques neither the chronogram nor the year of building is given. The finest and largest of all is the mosque of Hādjiî Mehmëd Bey, which is usually called “Karagyoğbegova džamiya”. The monograph, quoted below, by Pecz gives the names of twenty-seven mosques and twenty-six vakufs (vakf) and in each he mentions whether their foundation records are preserved or not.

It is the course of the xviith and xviiith century Mostar was several times threatened by Venetian troops (1652, 1693, 1717). At a late date (1763), the Herzegovina was incorporated in the vilâyet of Bosnian and Mostar was only the residence of the musellim. This lasted till 1832, when the land was again made a vilâyet and Mostar became the headquarters of the newly appointed Herzegovinian vazir ‘Ali Paša Rizvanbegović.

During the Turkish period Mostar produced a number of men of note in Turkish and Muslim literature and learning. Of poets we may note: 1. Dīyāzî (d. 972 = 1564); 2. Derwīsh Paša, (Bayezidagi; 1599 and in 1601 governor of Bosnia); 3. his son Ahmed-beg Sālḫī and Ahmed Rūzštî (born 1047 = 1637). The following learned men were natives of Mostar: 1. ‘Ali Dede b. Muṣṭafā (d. 1007 = 1598); 2. Muṣṭafā Ayyūbîzadeh, called Sheyyūq (d. 1119 = 1710). Muftî of Mostar, commentator of various works; 3. Ahmed Efendi Mostari (Mostarac d. 1193 = 1770), whose father (Muṣṭafā ‘Ali) were very popular in Bosnia, and 4. Muṣṭafā Ṣıldık (Karašbeg), Mufti of Mostar (murdered
in 1878), whose comprehensive 
Haddiya... 'ala Mihrāt al-Uṣūl was printed in Sarajevo (1316).

A few days after the murder of the last-named, Mostar was taken without resistance by the Austrian troops (Aug. 5, 1878) and on Oct. 5, 1898, annexed to the Danubian monarchy, in which it remained till 1918. During these forty years (1878–1918) Mostar was frequently the centre of Muslim (and of Serbian Orthodox) opposition to the government. In Mostar originated also the Muslim agitation for autonomy in religious affairs (cf. i., p. 760), which went on for ten years (1899–1909). The leader of the movement, ʿAli Fehmi Dabić, the then mufti of Mostar, had to escape to Constantinople at the end of January 1902, where he was appointed professor of Arabic literature in the University, in which capacity he published among other things his book Hujn al-Ṣaḥāba fi ʿArāb ʿAqlīf al-Ṣaḥāba (Constantinople 1324). In connection with the struggle for religious autonomy, which was published from 1906 (the Muslim political paper Muslīnāt) (in spite of its Arabic title written in the Serbo-Croat language). Shortly before the World War I, Muslim family papers Biser ("Pearl") (from 1912) was started in Mostar and the Jezigranska biblioteka (Muslib Library) which attained thirty volumes.

Since the dissolution of the Austro-Hungarian Monarchy in 1918, Mostar has belonged to Jugoslavia.

MOŠUL (AL-MAWSIL), the capital of Diyar- Rabi’ā (q.v.) on the west bank of the Tigris, opposite the ancient Niniveh.

Whether the town already existed in antiquity is unknown. E. Herzfeld (Archaeol. Reise, ii. 207, 259) has suggested that Xenophon's Mēṣīlā reproduces its old name and that we should read Mēṣīlā (= Mawsīl); but against this view we have the simple fact that this town lay on the east bank of the Tigris (P. H. Weissbach in Pauly-Wissowa, R. E., xv., col. 1164).

The Muslims placed the foundation of the town in mythical antiquity and ascribed it to Kēwānd b. Bīwarāsp Adamhāk. According to another tradition, its earlier name was Khšurān. The Persian satrap of Mošul bore the title Būd-Ardashir, so that the official name of the town was Būd-Ardashir (Le Strange, Eastern Caliphate, p. 87; Herzfeld, op. cit., p. 208). Lastly Bar Bahlul says that an old Persian king gave it the name Bih Hormez-Kowād (G. Hoffmann, Aeusser an syr. Akten pers. Martyrs., p. 178).

As the metropolis of the diocese of Aṯūr, Mošul took the place of Niniveh whither Christianity had penetrated by the beginning of the second century a.d. Rabban Īsho'-yāhūb called Bar Kāsār about 570 a.d. founded on the west bank of the Tigris opposite Niniveh a monastery (still called Mār Īsho'yā) around which Khšurāw II built many buildings. This settlement is probably the fortress mentioned in the Syriac chronicle edited by Guidi and H. Meinards (according to Herzfeld, citadel on the opposite bank) (Nicolai, S. B. Ak. Wien, xxvii., fasc. ix., 1893, p. 209; Sachau, Chronik von Arbel, chap. iv., p. 48, i; Heiskel, op. cit., p. 208) which later was developed into a town by the Arabs (Chronicle of Sefr, at the end).

After the taking of Niniveh by ʿUtba b. Farkad (20 = 641) in the reign of ʿOmar b. al-Khaṭṭāb, the Arabs crossed the Tigris whereupon the garrison of the fortress on the west bank surrendered on promising to pay the poll-tax and obtained permission to go where they pleased. Under the same caliph, ʿUtba was dismissed from his post as commander of Mošul and Hariljama b. ʿAradja al-Bāriʾi succeeded him. The latter settled Arabs in houses of their own, then allotted them lands and made Mošul a camp city (miṣr) in which he also built a Friday Mosque (al-Balāḏurī, ed. de Goeje, p. 332). According to al-Waḍī̀kī, ʿAbd al-Malik (65–86) appointed his son Saʿād as governor of al-Mawsil while he put his brother Muhammad over Arminiya and al-Djazīra. According to al-Muʿṣāfī b. Tāʾūs on the other hand, Muhammad was also governor of Ādharbājīyān and al-Mawsil, and his chief of police Ibn Talid paved the town and built a wall round it (al-Balāḏurī, op. cit.). His son Marān b. al-Mawsil is also described as a builder and extender of the town; he is said to have organized its administration and built roads, walls and a bridge of boats over the Tigris (Ibn Fākīh, ed. de Goeje, p. 128; Yākūṭ, Maḏbaḥa, ed. Wustenfeld, iv. 682–684). The foundation of a Friday Mosque was also ascribed to him. Mošul became under him the capital of the province of al-Djazīra. After Mutawakkil's death the Khārūjī Musāwir seized a part of the territory of Mošul and made al-Hadīthja his headquarters. The then governor of Mošul, the Khurayj ʿAkbā b. Muhammad, was deposed by the Taḏḥibī Ayyāb b. ʿAbd who put his own son Hasan in his place. Soon afterwards the ʿAzdī ʿAbd Allah b. Sulaimān became the governor of al-Mawsil. The Khārūjī took the town from him and Musāwir entered into possession of it. Muʿtamicj appointed the Turkish general Aṣṭāgin governor of the town, but in Dhuʾmādād I 259 the latter sent his son Askūṭārin there as his...
deputy. The latter was soon driven out by the citizens of the town who chose Yahya b. Sulaiman as their ruler.

Haitham b. 'Abd Allah whom Asadagin then sent to Mosul had to return after achieving nothing. The Taghlibi Ismail b. Aiyub whom Asadagin sent with 20,000 men against Mosul, among whom was Hamdan b. Hamdun, entered Mosul after winning a battle, but was soon driven out again.

In 261 the Taghlibi Khidjar b. Ahammad and in 267 Ismail b. Kandjagh was appointed governor of Mosul by Mutamid. A year after Ismail's death, his son Muhammed sent Hurun b. Sulaiman to Mosul, but when he was driven out by the inhabitants he asked the Banu Sahibn for assistance and besieged the town with him. The inhabitants led by Hurun b. 'Abd Allah and Hamdan b. Hamdun after an initial victory were surprised and defeated by the Sahibn; shortly afterwards Muhammad b. Ismail was deposed by the Kudari b. Dawud.

When Munadid became caliph in 279, Hamdun (the grandfather of Saff al-Dawla) managed to make himself very popular with him at first, but in 282 he rebelled in Mosul. When an army was sent by the caliph against him under Usuf and Naasir, he escaped while his son Husain surrendered. The caliph of Mosul was stormed and destroyed and Hamdun soon afterwards was captured and thrown into prison. Naasir was then ordered to collect tribute in Mosul and thus came into conflict with the followers of the Kharijites Hurun; Hurun was defeated and fled into the desert. In place of Turkam, who was imprisoned, the Caliph appointed Hasan b. 'Ali governor of Mosul and sent against Hurun, the main cause of the strife, the Hamdunid Husain who took him prisoner in 283. The family thus regained the caliph's favour.

When after the subjection of the Kharijites, raiding Kurds began to disturb the country round Mosul, Muktafi again gave a Hamdunid, namely Husain's brother Abu 'l-Hajjaj 'Abd Allah, the task of bringing them to book, as the latter could rely on the assistance of the Taghlibis settled around Mosul, to whom the Hamduns belonged. Abu 'l-Hajjaj came to Mosul in the beginning of Muharram 293 and in the following year subdued the Kurds whose leader Muhammad b. Bhul submitted and came to live in Mosul.

From this time the Hamduns [q.v.] ruled Mosul, first as governors for the caliph, then from 317 (Nasir al-Dawla Hasan) as sovereign rulers.

The 'Uqailids who followed them (386-409) belonged to the tribe of the Banu Khaich. Their kingdom, founded by Husain al-Dawla al-Mukhallad, whose independence was recognised by the Buyid, extended as far as Taki (Ishik), al-Madain, and Kifia. In 489 (1095-1096) Mosul passed to the Saljukids.

The town developed considerably under the Atabeg 'Imad al-Din Zangi who put an end to Saljuk rule in 521 (1127-1128); Mosul, which was for the most part in ruins, was given splendid buildings by him; the fortifications were restored and flourishing gardens surrounded the town. Under one of his successors, 'Izz al-Din Mansur I, Mosul was twice unsuccessfully besieged by Saladin (1182 and 1185 A.H.); after the conclusion of peace 'Izz al-Din however found himself forced to re-cognise Saladin as his suzerain.

The town was this time defended by a strong

citadel and a double wall, the towers of which were washed on the east side by the Tigris. To the south lay a great suburb, laid out by the vizier Muhammad al-Din Karmaz (d. 595). From 607 his son Badr al-Din Lu'lu' [q.v.] ruled over Mosul first as vizier of the last Zangids and from 631 as an independent ruler. In 642 he submitted to Hullagi and accompanied him on his campaigns, so that Mosul was spared the usual sackings. When however his son Malik Salluh Ismail joined Baibars against the Mongols the town was plundered in 660 (1261-1262); the ruler himself fell in battle (van Berchem, Poeschrijven f. Th. Noëldé, 1906, p. 157 f.).

The Mongol dynasty of the Djalai succeeded the Ilkhauns in Baghdad and Sultan Shawk Uways in 756 (1356-1355) incorporated Mosul in his kingdom. The world conqueror Timur not only spared Mosul but gave rich endowments to the tombs of Nabi Yunus and Nabi Lijdji, to which he made a pilgrimage, and restored the bridge of boats between Mosul and these holy places.

The Turkoman dynasty of the Aq Koyunlu whose founder Baba' al-Din Karai Othman had been appointed vizier of Diyar Bakr by Timur, was followed about 920 (1514-1515) by the Persian Safawids. After long fighting the Ottomans in 1047 (1637-1638) finally took the town from them. In 1079 (1669) it was visited by a severe earthquake, in 1156 (1743) besieged by Nadir Shah Afshar and heroically defended by Christians and Muslims. It was then under a Pasha of the local family of the 'Abd al-Djalal who had ruled the town for a long period, fairly independent of the Porte. In the 18th century Mosul was an important provincial town of the Turkish empire. After the World War the vilayet of Mosul after long negotiations was placed in the mandated territory of Iraq. The town has now about 70-90,000 inhabitants.

The Arab geographers compare its plan to a headcloth (talasih), i.e. to an elongated rectangle. Ibn Hawqal who visited Mosul in 358 (968-969), describes it as a beautiful town with fertile surroundings. The population in his time consisted mainly of Kurds. According to al-Makdisi (c. 375 = 985-986), the town was very beautifully built. Its plan was in the form of a semi-circle. The citadel was called al-Murabba'a and stood where the Nahr Zubaid canal joined the Tigris (now 'Ikhla' or Bash Tahliya; cf. Herzfeld, op. cit., p. 209). Within its walls were a Wednesday market (Suk al-Isra'itin) after which it was sometimes called. The Friday Mosque built by Marwan stood on an eminence not far from the Tigris to which steps led up. The streets in the market were for the most part roofed over. Al-Makdisi (op. cit., p. 135) gives the eight main streets of the town (discussed in Herzfeld, op. cit., p. 209). The castle of the caliph (Kasr al-Khalifat) stood on the east bank; half a mile from the town and commanded Nimrud; in the time of al-Makdisi it was already in ruins, through which the Nahr al-Khawarsi flowed.

Ibn Lubbaih visited Mosul on 22nd-26th Safar 580 (June 4-8, 1184). Shortly before, Nür al-Din had built a new Friday Mosque on the marketplace. At the highest point in the town was the citadel (now: Bash Tahliya); it was known as al-Hadba' "the hunch-backed" and perhaps as the synonymous al-Difa'da (G. Hoffmann, Auszug aus
MOZARABS, the name given in the middle ages to those CHRISTIANS who lived in districts under Muslim rule and bore the stamp of Spanish Moorish culture. The word comes from the Arabic muṣarrāb, the meaning of which is exactly that of the Spanish mozárabe; the Arabic form itself is found in documents in the archives of medieval Spain.

We know that in principle at the time of conquest the new subjects of the Muslim conquerors could either adopt Islam or continue to profess their own faith, in the latter case falling into the category of tributaries (dhimmī; q.v.). The early Arab rulers of Spain showed considerable tolerance in this connection and the treaties of capitulation were definite on this point, at least if we may judge by one of them of which the text has been preserved and which was concluded between the Visigoth Theodemir, lord of the district of Murcia [9, v.], and Alī ibn al-'Azīz b. Mūsā b. Nuṣayr. This attitude of Spanish Islam to the Christians hardly altered in the centuries following until the coming of the Almoravids and Almohads. It is true there were occasional anti-Christian reactions under the first Umayyads which found vent in persecution. But these persecutions seem to have been dictated by political considerations rather than by the fanaticism of individual rulers. The Christian communities of the large towns were the most active nurseries of the nationalist movements which broke out in Spain mainly in the ninth century. Among the most important we may mention that led by the Mozarab 'Omar b. Ḥāfnūn [9, v.], which passed far beyond the limits of a purely religious movement. At Cordova in particular a few illuminati had to be sent to the scaffold because they insisted the religion of the Prophet. The Muslim judges seem to have sentenced them to the supreme penalty with considerable reluctance and the central authorities took the initiative in summoning a council, so that the church itself put a stop to the demonstrations of certain mystics like Euclio and Alvaro.

In any case in the tenth century the Mozarabs of the caliphate were living in harmony with all classes of Muslim society and were themselves considerably influenced by Arab culture. They spoke Arabic, just as the Muslims spoke the Romance language, and were acquainted with Islamic literature. The reciprocal influences were therefore considerable and were to continue so till the end of the middle ages.

As regards administration, the Christian communities of Muslim Spain under the Umayyads were under the direct authority of officials chosen by themselves from their own number and appointed with the approval of the Muslim authorities. Their head, who is sometimes given the Latin title of defensor or protector, was most frequently called Count (Comōs, Sp. Cond., Ar. kūmās). The taxes which the Christians had to pay were collected by an agent called exceptor. To settle their differences they had a special judge (Ar. kādi 'l-naẓārā or kādi 'l-faggām, Lat. cens) who administered the Visigothic code (Liber Judicium, later the Fuero Juzgo).

The Christian communities of Cordova and Seville were among the most important but were less important than that of Toledo, which was during the caliphate the residence of the metropolitain (μητρόπολις) of Spain. The clergy were under bishops (ἄρχοντες). Public worship was celebrated.
in the churches: there were monasteries (dair) with monks (rabîb) in the neighbourhood of the larger towns: for example that of Aimilii (Quadramellato) near Cordova. The history of the Mozarab of Spain is of course closely connected with the political history of Islam in Spain and with the "reconquista." But its development is mainly interesting as throwing light on the peculiar culture of Moorish Spain which remained alive even after the fall of Muslim power. The recent publication of a considerable number of documents from the archives of the cathedral of Toledo mainly of the xii and xiii centuries enables us to estimate how great was the arabisation of all classes in re-conquered Spain, which we find influencing civil, military and economic institutions and even ecclesiastical ritual (Mozarab rite). It is similarly to the Mozarab communities and their representatives who went to the north of the Peninsula that we must attribute the origin of a special art. Mozarab art, directly derived from Cordovan art and characterized by almost regular use of the horse-shoe arch and the vault.

Mshatta, a ruined palace in Transjordania.

Description of the building. The ruins of al-Mshatta (the winter camp) lie east of the Jordan about 130 miles south of Damascus and 25 east of the northern shore of the Dead Sea, near the Darab al-Hadîl, the pilgrims’ road from Damascus to Medina and Mecca. It consists of a rectangular outer wall, defended by towers at the corners, each side being 157 yards long. The entrance gateway is in the centre of the south side and is flanked by two pentagonal half-towers rising out of an octagonal base, across which runs an octagonal colonnade, the long frieze 16 feet high and over 45 yards long. This part has been taken to Berlin and is the most famous monument of early Muslim architecture and decorative art and much discussed centre of interest in Oriental archaeology. The building of the whole area within the wall was planned in three sections of which however only the central one was carried through, at least in part. This again is divided into three parts: the entrance area, the central rectangular open court and the royal residence. The plan by B. Schusl (cf. Jährbuch d. preuss. Kunstammlungen, vol. xxv., 1904) shows a gateway and an entrance hall, both of which were intended to be vaulted, and a series of surrounding rooms, of which the oblong room to the right of the entrance has been said by Herzfeld and others to be a mosque because it has a niche in it which is taken to be a mihrab. Only the foundations of the walls of this part however are still standing. In the large quadrangular court on the western side is a waterbasin built of brick and traces of a second one mentioned by Tristram on the opposite side, so that Schulz thought they were originally intended to be four for the sake of symmetry. The palace consists of a great hall with three aisles, a domed chamber and the living rooms at the sides. The walls are about five feet high, of blocks of limestone and above that of brick (21 x 21 and 27 x 27, 65 cm. thick). The rooms at the sides to the left and right of the great hall with its three aisles, are all barrel-vaulted; the smaller vaultings still exist and, like the relieving arches of the doors, are remarkable for their pointed arches. Schulz was able with certainty to reconstruct the façade which had fallen and was still lying on the ground. It consisted of three round arches on pillars corresponding to the three aisles. The hall was divided into three sections by pillars of which a few shafts and a Corinthian capital with painting and remains of gilding have been found. Holes and gutters at the bases and on the shafts suggested to Schulz that the columns had originally been taken from another building and used again here. The horizontal termination of the façade also shows that this hall was intended to have a flat, and not a basilical roof, or actually had one. To give it its height the two supporting rows of pillars had a second story of pillars placed upon them, an arrangement usual in Syrian architecture also. The quadrangular hall of audience and ceremonial, entered from the oblong hall by a second door, was covered by a dome and three half domes of brick, all of which have collapsed. Focussing on the inside of the surrounding wall shows that it was intended to build on to the sides of the palace dwellings for soldiers and other retainers. On the evidence of these projections from the wall, Schulz has prepared his reconstruction of the plan of these wings. The quadrangular surrounding walls with the round towers had barely been half built when the half-finished work was stopped. The principal motive of the great frieze at the part of the wall containing the main gateway is a zigzag pattern in high relief which forms 44 half triangles. These triangular areas are, wherever the frieze was finished, thickly covered with tendrils in low relief. In the centres of the pairs of interlocking perpendicular and suspended triangles, bosses are set in high relief decorated with acanthus rosettes. The socket of the frieze is in the form of a modified Attic base consisting of a euthynteria and two tresses. The border which frames the frieze at the sides and above consists of a leaf frieze at the foot and a second larger crowning it. According to Schulz’s photograph, before the frieze was removed, the half left of the door up to the main border was finished but the right half only up to half height of the frieze.

The patterns of foliage in the fields of the triangles show great variety. Here we follow the scheme of the official publication in the Jahrb.
The triangles A and B have within circles vines with buds picking grapes; in the apex of triangle A there is also a Chinese fabulous animal with a human head such as was very popular in Chinese sepulchral plastic art. In C the circles are interlaced and lotus flowers appear in addition to the vine-tendrils. In D—I the vines which are here more realistic grow out of vases which are flanked by lions and winged griffins; buffaloes, panthers, lynxes and gazelles also relieve the foliage. In triangle J the tendrils grow straight out of the ground; this area also has the remarkable addition of men picking the grapes. Triangle L is the first right of the door and is the last to contain animals. The areas of the triangles of the right half show a quite different style. M—T have, it is true, still vines but of the greatest, lace-like delicacy and closeness of pattern which varies from triangle to triangle. U and V lastly are filled with palm-leaves and cone-shaped figures instead of vines and crowned with spirals.

**Form and purpose of the building.** The plan is that of a hippod, i.e. the Arab type of camp, reproduced in building materials, and so called after the Lakhmids capital, with the prince’s tent or house on the central axis just as is described by Mas’ud in his account of Sarmara (cf. E. Herzfeld, Eber vorender Bericht über die Ausgrabungen von Sarmara, Berlin 1912, p. 39 sq.). Mshatta, Khirbat and Sarmara are descendants of this eastern type of palace. Just as the form could only be recognised as typical after the examination of Khirbat in the Tjrān, and by the excavation of Sarmara, so it was the investigations of H. Lammens that first elucidated the purpose of these buildings (La Bābiya et La Hira sous les Omeides, in M.F.O.B., iv.). Following Lammens, Herzfeld explained Mshatta as a bābiya [q. v.], i.e. a country palace which was built in the form of a hippod for an Umayyad as an occasional residence.

**History of exploration, bibliography and date.** After its first discovery by H. B. Tristram in 1872, Mshatta was explained by its archaeological adviser J. Ferguson as a Sasanian palace, built by Khusrav II after his conquest of Syria in 614 A.D. It found a place in literature with this description in Tristram’s The Land of Moab (London 1873). It was not till about the end of the century that Mshatta became a subject of archaeological study and discussion when it was visited in 1898 by A. Musil and soon afterwards examined by R. E. Brunnow and A. v. Damascenski and published in their Provincia Arabia (1904—1909). In the meanwhile the Russian expedition sent to take it down under B. Schulz had already been there and the Berlin publication by Schulz and Strzygowski appeared in the Jahrb. d. preuss. Kunst., 1904. To Professor Strzygowski is due the credit of having urged W. Bode to bring the façade to Berlin. Thanks to the interest displayed by the Emperor William II in the plan and his friendly relations with Sultan Abd al-Hamid, the latter, with the traditional generosity of an Oriental despot, gave the German Emperor a present of this ornament of the desert. As a result of his study of the architecture and decoration, Strzygowski dated Mshatta between 540 and 600 a. D. M. v. Berchem with Clermont-Ganneau and Dussaud decided on historical grounds for the Lakhmids dating, i.e. that it was built as early as the fourth century A. D. (Aux pays de Moab et d’Edom, iv., J.S., 1909, p. 401—408) while Brunnow and Musil assumed a Chaldaean origin. On the other hand in his review of Strzygowski (Z. A., xix., 1905—1906, p. 419 sqq. and Islamstudien, p. 276 sqq.), C. H. Becker championed the Umayyad dating, which E. Herzfeld in his Genesis der islam. Kunst und des Mshattaproblem (Ist., i., 1910, p. 27—63 and 105—144) supported with evidence from the history of art, and was strengthened by the appearance at the same time in M. F. O. B., iv., 1910, p. 91—112 of H. Lammens’ study Bābiya et Hira. This Umayyad dating Herzfeld tried to make more convincing in his Mshatta, Hira und Bābiya (Jb. d. preuss. Kst., 1921) and finally crowned his work with the discovery of an inscription drawn up by Walid II himself recording repairs done by him; Walid II was murdered after a year’s reign (125 = 743—744) and work on the building was not completed. This attribution found further support in a story quoted by H. Lammens (in J. A., 1915) from Ibn al-Muksafi, according to which Walid II was murdered by a man named ‘Abārīm while building a “town” in the desert, which was to bear his name, Lammens identifies this town with Mshatta. Recently the Syrian desert palaces were again thoroughly investigated by the two fathers and teachers of the École Biblique St. Étienne in Jerusalem, Jaussen and Savignac (Mission Arch. en Arabie III, Les châteaux Arabes de Cever Amra, Haraach et Tāba, 2 vols., Paris 1922). As regards Tāba and Mshatta the two students came to the same conclusion as Miller scholars, namely that they belong to the same period. As it seemed to them impossible to attribute them to the Umayyad period, they attributed them to the pre-Islamic period; as both buildings were left unfinished, they must have been built towards the end of a dynasty or kingdom. The discovery of idols at Mshatta also, they said, prevented its being attributed to the Umayyad period (cf. Dier, Die Kunst d. islamischen Volker, 11th ed., 1926, p. 153).

**Establishment of the Umayyad date of Mshatta.** The archaeological material at Strzygowski’s disposal when he wrote on Mshatta in 1904 was still insufficient for the proper appreciation of the historical position. It was not yet possible to have a complete conception of Umayyad art. Herzfeld, who knew the lands in question by long residence and frequent travels was able six years later to approach the problem from much more solid premises. The most important monument from which deductions could be drawn was the Mihrāb of the Qāmil al-Khāṣṣaki, discovered by Sarre and Herzfeld in the meanwhile in Baghdād, which must be either pre- or early ‘Abbāsid and the decoration of which formed a parallel to that of Mshatta (Ist., i. 33 sq. and plate i.). The explanation of the niche in the chamber right of the gateway as a mihrāb had to be decisively rejected and indeed less emphasis had been laid on it by Herzfeld than by superficial writers on the question for whom the “mihrāb” meant an easy proof of their point. Schulz had previously ascertained on the spot that this niche is not a mihrāb, and a study of the plan and Schulz’s measurements shows a piece of masonry jutting 65 cm. out of the wall, containing a niche 1.62 m. broad and 1.48 deep. The fact that the mihrāb is never in a projection from the wall (an exception
would prove nothing) as well as the breadth of the niche which would be exceptional, even in very large mosques of late date (such a depth is hardly ever found anywhere), prove that this can only be a tribunal niche or something of the kind. Kašir al-Tuba has in its south wall four similar semi-circular apse-like niches about 10 feet broad, which surely no Muslim archaeologist would claim as muqarnas. Mshatta, however, does not require such illusive evidence to prove its Umayyad date. The three found proofs are found in the variety of material used and architectural styles in the application of the principles of the minor arts to the decoration of buildings, already noticed but not correctly interpreted by Strzygowski, and the variety of styles in the areas of the triangles which fall into four groups.

The combination of Irāq brickwork with Syrian stonework in the royal residence proves the cooperation of different groups of workmen working on the system of con-cription which was revived by the Umayyads. The construction of the brick arches is also Irāq in form and, besides, they are pointed arches which were unknown before the beginning of the seventh century, so that it is impossible to put the date before 600 A.D. It was only in the early Muslim period that they spread. We find Syrian torus profiles on the basilical building and North Mesopotamian profiles on the frieze. The pillars in the basilical hall are taken from older buildings as was the custom wherever possible in the early Muslim period. In the pre-Muhammadan period neither wooden braces in the arches nor material from older buildings were used (Herzfeld).

On the significance of the decorative façade we may add a little to Strzygowski's and Herzfeld's observations. Two points were hardly touched on in the previous discussion: that the frieze is to be considered and understood only as the basis of a great façade which was planned but was never finished, and the origin of this system of decoration from Persian textile art, which alone could supply the foundation for it and explain the sudden appearance of this completely new world hitherto unknown in architectural ornamentation. The façade proper planned above this architectural border would have contained a pattern on a much larger scale just as we see on carpets. The thum-mandol op-ed groups of animals still to be found on Russian carpets and textiles influenced from Persia and the Caucasus of the xvinth—sixth centuries and the rug margin filled with tendrils, each with a cypress (in place of rosette) in the centre show the popularity and wide distribution and permanence of this motive. When it was taken over for architectural decoration, the popular textile form, however, were translated into the traditional forms of the art of the land and time. This explains the different stylistic execution of the same plan by the stonemasons.

This historic breach with tradition, this surprising control over a differently oriented artistic tendency presupposes a radical change and reorganization of society and outlook. An artistic creed so perfect and complete in itself cannot possibly be explained by the ambition of some upstart of a desert sheikh but it presupposes in addition to enormous wealth and far-reaching power a highly trained artistic sense, which was only possible at the time of the Umayyad Court and actually existed there, as we know from many sources. Only a passionate builder and lover of architecture could visualise such a work and only at a court filled with scholars, poets and artists from all countries could the plans for it be drawn up. This illuminating emancipation from the Hellenistic façade with its pillared niches is only to be explained as the expression of a new outlook rooted in religion and proudly conscious of its quite different ideals, as was the case with young Islam. For the first time, the new teaching was here given artistic expression in a design on a figured ground, which was to develop into the frieze of incriptions on the Sūrūn in Khārgūrd in the xith century (cf. Diez, Churmschische Baukunst, p. 152).

MA'ADHDHIN. [See MAQDIS, I, H, 4 and ABDUllAH]

AL-MALIK AL-MU'A'IYAD SAIF AL-DIN, Shaikh al-Malджidi (so-called after his first owner) al-Khaššaši (member of the bodyguard), a Circassian by birth, was brought as a slave to Cairo and purchased by the Alībeg Bārikū. When the latter came Sultan in 727, he gave him his freedom, put him in the corps of pages (dawandar, q.v.), moved him to the corps of cup-bearers (qādār, q.v.) and later appointed him to the bodyguard (bāshār, whence his nickname). Bārikū's son, Nāṣir Farādž (q.v.), on his accession in 801 (1399) appointed him emir of a thousand and in the following year governor of Tripoli. He served as a troop commander in the battle of Damascus against Timūr, was taken prisoner, soon after his release again became governor of Tripoli and later of Damascus. The reign of Sultan Farādž was a period of uninterrupted fighting between the Sultan and his governors and Shaikh was always in the midst of intrigues; often he was on the Sultan's side, more often in rebellion against him. His relations with his rival, the powerful governor Nawwūr, were similar. Finally the Sultan succumbed to the emirs, was deposed and put to death: the caliph ʿAbbas b. Muhammad al-Mustā'in succeeded him in 815 (1412). The governor Shaikh who was in Cairo at the time, was appointed first minister (nakūm al-maldated) and retained power by filling all available offices with his followers. A rebellion of the Egyptian Beduins gave a pretext for deposing the Sultan al-Mustā'in. The emirs demanded that a man of vigour should occupy the throne and in Shāʾin of the same year chose Shaikh as Sultan. While he encountered no difficulties in Egypt, the governors of the Syrian provinces refused to recognise him. He had himself to go to Syria to bring them to reason. He gradually succeeded in taking one after the other prisoner, and after he had executed his chief enemy Nawwūr his throne was secure. The last rebellion in 818 (1415) he put down with comparative ease.

The defeat of the Ottoman Sultan Baysızid in 804 (1402) by Timūr and the civil strife in the Mamlūk kingdom had been utilised by the neighbouring rulers in the buffer-states between Egypt and the Ottoman empire to capture a number of towns and fortresses in southern Asia Minor up to a line Iarenda-Alabustân-Iarenda, which had previously been under Mamlūk rule. Sultan Shaikh regarded it as his duty to recapture these fortresses and again force these former vassals to recognise
his suzerainty in order to give his kingdom the necessary strength to resist its enemy, the Ottoman Sultan, and to protect the northern frontiers against the plundering raids of the Turkomans. The first campaign took place in 820 (1418) because, in spite of repeated demands, the prince Muhammad b. 'Ali of the house of Karamân would not surrender the town of Tarâsî, which he had taken, although he was ready to recognize the Sultan’s suzerainty on the coins and in the khatû. The Sultan set out from Cairo, receiving in Syria envoys from the families of Dhu ‘l-Ghâdîr, Karamân and Ramânjan, who brought the submission of their chiefs. Malaja, Abulustain, Darendz and Tarâsî were successively occupied, then Behesnâ, Kahtâ and Kakkîr west of the Euphrates; the citadels of the two last-named were besieged, but the siege was raised when the commanders recognised the suzerainty of the Sultan. In the following year, a dangerous enemy of the Sultan, Kârû Yüsuf, chief of the Black Sheep, invaded Northern Syria in pursuit of Kârû Yelek, chief of the White Sheep (both called after their banners), plundered the towns in the N. E. of the Mandîk empire but then returned to Baghánd. The Sultan’s successes were rendered useless by his return to Egypt, as the Syrian governors did not succeed in retaking the citadels. The Sultan therefore sent his son Ibrâhîm with a strong army to Asia Minor. The latter reached Kaisarîya, appointed friendly chiefs as governors, while several hostile chiefs were taken prisoners and put to death and others slain in their flight. Ibrâhîm himself returned to Cairo in triumph but died there in 825 (1421) to the great grief of his father (the story that the latter poisoned him out of jealousy of his fame is absurd). Kârû Yusuf was threatening the eastern frontier, but he had to turn his attention to his enemies, a rebellious son and Timûr’s grandson Shâh Rûkh, and at the end of the year he was poisoned. The Sultan himself had suffered for years from an affection of the foot; his illness (probably inflammation) became so serious that he could scarcely leave his bed. He had installed his eighteen months’ old son as his successor and three of his emirs formed a kind of regency. His death took place on the 8th Muḥarram 826 (Jan. 14, 1427). His kingdom was secure, the frontiers consolidated, but at home there was a lack of order. Hedûnis were plundering the country and Alexandria was not infrequently exposed to attacks from the sea by Frankish pirates. Offices were freely sold and the people suffered much from the extortions of the officials. From time to time the Sultan deprived high officials of the profits of their extortions or imposed severe punishments on them. Taxes oppressed the country. The Sultan himself was brave and to the end of his life fulfilled his duties as a ruler in spite of his painful affliction — he had frequently to be carried. Although he led a life of pomp and gave popular entertainments, firework's and feasts with great splendour, he was outwardly a pious and humble Muslim, who in times of famine and pestilence took part in prayers in the penitential garb of the Şâfîs on the bare ground and like a pious Muslim observed a three-days’ fast in times of drought. He was harsh on Jews and Christians, dismissed them from government offices where they had clerical and administrative posts, and punished them in addition. The old strict regulations about dress were again enforced and all kinds of humiliations heaped on the *'unbelievers*.

**AL-MU’AIYAD FI ‘L-DIN**

separable comrade of Bâyazid. When Sultan Mehmed heard from various sources, especially from a complaint in verse by Halimi Lutf Allah, Kaft of Siwâs, who had been gravely insulted by the entourage of the prince, of alleged abuses at the prince's court, especially the orgies of drug-taking (mukhayyifat: boc, aqîn, mukîn), he sent a commission of inquiry which arrived in Amsa when the prince was with Mu'ayyad on a pleasure trip to Ladik. The result of the inquiry was the issue of an order for the execution of the two chief culprits, one of whom was Mu'ayyad (this hukum al-shurif is given in Feridun, Mevlevî-i Munâzir, Constantinople 1274, ii. 270—271).

From a note by Mu'ayyad in a book bought by him during his stay in Ladik in Rabî' 1382 (June 1477) (the Ziyât of Shems al-Dîn) the date is exactly fixed (the date in Feridun should therefore be altered from 884 to 883; cf. Husâm al-Dîn, Amîrât-i Zîrûrî, Istanbul 1927, ii. 270 note 1). Mu'ayyad, receiving timely warning of the fate threatening him, escaped from Amsa, provided with everything necessary by Bâyazid, and after a short stay in Halab went to Shiraz, where he completed his theological studies under the celebrated Qâmil al-Dîn al-Dawwânî.

When Mu'ayyad returned home, on hearing of Bâyazid's accession, he received an iqâda (teacher's diploma) from Dawwânî. In 887 (1482) he reached Amsa where his father had died three months earlier. After staying six weeks here he went to Constantinople where his extensive learning soon gained him a reputation among the theologians. Bâyazid appointed him muflsîs at the Kalender-khâne-medrese in Constantinople. In 891 (1486) Mu'ayyad married the daughter of the famous legist Mu'âsh al-Dîn Kasîlî (Mawliâna Kasîlî) who was the last Kaftâsker-general of the Turkish empire and after the reforms by which this office was divided became Kaftâsker of Rumelia. Mu'ayyad had a brilliant career: in 899 (1494) he became Kaftâ of Adrianople; in 907 (1501) Kaftâsker of Anatólia; in 910 (1504—1506) Kaftâsker of Rumelia and head of all the ulâmâ. In 917 (1511) the Janissaries who had taken part of prince Selim plundered his house because his sympathies were with Ahmad, the favourite son of Bâyazid. He himself was dismissed by the now senile Sultan under pressure from the Janissaries. Selim I soon after his accession recalled however him to his old office as he saw in him the right man to carry through the important duties of a Kaftâsker. Selim took him with him on his campaign to Persia against Shah Lâmî (1510). But on the way back Mu'ayyad was deprived of his office in Cuân Kapора, as symptoms of a mental breakdown had begun to show themselves (920 = 1514). He died in 922 (1516) in Constantinople and was buried in Eyüp.

Mu'ayyad wrote a number of treatises on law and theology especially on Kürân exegesis. Brockelmann, G. A. L. i. 227 and Brusalf Mehmêd Tâhir, Odâsenü Muflsîliyèri, Istanbul 1333, i. 355, give a list of his works that survive in MS. Under the nom-de-plume of Khâmî, Mu'ayyad also wrote poetry in Arabic, Persian and Turkish. His great service to Turkish literature lies however less in his own original work than in the magnificant liberality with which he encouraged rising young talent, like the poets Nafizî and Zâti, the historians Kemal-Pasha-Zaide and Mahîyî al-Dîn Mehmed, the jurist Abu 'l-Su'îd and others. Mu'ayyad was also famed as a calligraphist. He was the first Ottoman to form a private library of over 7,000 volumes, a huge figure for the time.

AL-MUAKHİR. [See Alâhî, II.]

AL-MU'ÂMÂM, anagram, sometimes a râde, a kind of enigma propounded in verse and rarely in prose; its meaning is made "blind" or obscure with the object of misleading the wits and the eye. It is formed by designating one or more words by various allusions to the letters forming it or them or by allusions relating to the pronunciation: the alphabetic value, the numerical value of the letters, misinterpretation or inversion (kâlî). Very frequently no notice is taken of the vowels or of letters only connected with the spelling. Good taste is the rule.

There are several varieties of muâmâm which will be found enumerated in the works given in the Bibliography.

The invention of the muâmâm is attributed to Khalîl b. Ahmad, the inventor of prosody, while the Persians of course attribute it to 'Ali b. Abî Tâlib. The following is an example of a muâmâm on the name Ahmad: Aowadlal alûlluq tafâhân, wa-râbi 'l-tufâhû thâtâî, Waowadl al-mabîn laû tâlîn, wa-'akhûr 'l-warda li-dhâhû. Its first is the first of [the word] tufâh (apple) = A; and the fourth of [the word] tufâh (apples) is its second = H; and the first of [the word] musk (musk) is its third = M; and the last of [the word] word (oses) is the remainder of it = D'. Here is a Persian example on the word râdk: Nâm-e behtam in mãh âsâf, hâjtâft bâhlâlîsî adâlu: "The name of my idol, this [woman] fair as the moon, is seen in Persian and Arabic." The word râdk divided into two, gives sat or sît which in Arabic means "six" and is or yek which in Persian means "one", whence we have 6 + 1 = 7.

MUĀWIYA, the first Umayyad caliph, son of Abū Sufyān [q. v.] and Hind [q. v.], was born in Mecca in the first decade of the seventh century A. D. Under the training of his father, the most influential personage in, if not the actual leader of the merchant republic of Mecca, he had an opportunity to be initiated into the principles of government as the Meccans understood it. Converted to Islam in the year of the hijra or surrender of Mecca, he made himself useful to the Prophet in the capacity of scribe. Here he gained an insight into the workings of the new regime and learned to know the men with whom he was later to work or struggle: the autocratic ' Omar, the presumptuous ' Ali, a whole crowd of ambitious people, like 'Abd al-Haqq, Zubair and 'Aisha, sometimes redoubtable for their talents and capacity for intrigue, like 'Amr b. al-As [q. v.] and Mughira b. Shu'ba [q. v.]. This dual training early matured the young Mu'awiya who was remarkably gifted, and prepared him from the first for his high destiny.

In the caliphate of Abu Bakr he was sent to the conquest of Syria as second in command to his brother Yazid; in this new field he displayed an astonishing activity and distinguished himself by military successes, like the taking of Damascus and other cities of the Phœnician coast. On the premature death of Yazid, he took his place as governor of Damascus. In 'Omar's reign, with the advance of Arab arms, he added to this office the governorships of the other provinces of Syria. 'Othman, who was related to him, confirmed him in these offices and still further increased his authority. Mu'awiya gained the attachment of those under him and established in Syria during the twenty years of his governorship a model province, the best organized, and with the best disciplined troops of the young empire. Not having been able to prevent the assassination of 'Othman, he was able cleverly to take upon himself the task of avenging him. This was to lead him to the caliphate and bring him into open conflict with 'Ali. Delaying his attack, he let his rival use up his resources and lose his prestige in civil strife and in sterile conflicts with the dissenters ("Uthmaniyas, q. v.) and others, who accused him of complicity in the murder of his predecessor. The indecisive battle of Siffin [q. v.] resulted in the abdication of Adhrā' [q. v.]. In pronouncing that 'Ali should lose the caliphate, the verdict restored to Mu'awiya liberty of movement. He had won over 'Amr b. al-As to his side and at once used this valuable supporter for the conquest of Egypt. Encouraged by his military and diplomatic successes, he allowed his troops to proclaim him caliph and continuously harassed the provinces that still recognized 'Ali. Ibn Muljam's crime removed the last obstacle separating him from the throne. Mu'awiya profited by it to inaugurate his reign in Jerusalem. To him the title of caliph merely meant official recognition of a fait accompli, the result of twenty years of labour and devotion to those under his governorship in Syria. To law-abiding men, he alone seemed capable of putting an end to the anarchy in which the empire had been struggling for more than ten years. In the course of a rapid campaign in the Hijaz in 41 (661), he acquired from Hāsān b. 'Ali a definite renunciation of his family's claims. The submission of the provinces to the east of the Tigris restored the unity of the caliphate. This

year is known as the year of reunion (al-‘iqmā’).

One man continued to sustain in Persia the flag of the ‘Abbāsid, Ziyād b. Abihi [q. v.], Mu‘awiyah won him over by ʿiḥlāl, a procedure by which he recognised him as his half-brother, son of Abū Sufyān. This bold stroke secured him the support of the ablest governor of the caliphate, a worthy rival of ʿAmr b. al-ʿĀṣ and Mughira b. Shuṭah, already supporters of the caliph. Against the combination of these four brains all the plots hatched by the anti-ʿUmayyad opposition were to come to nothing. On the death of Mughira, Ziyād added the governorship of Kāfā to his own of Basra and for eight years ruled the whole of the eastern provinces. By his ability and loyalty, Ziyād showed himself most worthy of the confidence placed in him. Freed from anxiety about this half of the empire, Mu‘awiyah devoted his energies to the pacification and development of the prosperity of other parts of his vast empire and to removing the traces of the long struggle from which it had emerged. He organised the Arab navy while his lieutenants actively pursued the work of foreign conquest. He took Cyprus and Rhodes and on two occasions his son Yazid closely blockaded Constantinople. His great work was the creation of the Syrian army and the training of the army of Jund al-ʿArab, which he reconstituted. He formed the great military reserve of the empire for his successors, an inexhaustible nursery of soldiers and leaders. He was able to keep it in training by annual invasions of Byzantine territory: razzias on a large scale rather than campaigns with a definite plan of conquest. By thus keeping the enemy engaged at home, he managed to defend his own frontiers very efficaciously. Taken at a disadvantage during his tense struggle with ʿAli by an invasion of the Mardātes [q. v.], he did not hesitate to purchase the withdrawal of these adventurers from the emperor. If after his elevation to the caliphate he rarely left Damasus — henceforth the official capital — to lead his armies in person, he nevertheless was still the "real organiser of victory". He saw to the comfort and equipment of the troops, doubled their pay and saw that they were paid with a regularity hitherto unknown. His rival ʿAli said that on the call of Mu‘awiyah the Syrian army "would take the field without demanding pay, not two or three times a year only, wherever it pleased its leaders to take them". His intuition everywhere chose the ablest administrators, the best leaders among the Ḥurūf and other tribes. To the names already mentioned we may add those of Dāhbjāk b. Kais, Abū ʿAbd Allāh b. ʿUṣāma, Muslim b. ʿUṣāma, Bāzir b. Abī Arjān, Ḥabib b. Maslama [q. v.]. By the help of enormous subsidies and by his magnanimity he was able to keep the members of the Prophet’s family, the ʿAbbāsid and the Ḥāshimīn, quiet: Ibn ʿAbd Allāh and Ibn Ḫaṭṭār, ʿAbd Allāh, the brother, and the two ʿUmmāns, al-Ḥasan, the son of ʿAlī. He used the business experience of the Ǧārūḥīs to organise the financial administration. This fiscal reform gave him the resources required to maintain his armies, carry out desirable public works and pay the subsidies necessary to secure the success of his plans. He continuously interested himself in agriculture. He paid special attention to the development of the province least favoured by nature, the Ḥīdjar. His example, which was copied by his relations and most influential contemporaries, brought this region a century of prosperity under the ʿUmāyids such as it was never to see again.

In the lands of Medina and Mecca and Taʾif, Mu‘awiyah carried out great irrigation schemes, sank wells and built dams.

In Syria he strengthened his authority by a close alliance with the fellow-tribesmen of his Kalbī wife Māṣūn [q. v.] and through them with the other tribes of Kaʿbā and those from the Yemen; these groups formed the bulk of the Arab population of Syria. It was on these foundations that the hegemony exercised by Syria throughout the ʿUmāyid period was built and consolidated. His policy towards Christians was a tolerant one. Lastly, he endeavoured to train his son Yazid to be an able capa-ble of continuing his traditions of government, by checking certain tendencies of his well endowed but impetuous nature with its fondness for pleasure. Seeing his end approaching, he skillfully succeeded in getting Yazid recognised as his successor, first of all in Syria and then in other provinces. These difficult negotiations were the last of his political successes. Mu‘awiyah was now entering on the twentieth year of his caliphate, in 60 (Oct. 679) and probably was in the 80th year of a life which had been marked by constant success. By the year 3 or 4, contrary to the tradition of Dāmīr b. ʿĀṣī al-ʿIṣfahānī, he must have reached manhood, for four years later he was secretary to the Prophet. In the course of the forty years of his public career, no serious check ever interrupted his progress. After the abdication of Ḥasan b. ʿAlī, he had "reigned without a rival, without losing any of the conquests of ʿĪṣām. Neither ʿAbd al-Malik, nor Manṣūr, nor Ḥārūn al-Rašīd earned this praise, unique in the annals of ʿĪsām" (Dhahabi). He died at Damasus in the month of Raḏjab of the year 60 (April 680) and was buried in the cemetery of Bāb al-ṣaghir where his tomb still survives. Before his death he entrusted the regency to Dāhbjāk b. Kais and to Muslim b. ʿUṣāma until Yazid should return from Anatolia. Companion and secretary of the Prophet, brother of Umm Ḥabība [q. v.], "the mother of the believers", these claims have not preserved him from the hatred of the Shīʿīs and the official maledictions pronounced by certain ʿAbbāsid caliphs. More tolerant to his memory than to that of his son Yazid, orthodoxy generally agrees to recognise his right to the respect which is due to the ʿĀshībās. The Syrians long cherished the memory of his glorious reign and even beyond the bounds of Syria he had partisans among the Ḥanbalīs, called ṣaḥīlīt, the enthusiasts for Mu‘awiyah.

II. Mu‘awiyah’s policy. In the historical and anecdotal literature of the Arabs there are few collections which do not devote a paragraph to Mu‘awiyah’s "the mildness and complete self-control" (Wellhausen), qualities which the Arabs include under the term ḥilm. By this supreme virtue they claim to recognise the true statesman. The ʿUmayyid sovereign is said to have owed the great success of his career to it. "Mu‘awiyah’s ḥilm" thus became proverbial. A somewhat mixed virtue, essentially opportunistic in character, it may be combined with astuteness, or the less scrupulous forms of diplomacy. In our hero this quality has been found even in the most difficult trials inflicted on his amour-propre. His smiling imper- turability was able to disarm the proudest of his adversaries, who were then completely won over by his generosity. With the golden chains of pensions
and rich gifts the ruler was able to hold in leash his most intractable enemies. When his friends expressed surprise at the vastness of certain donations, he would reply "a war costs infinitely more". This was his favourite method of dealing with the 'Alids and Hashimids. He has been unjustly accused of having introduced the custom of publicly cursing the name of 'Ali from the pulpit of the mosque. There is no certain evidence of this practice before the time of the Marwanids.

The collateral branches of the Umayyad family supplied him with distinguished assistants. He was careful not to bring the more ambitious of them too much to the front or to leave them too long in one office. He was studious to inculcate into all his relations the feeling that they must stand by one another and that this consisted in the blind execution of his orders. The Umayyads formed his natural supporters. He could not do without them. But the unsettled problem, of the dynastic succession made him distrustful of relatives called upon to share the responsibilities of power. He did not fail to keep a close watch over them. With men like Ibn 'Amir, Sa'd b. al-As, Marwan b. al-Hakam [q.v.], of remarkable gifts, and considerable influence, who did not conceal their aspirations, he came to know in time a way that would effectively discourage them from following the dictates of their ambitions. As to the sons of the Caliph 'Othāmīn, they seemed to him too insignificant to cause him any disquiet. On the other hand, Marwan and Sa'd were appointed to succeed one another at about regular intervals in the government of the Hijāz, the cradle of Islam and of the ruling family. Mu'āwiya was unwilling to give them time to create in such an important centre a position for themselves and connections which might have compromised the future of the dynasty. Ultimately he decided to replace these two relatives by a nephew of his own, now almost grown up, the Sufyān b. Walid b. 'Uqba [q.v.]. In the important governorship of the Ṭirāk, which controlled the eastern provinces, Mu'āwiya showed his preference for Ḥṣafṣī officials, Mughira, Ziyād and the latter's son 'Uqba b.rale. He appreciated the devotion of these men, who came from the shrewd society in Ṭis, suspected by the other Umayyad families, compelled to rely on their sovereign, the author of their fortunes. For a moment, the extraordinary promotion of Ziyād and the confidence the Caliph showed in him suggested that he had him in view as his successor. In this attitude to his relatives, the interests of the dynasty surpassed all other considerations. The heir presumptive was young. Mu'āwiya wanted to save his Umayyads cousins from the temptation to set up as rivals of his successor. The first step was to do Yazid rather a bad turn. If, instead of the inexperienced Walid, Mu'āwiya had retained or restored for another period of office in the governorship of the Hijāz, the energetic Marwan, there is no reason to think that this would not have turned the incunctious Ḥusain from the hopeless explīt of Kābālīn.

In the traditional view Mu'āwiya appears as the perfect type of Arab ruler. When writers, jurists, and historians who compile anthologies have to quote a trait or a saying illustrating kingship, or the conduct of states, they rarely hesitate to credit it to our hero. This unambiguity which reflects so much to his credit has been transformed into censure by orthodoxy. Mu'āwiya is reproached with having transformed the kalifāt, the vice-regacy of the Prophet, into mukāb, into a temporal sovereignty, with having, if we may use the term, secularized the supreme power, really a purely lay one, in the heart of Islam. This criticism is an attempt to throw odium on Mu'āwiya while in reality it calls attention to his great merit. In him the ruler, the "king", i.e., the organizer and administrator, appear very distinctly while they are difficult to find in his predecessors, painfully fighting against the outbursts of Bedouin anarchy. This transformation of the patriarchal power had begun with 'Omār who was the first to realize that it was possible to give the mukāb the semblance of the new state and attempted to realize it. Mu'āwiya endeavoured to hasten its evolution towards more effective centralization, an extension of the powers and personal authority of the sovereign. To secure for the latter the advantages of external pomp, the prestige given by formalities, he gave more ceremony to the hitherto democratic appearance of the caliph at the Friday services. He appeared in the mukāb or pulpit, surrounded by a žīāta or guard — 'Ali had already had one — and remained seated while delivering his address, the κhāifa. Some have thought to see in this attitude a sign of pretension. This is to forget that the caliph as the mukāb was the seat of the ruler, the sovereign's throne, before it became by liturgical significance as the pulpit of the mosque, after the latter had become a building for religious worship. This charge of mukāb was also intended to render suspect the sincerity of the faith of the Suṣyānīd monarch. But austerity characterised his morals and private life. He was a good father and a devoted husband. We find him conscientiously performing his religious duties and dying at length a good Muslim.

The chroniclers unanimously find in the complex character of Mu'āwiya another trait besides hīm: political finesse, what the Arabs call ūdiya. To be credited with this it was necessary to have in addition to diplomatic skill, a remarkable gift of eloquence, force of decision, a resourceful nature and a conscience broad enough not to shrink from the use of trickery. Mu'āwiya was reckoned among the five best Kūraish orators of his time. He was fond of saying "I have won more success with the tongue than Ziyād (b. Abīhi) with the sword". Arab writers prefer to attribute these successes to the Machiavellian nature of the sovereign. He is said never to have shrunk from recourse to violence or the use of poison when he wished to get rid of troublesome adversaries. To support this charge the cases of 'Abd al-Rahman b. Khawād, Husayn b. 'Alī and Aṣhtar b. Mālik [q.v.] are quoted. But each of the examples is capable of a more natural explanation. We would readily put Mu'āwiya in the category of those statesmen to whom useless crime is naturally repugnant, too wise to allow themselves to be tempted by violent solutions but not scrupulous enough to hesitate in such an extremity, if reasons of state seemed to advise it. One of his successors, 'Abd al-Malik, called him "the cunning (mudālam) caliph". The pleasure-loving son of 'Alī, ruined by his easy life, forgotten and retired to Medina, did not deserve to be feared. The two other individuals above mentioned died by accident or were victims of private vengeance.

The poets, the "journalists" of the period, had an undoubted influence on their contemporaries. This influence the sovereign succeeded in controlling
and subjecting to dynastic interests. Himself very susceptible to the charms of verse, he would have liked to see poetry confine itself to developing patriotism, and renouncing satire which was a source of dissension among the tribes. The restorer of \( \ddot{y} \dddot{a}n\ddot{a} \), national unity, felt more than anyone the necessity for this concord to heal the wounds caused by anarchy. Powerless to prevent the incursions of poetasters into the field of politics he endeavoured to win them over to his side by gifts and the use of tact. To win them over was to have "a good press"; and at the same time gain their tribes to the cause of order, for the tribes usually agreed with the ideas spread by their bards. He exploited his son Yazid's relations and friendships with the poets to compromise them in favour of the Umayyads and make them less amenable to the advances of the reactionary parties. He paid for their panegyrics: he took them under his protection whenever their lack of discipline brought them into trouble with the local authorities. He did not hesitate to shut his eyes to some of their poetical outbursts, which seem to compromise the reputation of his own hearth; under the 'Abbasids such audacity would have meant death. He further left it to these indiscriminate auxiliaries to deal with abuses by officials and found in them a useful check on arbitrary exercise of authority by his lieutenants. It was at the same time a satisfaction of their amour-propre, allowed to the vanity of these rhapsodists, who were courted by all parties and intoxicated by the terror which their wit inspired. In return for this toleration, he was able to get less disinterested services from them. He imposed on them the duty of preparing public opinion in favour of the \( \dot{b}a\'\dot{b} \), the recognition, of Yazid as heir-apparent. To accustom the Arabs to this step so repulsive to their democratic instincts, to give the caliphs leisure to calculate its chances of success, there was nothing so useful as the intervention of these heralds with their echoing phrases. It enabled the government to remain discreetly in the background, ready to come out at the opportune moment.

The biased Mas\ud\i himself could not help admiring the crafty ease of Mu\'awiyah's policy, "his great genius, who takes his subjects and the benefits which he heaped upon them; winning their sympathies and seducing their hearts with such skill that they put him before their kinsmen and natural affections". Firmness in administration, skill in managing men according to their rank, cordiality, these are some of the qualities credited by this historian, the friend of 'Ali, to the successful rival of F\atima's husband.

Let us now deal with the charges brought against him by orthodoxy. With the object of making them more readily accepted, the indictment is carefully put in the mouth of the austere Hasan al-Bayri. Mu\'awiyah committed four crimes — one of them alone would suffice to cover him with dishonour: he abandoned the nation to men of no repute, deprived it without consulting it (by the \( \dot{b}a\'\dot{b} \) of Yazid) of the control of its destinies and that in the life-time (i.e. to the detriment) of numerous Companions and virtuous individuals. He chose his successor an incorrigible drunkard, robed in silk and playing the harp. He adopted Ziyad. Lastly he condemned Hudhr b. 'Adi [q.v.] to death". The imperial historian will have little difficulty in clearing the sovereign from these charges, which reveal his political flair, his instinct for rulership which raised him high above the prejudices of his contemporaries. The measures for which he is blamed secured the caliphate twenty years of peace and prosperity, the longest period it ever knew.

To sum up, Mu\'awiyah appears in the series of Muslim rulers as one of the most attractive individuals and one of all round ability. In him the Arabs see the very incarnation of sovereignty. In the opinion of Mas\ud\i his successors at best could only try to copy him without being able to equal him. In spite of their little liking for the able Sufy\nnid, the Marwanids frequently appealed to his traditions and the methods of government inaugurated by him. He was, beyond doubt, the least oriental and the most modern of the rulers of Islam. He did not disdain public opinion. One must be grateful to him for not having believed in the power of force alone in the management of men, for not having sought to reestablish, as the 'Abbasids were to do, the old Asiatic autocracies, for having preferred that his subjects should become voluntarily attached to him by winning their sympathies, for proclaiming that "the world is more surely led by the tongue than by the sword". This conviction led him to adopt several institutions of Beduin democracy — such as the \( \ddot{w}a\dot{f} \), deputations from the provinces and the principal tribes — to consult the views of such assemblies on as many occasions as possible, to associate them openly with public business by recognising their right of remonstrance. The astuteness of the sovereign knew how to direct these manifestations of the old individualism of the nomads and to bring them to cooperate with his designs. To quote the comparison of the Byzantine historians, he appeared as a \( \ddot{p}r\ddot{a}t\ddot{e}n\ddot{u}\ddot{b}u\ddot{v}e\ddot{n} \), in the midst of his \( \ddot{c}\ddot{u}b\ddot{a}b\ddot{a} \); in the deliberations of his Syrian parliament, he posed as \( p\ddot{r}i\ddot{u}m\, p\ddot{i}t\ddot{e}r\ddot{p}r\ddot{a}e \). He was gradually able to advance the political education of his subjects and to control the signs of lack of discipline. He was never perturbed by their criticisms nor by the satires of the poets. "I do not trouble" he said "about words so long as they do not lead to deeds". These liberal principles became restricted under the Marwanids and disappeared with the coming of power of the absolute monarchy of the 'Abbasids.

As is frequently the case with men who have grown old in politics, a long period of power — he exercised it without interruption for 40 years — had made him a skeptic. This benevolent scepticism was revealed in a knowing smile when, with eyes half closed, he used to listen without missing a word to the petitions and recriminations of his visitors and pretended to be taken in by their customary excesses. From his youth, passed in the cosmopolitan city of Mecca, then in Medina in the very mixed society of the Companions, he had been in too close contact with his contemporaries to be under any illusions about their disinterestedness. He had not to invent, but no one managed better than he, that in-trument of government, the i\ddot{t}\ddot{h}\ddot{is} \ddot{a}l-\ddot{g}ul\ddot{h}, the rallying of the troops, an ingenious euphemism of the Kur\\u0131an, meaning the art of purchasing hesitating adherents. Other caliphs surpassed him in courage, in outward austerity, \( \ddot{s}u\ddot{d} \), in love of knowledge, and other qualities that dazzle the eyes of the multitude. No one possessed to such a degree as Mu\'awiyah the gifts of the founder of an empire: vision,
energy and promptitude in action, breadth of view, logical thinking, absence of antiquated prejudices, skill in adapting the prestige and ceremonial of his position to Arab taste, ability to use men and to deal tactfully with their prejudices so as not to offend them directly. This rare combination of qualities enabled him to extract order out of the chaos of Beduin anarchy. If we endeavour to appreciate fairly Mu'awiya's work with its inevitable deficiencies, one must take into account the intractable material on which he had to work and the resistance opposed by the inveterate individualism of the nomads. He succeeded not only in disciplining them but also in transforming them into conquerors, able to rule over peoples of superior culture, heirs to the oldest civilisations.

For achieving this result, the son of Muhammad's old opponent has deserved well of Islam. In the list of those responsible for this great revolution his name should come after that of the Prophet beside the name of the caliph 'Omar. Orthodox tradition likes to exalt the latter and present him as the ideal of Islam. Of European writers, Sprenger and von Kremer have popularised this view. In it we may recognise the reply of the schools of the Hijaz to the Irak legend woven round the memory of 'Ali. To their work we owe the fantastic proportions assumed by the personality of 'Omar; it absorbs not only Abû Bakr, but even throws its shadow upon the Prophet. 'Omar is brought into the origin of all religious and administrative institutions, especially of all those that cannot decently be credited to the author of the Qur'an. This exaggerated admiration of the Hijaz was to provoke the protestations of the Abbasids. The counterblast of Shi'a tradition was to place 'Ali alongside of 'Omar to direct him and if necessary to correct him. The indisputable merits of the second caliph lie elsewhere. In the midst of the terrible confusion that resulted from the conquests he was able to maintain the unity and cohesion of the empire, immensely enlarged, to bring the Arab world under successive control. Closely watched, harassed by the selfish claims of his Medinese senate and its disturbing element formed by the redoubtable group of the "ten nabazghara" or "the chosen" and the oldest friends of the Master, he succeeded in neutralising their restless activities, their dire passion for intriguing and in exploiting their greed and mutual jealousies. In the provinces the generals and governors showed an obedience scarcely less intermittent. 'Omar had frequently to resign himself to approving by sanatio in radice in order not to lose touch with such undisciplined auxiliaries and to remind all of the existence of the vicariate of the Prophet. The day on which he thought of a more effective centralisation, of a less ideal systematisation, assassination brutally delivered him from his error. The same fate was to overtake 'Othman, when under pressure from the Umayyads, he took up his predecessor's programme where it had been interrupted. With 'Ali the caliphate relapsed into chaos and lost a quarter of a century of progress on the way to reorganisation. One province alone formed an exception, Syria, which had been governed since its creation by the Umayyads.

But for the intervention of Mu'awiya and his able lieutenants, the 'Amr, Ziyâd and Marwan, the Muslim empire would have been transformed — like the Irak and Khurâsân — into an arena to which the Arabs came to settle their petty tribal quarrels. Once on the throne, the Sufyânids worked to extend gradually to the rest of the caliphate the methods of government which had secured the prosperity of Syria. Encouraged by the results obtained in this country, he set himself to discipline the other Beduins who, according to the idea ascribed to 'Omar, formed the "substance of Islam". From this rude indigestaque motes, this rebellious mass, gradually broken in by the influence of Syria, fashioned by teachers trained in his school, the first Syrian caliph recruited soldiers, then formed them the cadres of a regular army. Wonderful troops always ready to play their double part, the ghûdî abroad, and at home the maintenance, against any threat from within, of the jumâ'a, the unity of the empire. Mu'awiya succeeded in impressing on these descendants of caravan-leaders of Arabia, nomads, all obstinate landmen, the importance of the mastery of the seas. Arab thalassocracy dates from this period. Forced to use primitive institutions, the sâwa, tradition, sanctioned by the Prophet and the Medina caliphs, he endeavoured to turn them to the needs of a great empire. He managed at least to suppress the anarchical working of the shûrâ by regulating the dynastic succession. He organised the finances; he began by revising and reducing the enormous pensions granted by preceding governments without regard to services rendered to the state. Down to his time the central treasury of the caliphate had been supplied by intermittent and always unwilling contributions extorted from the provinces. Mu'awiya endeavoured to settle the amount to be paid by each province and to regularise its collection. Under him the treasury ceased to be a relief fund which the conquerors claimed to use as they pleased. His predecessors had had to empty it periodically to secure assistance or neutrality important for the success of their policy. Hitherto mâl al-muslîmîn, the collective property of the Muslims", the treasury now became mâl 'Allâh, the treasury of the state, intended to cover general expenses, to secure the representation and the defence of the empire. These reforms made Mu'awiya the first sovereign, mali, of Islam, the first ruler to enjoy a definite authority, independent, unlike his predecessors, of the anarchic good-will of his subjects, and no longer at the mercy of an oligarchy interested in the maintenance of old abuses. The Medinese vicariate which developed from the triumvirate, could not long survive this coup d'etat, this drastic solution of the problem of the succession to the Prophet. Before Mu'awiya, the caliphate had only had a nominal existence. For this figure, the son of Abû Sufyân substituted a reality; he created the Arab state: a creation confirmed by 'Omar without having been brought to realisation.

MU'AWIYA B. 'UBAID ALLAH. [See Abû 'Ubaid Allah.]
MUBALLIGH. [See Masjid, I, D, e and H, 4.]

MUBARAK GHAZI, an Indian saint. In all parts of the Sura, the Muhammadan woodcutters invoke certain mythical beings to protect them from tigers and crocodiles. In the 24 Parganas it is Mubarak Ghazi who, in the Eastern parts of the Delta goes by the name of Zindah Ghazi, the living warrior. Mubarak Ghazi is said to have been a faqir (mendicant) who reclaimed the jungle tracts along the left bank of the river Hoogly. Every village has an altar dedicated to him and no one enters the forest nor do any of the boat's crew, who might sail through the districts, pass without first making offerings at one of these shrines. The faqirs in these dangerous forests, who claim to be lineally descended from the Ghazi, indicate with pieces of wood called sang the precise limits within which the forest has to be felled. Mubarak Ghazi, so the legend goes, came to Bengal when Radja Matak ruled over the Sundarbun. The saint happened to have a dispute with the chief, who thought himself to be in the right, upon which the latter agreed to give his only daughter Shushtia in marriage to the former, should his own opinion be proved wrong. This the Ghazi succeeded in doing and won his bride in consequence. Since no man saw him die, he is believed to reside in the depths of the forest, to ride about on tigers, and to keep them so obedient to his will that they dare not touch a human being without his express desire. Before entering a jungle or sailing through the narrow channels whose shady banks are infested by tigers, boatmen and woodcutters, both Hindus and Muhammadans, raise little mounds of earth and on them make offerings of rice, plantains, and sweet-meats to Mubarak Ghazi, after which they fearlessly cut the brushwood and linger in the most dangerous spots.

This strange myth, there cannot be any doubt, is borrowed from Hindus to suit the taste of the superstitious boatmen and woodcutters.

MUBARAK SHAH, Muizz-al-Din, the second king of the Sayyid dynasty of Dihli, was the son of Khair Khan, the first king, and succeeded his father on May 22, 1421. The limits of his kingdom were then restricted to a few districts of Hindustan proper and Multan, and he was obliged to desist from an attempt to establish his authority in the Pandjab by the necessity for relieving Qalawul, menaced by Haghaght of Malwa, who raised the siege and met him, but after an indecisive action came to terms and retired to Malwa From 1425 to 1427 he was engaged in attempting to restore order in Mewat, and received the formal submission of the rajas of Qalawul and Candwar (Fizūlīdī), but Muhammad Khan Awhad of Bayana, whom he had taken prisoner, escaped and took refuge in Mewat, and the work there was to do again. Muhammad Awhad, on being had pressed in Bayana, fled to Ibrahim Shāh of Dāvānpūr, and as the latter marched against Kālpī, Mubarak marched to meet him. Ibrahim, who had been plundering Mubarak's dominions, avoided a conflict for some time, but on April 2, 1428, the armies met near Candwar and Ibrahim, though not decisively defeated, retired.
the next day to Djawnpür. Mubarrak then collected revenue in the neighbourhood of Gwahlor and retired by way of Bayāna, which was evacuated by Muhammad Aḥwāli, who had returned thither. For the rest of the year his officers were engaged in restoring order in the Pāndjāb, ravaged by Djasrat the Khokar, and he in a similar task in Mewāt, and in collecting revenue by force. In 1430 Fīlād Turkhaṭa successfully defied the royal authority in Bhāṭinda, and in 1431 a rebellion broke out in Mūltān and had no sooner been suppressed than Djasrat renewed his activity in the Pāndjāb. The chronicle of the rest of the reign is a record of rebellions in the Pāndjāb, Mūltān, Sāmāna, Mewāt, Bayāna, Gwahlor, Tūjāra and Itāwā, and a rebel captured Lāhor and attacked Dālpūr. Lāhor was eventually recovered, but the whole country remained in a disturbed condition.

War broke out between Ibruḥim of Djawnpūr and Hāhang of Mālwa in connection with Kāpī, the successor of which belonged neither to and was against the Mīrzā as well as the Amārān, and the emperor turned aside to inspect Mubārakhād which he was building, and then, on February 19, 1431, he was assassinated at the instance of Sarwar al-Mulk, whom he had dismissed from the minister in the preceding year.

MUBĀRIR AL-DIN. [Muhammad b. Mu-Ẓaffar.]

AL-MUBARRAK, ABBU 'L-'ABBEKS MUHAMMAD B. YAZĪD AL-'THUMRĀI AL-'AZDĪ, an Arab philologist, was born in 1352 at Aḥār (March 25, 826) in Baṣra, was taught by Abū ʿOmar al-Dārimī, Abū ʿOṯmān al-Māzīnī and Abū Ḥātim al-Sījdīštanī, the pupil of Asmaʾ. In his early works, the Kitāb Maṣūl al-Qalā'a, he criticised the Kitāb of Sibawaih, but only a small number of his criticisms were well founded and of these only a minority were original (al-Suyūṭī, al-Mushir, i, 188; 211, 232). Later he went to Baghdād where he became a very busy teacher, among his pupils were Nifwawī, Ibn Durustawawī and Ibn Kaṣīṣ. His rival for favour at court was the K̄ifān Ṭhalab, to whom he was far superior in ability and style; the rivalry between these two scholars seems to have been the origin of the later opposition between the schools of K̄ifā and Baghdād. His epithet al-Mubarrak seems to refer to his skill in disputation, but there are a number of anecdotes explaining it in very different ways: Mushir, ii, 207, 11 sqq.; Ṭhāqīla, i, 116-117; Ṭhāqīla, v, 137, 139; 147). He died in Baghdād in Shawwāl or Dhu l-Kaʿda 285 (Oct. 9g8).

His chief work al-K̄āmil 'ala 'l-Ẓabh is a typical example of the work of the old philologists as developed from their teaching. Without being tied down to any fixed arrangement or even aiming at cohesion in the separate chapters, it combines traditions of the Prophet, sayings of pious men, proverbs, many poems mostly of the older period, and also historical matter like the important chapter on the Khāridjīs (characteristic is the passage on p. 409 in Wright's edition: *In this chapter we shall mention something of everything in order to prevent the reader from being wearied and mix a little jest with the earnest so that heart and soul may be recuperated*; similarly p. 428; exceptions like the chapters on simile p. 447 or on laments for the dead and consolation p. 713 are rare). The important feature is the full grammatical and lexicographical commentary which he gives to every quotation. The work was given its final form with numerous additions and glosses by Abu ʿl-Ḥasan al-Akhhāfī (d. 315 = 927). Al-Ṭabāyūṣī wrote a commentary on it which has not survived (Mushir, i, 182, 82; 223, 3); there is an anonymous commentary in the possession of Ismāʿīl Efendi in Stambul. It was first printed in Stambul in 1286; editions: The K̄āmil of Al-Mubarrak edited for the German Oriental Society by W. Wright, part i–12, Leipzig 1856–1892; reprinted Cairo 1308, 1323, 1324 (with extracts from Ṭhāqīla on the margins), 1339; with two modern commentaries: the K̄āmil by Abū ʿl-S̄āḥī al-Iṣ̄āfī (professor at al-Azhar), 2 vols. and Raghībat al-ʿArīm min Kitāb al-K̄āmil by Saiyid Ibn ʿAlī al-Mārsāfī (professor at al-Azhar), 8 vols. Cairo 345–346 (1927–1928); Das Khāridjiennerkapitel aus dem K., trans. into German by O. Rescher, Stuttgart 1922. His second collection of material, the Kitāb al-Muṣṭaqqāf, met with less success, because it is said, it had been transmitted by the heretic Ibn al-Rāwandi; it is preserved with a commentary by Saʿīd b. Saʿīd al-Fārīki (d. 301 = 1000; see Yākūt, Irshād, iv, 240) in the Escurial manuscript p, i 111 and in Stambul, Kopurul, N. 1507–1508 (cf. Rescher, in Z. D. M. G., lxxiv, 197; photograph in Cairo; Fihrist, ii, 123). Of his numerous other works given by his biographers we only have the Kitāb al-Taʾāṣī, Escurial, p. 534; the Kitāb Naṣīr al-Aḏḏān wa al-K̄āmil, in Stambul Nīf Efendi, 2003 (M. F. O. B., v, 491) = Welt der D., 3178 (M. F. O. B., vii, 108), Escurial, Ĉarsi 1700, fol. 59–68 (s. Levi Iliesa Vida, Les livres des chevaux, Leyden 1928, p. xiii), his answer to a letter from Aḥmad b. Wāḥīk on the question whether poetry is superior to eloquence, in Munich 791 and in a fragment in Berlin, Ahlw. 777 as well as the Kitāb al-Muṣṭarḥār wa ʿl-Muṣṭanīs as transmitted by Abū ʿAlī al-Fāṣī, in Damascus, Zayāt, p. 36, N. 135, 2. His other works are only known from quotations, e.g. his Kitāb al-Iḥtiyār, which he himself quotes. Kâmil, p. 760, 4, the Kitāb Gharb al-Hadīth, which Ibn al-ʿArīf mentions among his sources in the preface to the Nīf; the Kitāb maʿtaṣaṣīn Lajmūn wa Bīlaftul Maʿālim (Sūyūṭī, Sharḥ al-Mushir, Cairo 1322, p. 195–206); the Kitāb al-Kawāla, a collection of poems by contemporary poets beginning with Abū Nūrīs, Aḥmadī, vii, 15, 20, 25, 15, 25, 15, 25, 15, 25, 15; al-Djūjjīnī, Kitāb al-K̄āmil, 29; Ibn al-ʿArīf, al-Maṣḥāl al-ʿarīr, 185, 186; the Kitāb al-ʿIṯīnān on the causes of the poetical strife between Djarīr and Farazdāk: Ḍab al-ʿĀdār al-Baghdādī, K̄āmil al-ʿAbīb, i, 305–32; Kitāb al-Sharq (i.e. Sharḥ Kaṣīṣ al-ʿArīb), i, 193 infra.

AL-MUBARRAZ, a fortress on the Persian Gulf, about a mile north of al-Hufuf, surrounded by open villages and date palm-groves. The population of the fortress and of the hamlets that belong to it is given, sometimes at 10,000, sometimes at 30,000.

AL-MUBDI. [See Allah.]

AL-MUḌĀDI, name of sūra xxxii, which is also called al-nādiḍ or al-djin." (M. Benger)

MUḌĀR. [See Kāfir.]

MUḌĀR, the twelfth metre in Arabic proseody, which is very rarely used. Theoretically each of its hemistichs consists of three feet (māfadān fāʿilān māfadān); in practice the third foot is lacking. It has one ʿarād and one ʿafār only: māfadān fāʿilān: māfadān fāʿilān. Māfadān however must become māfā'en. The first māfadān may lose its m, in that case the form is fāʿilān (= māfā'en) and fāʿilān. (M. Benger)

AL-MUḌĀWĀNA. [See Sāḥīn.]

AL-MUḌĀTĀTHIR, title of sūra lxxiv.

AL-MUḌHILL. [See Allah.]

MUḌĪR, title of the governors of the Egyptian provinces, called muḍīriya. The use of the word muḍīr in this meaning is no doubt of Turkish origin. The office was created by Muhammad 'Ali, who, shortly after 1813, recognized the administrative division of Egypt, instituting seven muḍīriyas; this number has been changed several times. The present day there are 14 muḍīriyas. The chief task of the muḍīr is the controlling of the agricultural administration and of the irrigation, as executed by his subordinates, viz. the muḍīr, who administers a mākā: and the muṣīr who controls the kisā which is again a subdivision of the muḍīr. Under Sa'd Pasha the office of muḍīr was temporarily abolished with a view to preventing oppression. Until that time they had been without exception Turks, but under Isma'il Pasha, when the function was instituted again, this high administrative position was opened also to native Egyptians.

AL-MUḌJĀDILA, title of sūra liii.

AL-MUḌJĀHID. [See Rasūlus.]

MUḌJĀSIMA. [See Tashkīl.]

MUḌJAWWAZA. [See Turfan, iv, 890 sq.]

AL-MUḌJIB. [See Allah.]

MUḌĪR AL-DIN. [See al-ʿOlām.]

MUḌĪZA (A.), part. act. iv. of ʿaḍ-d-. Ilt. "the overhelming", has become the technical term for miracle. It does not occur in the Kurān, which contains miracles in connection with Muḥammad, whereas it emphasizes his ʿsigns", ʿaḍ-d-. i.e. verses of the Kurān: cf. the art. KURĀN. Even in later literature Muḥammad's chief miracle is the Kurān (cf. Abū Nuʿaim, Dālī al-Nuḥwān, p. 74). Muḍīza and ʿaḍ-d-. have become synonyms; they denote the miracles performed by Allāh in order to prove the sincerity of His apostles. The term kārūnā (q.v.) is used in connection with the saints; it differs from muḍīza in so far as it denotes nothing but a personal distinction granted by Allāh to a saint.

Miracles of Apostles and Prophets, especially those of Muḥammad, occur in the sūra and in Ḥadīṣ. Yet in this literature the term muḍīza is still lacking, as it is in the oldest forms of the creed. The ʿFīḥ Akbar, ii., art. 16, mentions the ʿaḍ-d-. of the prophets and the kārūnā of the saints. Muḍīza occurs in the creed of Abū Ḥāfiz ʿUmar al-Nasafi (ed. Cureton, p. 4; ed. Taftāzānī, p. 165): "And He has fortified them (the apostles) by miracles contradicting the usual course of things".

Taftāzānī explains it in this way: A thing deviating from the usual course of things, appearing at the hands of him who pretends to be a prophet, as a challenge to those who deny this, of such a nature that it makes it impossible for them to produce the like of it. It is Allāh's testimony to the sincerity of His apostles.

A very complete and systematic description occurs in al-Īḍā's Muṣabīḥ. He gives the following definition of muḍīza: "It means to prove the sincerity of him who pretends to be an apostle of Allāh. Further he enumerates the following conditions: 1. It must be an act of Allāh; 2. it must be contrary to the usual course of things; 3. contradiction to it must be impossible; 4. it must happen at the hands of him who pretends to be an apostle, so that it appears as a confirmation of his sincerity; 5. it must be in conformity with the announcement of it; 6. the miracle itself must not be a disavowal of his claim (daʾwāʾ); 7. it must follow on his daʾwā.

Further, according to al-Īḍā, the miracle happens in this way that Allāh produces it at the hands of him whose sincerity He wishes to show, in order to realise His will, viz. the salvation of men through the preaching of His apostle. Finally, as to its effect, it produces, in accordance with Allāh's custom, in those who witness it, the conviction of the apostle's being sincere.

MUḌĪTAHD. [See Ḥattāhd.]

MUḌĪTATHTH, the fourteenth metre in Arabic proseody, has theoretically three feet, consisting of two successive faʿilān in every hemistich; in practice there are two feet only.

It has one ʿarād, and one ʿafār only: faʿilān faʿilān. The foot faʿilān of the ʿafār and also, though seldom, that of the ʿarād, may become faʿilān, on condition that faʿilān retains its n; it loses its n when faʿilān loses its s.

Faʿilān loses its s, when the preceding faʿilān retains its n; it also loses its n, when faʿilān following it, does not become faʿilān.

(M. H. Benger)
Al-Mu'afidāl, like his contemporary Ḥammād ʿUqī, bore the epithet and title of honour of ʿAbd al-Muṣūr, and was regarded as an apostate poet. As a partisan of the house of ‘Abbās he took part in the rising against the ‘Abbāsīd caliph al-Maḥdī led by Ibrāhīm b. ‘Abd Allāh ʿUqī, son of al-Nafs al-Sakūṭī. The rising was put down and Ibrāhīm killed; al-Mu'afidāl was taken prisoner but pardoned by the caliph and appointed tutor to his son, the future caliph al-Mahdī, and in his train he visited Ḥurrāsān. He then worked in Kūfah as a philologist and teacher; among his pupils was his stepson al-ʿArābī. The date of his death is variously given; the Fikrist does not give it at all while others give 164, 165 or 170.

Al-Mu'afidāl, like his other contemporary Ḥammād ʿUqī, bore the epithet and title of honour of ʿAbd al-Muṣūr, and was regarded as an apostate poet. and was in turn commented on by the
Baghdâdî Na'îd al-Shârîf al-Murâdî, the work on
law and tradition given second below was also the
basis upon which his pupil Shââkh Tûsî [q. v.]
ruled as a commentary his Taqâlîd al-Adâkîm,
one of the "4 (5) books" of the Twelvers. Mufid
wrote pamphlets against Dju'dhâ's. Dja'râb b. Harb,
Ibn Kûllûb, Karâbîsî, the Ma'âtîslûn, Zaidîs,
the followers of al-Hâllâj, Ha'bâlî, Dju'dhî and the
Ummâniyâ (for other collected titles see al-Khâyâtìs,
A'îd al-Adâkîm, p. 156). The number of his writings
runs to nearly 200. In addition to those preserved
in European libraries, there are many other manuscipt
in Shi'a libraries, e. g. in Na'daf. Among
them are the usual handbooks of Hadis, on the
juhûd e. g. on the ma'mûrâ as well as the jâfûf e. g. on
the juhûd and the law of inheritance; also treatises
on fundamental philosophical conceptions such as
the predicate, the state of being created etc.; but it
is with specifically Shi'a problems that he mainly
deals. Mufid, as the titles of several of his works
and his influence on later writers show, championed
the enhancement of the dogma of Prophets, dealt
with the question, a painful one for the Shi'a,
whether Abu Tâlib was a believer, with the imâmâte
of 'Ali and the proof that the Imams are higher
than the angels. He naturally dealt also with the
usual special tenets of the Twelvers, like the
concealment of the Imam and the prohibition of meat
buttered by the "People of the Book". He also
wrote guides for pilgrims to the peculiarly Shi'a
holy places.
Mufid died in Ramadan 28, 413 (Nov. 26, 1022).
The na'îd al-Shârîf al-Murâdî conducted the funeral
service; he was buried beside Ibn Bâbîyû [q. v.]
at the feet of the ninth imâm Muhammad al-Djâwâd

MUFTI. [See FATWA.]
MUGHAL. The name given to the dynasty
of Emperors of Hindustân founded by Bâbur in 932 (1526), in virtue of the claim made
by Timûr, the ancestor of the dynasty, to relationship
with the family of the Mongol (Mughal) Çingiz Khan (q. v.). For the detailed history of the dynasty see the articles BÀBAR, HUMÀYUN, AKBAR, UMÀNÎNâ, SHÀH-JÀHÀN, AWARÀNÎB, and their
successors.
I. THE MUGHAL EMPIRE TO THE DEATH OF AWARÀNÀB
a. Military Organization
b. Economics and Administration
II. THE DECLINE OF THE MUGHAL EMPIRE
III. MUGHAL ARCHITECTURE IN INDIA
A. Military Organization of the Mughal Empire.
The army which Bâbur led into India, and with which he defeated at Panipat the army of Ibrahim Lodû, 100,000 strong, consisted of about
10,000 combatants, mainly cavalry, but comprising a corps of artillery and a small proportion of
infantry, chiefly matchlockmen. Bâbur's son and
successor, Humàyûn, though hampered by the
virtual independence of his brother Kâmûnî,
governor of Kûbul, who annexed the Pandjâb,
and thus cut him off from the best recruiting
grounds of the Muslim army in Northern India.
Afghanistan, and Transjûf, was nevertheless
able to lead to the field at the battle of the
Ganges, near Kanadâd, where he was defeated by
Shir Jâh, an army of 100,000 men. On his return
to India in 1555 he left Kûbul with an army of
no more than 15,000 men, and it was his son
and successor, Akbar, who was the creator of the
empire of which he was, in fact, the founder.
The empire was a military despotism. The
Governer of a province was entitled zîrân-àdîrî,
or "commander-in-chief", the governor of a pargana,
or sub-district, faqûdâdîr, or "commandant", and
practically all courtiers and officials, even those
holding civil and judicial posts, were graded as
commanders of horse. Thus we find Shââkh Abu
'l-Fadl, Akbar's secretary, graded as a commander
of 2,500; Rûdja's Bar, court wit and Hindi
poet laureate, as a commander of 1,000; Sâliyûd
Muhammad, Mir 'Adî, a judge, as a commander
of 900; and Shââkh Fâidî, the poet, as a commander
of 400 horse. A command of horse was known
as mânzûh ("rank") or "dignity"), and its holder
as mânzûdîr ("officer."). Each of these nominally
commanding from 500 to 2,500 horse was classed
as an amûr ("noble"), and each of these nominally
commanding more as amûr-i-kâtîr ("great noble")
These commands were nominal, conferred merely
for the purpose of regulating the rank of the official
holding them, and were styled mânzûbâbâtî ("personal rank"). Each of those actually exercising military authority had, in addition to
his personal rank, sawâr (horseman) rank. Thus,
a commander of 5,000 might be described as
"commander of 5,000, with 4,000 horsemen", that
is to say, one ranking as a commander of 5,000,
but supposed to maintain only 4,000 horsemen.
In Akbar's reign, apart from the rank held by
the royal princes, commands ranged from 10 to
5,000 horsemen, but at the end of the reign
two or three nobles were promoted to commands
of 6,000 and 7,000. In these two high commands
there was no distinction of grade, but each of the
other commands was divided into three classes, viz.:
1. those whose sawâr rank was equal to their
personal rank, 2. those whose sawâr rank was
half or more, of their personal rank, and 3. those
whose sawâr rank was less than half of their
personal rank. Thus, a commander of 5,000 with
5,000 horsemen would be in the first class of his
rank, a commander of 5,000 with 3,000 horsemen in the second, and a commander of 5,000 with 2,000 horsemen in the third. A purely civil official often had no sayyid rank, but the distinction between military and civil officials was less clearly marked than it is to-day, and all officials were, in theory, soldiers. The secretary, Abu 'l-Fadl, served, at least on one occasion, in the field, and Akbar once entrusted military commands in the field to his court wit and to a leading physician, with disastrous results.

The lists of "commanders of horse" given in such works as the Fihrist Akbari, the Tahābalat-i Akhbari, and the Fath-i Akbari are not "army lists", but gradated lists of the whole establishment of public servants, civil as well as military. Even where, as in the Fath-i Akbari, sayyid rank is given as well as personal rank, the lists are no guide to the effective strength of the imperial army, for commanders with sayyid rank did not maintain, and were not even expected to maintain, the number of horse indicated by that rank. Thus, Shāh Jahan issued an edict to the effect that commanders were required to maintain more than one-third, and, in some cases, as much as one-quarter of the number of horse indicated by their sayyid rank, and in the Balkh campaign they were not required to muster more than one-fifth of their nominal quota.

The yearly salaries of "commanders of horse" ranged from Rs 350,000 a year for a commander of 7,000 down to Rs 4,000 a year for a commander of 100, but in the commands in which there were three classes the salary varied with the class. Thus, in the 5,000 command an officer of the first class received Rs 250,000; an officer of the second Rs 242,500; and an officer of the third Rs 235,000. These salaries were attached to the personal rank, and were intended to enable the official to maintain his position at court or in the provinces, his household, his transport, and such horsemen as he might require for his personal service. For the payment of troops actually maintained separate allowances were made.

The horsemen were styled ta'biran ("followers" or "troops"), and the majority of them provided and maintained their own horses and arms, and, in the field, their own transport. They were divided into three classes: three-horsed and two-horsed men, each of whom received nearly Rs 25 a month, and one-horsed men, each of whom received rather more than Rs 16½ a month. At a later date higher rates of pay than these were allowed in the Dakhan. Horsemen who could not supply their own horses were styled barāg, and were the servants or followers of those who supplied them. The proportion of these classes in every ten troopers was usually three three-horsed, and one two-horsed, and three onehorsed troopers, or ten men and twenty horses.

The payment of the contingents maintained by the manṣabārs was at first provided for by the grant of ḍājūrs, or fevs, so that the army was maintained on a feudal system, which, however, differed from the feudal system of Europe in that the fevs were not hereditary, and the ḍājūrs, or fev-holders, had no proprietary rights in them. A fev-holder might be transferred from one fev to another, or a portion of his fev, or even the whole of it, might be resumed. In 1574 an edict was promulgated by Akbar resuming all fevs and converting them into crown lands, the payment of the troops being provided for by orders on the treasury for payments in cash. This edict caused much discontent, for the ḍājūrs system was, for many reasons, far more popular than the naqd, or cash-payment, system. Under the naqd system a muster-parade might at any time be made a condition precedent to the issue of a payment order; and a ḍājūr might reap much profit by economizing in the administration of his fev, by rack-renting the landholders, and by encroachments, but the naqd system furnished him with no such means of enriching himself. The edict was immediately modified, and though the naqd system was introduced in the settled provinces of the empire, the ḍājūr system was retained in the more recently conquered provinces of Bengal, Gujrat, and Sind, and, after Akbar's death, was restored, in many cases, in other provinces.

Another reform introduced at the same time, the ilāgh u-naḥalli, or branding regulation, was resented even more than the substitution of the naqd for the ḍājūr system. It was seldom that manṣabārs maintained their full quota of troopers; "false musters were an evil from which the Moghul army suffered, even in its most palmy days. Nobles would lend each other the men to make up their quota, or needy idlers from the bazaars would be mounted on the first baggage pony that came to hand, and counted in with the others as efficient soldiers". It was to check such fraudulent practices that Akbar introduced the ilāgh u-naḥalli regulation, which required the preparation of descriptive rolls of men and horses, the latter being branded on being passed as fit for service; and at muster-parades only these who produced branded horses were paid. This system originated, apparently, with the Sanżūks in Transoxania and Persia, and was introduced into India by 'Alī al-Lin Khaṭūbī in 1532, but was not enforced after his death until it was revived by Shīr Shīh in 1541. After his death it was again abandoned, and Akbar had great difficulty in reviving it, owing to the determined opposition to any measure designed to prevent public officials from enriching themselves by defrauding the state. Even he was obliged to exempt commanders of 5,000, or a greater number, of horse from its operation, though these were required to parade their contingents for inspection when ordered. In the later days of the empire, the regulation was not enforced, and when Burhan al-Mulk joined Muḥammad Shīh at Kanūnī, to meet Nādir Shīh, a historian considers it worth while to describe his contingent as manṣabālu na kāḥūlī, that is, "actually present, not merely on paper"; and later, in 1750, an officer in Bengal receiving pay for 1,700 men was said not to have been able to muster more than seventy or eighty.

Besides the contingents of the princes and the manṣabārs there were the sovereign's personal troops. His body-guard was a corps known as the Wāliākāhī, composed chiefly of men who had been attached to him from his youth, and had served under him as a prince. Manucci refers to these as the emperor's slaves, and says that they numbered 4,000 under Awrangzīb. Details of their pay are not given, but they probably received more than the troopers serving in the contingents of the manṣabārs. There was also a corps d'élite first formed by Akbar, and styled the Aḥsāni corps. Abu 'l-Fadl, in a characteristically foolish passage says that they were so called because they were
fit for a "harmonious unity", whatever that may mean; but they seem to have been called *ahādi* because they enlisted singly in the personal service of the emperor, and were not brought into the service in bodies by a *mangahārār*. They stood, in rank, between the lower *mangahārārs* and the *tābbān*, and received nearly double the pay of the latter. They may be compared to "gentlemen of the life-guard", and many were seconded from the corps in order that they might hold civil appointments. The proportion of three-horsed, two-horsed, and one-horsed troopers was the same in the *Ahādī* corps as in the contingents of the *mangahārārs*.

A commander of horse, whether he held a *dīdar* or whether he drew the pay of his contingent from the treasury, made his own arrangements for its disbursement. He was entitled to retain five percent of the pay of his men for himself, and pay was not always allowed for a whole year; often only for six, five, or four months. Manucci, writing of the army in the reign of Awrangzib, says, "in respect of one year's service they receive six or eight months' pay. Even that is not all in coin; they are always foisted off as respects two months' pay with clothes and old raiment from the household. Over and above this, there is almost always due to them the pay for two or three years' service. The soldiers are obliged to borrow money at interest from the *sarīfās*, or money-changers. These men lend to them, it is true, but it is hardly ever without a command from the general or officer; and these latter have an understanding with them about the profit from interest, which they share between them. Sometimes the soldiers sell their papers to these money-changers, who for a note of hand for one hundred rupees will give them twenty or twenty-five. It is by these and such-like extortions that these generals ruin the wretched soldier, who, unable to find other means of gaining his bread, is forced to remain on in his service. Speaking generally, it is impossible for them to escape such extortions, for these disorders reign throughout all the princes' establishments. If any one resigns service at his own request, they deduct two months' pay. Nevertheless service in the cavalry was socially an honourable profession; a common trooper was looked upon as being, to some extent, a gentleman, and such were, even when illiterate, often used to the highest positions."

The infantry was, in every respect, an inferior arm. With it were classed doorkeepers, watchmen, runners and spies, gladiators, wrestlers and palanquin-bearers, but the combatant branch consisted of musketeers or matchlockmen (*bārdandācs*, archers, and spear-men. Akbar maintained a corps of 12,000 matchlockmen, the officer in command of which was styled *dārūgāhā*. A secretary and a treasurer kept the accounts and disbursed the pay of these troops. The non-commissioned officers of the corps were graded in four classes, the first of which received 7½, the second 7, the third 6½, and the fourth 6½ rupees a month. The privates were divided into five classes, the pay of which ranged from 4½ down to 2½ rupees a month.

Besides this corps was a number of troops styled *dākhlī*, of which one-fourth were matchlockmen and three-fourth archers. These were the troops allowed to the *faujīdārs* in the pagans or sub-districts, to assist them in maintaining order and collecting the revenue. The non-commissioned officers of the matchlockmen received Rs 4 a month, and the privates Rs 3½ each. The archers were considered more efficient than the matchlockmen, for the matchlock was not an arm of rapid fire or precision, and an archer could shoot many arrows while a matchlockman was loading his matchlock. Neither matchlockmen nor archers could, as a rule, face cavalry in the field, and it was not until the emperors and their vassals were brought face to face with troops armed and drilled after the European fashion that they discovered that infantry was the queen of battles; but belief in the superior efficiency of cavalry died hard.

The artillery was divided into two classes, the heavy and the light. Bābar had an efficient corps of artillery, and used it with great effect, but the Muslims of India were not skilled artillerists, and the heavy artillery was usually officered and partly manned by 'Uthmānī Turks, Portuguese renegades of pure or mixed blood, and occasionally by other Europeans. The light artillery consisted of field-pieces carried on bullock-carts, wall-pieces on animals' backs, and *zambūrāks*, or still lighter service-guns, carried on and fired from the backs of camels. The heavy artillery was drawn by strings of oxen, or, occasionally, by elephants, and, as the army gradually declined in efficiency the heavy guns increased in length and calibre until they became so heavy as hardly to be mobile, so that often they could not be dragged to their destination but were left stranded by their road. A defeated army could seldom save its heavy and field artillery. All that it could do was to spike its guns and leave them. The ammunition was solid shot, sometimes of stone, sometimes of iron, and field guns and heavy guns in the field were sometimes loaded to the muzzle with the rough copper coin of the time, which took the place of case-shot, and did great execution at close quarters. The artillery also comprised a corps of rocketeers. The whole of the artillery was commanded by an officer entitled *Mir-i Aīnšā*, or "lord of fire". The officers were entitled *gādīwāl* ("commander of 100") corresponding to a battery commander, and *nirīslāhā* (commander of 10), who had charge of a subdivision, or one gun. The wall-pieces and *zambūrāks*, which were numerous, account for the enormous numbers of "guns" mentioned in accounts of armies in the field.

Akbar used elephants freely in battle, and brought them into the field in great numbers. They usually carried archers or musketeers on their backs. Their use as a fighting force was, however, soon abandoned, and would have been abandoned even earlier if it had not been for their imposing appearance, for it had long been established that they were more dangerous to their own side than to the enemy. "To the last some elephants protected by armour were brought into the battle-field, but their use was confined almost entirely to carrying the generals or great nobles, and displaying their standards. The baggage elephants were assembled in rear with those bearing the īrām, the women remaining mounted on the latter during the battle, and protected by a strong force posted round them".

Under Akbar the elephants ridden by the emperor were called *kāyās* ("special"), and all others were arranged in groups of ten, twenty, or thirty, called *huīka* ("ring", or "circle"). In later reigns the same classification was employed, but with
a more extended meaning, *khāṣpa* then including all riding, and *halāka* all baggage elephants. *Manjubārs* from 7,000 down to 500 were required to maintain each one riding elephant, and, in addition, five baggage elephants for each Rs 2,500 of pay. It appears that these elephants belonged to the emperor, and were not even made over to the *manjubārs* for use, except in the field. In the *Aini Akbari* Abu 'l-Fadl says that 'Akbar put several *halākas* under the charge of every grandee, and required him to look after them'.

The commander-in-chief of the army was the emperor himself, but at the head of the military administration was an officer entitled *Bakhshī al-Mansūr*, whose position may be described as that of adjutant-general, and muskermaster-general. He was assisted by three *bakhshīs* and a number of *bīṭhīs*, or clerks, and the duties of this department included enlistment, mustering, and passing the pay of both *manjubārs* and *qalīnān*, for which purpose they were obliged to see that the branding regulations, so long as they were enforced, were observed by those to whom they applied. Manucci says, "twice a year the *bakhshī* holds a review of all the cavalry present at court, examines all the horses, and sees whether any of them are old and unfit for service. In the latter case he makes the owners get rid of them and buy others". These officers remained at headquarters, and from some authorities it appears that one of them had charge of the *bakhshīs*, or body-guard, but the *Abādi* corps, which was commanded by one of the great nobles, had its own *disnān*, or paymaster and quartermaster, and its own *bakhshī*, both officers being assisted by *bīṭhīs*. Certificates granted by the *bakhshī* were recorded by the *wali* or *wali*-nīgār, or writer of the official diary, and were sent to the office of the minister, who, after passing them, sent them to the office of revision and record, but pay was issued on the minister's order. "In addition to the *bakhshīs* at headquarters there were officers with similar functions attached to the governor of every province", their office being generally combined with that of the *wali*-nīgār, or provincial diary-writer: and in imitation of the imperial establishments each great noble had his own *bakhshī*, who performed for him the same duties as those performed for the emperor by the imperial *bakhshīs*.

It is impossible to estimate accurately the strength of the army in Akbar's reign, for the *saʿārī* rank of the *manjubārs* is not given, either in the *Aini Akbari* or in the *Tābakāt-i Akbari*. He maintained 12,000 matchlockmen, and Blochmann estimates the whole strength of his army at 25,000, of which 12,000 were cavalry and the rest matchlockmen and artillery, but this seems to be much too low an estimate. Humâyūn could put 100,000 cavalry into the field, and it is not likely that Akbar, with far wider dominions, would have been content, or could have ruled and extended his empire with a smaller army. It seems probable that Blochmann's estimate included only the emperor's personal household troops, in the latter half of Shāh-Uljahān's reign the contingents of the princes and nobles would have numbered 425,500 if each *manjubār* had maintained the full quota of his *saʿārī* rank, but this they were not even expected to do. Fortunately a fairly exact return of the strength of the army is given in the *Padshahānāma*. There were 8,000 *manjubārs* of all ranks, 7,000 mounted *Abādis* and *baraqāndāzs*, 200,000 cavalry, exclusive of the troops allowed to *fandāshīs* for the maintenance of order and the collection of the revenue, and 40,000 foot matchlockmen, artillerists, and rocketeers, of whom 10,000 were at headquarters and 10,000 in the provinces and the forts. It is not quite clear what is meant by the mounted *baraqāndāz* classed with the *Abādis*, for *baraqāndāz* is the word used for a matchlockman, and horsemen certainly did not carry the cumbersome matchlock, and carbines and pistols had not been introduced, but it may be that a few men carrying a lighter musket than the ordinary matchlock were attached to the *Abādi* corps. Of the army in the reign of Awarangzīb Manucci writes, "ordinarily the king keeps fifty thousand horse in garrison besides those in movement every day, an almost equal number. He has twenty thousand infantry, all Rājpūts; out of them twelve thousand are in charge of the artillery; the rest are for guarding the royal palace, mounting sentry, and *et cetera".

The army of the Mughal emperors was not drilled. Muster parades consisted merely in the troopers passing in single file before the *bakhshī*, and the nearest approach to any manoeuvres was the participation of the army, or part of it, in a royal hunt, when the troops, aided by the people of the country side, acted as beaters, surrounded a large tract of country, and, day by day, closed inwards until in a small area was enclosed an enormous quantity of game, which was then slaughtered wholesale by the emperor and those who were permitted a share in the "sport". Apart from this species of hunting styled *chikāri kamargha*, the army was never exercised in any combined movements, or drill; but the individual trooper paid great attention to the training of his body, exercising himself with all his weapons, sabre, spear, mace, battle-axe, buckler, dagger, and bow and arrows. The bow was considered a most effective weapon, as a hor-eman could shoot six times before a musketeer could fire twice. The trooper also went through various exercises for strengthening his limbs and his body, both with and without apparatus, the latter consisting of dumb-bells, *mugālar*, or Indian clubs, and the *lecam* a strong bow with a steel chain instead of a string, most effective in training these muscles employed by an archer. The horses were also trained in a sort of manège.

E. Economics and Administration.

The Mughal Empire lived mainly by agriculture. The only metals available in quantity were iron and copper; both were relatively expensive, and local supplies of the latter were failing in the xvith century. The existence of coal was unknown, and of other minerals only lime, salt, saltpetre, and, locally, building stone were largely produced. The agricultural land was divided into areas known as
villages (dák), usually, but not always, inhabited. The villages were grouped traditionally in larger areas (purana), which were usually treated as administrative units (mahall). Most villages, but not all, were occupied by a community of peasants, held together by the tie of common ancestry; each member of these bodies had separate possession of the land which he cultivated, but the community acted as a whole, through the headmen (mukaddums), in the management of the village, letting surplus land to tenants, paying the revenue and other expenses, and transacting such other business as emerged.

The population was predominantly vegetarian. Meat for the officials and the army was provided where required, but its supply lay outside the ordinary course of agriculture. The products of the land were mainly food, cereals, millets and pulses, with, on a smaller scale, sugar, vegetables, and condiments. Oil-seeds were grown for local needs; opium was produced largely, and tobacco, a recent introduction, had spread rapidly through the empire; cotton and some other fibres, together with indigo and other dyes, were the chief industrial crops. Holdings were usually small, and were worked largely by the peasant himself with the aid of his family and the landless labourers of the village. Oxen were used for tillage; implements were few and primitive, and there was in general a scarcity of agricultural capital, necessitating prompt sales of produce at each harvest, to the peasant’s loss and the middleman’s gain.

Handicrafts were numerous and varied, but weaving was by far the most important. Cotton cloth was woven all over the empire, most of it for local consumption, but near the coasts production was directed largely to supplying overseas markets, while finer goods—muslins and prints—were carried long distances by land. Most of the consuming markets were conservative, adhering closely to established styles and patterns. There was thus little scope for invention; copying was safer than designing; and such developments as were recorded were the result of either patronage by wealthy amateurs, or the extension of the European demand. Silk-weaving was locally important in Bengal and Gudjarát, in the latter case from imported material; jute and hemp also were only of local importance, but in the xviiith century an export trade in sacks and sacking was beginning to develop.

In peaceful regions commerce was active, and, for the period, highly organised. Funds were ordinarily transmitted by bills of exchange, which could be negotiated in all the principal towns, and in some centres outside the empire. Merchants were, however, disinclined to carry large stocks of commodities, and preferred to utilise their funds in money-lending; the rate of interest in commercial transactions was commonly about 10 or 12 per cent, but the charge was much higher when the element of risk was great.

External land-trade was almost limited to the two caravan routes westward by way of Kábul and Kandahar, though there was some small traffic with Tibet. By sea, Gudjarát had old-established connections with the Red Sea and the Persian Gulf, with East Africa, and with Sumatra, Malacca and further East; on a much smaller scale Sind had relations with Persia; while Bengal dealt chiefly with the south of India and with Burma and Siam.

During the xviith century all the sea routes were dominated by the Portuguese, who were concerned rather to exploit than develop; the chief extension of trade due to their efforts was the supply of cloth to Brazil and West Africa, but most of this was drawn off the East Coast, which was outside the empire until almost the end of the xviith century. After “factories” (i.e. agencies) had been established at Sírat by the English (1611) and the Dutch (1617), an important trade with western Europe grew up in indigo and calico. In the middle of the century the indigo-trade yielded to competition from the West Indies, while the depopulation of Gudjarát by the famine of 1630 transferred the bulk of the calico trade to the East Coast; Sírat remained, however, an important centre until its supersession by Bombay. In the second quarter of the xviith century the Dutch, followed by the English, established factories on the Húglí in Bengal, and trade developed in silk, salt petre, fine calico, and muslin. Towards the close of the century a change of fashions in Europe produced a great demand for muslin and print, which was met partly by Bengal, and partly by Madras, by this time technically within the limits of the empire.

The outstanding feature of all trade with India was the need for importing gold and silver. India bought little beyond the industrial metals and luxury goods, but was eager to sell produce for cash; and, since Western Europe could not supply what was most in demand, the operations of the trading Companies were necessarily so organised as to direct streams of gold and silver to India from those countries which would part with them, notably, at this period, gold from China, and silver, and later gold, from Japan. The seaports serving the empire were thus brought into a complex but efficient organisation, which took whatever they had to sell, supplied whatever they wanted to buy, and, so far as was possible, satisfied the demand for gold and silver.

Inland transport was necessarily less efficient. The Indus, the Ganges, the Djamna, and the waterways of Bengal were largely used, but the bulk of the empire depended on what were then called roads, unmetalled tracks, sometimes defined by lines of trees, with halting-places which were generally walled or otherwise defended against robbers, and usually furnished with supplies. Transport was effected by carts and pack-animals, generally oxen but in some places camels. Passengers travelled on horseback, in palanquins, or in carts drawn by fast oxen. There were excellent arrangements for the rapid transit of letters, but these were for official use, and were not ordinarily available for private persons, who hired messengers when required, or in a few cases, clubbed together to send messengers periodically.

Standards of life presented sharp contrasts. The mass of the population, peasants, artisans and labourers, lived in such extreme poverty as to excite the commiseration of European visitors. An almost equally low standard prevailed among the numerically important class of servants in the towns, whether freemen or slaves, who, however, enjoyed a more secure life than the rural population. The middle classes, comparatively smaller in numbers than now, were thrifty and frugal; and, even when wealthy, were careful to avoid any display which might lead to exactions by officials. The superior
grades of officers employed by the State were exceedingly well paid when allowance is made for the high purchasing power of money, and spent their incomes freely in extravagance and display, increased by the fact that on their death their property reverted to the treasury.

The prosperity of the empire depended mainly on three factors: the character of the rainfall, the degree of internal tranquillity, and the working of the revenue administration. The seasonal rainfall was, as it still is, uncertain, and any serious defect resulted in insufficiency of food. The difficulty of transport made it impossible to afford adequate relief on the spot, the people abandoned their homes to wander in search of food, and in contemporary narratives we read again and again of the then familiar features of deaths from starvation, cannibalism, and the sale of children into slavery. Recovery from such a calamity was a slow process, and the famine which desolated Gujarat and the Dakhan in 1650-1651 left its mark for at least a generation. This particular famine might also prove calamitous, though not to the same extent. There was no local market for the surplus produce, prices fell to a ruinous level, and in official regulations low prices were treated as a calamity requiring relief on the same footing as drought or hail.

The dominance of the weather was inevitable; the other influences on prosperity were matters of administration. Here a clear distinction must be drawn between the general and the revenue administration, a distinction denoted by the current phrase mulki wa-muli. The emperor was of course supreme in both branches, and was assisted at his headquarters by four principal officers, the Wazir or Prime Minister, the Nasir or Revenue Minister, the Bakhsh (see col. 629), and the Sadir, who was in charge of Islamic law and also administered the department dealing with charitable grants and endowments. The post of Wazir was not always filled, and when it was in abeyance the duties attaching to it devolved on the Wazir. In practice the powers of these Ministers depended on the personality of the Emperor; under Akbar or Shāh Jahan they were definitely subordinate, while Dāhāngīr's Prime Minister was at times practically the ruler of the country.

The system of general administration to which the Mughals succeeded in Northern India was not highly developed. The great bulk of the country was held by officers in assignment (a term explained below); the assignee was responsible for keeping the peace, and in practice had a free hand in the methods employed. Under Akbar a more effective system was established, which was maintained throughout the period. The empire was divided into provinces (sīnha), each of which was in charge of a Viceroy (Spahsīlār, Sāhākhār), who at first was responsible to the Emperor for all branches of administration, but after 1595 was relieved of revenue work. Apart from the Viceroy, officers who may be described as Governors were stationed at selected places, with the duty of keeping the peace and putting down rebellion, a term which covered failure to pay the revenue due. The ordinary designation of these Governors was Fāqīdhār, but in outlying regions which were controlled by fortresses the Governor was the fortress-commander (Khalīlār), while in a few large assignments the assignee exercised the powers of a Governor. Cities were governed by officers designated Kotwāl, who combined the functions of magistrate, police-commandant, municipality, and censor of morals. There was no regular police force at the disposal of these officers, who were expected to employ the troops they maintained as a condition of their rank, obtaining help when their own forces were insufficient. The efficiency of this organisation varied with that of the central administration, which depended mainly on the personality of the Emperor; by the close of the xvith century it was definitely breaking down, and conditions of anarchy were spreading over the empire.

It is difficult to state in precise terms the relation of this organisation to the extensive portions of the empire where internal jurisdiction remained in the hands of Hindu Chiefs; but apparently the Chief was regarded officially as assignee of his territories, and was expected to maintain order within them. If he failed to do so, the Viceroy or Governor concerned might intervene, but his action would ordinarily be directed against the Chief rather than against the people.

The revenue administration was controlled by the Wazir, sitting in the Revenue Ministry, which was known as Dīwān, as opposed to Huḍūr, or the Court, whence orders were issued by, or in the name of, the Emperor. Revenue at this period meant practically Land Revenue; the Imperial Treasury had receipts from other sources — Customs, Salt, Mint, Presents, Inheritance, and, under Awrangzīb, the Capital Tax (qāla). But, taken collectively, they were of little importance compared with the income obtained from the peasants. Under the system traditional in India, and emboldened in Hindu law, every person cultivating land was required to pay a share of the produce to the King, who determined, within somewhat elastic limits, the amount of the share, and who also prescribed the methods of assessment and collection. The first Muslim conquerors accepted this "King's share" as the kharāja to which they were entitled under Islamic law; the question of property in land was not raised, but occupants were ordinarily allowed to retain possession subject to due payment of the revenue.

In the Mughal period agricultural land fell into three classes: Chiefs', Reserved and Assigned. The areas governed by the more important Chiefs were not assessed to revenue (kharāja) by the Wazir; that was the privilege of the Chief, and any payments which he made to the treasury were in the nature of a tribute, determined by negotiation. The treatment of the numerous smaller Chiefs is not on record; but the few facts which have survived are consistent with the view that assessment was made through them, and that they were allowed to retain a portion of the revenue in return for their services. In the regions which were directly administered, certain areas of land, described as kāhāna, were reserved to furnish the treasury with cash, and were managed by the staff employed by the Revenue Ministry; at first the local staff was under the provincial Viceroy, but in 1596 a Dīwān was posted to each province, to manage all revenue business directly under the Minister, and in this way emerged the dichotomy into diwānī (revenue business) and fāqīdhāra (general business) which henceforward characterised the local administration.

The land not reserved for the treasury was
available for assignment. Every officer appointed to the Emperor’s service was entitled to an income
defined in cash, which represented both his personal
salary and the cost of the troops he was required
to maintain. For a short period in Akbar’s reign,
this income was paid, as well as defined, in cash, but
the ordinary practice in the empire was to assign
to each officer an area (gāğī, tīrūl, or īkō),
estimated to yield as revenue the amount of his
stated income; and the officer thereupon took
charge of the area assigned to him, and assessed
and collected the revenue in accordance, at least
theoretically, with the general orders in force. If
the yield proved insufficient, he could claim the
balance from the treasury, while he could be re-
quired to account for any excess receipts; but in
practice these matters seem usually to have been
adjusted by bribery, for which there was also
an extensive scope in securing profitable assignments,
and in getting rid of those which had been squeezed
dry. Changes of assignment were ordinarily so
frequent that an officer would have been unwise
to spend money on fostering agricultural develop-
ment or do anything beyond the barest minimum
income which his assignment could be made to
yield. The great bulk of the land was ordinarily
assigned, the reserved area being one-sixth or one-
seventh of the whole.

The share of the peasants’ produce claimed by
Akbar was one-third; later, at some uncertain
time in the first half of the xvith century, this
figure became the minimum, with a maximum of
one-half, which inevitably tended to become the
standard. Three principal methods of assessment
were in vogue: Sharing (gāła baḥkīdi), Measurement
(pāmātī shīk), and Group-Assessment (nasãk).
In Sharing, the produce of each peasant was or-
dinarily estimated (or occasionally ascertained at
harvest), and the prescribed share valued to deter-
mine the cash-revenue due for that season. In
Measurement, a fixed charge, varying with the
crop, was made on each unit of area sown; it
might be fixed in either cash or produce and in the
latter case it was valued at current prices. Under
both these systems payment in cash was the general
rule, but payments in kind were permitted in some
backward regions where currency was scarce. In
Group-Assessment, the official concerned came to
terms with the headmen of the village to pay a
sum fixed in cash for the year, thus avoiding the
necessity of detailed assessments on individuals;
this system tended to pass into Farming, when
terms were made, not with the headmen, but with
an outsider.

Each ruler determined at his pleasure which of
these methods should be employed, and in what
regions. Group-Assessment was the prevailing
system at the time of Bibi’s conquest, and
apparently was accepted by him. After the expul-
sion of Humayīn from India. Shīr Shah introduced
Measurement throughout his kingdom, and his
methods were at first adopted by Akbar; the
revenue claimed from each unit of area was at
this time a stated quantity of produce, calculated
to be one-third of the average yield, and, except
in the tracts where payment in kind was practised,
this amount of produce was commuted to cash at
prices fixed officially for each season. Practical
difficulties arose, however, in regard to commutation;
and in 1579–1580 the revenue was put definitely
on a cash basis, the charge on each unit of area
sown being a fixed number of dām (reckoned at
40 to the rupee) instead of a fixed weight of
produce. Schedules of cash-rates adapted to the
varying productivity of different regions were now
drawn up, which remained in operation during
the rest of Akbar’s reign. At some uncertain period,
probably under Dāhāṅgīr, these schedules were
discarded, and a return was made to Group-Assess-
ment, which was the standard system in the middle
of the xvith century, and survived into the British
period; Sharing was now practised only in back-
ward tracts, or in some cases where the headmen
refused to pay what the assessor thought a reason-
able revenue, in which case he proceeded to
detailed assessment on individuals, by Sharing or
by Measurement according to circumstances.

Such was the history of assessment in the heart
of the empire, but the outlying provinces were
not brought into rigid uniformity, local conditions
determining the system applied in each; while in
the Dakhan provinces a distinct and elaborate
system was introduced in the middle of the xviith
century in order to promote recovery from the
effects of war and famine.

It would be futile to criticise these varying in-
stitutions, for the value of all alike depended
on the spirit in which they were worked. In admini-
strative circles there was throughout the Muslim
period a definite ideal of agricultural prosperity
as the foundation of the State, its elements being
extension of cultivation, improvement in the class
of crops, and development of irrigation. Against
this ideal operated the urgent need for the largest
immediate revenue that could be wrung from the
peasants. The course of the struggle cannot be traced
in detail but the central fact is that by the middle
of the xviith century agriculture had ceased to be
an attractive career, and the peasants were deserting
the land for other occupations; the resulting decline
in agricultural production was the chief economic
factor in the eventual collapse of the empire.

The remaining branches of the administration
require little description. Customs duties were formal-
ly low, but their incidence was increased by
arbitrary over-valuation and unauthorised payments
required to secure prompt clearance of goods. In
the towns, civil justice was administered mainly
by the kātī; in the country, disputes were apparently
decided summarily by the executive officials. Punish-
ments for crime were summary and drastic, and
were not always in accordance with Islamic law.
By Indian tradition, local officials raised a large
revenue for local purposes by a multitude of taxes
and excises of a most oppressive nature; these
were prohibited en masse by Akbar, and again by
Aurangzeb, but the system survived. Its worst
feature was the levy of transit dues on internal trade,
which were a cause of constant complaint by Indians as well as foreigners.

Special attention was given to the coinage, as
being a recognised appanage of sovereignty. Gold,
silver and copper were coined, all the coins cir-
culating at their metallic value, so that the exchange
rate between different denominations fluctuated;
but gold was not in general circulation. The chief
coin of the empire was the silver rupee, containing
nearly 180 grains of almost pure silver; the prin-
cipal copper coin was the dām, of nearly 324
grains; and there were various smaller coins of
both metals.

The unit of weight used in wholesale commerce
was the maund or man, which varied in different parts of the country. In the south of India it ranged round about 25 lb; in Gujrat it was 33 lb, but in 1635 this was raised to 37 lb; in North India, it was 52 lb at Akbar's accession, was raised by him to 55 lb, by Djiàhàngir to 60 lb, and by Sháh Djiàhàn to 74 lb. In Bengal, it was 64 lb in the 16th and 60 lb in the 17th century. These figures are given to the nearest lb. The unit for retail trade varied from place to place, but was ordinarily smaller than those which have been named. Measures of capacity were not used in wholesale commerce. The measure of length in the North was the gaj or yard, which was standardised by Akbar at about 33 inches, and by his successor at about 40 inches, but the smaller unit survived; in the South the hásá, or cubit, of about 18 inches was used: it was smaller than the yard and in Bengal about 27 inches.

(W. H. MORELAND)

II. THE DECLINE OF THE MUGHAL EMPIRE.

The decline of Mughal authority, already manifest during the reign of Aurangzîb, rapidly developed under his immediate successors. Bahadur Shah [q.v.] (1707—1712) was too amiable, Dzûhândîr Shah [q.v.] (1712—1713) was too vicious, Farrukhsîyâr [q.v.] (1713—1719) was too feeble, to revive the empire. In seven bloody battles of succession, fought within six years of Aurangzîb's death, the imperial family attested its inherent lawlessness and declining power. Then it became the sport of rival factions. For a while the two famous Saiyid brothers, 'Abd Allâh and Husâm al-Mulâk rose in arms. Husâm Alî marched against him, but was murdered with the connivance of Muhammmad Shâh, the emperor whom he and his brother had set up in 1719. Shortly afterwards, his brother 'Abd Allâh was defeated and, after lying in prison at Dîlí for two years, was poisoned. When they fell, Niţâm al-Mulâk strove hard to restore something like the old order of administration. But he was unwilling to force himself upon Muhammmad Shâh as the Saiyids had forced themselves upon Farrukhsîyâr. When the emperor whom he had delivered refused his advice, and the favourites of the court made fun of his antiquated dress and ceremonious manners, he preferred to retire and rule the Dakhân in virtual independence. Ironically enough, Mu-
MUGHAL.

Hamid Shah believed that Niẓām al-Mulk had been plotting his overthrow.

With Niẓām al-Mulk’s departure from Dihli the last chances of a revival of the empire vanished. Never did a falling state betray greater incapacity for reformaiton. No phoenix could arise from those shameless ashes. Even while Niẓām al-Mulk still retained the nominal control of affairs, extraordinary incidents could occur. At Dihli itself, for example, a Hindu clerk in one of the imperial offices turned Muslim, and, when his wife and daughter refused to follow his change of faith, he laid a complaint against them, alleging that, as his daughter had not attained puberty, she was therefore of her father’s religion. The case offered certain technical difficulties, was at last referred to the ṣadr al-ṣuḥūr. His treatment of the case displeased the Dihli mob. Riots arose, the recital of the ḥijāth at the Dāhān-nunā Masjīd was interrupted, two or three Hindus were seized and circumcised. To pacify the rioters, the girl was imprisoned, and, a few days later, buried with Muslim ceremonial. “To cut a long story,” says Kāmwar Khān who relates the incident, “she was killed; otherwise there would have been many headaches and much vexation.”

Niẓām al-Mulk’s successors were worthy of the frivolous emperor whom they professed to serve. For twelve years the imperial councils were directed by a man called Shāh ʿAbd al-Qādir. By origin a cotton-weaver of Tatbīr, he had lived both as ṣajj and ḫāṭir. Claiming magical powers and popularly believed to consort with djinn and devils, he was summoned to interpret the dreams of the emperor’s mother. This led him into the imperial service, and he contrived to accumulate in his own hand a great number of offices, producing a revenue of 5,000 rupees a day, apart from the bribes which he received, said to amount to as much more. This man was pithily described as never having spent money on a good work, never having conferred a favour, and never having done a kindness. He was a miser, and at his downfall (for even at Dihli under Muhammad Shāh such qualities at last produced their natural reaction) more than a crore of rupees was found in his private hoards. But the unpopularity which his character and habits naturally evoked was nothing compared with the detestation with which his son and daughter were regarded. No one in Dihli was safe who displeased them or denied them anything that they desired.

Amid such confusion and under such rulers the empire rapidly lost its cohesion. The Marājīhs [q.v.], whom even Avrangzēb sought in vain to subdue, soon became the most formidable power in India. On Avrangzēb’s death, his successor, Bahādur Shāh, had released the Marājī prince, Shāhī Rādā, in the desperate hope of reestablishing through him the form, if not the substance of imperial control. Shāhī Rādā met with influential and talented support. In 1708 he took possession of Satara and by the next year was generally recognised as ruler. A Chitpavan Brahman, Bāḏājī Ṣiṁhānāth, became his ṣajjūn or first minister, and began to develop the characteristic Marājī policy, which was to play a part in the enfeeblement of the empire. This was to put forward claims to a share (under the title of ḫan or a quarter part) in the imperial revenues in as many provinces as possible. In 1709 the Mughal governor in the Dakhan admitted this claim, and, although later governors contested it, it was again recognised by the Bārha Saiyids in 1719. In the next year Bāḏājī Ṣiṁhānāth was succeeded by his son, Bāḏājī Rāo I, and the process was extended farther afield. Particular provinces were assigned to particular officers, who were to realise the ḫaṭkh either by collecting the amount from the provincial governor, or by plundering the country. Bāḏājī Rāo employed Plāḍājī Gāckwār as his chief leader in raids in Gujārāt; Rāghuḍājī Bhonsla established himself at Nāgpūr; these and other leaders spread the terror of Marājī devastations in all directions, and it was no longer possible for the provincial governors to maintain any semblance of control. At the same time, seeing that their tenure of office was coming to depend more and more upon their own power and resources, the governors tended to become virtually independent rulers. Aṣaf Dījā Niẓām al-Mulk in the Dakhān continued to profess himself a humble servant of the emperor, but he repelled by force of arms the persons who came with imperial ṣafarīn ordering his supercession, and when he died in 1748 he was succeeded by his son. In Bengal too the succession had become a matter of heredity or war. But the respect which the name of the empire still enjoyed and the degradation into which the empire itself had fallen were exemplified by the large gifts sent by a new ruler for ṣafarīn of investiture and the unhesitating compliance with which they were issued.

The troubles bred by this internal dissolution were enhanced by those of foreign invasion. In 1722 the Ṣafawīs were overthrown in Persia, and, after a short period of great confusion, the Turkmān Nādir Kūli established himself as ruler under the title of Nādir Shāh [q.v.]. With him difficulties arose over the Kandahār frontier. He was engaged in reducing the Ghilzais there to submission. Thrice he sent envoys to the court of Dihli requesting that his enemies should not receive shelter in the Mughal territory. But by this time the Kábul province was falling into a like disorder with the rest. The governor spent his time in prayer and hunting. The money which had been regularly sent from Dihli to bribe the hill-tribes into quietude and pay the troops ceased to be sent, partly because of the growing imperial penury, partly because it was believed that it never reached the governor but was embezzled by his patron at court. Large bodies of Ghilzais therefore were able without the least difficulty to take shelter from Nādir Shāh’s troops in the Mughal province, while the Mughal court foolishly supposed it was evading its difficulties by neglecting to answer Nādir Shāh’s repeated demands. The ineptitude of the court, therefore, rather than (as used to be supposed) any elaborate intrigue of party against party, made Nādir Shāh resolve to invade India. No effective opposition could be offered in either the Kābul province or the Pandžāb. In 1738 Kābul was occupied. In the next year Nādir Shāh’s army appeared before Dihli. The emperor went out, not to strike a blow in his own defence, but to make his humble submission. Conqueror and captive then entered the city. The Dihli mob, grievously mistaking its strength, attempted to massacre the foreigners. As a punishment Nādir Shāh deliberately let loose his troops for five long hours— from 9 o’clock in the morning till 2 in the afternoon— during which some 20,000 of the inhabitants were believed to
to have perished; and beyond this toll of life a great ransom was exacted, including 50 stores' worth of those wonderful jewels which earlier Mughal sovereigns had heaped up for their delight. From this time onwards the annals of the Mughal empire contain nothing but dishonour. Nâdir Shâh fell; but Ahmad Shâh Durânî established on the borders of India another empire and repeatedly invaded India between 1748, the year of the ignominious Muhammad Shâh's death, and 1761, the year in which he inflicted the severest defeat in all their history upon the Marâthâs at Panipat. Until the decay of the Durânî empire in the early years of the nineteenth century, the provinces of Kâbr, Kâsîn, and Kâshmîr, were dependencies of the Afghan kingdom.

Europeans in India—Dutch, French, and English—had observed these events with great concern. Early in the eighteenth century the Dutch had sent a great embassy to Bahâdur Shâh, and a little later the English had sent one to Farnâkhsîyâr. Both had secured far-reaching falsâs from profuse expenditure; both had found that their falsâs were waste paper wherever they ran counter to the interests of local governors. But it was the Frenchman Dupleix who first sought to put into practice the conclusions to be drawn from this situation. Others were convinced that European force could easily establish itself in India; but he began experiments, and, in the hope of keeping the English motless while he acted, he professed to be acting on behalf and in the name of the Mughal emperor. This fiction became the traditional basis of French policy in India, and down to the end of the century Frenchmen were elaborating plans (which their failure to control the sea brought to nothing) for establishing themselves in India and expelling their rivals under cover of imperial grants. With equal consistency the English adopted a political realism which squared far better with the circumstances of the time. They fought and overcame Dupleix in the name of their national interests. When they acquired Bengal, they carefully avoided all obligation to reestablish the imperial authority; and it appears that their acceptance of the dâwâr of Bengal was dictated, not by any desire to mask the reality of their power (which no one in India doubted), but by the desire to take on behalf of the East India Company something which could not be taken over by the English crown as a territorial sovereignty certainly would have been. Thus it was that Prince 'Ali Gawhar, who professed himself as Shâh 'Alam II [q. v.] in 1760, on learning of his father 'Alamgir's murder by his wazir, Ghâzâl al-Din, first came under the protection of the English. He had for some years been attacking the province of Bbâr with the aid of the Nawâb Wazir of Oudh. But after the battle of Bakar in 1764 he had given up the struggle, joined the English camp, and in the following year on Clive's demand bestowed on the East India Company the dâwâr of the provinces it held in return for an annual allowance of 26 lakhs of rupees. At the same time the districts of Kora and Allahâbâd were assigned to him and he proceeded to reside in the latter city. Soon however, he wearied of his position of dependence, and departed to join the Marâthâs, who, having recovered from their defeat at Panipat, were once more invading northern India. On this Warren Hastings decided to hand Kora and Allahâbâd over to the Nawâb Wazir and refused to continue the payment of the 26 lakhs. From this time until the close of the century he remained under the control of the Marâthâs, except at such times as their internal dissensions led to the recall of their forces from the north. One of their chief leaders at this time, Mahadâjî Sindhia, gradually built up a strong principality for himself, conquering the provinces of Agra and Dîli, and becoming the emperor's real custodian. So matters remained till Sindhia's defeat by the English in 1803 transferred the guardianship of Shâh 'Alam into the hands of the latter. They carefully refrained from entering into engagements with him, but they assigned revenues for the maintenance of the imperial family, they permitted all orders issued in the city of Dîli to run in the emperor's name, though the actual administration was conducted by an English agent, and they attempted no interference within the precincts of the palace. Gradually the traditional observances broke down. The Mughal emperor and the British governor-general met with the ceremonials of equals. The emperor's name was removed from the coinage. And it had been resolved no longer to recognize the imperial title after the death of its holder, Bahâdur Shâh II, when the Indian Mutiny, in which several of the imperial princes took an active part although they seem to have had little share in bringing it about, led to the formal trial and deposition of the emperor and the disappearance of the shadowy court which for a century had lingered on under the toleration of the real powers of India.

III. MUGHAL ARCHITECTURE IN INDIA.

The Mughal dynasty brought to India strong Central Asian predilections and a keen feeling for natural beauty. But each in succession obeyed his own instincts, education and caprices. Hence they patronised no "schools" of art, but came to employ an almost cosmopolitan body of artists, Persian, Indian, Turk and even European, who one after another had to adapt their own canons to the aesthetic moods of their employers. In general the Mughals forbade any sculpture of the human form, but like the Orthodox Greek Church, were usually rigid towards paintings of it and even fostered portraiture till it reached a high level. Yet, with relatively few exceptions, the Mughal buildings were all religious, comprising mosques and tombs or shrines. Hence their scope was limited, though within their limits they express the religious feelings and policies of the dynasty. Even the conqueror Bbâr found leisure in his brief reign of five years, 1526—1531, to build at Panipat the Kâbal Shâh mosque, whose name commemorates at once his love of Kâbul and his victory at Panipat in 1526. His mosque at Sâmbhal in Rohilkhand is marked by an akind jawâb. When he required constructive work Bbâr summoned pupils of Sinan, an Albanian, from Constantinople, and avoided Indian, Hindu or indigenous standards, though he must have employed Indian workmen in spite of his dis-
paragement of Indian skill and knowledge in design or architecture.

Humayun's longer but still more chequered reign produced many buildings, of which few remain. His mosque at Fatehpur near Dhill is massive and well-proportioned, recalling the Tughlaq or Turkish period, with domes rather more than hemispherical. It is decorated with enamelled tiles in the Persian manner, apparently the earliest example of that style now extant. His tomb at Dhill, doubtless begun, as is customary among Pious Easterns, during his lifetime, is of red sandstone and also Persian in style, but in it coloured tiles are replaced by white marble, of which the dome is wholly composed, the rest of the masonry being also infaid with that material. The main dome has a narrow neck, the first of its type to appear in India. The four corner cupolas, also a new feature, support domes of an earlier style.

Akbar (1556—1605) was versatile in his architecture as he was in his religion. In the Fort at Agra he built the palace—one of the few secular buildings of the Mughal period which survive—called the Dzahangri Mahall. His other buildings at Agra were demolished by Shahr-Dzahahn. This palace, built of red sandstone which has weathered badly, bears the impress of Akbar's vigour and originality. Throughout arches are used sparingly, the horizontal style of construction being the rule. Its forms also are as Hindu as its construction, but the ornamentation, carved on all flat surfaces, is of a type used by Akbar but not found in other buildings. During the early part of his reign was erected at Gwalior the tomb of Muhammad Gawa'h, who died in 1562. Closely resembling that of Sibz Shiz at Sahsaram, it marks a considerable advance in tomb-building during the brief period that had elapsed between the erection of the two; an advance ascribed by Ferguson to the invigorating touch of Akbar's genius, but doubtless due in great measure to the skill of the Gwalior school of architects and masons who were probably Hindus.

The tomb is a square, 100 ft. each way, exclusive of the hexagonal towers, and its chamber forms a hall, 43 ft. square, with the angles cut off by pointed arches so as to form an octagon on which the dome rests. Around this square building is a wide gallery, enclosed on all sides by a screen of exquisite tracery in pierced stonework with a projecting porch on each face.

At Fatehpur-Sikri, the new capital founded by Akbar where the court resided from 1569 to 1584, the emperor's eclectic phase found its fullest expression. Its architecture is admirably illustrated in W. E. Smith's works, but all its significance has not yet been explained. The site was chosen because Akbar's patron saint, the Shift Salim Chisti, lived in a cave on its summit. Akbar's own residence was the "House of Dreams," the Khwab-gah, an unpretentious structure standing on the roof of the Mahall-i Khayy, which contains paintings attributed by Smith to Chinese artists and apparently depicting Buddha as Yamantaka. However this may be, the design of his throne in the Diwan-i Khayy massive pillar symbolizes that he sat there as a Cakravartin or ruler of the four quarters, as Havell suggests, though it is conceivable that he signified his claim to the supreme headship of his new religion, the Din-Illah. But it is rash to dogmatise on the symbolism of a builder who seems to have had no settled design for the plan of his new city. The Mahall-i Khayy, regarded by Ferguson as the original block of building at Fatehpur-Sikri, has two spacious courtyards and is larger than the Red Palace at Agra, but its surrounding structures are inferior in richness of design and ornamentation. From time to time Akbar added courts and pavilions as if to compensate for this inferiority. While the Diwan-i Khayy is square as before as the Hall of Audience, the Daftar-Khana or Record Office is peristylar like the one erected by Akbar at Allahabad. The Panç Mahall, a five-storied open pavilion with richly carved pillars, and long colonnades and walls connecting these buildings one with another, complete this group of structures. The most characteristic and beautiful of his designs here are the three small buildings, the Mahall or apartment of Birbal's daughter, the house of Mariam Zamāni, mother of Dzahangir, and the palace of the Rāmi Sulzāna, Rukaiya Begam, a cousin of Akbar and his first consort. Akbar's greatness however demanded more grandiose monuments. The Dzami Masjid or cathedral mosque, erected in 1571 (the year in which he proclaimed himself the mugafadd of his age and openly claimed the spiritual headship of Islam), commemorated his victories in the Dakhah (Southern India). It ranks amongst the finest ecclesiastical buildings of India. According to its inscription, it was designed by Shaikh Salim Chisti himself and modelled on the Ka'ba. Though highly ornate it betrays few or no traces of Iranian influence. The tomb of the Shaikh, in its courtyard, is built wholly of white marble, with windows of pierced tracery of the most exquisite geometrical patterns, and a deep cornice of marble supported by brackets of a design so elaborate as to be almost fantastic. The other tomb in the courtyard, that of Salim's grandson, Shaikh Islam Khan, is of sober and excellent design but eclipsed by its surroundings. The Baland Darwāzah or "lofty gateway," built in 1602, commemorates Akbar's conquest of Khandesh and shows even the Dzami Masjid Hall it is the grandest gateway in India and one of the loveliest in the world, its height being enhanced by its position on the brow of the hill on which Fatehpur-Sikri stands. Its architect placed its portals at the back of a semi-dome, which thus became its porch or portico, and its dimensions impress themselves as those of the actual portal. It must be added that Akbar intended his new capital to be a school of all the arts and that he allied architecture to painting. From the fragments of interior mural paintings which survive, it is clear that he employed Persian and Indian artists, who worked independently, and some idea of their technique is doubtless to be gathered from the miniatures of this period, as mural artists were also required to illustrate manuscripts.

2) The tomb of Salim Chisti is described and illustrated in Smith's work cited above and in F. Indian Art, Nrs. 64 (vol. viii., p. 41 and sqq.), 1898.
At Allāhabād, the city where Akbar was compelled by administrative duties to reside more than at his new but isolated capital, he built the pavilion of the Cālis Sītān or “Forty Pillars”, of which only the hall survives. Its plan is square, supported by eight rows of columns, eight in each row, making sixty-four in all; and it is surrounded by a deep verandah of double columns, with groups of four at the angles, all surmounted by bracket capitals of the richest design.

But perhaps the most characteristic of Akbar’s buildings, observes Fergusson, is his tomb at Sikandra, begun in his lifetime but completed by his successor. Unfortunately Dāhāngīr, in his Tikān (from 1548 to 1556), asserts that the greater part of Akbar’s work and reconstructed the tomb. But, seeing that the plan of the building is unique in India and has no Persian or Saracen parallel, it is more likely that only its exterior is the work of the fastidious orthodox Dāhāngīr. Its original plan was modelled on the Panāh Mahāll, being composed of five square terraces diminishing in size as they ascend. Thus the outline of the structure is pyramidal, not domical. Standing in an extensive garden it is approached by a single gateway and stands on a raised platform. Excluding the angle towers the lowest storey measures 320 ft. each way, and on this terrace stand three more, similar in design but more ornate, each about half the height of the lowest storey or terrace. Within and above the highest storey is a white marble enclosure, 157 ft. square, contrasting with the red sandstone of which the rest of the structure is built. The outer wall of this enclosure is entirely composed of beautiful trellis-work; and inside it is a colonnade or cloister, also of white marble, in the centre of which is placed the tomb of Akbar, resting on a platform of exquisite arabesque tracery. This doubtless typifies Akbar’s celestial resting-place, for below it lie his remains under a far plainer tombstone in the basement. That Dāhāngīr here departed from the original plan is certain. According to W. Finch, the tomb was to have been covered with a canopy of “curious white and speckled gold richly inwrought”. What Akbar planned and what he meant to express by his design must remain a matter of conjecture. Fergusson postulates a Buddhist model, and even sees in the pavilions which adorn the upper storeys reminiscences of the cells which stand on the edge of the great rock-cut rath at Māmalapram; but these may have been intended for use as a theological college like the rooms and pavilions in the upper storey of Humāyūn’s tomb. He also thought that a domical chamber over the tombstone formed part of the original design, since no such royal tomb remains exposed to the air in any Indian mausoleum — a dangerous generalization. Havell sees in the building an Indian five-storeyed Assembly-Hall, apparently a meeting-house for the royal order, the Dīn Ḫilī, the four lower pavilions (or terraces) corresponding to the four grades of the order. Even Cambodian influences have been conjectured 1). Yet it is not impossible that a Zoroastrian model was kept in view, as Akbar borrowed from that faith among others.

As compared with Akbar Dāhāngīr contributed little to the architectural magnificence of Mughal India. At Lahore, which he made his capital, he added the Bārā Khwāb-gah or greater sleeping apartment to the Fort; and the tomb of Anārkhā was also erected in that city. Near Srinagar in Kashmir he made the Shālmār gardens with their summer-houses; and the fine gateway to the Surā at Nūrnāhāl near Dājandhar is also ascribed to his reign. The quadrangle at Lahore was doubtless executed by Hindu artisans, as the colonnade which surrounds three sides of its area, is supported by pillars of red sandstone with bracket capitals and carved figures of elephants, peacocks and conventional animals like those found in the Red Palace at Āgra. Dāhāngīr’s greatest buildings were however erected at Dākka, in Eastern Bengal, where he made a new provincial capital in succession of Gavin; but his structures there were principally built of brick, covered with stucco, only the pillars and brackets being of stone, and they have been almost destroyed by the jungle. In one respect only did Dāhāngīr innovate. In 1600 he built the Mott Māsджīd or “Pearl Mosque” at Lahore, the first of its kind in India. Between Akbar’s style and that of Dāhāngīr little difference exists. The former had used colour ornamentation at Fathpur-Sikri; its later buildings were richly decorated with wall-paintings, and marble mosaic was used in the Djiām Māsджīd. Dāhāngīr relied still more on mosaic decoration, e.g. in Akbar’s tomb at Sikandra, but soon after its completion we find variegated marble mosaic supplemented by pīṭra dūra, as in I’timād al-Dawla’s tomb, and in the Tādji we still find inlay almost exclusively used. Akbar had continued the use of enamelled tiles at Fathpur-Sikri for roofing and more sparingly for ornamentation; and they were employed by Dāhāngīr at Sikandra and by Wāzīr Khān, his wazīr, on his mosque at Lahore. Indeed this mosque is only noteworthy on account of this decoration. Akbar had also introduced painting on interior walls.

Dāhāngīr’s wife Nur Mahāll or Nur Dāhān erected at Āgra the tomb of her father, I’timād al-Dawla, completed in 1628. Built almost entirely of white marble, enriched with semi-precious pīṭra dūra patterns, it foreshadowed the finest work of Shāh-Dāhān’s reign. Dāhāngīr’s tomb, at Shāh-darā near Lahore, has little architectural merit, consisting of a vast platform 209 ft. square, with a minaret at each corner. The façades are decorated with white marble let into the red sandstone and the flat roof with geometrical mosaics. The emperor’s remains are probably buried beneath an opening in the roof so that the rain and dew of heaven might fall on his tomb, as his earliest chronicler says 2). In brief the actual grave was hypaethral 3).

2) Muhammad Šāhī Kambū, in his Shāh-Dāhān-Nāma (also called the Amāli Šāhī in Elliot and Dowson’s Hist. of India, vii., p. 125) cited in Arch. Survey of India, Annual Rep., 1906—1907, p. 13.
3) A contrary view, that the tomb had a closed
THE EMISSARIES, a name often applied in the Ḥurūr to those followers of Muhammad who had migrated from Mecca to Medina with him. The word is derived from ḥāfiṣ, which does not mean “flight” but breach, dissolution of an association based on origin, in the place of which a new connection is formed. The term ṣaḥḥāf is not applied to the Prophet himself but to those who migrated with him and later went on to make up a considerable portion of the population of Medina. The followers of the Prophet who were natives of Mecca were given the name Anṣār [q.v.] to distinguish them from the Muḥājirūn, because the migrants were not dependent on their help and active support after they had given up their homes and livelihoods in Mecca. It now became one of Muhammad’s main objects to arouse sympathy for them, because in the early days after their migration they were for the most part in very needy circumstances. With the greatest eloquence he describes them as the particular favourites of Allah who will receive a splendid reward for their sacrifices “when those who have adopted the faith, who have migrated and fought for Allah’s cause may hope for his grace” (Sūra ii. 215); “the sins of the emigrants and of those driven from home are forgiven” (iii. 191). Those who remained in Mecca and feared to migrate although the earth was large enough to afford them shelter were severely censured. He who emigrates finds a home on the earth and if he dies Allah will reward him (iii. 103). This was however at first only an imaginary hope which had not yet materialised, and in addition to these rosy utterances (cf. xvi. 43; viii. 75; xxii. 57) the Prophet made more practical efforts to help those who were living in difficult circumstances. A portion of the plunder taken in fighting was given to the poor emigrants who had been driven from their possessions in order to aid Allah: “they are the trustworthy” (lxxv. 8). In order to make the bond between them and the Medinese as tight as possible it is announced in Sūra vii. 73 that the emigrants who had left their homes to fight for the true religion and those who gave them shelter (cf. Ibn Ḥishām, p. 321 sqq.) and assistance (the Anṣār) should enjoy rights of kinship with one another while on the other hand, those who, while adopting Islam had not migrated, should not have any rights of kinship. According to the usual interpretation, this passage refers to the peculiar bond of brotherhood which Muhammad instituted between each emigrant and a Medinese believer, an explanation which is however not quite certain as the passage perhaps only expresses a general principle (cf. Fr. Buhl, Leben Muḥam- med’s, p. 209). Besides, the usual exegesis sees in the regulations for inheritance (Sūra iv. 13, 15) a proof that this special bond was very early abolished again.

AL-MUGHIRĀ B. SHU’BA

AL-MUGHIRĀ [See ALLĀH II.]

AL-MUḤĀDĪRŪNA

The high esteem in which the emigrants were held finds expression in Sūra ix. 20, where we read “those who believed and migrated and expended blood and treasure in fighting for the cause of Allah, occupy a higher position (than other believers); they are the fortunate ones”. Muḥādīr in this way became a title of honour (cf. Sūra xxix. 25 where Ḥādī is so called). Individuals who had migrated not to Medina but to Abyssinia also proudly called themselves muḥādīr (see Fr. Buhl, op. cit., p. 172). But the real “migration” was that to Medina in which the Prophet himself took part. The number of the Muḥādīrūn gradually grew as the increasing power of Muḥammad from time to time induced Meccans to leave their heathen city and go to Medina. It is to them that Sūra viii. 76 refers, where those who adopted Islam later than the first emigrants who migrated and afterwards fought alongside of the older Muḥādīrūn are acknowledged as belonging to the community (“they are of you”). After the treaty of Ḥudaybiyya [q.v.] in particular, we hear of Meccan women who left their pagan husbands and went to Medina where in accordance with Muḥammad’s interpretation of the treaty they were not surrendered if they once took the so-called women’s pledge (see Sūra lx. 11 sqq.). Thus the Muḥādīrūn, later and earlier, formed an increasing element in the population of Medina, whom Muḥammad often mentions along with other sections of the community as possessing equal rights with them (e.g. Sūra xxxiii. 6, 49) in which connection it should be noted that Muḥādīrūn is never, as was the case among the Anṣār, used in genealogies.

That these emigrants were specially dear to Muḥammad is easily intelligible, for they had shared his sufferings in Mecca and made the greatest sacrifices for him and included in their number men who had adopted his teaching out of pure conviction. With the occupation of Mecca, the migration ceased while the Muḥādīrūn remained as a separate highly honoured body. It is natural to suppose that a certain amount of rivalry might easily arise between them and the other elements of the community, and that there was actually a certain amount of friction between the emigrants and the Medinese is evident from the fact that in the troubles after the Prophet’s death the Medinese endeavoured to set up one of their number, Sa’d b. Ḫūdān, as successor to the Prophet. The attempt failed through the energetic action of Ṭāhir, Aḥbār Bakr and Aḥbā’i Ṭāhir, and the leadership of the community remained in the hands of the Muḥādīrūn until the descendants of Muḥammad’s old opponents in Mecca seized power for themselves.

MUḤĀL [see MANTIṣ].

AL-MUḤALLAB B. ABI SUFRA, ABD SĀĪD AL-ĀZĪD, AN ARAB GENERAL. Al-Muḥallab is said to have been born two years before the death of Muḥammad. In the reign of Muḥāwiyah he used to campaign against the country between Kažib and Muhārān (44 = 664–665). He next distinguished himself in the expeditions of the governors of Khurāsān against Samarkand. Then however, he left the Umayyads and joined the anti-Caliph ‘Abd Allāh b. al-Zubair who gave him the governorship of Khurāsān. When he was just about to start for there, he was appointed commander-in-chief in the war against the Azrāḳ
following the precedent set by Bābur. The sarcophagus is of white marble, inlaid with *pietra dura*, and it stands in an octagonal chamber 21 ft. high and 201/2 ft. in diameter. This chamber is enclosed in nearly solid walls of masonry. 56 ft. thick on all sides, and access to it is afforded by two oblong apartments, one on each side, but it does not open into any of the forty other rooms, behind the arches which surround the structure, each façade having a central arch with five smaller arches on each side.

Under Shāh-Djāhān (1627—1666) Mughal architecture attained its zenith. One of his earliest buildings was the incomparable Tādž Mahāl [q. v.], begun the year after the death of the empress, Asdujand Hānā Begam, entitled Mumtāz Mahāl, or the “Chosen One of the Palace”. For himself Shāh Djāhān planned a corresponding tomb of equal magnificence on the opposite bank of the river Djamnā, but Awrangzēb did not carry out the scheme, probably because it savoured of paganism.

Considerable controversy has raged over the question of its architect. Shāh-Djāhān’s style was essentially Persian, with an indefinable difference of expression, and it is sharply distinguished from those of Isphān and Constantinople by a lavish use of white marble, sumptuously decorated with *pietra dura*. Coloured tiles had by now become rare. Spacious grandeur was combined with feminine elegance, to which inimitable open-work tracery contributed. In the mosques colour was eschewed, and the finest art is found in the Pearl Mosques at Agra and Dihli. The former was built in 1646—1653. Meanwhile Shāh-Djāhān had founded Shāh-Djāhānābād, the great palace near modern Dihli, recently restored to something like its pristine beauty. A Persian engineer, ‘Ali Mardān Khān, had tapped the Djamnā 6 miles above Dihli, and his canal fed the new capital with many streams. The most favoured of them was the Nahr-i Bihāšt of “Stream of Paradise”, which was so named by Shāh-Djāhān himself. It fell in a cascade down a marble chute in a pavilion — the Shāh Būrgī — and flowing along the terrace which bordered the Hayat-Bakhtā (“life-giving”) garden, it traversed the chain of stately edifices that lined the eastern wall of the Palace — the Ḥamnām, Divvān-i Khāss and Khvāār-gāh — silently gliding beneath the Mīzān-i Inṣāf (“Balance of Justice”) across a sun-bathed court into the cool of the Imamī Mahāl or “Palace of Distinction”, styled later the Rāng Mahāl Kalān or “Greater Colour Palace”, from its elaborate painted decoration and gilding. Set on a marble terrace which formerly swept from end to end of the Fort, it overhung the Djamnā whose course then flowed along the base of the red sandstone walls. On the West an orchard separated it from the Divvān-i ‘Am. Thence, still southward, it passed through the Lesser Rāng Mahāl, the Mumtāz Mahāl and other buildings of the imperial castrum. Thus Dihli combined the Mughal love of enclosed gardens, watered by running channels, with their passion for architectural beauty. It preserved Bābur’s love of nature, and perhaps added to it a sense of landscape which also found expression in the Mughal gardens of Kashmir.

With Awrangzēb (1659—1707) set in the period of decline, due no doubt largely to that emperor’s orthodox prejudice against art, but partly also to his conscientious parsimony. He declined to complete Shāh-Djāhān’s tomb, ostensibly on the ground of expense, but also perhaps because he regarded the scheme as savouring of paganism. Yet he constructed at Benares the great mosque with its lofty graceful minarets, built a copy of the Dihli mosque at Lahore, and at Awrangzbād imitated, though on a smaller scale and with success, the Tādž in the tomb of his favourite wife. Awrangzēb’s own tomb, at Khuldībād, a hamlet just above the caves at Ellāt, is mean and insignificant. But some of his buildings, in spite of their incipient decadence, are the last great examples of the Mughal style. His Djamnī or Bādshāhī mosque at Lahore is pleasing in form, though the marble ornamentation of its great central and front façade is very inferior in detail to its prototype at Dihli. Its three domes of white marble and the imposing gateway of red sandstone and marble leading to it from the Ḥazīr Bāgh are its finest features.

Near Dihli the tomb (1756) of Nawwāb Sa’dar Djang, Wazīr of Oudh, is a passable copy of a Humāyūn’s mausoleum, but its interior is marred by indifferent plaster decoration.

At Lucknow, the capital of the Nawwāb Wazīr of Oudh, the buildings erected by that dynasty and its noblest descendant are to be classed as Mughal. The one exception is the vast Imāmābād, built by the fourth Nawwāb, ‘Āṣaf al-Dawla, in 1784. Conceived on a grand scale for the celebration of the Maharram according to the Shi’a rite, its details will not bear close examination, though its solidity is impressive. The buildings of the Maharram dynasty of Mysore (1760—1777) have still less claim to be regarded as Mughal.

To conclude, the architecture of the Mughals was, like all their arts, a resultant of many forces.
But its essential distinction over Hindu art lay in its balanced use of purely Indian and imported techniques; while it recognised the value of symbolism in its structures, it never made its arts merely a vehicle for symbols, as Hindu sculpture tended to do.

MUGHAMMAK: According to historians MUGHAMMAK was a valley near Mecca on the borders of the sacred area. According to tradition, Abraha [q.v.] ordered his army to encamp here when he was going to attack Mecca, but was prevented from doing so as birds slew his soldiers by dropping stones on them. In Mughammas is shown the tomb of the Tā’fī Abū Righāl who died here after acting as guide to Abraha. He was so hated by the Meccans for this that the custom grew up of casting stones on his grave [cf. Al-MAJRAK]. Whether this explanation is true or not is unknown, but in any case a verse of Hassān b. Thābit (ed. Hirschfeld, LXII), shows that in the time of the Prophet the mention of his name was sufficient to insult the Tā’ifs. The antiquity of the custom of stoning his tomb is shown by a verse of Dājjār: “When al-Farazād died, stone him as you stone the grave of Abū Righāl.”

FR. BÜHL)

AL-MUGHIRA B. SHUBA, of the sept of the Ḩathīf, a subdivision of the Ḥathīf, further a member of the clan of the Banū M‘āṭīb — guardians of the sanctuary of al-Lat — and nephew of ‘Urwah b. Mas‘ūd [q.v.], companion and martyr. For having attacked and plundered some travelling companions during their sleep, he was forced to leave Tā’fī, his native town, and came to Medina to offer his services to Muhammad. The latter used him to attract the Ḥathīf to Islam and after the submission of Tā’fī, sent him to this town to supervise the destruction of the national sanctuary and the liquidation of the treasure of al-Lat. In the caliphate of Abū Bakr, although he never succeeded in attaining to one of the great posts which were reserved for the Kurajsh, Mughira was able to keep a position in governing circles. ‘Ōmar, while under no illusions about his morals, appointed him governor of Başra. A scandalous incident temporarily interrupted his administrative career. He was accused of adultery. The evidence was overwhelming: instead of having him stoned, ‘Ōmar only dismissed him. Mughira holds in tradition the record for marriages and divorces; the figures of 300, 700 and 1,000 are given. In the year 21 (642), recalled to public life, he was appointed to the important governorship of Kūfah. His slave Abū Lu‘yān, who lived in Medina, assassinated the Caliph ‘Umar. Under ‘Uthmān, Mughira retired to private life. In the reign of ‘Ali, he withdrew to Tā’fī to watch the course of events. He went without having been invited to the conference of Adhrā [q.v.]. In 40 (660), taking advantage of the general confusion that followed the assassination of ‘Ali, he produced an alleged certificate of appointment from Mu‘āwiyah and took over the control of the annual pilgrimage.

The great Sufyānī was able to appreciate at their true value auxiliaries of the stamp of Mughira, one of the chief dā’iyas of his time, the man “who could get himself out of the most hopeless difficulty”: “if (it was said) he were shut behind seven doors, his cunning would have found a way to burst all the locks”. Of shocking morals, free from any attachment to the ‘Alīd party, equally free from any claims to the caliphate, free from the jealousies of the Kurajsh, and, as well as the narrowmindedness of the Anṣār clan, a member of the intelligent and enterprising tribe of Ḥathīf, everything attracted Mu‘āwiyah’s attention to him. In the year 41 (661), this Caliph appointed him governor of Kūfah, a region disturbed by the intrigues of the Shī‘a and the continual risings of the Khaṭībdīs. Mughira succeeded in not compromising himself with the former: he was content to advise them to avoid any too striking outburst. Now nearly sixty, the able Ḥathīf felt the unusual ambition of remaining where he was and of finishing his troubled career in peace and honour. This opportunist, who had come over to the Sufyānīs after cool calculation, felt little desire to sacrifice his own peace and leisure for the consolidation of the Omayyad dynasty; he was solely concerned with keeping on the right side of the sanguinous Mu‘āwiyah. The sudden rising of the Khaṭībdī leader Mustawrid failed to disturb his equanimity. With remarkable cleverness he was able to let loose against these rebels their born enemies, “the fine flower of the Shī‘a”. Whichever was victorious, it could not fail to lighten his responsibilities. By setting them against one another he rendered harmless the most dangerous elements of disorder in his province. The crushing of the Khaṭībdīs enabled him to breathe freely.

Thanks to this combination of mildness and astuteness, and by knowing when to shut his eyes, Mughira succeeded in avoiding desperate measures against the people of the ‘Irāq, who were a continual source of trouble, and succeeded in retaining his position. He was even regretted by his former subjects after he was gone. Not quite satisfied, Mu‘āwiyah thought of breaking this lieutenant of his who was playing a double game. Mughira was always able at the opportune moment to provoke troubles which required the continuation of his services. In this way he prepared the return to favour of Ziyād b. Abīhi [q.v.], destined to be his successor. He is also said to have disarmed the Caliph’s suspicions by suggesting the plan of proclaiming Yazid heir-apparent. As the general situation had considerably improved in the ‘Irāq and order prevailed, on the surface at least, the Caliph left him in office till his death, the date of which is uncertain but which must be placed between 48 and 51 (668—671). Mughira died, the plague at the age of about 70.

**K. V. ZETTERSTÉEN**

**AL-MUHALLABI, ABDU’L MUHAMMAD AL-HASAN B. MUHAMMAD, A VIZIER OF MU’IZZ AL-DAWLA.**

He belonged to Bajra and was born in Muharram 291 (31 Dec. 390). In 334 (945) when Mu’izz al-Dawla was marching northward, he sent him in advance to negotiate with the Caliph and on Ljumála I, 27, 359 (= Nov. 950) al-Muhallabi was appointed vizier. He was given the supreme command in the war with Imam b. Sháhín [cf. Mu’izz al-Dawla] and had brought him into a very precarious position when he himself fell into an ambush and could only save himself with difficulty, whereupon Mu’izz al-Dawla had to conclude a truce with Imam. In 341 (952—953) the ruler of Oman, Yúsuf b. Wáqí’l, undertook a campaign against Bajra; al-Muhallabi, however, anticipated him, occupied the town and defeated Yúsuf. In the same year, he fell into disgrace but was able to retain his office and the good relations between Mu’izz al-Dawla and his vizier were restored. A few years later, Mu’izz al-Dawla equipped an expedition against Oman and put al-Muhallabi in command. The latter set out in Ljumála II, 372 (= June/July 963) but soon fell ill and decided to return to Rayhad. He died on the way on 26th Sháhín of the same year (= 19th Sept. 963) and was buried in Rayhad. On his death Mu’izz al-Dawla confiscated all his property, which aroused general indignation.

**MUHAMMAD, THE FOUNDER OF ISLAM, was a native of the city of Mecca.**

The energetic Khùsáf had in the sixth century created a flourishing centre of commerce by exploiting the much visited places of pilgrimage there. In consequence of the unlikelihood of the sources at our disposal the very question a biographer has to ask, namely when was his hero born, cannot be answered with certainty. That Muhammad’s activity in Medina covered ten years (622—632) is certain; but we have no certain data for the Meccan period. There is however no cogent reason to doubt the statement in a poem ascribed sometimes to Abū Ka‘b b. Abi Amr and sometimes to Usámah b. Thābit (ed. Husainfeld, *NÖ* 19, 1) to the effect that his prophetic activity in Mecca lasted “ten and some years”. The parallelism between the two periods, which might be brought forward as a ground of suspicion, is not complete, and on the other hand, the annual recurrence of the great pilgrimage at Mecca must have made it easy for the inhabitants to reckon by them, so that a chronological statement originating there deserves more confidence than others. The Meccan period in any case must not be put too short. According to ‘Urwa’s story mentioned below (Tabari, *l. c.* 1181), “seven years” passed after the migration of his followers to Abyssinia before they returned, after which new difficulties arose which produced the migration to Medina. — For the period before he came forth as a religious reformer we have only the indefinite expression *anaw* (Sîra x. 17).

**The Encyclopedia of Islam, III.**
The only thing certain from the Qur'an is that Muhammad grew up as an orphan in very miserable circumstances (Sûra, xiii. 6 sq.). The first tangible historical figures among his relatives are his uncles: Abû Tâlib, with whom tradition records that he found a kindly reception; Abû Bakr, Hamza [q.v.] and Abû al-Âzîz [cf. Abû Lahab]. On the idyllic little story of the boy's stay with the Median sheikhs, b. Bahîr, see the article JâLÎMA. The story of the cleansing of his breast (a similar story is related of Ummayy b. Abî 'Âsâ'; cf. Goldziher, Abb. d. Arab. Phil., i. 213) is a materialisation of Sûra xiv. 1.

In Sûra xiii. already quoted, we are told that Allah made the poor orphan prosperous. Corresponding to this in tradition is the marriage of Muhammad with a rich merchant's widow, in whose service he had been [cf. KHAĐÎJA]. She bore him four daughters, who play a part in later history, and several sons all of whom died in infancy: one of them at least must be his historical as his pagan name was Abû Manâf (Sprenger, i. 199 sq.; Caetani, i. 173): could not be invented by later writers; such a fiction in any case, as posthumous comfort to alleviate the disgrace of the lack of male heirs (Lammens), would be very inadequate, if it had to make the sons die again after their death. The interest in business matters apparent in the Qur'an (Sûra ii. 194; Is.l. 9 sq.) as well as his fondness for business expressions (cf. however similar expressions in the Wisdom of Solomon, iv. 20; Pirg. Abot, iii. 16; iv. 22; Horn, Gesch. d. Pers. Lit., p. 10) are very natural if Muhammad took part in business transactions as Khaṭîja's assistant and husband. On the other hand, it would be wiser to set aside the alleged trading journeys into neighbouring lands, which is said to have made even as a child with Abû Talib and later in Khadyja's service: in the form in which they are given, they have distinctly apologetic tendencies [cf. Bâkıra] and are quite unnecessary to explain his later religious development. Sûra xxxvii. 137 sq. in any case is referring to a period which however might be interpreted merely as a polite formula; cf. Song of Solomon, vi. 2; Dalman, Patristischer Divan, p. 190, 255 sq.; E. Littmann, Neuhochdeutsche Volkssprache, p. 141). On the other hand, the Meccan enemies of the Prophet say in Sûra xiii. 30 that they would have been more confident if he had been one of the prominent men of the two cities (Mecca and Ta'f). The Hashim family in any case could not compare with the most prominent families like the Makkûh and Cmâyâh: and what is recorded of the needy circumstances of Muhammad and some of his relatives suggests that the Hashim family must have been exceedingly poverty stricken at this time. On his mother's side he had connections, which are not clear to us, with Medina [cf. Amîna and Hashim]; according to Mâsâ b. 'Uqîla the Medineans called Abû al-Mutallib their "sister's son" (cf. Ibn Sa'd, i. 128, 8, 12). We know nothing more that is definite about his own life or of what is related is legend. His father, who is said to have died before his birth, is quite a colourless figure, whose name 'Abû Allâh is perhaps only a later improvement on a heathen name. His grandfather is called Shaib or Abû al-Mutallib; the connection between these two names is however obscure as is that between Abû al-Mutallib and the oft mentioned family of Mutallib (Hashim b. Thälîb, nº 154, 2; Ibn Hâschim, p. 230, 13, 156, 14; or the Banû Shâibah (Ibn Sa'd, 1/1, 94; 1/1, 124; 29).
he relates of Mary, Joseph, Zacharia and John; the story of the Seven Sleepers (cf. Aqīb al-Kaḥf and M. Huber, Die Wanderlinge von den Siebenschlafern, 1910) also presupposes Christian authorities. One therefore cannot blame his enemies when they said that he had foreign teachers (xvi. 105; xxv. 5 sq.; xlv. 13), which is certainly not related by the reply in xvi. 105. Further it is clear from the Kur'ān that he did not come into contact in this indirect way with the books of the Bible in their simple form, but that his authorities had drawn on Midrashic and Apocryphal works, which is easily explained by the varied and luxuriant character of the religious tendencies in Arabia. In particular what he tells of the birth and childhood of Jesus (xxix. 22 sq.; iii. 41; v. 109 sq.) comes from Apocryphal sources, and his account of the death of Jesus (iv. 156) has parallels among the Manichaean and Buddhist.

To state exactly what religion exercised particular influence on Muhammad's ideas is hardly possible in view of the scanty information and the lack of conditions in these "possessors of a scripture" — Judaism and Christianity — and he was conscious of this, in as much as he repeatedly emphasised the agreement between his teaching and these older religions of revelation as irrefutable evidence of its truth (cf. the significant passage: "If thou art in doubt about what We have revealed, ask them who read the scripture before thee", Sūra x. 94). The only question is, in what way did he become possessed of these new ideas. This much only is certain, that he did not get them from his own reading of the holy scriptures of the Jews and Christians. The word ummī (q. v.) applies to him (Sūra vii. 156) signifies, without committing us to anything about his ability in reading or writing — as a merchant he must have had a certain knowledge of these arts — that he was an illiterate layman, who was not able to read the Hebrew or Greek Bible, and that this was actually the case, the Kur'ān shows on every page. For this explanation of the term Wensinecke, Acta orient., ii. 191 and (citing the Hebrew ummī ḫaššālim) Horovitz, Kornische Untersuchungen, p. 52 would put "pagan", Enaj, but, although this might fit some passages, it could hardly suit Sūra ii. 73 where there is a reference to a difference between the "possessors of a scripture" and the musallānān among the Jews. The usual explanation suits well enough, as it is certain and it is confirmed by the Kur'ān everywhere that, while Muhammad had some notion of the books of the Bible, the Hebrew and Greek Bibles were closed books to him. Utterances like the saying that Jesus "received" the Gospels (iii. 44; v. 50; iv. 27) and that it should be "observed" like the law (v. 70, 72) clearly show that he did not know its real contents. Sūra xxi. 105 contains a quotation from the Psalms, but this is quite an isolated instance and he knew nothing of the Psalms as a part of the Old Testament (xvii. 57). The parable of the camel and the eye of a needle (vii. 38) proves of course no literacy dependence and the alleged description of Muḥammad and his followers in the Gospels (xlv. 29) shows what he could build up on a vague recollection of something he had heard. On the other hand the stories reproduced, e. g. the long account of Joseph (Sūra xii.), show that he was indirectly dependent on the Bible and not only on the Old but also on the New Testament (cf. what
which decided the whole course of his life: he felt himself called to proclaim to his countrymen as a prophet the revelations which were communicated to him in a mysterious way. When Caecum wishes to see in this the result of a long development and continued reflection, this is certainly not correct. We must rather oppose to the tradition which tells of a sudden outbreak of conviction that he was called to proclaim the Word of God. For this view we have the analogy of prophets in general, from the Old Testament prophets down to Joseph Smith; and no long drawn reflections but only an overwhelming spiritual happening could give him the unshakable conviction of his call. This is also confirmed by several passages in the Koran, which point to a deciding moment, definite in time (xlv. 2 sq.; xxviii. 11; n. 184), in which connection it is of minor importance whether it is possible to identify the revelation of the call itself among the Suras of the Koran (according to a common opinion, xcvii. 1 sqq.; according to some, on the basis of its language, xcvii. 1 sqq.; especially as one must reckon with the possibility that the very earliest revelations were not written down. If this really was the case, however, the reason certainly was not that they were deliberately suppressed, since a revolutionary change of his world of ideas into its diametrical opposite while retaining the earlier apparatus of inspiration would be quite an untenable hypothesis.

The Koran gives only a few hints about the manner of these inspirations; a veil lay over them which the Prophet either could not or would not raise completely. Perhaps the wrapping up (lxxviii. 1; lxxxiv. 1) refers to a preparation for the reception of the revelations in the manner of the old Arab kätaru; but we are taken further in an indirect way by the oft recurring accusation of his enemies that Muhammad was possessed (massignin), a soothsayer (kätän), a magician (safar), for they show that in his moments of inspiration he made an impression similar to those figures well known in ancient Arabia. In addition there are several traditions which describe his condition in such moments more fully and may undoubtedly be regarded as genuine, since they are the last thing later Muhammadanism might be expected to invent, while these mysterious seizures afforded to those around him the most valid evidence for the superhuman origin of his inspirations. In Byzantine authors we find it stated that the Prophet was an epileptic (e.g., Theophanes, Chronographia, ed. de Boor, i. 334); and modern psychiatrists recognize the correctness of the e descriptions of his attacks; we must of course leave it to them to define the exact nature of his condition. From the scientific point of view the fact is that the voice heard by him only uttered what he had from time to time heard from others and which now cropped up out of his subconscious. The scientific student therefore does not see in Muhammad a deceiver but fully agrees with the impression of sincerity and truthfulness which his utterances in the older revelations make (e.g., Si. 8, 16, 20, 113; xxviii. 85 sq.); Isl. 44: 16 sq.; cf. vii. 202; xvi. 100; the cogent impevements lxxv. 21; xcvii. 1; the self-denunciation lxxv. 1 sqq., etc.) along with the fact that he upheld his enduring years of hostility and humiliation in Mecca, the unshakable conviction of his lofty task. It is more difficult with the later Medinese revelations, in which it is only too easy to
detect the human associations, to avoid the sup-
position that his paroxysms (e.g. at the battle of
'Tahira: Ibn Hisân, p. 444: in the slandering of
NSS. of his enemies, he artificially
bought off, and there is even a tradition which
makes 'Aisha say to the Prophet: "Thy Lord
seems to have been very quick in fulfilling thy
prayers". It must not be forgotten however that
taures like this, without actually being conscious of
of it, are able to provoke the same states of exci-
tation, which earlier races without their assistance;
and so probably not only were his followers
in Medina (cf. Kâb b. Malik in Ibn Hisân, p. 614): but even he himself convinced, that
the spirit was continually hovering about him to
communicate the revelations to him. By this
we do not of course mean that in his ecstatic
condition he received the divine communications
in the air, as we now have them in the Kur'ân:
only the foundations were given him, which he
earlier developed into discourses of greater
length. Since in doing this he used the external
forms of the old Arab soothsayers it is natural
that the Meccans took him for one, but it does
not follow that he was spiritually akin from
the first to those soothsayers who were inspired by
djins. The inclination with which he objects
to being associated with them is not a proof of
such a relationship of which he wished to rid
himself, simply because he was conscious of the
similarity, but a natural result of the fact that
the enlightened Meccans saw in persons of this
kind licentious fanatics of the lowest kind, while
he was firmly convinced that he was filled with
quite a different spirit, one quite unfamiliar to
his enemies.

While it is in this way possible with the help of
the Kur'ân and Tradition, to get an on the
whole satisfactory picture of Muhammad's develop-
ment and his condition when prophesying, he him-
self gives in the Kur'ân quite a different interpretation of
the revelations that came to him, which is based
on a peculiar theory which he apparently did not
invent himself but adopted from others. The
fundamental idea in it is the conception of a
divine book existing in heaven, al-Kitâb, a well
conceived book, which only the pure may touch (Ixxvii. 76 sqq.); a well guarded tablet (Ixxxv. 21 sqq.),
the master of the book (xlii. 2 sqq.), on heavenly
leaves, exalted and pure, by the hands of noble
and pious scribes (Ixxxv. 13 sqq.). He himself did
not read this book, as E. Meyer erroneously thinks,
but it was communicated to him orally piece by
piece, not in its original form but in an Arabic
version intelligible to him and his countrymen
(cf. xlii. 1; xlii. 37; xx. 112; xlvii. 102 sqq.; xl.
2; liiv. 58 and especially xlv. 44: "If we had
made it a Kur'ân in a foreign tongue, they would
say: Why are its signs not expounded intelligibly, a
foreign text and an Arab reader"). In
addition there is the fact that Muhammad was aware
that the complete contents of the book were
not communicated to him, as he expresses states,
e.g. of the stories of the prophets, not all of
which were related to him (xlvii. 78; iv. 162). He
received the communications orally, Allah rehear-
sing to him the substance of the separate sections
(Ixxxv. 16 sqq. etc.), while in several passages it
is stated more precisely that the revelations were
communicated through the Spirit (xlvii. 162 sqq.;
xvi. 104; xlii. 52) or the Angel (xvi. 2; xv. 8;
cf. liii. 5 sqq.; lxiii. 23 sqq.); a late passage of the Medina period (li. 91) is even more precise in
saying that they were communicated by Gabriel.
References to visions are rare (e.g. the encouraging
apparitions in Sûra vii. 45; Sûra viii. 27; the night
journey must also have been a vision) and even in
such cases the main thing is not what he heard (lii.
10; lxvi. 10). These communications were the
great miracle that was granted him, while he
expressly and repeatedly says that the ability to
perform miracles in the usual sense was denied to
him (unlike Jesus).

From this book in heaven, the all-compromising
contents of which are not by any means exhausted in
the extracts forming the Kur'ân, also came the
older religions of revelation of the possessors of
a scripture, whose religions are therefore in his view
coincident with his and, as he often says, were
confirmed by it (cf. Hassân b. Thâlit, No. 134.3). This
again is connected with a theory expounded
by him of a line of prophets which began with
Adam, and of which he was the last representative.
His source for this idea was not Judaism, for
he does not know of the great prophets who
wrote books of the Old Testament; instead of them
he mentions individuals, whom the Jews do not
count as prophets, e.g. Lot, Joseph, Solomon, Job,
etc.; on the other hand the fact that Jesus and
John the Baptist are the last links in the chain of
prophets clearly suggests a Christian origin, and
though parallels in more or less heretical early Christian
literature can be demonstrated. Of the prophets
Muhammad relates a number of stories, which do
not begin to appear in any number until the
middle Meccan period when the Meccans were
beginning sharply to reject his mission.

The ideas in the oldest, passionately excited
inspiration, developed under a baroque power of
imagination rarely reached later, are very simple.
They are based not on the dogmatic conception
of monotheism but on the strong general religious
and moral impression which contact with older
religions had made upon him, which was bound
finally to lead to a breach with polytheism. In
particular he was filled with the idea of the moral
responsibility of man created by Allah, and with
the idea of the judgment to take place on the day of
resurrection, which again points undoubtedly more
to Christian than Jewish influence (especially
the introductory sounding of trumps, not found among
the Jews). To this are added vivid descriptions
of the tortures of the damned and seductive pictures
of the joys of Paradise, which are further of interest
because they reveal Muhammad's strongly sensu-
al temperament. Gradually monotheism was empha-
sized as an overruling basic idea and at the
same time he attained a somewhat weakened concept of the Deity. With all the vigour of an elemental
religious nature, he points to the wonders of
everyday life, especially to the marvellous pheno-
menon of man (in this connection cf. the poem
of the Jew Sama'il, al-Iraq, ed. Al-Bawqâî, No. 209.) The religious duties which he imposes on
himself and others are simple and few in number; one
should believe in God, appeal to Him for forgiveness
of sins (xxviii. 11), offer prayers frequently on
the model of the Jews and Christians, in the night
also (xi. 116; lxiii. 20: cf. lxvi. 25 sq.); assist one's
fellows, especially those who are in need, free
oneself from the love of delusive wealth and — what
is significant for the commercial life of Mecca — from all forms of cheating (xxvi. 182 sq.; lv. 8 sq.), lead a chaste life and not expose newborn girls, as the barbarous custom of the time was (according to Sūra vi. 152, xvii. 33 from poverty, cf. al-Mubarrad, Kāmil, ed. Wright, p. 277; originally perhaps a kind of magic to procure sons, when only girls had been born, cf. Musil, Lātīn-ʿArab., p. 38; even before Muhammad's time there had been people who fought against this barbarous custom, cf. al-Mubarrad, Kāmil, loc. cit.). This is the ideal of the truly pious man who is called by the name of musulm (lxvii. 35; xxi. 108 etc.) or bānī (s. 105; xxi. 29; xvii. 4; cf. vi. 79 and the article). Cf. in this connection the list of Muhammad's precepts in Alāʾ's poem (Ibn Hisnām, p. 255: Morgenlandische Forschungen, p. 25 sq.).

From all this, it is quite evident that Muhammad had at this time no thought of founding a new religion. His task was only to be a "warner" (li. 59; lixv. 2; lixiv. 45; lxxv. 11; lxxviii. 21 sq.), in view of the approach of the kiss of judgment, to his countrymen, whom no prophet had yet been sent (vi. 157; xvii. 46; xxii. 3; xxiv. 43; xxvi. 51; no notice is taken here of Hūd and Sālih) and as a result of the revelations granted him to give them, in the form of a lucid Arabic Qurʾān (see above), what the "possessors of a scripture" had in their scriptures, which were not accessible to the Arabs and thereby to save them from the divine wrath. The Jews and Christians also must therefore testify to the truth of his preaching (s. 94; xvi. 45; xxi. 7; xcvii. 197; xxviii. 52 etc.). On account of the insufficiency of the sources, it is very difficult to ascertain in detail how Muḥammad's relations with the Meccans developed. The Qurʾān contains only vague hints, which permit no chronological arrangement, and the traditions are very full but little reliable. Only one report, which ʿUrwā composed for the caliph ʿAbd al-Malik (Tabari, i. 1150 sq.; 1224 sq.), the value of which has already been indicated by Spenger, gives a brief but apparently trustworthy glimpse of the main events (cf. also al-Zahiri in Ibn Saʿīd, ii. 133). At first Muhammad met with no serious opposition and in not a few cases his preaching fell on fruitful soil: indeed in the words addressed to Sāliḥ (xi. 64) we may find a hint that he had at first aroused considerable expectations among the Meccans. All traditions agree that Khadijah was the first believer, while they differ as to who was the first male adherent. In any case Abī Bakr, the manumitted slave Zaid b. Ṣāhīḥa, Ḳabīr b. al-ʿAwwām, Ťalha b. ʿUbayd Allāh, ʿAbd al-Rahmān b. ʿAfī. Saʿīd b. ʿAbī Waṣāṣ, and Muhammad's cousin ʿAli [q. v.] were among his earliest followers. The majority of those who were won over by his preaching were however young and of no great social standing, while the well-to-do and influential held back (xix. 74; xxi. 30 sqq.; xxviii. 62 sq.; lixiv. 11; lxxv. 1 sqq.; cf. the veiled references in vii. 73; xi. 29; xvii. 17; xxvi. 111). This became still more the case when the full consequences of his ideas became clear to him and he openly attacked the religion of his native town; for the Meccans, to the majority of whom such devotional meetings had been a matter of complete indifference, now discovered that a religious revolution might be dangerous to their fairs and their trade. That this was the salient feature of their resistance to Muhammad is evident from the fact that he frequently endeavours to calm the fears of the Kurānī on this point: the Meccan sanctuary, he said, belonged to his god Allāh, whom the Meccans also recognised as the highest god (xxvi. 24; xxix. 39; cf. Kaʿīs b. al-Khaṭím, ed. Kowalski, v. 14; xii. 12 where Allāh is the Lord of the Kaʿbah) and he will protect and bless his sanctuary, if they submit to him (xxvii. 93; xxvii. 57; xxix. 67; cvi. 1 sqq.). In addition there was the conservative attitude of these merchants in the field of religion and their animosity to new and fantastic ideas, particularly to that of the resurrection of the dead.

Traditions record at great length the persecution and ill treatment which Muhammad and his followers suffered at the hands of the Meccans. These descriptions are undoubtedly much exaggerated, for the object was to glorify the self-sacrifice of the believers and no doubt also to put the old patrician families of Mecca in an unfavourable light. But it is equally certain that there is some foundation for these stories, for ʿUrwā speaks of two turns (jumma) which twice forced the believers to migrate, and in the Kurān there is mention of "trials" which their opponents inflicted upon the believers, men and women (lxxv. 10), and it is expressly mentioned that the influential wished to prevent Muhammad from praying (xvi. 9 sq.; cf. the veiled account vii. 84), while on the other hand, the complaints about what they would have liked to do should not be taken at their face value without more ado (vii. 26; xxi. 17; xviii. 78; cf. xi. 93). The peculiar feature, repeatedly found in stories of the prophets, that their opponents threaten them and their followers with stoning (Sūra xi. 93 and frequently) might suggest the hypothesis that Muhammad was actually threatened in this way by the Meccans, but this would probably only have been in a momentary outburst of passion and in any case the quarrel was mainly conducted in endless wordy disputations in which the spiritual advantage lay with Muhammad. His strength lay in the consciousness that he lived in a higher intellectual world which was closed to the Meccans and that he proclaimed ideas, "the equal of which neither men nor djinn with combined efforts could produce" (xvii. 90). Very pertinently he often points to the lack of logic in his enemies, when they recognise Allāh as the real true God but will not draw the logical deductions from this. But even his most crushing arguments rebounded from the impregnable wall of their prejudices which were based on their material interests. This contumacy now began to influence the matter of his preaching in a very remarkable way. When his opponents mocked him because the divine judgment threatened by him did not come (xxviii. 15; lxx. 5) he began to describe in an increasing degree in his stories how the contemporaries of earlier prophets had met them with incredulity and had therefore brought on their heads dreadful punishments. That he did not use such means at the very beginning of his mission is evident from the fact that his preaching, according to the already mentioned credible tradition, at first gave no offence, and indeed this feature is lacking in the sūras which are certainly the oldest. It was the hardness of heart of his countrymen which forced him to take to this weapon in order to stir them. At first it proved by no means ineffective, as the Arabs knew of old trading peoples like the
Hamid [q.v.], whose destruction might well give
them cause for reflection. But gradually this line
of attack lost its effect. To Muhammad however
the resistance to the obvious truth was something
so unintelligible that he could only find solace in
an idea, which was to be of far-reaching importance
in the further development of Muhammadan dogma-
nces: Allah, the immeasurably exalted and al-
mighty, could of course not be impeded by the
resistance of mortals; the unbelief of the Prophet’s
opponents was therefore an effect of the divine will: “Allah makes to err whom he will and guid- whom he will” (x. 99; xxxii. 12 sqq.; xxxv. 9; lviii. 34 etc.), a view which his enemies endeavoured
not unskilfully to turn against himself (xii. 37;
xxvi. 47).

Several episodes stand out in the Meccan period
which are unfortunately more or less obscure and
may be interpreted in various equally uncertain
ways. It is certain, in spite of the silence main-
tained about it in the Kur'an (even xvi. 45 sq.
does not refer to it), that Muhammad’s commu-
ity was at one time in so great distress that a con-
siderable section of them migrated to Abyssinia.
The later view was that participation in this flight
became a patent of nobility similar to that conferred
by the great Hijra to Medina, which was actually
granted as a titular distinction (Weilhassen, Niss-
zen, iv. 113); but the Prophet gave the advice to seek
protection among the Abyssinian Christians;
ly to those of his followers, of whom he was aware
that they had not sufficient strength to maintain
their faith under the difficult conditions in Mecca
(cf. the significant story of the cool reception
which some of the exiles later received on their
return to Medina; Bukhari, ed. Kreidl, ii. 128)
M. Hartmann’s view that the emigrants were to
conduct political propaganda in Abyssinia is not
capable of proof. According to ‘Umar, the emi-
grats (i.e. probably the greater number of them)
returned to their native town, when Islam had
become strengthened by the accession to its ranks
of a number of individuals of position. At the
same time there is a different story of their return,
which it would not be difficult to combine with
‘Umar’s story if we assume that they gradually
drifted back. We are told that Muhammad pro-
claimed in one of his sermons that the favorite
deities of the Meccans, al-Lat, al-Uzza and Manat
[see these articles], might be regarded as divine
beings whose intercession was effectual with Allah.
This led to a general reconciliation, news of which
reached Abyssinia and induced a number of the
Muslims there to return home. Here however they
learned to their horror that the agreement had been
of short duration, as the Prophet had very
soon recognised these words as interposit as of
Satan, and had substituted for them the words which
we now have in Sura lxi. 19—23. The credibility
of this story has been doubted, certainly wrongly:
br for in view of the absolute impossibility of such
a story being a later invention, any possible ob-
jections to the reliability of the authorities cited
(Tahari, i. 1192, 1195; Ibn Sa’d, iii. 137 sq.) hardly
deserve consideration and passages like vi. 56,
57; xvii. 75 sqq. (cf. iv. 113) amply show that the
incident was quite possible from the psychol-
ogical point of view.

It is much more difficult to elucidate another
episode of the Meccan period, the story of the
boycott of the Hashimids. That Muhammad’s whole
position during his struggle with the Meccans was
only made possible by the support given him by
his own family has already been indicated. All
members of the family of Hisham, the reception of
Abd Lahab [q.v.], who on this account is
perpetually damned in the Kur’an along with his
wife, chivalrously fulfilled their duty in this
respect, although only a few of them believed in
his call. It would therefore be not unnatural in
itself for the Meccans in the end to attempt to
make the whole family innocuous without bringing
on themselves the guilt of bloodshed by an open
attack. The story, however, which tells how they
forced the Hashimids to withdraw into their own
part of the town and pledged themselves to refrain
from intermarriage or commerce with them, is
confirmed neither by the Kur’an nor by ‘Umar,
but sounds in itself somewhat suspicious and is
probably much exaggerated. That the effort finally
failed is conceded by the story itself. On the
other hand, it is quite possible that Khadija’s
fortune may have suffered considerably from
Muhammad’s obligations to his necessary followers
and from the enmity of the influential merchant
princes.

To the last portion of the Meccan period most
probably belongs Muhammad’s nocturnal journey,
later so celebrated, to the “ remotest place of prayer”
which xvii. 1 (perhaps also verse 62) briefly refers,
no doubt a vision, which however make an impres-
sion of reality. According to the pre-
vailing opinion, the terminus of this journey was
the temple in Jerusalem, and conclusions are
drawn from this about the great significance which
this city then had for him. Schr 4 (f. vi. 1 sqq.) and Horovitz (loc. cit. ix. 156 sqq.) have how-
ever sought to show that musafir al-arš refers to
the place of prayer of the angels in heaven
(cf. vii. 205; xxxix. 75; for which view several
cogent arguments can be produced, notably that
the nocturnal journey is associated with the journey
to heaven as early as in the tradition given by Ibn
Ishaq and that in the Kur’an there several times a reference to an angel’s journey into heaven (vi.
35; xxxii. 6 sqq.; tv. 14 sq.)

Of other details we may further recall that
Muhammad, who, as already remarked, was firmly
convinced that his preaching agreed with the
religion of the “poissors of a scripture”, never-
theless had already begun in Mecca to reject the
christological dogmas of the church. This is cer-
tain from the conversation with his pagan opponents
(Ahin. 57 sqq.) which can only have taken place
in Mecca. This however does not affect his idea
of the fundamental identity of his with the other
revelations but only the false doctrine later adopted
in the church, for he makes Jesus vigorously reject
this doctrine of his divinity: but this limitation
of his theory was not without importance and was
able to serve him as a model in his later
criticism of Judaism.

The sources are somewhat fuller for the close
of the Meccan period. Although late tendentious
historiography has coloured everything in the
traditions. According to ‘Umar’s account, Mu-
hammad did, it is true, succeed in winning a few
notables in Mecca (including probably ‘Umar) for
his teaching, after the emigration of a number of his
fellow-Meccan to Abyssinia. But on the whole his
attempt at a religious reformation could be regarded
as having failed, and when Khadija and Abä
Tâhid died, his position gradually became more and more hopeless. An attempt to establish himself in Tâhid brought him into considerable danger, according to the narrative, although the approval of his preaching expressed by some djinns (cf. Al-Ma'âlik 11), certainly raised his drooping spirits. It was probably at this period that 'Abâ ibn 'Abî took him under his protection, which is corroborated by REFER (N9, III.vii.vii.). He could now have consorted himself with the reflection that he had done his duty; as a “warner” and could regard it as the will of Allâh that his contrivances were not to be saved (cf. x. 99; xili. Sg). But the consciousness of being a chosen instrument of Allâh had gradually become so powerful within him that he was no longer able to sink back into an inglorious existence with his object unachieved. His unassuming gift of being able to exert a powerful religious suggestion even on men who were intellectually superior to him impetuously demanded a wider sphere of activity than a small number of adherents, not only without influence. In addition, there was a factor of which he himself was certainly unconscious but which is apparent on every page of the Meccan sûras, namely his mental exhaustion. All this brought him to the idea of looking for a new sphere of activity outside Mecca, however difficult it must have been for an Arab to break the links that bound him to his tribe and family. The congress of people from all parts at the pilgrimage gave him good opportunities to attempt to find one. After several unsuccessful negotiations, he found a favourable soil for his scheme with some men from Medina. Unfortunately we know very little about conditions at this time in this town (q.v.) but we may safely assume that the large number of Jews in it had contributed to make the peasant population of Medina somewhat familiar with religious ideas (cf. Ibn Hishâm, p. 178).

There is however no question that the Medinese did not so much want to attract an inspired preacher to themselves as to get a political leader, who would readjust their political relations, which had been shattered in the tribal conflicts climaxing in the battle of Badr (q.v.). With this we are faced with one of the most difficult problems in the biography of Muhammad, the double personality, which he presents to us. The inspired religious enthusiasm, who ideas mainly centered around the coming last judgment, who had borne all insults and attacks, who only timidly touched on the possibility of active resistance (xvi. 127) and preferred to leave everything to Allâh’s intervention, with the migration to Medina enters upon a secular stage and at one stroke shows himself a brilliant political genius. That Muhammad’s eye in Mecca took in the wider political situation is evident from the prophecies in sûra xxx. 1 et seq.; but the passage is quite isolated there and in any case M. Hartmann’s effort (Die älteren Propheten, p. 53), to make him play the part of a far-seeking diplomat in international politics is based on fanciful arguments with no basis in the sources. Nevertheless in the despatch of a section of his followers to Abyssinia and in the attempt to reach a compromise with the polytheists in Mecca, we have hints which to some extent bridge over the gulf between the two figures. The decisive point however is that the Medinese would certainly not have thought of seeking in him a savior from their social and political difficulties, if they had not been much impressed by his abilities in this direction. After Muhammad had entered into relations with some Medinese who had come as pilgrims to Mecca, the latter began to spread Islam in their native town along with men whom he had sent there and thus he was able after a preliminary conference in al-‘Akabah (q.v.) to conclude at the pilgrimage next year (622) at the same place a formal agreement with a considerable number of Medinese, in which they pledged themselves in the name of their fellow-citizens, to take him into their community and to protect him as one of their own citizens, which, as the further history shows, was also to hold for his Meccan followers if they moved to Medina. Tradition, and no doubt rightly, here mentions only the promise of the Medinese to take Muhammad under their protection and not any further obligations. On the other hand according to Ibn Hishâm, p. 287, at the first conference at ‘Akabah Muhammad is said to have imposed a series of commands upon them; but this so-called “women’s homage” is, as the very name shows, taken from the later Sûra 1x. 12 and is clearly adapted to Meccan conditions (cf. especially the vow not to kill children). These negotiations, which could not remain unknown to the Meccans, produced great bitterness, and a second kitab, as ‘Urwâ says, began for the believers, which must have still more confirmed them in their resolution to migrate to Medina. They slipped away in larger or smaller bodies, so that finally only Muhammad with Abu Bakr and, according to the story, ‘Ali was left. That the Prophet did not go with the others was certainly due to the fact that the Meccans otherwise would have prevented the whole emigration. They knew him well enough to see the danger if he were to ally himself with another tribe and there is therefore no reason to doubt Tradition when it relates, although with much legendary embellishment (cf. on David’s flight: Tabaqat, i. 556), how he had to be the last to flee from the town. Tradition is also confirmed by Sûra 40 where there is mention of Muhammad and his companion (Abî Bakr) stopping in the cave.

The migration of the Prophet, the Hijra (q.v.), has been with justice taken by the Muslims as the starting-point of their chronology, for it forms the first stage in a movement which in a short time became of significance in the history of the world. According to the usual calculation, he arrived in Kûbah, a suburb of Medina, on the 12th Râdi’ of the first year, i.e. Sept. 24. 622 and shortly after went into his new home. The tasks which awaited him placed the greatest strain on his diplomatic and organizing abilities. He could only rely with absolute certainty on those who had migrated with him (the Muhâjirûn; q.v.) for their whole future existence depended entirely on him and of course only those had migrated who were familiar with the truth of his mission. In addition, there were those Medinese who had already adopted Islam or did so soon after his arrival, the so-called Ansâr (q.v.) or “helpers”, who however formed only a portion of the inhabitants of Medina. He only found direct opposition in a few families, like the ‘Aws Allâh; but at the same time there were a number who while they did not exactly oppose him only reluctantly accepted the new relations, the so called Munaqibah (q.v.), who were to cause
him much anxiety. Fortunately for him, they were led by a man, the Khaṣṣādī Abī Ummayy, who possessed the muqtaṣī quality of misrepresentation to such an extent that he regularly let slip every occasion on which he might have offered successful opposition. A further danger lay in the fact that the old and bitter feud between the two chief parties, the Jews and the Khaṣṣādīs, had by no means died down, but might easily break out again on any occasion. Finally there were the Jews (in the first place al-Kātimīn, i.e. the Nabūdī and Kurānī; cf. Kāsī b. al-Khaṭīm, ed. Kowalski, xx; Ḥasan b. Thābit, Nō. 216, 19; Ibn Ḥishām, p. 660 and Ibn Sa’d, viii. 86, 91) and the judaized tribes in Medina, who played an important part because of their wealth and the support they had in the Jewish colonies in Khābar etc. For Muḥammad they were on the whole a plus factor in his calculations for, according to his theory already mentioned, he ought to expect that they would champion the truth of his preaching. His relations with the Christians in Medina (cf. Ḥasan ib. Thābit, Nō. 153, 17) were no longer absolutely unimportant, since he had begun in Mecca to reject the orthodox Christians and to use them against the law and the Jews, who were insignificant and could be ignored. He also had a much greater sympathy with them than with the Jews (v. 85; lvii. 27).

Muḥammad had to form a united community out of these heterogeneous elements. The first problem to be tackled was how to procure the necessary means of subsistence for the emigrants, who were for the most part without means or work, which could for the time being only be done through the self-sacrifice of the Anṣār and certainly only very inadequately. To strengthen their claims for protection, he ordered the relationship of brotherhood to be created between each emigrant and a man of Medina. This arrangement, to which was added brotherhood between every two emigrants, was abolished after the battle of Badr by Ṣa’d xxxiii. 6 and left only a few traces with Ibn Sa’d, iii. xxxiv. On the other hand, we possess for a somewhat later period, when relations between Muḥammad and the Jews had begun to be strained, a very valuable document in Muḥammad’s constitution of the community which has been preserved by Ibn Ḥishām. It reveals his great diplomatic gifts, for it allows the ideal which he cherished of an umma definitely religious in outlook to sink temporarily into the background and is shaped essentially by practical considerations. It is true that the highest authority is with Allah and Muḥammad, but before whom all matters of importance are to be laid; but the umma included also Jews and pagans, so that the legal forms of the old Arab tribes had to be substantially preserved. This scheme had however no considerable practical importance: it is nowhere mentioned in the Kurān (hardly even in viii. 58), because it was soon rendered obsolete by the rapidly changing conditions.

It is a proof of the Prophet’s political wisdom that he endeavoured to attach the Jews to himself by taking over several features of their worship. Thus he made the 10th Muḥarram a fast-day, obviously in imitation of the Jewish fast on the 10th Thārī, the day of atonement, which is particularly obvious in its name, taken from the Aramaic ʿšūrān). On Jewish practice are probably also based the introduction of the midday salāt, which was now (ii. 239) added to the morning and evening salāts and the easier rule about purification before the salāt (iv. 46; v. 97). On the other hand, Friday as the day of the common salāt, which probably goes back to the Jewish day of preparation (cf. Becker’s correction to Ibn Sa’d, iii. 83, 23, in alh., iii. 519), is said to have been already introduced before the Hijra by Masʿūd b. Umair (according to others, Asad b. Zairaj). Whether the Friday of Jerusalem as the ʿidhā (cf. v. x.) was one of the concessions made to the Meṣṣāḥ Jews is uncertain as the statements about his attitude in Mecca on this point differ. But it is improbable that he should have turned towards the Kaḥā there, otherwise it is difficult to understand how the different stories could have arisen. But whether he then used Jerusalem as the ʿidhā, which need not necessarily mean a borrowing from the Jews, as this direction of prayer was elsewhere found in the east, e.g. among the Ebonites and Elle-alites, whether he turned to the east like many Christians, or whether he had a ʿidhā at all (the Kurān is silent on the point) is uncertain, but in any case the balance of probability is in favour of the Jerusalem ʿidhā having been one of the alterations made to gratify the Jews. If some writers have seen in the immediate erection of a place of prayer (Ibn Ḥishām, p. 336) a copying of the Jewish synagogues, Caetani has with weighty reason argued that this was not a building definitely assigned to the worship of God, since the alleged masjid was also used for all kinds of secular purposes, because in reality it was simply the court-yard (ṣarār) occupied by Muḥammad and his family, while the assemblages for regular worship were held on the miqāṣ (cf. MAIIF). But nevertheless the “mosque of opposition” so called by the Prophet with horror (Ṣūra ix. 108; see below) seems to have been an actual building recalling the Jewish synagogues. In spite of these concessions to the Jews, it soon became obvious that he had seriously miscalculated with regard to them. Although they undoubtedly cheri-hed lively expectations of the coming of the Mīṣṣāḥ (Ibn Ḥishām, p. 286, 373 617) they could not possibly recognize an Arab as the expected Mīṣṣāḥ and he had soon reason to lament that only a few among them believed in him (iii. 106). In particular, the misunderstandings in his reproduction of the Old Testament stories or laws aroused the notorious Jewish love of ridicule and thus brought him into an unfortunate position. His conviction of the divine origin of his mission and his position among the believers would not allow him to confess that he had made a mistake and on the other hand he had too often himself appealed to the testimony of the other religions of revelation to be able to ignore this criticism. He rescued himself from this dilemma by asserting that the Jews had only received a portion of the revelation (iv. 47; cf. iii. 115) and even this included a number of special laws adapted to a particular age (iv. 158; vi. 147; xvi. 119) but they had also concealed all sorts of things in their holy scriptures (i. 30, 141, 143, 169; iii. 64 etc.) and indeed had even falsified their scriptures (i. 56; iv. 48; v. 16, 45; vi. 162; cf. Ḥasan b. Thābit, Nō. 96., and the article ʿaṣurān), in short they obtained hardly more benefit from their scriptures than an ass from the books which he is carrying on his back (lvi. 5). The Jews were not able to refute these assertions for, although he challenged them to produce these scriptures
(iii. 87) neither he nor his followers could read a word of them. He therefore now poured forth the vials of his wrath upon the Jews in many speeches and awaited the time when he would be able to refute their criticism and malicious vituperation and tergitiation in convincing fashion (e.g. iii. 177 sq.; iv. 48). As he had begun to regard the church doctrine of the Christians as a corruption of the true teaching of Jesus, he felt himself called upon to reform the degenerate religions of revelation, each of which as he saw it was the only true one (ii. 107). As a result he now claimed a special place among the prophets: he is the seal of the prophets (xxixii. 40); a metaphorical expression which Mani among others applied to himself and which indicates the conclusion of the series, he is the last prophet, to whom Jesus himself had pointed under the name Ahmad (lxii. 6; cf. iii. 75). Still he is not thinking any more than before of introducing a new religion but only of restoring the religion proclaimed by the prophets from the beginning. But nevertheless the early years after the migration were the period when Muhammadanism was born as an independent religious system parallel with his criticism of the religions of revelation and in particular opposition to Judaism ran a positive shaping of Islam, through which he was emancipating himself in important points from his previous models. He gave his religion a pronounced national character by taking over various elements from the worship of the old Arabs and associating them with his religious ideas. In the second year of the Hijra (July 622—June 624) after some hesitation, he ordered that Jerusalem should no longer be the hajra at prayer but the ancient sanctuary of the Black Stone at Mecca (ii. 136—145) for it “is a gathering-place and a safe retreat for men” (ii. 119). His native town was thus made the centre of the true religion. As a substitute for the pilgrimage which he now adopted into his religion as one of the main rites, but from which he and his followers were temporarily cut off, he had an animal sacrificed in this year on the 10th Dhu-l-Hijja on the mawil or in Medina (Tabari, i. 1362; according to Ibn Sa'd, t.iii. 9 he continued this after the occupation of Mecca) and in the following year he calls the hajj one of the obligations of believers towards Allah (iii. 90 sq.). Frail retained its significance but was not to be a day of rest like the Jewish Sabbath (xxii. 9 sq.), which is connected with his rejection of the Old Testament idea of God resting after the creation (i. 37). In place of the fasting on Ashura, he substituted quite a new particular rite, according to which his followers were to fast throughout Ramadan, the month, in which he had received the fundamental revelation (i. 281), as long as the sun was visible in the heavens. The Manichaean had a similar cu-tom: but whether he took the new revelation from them or from another sect cannot be ascertained [cf. KAMALAN].

This nationalisation of Islam, which was to have so many results, gave Muhammad a final legitimisation, which brought it into harmony with his earlier appeal to the religions of revelation, as he came forward as the restorer of the religion of Abraham (sunnat Ibrahim) which had been corrupted by the Jews and Christians. Abraham, whom Jews and Christians alike regarded as the great type of faith and whom he had, himelf emphatically indicated as the true hanif (e.g. vi. 79), now becomes the great hanif, not only in contrast to the heathen but also to the possessors of a scripture (neither polytheist, nor Jew nor Christian) (ii. 129; iii. 60, 89) wherefore, as Snouck Huyghens has shown. vi. 162 and xvi. 124 must also be Medine). He and his son Ishmael, the ancestor of the Arabs, founded the Meccan sanctuary and the sacred city of Mecca now corrupted by the heathen, which Muhammad is to restore (ii. 118 sq.; xxii. 25 sqg.). Whether this bold idea, which according to Sura iii. 58 met with opposition from the possessors of a scripture, was an original one and in this case a really brilliant invention of Muhammad's or whether it was already in existence, for example among arabised Jews, cannot be decided. The only thing certain is that he cannot have been acquainted with it in Mecca for we meet it nowhere in connection with mentions of the Kab'a and it is actually excluded by the passages mentioned above (p. 726a).

While his religion was being transformed in this way, Muhammad's personal position was being gradually changed by the altered conditions. According to the already mentioned constitution of the community, all important matters were to be laid before Allah and himself. It now became a fundamental duty of the believers to be obedient to Allah and to himself (iii. 3, 29, 126, 166; iv. 17 sq., 62 [where it is added: "and to those among you who have to exercise authority"]; v. 93; xxiv. 51. 62; cf. also ii. 12, the "women's homage" which is inserted in the account of the second conference at 'Akaba, Ibn Hisham, p. 289) and those who are disobedient are threatened with the terrors of hell (lx. 64). Alongside of the belief in Allah now appears belief in the Prophet (xxv. 9; lix. 8 etc.). Allah is his protector, his guardian, Gabriel, and the angels are his disposal (lxvi. 4). He claims certain privileges, which suggest a worldly mortal rather than a spiritual leader (xxiv. 62; xlix. 2 sqg.; xxiv. 63; liii. 13 sqg.; lxxxi. 53) but which however must be described as quite moderate demands.

The elevation of Mecca to be the centre of his religion imposed on Muhammad new tasks, which were soon to lead to unexpected results. If visiting the holy places in and around Mecca was a duty of the Muslims, who were excluded from the town (xxii. 25 sqg.), the result was the inevitable necessity of forcing admission to them. In addition the Prophet had an account to settle with the Meccans, for by his expulsion they had triumphed over him in the eyes of the world and the punishment repeatedly threatened them had not materialised, unlike the stereotyped punishments of the godless in the stories of the prophets. This led to a new command, that of the holy war ("war on the path of Allah", al-jihad, q. v.), and to set such a war in motion now became the object of his endeavour, which he tenaciously pursued. There were however considerable difficulties in the way of achieving this object. The Medine-e had only pledged themselves to defend him like one of their number if he were attacked, and the anything but warlike merchants of Mecca were not inclined to oblige him by beginning. The emigrants were, it is true, not bound in this way, but it went nevertheless very much against their feelings as Arabs openly slight members of their tribe and blood relations. How much their resistance vexed him is shown by the vigorous reproaches which he makes to his
followers in this connection (ti. 212; xxi. 39 sqq. ex.) He succeeded however in finding a way out of the difficulty, which might be able to pave the way for military enterprises without injuring these feelings too much. After he had sent different men with small armed forces who did not succeed in encountering the enemy, in Badr, one of the sacred months in which all fighting was forbidden, the sent some of his followers to Nakhl, where a caravan was expected and gave their leader sealed orders in which he left it to their judgment what they should do. They did not disappoint him for they fell upon the caravan which felt secure until the end of the month and one of the Meccans was killed. The rich plunder was sent to Medina, where in the meanwhile a storm of indignation had broken out. Muhammad however gave the people time to recover and finally calmed them by the revelation ii. 214. The success of the coup had had such an effect in Medina that not only emigrants but also a number of Angar offered their services, when he appealed for followers in Ramadan 2 A.H., in a new raid, which would himself lead. On this occasion chance came to his aid in an unexpected fashion. He had learned that a Jewish caravan was to take a way from Syria and he decided to ambush it at Badr [q.v.]. The very cautious Abi Safян [q.v.] who was leading the caravan got wind of his plan however and sent messengers to Mecca for help. But when by a diversion to the coast he had reached safety, he soon afterwards sent other messengers to Mecca to cancel the first message. The angered Meccans had however already collected an army which was three times the size of Muhammad’s little handful of men and were unwilling to let the opportunity escape of properly chastising them trouble-some enemy. They went to Badr where soon afterwards Muhammad arrived with his men, excepting that one of the Jewish caravans had been attacked and its goods taken, and on learning this he turned quickly back towards Mecca. The Prophet was thus saved from the worst, but he had to lament many fallen friends including Hamza [q.v.] and his newly acquired prestige naturally also suffered. With all the eloquence in his power he endeavoured to raise the morale of his followers by exhortation and courage alike (ii. 1. 114 sq., 133-154, 159-200) but the consequence of his reverse did not fail to materialise. The Jews who had taken part in the fighting (according to Ibn Ishaq, they were observing the Nabath), made no secret of their delight at his misfortune, and several Beduin tribes next year (A.H. 3, June 625—beginning of June 626; the eclipse of the moon which took place in Garuda II of this year was that visible in Medina in the night of Nov. 19-20, 625, of Rhodokanakis, in W. Z. K. M., III. 105: 101: 16). Thus the number of the Meccans was reduced and Mecca enjoyed such great prestige in Arabia that its conqueror was bound to attract all eyes to himself. He therefore displayed even greater energy and was able to utilise the advantages he had won. After he had drawn up the programme given in Sura vii. 57 sqq. he began to besiege the Jewish tribe of Kamaqa in their forts. The Munafikina did not dare to oppose him seriously and the other Jews left their co-religionists in the lurch in shame-ful fashion (cf. lix 14) so that the latter were forced to migrate to Transjordania.

In order to protect himself while fighting from attacks from another foe, Muhammad at this time adopted a plan which is a further proof of his outstanding political ability. He concluded, as a number of letters that have been preserved show (cf. J. Speiser, Mitteilungen der Seminar für Orient, 1916), an alliance with a number of Beduin tribes in which he had been pledged to himself to assist one another. In the year 3 A.H. (June 624—June 625) Muhammed continued his attacks on the Meccan caravans so that the Kuraiš finally saw the necessity of taking more vigorous measures and revenging themselves for Badr. An army of 3,000 men was equipped and set out with much display for Medina under the leadership of Abi Safян, who was little suited for the task. Although several of his followers advised Muhammad to make his defence within the town, he decided to go out with his forces, which, had been much reduced by the departure of the Munafikina and took up a position near the foot of the hill of Uhud [q.v.]. In spite of his numerical superiority of the Meccans, the fighting at first went in favour of the Muslims, until a number of archers who had been placed to defend his flank joined against Muhammad’s express orders in the battle, which promised to yield rich booty and this at once enabled Khalid b. al-Walid to fall upon Muhammad’s flank. The tables were now turned and many of the Muslims began to flee, especially when the rumour spread that the Prophet had fallen (cf. iii. 138). In reality he was only wounded and escaped with a few faithful followers through a ravine on to the south side of the hill. Fortunately however, the Meccans were quite incompetent to follow up their victory and as they thought that Muhammad had been punished and their honour saved, they turned quietly back towards Mecca. The Prophet was thus saved from the worst, but he had to lament many fallen friends including Hamza [q.v.] and his newly acquired prestige naturally also suffered. With all the eloquence in his power he endeavoured to raise the morale of his followers by exhortation and courage alike (ii. 114 sq., 133-154, 159-200) but the consequence of his reverse did not fail to materialise. The Jews who had taken no part in the fighting (according to Ibn Ishaq, they were observing the Nabath), made no secret of their delight at his misfortune, and several Beduin tribes next year (A.H. 3, June 625—beginning of June 626; the eclipse of the moon which took place in Garuda II of this year was that visible in Medina in the night of Nov. 19-20, 625, of Rhodokanakis, in W. Z. K. M., III. 105: 101: 16). Thus the number of the Meccans was reduced and Mecca enjoyed such great prestige in Arabia that its conqueror was bound to attract all eyes to himself. He therefore displayed even greater energy and was able to utilise the advantages he had won. After he had drawn up the programme given in Sura vii. 57 sqq. he began to besiege the Jewish tribe of Kamaqa in their forts. The Munafikina did not dare to oppose him seriously and the other Jews left their co-religionists in the lurch in shame-
of which on this occasion Muhammad reserved for himself (lx. 6 sqq.).

To this period most probably belongs the prohibition of the drinking of wine which is characteristic of Islam (v. 92 sqq.): cf. the inductive gradation in xxxii. 25: xvi. 69: lv. 46: li. 216, where the word "great" is to be deleted as Schwally proposes.

It has been connected with a number of features of life in the old Semitic East but the main reason should rather be sought in the connection with the maslaha games [q.v.]. Drinking-bouts with feasting on a specially slain camel and games of chance, which were in the eyes of the old Arabs the bright spots in their hard struggle for existence, and in which they endeavoured to display their nobility and hospitality, brought the Muslims into suspicious relations with pagans and with Christian and Jewish wine-sellers, which might easily lead to their faltering in their new religion (cf. Wākidī, transl. Wellhausen, p. 100; Bukhārī, ed. Krehl, ii. 270 sqq.): and this might explain why he forbade both at the same time, which of course does not exclude the possibility that forms of abstention for other reasons may have been known to him (Maslama's prohibition of wine was obviously included as asceticism [cf. the article]). While Muhammad was endeavouring to restore his weakened authority, a new and threatening storm came upon him and Medina from Mecca. The Quraysh, whose caravans were being continually harassed by him (cf. Ḥassān b. Thābit, N'o. 16, 6 sqq.) and who were urged on by the Jews of Khaibar, recognised that the victory at Uhud had only been a blow in the air and realised the necessity of occupying Medina, which they had then neglected to do. Conscious of their slight military skill, they negotiated vigorously with various Beduin tribes and thus raised a large army — said to have been 10,000 men — with which they set out against Medina in the year 5 (June 626—May 627). The various accounts of the season of the year (sometimes a month after the barley harvest, sometimes cold winter storms, the latter in agreement with Śūrā xxiii. 9: cf. Ḥassān b. Thābit, N'o. 14, 3 sqq.) may be reconciled by the possibility that the siege lasted a considerable time (cf. Doughty's description, Travels, ii. 429 sqq. of the siege of Ḥāriz, which in general illustrates this war excellently). The advance of this imposing army produced great consternation in Medina, which was still further increased by the languishing attitude of the Muhājirūn and by the discovery or perhaps only the suspicion that the Jews were conspiring with the enemy (xxiii. 10, 26) Muhammad in order to strengthen the defences had a ditch (ṣuḥaṣ, a Persian word) dug in front of the unprotected part of the town. According to several sources, he did this on the advice of a Persian named Salmān but J. Horovitz (cf. Idr. i., 175—183) would reject this as a later accretion. Modest as the defences were — about 150 years later 'Ībād Mīrāq bridged the ditch which had been restored by Muhammad b. 'Abd Allāh, by throwing a few doors across it — they seem to have imposed upon the enemy who had little experience in the art of war and the siege gradually dragged on.

The able lord of Medina used the time for secret negotiations with the Ghāfarīn and cleverly stirred up distrust of one another among his opponents and when at the same time the weather conditions became unfavourable the besiegers lost heart and gradually began to retire so that the last effort of the Quraysh to destroy their sinister foe came to nothing. For one section of the participants however, the comedy of the "War of the Ditch" was to become a bloody tragedy. Hardly had the besiegers retired than the Prophet declared war on the last Jewish tribe of any size, the Quraysh, and began to besiege their quarter of the town. The Jews no doubt hoped to escape in the same easy fashion as the Nāḍir had, especially as their allies, the Ṣūrī, were very actively trying to induce Muhammad to clemency; but this time he was inexorable and carried out seriously a threat that he had previously made (lx. 3). Tradition has however endeavoured to put the responsibility for the massacre of the Quraysh on Sa'd b. Mu'ādh (cf. Ḥassān b. Thābit, N'o. 62, xxvi., who asserts Sa'd's innocence). But there are various indications that it was the Prophet himself who made the decision and perhaps induced the Jews to surrender. On this occasion the Jews showed a strength of character and nobility of spirit which threw a redeeming light on their otherwise so ignoble history.

By these amputations, which however did not remove all the Jews from Medina (cf. Ibn Ḥishām, N'o. 589): Wākidī, transl. Wellhausen, p. 269, 393: Ḥassān b. Thābit, N'o. 133, sqq.), the Prophet had come nearer his goal, the organisation of an umma on a purely religious basis, which hitherto he had to keep somewhat in the background for political reasons. For the present he continued his attack on the Meccan caravans far into the year 6 (May 627—May 628) and his raids, usually punitive expeditions, on Beduin tribes; of these expeditions, which have no particular interest, mention may be made of that against the Banū Maṣṭalīr which must have taken place about this time, as it gave rise to a serious conflict between the Muḥājirūn and the Anṣār and involved Ḥāshā [q.v.] in the celebrated adventure which nearly cost her her position as the wife of the Prophet, until finally a revelation saved her (xxiv. 4 sqq., 10—20).

Towards the end of the year 6 Muhammad thought that his position in Medina was so firmly established that he could risk a step, which would bring him nearer the desired goal. He and the emigrants were still excluded from Mecca and its holy places, but through secret confidential agents, among whom we may certainly include his carefully calculating uncle ʿAbīd, he knew that feeling in the town had been gradually coming round (cf. alviii. 15: lx. 7). An increasing number had become tired of the hopeless wars and thought it would be much more advantageous for the commerce of Mecca to make peace with their infuriating enemy, especially after he had granted his programme of the pilgrimj to their fairs, the source of the city's wealth. Trusting to this revaluation of feeling he gave his followers in Dhu ʿl-Mīrāq of the year 6, i.e. March 628 (the news of the death of the Persian king Khusraw Parvīz on the Feb. 20 of this year reached him on the way) orders to provide themselves with sacrificial victims and undertake an umra [q.v.] with him to Mecca, as Allah in a vision had promised him a successful fulfilment of the visit (alviii. 27). He probably chose an umra deliberately (Ibn Ḥishām, p. 740: Wākidī, transl. Wellhausen, p. 249 sqq. 253: cf. Śūrā, xx. 30, 34) in stead of the great pilgrimage which was soon due, as the consequences of an encounter with all manner of tribes, with whom he might
possibly have been waging war, were too incalculable for him: but perhaps he cherished also the hope that, if all went well, he might remain there in the following month also (cf. ii. 192 which perhaps belongs to this connection). The step was nevertheless a risky one, so that he asked several Bedouin tribes to accompany him in case they met with resistance. To his disappointment however, they refused (xlix 11 sq.) so that he decided to abandon the military character of the march and make his followers go as harmless pilgrims. In Mecca many were inclined to meet his wishes but the belligerent party was still strong enough to get a body of armed men sent to meet him to prevent entering the town. He therefore encamped at al-Hudaylaya ([q. v.] where he began to negotiate with the Meccans, and when this led to no result he sent Ulûmân, who was protected by his family connections, into the town as his representative. But when the latter showed no signs of returning and finally a rumour got about that he had been murdered, the situation became critical and Muhammad dropped all negotiations, collected his followers under a tree, probably one long held sacred, and made them swear to fight for him to the last, which they did with enthusiasm (xlix. 16, 18). But soon afterwards a number of Meccans arrived and offered a compromise, which is very characteristic of the amicable Meccan policy, by which he was to return this time but to be allowed to perform an 'umra next year. He agreed to the proposal, concluded a ten years' truce with the Kâbah and further promised to surrender all Meccans of dependent status who came to him. His followers, whom he had worked up into a state of great excitement by his promises and the taking of the oath, heard these conditions with secretly concealed anger; but Muhammad calmly ordered the sacrificial animals brought with them to be slain, which was to have been done at an 'umra in the town (see Lane, Lexicon, s.v. wâclîl). and had his hair cut and by his authority forced his grumbling followers to do the same. Only later did they discover that he had made a brilliant stratagem to policy for he had induced the Meccans to receive the despised fugitive as an opponent of equal rank and had concluded a peace with them which promised well for the future.

He and the participants received ample compensation for the apparently frustrated 'umra at the beginning of the year 7 (May 628—April 629) by the capture of the fertile oasis of Khudîâm ([q. v.] which was inhabited by Jews. It was the first actual conquest by the Prophet and he instituted on this occasion a practice which became regular afterwards; when Jews or Christians capitulated: he did not put the people to death or banish them but let them remain as tenants, as it were, who had to pay dues every year. This expedition which also brought the Jewish colonies of Wâdi 'l-Kûrâ in to his power, made the Muslims rich (xlix. 18-21).

In this period, although the exact date is variously given, tradition puts the despatch of letters from the Prophet to Mûjâwîs, governor of Alexandria, the ruler of Al-Qusînâ, the Byzantine emperor, the Persian king etc., in which he demanded that they should adopt Islam. The alleged original manuscript of the first of these has however proved not to be genuine (see J. A., 1854, p. 482 sqq.; Tadd, in Hilâl, 1904, p. 193 sqq.; Becker, Papias Schott-Reinschdt, i. 3). But even what is related about these epistles hardly deserves the faith most people have put in it. Even if we disregard the many apocryphal details, we must surely consider it very unlikely that so sober a politician as Muhammad, who had at this time a very definite object, the conquest of Mecca, before his eyes, should have thought of indulging in so fantastic an idea as the conversion of Heraclius or the Persian king, to whom the "Ined Arabic Kurân" was no less unintelligible than the Bible to the Prophet and his countrymen, and whom he could neither compel by force nor entice with preferred advantages. It is very doubtful if Muhammad ever thought at all of his religion as a universal religion of the world, as for example Noldeke, in W. Z. K. M., xxi. 307, Goldziher, Vorlesungen über den Islam, p. 25, and T. W. Arnold, The Preaching of Islam, p. 23 sqq. hold (against them, see Noldeke, Muhammad- Arabism, p. 45 sqq.; H. Lammen, Études sur le croy de l'Ibâdites, i. 422). The passages in the Meccan suras which can be quoted in favour of this theory (xi. 90; xxi. 104; xxi. 157; xxv. 1; xxxiv. 27; xxxv. 70; xlviii. 87; lxxi. 52; lxxii. 27; cf. from the later period: iii. 96; xxvii. 25) are limited by their context or by unanimous parallels (like vi. 92: xlv. 5 [the mother of the city, i.e. Mecca]; cf. xxvi. 214). Besides, in the Meccan period, the place of persuasion and proof ("no compulsion in religion"); ii. 257; cf. xvi. 126), was taken by the spread of Islam by force of arms, which, although based on the supremacy of Islam over other religions (iii. 79; ix. 33. xii. 4), was confined to the lands inhabited by Arabs. If after the conquest of Mecca he also declared war on the possessors of a scripture (see below) the campaigns undertaken by him prove that he was only thinking of Arabs under Byzantine or Persian rule, and it cannot be proved that he ever went beyond this in his schemes (see the gift of Hebron, Balâzjûri, ed. de Goeje, p. 129 may be confidently asserted to be a forgery; cf. the article ISHAM). The decisive consideration however is that Muhammad at the height of his power never demanded from Jews or Christians that they should adopt Islam but was content with a political subjection and the payment of tribute. The correct conclusion is therefore to reject those stories and to look for the real historical basis in negotiations of a purely political nature, e. g. with the friendly Mûjâwîs (p. v., and cf. Butler, The Arab Conquest of Egypt, 1902) and to assume that the idea of a great missionary enterprise arose later under the influence of Christian traditions, notably of the miracle of Pentecost.

On the other hand, the character of the genuine letters of the Prophet to the Arab tribes changes at this time, for he was no longer content with a purely political agreement but, relying on his now consolidated power, also demanded that they should adhere to his religion, which involved performing the 'âdâb and paying "alms": he even gave the Idrîslâm on the Syrian coast a re-pite (in this period) of two months after which they were to decide (see Schérer, op. cit., p. 14 sqq.).

In March 629, Muhammad performed the "umra stipulated for him by the peace of Hudaylaya (the "umra of the "contract" or "recovery"). For him who had been driven out of his native city it was undoubtedly a great satisfaction to be able to visit Mecca as the acknowledged lord of Medina;
but otherwise the significance of the occasion was more symbolic and the efforts of the practised diplomat to prolong his stay by his marriage with a sister-in-law of his secret ally 'Abdās [see MADżNAs] were politely but firmly resisted by the Meccans. On the other hand, it was of great significance that some of the most important Meccans, like 'Amr b. al-‘As and the military genius Khālid b. al-Walid, who saw he was the coming man, openly joined him, while his uncle 'Abbās and the very patriotic (Ibn Ḥīḍām, p. 275) but cautious Abu Sufyān endeavoured in secret negotiations to prepare in the most favourable way for the inevitable result. In the meanwhile he continued his military expeditions. His forces suffered a serious reverse in the first considerable effort to extend his authority over the Arabs on Byzantine soil, at Muṭa [q.v.] in Transjordania; this is also recorded by Tho- phanes (Chronographie, ed. de Boor, i. 325). But several Beduin tribes now began to see what advantages they would procure not only for the next but also for this world by joining him, and large groups like the Sulaim voluntarily adopted Islam and placed themselves under his flag.

That it was Muhammad's intention to break the truce with the Kurāsh at the first opportunity may be taken as certain; for it must have been intolerable for him that the heathen should still have Allāh's sanctuary in their control (ix. 17 sqq.; cf. viii. 5). The taciturnity of the Meccans now gave him his oppotunity. Very much against the advice of Abu Sufyān, the belligerent party in Mecca had supported the Bakt against the Kurāsh, who were Muhammad's allies, and thus given a plausible casus belli (cf. perhaps ix. 12 sqq.). In Kamādān of the year 8 (May 629—April 630) he set out at the head of an army of Muhādjīn, Anṣār, and beduins. The news produced considerable anxiety in Mecca where the number of those who wanted to fight shrank daily so that the more prudent now could take control. Abu Sufyān, who was sent out with several others (including the Khāzān Badar b. Warka who was a friend of the Prophet) met Muhammad not far from the town, paid homage to him and obtained an amnesty for all the Kurāsh who abandoned armed resistance (cf. Tūnā, Tartār. i. 1634 sqq.). Except for a few irreconcilable (cf. Diwan dr. Hudhafīz, No. 183; Muhammad, al-Kāmil, ed. Wright, p. 356), they acquiesced and thus the Prophet was able to enter his native city practically without a struggle and almost all its inhabitants adopted Islam. He acted with great generosity and endeavoured to win all hearts by rich gifts (ṭa‘īf al-ṣaliḥā, a new use of the alm.: cf. iv. 60). Only he demanded ruthless destruction of all idols in and around Mecca. Only Sīra ex. seems to preserve an echo of the exultation with which this victory filled him; here as in the unusually touching passage of alvili. 1 sqq., he sees in the success of his plans a sign that Allāh has forgiven him all his sins. Muhammad did not rest long upon his laurels for not only was Ṭa‘īf, which was closely associated with Mecca, still unsubdued but the Hawāriz tribes in Central Arabia were preparing for a decisive fight. A battle was fought with these Beduins at Hunain on the road to Ṭa‘īf [q.v.] which at first threatened to be a fatal disaster to the Prophet, mainly because of the unreliability of a number of the new converts, until some of his followers succeeded in recalling the fugitives and routing the enemy (ix. 25 sqq.). On the other hand, his inexperienced troops were unable to take Ṭa‘īf with its defences (cf. the description of impregnable fortresses in Diwan der Hudhafīz, No. 66, 10 sqq.). The people of Ṭa‘īf however afterwards fell in with the spirit of the time and adopted Islam. When Muhammad, after raising the siege, was distributing the booty of Hunain, the Anṣār who as soon as he entered Mecca had expressed the fear that he would take up his residence again in his native town, became very indignant about the rich gifts that he made to his former opponents in order “to win their hearts”, while they themselves went empty-handed (cf. Ḥasan b. Thabit, No. xxxi) but he spoke so kindly to them that they burst into tears and declared themselves satisfied. His conduct on this occasion reminds us to some extent of that of David towards the Jews and Ephraïmites after Absalom's rebellion.

The characteristic feature of the year 9 (April 630—April 631) in the memory of the Muslims was the many embassies which came from different parts of Arabia to Medina, to submit on behalf of their tribes to the conqueror of Mecca (cf. ex. 3) and the letters which he sent to the tribes, to lay down the conditions of their adoption of Islam. In the autumn of this year, he made up his mind to conduct a campaign against Northern Arabia on a considerable scale, probably because the defection in Transjordania required to be avenged and because the Ghassānīd king was adopting a hostile attitude (cf. Ibn Ḥīḍām, p. 911; Bukhtārī, Maghāzī, b. 78, 79). But his appeal for followers met with little support. Muνāṣir as well as Beduins held back and even among his devotees there were some who put forward all sorts of objections, out of fear of a campaign so far away in the glowing heat (cf. iv. 45; lvi. 84—91, 98 sqq.). In particular he seems to have had to face at this time a considerable opposition in Medina (ix. 58—73, 125) so that he had to have recourse to his old instrument of intimidation and his words recall in a remarkable way the period of passion in Mecca (ix. 71, 129 sqq.). Matters came to such a pitch that some of the opposition, being whom is said by one tradition to have been his old inexorable opponent, the ascetic Abu 'Amr 'Abd Allāh, founded a house of prayer of their own “for division among the faithful and a support for those who had formerly fought against God and his Prophet” (ix. 108 sqq.). Unfortunately the expressions in the Kurān and in the tradition are quite insufficient to enable us to get a clear picture of this very remarkable affair. In spite of all opposition however, he carried through his plan but when after great hardships he had reached Tabūk on the frontier (in the land of the Byzantines: cf. Ibn Ḥīḍām, p. 956), he stayed there some time and then returned to Medina. The campaign was however not without success. His prestige had now become so great that the petty Christian and Jewish states in the north of Arabia submitted to him during his stay in Tabūk, for example the Christian king Wulhannā in Tā'ā [q.v.], the people of Aδlīr [q.v.] and the Jews in the port of Makta Khālid also occupied the important centre of Ḥimādal (cf. for a criticism of the account: Caesari, ii/266; 268; 270; 271; 272 sqq.; 272 sqq.; on the legal letter from Muhammad to the Jews in Makta, see also Wensmek, in It. li. 290).
The memory of the agreement between Muhammad’s teaching and that of the “peoples of a scripture”, earlier so much emphasised, must have contributed to this rather illogical settlement and in addition there was the fact that treating the Jews as tax-paying tenants, and allowing them to practice their religion, as had been already done at Khadîj, was much more practical for the Muslims than fighting them till they gave in. A further compounding with the “peoples of a scripture” was that believers were allowed to marry the non-believers of the “peoples of a scripture” and eat food prepared by them (v. 7). It is noteworthy that the Parâis (Mâdîz, xil. 17) were included among the “peoples of a scripture” which made a difficulty for later better informed generations (Tabîrî, i. 1055, s. 39; Râdîrî, p. 79); probably Muhammâd did not dare for political reasons to demand that they should give up their religion. This extended application of the term “peoples of a scripture” is found not in the Kur’an but in a letter of Muhammad’s to the Parâs in Hijâjar (Ibn Sà’d, i. 19) but with the limitation that the Muslims are forbidden to marry their women and eat meat killed by them.

With these exceptions, the Prophet had approached nearer the object which was always before him, although it hitherto eluded him, the formation of a ummâa on a definitely religious basis, for the inhabitants of a number of parts of Arabia were now actually bound together by religion. The old differences between the tribes with their endless feuds, their blood-vengeance and their lamas which continually stirred up new quarrels, were to disappear at the will of Muhammad and all believers were to feel themselves brethren (ix. 11; xil. 10 sqs.). There was to be no distinction among believers except in their degree of piety (xil. 13). The Prophet certainly had an ideal before him but it was realised only in a very incomplete way. The very rapid extension of Islam had been accompanied by a considerable diminution in its religious content. Alongside of the old adherents, who were really carried away by his preaching and whose faith had been tried by privations and dangers, there were now the many new converts who had been gained mainly by fear (cf. the well-known poem of Râbî b. Zuhair; the poem of the Hindî, Lisâd b. Abî Iyâs in Kosegarten, Cornelia Haiduts, No. 127) or by the prospect of material advantages. In spite of the teachers sent out to them there could be no question of any deep-seated conversion among these Arabs and how the old Arab spirit continued to flourish among them weakened is shown for example by the boasting and abuse in the poems of Ibn Hishâm, p. 934 sq., which are in no way inferior to the old poems. The Prophet himself in Sûra xil. 14 has remarked very definitely how far the Bedouins were from the true faith: they cannot say that they believe but only that they have adopted Islam. Commandments relating to religion and worship, which had considerably occupied Muhammad in the early Medinese period, gave in striking fashion to social and political regulations, a natural result of the fact that the new members were not ripe for the former. Uncertainty on these matters was still great and even at headquarters much seems still to have been in an embryonic state. This is true even of so fundamental a law as the rule for the times of daily prayer, as the five prayers later obligatory are
nowhere laid down in the Qurʾān (see above; cf. also the expression “morning and evening” in Ṣaḥīḥ al-Bukhārī, p. 239). That they were introduced by Muḥammad himself at the end of his life is possible, but not very probable in view of the silence on the point in the Qurʾān, and in any case it is not certain proved by the mention of the five times of prayer in a letter of the Prophet (Ibn Hishām, p. 962) as we are of justified in expecting absolutely literal accuracy in the transmission of such documents. Only one or two religious institutions are dealt with at all fully in the Qurʾān, the great pilgrimage to the sanctuaries at Mecca and the ῥazure in the town itself, but the hājdāj, or rather, the act of the hajj, was indeed the crown of his endeavors begun in Mecca and carried through with tenacity. The Prophet, although he was now lord of Mecca, did not yet take part in the pilgrimage in the year 8, which was so inexplicable to later generations that they invented an ῥazure unknown to many of his followers (Ibn Hishām, p. 586; Tabari, i. 1670; [Uwa], 1655; Wāṣīd, p. 350; Ibn Sa’d, ii. 1, 125 sq.; al-Muqaddamah, p. 58 sq.). Nor did he come in the year 9 to Mecca to the hājdāj; he showed his intentions in it, however, by sending Abū Bakr as his representative and making him read a proclamation which had momentous results (Bukhārī, ii. 163, 219; according to the usual tradition, it was ʿAlī who acted as his deputy; but this is probably a tendentious alteration; cf. Tabari, i. 1760 sq., where Abū Bakr complains about being passed over and is comforted by Muḥammad; there is also another tradition, according to which Abū Bakr commissioned Abū Hurairah to proclaim the exclusion of the heathen from the pilgrimage (Ibn Sa’d, ii. 121 sq.). This was what is known as the baḥr ʿaḥ (v. 9), in which Muḥammad, who had been for so many years excluded from the pilgrimage, forbade all heathen any participation in it and gave them a period of four months, after the expiration of which they had to choose between the adoption of Islam and merciless warfare (Ṣaḥīḥ is.). This explains his absence from the celebration in the two preceding years: he wished to wait until he could celebrate it as sole ruler and completely in agreement with his intentions or, as he said, with the ceremonies introduced by Abrahām (ii. 119 sq.). Finally all was prepared and at the end of the year 10 (April 631–March 632) he was able to carry through the first reformed pilgrimage (the “Farewell Pilgrimage” or the pilgrimage of ʿIsām), which became the standard for all time. It is remarkable that the regulations for the ceremonies of the hājdāj, the object of which was to remove all that was too obviously pagan in the old ceremony (cf. e.g. the ʾājābā in Minā in Parādak in Z. D., p. 604; Abu Ḥāshim, p. 402) and to give it an Islamic colouring, are found mainly in traditions, where later details can of course easily have been inserted, and only in fragments and more or less incidentally in the Qurʾān; but broadly speaking, the later form is undoubtedly based on what the Prophet laid down on this memorable occasion (cf. the article al-Muqaddamah).

The Farewell Pilgrimage, at which an effective address, of which somewhat variant versions have been handed down, is put in the Prophet’s mouth, marks the culminating point in his career. His feelings at this time are probably expressed in Allah’s words in Sūra v. 5: “To-day I have perfected your religion, and completed my favours for you and chosen Islam as a religion for you.” There is therefore a touch of the dramatic in the fact that his career closed a few months later. He himself hardly expected this, for only a month before his death he was preparing an expedition, which was to set out under the leadership of the young ʿUthmān (q.v.) against Tumsjūdira (note in some traditions to West of the Jordan, cf. the article ʿUṣayma) in order to avenge the death of his father. The situation was such in other directions also that it required a man in full vigour to deal with it; in several places the appearance of different “prophets” had provoked disturbances (cf. Aḥmad, Tahlīla and Muḥallima). Then Muḥammad suddenly fell ill, presumably of the ordinary Medina fever (Parādak, i. 13); but this was dangerous to a man physically and mentally overwrought. He rallied a little but then died on the 13th Rābiʿ I of the year 9 (i.e. June 8, 632; only this date suits the statement in the Ṣaḥīḥ of B. Thālib, N. cxxxiv. and all traditions that it was a Monday) on the bosom of his favourite wife ʿAḥṣa, according to the story with the words: “The highest friend” (rabīʿa, for which Goldziher once proposed raḥīmah, “the vault of heaven”) of Paradise”. He left, unfortunately however for his community, no legal successor, for even the little Ibrāhīm whom the Coptic slave Marīya bore to him had died shortly before (on Jan. 27, 632, if the statement is right that there was an eclipse of the sun on the day he died; cf. Rhodokanakis, in W. Z. K. M. xiv, p. 78 sqq.; Mahler, op. cit., p. 109 sqq.). The wild confusion which party used to settle on Mecca when his death became known had the remarkable result that his corpse remained neglected for a whole day until it was finally buried under ʿAḥṣa’s hut (Tabari, i. 1517; Ibn Sa’d, ii. 57, p. 58, 59, 71, 6).

The great difficulty which the biographer of Muḥammad feels on every page is this, that the peculiar excellence in his career, the wonderful strength of his personality and the power which those around him by suggestion, is not recorded in the early sources and indeed could not be recorded. From the Qurʾān, it is true, one becomes acquainted with his earliest remarkable inspirations, which even now are not without effect, and with his eminent political gifts later in Medina. We do of course find instances in the battle of Badr or the agreement of Ḥudaybiyya where his intellectual superiority is overwhelmingly evident; but these are only isolated flashes and for the most part we have to read the essentials between the lines and be content with instinctive analogies among which the influence of Joseph Smith on the intellectually far superior Brigham Young is a particularly striking example. The really powerful factor was his unshakable belief from beginning to end that he had been called by Allah, for a particular mission such as this, which does not admit of the slightest doubt, exercise an inestimable influence on others; and the certainty with which he came forward as the executor of Allah’s will gave his words and ordinances an authority which proved finally compelling. His real personality was revealed quite openly with its limitations; his strength and his knowledge were limited, the ability to perform miracles was denied him and he speaks quite frankly of his faults (vi. 69; xxxiv.
Apart from the revelation with which he was favoured, he is a man like any other and several times refers to the fact that he will die. The episode in Ibn Hāشم, p. 102 sg., is not historical but a tendency to connect the story against the becoming of Prophet. This is exactly the field in which later ages are of little satisfaction. They are driven mainly at such a rate of the traditions which are clearly confirmed by the Qur’an that we can only have certainty in the strictest sense of the word in case, where the stories place the Prophet in an unfavourable light, not only from our point of view but also from that of the Muslims, e.g. in the story of his temporary recognition of the three Messianic messengers or of his being confused by ‘Umar for putting off the 'ibāra between the ‘umma and hadj. On the Farewell Pilgrimage, for it is quite incredible that such features should be later inventions and as a rule in such cases the compromising stories are confirmed by the existence of variant traditions which attempt to dispose of the offensive features by glossing them over or altering them.

If the biographers of Muhammad must for these reasons impose a very considerable restraint upon themselves, there is nevertheless one essential aspect of his activity, which ought to be very strongly emphasised, particularly as justice is not always done to it in modern treatments of his life. There is a tendency in some recent writers not only to emphasise all that is unfavourable but also to neglect his real religious importance. If he had really only been an oversexed man, anxious for worldly profit and quite unscrupulous in the choice of his means, Islam, which had been created by him and developed after his death, would have been an effect without a cause. It is impossible for the unbiased historian to deny that he aroused the religious instinct of his countrymen, and gave expression to a body of religious and moral conceptions which not only satisfied his fellow-countrymen but supplied the needs of the people of his time which had old civilizations conquered by the Muslims and served them as foundations for a vigorous and far-reaching intellectual activity. Although as a result of his singular theory of inspiration, his direct claim in the older religious of revelation remained concealed, he was able in his own way to communicate to his countrymen a part of the spiritual wealth of the peoples of a scriptural faith and how he touched the soul of the Arabs best seen by the efforts of the Wahhabis at a reformation. In hands of ancient culture, Islam, it is true, was only able to carry out its task by a sometimes radical remoulding and the intellectual activity already mentioned developed also under the influence of Christianity and mysticism, but yet it was Muhammad who set the whole process in motion and he could not have gained this influence if he had only been what the writers mentioned professed to have found in him.

The Encyclopaedia of Islam, III.
Muhammed was able to maintain himself in Amasra and Tokat against Timur's governor in Nisark and against Turkoman bands. Soon after Bayazid's death in 1403, having found support with the dynasties of Karaman and Dhi l-Kadr, he conquered Brusa from his brother Isk, who had fled there after the battle of Angora. Then followed the struggle with his other brother Sultanin, who had escaped to Adrianople but reappeared in Anatolia on account of his dealings, friendly as well as hostile, with the Iznik Oglu Ljumal. Sultanin was able to take Brusa but was soon obliged to return to Rumili, where Muhammad had sent their brother Muzafar (who, after Angora, had been prisoner for some time with the Germeyin Oglu). When in 1410 the struggle between Sultanin and Musafir ended in the latter's victory, Muhammad, whose position in Anatolia was now strengthened, had to face Musafir himself. At first the conquest of Kast礼物 did not seem hopeful, but after some high functionaries, like the Ljumal-oglu Iskandar Pasha, had convinced him of his beauty Musafir was able to crush Musafir in the battle of Camurlu in Suviana (July 1413). By this battle the unity of the Ottoman state was restored: nevertheless one gets the impression that even after the battle of Angora, the supremacy of the house of Oghman over the other Muhammadan and Christian chiefs in Anatolia and the Balkan Peninsula was never seriously questioned. The hereditary enemy in Asia, Karaman Oglo Mehemel, who in the meantime had gone as far as besieging Brusa, was subdued at Djamik in 1414 and at the same time the turbulent Isik Oglo Ljumal was finally driven away from Suvagna. In 1416 the Ottoman power in the Aegean Sea was strengthened by the battle of Gallipoli against a Venetian fleet. That year witnessed the extremely serious despot revolt in Aizan and the peninsula of Kara Brusa, connected with the name of Simanwa Oglo Bahr al-Din (cf. Babinger's monograph on the subject in Isak, xi. 1-174 and, as to the date, p. 62 sqq.); its suppression required the levying of troops from all parts of Anatolia under Bayazid Pasha. In the European part of the Empire the Sultan kept up friendly relations with the Byzantine Emperor. The Turks intervened, however, in Wallachia where the succession was disputed and they built there the fortress of Djunjewevo (Turk: Var Klokau) on the northern bank of the Danube; at the same time (1419), the raids of the Turkish troops reached Hungary, Bosnia and Styria. On the Asiatic side large parts of the possessions of the prince Kastamuni, including Tosia and Kaushtur, were incorporated into the Ottoman possessions. From 1419 Muhammad had moreover to face a pretender to the throne who claimed to be his brother Musafir: this Djumia Musafir found an ally in Ljumal. Both were defeated near Selanik and had to fly to Constantinople. The Sultan died in 1423 in Adrianople, shortly after his return from Anatolia. His death was kept secret from the army during forty days, until the heir to the throne Murad had arrived at Brusa. Muhammad I has won the reputation of a mild and benevolent ruler; he often occurs with the surname of Celebi also to his brother. Another surname is Karabadi, the 'Wrestler', which takes unrecognizable forms in the European sources ("Crisia" in the Ragusan documents cited by Babinger on p. 63 of his article in Isak). Important administrative measures are not recorded under his reign; the political and religious unification and pacification occupied all his forces. Some famous edicts are connected with his name: he finished the book of the "DHUMAIN", which had been started by his brother Iskandar, and the mosque of the same name in Brusa. A new building of this Sultan was the well known Yezgih Djamik at Brusa (cf. Ewliya Celebi, Travels, ii. 15). Bibliography: The ancient Ottoman chronicles of Aşık Paşa Zade and Taşköprü: Ali: Oğhaman, edited by Gise; Crudj Bey, ed. Babinger and the later historians, especially Ali, Kuv-ah-Elghar. — Of the Byzantine writers this period is treated by Phrantzes, Ducas and Chalcedonides. Further: von Hammer, G. O. R., i. 331 sqq.; Zinkeisen, Gesch. des Ott. Reiches, Hamburg 1840, i. 385—500 and Jorga, Gesch. der Ott. Reiches, i. 351—377. (J. H. Kramers) Muhammed II, with the surname Ali-Fath, or, more popularly, Fatih, was the seventh ruler of the Ottomans, his father having reigned from 1413 until his death in 1481. He was born, according to Sijjili Oghman, i. 67, in Radjaz 832 (April 1429) and resided during his father Murad II.'s lifetime as governor in Magnesia; after the death of his brother Ala al-Din in 1444 he became heir to the throne. Before his final enthronement, Muhammad had twice resided in Adrianople, on account of the abdication of Murad II. the first time in June 1444, after a ten years peace had been concluded with Hungary. When, notwithstanding this treaty, Hungary and her Christian allies again took the offensive in July, Murad came back from Magnesia, to which he had retired, and won the battle of Varna (Nov. 10, 1444). Then Murad abdicated a second time, but a menacing revolt of the Janissaries in Adrianople made the grand vizier Kultur Pasha call him back again, after which Muhammad was relegated once more to his Anatolian government until his father's death. On Febr. 9, 1451 this new Sultan arrived at Adrianople and seemed at first peacefully inclined. In reality his reign was to become a period of untried and continual conquest under the personal leadership of Muhammad himself, who, especially in the beginning of his reign, took part in nearly all the important campaigns. His conquests did not very much enlarge the boundaries already reached at Murad II.'s death, but consisted more in a bringing under immediate Turkish rule of a large number of countries, regions and towns that were still held by local rulers under the Ottoman suzerainty. In this way Muhammad's conquest made possible the immense expansion of the Ottoman empire in the sixteenth century. The first, and at the same time most conspicuous military achievement of his reign was the conquest of Constantinople, where, by the grace of Murad I., the Palaeologue Constantine was still reigning. The preparations for this memorable siege had begun in 1452 with the construction of the castle of Riumli Ilyar (in which an inscription by Zaghano Pasha, one of the builders, of 856 [1452], is found; cf. Kultur Edhem, in T. O. E., ii. 454—497) and other military preparations, e. g. the casting of an enormous siege gun. Constantinople was taken on May 29, 1453 and Galata surrendered soon afterwards [cf. CONSTANTINOPLE]. In the next
year, the sultan obtained successes against Serbia, while Turkkhan [q. v.] intervened in Morea, where the last Palaeologue despos were at war with the Albanians. Immediately after the taking of Constantinople the grand vizier Khalid Pasha had been deposed and executed by order of the sultan, who had personal and political causes of complaint against him (cf. Taeuschner and Wittek, 272, n, 169 sqq.); he was replaced after nearly a year by Mahmūd Pasha [q. v.], who for the next twelve years was to be a no less energetic supporter of Muhammad in the achievement of the programme of conquest. The year 1455 saw both of them in Serbia and on the Aegean coast, where the principal conquests were Kavous and the island of Lesbianos [q. v.]. In 1456 they were unsuccessful in the siege of Belgrad. During the years 1458 and 1459, Serbia was made a direct Ottoman province (Semendra taken in 1459 by Muhammad), and in the same year and in 1460 the sultan took part in several campaigns in the Morea, the northern part of which was conquered from the Palaeologues. About the same time a temporary understanding was reached with Skanderbeg [q. v.] in Albania, then came the amazing Asiatic campaign of 1461. Amasya (Amastria) was taken from the Genoese and Sina (Sinia) [q. v.] from the last vladiyard Oghlou; the fall of Trebizond immediately followed [M. Parabeni], after the beginning of a conflict with Çum Hasan of the Ak-Koyunlu. In the next year the sultan’s army drove the famous Wallachian voivod Vlad Dracul from his principality, which was given to his brother Radul, and at the end of the year Muhammad and Mahmūd made an end to the rule of the Genoese dynasty of Lesbos. The years 1463 and 1464 were mainly occupied by the annexation of the kingdom of Bosnia. In 1463 began a war with Venice, which was to last seventeen years; the main theatre of hostilities was the Morea, but also in the islands of the Aegean there were continual encounters with Venetian fleets. Thus the death of the Karaman Oghlu [q. v.] Ibrahim in 1464 had first provoked the sultan’s intervention and soon nearly all the towns of this once powerful principality were conquered during Muhammad’s campaign of 1466 (battle of Lárnaca). In that same year Muhammad was successful in Albania, where he fortified the town of Ithacin [cf. SKANDERBEG].

Mahmūd Pasha had been deposed as grand vizier after the Karaman campaign and replaced by Kam Muhammad Pasha. But it was Mahmūd who as governor of Gallipoli and Kapudan Pasha, helped Muhammad in the conquest from Venice of the islands of Negroponte (Euboea) in 1470. In the same year began again a series of campaigns under Kam Muhammad and Gedik Ahmad Pasha against the last towns held by descendants of the Karaman Oghlu, who were supported by Çum Hasan [q. v.] and by Christian fleets on the sea side. When Çum Hasan had even then taken the offert piece in conquering the town of Tokat, great preparations were made for a new Asiatic campaign of the sultan, and Mahmūd was again made grand vizier. The sultan’s army won in 1473 the great victory of Erzincan, which put an end to danger from that side. In this campaign a part was played by prince Mufta, the heir to the throne, who completed in 1474 the conquest of Fili (Cilicia) but died soon afterwards. Mahmūd Pasha had been deposed again from the grand vizierate and executed in August 1474; Gedik Ahmad Pasha took his place.

In the following years, until 1480, the sultan’s chief attention was given to conquests in Europe. He built in 1471 the fortress of Sába (Bogardelen) in Syria, near Belgrad, while his troops in these and the following years made incursions into Hungary and far into Austrian territory; the war with Venice continued and in 1474 the Albanian Skutari (Shkodrā) was in vain besieged. The year 1475 brought the great success of the conquest of Kaf虆 from the Genoese and, as a result of the establishment of the Ottoman power in the Crimea, the submission of the Tatari Khānate of the Crimea to Ottoman suzerainty. In 1476 the sultan himself was successful in Moldavia, but in the next years the Turkish armies had less success against the Venetians in Albania and southern Morea; finally in 1475 Muhammad himself went to Albania and took Corfu: Skutari was besieged a long time, but surrendered only on account of the peace negotiations with Venice, which led to a peace treaty (confirmed January 26, 1479) leaving a certain number of towns in Albania and Morea to Venice. The Ionian islands, however, were conquered in 1479 by a fleet under Gedik Ahmad, who, at the same time, went so fast as to take Otranto in southern Italy. An endeavour to conquer the island of Rhodes in the same year was not successful.

Muhammad’s last campaign took place in 1480, when he intervened in the dynastic disputes of the dynasty of Dhit Tahār [q. v.], which intervention gave rise to the first difficulties with Egypt. In the next year, 1481, he had already set out for a new military enterprise in Asia, the aim of which was yet unknown, but may have been connected with the same difficulties, when he died, rather suddenly, in the place called Tekfur Câyri or Kökünk Câyrı between Skutari and Gellice (May 5, 1481). His body was transported to Constantinople and buried in the fêtir of the Fātimi Mosques. Besides being a great conqueror, Muhammad II was the builder of many important edifices, in the first place of the Fātimi Mosque in Constantinople and the mosque of Esmit (Hadżat-ESin), etc. 243 sqq. and further of the place called Tekfur Câyri or Kökünk Câyrı between Skutari and Gellice (May 5, 1481). His body was transported to Constantinople and buried in the fêtir of the Fātimi Mosque. Besides being a great conqueror, Muhammad II was the builder of many important edifices, in the first place of the Fātimi Mosque in Constantinople and the mosque of Esmit (Hadżat-ESin), etc. 243 sqq. and further of the castle of the Pianelles and other works of naval and military importance. In the army administration he succeeded in restoring discipline among the Janissaries by incorporating in them the corps of the Seghans: further his name is connected with the first Ottoman Kânar-îmâne (preceded as an appendix to the T.O.E.M., iii). He encouraged scientific studies and showed an interest in literature and poetry (he pensioned thirteen Turkish poets), even for the Renaissance arts in Italy he summoned Gentile Bellini to Constantinople, who made his portrait, etc. Also Tschoel, von alien Osmanischen Reich. Tiungen 1930, p. 189.

Bibliography: Among the early sources, the Byzantine historians (Phanes, Duces, Cacoudylos) are by far the more important. The Greek description of Muhammad’s life by Crīmulus was translated into Turkish (appendix to T.O.E.M., i, and ii). The old Ottoman chronicles (Neshri and others) often treat the beginning of Muhammad’s reign in their last parts, the later historical sources (Sad al-Dīn, All Feridun) are far from being reliable for this time. Further: von Hammer, G. P., R., u. u., Zinkeisen (u) and
MUHAMMAD, thirteenth ruler of the Ottoman Empire, was born on May 16, 1567, the son of Murad III and the Venetian lady Bajza, and reigned from January 27, 1595 until his death, December 22, 1603. He was the last sultan who, as crown prince, had reigned as governor in Maghreb. During his short reign he does not seem to have exercised any great influence on the policy of the Empire, being mostly under the influence of his mother who, as valide sultan, intervened in affairs of state through her protégés within and without the palace. Much against her will but on the insistence of a large part of the troops and of the high dignitaries, Muhammed took part in one campaign, namely that of 1596, in which the Hungarian town of Eger (Egri) was taken by the Turks (September 1596). This campaign was a part of the war against Austria that lasted during all his reign and occasioned every year a military expedition to Hungary or Wallachia. The grand vizier was changed not less than twice during this sultan, the most conspicuous grand vizier was İbrahim Paşa [q.v.], his brother-in-law and the protege of the valide. Ibrahim three times held the sultan’s seal, three other titulars ended their office by being executed. In the same year as the conquest of Eger, the Turks won the battle of Keresztes over the Austrians and Hungarians; the severity of the then grand vizier Çughlu Sinan caused a great number of the troops to desert and to appear some years afterwards as partisans of Gedik Ali, provoking a dangerous revolt in Asia Minor which lasted thirty years and began with the taking of Tebriz by Kara Yeddi [q.v.] in 1599. A third memorable feat of the Hungarian war was the conquest of Kanice in 1600 by Ibrahim Paşa. In other parts of the Empire the situation was relatively quiet; only in the Crimea there was a war between two rivals to the khanate, in which the Ottoman government had to intervene. Relations with the European powers were peaceful. France began already to exercise considerable influence through her ambassador; with Persia there was peace until September 1603, when a war began with the taking of Tabriz and Naftshāvān by Abāhā I.

The Empire was still supported by the traditions of Suleiman’s time, but the lack of strong government had introduced a lot of abuse, notably in the administration of the timars and of the finances. One of the consequences was the dangerous revolt in January 1603 of the sigâhis in Constantinople, who demanded the abolition of the harem régime in the capital and the re-organisation of the authority of the government in Anatolia. Two high harem functionaries fell as victims of this revolt; the grand vizier Vemeshçu Hasan was able to oppose the sigâhis with the aid of the Janissaries, thus creating an everlasting feud between the two corps, but in October of the same year this nefarious policy caused his own fall and execution.

Muhammad III was buried in a turbine of the Aya Sofia, a short time before his death, he had ordered the execution of his eldest son Mahmûd. He is said to have made a great show of piety, and had some excellent counsellors in his environment, such as the khaṣâṣja Sa’d al-Din (sied 1599), who had determined him to accompany the army in 1596; but on the whole his mother’s influence prevailed by keeping him mainly confined to the harem in the palace.

Bibliography: Among the Turkish historians the works of ‘Alî (until 1590); Bâlûkî (until 1600), Pecawî and Hasan Beg Zâde are valuable as contemporary sources, further Nâmisî and Hâdimî Khâfî. Von Hammer, G. O., etc. and the works of Zinkischen (iii.) and Jorgaarte. A contemporary European source is Laz. Saro’s, Ottomani rivi de rebus turciis libri, continens descriptiones potentiae Mahometti III, 1600.

MUHAMMAD IV, nineteenth Sultan of the Ottoman Empire, was born on December 30, 1614 and was placed on the throne on August 8, 1648, after the deposition, soon followed by the execution, of his father Sultan Ibrahim. The power in the state was at that time divided between the court, where the old valide Kosem [q.v.] and Sultan Muhammad’s mother, the valide Taçhân, held the reins, and the rebellious soldiery of the Janissaries and the Sipahis. The lack of stability in the government at this time is shown by the fact, that, until the nomination of the grand vizier Köprülü Muhammad in 1656, there were no less than thirteen grand viziers. In 1657 the old valide Kosem was assassinated and at the same time the resistance of the Janissaries was broken; the regime of the court party that followed under the sultan’s mother did not improve the situation. The grand vizier of İbrahim Paşa (1652–1654) was at first seemed to be the strong man needed, but brought to an early end by his rival Murad Paşa, and in the meantime the Cretans were against Venice was exhausting the resources of the Empire. In March 1659 a military rebellion forced the sultan to allow the execution of several of his favorite courtiers.

The real strong man proved to be Köprülü Muhammed Paşa [q.v.] (Sept. 15, 1650—Oct. 31, 1661) who eliminated immediately the influence of the harem and took control and until his death the real ruler of the Empire. His régime began with a Turkish maritime defeat by the Venetians at the Lardanelles, but already in the following year he obtained as serasker successes in Transylvania and succeeded at the same time in establishing firmly the Turkish authority in the Danube principalties; the collaboration with the Crimean Khan was here of great value. In 1658 and 1659 he was able to suppress rebellions in Asia Minor, and in the Venetian war his great fleet of Venetian ships and other Christian allies did not succeed against the Turkish forces on Crete. After his death (Oct. 31, 1661), he was succeeded in his office by his son Köprülü Ahmet Paşa, who completed the work of his father by carrying through the final conquest of Crete (surrender of Candia on Sept. 4, 1669) followed by peace with Venice. In 1661 the war with Austria had begun again, where Sultan Muhammad took part in several campaigns, notably that of 1663 in which Ujvard (Neuhausen) was taken. In 1664 took place the famous battle of Vuktor, where the Turks were beaten by an allied army, a part of which was formed by French troops; still the peace concluded with Austria in 1665 was favourable for Turkey. In 1672 the sultan took part in the campaign against Poland, after the Ukrainian cossacks had invaded Ottoman
against the Polish king; the Polish war, ending in a peace treaty of 1676, strengthened still further the Empire's position in the north. Köprülü Ahmed Pasha died Oct. 30, 1676. Though the sultan, who had developed in the meantime a moody and capricious character, never showed him the same deference as to his father, Ahmed had been easily able to maintain himself against enemies in the interior, not least by forming new troops (the başkılı and the geydocu), who were far more reliable than the Janissaries and Sipahis. He had not been able, however, to put an end to the extravagant luxury of the court, which wasted enormous sums. The sultan had an abnormal liking for big hunts, that were organized at enormous cost in the environment of Adrianople, which town he preferred as a residence to Constantinople. After Ahmed's death the sultan did not himself take the affairs of state in hand; he appointed Kora Muşafı Paşa [q. v.] as his grand vizier. The latter continued in an unsteady way the tradition of the last sultans. In 1677 and 1678 he obtained successes against the Cossacks, behind whom the Muscovite power now began to gain in importance in Turkish affairs. In 1682 war broke out again with the Austrian monarchy and led to the second Turkish siege of Vienna (July 13—Sept. 12, 1683), ending in a Turkish delâce, thanks to the intervention of the Polish king Sobiesky. This disaster cost Kora Muşafı his office and his life and at the same time the influence of the Selâzil became again predominant. The grand viziers, now following proved unequal to their task and in the years 1685—1687 nearly the whole of Hungary was lost to the Austrian armies (Turkish defeat at Mohacs on June 22, 1687). At the same time the hostilities with Venice had been reopened in the Morea and in the Archipelago.

All these disasters caused a revolt of the troops in the field; they marched on the capital in September 1687 under Siyavuş Paşa of Aleppo. This time the sultan himself fell a victim to them; he was deposed on November 8, 1687 by the fa irrişkân Köprülü Muşafı Paşa and lived in seclusion in Adrianople until his death on December 17, 1692. He was buried next to his mother in the Yeni Dâmi.

Bibliography: Naîma (ii.) and Häjeddî Kâhalîa, and until 1660 the Tarîkh of Kâshir are the most important Turkish historical sources. The Siyâhat-name of Kiliyaî Çelebi describes many of the military expeditions of this period and is also otherwise a valuable source of information. Among the European sources this period is covered by P. Ricaut, Histoire des derniers empereurs des Turcs depuis 1664 jusqu'à 1677, Paris 1683. Further, von Hammer, G. O. R., v. vi. and the works of Zinkensdorp (iv. v. and vi. and Joeg (iv.). (J. H. Kramers)

MUHAMMAD V Reshid, third and fifth Ottoman Sultan, was born on November 2, 1843 as a son of Sultan Abd al-Majid. During the reign of his brother Abd al-Hamid II he lived in seclusion; his very existence inspired 'Abd al-Hamid with such terror that even the mentioning of persons with the name Reshid had to be avoided in his presence (cf. Snouck Hurgronje, Verzegde Gezichten, iii. 239). He was a man of mild character, who owed his accession to the throne (April 27, 1909) only to the victory of the Young Turks; moreover he was the first constitutional ruler of Turkey, but he was unable to give direction to the very disparate political tendencies that manifested themselves within and without the parliament during the years after the Revolution, and, after the final victory of the Unionist party in January 1913, Muhammad V had to submit, much against his will, to their government.

At the very beginning of his reign, Turkey lost her last vestige of authority over Bosnia and Herzegovina by Austria-Hungary's annexation, and over Bulgaria by the declaration of its independence (Oct. 5, 1909). The cabinets under Hâsim Hilmi Paşa (until January 18, 1910) and Lalîeddî Hâkî Pasha (q. v. until Sept. 29, 1911) were not able to bring about a peaceful situation in the interior (revolts in Albania), Hâkî Pasha had to resign on account of the declaration of war by Italy. Under the grand viziere of Sa'id Paşa [q. v.] the Italian war led to the loss of Tripoli, confirmed by the peace treaty of Uçhisar (Oct. 15, 1912). The peace was signed under the anti-unionist cabinet of Ahmed Mâhkîr Paşa, but in the same month began the so-called Balkan War against the federated Balkan States. The reactionary cabinet of Kâmil Paşa soon showed an inclination to conclude a disastrous peace through the intermediacy of the European powers (Conference of London); then on January 23, 1913 the Unionist coup d'état brought again a Unionist government under Mâhkîr Shewket Paşa. The result was a reopening of the hostilities and, after the failure of Bulgaria, the recapture of Adrianople (July 22, 1913). In the meantime Mahîmî Shewket had been murdered (June 28) by adherents of the liberal opposition, but this did not bring about a change in the political course; his place was taken by Saîd Hilmi Paşa, whose government signed the peace-treaties with Bulgaria (Sept. 29, 1913), Greece (Nov. 14) and Serbia (March 14, 1914). From this time on, the Committee of Union and Progress, which from the beginning of Muhammad Reshid's reign had not ceased to work behind the scenes, became all powerful and its leaders 'Atatâr Bey and Emner Bey came more and more to the front. Afterwards, when at the beginning of the Great War, the Ottoman Government had decided to remain neutral, it was the unionist sympathies with Germany that brought about a gradual estrangement between Turkey and the Allies (the "goeben" and "beslan" incident), culminating in the entrance of Turkey into the war on the side of the Central Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Powers (the Turkish fleet in the Black Sea on Oct. 29 and 30, 1914). 'Atatâr Paşa himself became grand vizier in February 1917. The Allied endeavour to force a way through the Dardanelles was definitely abandoned in January 1916 and in the meantime Turkish troops fought on the Egyptian front, in Iran and on the Russian and Persian frontiers. Before the end of the war Muhammad V died unexpectedly on July 2, 1918.

(J. H. Kramers)
MUHAMMAD VI Waḥīd al-Dīn, last Sultan of the Ottoman Empire, was born on January 14, 1661, as son of Sultan Abūl Muḥājir. He was installed to the throne on July 3, 1708, after the death of his brother Muhammad V Rūḥānī, the former heir to the throne. His father, having died in 1661, when on October 30, 1718, nearly four months after his accession, the amirul-mu'minin was signed, he was the ruler of an empire that seemed to be at the mercy of its former enemies, whose military forces occupied the capital and other hitherto unconquered parts of Turkey. On the other hand, the power of the Committee of Union and Progress was broken, but, since in the beginning of 1719 there began in Anatolia an increasing opposition against the foreign occupation, joined with an assertion to obey the Constantinople government. Muhammad VI seemed to have no other choice than to throw in his lot with the Allies and, together with his grand vizier Dā'imī Farid Pasha, he collaborated with the Allies in the endeavours to suppress the nationalist forces (beginning of 1720); this anti-nationalist action was even sanctioned by a fatwa of the Shaikh al-Islām. As the nationalist movement grew ever stronger, the Sultan's authority could only be upheld in Constantinople by the support of the Allies. His government had to sign the Treaty of Sèvres (August 10, 1920) and the Tewfik Pasha Cabinet (since October 21, 1920) and it strove to summon the Parliament for its ratification. But in 1921 things had already gone so far that Tewfik Pasha recognized the powerlessness of his government to represent Turkey. The final success of the nationalists against the Greeks (cease of Smyrna, September 9, 1922) brought about the armistice of Mudania (October 13, 1922), to which the Sultan's government was not a party. It was still invited to represent Turkey in Lausanne, together with the Angora government. This was not accepted by the Great National Assembly, which, on November 1, 1922, declared the Ottoman sultānate abolished from March 16, 1920 (occupation of Constantinople); Tewfik Pasha's cabinet resigned accordingly (November 4) and Muhammad VI remained as Khalif in Constantinople, where, on November 10, he appeared at his last aqūmāf. When, however, the National Assembly decided some days afterwards to throw Wahid al-Dīn on a charge of high treason, this last Ottoman Sultan left Constantinople as a fugitive on a British ship (November 17, 1922) and the very next day the Angora government declared him divorced of his caliphate. Having gone first to Malta, the ex-sultan proceeded to Mecca as a guest of king Husain. From here he launched a proclamation to the Islamic world, in which he maintained that the separation of the caliphate from the sultanate was contrary to the shari'a (text in Orante Moderno, n. 702—705). This appeal found hardy any response in the Islamic world. The last Ottoman Sultan left Mecca again and went to live in San Remo, where he died on May 16, 1926. In 1924 he had even recognized king Husain's claim to the caliphate.

by his nephew Mahmud, son of Ghiyath al-Din, but the viceroy of the provinces. Asseg in Dilli, Kishn in Multan, Tadji al-Din Yildiz in Kairan, and Dilgiz in Ghaizan, became independent.

(T. W. HARK)

MUHAMMAD, TUGHLUK, the second king of the Tughrul dynasty of Dilli, was the eldest son of Ghiyath al-Din Tughrul, its founder. During the short reign of the usurper Nasir al-Din Khanaraw, he was in some peril, but escaped and joined his father, who was marching on Dilli. He was known at first as Dhiwan Khan, but received the title of Ulugh Khan and was sent in 1321 to Warangal, to reduce to obedience the raja Pratapsa Radhadeva II. In this distant region he attempted to rebel, but his army refused to believe his story of his father’s death at Dilli and to accept him as their king, and he was obliged to return in haste to the capital, where he either persuaded his father of his innocence or gained a pardon, for, though his accomplices suffered cruel deaths, he was again sent in 1323 into Telengana, and on this occasion compelled the raja to surrender and sent him to Dilli. In the following year he acted as regent during his father’s absence on an expedition into Bengal, but his conduct aroused suspicion, and his father rebuked him in letters sent from Bengal. He received the king, on his return, in a temporary hulk of wood, so constructed that the disbanding of a beam would bring the whole structure down, and by this device crushed the old man to death, and ascended the throne in February 1325.

The delineation of a character so complex and contradictory as that of Muhammad Tughrul is no easy task. He was one of the most extraordinary monarchs who ever sat upon a throne. To the most lavish generosity he united revolting and indiscriminate cruelty; to scrupulous observance of the ritual and ceremonial prescribed by the Islamic law an utter disregard of that law in all public affairs; to a debauchery and superstition-veneration for all whose descent or whose pious commands respected a ferocity which when routs repected neither the blood of the Prophet nor personal sanctity. Some of his administrative and most of his military measures, give evidence of abilities of the highest order; others are the acts of a madman.

The chronicle of his reign is largely a record of rebellion, punished with unsparing rigor. In the second year his cousin Gunishpur rebelled in the Dakan and was put down alive. In 1327 he rebuilt Mehrgir, named it Dawlatabad, made it his capital, and two years later drove the whole population of Dilli thither. In 1328 Kishn Khan rebelled in Multan and was defeated and slain, and in 1329 India was invaded by the Mughul, Alp al-Din Tarnah-jirun, who, however, was driven from the country. In the same year the enhancement of the land-tax in the Gangetic Doab drove the inhabitants into rebellion, and the measures taken to suppress the rising depopulated the country. At about the same time Muhammad issued his famous fictitious currency, decreeing that his brass tokens should be accepted as equivalent to silver tangar. No precautions were taken against counterfeiting, and when the experiment failed and the tokens were recalled the treasury was obliged to purchase mountains of brass at the price of silver.

In 1331 a rebellion in Bengal was crushed by Bahram Khan, but in 1338 he died, and a second rebellion separated the province from the kingdom of Dilli, and in 1334 Sadiq Dilmuqan al-Din Afsan established his independence in Madura. Muhammad marched to punish him, but a pestilence in his army compelled him to retreat, and on his return he established in the Dakhan the pernicious system of farming out the revenue for extravagant sums, the result of which was to drive both the impoverished cultivator and the defaulting farmer into rebellion. Hulgar of Daulatabad, believing a report of the king’s death, rebelled, but was captured and pardoned, a rare instance of clemency, but a rebellion in the Pandjab was crushed with great severity.

An enormous army raised for the conquest of Persia melted away for want of funds to maintain it, and in 1337 a heavy calamity fell on northern India, a famine of unusual severity which lasted for seven years. The king’s measures to combat the famine were, on the whole, well conceived and well executed. Ganni was plentiful in Awadh, which proved that the famine was largely due to artificial causes, and he built a temporary city, Sagar-i-Awadh (Nagavat-pur, Sambh “the Gate of Paradise”), on the western bank of the Ganges, transferred thither the revenues of Dilli, and with the assistance of Amul Mullik, governor of Awadh, fed them from the granaries of that province. In the following year he was committed one of the greatest of his many follies in assembling an army of 100,000 horse for the invasion of Tibet and sending it into the Himalayas, where it perished.

In 1339 a rebellion in the Dakhan was crushed and even the faithful Amul Mullik was高尔led into rebellion, but, in consideration of his services, was imprisoned instead of being put to death. Almost immediately afterwards Dhiwan the Afghan rebelled in Multan, but died before the king’s wrath fell on Afghanistan. The famine was now at its height, and the people were eating human flesh. Muhammad set himself to the saving of regulations which should improve and extend agriculture and obviate future famines. By that means, says the contemporary historian, with conscious or unconscious irony, agriculture would have been so promoted that plenty would have reigned throughout the earth, had they been practicable. They included the extermination of the system of farming the revenues, and local confusion and rebellion, which reacted on the king until he regarded his subjects as his natural enemies and waged war against them with all the weapons of despotic power. The tale of execution is recorded, with sickening details, by execution. Execution is recorded, with sickening details, by execution.
and proclaimed an Afghan, Isma'il Mulk, as their king. The king marched to Dawlatabād, captured the city, and besieged the rebels in the citadel, but was recalled to Gudjarat by a serious rebellion headed by a man named Taghā. He pursued the rebel in Gudjarat and Kāthīwār for three years, drove him into Sind, and followed him thither, and on March 20, 1531, died within a few miles of Thatha, where the rebel had taken refuge. "The king," as a historian says, "was freed from his people, and they from their king."

His empire, at its greatest extent, included the whole of India except the small kingdoms of the Cola and the Pandyas, in the neighbourhood of Cape Comorin and the principality of Gūr in Kāthīwār. Before his death he lost Bengal, the Dākan, the Peninsula, and Sindh, and left the tenants of his dominions weeping with discontent.

**MUHAMMAD III, the sixth king of the Tughlūk dynasty of Dīlīhī, was the son of Fīrūz, at whose death the son of Fāṭīh Khān, his eldest son, was raised to the throne on Sept. 20, 1388, as Ṣuyūḥ al-Dīn Tughlūk II, but was slain on Feb. 19, 1389, and was succeeded by his cousin Abū Bakr, son of Zafar Khān, the second son of Fīrūz. Muhammad, the third son, contested the succession and, after suffering more than one defeat, occupied Dīlīhī and ascended the throne on Aug. 31, 1390. Abū Bakr took refuge with Bahādur Nāhir, in Mwāt but was pursued and defeated, and was imprisoned in Mirahat, where he shortly afterwards died. The old servants of Fīrūz, men of Eastern Hindūstān, who had been the principal factors in all the troubles of the kingdom, were put to the sword, after being tested by a shabboleth which distinguished them from the natives of Dīlīhī.

A rebellion in Gudjarat was suppressed in the same year by Zafar Khān, who in 1396 became independent in that province, and in 1391 Muhammad again invaded and plundered Mevāt and returned to Dīlīsār, where he fell sick. Bahādur Nāhir took advantage of his illness to plunder some villages in the neighbourhood of Dīlīhī and Muhammad marched into Mevāt, defeated him, and put him to flight, but on his return to Muhammadābād his disorder increased, and on Jan. 20, 1394, just as he had ordered his son Humayūn Khān to march against the Khokhara, who had captured Lābor and were ravaging the Pandjāb, he died.

(T. W. HAIK)

**MUHAMMAD II, the fifth king of the Bahāmīn dynasty of the Dākan, was the son of Muḥāmmed Khān, the youngest son of `Alī al-Dīn Bahman Shāh, the founder of the dynasty, and was raised to the throne on May 20, 1378, after the assassination of his uncle, Dīwān Shāh. Firīsha's statement that this king's name was Muḥāmmed has misled all European historians, but is refuted by inscriptions, legends on coins, and other historians. Muhammad II was a man of peace, devoted to literature and poetry, and his reign was undisturbed by foreign wars. He invited Hādī to Dākan, his great, and the great poet set out from Shīrāz in response to the invitation, but was so terrified by a storm in the Persian Gulf that he disembarked and returned to Shīrāz, whence he sent to Muhammad his excuses in a well known ode.

Between 1387 and 1395 the Dākan was visited by a severe famine, and the king's measures of relief included the free importation of grain, the establishment of schools at which children were taught, fed, and lodged at the public expense,
and special allowances to readers of the Koran and the blind, but only those of his own faith profited by his benefactions. He died of a fever on April 20, 1437, and was succeeded by his eldest son, Muhammad ibn Muhammad, in 1437/38.

(M. W. H.)

MUHAMMAD III, LASHKARI, the thirteenth king of the Bahmani dynasty of the Dakhân, was the younger son of Humâyûn Shâh, and succeeded his elder brother, Nilân Shâh, on July 30, 1463, at the age of nine. His minister was the famous Malik Gâwân, Malik al-Tûdîjâr, Khâdira Gâhwâ. A campaign against Mâlwa in 1467 was unsuccessful, but between 1469 and 1471 Muhammad Gâwân conquered the southern Konkan. In 1472 Malik Hasan Bahâr, Nîân al-Mulk, a Brâhman who had been captured in Vâdjyanagar and educated as a Muslim, led a successful expedition into southern Uçra and was rewarded by the government of Telîngâna. Fath al-Âlî 'Imdâd al-Mulk, another Brâhman with a similar history, was made governor of Barâr, and Usâf 'Adil Khân, a Turk, was appointed to Dawlatabâd. In the same year Muhammad captured the fortresses of Bankâpur and Bûlgânâw, and his conduct at the siege of the latter earned for him the title of Lashkari, "the Soldier." In 1474 the Dakhân suffered severely from a famine which lasted for two years, and in 1476 a rebellion in Konâwâr led the king into Telîngâna. He relieved Malik Hasan, who had been besieged in Râjâmahendrâ, invaded Uçra and punished the râdâja, who had supported the rebels, and on his return, in 1478, captured Konâwâr and assumed the title of Ghâzâ. He then set out to invade the eastern Kûnâtâk, but first divided the great province of Telîngâna into two governments, mortally offending Malik Hasan, the governor. The partition was part of a scheme devised by Muhammad Gâwân, to be applied to all the provinces of the kingdom.

Muhammad made Konâwâr, in the Kûnâtâk, his headquarters, and returned thither after carrying out a daring raid to Kândjewâram. From Konâwâr he issued an edict dividing the other provinces of his kingdom, Barâr, Dawlatabâd, and Gâlharâ, each into two governments. The measure was intensely unpopular, but it was only the vindictive Malik Hasan that actively resisted it. He regarded Muhammad Gâwân as the author of all the unpopular reforms, and by means of a forged letter persuaded the young king that his minister was in league with the foreign enemies of the state. Muhammad, when under the influence of his mûazzâm, summoned his faithful minister, and on April 5, 1481, without any inquiry into the circumstances of the case, caused his head to be struck off. Muhammad's innocence was established immediately after his death, and from the day of his unjust execution may be dated the collapse of the authority of the Bahmani kings. Of the two parties in the state all the foreigners, led by Usâf 'Adil Khân, who established himself in Bûljâpûr, and the respectable portion of the Dakhân, led by Fath al-Âlî 'Imdâd al-Mulk of Barâr, avoided intercourse with the king, who was thrown into the arms of the assassins, led by Malik Hasan. The latter accompanied Muhammad to Bûlhar and subsequently on an expedition to Bhâlgâwâ, but encamped apart from the royal troops, and always saluted the king from a distance, refusing to enter his presence. Muhammad attempted to drown his grief and humiliation in drink, from the effects of which he died at Bûlhar on March 22, 1482, crying out in his last moments that Muhammad Gâwân was slaying him. He was succeeded by his son Muhammad, who was never a king but in name.

(M. W. H.)

MUHAMMAD bin 'ABBâs [See KÂJâR.]

MUHAMMAD bin 'ABBâd ALLâh, great-grandson of Hasan, the eldest son of 'Ali and Fâjîma, was one of the 'Abîs who did not spend their time passively awaiting the fulfillment of their aspirations, but endeavoured to realise them by personal effort. He and his brother Isâ 'îbâm had, according to Wâlîdî, been brought up as future rulers and Muhammad was called al-Mahdi by his father. As early as the reign of the 'Umayyad caliph Hâshâm, the two sectarian al-Maghira [q.v.] and Payân [q.v.] who did not recognise Muhammad bin 'Abîs and 'Abîs [q.v.] endeavoured to make propaganda for them. When signs of the imminent collapse of 'Umayyad rule became apparent after Wâlîdî's death, 'Abî 'Allah's family by his command paid homage to Muhammad with the exception of al-Âlî's son Dîfâr. Wider circles also recognised him as the legitimate heir, including the Mu'ââlîs, who in those days had a distinctly ascetic character. Dîfâr, later the 'Abîs-dîfâr caliph, was at this time attached to this school and it is several times recorded that he was among those who paid homage to Muhammad. This is in itself by no means improbable and well explains his hostile attitude to him, although it remains remarkable that Muhammad later nowhere, even in his polemical letters to him, refers to this important fact. The 'Umayyad governor of Kūshâra also thought of joining him when he was besieged in Wastât in 152 (756), but dropped the matter when he received no answer to his letter.

When finally the 'Abîs-dîfâr Abu 'l-'Abbâs in the same year won the caliphate and ousted the 'Abîs, the two brothers disappeared and showed thereby that they would not recognise him. There now began for them a period full of adventure and danger, especially after Dîfâr became caliph in 136 (754). They went secretly from place to place to gain adherents; nowhere could they feel safe from the caliph but the people were on the whole favourably disposed to them and at least would not betray them. In this way they reached not only Sârâ and Kûfâ but even went as far as al-Sûrâ via 'Adên; as a rule however, they stayed in Arabia, most securely among the Dîfârîs, in whose territory lay the hill of Radâwa, which so often appears in the history of the 'Abîs. The caliph was very uneasy at the continued lack of success of his search for them; more and more angrily he demanded of his governors in Medina that they should be produced and he dismissed several in rapid succession, when they appeared, perhaps not without reason, insubordinate and lukewarm in their efforts. He himself took very active steps but with as little result. On his pilgrimage in 136 (756) he had Muhammad and 'Abîs's father thrown into prison because they would not betray their place of concealment, and on a later pilgrimage (144 = 762) the same fate met the sons and grandsons of Hasan, 'Abî 'Allah's brother. They and 'Abî 'Allah were taken to Kûfâ, treated most
bruantly and thrown into prison, where most of them died. The same thing happened to Huraym's daughter-in-law Muhammad b. Abī Alā, a deaconess of Tūmah, whose head the caliph sent to Kurāsān with a certificate on oath that it was the head of the 'Abī Muhammad in order to intimidate his followers there. Shortly before (Dec. 708), he finally found a governor after his own heart, Riyyād b. Tūmah, who conducted the search with the necessary vigour. But he was soon able to save himself the trouble for in Radjā 145 (Nov. 762), Muhammad appeared in Medina and began the revolution while his brother Abī Shāmīm went to Bāṣra to do the same. It is not clear whether they did this because in Muhammad's opinion the time was ripe or whether they were forced by circumstances to hasten their plans. In any case, the enterprise was not sufficiently prepared, for although they had a large number of followers in Kubā, Bāṣra, Egypt, where however Muhammad's son ʿAlī was arrested by the ʿAbābādī governor, in Khurāsān and even in Sind, to which another son Abī Alā ʿAlī-al-Aṣhtar was sent, there was no question of any organisation, and, as so frequently, the enthusiasm for the Ṭāhidīs was like a fire of straw which blazes up quickly but dies down as soon. In Medina where Riyyād was completely taken by surprise, Muhammad in keeping with his character acted with great mildness, he opened the prison, forbade all bloodshed and was content with arrest and iṣlaq. The best elements in the town came over to him after the jurist Mālik b. Anṣār declared invalid his oath taken to the ʿAbābādīs; Mecca also surrendered to the new ruler. The outbreak of the revolt was really a relief to Abī Dāʿīrī for he had now, as he said, entered the fox out of his hole. He hurriedly left Baghdād, with the building of which he was busy, and went to Kubā, out of his hole, He hurriedly left Baghdād, with the building of which he was busy, and went to Kubā, the point of danger. With keen instinct he saw that the weak point of the rebellion lay in Medina which must be attacked first, for in this remote spot there was a lack of materials of war and the roads thither could easily be barred. But he first of all offered a complete amnesty to Muhammad, which however only led to a characteristic exchange of letters, in which each reproached the other with the weaknesses of his family. He then sent his relative Ṭāṣā b. Mīnā a. with 4,000 men, with instructions however to settle the matter peacefully if possible. His arrival had a soothing effect upon the Medinaese, of whom a number seized the opportunity to get out of their difficult position. Muhammad however remained undismayed. He rejected the well meant advice of several men to abandon Medina as an inault to the town but left his people free to stay with him or not. He trusted in Alāʿ “from whom victory comes and in whose hand the matter lies”, and imitated all that the Prophet had done in his time in romantic fashion. For example he restored the ditch which the Prophet had dug round Medina when it was besieged by the Kurājīs; he used Muhammad’s sword and his battle-cry was the same as that of the Prophet even the old single combat before the battle of Uhud was revived. The result in these circumstances was easily foreseen Ṭāṣā, after offering a free pardon in vain for a few days, had a few days over the ditch, entered the town and began a battle in which Muhammad’s supporters became less and less in numbers until their leader finally fell (Monday, 14th Ramadān 145 = Dec. 6, 762). Muhammad’s head was cut off and sent to the caliph. For the farther course of the rebellion see the article MUHAMMAD b. ʿABD ALLĀH. Muhammad is described as tall and strong with a very dark skin, on which account the caliph sarcastically called him ʿAlī Muhammad, the “Blackened”. He was rightly called “the pure soul” (Tabāris, iii. 206) for he was an ideal character, gentle in spite of his personal bravery, but he lacked those qualities which are required of a pretender in times like his.

(Mr. Behl)

MUHAMMAD b. ʿABD ALLĀH, a Tāhirī, governor of Baghādād. Born in 209 (824—825) Muhammad in 237 (851) was summoned by the Caliph to Baghādād and appointed military governor in order to restore order in the chaos then prevailing. In spite of the great power of the Tāhirīs, who ruled Khurāsān as independent sovereigns in practice, although they nominally recognised the suzerainty of the Caliph, his task was by no means a light one. After al-Mustāmī had ascended the throne (248 = 862), he confirmed Muhammad in his office and also gave him the governorship of the Trāk along with the two holy cities of Mecca and Medina. In the following year troubles broke out in Baghādād and Sāmarrā. The Arabs were defeated by the Byzantines and the rage of the people was turned against the Caliph. The vizier Utairī however finally succeeded in restoring order with the help of the two Turkish generals Wasif and Boghā the Younger. The Ṭāhidīs also gave the government trouble on several occasions. A descendant of ʿAli named ʿAlīya b. ʿUmar rebelled in Kubā and drove out the governor of the town. After he had routed an army sent against him by Muhammad, he was attacked by the ʿAbābādī general al-Ḥabīb al-ʿAbī ʿAlī, while another division took him in the rear and he finally fell in the battle (Radjā 250 = Aug. 865). Another ʿAlīd, al-Ḥasan b. Zaid, had more success. Two prominent men in Tabaristan, who were dissatisfied with the rule of the Tāhirīs, appealed to him in 250 and very soon he was acknowledged as lord of the whole of Tabaristan. The Tāhirī governors of al-Raŷī and Kazvin were driven out and replaced by Alīs; Muhammad b. Ṭāhir, governor of Khrāsān, a nephew of the governor of Baghādād, then sent an army against al-Raŷī. The ʿAlīd governor was defeated and captured and the town had to surrender, but again fell into the hands of the ʿAlīs. When the former governor of Tabaristan, Sulaymān b. Abī Alā, invaded this province again in 257, the Tāhidīs completely, al-Ḥasan b. Zaid had to flee to Dālam where he was defeated by Muhammad b. Ṭāhir (351 = 865—866); after some years (257 = 870—871) however, he inflicted a defeat on the latter's troops in Djarādān and in 259 (872—873) he again became lord of Khrāsān, where he founded an ʿAlīd dynasty which lasted about sixty years. Arabic
also did not escape the ‘Aid plot. A descendant of Ali named Isma’îl b. Yihâf raised trouble there. In 1904, after a violent pilgrimage, he was defeated and driven from the region. In the same year, the British expedition was forced to retreat.

In the same year, the British expedition was forced to retreat. In 1905, Colonel Swaine drove back the Mulhall as far as the banks of the Nile. In 1906, Trench entered the town of Mecca and proclaimed Caliph; he then appointed his brother Abî Ahmad, later co-regent with the Caliph al-Muhammed, commander-in-chief in the war against Abî Ahmad and his government. When all negotiations failed, the latter had to take arms and was several times defeated. Fighting took place in 1906 and 1907, with varying success; during most of the year, only Amiri forces were present, and when Abî Ahmad finally began negotiations, the Mulhall was victorious, and the Caliph had to protect the region. In the meantime, the British forces were placed under the command of General Manley, and the British army entered the town of Mecca, and proclaimed the Caliph as the ‘Aid ruler. The British forces were then defeated by the British in the town of Mecca, and the British army entered the town of Mecca, and proclaimed the Caliph as the ‘Aid ruler. The British forces were then defeated by the British in the town of Mecca, and proclaimed the Caliph as the ‘Aid ruler.
Government, and further they organised the Sultān’s forces to employ them against the Mullah, thus
assuring the defence of the northern frontier of their colony. Thereupon began a series of raids
both by Sultān’s auxiliaries and especially against the Mullah’s followers in the northern valley
of the Shabella and towards Nūgēl, where Djirisani and Garād were occupied by the Sultān of Holya.
These energetic actions which took place even during the Great European war, besides wearing
down the Mullah’s army, caused him to lose political control of a very large zone where the
population concluded peaceful agreements with Italy and forced him to be continually ready to defend
his territory from the south also. However, after the end of the Great War, the British Government
decided to attack the Mullah from Berbera and to finally overthrow him. In January-March 1920
after violent bombardments of the Mullah’s defences by the British airmen, a British force advanced to
Talib, the Mullah’s last camp; he, rapidly pursued by the Camel Corps and Somali auxiliaries, lied,
Oogad and then into the Karan tribe’s ter-
ritory, where he died on November 23, 1920.
The Mullah’s career is a very typical one for the study of the Somali mind. He had begun his
movement as an agent of the Sālihiyya ṭirība, then his increasing popularity tempted him to a more
ambitious sphere and, accordingly, after placing his propaganda on a more religious basis, he
tried to become the leader of all the Somalis by making the ties of the common faith prevail
over the tribal bonds. This is really the only way to lead such a movement in Somaliland where
Islam may be regarded as a tie of brotherhood among tribes otherwise deeply divided by their
secular history of wars and revenge. Therefore Muhammed b. ʿAbd Allāh Ḥassān said in a famous
poem: “Have I not put my prayer-mat on this sea
to join together the Muslims who were not
brothers?” also alluding to his relations with the
Sālihiyya in Arabia. He desired for the same reason
that his followers should call themselves “Darā-
wīš”, forgetting even the name of their original
tribe. Therefore he affected to become angry when
he was referred to in official correspondence as “Mu-
hammed ‘Abd Allāh, the Ogođen Bah Gei” while he
used to add to his signature only the nisba: al-
Hāṣhimī (alluding to the origin of the Somali
from ʿAṣil b. Aḥs Tālīb) [see the art. SOMALILAND].
Further, instead of the tribal forces he raised
special armed corps, often with a new name, like
the Ḥagattu (“the scratchers”) recruited among the Ḥabar Gidir, the Dīgad recruited among the
Mikāhīl (“Dīgād” means “shooter”), the Kāyād recruited among the Dallasha. But he did not
pursue this policy to the end: the hostility of the
greater part of the Isāq tribes, which was a strong
appeal to the old rivalry between Isāq and Dārič; Muḥammad Śāliḥ’s letter, which was undoubtedly
a severe blow to him, since he had had already pro-
voked the hostility of the Ḥaridir and so had to rely
entirely on Sālihiyya support; the necessity of getting
booty for his soldiers who otherwise would have
hardly remained with him: all these things and his
very nature caused the religious prestige of the
Mullah as the Mahdi of Somaliland to decline and he
gradually became merely the chief of a tribe;
a powerful chief indeed of a large tribe as the
Darāwīš became, formed from various elements and therefore very similar to the federations well
known
in the Somali customary law. It was obvious that
when he began to regard himself in this light (that is regarding himself as a chief of a Somali tribe rather than the brother born from the same
father and the same mother of all the Muslims); it was very difficult for him to restrain himself
and his followers from exaggerating those tendencies
so familiar to their own national character: and therefore they came back gradually to the ancient
Somali custom of guerrilla warfare conducted in
the traditional way, even to defying the tribe of
the enemy in insulting or scornful poems or
designating them with typical ironical nicknames
or giving to every razzia a special name (“the razzia smashing the bones” was the name given
to the fight at Dilmadob; cf. the Ḥiyānī a-
Arab). It may therefore be concluded that the Mullah’s attempt to avail himself of Islam to conquer
the old rivalries between the tribes and combine the
Somalis to drive the Europeans out of the country, failed both on account of the strength of the
European arana tribe’s territory, where he died on November 23, 1920.

MUHAMMAD b. ‘ABD ALLĀH [See Ibn Al-
Abru, Ibn al-Khaṭīb, Ibn al-Malik.]

MUHAMMAD b. ‘ABD AL-MALIK, Arc Dža-
Far, called Ibn al-Zayyāt, vizier to several Āb-
āsids. Ibn al-Zayyāt began his career as secretary in
the chancellery in Baghdād and when the caliph
al-Mu’āsir noticed his ability and learning he
appointed him his vizier (219–220 = 834–835)
He also filled this office in the reign of al-Wāḥibī:
as but he treated the latter’s brother Dža’far, the
future caliph al-Mutawakki, with a lack of respect
he earned his hatred. After the death of al-Wāḥibī
in Dhu l-Hijja 232 (Aug. 847), Ibn al-Zayyāt
wished homage to be paid to his son Muḥammad; the
latter, however, was thought to be too young
by the Turkish general Wāṣif and in his stead
Dža’far was proclaimed caliph under the name al-
Mutawakki. The vizier was at first allowed to
remain in office but in Ṣafar of the following
year (Sept. 847), he was arrested, deprived of
his possessions and subjected to a cruel form of torture
which he himself had invented. After enduring the
most horrible cruelty he died in Rabī‘1 233
(Nov. 847).

MUHAMMAD b. ’ABD AL-MALIK [See Ibn
Tufālī, Ibn Zehr.]
MUḤAMMAD b. ʿABD AL-RAḤĪM [See Ibn al-Fikrī]

MUḤAMMAD b. ʿABD AL-WAḤHĀB [See al-Waḥḥābiya]

MUḤAMMAD b. ʿABI ʿĀMIR [See al-Mansūr b. ʿAbī ʿĀmīr]

MUḤAMMAD, a son of Abū Bakr and one of his wives, Aṣmā' of the tribe of Khalīfām. He was born in the last year of Muḥammad’s life so that his father could not have exercised any influence on him, while the memories of Abū Bakr’s great friend which were kept alive in his family must have had all the more influence on the passionate nature of the boy, which receives important confirmation from the fact that Ibn Kātaba decries him as one of the “pious” (ṣīrāṣ) among the Kurāshī. When in the reign of ʿUthmān the bitterness at the preference of the Umayyads in combination with a reaction against the strong secularisation of Islam provoked a movement which grew in strength, he took part in it with great vigour and began along with ʿUthmān’s son, Abū Bakr b. Mūsā juḥātā to stir up the people of Egypt against the Caliph. He later went with other revolutionaries to Medina where his equally ardent but much wiser half-brother ʿAlī in vain advised him to go with him to Mecca and leave others to carry through the crime; but he was one of those who broke into the Caliph’s room where he ill-treated the helpless old man although it was Kinnān b. Bishr who dealt the death-blow. He was one of the few Kurāshī who joined ʿAlī and the latter apparently cherished a real affection for the young man, which his enemies of course interpreted as further evidence of his friendship with the murderers of ʿUthmān. Muhammad took part in the battle of the Camel, at the conclusion of which the chivalrous ʿAlī commissioned him to escort his half-brother to Bāṣṭa. The sources give somewhat different accounts of the last phase of his life in Egypt. According to Wāṣ ṭ kī in Baladhurī, ʿAlī and Mūsāf (Tabari, i., 589, 696) and Yākūbī, ʿAlī at once appointed him governor of Egypt after wisely recalling Kāb b. ʿAṣd; but as he soon discovered how foolish it was to appoint a youth inexperienced in war to this difficult post, he sent for his ablest follower al-Ashtar [q.v.] and gave him command in Egypt while he appeased Muhammad’s rightly injured feelings by a kind letter. The attempt to make good the mistake failed, however, for al-Ashtar was poisoned on the way in al-Kulzum at the instigation of Muʿawiyah. Al-Zuhri’s account (Tabari, i., 3242) shows ʿAlī in a considerably more favourable light. After the recall of Kāb he sent al-Ashtar as governor to Egypt and only after he was poisoned did he send Muhammad. Finally there is a third story ( Ibn al-Kalbī and Masʿūdī) according to which al-Ashtar was sent to Egypt only after the death of Muhammad, but this must be due to some misunderstanding of the first version. In any case, the choice of Muhammad was an unfortunate one for the inexperienced youth, who had had no authority and was besides insufficiently supported by ʿAlī, was not fit to meet experienced opponents like Muʿawiyah and ʿAmr b. ʿAlāʾ; anyone but ʿAlī would have seen. ʿAmr b. ʿAlāʾ came with an army and a battle was fought at al-Musannāt (the dam). When the actual murderer of ʿUthmān, Kinnān b. Bishr, had fallen after a brave resistance, the Egyptians lost heart and Muhammad, abandoned by all, was captured and killed while trying to escape (38 = 658).

(From Buhl)

MUḤAMMAD b. ʿABI ʿĀMMI [See Ibn Zātār]

MUḤAMMAD b. ʿABI MUḤAMMAD [See Ibn Zātār]

MUḤAMMAD, b. ʿABI ʿĪSĀ At Ḥabū RASSID, son of Abū ʿĪsā Diwādī, an Eastern Iranian (not Turkish) noble from ʿUthmān b. ʿAffār b. al-Nahj al-Muʿāẓir (see al-Masʿūdī, Zad al-Qudūs, M., S., p. 169). For his early career see the articles ʿAlī, ʿUthmān. After his flight with Khumarawān he returned to Baghādād (276 = 889) and appears to have remained there (cf. Tabari, in 2122) until his appointment as governor of Adhathālīdān in 279 (892). Though on his arrival he had entered friendly relations with the Baghādād king of Armenia, Sembat (see 891), after seeing Marīgha in 280 (893) he made a first invasion into Armenia, but without success. At the same time he had strengthened his position at Baghādād by giving his daughter in marriage to al-Muʿtaṣir’s confidant, the general Balār al-Muʿtaṣirī. Having been rejoined by his ʿāqṣām, the general Wasif, who had defeated the Dālūtī ʿUmar b. ʿAbd al-Aʿzī in the ʿAblūdī in 281 (894—895) but did not succeed in routing his territory, he made a second expedition into Armenia in 282—283 (895—896) and captured Karā, Dīmān and Wasparūkān. Subsequently he came to terms with Sembat, but his son Diwādī remained as governor of Dīmān until Muhammad’s death in 284 (897—898). Muhammad declared his independence, but finding himself unable to withstand al-Muʿtaṣirī’s prompt submission, he was pardoned, and in the following year officially recognized as governor of Armenia in addition to Adhathālīdān. About the same time he appears to have adopted the title of al-Aṣfīn, which appears on his coinage, and which was evidently intended as a claim to descent from the old princely family of ʿUthmān (see the article ʿAṣfīn and ʿAṣfīn, Imām, Nāṣīr al-Moʿāwīya, s. v. Ḵurram). In 287 (900) he made a further indirect attempt to extend his rule over the territories which were slipping from the grasp of the Tāfīlīdīs by encouraging Wasif to seize Malaya and to apply to the caliph for investiture with the government of Cilicia. Al-Muṭahhībī, however, learning that this was only a preliminary step towards the seizure of Diyar Muṣār by Wasif and al-Aṣfīn, put an end to their design by a swift and unexpected campaign against Wasif, who was himself captured. Al-Aṣfīn died a few months later (Kalbī, 1, 288 = March 901) at Baghādād.

MUHAMMAD b. ABD AL-SAMAD — MUHAMMAD b. AMMAR

of an 'Abid, know nothing of this. This Muhammad is, generally speaking, only occasionally mentioned outside the Shi'a, along with his father, e.g. in Ibn Wādīlī al-Yaḥyāī, Ta'īīs, ed. Housain (Leiden 1883), ii. 552 and in Tabari, Annals, ii. 1129, 1102: according to al-Maqrīzī, Muḥaŷr al-Maqrīzī (Paris 1858–92), vii. 117, Muḥammad died in 120, according to vi. 171, not till the reign of al-Wādīlī, i.e. after 227. Even within the Shi'a, his role is quite a passive one. After his father's tragic end, those with Zaidi views who had hoped some day with him as Caliph to put into force their activist 'Abid political programme, went their own ways again, while those who held Imamī views, one group, as usual in such a case, became 'standardist' Wāḥīfīya and another chose Ahmad, a brother of al-Şalīh, as Imam; for Imamī Muhammad was only seven at the time. For those who remained faithful to him, there arose in the Shi'a of Imamī the question of the child Imamī's knowledge. The case was repeated with the following three Imams. But the authority to teach was in the hands of men whose activity extended through several Imāmīs; with Majdīs (l. a.), Muhammad b. Ahmad al-Shāhī, Muḥammad al-Mājdī (Teheran 1306), p. 217; Abū Amr al-Kašshāji, Mūsāfīt Abūd-Maṣarrī al-Rūḥī (Damas 1317), p. 353 sqq., 374 sqq.; Tūsī, Fī fatīh al-Shī'ayn (Būl. Ind., No. 60), No. 124, 150, p. 289, note 1. The gradual development of the dogma in question, which is associated with the child Jesus teaching in Sārā xix. 30 sqq., is not quite clear, as regards its apportionment to the various Imamīs. Heresiographers including al-Nawḥakhtī, Fīrāq al-Shī'ayn (Būl. Ist., No. 4), p. 74 sqq., quote the doctrines anonymously. Besides, there is the confusion of names (which has also entered European indices); for Muhammad b. 'Alī was also the name of one of his grandsons, who died before his father, the tenth Imam 'Alī al-Ṣaḥīḥ, but left issue; his adherents continued the immediate further, than the Twelvers through these children, while they deny the existence of the twelfth Imam Muhammad al-Mahdi as son of his brother, the eleventh Imam Hasan al-Askari. Shi'a works avoid confusion by giving the ninth Imam the kunya Abū Djasār al-Ṣāḥī, his official title is al-Ṭājī, "the God-bearing"; a common epithet is al-Ṭājīwālī, "the liberal": he said: I have paid his father's debts. As ʔaddār al-Ṣāḥī he had, like al-Ṣaḥīḥ, before him, Ummūn b. Sālih al-Ma'amī, called Sānūmān or Ṣāfā],[1] Among the usual miracles of the Imamīs, Abū Djasār al-Saffār (l. 290) in Fīrāq al-Madārij (in Majdīs, ii. 108) relates that the ninth Imam carried a woollen shirt at night from Syria to the holy sites of Kerbelā, Kūfa and Medina as well as to Mecca. The fact that his memory has been kept so green to the present day is due to the fact that he was buried beside the tomb of his grandfather, the seventh Imam, Mūsā al-Kazim [p. v.]; thus arose the double Meshed al-Kaẓimīn.

ROUN.] 
MUHAMMAD b. FARAMARZ [See ISF. 11.
Q. B.] 
MUHAMMAD b. HABIB [See INF. 61.] 
MUHAMMAD b. AL-HANAFIYA, a son of 
Ali and Khawla, a woman of the tribe of 
the Banu Hamils, who had been brought a prisoner to 
Medina after the battle of 'Akabah [q. v.] and came to 
Ali's possession (cf. Suyuti's poem KAD. 
AHAD., viii. 4: "He was a servant in the house"); he was born in 16 A.H. Although he did not, 
like Hasan and Husain, have the blood of the 
Prophet in his veins, he became involved not only in 
the political tumults but also in the schemes 
which the boundless fancies of the extreme Shi'ahs 
built up around the family of 'Ali. He was not to 
blame for this, for he was of a retreating dis-
position and acted very cautiously. But when Hasan 
rather sold his rights and Husain had fallen at Karbela 
in 680, many turned their eyes to him as the 
natural head of the family. This aroused the suspicion of 
'Abd Allah b. Zubair who, after the death of 
Husain, appeared more and more openly as a 
pretender; the fact that Muhammad had no sym-
pathy with the efforts of the opposition in the 
'Umayyads is evident from the interesting statement of 
Baladhur that he definitely declared the
resolutions brought against the Caliph Yazid I by 
the Medinees to be false. The matter only became 
serious when the adventurer Mukhtar [q. v.] after 
several vain efforts to get others to join him stirred up 
a movement on a large scale in the 'Iraq in 
66 (685), as champion of Muhammad's rights.
Even now Muhammad acted with great restraint 
and declined the significant title "al-Mahdi" with 
which they wished to greet him (cf. Tabari, n. 
610 and Ibn Sa'd, v. 68, which has certainly been 
missinterpreted by Lammens). He obviously did 
not care for Mukhtar at all, and he had every rea-
son to doubt the genuineness of his enthusiasm 
for him; but in view of the many dangers which 
surrounded him and probably also from a want of 
confidence he did not wish to break with him openly.
Therefore, when some people came to him from 
Kufa to clear up his attitude to Mukhtar, he only 
gave them a diplomatic answer which was very 
commodious (cf. the somewhat different versions: 
Ibn Sa'd, v. 72; VA'ILAH, i. 308; Tabari, ii. 607 
and thereon KAMAL, p. 598) but which they inter-
preted as a kind of approval, as it did not definitely 
throw him. As a result the revolutionary move-
ment spread in extent and much blood was shed 
to avenge Husain and other 'Alids. Muhammad 
was against this also (cf. Ibn Sa'd, v. 72 sqq. 77): 
but when Ibn Zubair's attitude became more and 
more hostile and he finally imprisoned Muhammad 
and several relatives, including 'Abd Allah b. 
Akhbar, at Mecca near the Zemzem well, he saw 
nothing else for it but to appeal for help to Mukhtar. 
This was what the latter wanted and he sent a 
body of cavalry at once to Mecca and released 
Muhammad and the other prisoners in the nick 
of time but by the latter's express orders avoided 
all contact with Ibn Zubair's troops, as the town was 
not to be deserted by bloodshed. Muhammad had 
then sought shelter with his family at Minai (cf. 
KAMAL, p. 554 sqq.; KABD. AL-QADIDA, vii. 33; 
Kuwaït, ed. HOOTZ, i. 78) and later went to 
'Yazid. He made no further use of Mukhtar and was 
therefore not compromised when the revolution 
failed and his champion fell in 67 (686-687). 
In spite of the threats of Ibn Zubair and the 
demands couched in more friendly language of 
'Abd al-Malik and although a safe place of residence 
was granted him neither in 'Iraq nor in Syria, he defined his attitude by paying homage to 
neither of the two pretenders and adhered to 
the principle that he would only recognize a ruler around whom the Muslim community were united. 
He therefore appeared in the noteworthy pilgrimage 
of the year 686 along with the Zubairis, the Umayyads 
and Khawarij, as an independent head of a party, 
although only under an armed neutrality. Only 
when, after the fall of Ibn Zubair (72 = 692), the 
unanimity of the ziyad, which he had demanded, 
became a reality, did he finally recognize the 
Husaynid as the legitimate ruler and visited him 
in 78 (697-698) at Damascus. He returned how-
evertheless to Medina, where he died in 81 (700-701). 
His strict passivity in the political field is always 
attributed to purely religious motives in the 
traditions: not human force but Allah's help alone 
should assist 'Ali's family to their rights; but there 
is no doubt that a further reason was his lack of 
enterprise and self-confidence, a trait common 
to a number of 'Ali's. That, like his paternal family, 
he at the same time looked the good things of this 
world was evident from the heavy demands which 
he sent to 'Abd al-Malik for the payment of his 
debts and annual pensions for his children, 
relatives and clients; there is also evidence that 
he had the family fondness for fine clothes and 
coattails. It is all the more remarkable then that 
the more fanciful and extravagant school of 
Shi'ism seized upon him at once after his death and spread 
the belief that he was not dead but lived in a 
kind of fairy kingdom on the hill of Kadwah west 
of Medina, whence he would return as the victorious 
leader of an army (cf. KABD. AL-QADIDA, vii. n. 
87; viii. 32). This was the idea of rumaysh, which 
'Abd Allah b. Sa'd [q. v.] had associated with 
'Ali (cf. FRIEDLANDER, in Z. A., ann. 309 sqq.) and 
which was now transferred to him; and in fact it 
was now easier to bring him into the forefront 
than it had been while he maintained an attitude 
of stubborn passive resistance in his lifetime.

MUHAMMAD b. MAHMUD

MUHAMMAD b. ILYAS [See Abu 'Ali]  
MUHAMMAD b. ISA [See Isaweya]  
MUHAMMAD b. ISHAK [See Ibn Ishak, Nadjim]  

MUHAMMAD b. AL-KASIM [See Abu'l-A'lam, Anak]  

MUHAMMAD b. KASIM, a cousin of Walid 1 (896–905) and son-in-law of al-Hajjaj. He was governor of Basra; in 92 (711), he was sent to conquer Sind. Having defeated and killed the Kairan of the place called Dahir, he took possession of that country in 93 (712) and finally penetrated as far as Multan about 500 miles from the sea, and even reached the foot of the Himalayas. Various accounts are given of the death of this general. The common story is that Muhammad b. Kasim was falsely accused by the two daughters of the Kairan of Dahir, whom he had sent to the harem of Sulaiman (96–99 = 715–717), the brother and successor of Walid, of having violated their chastity, and that he was therefore sewn up alive in a raw cow-hide, by order of the enraged caliph. Others say that Muhammad b. Kasim was mistaken, and put to death by Sahl b. Abd al-Rahman, governor of Iraq, in revenge for the murder of his brother by Hajjdij.  

MUHAMMAD b. MAHMUD

Abu Shuward Qasim al-Diyya wa-l-Din, a Sa'di in Sultan 547–554 (1153–1159), born 522 (1125), like his brother Malik Shah was educated with the atabeg Buzaba, who set them up as claimants to the throne against their uncle Mas'ud. When Buzaba in 542 (1147–1148) was taken prisoner in a fierce battle and executed, Mas'ud adopted his nephew and married Muhammad to his daughter. He probably intended him to succeed him and not Malik-shah, as Ibn al-Athir and others say, because after his death (547 = 1152) the latter was actually raised to the throne. Muhammad was away at the time but within three months he was recognised as sultan by the powerful Khayyeb, after he had come to Hamadhan, because Malik-shah proved quite incompetent. The new sultan showed his gratitude by treacherously putting Khayyeb to death and sent his head to the emirs of Maraghah and Astarabad in the hope that he would win them over. But he was disappointed for, although they hated Khayyeb, theKhayyeb's party at the cruel deed made them prefer to pay homage to Muhammad's uncle Sulaiman, who had escaped from years of imprisonment on Mas'ud's death. Muhammad therefore fled to Ispahan, but because Sulaiman was an inveterate drunkard, he could not hold out in Hamadhan and when he had gone away Muhammad returned and was henceforth recognised as sultan by the emirs. In the meanwhile Sulaiman succeeded in escaping to Ispahan and entered into relations with the Caliph al-Musta'f or li-Amir Allah. The latter was endeavouring not without success to make himself independent of the Seldjiks and let Sulaiman come to Baghdad (550 = 1153) to use
him against Muhammad. He was also able to win Malikshah over and to collect an army, which was however scattered in the following year by Muhammad with the help of Mawdud, lord of al-Mawsil, and Sulaiman was again made prisoner. Muhammad now thought himself strong enough to attack the Caliph himself and to besiege him in Baghda. Inaid al-Din, who was in the town, gives a full account of the siege (Rut. Hist. Crois., ii. 246 sqq.). Muhammad hurriedly raised the siege when news reached him that Bitgiz had occurred with Malikshah and Arslan (552 = 1157). By the time the sultan arrived there they had retired, but he was at war with them till his death in 554 (1159).

Bibliography: see the article seljuk.

Muhmmad b. Malikshah Abu Shuja' Ghiyath al-Dunya wa-l-Din Qasim Amir al-Mu'minina, a Salidjuk sulthan (498-511 = 1105-1118), was born on the 18th Shaban 474 (Jan. 20, 1082) of a slave, who was also the mother of Sandjar, and was given the Turkish name of Tapar. After his father's death, he stayed at first with Turkan Qasim and then joined his brother Barkiyaruk who granted him the town of Gandja. Arrived there, he also seized Arsan and allowed himself to be seduced by Mu'ayyad al-Mulk b. Nizam al-Mulk into dropping his brother's name out of the kufra. The two brothers fought one another with varying success in the following years until finally in 497 (1104) Barkiyaruk withdrew from the western provinces of the empire to Isfahan and left Muhammad to enforce recognition as sultan from the governors in these lands. When Barkiyaruk died soon after, at the end of 1104, Muhammad turned first to Baghda because he was sure of the homage of the Caliph, who had already received him and his brother a few years before in ceremonial audience (cf. the account in Ibn Khallak, Bilak, 1299, ii. 444, had the emir Ayar, who had at first had the kufra read for Malikshah b. Barkiyaruk, treacherously put to death and sent the king of the Arabs Sandjar back to his capital al-Hilli with orders to restore peace in Basyra and among the Arab tribes of the neighbourhood. He then hurried to Isfahan where the Bantinya had achieved great successes in the trouble in the neighborhood of Barkiyaruk and had established themselves in several hill-fortresses in the neighbourhood. One of their leaders, Ibn Atgh, had by a ruse secured possession of the fortress of Dul-Kuh of Shash-Diz built by Malikshah. The Sultan regarded it as his first duty to subdue and root out if possible these unbelievers; he sent his troops to besiege the fortress and, when it was taken, razed it to the ground and had the captured Bantinya executed in cruel fashion (500 = 1107; cf. the text of the report sent him by the Caliph's vizier in Ibn al-Kalanisi, ed. Améroz, p. 152 ff.). Nor did he hesitate to have his own vizier, Sa'id al-Mulk Abu 'l-Mahsas al-Ati', executed at the gate of Isfahan; he was suspected, according to Anusharwan wrongly, (cf. Rec. Hist. Crois., ii. 91) of having had dealings with the Bantinya.

While Muhammad was still in Isfahan, the emir Cawali Sakawu, who ruled between Fars and Khuszistan, sent his submission to him; the sultan had frequently tried in vain to bring him to obedience through the emir Mawdud. The sultan was so pleased that he granted him the town of al-Mawsil where Djekermish, who had only paid homage to him under compulsion, was in command. The latter was not inclined to submit to the arrangement, but was taken prisoner in an encounter with Cawali. The latter however was not yet lord of al-Mawsil, for the followers of Djekermish now supported his son Zangi and appealed for help to Aksoskor al-Bursuki, the governor of Baghda, to Sadaqa and to Khilid Arslan, the Salajjuk of al-Rum. The last-named alone answered the appeal and came with his troops to al-Mawsil where he had homage paid to himself as sultan, but soon afterwards, after an unsuccessful encounter, he was drowned in the Khabur on his retreat. Cawali now had little difficulty in taking the town and going on to his further task, the war against the Crusaders. It would take us too far here to sketch the course of this war, and the reader may therefore be referred to Weil, Gesch. der Chal., iii. 191 sqq. During his absence he again fell into disgrace with the Caliph, who had in the meanwhile returned to Baghda and sent his troops to attack Sadaqa, with whom he was also dissatisfied. Sadaqa fell in battle in 501 (beg. of 1101). The sultan sent Mawdud to al-Mawsil and granted him the same dignity as he had previously given Cawali. The latter after some time made peace with the sultan and was appointed as attabeg to Fars, where he fought the usual elements in the population with great energy (cf. Ibn al-Ahbar, ed. Tornberg, x. 561 sqq.). The Bantinya however gave Muhammad no peace, so long as they were able to hold their strong mountain citadel of Alamut; Abu Nasr Ahammad, a son of Nizam al-Mulk, who after Sa'id al-Mulk acted as the sultan's vizier, was therefore given orders to take this fortress and when he did not succeed, he was dismissed in 504 (1109-10). In the meanwhile the sultan was being urged more and more from different sides to prosecute the war with the Crusaders seriously, and he succeeded in persuading the various governors of the western provinces to combine and attack the Christians under the leadership of Mawdud accompanied by the young prince Mas'dud. After Mawdud's assassination (507 = 1113) Aksoskor al-Bursuki took the command and after him Bursuki assumed the supreme command but on account of the strife among the Turkish emirs, the value of the Crusaders and the complicated situation in Syria, decisive successes could not be attained. For the course of the campaign we again refer the reader to Weil, op. cit., p. 194 sqq. and the historians of the Crusaders. In the last years of his life, the sultan sent the emir Anushjestin Shirig against the Bantinya in Alamut, but he died on the 24th Dhu 'l-Hijja 511 (Apr. 18, 1118) before the fortress was taken. He was only 36 years old and this is why Weil suggests that the Bantinya had a hand in his death, but there is nothing to support this hypothesis in the oriental chronicles. On the contrary, individuals in his immediate entourage, notably the Great Hizijj 'Ali bar, seem to have been not quite innocent, because they, apparently to avert suspicion from themselves, accused the sultan's Gohar Qasim and the famous poet al-Tughra' of having caused the sultan's illness by magic arts. The former was blinded and strangulated on the day Muhammad died. The reason given by Matthias of Edessa for this (Docum. Arm., i. 120) is wrong. The sultan deserves credit for having, with the assistance of his brother Sandjar who ruled in Khurasan and the adjoining lands, restored the fortunes of the Salajjuk kingdom, which had declined since the death of Malikshah

The Encyclopaedia of Islam, III.
and for having vigorously fought infidels and sectarians in his zeal for Sunni Islam and the 'Abbāsī caliphate. He was, as Rev. Hist. Crit., ii. 118 has it, the perfect man of the Sūlāqūn and their strong be-camel.

Bibliography: given in the article SELJUKS.

Mūhammad, Abū 'Abd Allāh, Dālāl al-dawla wa-dālāl al-Milla, Abū Ahmad Mūhammad, second son of Sultan Mahmūd of Ghazna, was born about 587 (997). He was married to a daughter of Abū Nasr Mūhammad b. Abū l-Ḥārīm 'Abd Allāh b. Mūhammad, the Fārghānī ruler of Dīrzhānān. After the death of Abū Nasr Mūhammad in 401 (1010–1011), Sultan Mahmūd assigned to his son Mūhammad the government of the province of Dīrzhānān. In 417 (1026), at the instance of Sultan Mahmūd, the 'Abbāsī Caliph al-Kādir bi 'llah conferred on him the titles of Dālāl al-dawla wa-dālāl al-Milla. Towards the close of his life, Sultan Mahmūd divided his empire between his sons, giving Ghazna, Khurāsān and India to Mūhammad and Raiy, Dīrzhānān to Maʿṣūd, and took solemn vows from both to respect this division. When Mahmūd died in Rabī' II, 421 (April 1030), Mūhammad ascended the throne at Ghazna, but Maʿṣūd, disregarding his vows, marched from Dīrzhānān to take possession of Ghazna. In the meantime, the nobles at Ghazna deposed Mūhammad on 3rd Shawwāl 421 (October 2, 1030) and read the 'ijāra in the name of Maʿṣūd. Mūhammad was then deprived of his sight by orders of Maʿṣūd and imprisoned in a fort. His reign had lasted only 6 months.

In 431 Sultan Maʿṣūd suffered a crushing defeat at the hands of the Sūlāqūn, and resolved to settle in India. In the beginning of 432 (September 1030), leaving Ghazna in the hands of his son Mawdūd and his wazir, he marched to India with all his treasures, but on 13th Rabī' II, 432 (December 24, 1040) his slaves deserted him and raised Mūhammad to the throne. Shortly after this, Maʿṣūd was put to death. Hearing this, Mawdūd advanced with a large army to avenge the death of his father, defeated Mūhammad near Dūnpūr on 3rd Shaṭābīn 432 (April 1041), and put him to death. The second reign of Mūhammad lasted only 4 months. Mūhammad was obedient to his father and was a man of amiable temperance. He resembled his father in appearance and speech.

Muḥammad b. Marwān, an Umayyad governor. In 65 (684–685) he was sent by his father, the caliph Marwān I, to Mesopotamia, and in the battle of Dār al-ʿAlā (72 (690) in which his brother, the caliph ʿAbd al-Malik, defeated Muʿaṣṣar b. Zabār, he commanded the advanced guard of the Syrian army. In the following year ʿAbd al-Malik gave him the government of Mesopotamia and Armenia which he carried with it the command in the war with the Byzantines. On account of climatic conditions the Arab expeditions always took place in summer. In 73 (692), the emperor Justinian II was defeated at Seleucia di Cilicia. In 75 (694) Mūhammad again took the field against the Byzantines and was successful against them at Marāshī, and in the following year he invaded Armenia. Along with his nephew ʿAbd Allāh b. ʿAbd al-Malik he was sent to al-Ḥadīr (May 701), to support him against the rebel ʿAbd al-Rahmān b. Mūhammad b. al-ʿAshār, and in the negotiations with the Persians before the battle at Dair al-Jamāḥīm the caliph was represented by Muḥammad b. ʿAbd Allāh. In the same year, Mūhammad led an expedition against Armenia, and again in 84 (793) and 85 (794). After the accession of al-Walīd (Shawwāl 86 = Oct. 795) Mūhammad fell gradually into the background while Maslama, the caliph's brother, was the actual commander; but the former retained his governorship for some time until in 91 (799–800) he was replaced by Maslama here also. Mūhammad died in 101 (797–798).

Muḥammad b. Mūkarrām (See Ibn Mānūš).

Muḥammad b. Muṣāb b. Shāhīr (See Mūsā Bānū).

Muḥammad b. al-Mustānīr (See Kūtībū).

Muḥammad b. al-Muẓaffar (See Muṣaffārūd).

Muḥammad b. ʿOmar (See Ibn al-Kūṭīyā).

Muḥammad b. ʿOthmān (See ʿAbd Zādān).

Muḥammad b. Rāʾīk (See Ibn ʿĀṣir).

Muḥammad b. Rāzīn (See ʿAbd al-Līḥās).

Muḥammad b. ʿSaʿūd (See Ibn Mardanisheh; Ibn Saʿūd).

Muḥammad b. ʿSālīm (See Ibn al-Wakīl).

Muḥammad b. ʿSaʿūd (See Ghiyāt al-Din).

Muḥammad b. ʿSaʿūd (properly Saʿūd) was Muḥammad of the Muqrīn clan of ʿAnaza, the founder of the Wahhābi dynasty of the ʿAlī ʿSaʿūdī in Najd (see the article Ibn ʿSaʿūd), succeeded his father as amir of Darʿiya in 1137 (1724) or 1140 (1727). His association with the reformer Muḥammad b. ʿAbd al-Wahhāb (cf. Wahhābīyā) began in 1157 (1744). Thereafter until his death (end of Rabī' I, 1179 = Sept. 1765) the history of his reign consists of an unceasing and on the whole indecisive struggle against the neighbouring settlements and tribes and his former suzerains, the ʿAbāb Khālid of al-Jāsā. He took little active part in these operations, and the personality is overshadowed by the figures of the Reformer himself and of his own son ʿAbd al-ʿAzīz. Nevertheless his talents as a diplomatist more than
once saved the Wāhhabī state from being crushed by a coalition of its enemies, notably after the disastrous defeat by the forces of Nāṣir al-Dīn at Ḥijr in 1764.

Ḥammām (d. 1225 H.), Ms., British Museum Add. 23, 343, fol. 30a—30b [the Bombay lighthograph (1332 H.) is very inaccurate] summarized by H. St. J. Phillips, Arabia, London 1939, p. 12—22. — See also A. Musil, Northern Syria, New York 1928, p. 258—259, and Amin al-Raiḥānī, ‘Umar Nāṣir al-Ḥāshibī, Bairut 1928, p. 50—53, and for general works the Bibliography to the article Ibn Sā’d. (H. A. R. Gibb)

MUḤAMMAD b. SIRĪN [See Ibn Sūrān.]

MUḤAMMAD b. ‘ṬĀHIR, governor of Ḥūrāsān. After the death of his father, Muḥammad reigned the governorship of Ḥūrāsān (Rājāb 248 = Sept. 562). In 250 (864—5) the ‘Allīd al-Ḥasan b. Zaid rebelled, which led to a long and serious struggle [see MUḤAMMAD b. ‘ABBĀS AL-‘Ā‘IY]. When ‘Abd al-Salām b. al-Ṭābil rebelled against Yāqūtb, Muḥammad b. al-Ṭābil al-Ṣaffār and appealed for help to Muḥammad, who appointed him governor of al-Ṭabasān and Kuṭalbūṣ, Yāqūtb found a welcome pretext to invade Ḥūrāsān. Muḥammad sent an embassy to him; but as Yāqūtb had already found a following among discontented Ḥūrāsānīs, all negotiations were in vain. In Shawwāl 259 (Aug. 873), or according to another statement in 258, he entered Nisābūr without striking a blow, put an end to the Ṭihrid dynasty and took Muḥammad prisoner. But when he rebelled against the Caliph al-Mu’tamid, he was defeated in Rājāb 262 (April 876) by the latter’s brother al-Muwaṣṣafī and Muḥammad, whom he had with him in chains, escaped. The Caliph restored the latter to his former office in Ḥūrāsān; the exiled Ṭihrid however never found an opportunity to exercise his functions. He was further appointed — probably not till 270 (884—5) — as the vizier Shu b. Malikb as his deputy as military governor of Baghād. He held this office until the accession of al-Mu’tamid (279 = 892). He died in 296 (908—9).

(K. V. Zetersteën)

MUḤAMMAD b. ‘ṬĀHIR [See Ibn al-Ka‘dā.’]

MUḤAMMAD b. TAKASH [See Kuwārīm al-Muḥammād]

MUḤAMMAD b. TŪḤDĪ b. DUFF (or Ḍuff) b. YĀLTAŠI b. FERKIN b. FEŠI b. KHĀṢHĪN, Abū Bakr, known as al-‘Īṣhrīṣī, from the title granted to him by the Caliph al-Ṭabāqī in 327 (939), was the founder of the Egyptian dynasty of the Ḥāshidids [q. v.]

He was born in 265 (882) at Baghād, and must have spent his youth in Syria, as his father, who joined the service of the Tāblkīts at about the same date, was appointed governor of Damascus and Ṭabarīya c. 270, a post which he held for some fifteen years, and he himself acted for a time as his father’s deputy for Ṭabarīya. In consequence of the overthrow of the Ḥāshidid dynasty in 292 (904), he was imprisoned at Baghād. He was released in 294 (907), attached to the wāizr al-ʿĀ‘lām b. al-Ḥassān and had many opportunities of murder, had to fly when the conspiracy of Ibn al-Muṭarr [q. v.] failed in 296 (908). He escaped to Syria and found himself reduced to a humble station. Next year he passed on to Egypt, where Ṭakin, its governor, took him into favour, so that he kept him with himself, both in Egypt and in Syria when he was transferred thither to act as governor at intervals (302—307 and 309—311), and promoted him to appointments of importance.

At this period Muḥammad came into contact with the powerful Māhrūsī family, and also attended Munīs [q. v.] when he was brought to Egypt by the Fāṣīd invasions. He had already attracted some attention at Baghād by an exploit in 306. In 316 (928), through influence at the capitol, he became governor of Kāmīn, quiting Ṭakin abruptly. In 319 he obtained a transfer to Damasc, where he became powerful, and in consequence of his defeat of Bāḥshī in 321 extended his rule over the whole of Syria. In the same year (March 933) Ṭakin died, and Muḥammad b. Tūḥdī succeeded in obtaining the appointment as governor of Egypt in his place, but only nominally and for one month (Sept. 933). Two years later, by means of a large army and fleet, he entered Fāṣīd and took possession of the country, overcoming the resistance of al-Muḍārī (Muḥammad b. ‘Allī), who by appointment from Baghād was then in control of Egypt, the governor being under his direction (ṭāfīf al-tadbirī), superior to al-Muḥammad, however, was al-Fāḍl b. Ḥaḍīr b. al-Gurārī [for whom see the article IBN AL-KA‘DĀ’]. The reining minister (wāizr al-kirāf) of Egypt and Syria, who had been specially granted full executive powers, Muḥammad b. Tūḥdī had acted with the authorization of al-Fāḍl and later (324) obtained the confirmation of al-Ḵādī to the addition of Egypt to the province of Syria already held by him. Probably at the same time he was granted the suzerainty over al-Yaman and the Holy Cities of Mecca and Medina, for in his letter of the following year to the Emperor Romanus he boasts of these places as part of his kingdom. Until the death of al-Fāḍl in 327 (March 959), he seems to have been subject, at least in theory, to some control by him.

In 324 a decisive victory by the troops of Muḥammad b. Tūḥdī near Alexandria (battle of Abūlq, March 31, 936) crushed the third Fāṣīd invasion of Egypt and led to overtures from the Fāṣīd Caliph al-Kā‘īm, in which the end came to nothing. Muḥammad did indeed decide three years later to recognize the Fāṣīd, and had given the order that al-Kā‘īm should be proclaimed in Egypt, out of indignation at the Ḥabbāsid government at Baghād, but was induced to recon sider his decision.

Only a month after he had received his title al-Kā‘īmī from al-Kā‘īm (Ramadan 327 = June—July 939), he found himself threatened from Rakṣa by Ibrāhīm b. Rākṣa [q. v.] and learnt that his provinces had been granted to this rival. Bakrīm [q. v.], as amir al-mu‘ādrī at Baghād, gave no answer to his appeal but that the question must be decided by the sword; the powerless Caliph could say nothing. Ibrāhīm b. Rākṣa rapidly possessed himself of Syria, driving back the forces sent to oppose him,
and had soon captured Ramla (Oct. 939). Muhammad b. Tughjdi himself confronted him with an army at Farama, and with no fighting beyond some skirmishing entered into negotiations, ending in an agreement to cede Syria from Tbabariyya to the north on condition that Ramla and the rest were restored to him. Ibn Râjk soon broke this treaty and again advanced. This time Muhammad b. Tughjdi encountered him at al-Árish and routed him (15th Ramadân 324 = June 24, 940), but as he followed him into Syria, met with a reverse in his turn, one of his detachments being surprised and badly defeated at Laddejân (15th August). Peace was then renewed on the same terms as before, and Muhammad b. Tughjdi undertook to pay an annual subsidy of 140,000 dinârs. He was back in Egypt in October.

The death of Badkjâm in 329 (April 941) drew Ibn Râjk back to Baghdad, and Muhammad b. Tughjdi was soon relieved of him completely, for he was murdered a year later by the Hadâmîns. Muhammad lost no time in recovering Syria, marching thither himself (June 942) and remaining in the country about six months before coming back to Egypt. It must have been at about this period that he succeeded in dispensing some minor encroachments on Syria from the direction of Raîkâ that are alluded to without details, those of Ádil (al-Badkjâm) and Badr al-Kharthjâmi. He had to meet more serious attacks from the Hadâmîns. One of them, al-Husain b. Sa'id, took Hâlab from him in 332 (March 944), and in May he set out to recover it. The Caliph al-Muttaqi, moreover, issued an order protecting the Hadâmîns from Tâzûn, the anîr al-ummarî, had appealed to him for help. His enemy retired at his approach and having regained the town he proceeded to Raîkâ, where he met the Caliph (Sept. 7, 944). At this time he had thoughts of becoming anîr al-ummarî himself. He urged al-Muttaqi to come with him to Syria and Egypt, and even offered to go with him to Baghdad. He begged him not to trust himself to Tâzûn, but could not dissuade him. After receiving flattering marks of honour he departed. Before he reached Fustât on his return the Hâdamîn Saif al-Dawla [q.v.] had retaken Hâlab (Oct. 944). The Egyptian army sent to meet this new aggression was severely defeated at Rastân near Hîm, and Saif al-Dawla advanced to Damascus and entered it (April-May 945). Muhammad b. Tughjdi, coming from Egypt with his army, obliged him to retreat, pursued him, brought him to battle at Kinnasrin (May—June 945), and defeated him. Again Muhammad made easy terms when victorious. Saif al-Dawla retained Syria north of Damascus and was also given a subsidy. The treaty was concluded in Kâfîr b. 334 (Oct.—Nov. 945), and Muhammad then went back to Damascus, remaining there until he died a few months later (21st Dhu ‘l-Hijja 334 = June 24, 946), just after the arrival of a Byzantine envoy concerning an exchange of prisoners for which he had opened negotiations.

Next to nothing is recorded of the internal events of Egypt during his reign; the country was doubtless quiet. Its revenue, said to have amounted to two million dinârs annually, was no longer accounted for to Baghdad, and no regular payments were made from it to the central treasury. But he sent large occasional gifts to the Caliph, so that al-Râjk considered him an exemplary vassal.

He left seven million dinârs at his death besides considerable other property. No constructive works of much importance are credited to him. At Fustât he rebuilt the shipyard on the mainland, and on its site on the island of Rawda a garden called al-Mukhtár; he enlarged the government house in which he resided, a Tulûnî building that was situated near the still existing tomb of al-Kâfîrî Bahkârî, and added a maidân; he also made another garden known later as al-Kâfîrî, afterwards the site of the western Tulûnî palace of Cairo. His armies at times seem to have been large. At the battle of Ablûk the Egyptians are said to have had 15,000 horsemen, at that of Kinnasrin 50,000 men. Such numbers must have been reached by means of levies for particular emergencies, which he is known to have raised more than once. On one occasion his personal retainers (kuttâns), on whom he more especially depended, numbered 500. The constantly repeated and universally accepted figures of 400,000 for his army and 8,000 for his bodyguard can be dismissed as ridiculous, notwithstanding that they rest on the early authority of al-Tantûbî (d. 384), and with them the accompanying myth as to his habit of concealing his sleeping places when on campaign.

The most renowned of his followers was Kâfir [q.v.]. Another of his kuttâns, Fâzik, rose to some eminence. Ali b. Muhammad b. Kâfîr was his secretary both at Damascus and in Egypt. Muhammad b. Ali b. al-Madâinî was his waiz for a few months (328–329); Muhammad b. Ali b. Mûktâlî, previously secretary to Ibn Râjk, was his waiz at his death. His four brothers were all younger than himself; al-Husayn was in command at the battle of Ablûk, and represented him in Egypt during all his absences, al-Husain was in command at Laddejân and killed there, Ublâd Allâh acted for him in Syria, Ali disappears early.

Notable Egyptian authors who flourished during his reign were the historian Ibn al-Dîya (d. 334), al-Hâmidî (d. 350), and Abu Târîk ha-Târîkî (d. 362), who came to Egypt in 329 and was in his confidence at Raîkâ in 333. Al-Masâdîî moreover visited Egypt in 330. Al-Mutanabbi, just rising to fame, recited once in his presence in Syria and addressed a verse or two to him and to his brother Ublâd Allâh (d. 333 at Ramla).

Muhammad b. Tughjdi was strong physically, but subject to occasional fits of melancholia. His character is illustrated by a number of incidents that have every appearance of being authentic. He was strict, but in no way vindictive or cruel. He often brought his officers to account, and then after punishing them by arrest or fine would restore them to favour. Hardly any executions are heard of in his reign. He would not allow torture and the maltreatment of accused persons, something he carried out in his time. His tact and sagacity were conspicuous. He was decent in his life and liked by his men and the people. On the other hand, he was certainly oppressive and unfair in some of his money exactations, and though at times not ungenerous was inclined to be mean and miserly in minor matters. The two great faults attributed to him, even to his face in his lifetime, parsimony and timidity, are not altogether without foundation. As to the latter, his own defence in a particular instance looks valid.

His career was closely parallel to that of Ahmad b. Tulûn [q.v.], even as regards several fortuitous
occurrences. It leaves no doubt of his capacity, and if admitting of occasional overcaution, will not allow of anything like cowardice. He did not make the same mark as his predecessor, but was a mild and perhaps a better ruler.

**Bibliography:** Ibn Sa'd, al-Mu'arrab (ed. Tallqvist, Leyden 1899) contains the text of the biography of Muhammad, including subsidiary authorities, and a full biography in German carefully worked out from both sources. By far the most important authority is the long and detailed biography of Muhammad b. Tughdî which forms part of Ibn Sa'd's work, and appears to consist of the life composed by Ibn Zalik between 350 and 355, reproduced almost but not quite verbatim. The other principal authority is the Kitab al-Walî of al-Kindi, ed. Guest. Little, if anything, can be added from books published after al-Mu'arrab.

MUHAMMAD B. YAHYA [See IBN BÂJUJA.]

MUHAMMAD B. YÂ'ÂTÎ, ÂBD BAKR, a chief of police in Baghdad. In 318 (930) Muhammad, whose father was chief in the capital to the Caliph al-Mukhtadîr was appointed chief of police. The maintenance of order in the capital at this time was much neglected and the praetorians conducted a regular reign of terror. In a fracas between infantry and cavalry Muhammad intervened on behalf of the latter; their opponents were cut down, some driven from the city and only a small contingent of negroes, who at once surrendered, remained unscathed (Muhammad 318 = Feb. 930). Some months later these mutinied and demanded more pay; but they were driven out of the town by Muhammad and then routed by the chief emir Mu'nis [q.v.] near Wusit. The confusion was increased by the breach between Mu'nis and Muhammad. At the instigation of Mu'nis, Muhammad was dismissed in 319 (June-July 931). Mu'nis was nevertheless not satisfied but demanded that his hated rival should be banished. The Caliph at first refused to grant his request; but when Mu'nis threatened him with force, he had to yield, whereupon Muhammad went to Sidjastân (Radjab 319 = July 931). Soon afterwards the Caliph quarreled with Mu'nis and recalled Muhammad. In Muhammad 320 (Jan. 932) the latter returned to Baghad; the Caliph then sent him with an army to al-Mashâq in the region of Takrit. But when Mu'nis advanced from Mosul, the Caliph's troops under Muhammad and Sa'id b. Jâfâr retired to Baghad without striking a blow. After the victory of Mu'nis and the murder of al-Mukhtadîr in Shawwâl of the same year (Oct. 932) the latter's son Abd al-Wâhid fled with Muhammad and his other supporters to al Madâ'in and then to Wusit where a number of his generals abandoned him. When the forces of the new Caliph al-Kâhir approached under the command of Yalshâq, 'Abd al-Wâhid and Muhammad fled to Tusshar. Muhammad was not popular on account of his arrogance and selfishness, so that once after the other laid down his arms and finally 'Abd al-Wâhid surrendered. Muhammad entered into negotiations with Yalshâq and the Caliph pardoned him. He then returned to Baghad where he gained a great influence over al-Kâhir. On the accession of al-Râfi in 322 (April 934), Muhammad became the real ruler in a short time; the Caliph appointed him chief chamberlain and also made him his commander-in-chief while the vizir Ibn Muljûk played a more subordinate part. When al-Mu'qaddîr's cousin Hârûn b. Qâbir, whom al-Kâhir had appointed governor of Mâhk al-Kûfâ, al-Dinawar and Mâsadâdbîn rebelled, Muhammad was sent with an army against him. In the resulting battle, Muhammad suffered a defeat (Lûmmâdî II 322 = May 934); soon afterwards however, Hârûn fell from his horse and was killed by one of Muhammad's slaves. With the death of their commander the resistance of Hârûn's followers collapsed; Muhammad was nevertheless unable long to retain his position of power. On the advice of Ibn Muljûk who feared his ever increasing power, al-Râfi had him arrested along with his brother al-Muqaffar and the secretary Abî İbar al-Kâstîfî on the 51st Lûmmâdî I, 323 (April 12. 935). Muhammad died in prison in the same year.

MUHAMMAD E. YAZID [See IBN MUSÂJA, AL-MURRAHÂ]

MUHAMMAD B. YÜSUF [See Abi HAYYÂN.]

MUHAMMAD 'ABD AL-KARIM 'ALAM, better known as 'Abd al-Karim Mushî, a Persian historian of the middle of the sixteenth century. His best known work is the Ta'rikh-i Ahmâd or Ahmâshabî composed for 'Abd al-Râjuhî b. Hâzîm, Muhammad Rawshân-Châin, a historian of the founder of the Durrânî dynasty in Afgânistan, Ahmad Shâh. After 'Abd al-Karîn had finished a history of Shadrî al-Mulk Durrânî and the conquest of Khudââdan in 1235 (1820), he decided to write a complete history of the Durrânîs and began his Ta'rikh-i Ahmâd. The work is based on the Ta'rikh-i Husânî of Imam al-Din Husâni (Rieu, Cat. Pers. MSS. Lirr. Mus. lii. 904b) and is really only a paraphrase of it. It begins with the story of Ahmad Shâh which he continued to the year 1212. Then follows a description of the Panjâb and the roads between Khâbul, Hârat, Padshâwar and Kandahâr and a chapter on Turkistan under Nasirîs Bay. The work concludes with the accession of Shadrî al-Mulk. In addition to this book, 'Abd al-Karîn in 1265 (1847) wrote the Mu'âllaqa'i Kâtil ve Kamshâr, which describes the war with the English down to General Pollock's expedition (Sept.-Oct. 1842). It is again not original but based on the poem Akbar-nâmâ of Kâsim Dîân. According to Beale, Oriental Biographical Dictionary (London 1894, p. 5), he also wrote a history of the Sikh war entitled Ta'rikh-i Panjâbful Tasfâsân-i 'Aâhâsh, but there is no mention of a manuscript or lithograph of any such work in any of the European catalogues. It is possible that there is some confusion with the Panjâb section of the Ta'rikh-i Ahmâd. In the Catalogue of the Persian printed Books in the British Museum (London 1922, p. 19), E. Edwards ascribes to the author a dictionary of English and Persian homonyms
entitled *A Dictionary of Anglo-Persian homonymous words being a... Collection of... Words having nearly the same Sound and the same Meaning*, Bombay 1889; it is however unfortunately not possible to be certain that the author of the book is the same 'Abd al-Karim Mun-hi. 

**MUHAMMAD 'ABDUH, a Muslim theologian, founder of the Egyptian modernist school.**

Muhammad 'Abdul belonged to an Egyptian peasant family and was born in 1849 in Lower Egypt. He spent his childhood in the little village of Majallat Nasr in the mudiriyat of Bulhain. When Muhammad 'Abdul had learned the Kur'an by heart, he was sent in 1862 to the theological school of Taht but he left this after a year and a half discouraged and was only induced to resume his studies through the influence of a grand uncle who aroused in him an interest in mysticism. In 1865 he returned to Taht but the next year proceeded to Cairo to the Ashar Mosque. There at this moment the first movements of a new spirit were becoming apparent in the beginning of a return to the classics and an awakening interest in natural science and history, which agreed with mysticism in a lower estimation of the old traditional studies. In this milieu Muhammad 'Abdul at once devoted himself entirely to mysticism, practised asceticism and retired from the world. It was again his grand uncle who persuaded him to give this up. About the same time, 1872, Muhammad 'Abdul came into contact with Sayid Jumal al-Din al-Afghani [q.v.] who had just arrived in Egypt and was desirous to exercise a profound influence upon him. It was he who revealed traditional learning to Muhammad 'Abdul in a new light, called his attention to European works accessible in translations and attracted his interest finally to Egyptian and Islamic problems of the day. Muhammad 'Abdul, soon became his most ardent disciple and in his very first work of a mystical nature (Risālat al-Wirādit, 1290 = 1874) enthusiastically described Sayid Jumal al-Din as his spiritual guide. The influence of Sayid Jumal al-Din is still more marked on the matter of Muhammad 'Abdul's second work, notes on dogmatics entitled Ḥujjat al-Khilafal al-Dawā'ir li Ḥ-Ṣifik al-Adil 'Aṣlīya [1292 = 1876]. The influence of Sayid Jumal al-Din and the development of affairs in Egypt towards the end of the reign of the Khedive Ismail caused Muhammad 'Abdul in 1876 to take to journalism, which he practised henceforth. After concluding his studies at the Ashar mosque and acquiring the certificate of an
Theodoros K. Vrachos's and the foundation of the College for Kādis goes back primarily to his efforts. In the same year, 1899, he became a member of the Conseil Législatif, which marked the first stage in the representation of the Egyptian people. Finally, he was to resume his interest in education: in 1894 he became a member of the governing body of the Azhar, which constituted a move towards his position at his suggestion, and in this capacity he was not only acquired great renown by his reforms in the university but himself took an active part in the teaching. In addition to this many-sided activity in the fifteen years after his return he found time to publish a number of works, including his most important: the Rādūlat al-Tashīṣ (1315 = 1897), his principal theological work based on his lectures in Bairūt: the publication of a work on logic (Šarḥ Kitāb al-Baqṣīr al-Naṣiriyya, Tābīṣ al-Κaṣī Zālīn al-Dīn [1316 = 1898]): a defence of Islam against Christianity in the field of knowledge and civilization entitled al-Ḥādīs wa l-Naṣiriyya mūta l-Ilm wa l-Madārīna (1320 = 1902; first published in al-Manṣūr). Muhammad ʿAbduh was a candidate for the chair of the Kurān, on which he had great importance and of which he had published in al-Manṣūr; it was revised by his disciple and friend Sheikh Muhammad Rashid Rūdā and published first of all in al-Manṣūr. Of Muhammad ʿAbduh's numerous articles by which, along with his lectures, he most influenced public opinion, two (of 1900) were published in a French translation entitled L'Europe et l'Islam by Muhammad Taḥāt Harb Bey (1905). The advanced ideas put forward by Muhammad ʿAbduh provoked the most vigorous hostility in orthodox and conservative circles which manifested itself not only in serious refutations but also in attacks on and intrigues against him, as we see from a whole literature of pamphlets. But his teaching met with remarkable support among all seriously minded Muslims. The principal organ of his views was the monthly al-Manṣūr, which had appeared since 1897 under the editorship of Sheikh Muhammad Rashid Rūdā, who has also produced an extensive literary monument to his master (but his views and the tendencies of his periodical must not be identified offhand with those of Muhammad ʿAbduh). Muhammad ʿAbduh died in 1905; but his teaching has retained its influence steadily to the present day.

Muhammad ʿAbduh's programme according to his own statement was: 1. the reform of the Muslim religion by bringing it back to its original condition, 2. the renovation of the Arabic language, 3. the recognition of the rights of all people in relation to the government. His political activity was dominated by the idea of patriotism, which he was the first to champion enthusiastically in Egypt. As an opponent equally of the political control by Europe and of Oriental despotism in Muslim lands he favoured an inner assimilation of western civilization, without abandoning the fundamental Muslim ideas and a synthesis of the two factors. From this programme, which assures Muhammad ʿAbduh an important place among the founders of modern Egypt, must be distinguished his effort to carry it through in the field of theology. Muhammad ʿAbduh is in the first place a theologian; his life was devoted to the attempt to establish and maintain ʿAšrām, at least as a religion, against the onslaught of the west, while he abandoned without a struggle those aspects of Muslim-Oriental life in which religion was of less moment. However great a stimulus he may have received from progressive western thought, the actual foundations of his teaching came primarily from the school of Ibn Taimiya and Ibn Kaṭīb al-Luṭaynī, who favoured reform on conservative lines, and from Ghazālī's ethical conception of religion. Deeply convinced of the superiority of true Islam, unaffected by the vicissitudes of time, Muhammad ʿAbduh wished to get rid of the abuses which falsified the Muslim religion and made it out of keeping with the times, and to adapt Islam to every real advance by going back to its true principles. Muhammad ʿAbduh was thus brought to attack the muṣaddiq and taḥlīl [q.v.], to demand freedom for ḫidqīq [q.v.] and a new ʿaṣr [q.v.], in keeping with modern conditions, based on the Kurān and the true sunna, for the establishment of which he laid down strict criteria; he was also brought to reject the hairsplitting of the fuḥūlī, the worship of saints and all ʿāqād, and to the emergence of other forms of religion instead of a mechanical formalism. The antiquated system of Fikr, against which Muhammad ʿAbduh claimed full freedom, was to be replaced by new laws capable of development, in which consideration for the common good (maṣla) and the times should, in keeping with the true spirit of Islam, have if necessary preference to the literal text (naqī) of revelation, just as in any conflict between reason and tradition in setting what is laid down by religion, the verdict of reason should be followed. Alongside of the belief in the sublimity of revelation there was in Muhammad ʿAbduh the conviction that knowledge and religion, properly understood, could not come into conflict at all, so that reason need not recognise a logical impossibility as a religious truth; religion was given to man as a thread to guide him against the alternations of reason; reason must therefore, after it has tested the proofs of the truth of religion, which it is qualified to do, accept its dogmas: Muhammad ʿAbduh's object was a cooperation between religion and science. In dogmatics he adopts essentially the most rational conception that could still be reconciled with orthodoxy. At the same time he interiorises the conception of revelation (to him it is intuitive knowledge caused by God and provided with the consciousness of this origin, but this kind of religious experience is limited to the prophets) and deflects that of religion (to him it is an intuitive feeling for the paths to happiness in this and the next world, which cannot be clearly grasped by the reason). The task of prophecy for him is the moral education of the masses. Religious teaching and commandments are therefore intended for the masses and not for the elite. Muhammad ʿAbduh regards the Kurān as created and endeavour to weaken the rigidly opposed point of view of orthodoxy. The saints do not take into this system but is sceptical regarding belief in miracles. In spite of the denial of causality and laws of nature by orthodoxy, he finds a basis for explaining nature by causal laws but by quite scholastically formal reasoning. As regards the duties of religion, Muhammad ʿAbduh adheres to the four main duties: ritual prayer, the fast, alms-giving, and pilgrimage; only he shifts them, as usual in mysticism, from the sphere of worship to that of religion and morals. On the old question of free will Muhammad ʿAbduh
decides for indeterminism; he thereby opens the way to build up a moral system for society, which, excluding all fatalism, preaches vigorous activity by every one and, following the ethics of the mystics, mutual support. His view of the substance of Muslim teaching Muhammad 'Abduh defends not only against traditional orthodoxy but against Christianity also by a kind of philosophy of history of religion; the sending of prophets was a gradual process of education of step by step: the last and highest stage, that of absolute religion, is the sending of Muhammad; if the Muslim peoples of the present do not correspond to the Muslim ideal, this is only the result of the fact that they have lost the old purity of the teaching; an improvement is possible by return to it. This primitive Islam of Muhammad 'Abduh is however not the historical Islam but a very much idealised one. The superiority of Islam over Christianity in substance lies, according to Muhammad 'Abduh, in its rationalism and its closeness to reality and its avoidance of unattainable ideals of life.

In this theology, the religious content consists of humility before God, reverence for the Prophet, enthusiasm for the Kur'ān. The basis of this Islam is the recognition of a not too retrogressive system of dogmatics, its object is the observance of an ethical system which is favourable to progress, and both are influenced by a strongly marked rationalism, which is genuinely old Muslim but for Muhammad 'Abduh is no indifferent inheritance but the main weapon of defence of Islam and actually takes the place of a deepening of religion so that his theology has the character of an apologetic compromise.

MUHAMMAD AHMAD B. 'ABD ALLAH, the Mahdi of the Sudân, was born about 1258 (1843) on the island of Darâr in Dongola among the Argû islands north of el-Orde. A member of the Kunîz family of the Nubian Arab Beräbera, in later life when Mahdi to prove his kinship and mystical relationship with 'Ali and the Prophet, he traced his genealogy on his father's side to Hasan and on the mother's side to Hasan and 'Abbâs. He was the second son of a ship's carpenter and had an older sister and three brothers. Mystic tendencies early revealed themselves in him. Under the usual early education he therefore in 1277 (1861) entered the order of the Sâmmânîyya with Shaikh Muhammad Sharîf; after a seven years noviciate Muhammad Sharîf appointed him a shâkh of the order. After a short stay in Kharjîm where he married, he went to the island of Abbâ (in the White Nile, north of Kosti), built a dîwan there and a khilawâ and collected pupils around him.

His master Muhammad Sharîf, with whom he maintained a constant connection, settled near him in 1288 (1872), which seems to have been a turning point to Muhammad. Shortly after this event there arose in Muhammad the consciousness that he was the Mahdi al-muntaqar, under the influence of the traditional ideas of the Mahdi, which brought about a breach between him and his master. He now joined the enemy of his former leader, the Shaikh al-Kurashi, and in 1297 (1880) became his successor. In his wanderings (ziyâda) from Dongola to Sennâr, from the Blue Nile to Kordufân, he convinced himself of the discontent of the people, who were oppressed by the Egyptian government; the turbulent, mixed population of the Sudân, the religious fanaticism, the dissension between Turk and Arabs, the old opposition of the Shî'a to the Turkish ruling official classes, all formed a fruitful soil for his claims to be the Mahdi. The movement begun by Muhammad Ahmad which, as his letters and proclamations show, was based on a religious experience in which he earnestly believed, became from the first mixed up with political and social ideas, which in the east cannot be separated from religion, and in which finally dejection and cunning played an evil part. According to the traditional formula, Muhammad Ahmad felt himself called "to purify the world from wantonness and corruption." For this purpose he summoned the people to fight in the first place against the infidel Turks."He had previously bound a number of chiefs in Kordufân and Dârîfûr to him by beita (oaths of fealty, after the model of the Prophet: for the text see Dietrich, in Islam, 1925, p. 39) and had been cleverly able to attach men of action like the unscrupulous 'Abd Allah al-Ta'ayshii, later his Khalfii, to him; at the same time he practised a shameless nepotism. He further incited the people by numerous pamphlets and edicts, which contained his visions of the Prophet, who had appointed him Mahdi, of al-Khoji, Gabriel, the aflâm, summons "to purify religion," to "emigrate," to swear fealty, to imitate the Mahdi, to the ghîbâd etc. The hill of Gadir in Dâr Nuba became the centre of this secret propaganda; in Sha'bân 1298 (July 1881) he made his first public appearance as Mahdi. Negotiations begun by the government in Kharjîm with Muhammad Ahmad proved fruitless. Two companies sent against him under Abu l-Sâîd were destroyed; this secured further victories for him. The Egyptian government was moreover prevented by the rebellion of 'Arabî Pashâ from taking vigorous action. The expeditions of the governor of Fashoda, Rashid Pashâ, Yusuf Pashâ al-Shallâm (at Gadîr, May 1882) and of Hicks Pashâ (at Shaikân or Koshjil), all ended unsuccessfully. The Mahdiya thus spread unhindered from Kordufân via Bahr al-Ghazâl to the eastern Sudân; there in Sawâkin, 'Othman Digna, a former slave dealer, soon to be the ablest Mahdist general, entered Muhammad Ahmad's service. Attempts by the Mahdi to extend his power to the west and with this object to conclude alliances with Muhammad al-Sanûsî in Djaghbûb and with Morocco came to nothing. At the height of his power the campaign of 1301 (1884) took him to Kharjîm, where after a heroic defence by Gebril, another haskîkh, the Mahdi's hands on Jan. 20, 1885, Gordon was killed. Muhammad Ahmad did not however long survive his victory; he died, probably of typhus, on 6th Ramadân 1302 (June 22, 1885) at Omdurman near Kharjîm.
where a kubba was erected to him by his successor, the Khalifa 'Abd Allāh; it was henceforth the Mahdist capital until Kitchener put an end to 'Abd Allāh's rule and to the Mahdiya in 1898.

The organisation of the Mahdiya under Muhammad Ahmad, which was primarily to follow the sunna of the Prophet, was early developed; it was quite maritime in character, for the dhikr was considered more important than the hadj. He had four khalīfs beside him, of whom al-Ta'ayshī was the most intimate and undoubtedly had the most pernicious influence on him. Particular attention was devoted to the distribution of booty and to the administration of the treasury (hart al-mal).

Muhammad Ahmad's teaching shows some of the features of the extreme popular Sāfism and some of those of an idealised primitive Islam. His asceticism was hostile to progress; the contempt for learning in the Mahdiya and the order to burn all books on sunna and tafsir alienated the educated classes from him. The only things that had validity in addition to the Kurān were the proclamations of the Mahdi, the Kātib ('a collection of dhikr exercises) and the hadj. Contained in Muhammad Ahmad's own sunna as a substitute for the previous one but remained incomplete. In the abolition of the four mahdilahs, we see the šī'ī tendencies frequent among the Saiyids. Wahhābī influences are very probable in a number of regulations, for example in the prohibition of adornment, music, extravagance at weddings, tobacco and wine; particularly however in the zeal against the worship of saints and sorcery; as a matter of fact Muhammad Ahmad himself became an object of worship among his followers even before his death.

The only really new thing in Muhammad Ahmad is the addition to the shahāda: "... wa-anna Muḥammadun Allāhmun 'abdu 'Abbāsillāhum Allāhi Bîn Yassīn b. Yāsīn;" Where the traditions of the Mahdi did not suit him, he did not hesitate to alter them. He laid down the following 6 'aradm instead of the around of the sunna: 1. gelā, on the congregational performance of which the greatest stress was laid; 2. dhikr, in express opposition to the sunna practice and in place of the haqīq; 3. obedience to God's commandments; 4. the extended tahādā; 5. recitation of the Kurān and 6. of the Kātib.

A few extremist ideas, like that of equality between rich and poor, come partly from the revolutionary character of the old šī'ā, partly from the political and social conditions of the time; the social ideas were however not his central ones but only incidentally used cunningly to attract the masses. In practice the Mahdiya had an exceedingly unifying and equalising effect: slaves and slave-dealers fought under one banner, the humblest often rose in a short time to the highest offices.

Muhammad Ahmad's eschatology centres round the world domination of the Mahdi. The conquest of the Sūdān was to be followed by that of Egypt, Mecca, Syria and Constantinople.

The formation of legends around Muhammad Ahmad's personality began very early; sometimes deliberately encouraged by him and his immediate followers and sometimes actually believed by them. Under pressure from him his court chronicler Ismā'īl 'Abd al-Kādir composed a highly coloured sirr entitled Kitāb al-Mustahhī ila Sirat al-Imām al-Mahdi. It covered the years 1298 to 1302 A. H. but was burned in the time of the Khalīfa 'Abd Allāh. The Egyptian writer Shukair (see below) claims to have had his hands a copy that was said to have survived.

Bibliography: Na'am Shukair Bey, Turābi' al-Sūdān, Cairo 1903 (in the third part Shukair, utilizing the edicts of Muhammad Ahmad and the Khalīfa 'Abd Allāh, which were collected and printed under the Khalīfa, as well as the above mentioned Sirr and his own experiences in the Anglo-Egyptian army, gives a very full account of the Mahdiya under Muhammad Ahmad and 'Abd Allāh); Djirdj Zaidān, Rīviyyat Aḥī al-Muhammadī, Cairo 1892.— On two fatwās of the Egyptian government against the Mahdiya s. DIETRICH

MUḤAMMAD 'ALĪ PASHA (in European sources often Mehemet Ali or Mehemet Elı) was the well-known powerful viceroy of Egypt during the years 1805–1849 (which period comprises the entire reign of Sulṭān Muḥammad II q. v.); and the founder of the khedivial, later royal dynasty of Egypt. Seen in the light of history his life-work fully entitles him to the epithet of "the Founder of Modern Egypt".

Muhammad 'Ali was born in 1769, possibly of Albanian extraction, in the town of Kaβāla [q. v.] in Macedonia; he was engaged in the tobacco trade until he joined, as hākīb in a corps of Albanian troops, the Turkish army that landed in Egypt in 1799 and was beaten by Bonaparte at Abū Kir (July 25). In 1800 he was one of the two chiefs of the Albanian troops in Turkish service who were left behind in Egypt; this secured him an influential military position when, after the final departure of the French in 1801, Turkey began to try to recover her authority over Egypt. At the end of 1801 he fought as a general against the Mamluks, but in the troubled years that followed he was alternatively on the side of the Mamluk Beys (headed by al-Bardisi) and of the Turkish governors sent from Constantinople. He intrigued against Khawrān Pasha [q. v.], who had to leave Egypt in May 1803, and was already in the same year, appointed titular governor of the Hijādas. Under the following governorship of Khurshid Pasha, Muhammad 'Ali succeeded in winning the favour of the inhabitants of Cairo and their spiritual leaders, and used them with success in his intrigues against Khurshid, whose Turkish troops — composed of delis — were a scourge to the population, while his own Albanians were ordered to behave well. The result was that Khurshid had to withdraw in August 1803, leaving the citadel of Cairo to Muhammad 'Ali. The Turkish government, though sending several emissaries and trying to remove the Albanian troops, failed to keep Egyptian affairs under control and ended by recognizing Muhammad 'Ali's self-assumed
position (November 2, 1805); he was solemnly installed in April 1806.

The internal and external difficulties of the Sublime Porte did not allow her to interfere in any further for the moment and the new governor had soon occasion to show himself a loyal vassal when war with England — then at war with Turkey (cf. Selim III) — landed in Alexandria in March 1807. At that time Muhammad 'Ali had already undertaken the struggle against the Mamlûks Bey- al-Bardisâ and al-'Alî, the latter of whom was strongly supported by the English. He came back hastily from Upper Egypt, fortified Cairo, and gained a victory over the English army at Raṣhîl (Rosetta) in April. Soon after the departure of the British fleet in September the viceroy began the execution of his far-reaching administrative and economic measures, which were to restore Egypt's economic strength and consequently to assure for himself a more powerful position than any Turkish governor had had for the last two centuries (cf. Mamlûks). In the meantime the Beys (whose two leaders had died in 1807) continued their opposition (no doubt increased by the viceroy's land policy), which was finally broken by the massacre of about 100 Mamlûks in the citadel of Cairo on March 1, 1811, on the occasion of a festival. The persecution of the Mamlûks was at the same time extended to the other parts of the country. Muhammad 'Ali now could send, without danger to his own position, his Albanian troops in the campaign against the Wahhabîs in Arabia, to comply with a request of the Porte. The Wahhabî war began in September 1811 and was conducted, until 1816, by Muhammad 'Ali's son Tûsin; after the latter's death the command was taken over by his elder brother Ibrahim Pasha [q.v.]. Muhammad 'Ali himself took part in an expedition to Yaman, but had to return before the end of the war, because his position as governor seemed to be in danger.

The military successes of the Egyptian troops against the Wahhabî power immensely increased Muhammad 'Ali's authority all over Arabia and in a larger sense in the entire Near East; European policy began to look for the first time on Egypt as a factor of political importance. This importance was further increased by the expeditions to the south that followed immediately on the Arabian campaign: Egyptian power was established for the first time in the Südân [q.v.], where Muhammad 'Ali's third son Ismâ'il found his death in 1822, the year in which the town of Khartûm [q.v.] was founded. At this time Egyptian power was also extended in the direction of the Red Sea, which made an end to the hitherto continuous plague of the incursions of nomadic Arabs into the Nile valley; the ports of Sawâkin and Massawa (Masâwa) came under the Egyptian sphere of influence, although the direct authority of the Porte was maintained.

A new phase in the development of Muhammad 'Ali's power began by his participation in the military repression of the Greek revolt by the Turks. Only through Egyptian aid was the submission of the whole of Greece with the exception of Nauplia obtained; first by the conquest of Crete by Ibrahim Pasha (1823) and then by the Egyptian army that landed in 1825 in Morea. When in 1827 England, Russia and France intervened in the Greek question, the combined Turkish-Egyptian fleet was destroyed in the bay of Navarino (October 20, 1827); in the following year the Egyptian troops evacuated the peninsula, after a convention had been concluded between Muhammad 'Ali and the British admiral Codrington (August 6, 1828). Crete remained under Egyptian administration until 1841.

Muhammad 'Ali's power was now such that he could conclude international agreements without the sultan's cognizance; at the same time the two Mediterranean naval powers, France and England, were endeavouring to win him over as an independent political factor. In 1829 France had almost induced Muhammad 'Ali to undertake the conquest of the Barbary states of Algiers and Tunis; the viceroy, however, was more inclined to seek territorial expansion in the east, the more so as the four governorships of Syria had been promised him by the Porte as reward for his participation in the Greek war, a promise that had never been fulfilled. At the end of 1831 there arose difficulties between Muhammad 'Ali and the Porte on account of the governorship of 'Akkâ, which he claimed for himself. The conflict soon brought about the sending of an Egyptian army under Ibrahim Pasha into Syria. On May 27, 1832 'Akkâ was taken. In the following months the army that was sent by the sultan was repeatedly defeated and finally beaten near Konya (December 21, 1832). The Egyptian army, continuing in the direction of Constantinople, reached Kutahia. Here at last an armistice was concluded between the Porte and Ibrahim as representative of his father, thanks again to the intervention of the European powers.

In 1833 Muhammad 'Ali was granted the governorship of Syria and Adana by the definite peace of April 6, 1833.

During the following six years the viceroy's power was at its height. While Ibrahim administered Syria, severely but on the whole to the prosperity of the country, Muhammad 'Ali continued his administrative program in Egypt. In 1834 the Egyptian government had established a pan-Arabian policy, the aim of which was to be the union of all Arabic-speaking peoples under his leadership. In Arabia his influence was still considerable since the Wahhabî war; he now tried to extend Egyptian influence as far as the 'Iraq. This policy, while at the same time constituting a threat to the ambition of the European powers in the Near East, was to bring him again into conflict with the sultan, who, having succeeded at last in subduing too independent vassals in other parts of his empire, was waiting for an opportunity to crush his most powerful vassal in Egypt. The latter, in 1838, had even made known his intention of declaring himself independent of the Turkish government.

Not long after the outbreak of hostilities the Turkish army under Hüdâ Pasha was completely defeated at Nasîb in North Syria (June 24, 1839), while the Turkish fleet under the Kapudân Paşa was destroyed in the same battle (November 8, 1840) and went over to Muhammad 'Ali's side. In this desperate situation the authority of the Porte was saved by the intervention of the five European powers, in defence of the integrity of the Ottoman Empire. The Egyptian question had thus produced an international political crisis, which was aggravated by the opposition of France, which had long been the best intentioned towards Muhammad 'Ali among the European governments. By the convention of}
London (July 5, 1840) England, Russia, Austria and Prussia agreed with the Porte upon the terms to be imposed upon Muhammad 'Ali. When the latter did not accept, there followed military demonstrations against the coastal towns in Syria ('Akka taken on November 4, 1840). Soon afterwards a British fleet appeared in Alexandria, where Admiral Napier on November 27 concluded an agreement with Muhammad 'Ali. The viceroy consented to the return of the Turkish fleet and renounced his governorship of Syria, Adana and Crete, while on the other hand he was to keep the hereditary governorship of Egypt as a part of the Turkish Empire. These terms were confirmed by an imperial firman of February 13, 1841, completed by another of May 23, in which the mutual relations of sultan and viceroy were definitely regulated. The chief points were the right of succession according to seniority in Muhammad 'Ali's family, the payment of a tribute and the permission to maintain an Egyptian army of 18,000 men, the higher officers of which were to be appointed by the sultan.

Muhammad 'Ali's last years were passed in peace. In 1846 he visited Constantinople and Kayâli; in 1848 he lost his son 'Ibrahim to whom so many of his military successes were due. On April 1, 1849 he himself died in Alexandria, to be succeeded by his son 'Abbas Pasha [q.v.]. He was buried in the new mosque which he had erected in the citadel of Cairo.

Still more amazing than the career of this once obscure Turkish officer are the enormous changes brought about by his work in the condition and the international position of Egypt: they have made him a hero in the history of the Near East. His reign is an era by itself in Egyptian history. Muhammad 'Ali's latest biographer says: "He began by seeking only to raise money. He ended by seeking, however mistakenly, to develop and civilise the country" (Dodwell, p. 220). His work indeed did not at all mean a break with the government traditions prevailing in the Turkish Empire, but the political aim that Muhammad 'Ali had set himself, seconded by his persevering energy and the continuous supervision of his efficient individuality, led after all to results which under similar conditions would otherwise have been difficult to attain, as is shown by the state of things prevailing at the same time in other provinces of the Ottoman Empire.

As the measures taken by Muhammad 'Ali in the field of administration, land policy and the industrial and commercial mobilisation of the country have been briefly sketched in the text, K.I. D.E.N. it is unnecessary to enter here into the same details. It is sufficient to point to the fact that all the main measures had as their first object to make the pasha himself the sole proprietor and administrator of the riches of Egypt. He certainly listened to the advice of European and other councillors and valued European institutions as examples to follow to a certain extent. But he followed oriental methods and made as good, if not as good use of Europeans as officials in the home administration.

This was not the case in Muhammad 'Ali's newly created army. The pasha him-self had not been entirely able to keep his mercenary troops under control (mutiny in Cairo in 1816). So he decided to form a new army, moved by the same motives that had led Sultân Selim III to create new regular troops (mutimî kâtibâtî). From 1819 this enterprise was confined to and brought to a successful end by the French captain Sève, who, after having embraced Islam, served Muhammad 'Ali as Sulâmân Pasha. A first attempt to use negro slaves from the Sudan as soldiers proved to fail, and only free Egyptians were recruited: the officers were mainly taken from among the young Mamlûks, besides whom there were not a few Europeans. With this army were won the military successes in Morea and Syria. The recruitment met with exceedingly strong opposition among the people of Egypt and later in Syria, and the methods used to get the required number were sometimes cruel, but the pasha's energy prevailed. At length this military organisation proved to be a means of education for the people and prepared the growth of national feeling among the generations to come. As has been said already, the final Imperial firman of 1841 limited the Egyptian army to 18,000 men in time of peace.

Muhammad 'Ali's attempts to create an Egyptian fleet go back as far as 1815. At first he had ships built in France and Italy and in Bombay, but soon Alexandria itself got its yards. After the destruction of the Egyptian fleet at Navarino ship-building began again and quite a number of French and Italian officers were employed in the Egyptian navy after 1851. The Egyptian fleet, however, did not long survive its founder.

On the whole, Muhammad 'Ali's rule was a Turkish character. Most of the responsible posts in the administration and in the army were held by Turks and by de-cendants of the Mamlûks. Thus the Ottoman ruling system, with some modifications applied after the European model, was imposed on Egypt most completely at the time when the country itself was politically loosened from the empire. It may be called an exception that the Armenians Boghos Bey, was for a long time Muhammad 'Ali's minister of finance and of foreign affairs, came to this exalted position, although the use of Christians (Armenians and Copts) in more subordinate offices had always been a government practice in Turkey as well as in Egypt. The viceroy himself is said never to have spoken well any language other than Turkish.

Muhammad 'Ali was not a great builder of magnificent architectural monuments. He erected a mosque after the Turkish fashion in the citadel of Cairo, but he never built costly palaces for himself. Most of his works were of public utility, such as the improvement and the enlargement of the irrigation system in the Delta, including the Nile Barrage below Cairo. This last work was undertaken in 1847, but failed.

The judgments on Muhammad 'Ali's personality were very divergent even during his life-time. Most of his admirers were found amongst the French; in view of this in the whole friendly attitude of the French government this is of course not strange. British opinion was less favourable, but all those who came into contact with the viceroy were impressed by his personal charm. Now that his era belongs to the past, the impression remains of a great man in many respects, possessed of considerable personal courage and trustworthy and loyal in a high degree. His methods were sometimes cruel and in the begin-
ning of his career he often had recourse to intrigues, but in the circumstances it is hard to understand how it could have been otherwise. As years passed by and the prosperity of the country increased, his methods of government grew more lenient, so that, at the end of his reign, he had become decidedly popular with his subjects. An equestrian statue of Muhammad 'Ali now commands the chief square of Alexandria and one of the largest thoroughfares in Cairo is called after him.

MUHAMMAD 'ALI ii. MUZAFFAR AL-DIN

[See Kādir.]

MUHAMMAD BAIRAM (MUHAMMAD B. MUṣṬAFĀ B. MUḤAMMAD B. MUḤAMMAD B. ḪUSAYN B. ʿABD B. MUḤAMMAD B. ʿUṣAYN B. BAIRAM), a Tunisian patriot and man of letters, born in Tunis in Muharram 1256 (March 5—April 3, 1840) and died on Wednesday, 25th Rabi‘ II, 1307 (Dec. 18, 1889) in Egypt, at Hulwan, and was buried in Cairo near the tomb of the Imam al-Shafii. Belonging to the family of the Bairams whose
ancestor Bairam, at the head of a body of soldiers, took part in the capture of Tunisia by Sinan Pasha on 25th Djamâda 981 (Sept. 24, 1573) and of which several members had held the office of grand mufti of Tunis, Muhammad Bairam studied at the Djamâi al-Zaituna and had as teachers al-Jâbir b. Aâshîn, al-Mâshhâsî b. Sâlih, Ahmad Bairam, Muṣṭafâ Bairam, the Shaikh al-Islâm Muhammad b. Muṣâwîya and others. At the age of 17, he compiled a kamātî in which he recorded the ordinances, decrees and administrative regulations which the emir Muhammad Pasha ordered the authorities to enforce.

On the death of his paternal uncle Bairam IV, he was given charge of the Madrasat al-Cuukiyâ on al-Dhâr al-Sâbîn and the Nebi-Muhammad, demanded return on the 9th of the following month (Dec. 13) of that of the Djamâi al-Zaitunâ. Soon after this, troubles provoked by the despotic régime began to disturb Tunisia and resulted in the closing of the representative assemblies in which Bairam was interested. He published in the Kaʿīd, the official gazette, the two first political articles that ever appeared in Tunisia and in them he condemned the tyranny of the authorities, preached the love of liberty and begged the government to be liberal and to grant its subjects representative assemblies.

On 1st Safar 1291 (April 6, 1874) he was appointed to the post of audiûr, which he hastened to reorganise. The hard work ruined his health and forced him to take a journey in Europe to recuperate; this caused him to begin his Sâfīrat al-Fathâr. He left in Shawwâl 1292 (Oct. 31—Nov. 28, 1875) and visited Paris. In the same year the Sâdîqî College was founded; Bairam shared in the preparation of the regulation and programme of studies, modelled on those of European institutions, and was one of the first to enrol his son so as to encourage his compatriots to take advantage of such innovations.

On 2nd Djamâda II, 1292 (May 7, 1875) he was put in charge of the government printing works which he at once reorganised, and securing eminent assistants like Muhammad al-Sanûsî of Tunis and Ḥâmza Fâth Allâh of Cairo, produced the Ḳâīd regularly. It was at this time also that he reorganised the Maktubat al-Sâdîkîyya alongside of the Djamâi al-Zaitunâ.

In 1293 (1876) he assisted Turkey in the war with Serbia and Montenegro by sending money, horses and camels, political considerations preventing the despatch of help in men.

In the summer of 1295 (1878) he went a second time to Paris, visited the Exhibition, and was received with great consideration by President MacMahon. He took the opportunity to visit London and England and, on his way back, Algiers. He took a very prominent part in the reorganisation of the Sâdîqî Hospital which was opened on Safar 18. 1296 (Feb. 1879). At the same time he was one of the two arbitrators appointed by the Tunisian government in the case of Henshir Sinîyâd Thabit and the French government. In the middle of the same year, he was appointed by the vizier to go to Paris, to receive medical attention, it was said, but in reality to ask Germany to remove the French consul, who was interfering in the domestic affairs of the country and even managing them. The consul thwarted the plans of Bairam and the vizier. On his return he told the vizier that France intended to annex Tunisia. Tired of the vexatious pestering of the vizier Muṣṭafâ b. Ismaʿîl he obtained, after many attempts, permission to make the pilgrimage to Mecca and left Tunis to return on Shawwâl 12, 1296 (Oct. 4, 1879). He went via Malta, Alexandria and Cairo, where he was received by the Kheïdev Pacha and thence to the Hulâwân, visiting Mecca and Medina. He then went via Yambuʿ and the Suez Canal to Bairût, where he was much honoured by the people and by Midhat Pasha, the governor of Syria, and on to Constantinople. He wrote a Khâfîlâ in honour of Sultan ʿAbd al-Ḥamîd. The Tunisian government at the instigation of the French consul, who feared the establishment of closer relations between Turkey and Tunisia, demanded his return but the Sultan Porte diplomatically did not receive the request.

It was in Constantinople that he began to prepare the Sâfīrat for publication and finished the first two volumes. The penetration of France into Tunisia was a rude shock to Bairam, who in collaboration with the former vizier of Tunisia, Khair ad-Dîn, was appointed by the Sublime Porte to prepare a report on the situation created by France. Despairing of returning to his native town he went to Léghorn and was joined by his family; he then went to Geneva where he left his son to finish his education and to Vienna and Bucharest and then settled in Constantinople. The Sultan, wishing to send some horses as a present to the Emperor Frederick III of Germany, Bairam was appointed to send the letters conveying the gift. During the eighteen months which he spent in the Turkish capital, Bairam drew a pension of £25 per month. It was during this stay that he prepared the third volume of the Sâfīrat.

His health being undermined by an illness which grew worse daily and being unable to meet his expenses and fearing the machinations of his detractors, who saw in him a man to be removed, he left Constantinople on 1st Muharram 1302 (Oct. 21, 1884) to go to Egypt, where his letters of recommendation secured him the esteem of the Kheïdev Pacha, who gave him a pension.

On the 25th Rabiʿ of the same year (Jan. 13, 1883) he produced al-Mālaʿem, a political and scientific journal.

Two years later, he went to London to attend the Jubilee celebrations of Queen Victoria, had medical attention in Paris and returned to Egypt via Berlin and Vienna. He then completed a work which he had begun in Constantinople entitled Tâfriq al-Sânûsî li ʿl-Khadîjat ʿašaʾi ʿl-Khâfîlâ Sinîyâd (Râzînâ), in which he refuted the arguments which Renan had advanced at a conference in the Sorbonne on March 29, 1883 on Islamisme et la Science (Paris 1883), in which he alleged that religion was an obstacle to the diffusion of science among Muslims. He also published a Râzîlā in which he declared that it was permitted to purchase bonds or shares in a Muslim government loan so that Muslim money should not leave the country, and that this had no character of usury. He wrote a report on the compulsory use of the Arabic language in the teaching even of modern sciences. He finished the fourth volume of the Sâfīrat and had begun the fifth which death prevented him from finishing.

On 12th Djamâda 1. 1306 (Jan. 14, 1889) Bairam was appointed a judge in the Tribunal de l'îer Instance in Cairo. Going to Hulâwân for a change of air, he took pleurisy and died after 25 days' illness.
He had a vast knowledge of Hadith, law, history, ancient and modern, and historical and political geography.

In addition to the works already mentioned and numerous al-Nāṣiḥahs which it would take too long to enumerate, we may mention the following: 1. Taṣawwuf al-Khāṭārī fī Ḥill ʿAlī Būn-dūr al-Kaṭībī, printed at Cairo in 1303 in which he claims that the law regards as permitted the flesh of game killed with fire-arms; 2. a treatise on prosody; 3. a riṣāla in which he says that it is permissible for men to let their hair hang down and that in the air, contrary to the opinion of several fāqihīs; 4. al-Taṣawwuf fī Maḏāra al-Kaṭībī, a study in which he shows what slavery among Muslims is according to the law, points out the motives of slavery and the rules regulating it, and concludes by saying that slaves who are sold at the present day are free men and that Muslim governments which forbid the sale of slaves are acting in accordance with the law; 5. ʿIṣbaṣl al-Fīlīlāt bi-Muṣṭawrada al-ṭarāṣ, published in 6 vols. in Cairo in 1302–1303, 1303–1304, 1304–1311, the sixth volume being devoted to the history of Muhammad Bāṣrī and his biographer by his son of the same name; it is perhaps the best treatise yet written in Arabic on political geography.

MUḤAMMAD BAṢIR, son of Shāhīt Gūlām, born in 1303 (1627), was first taught by his father and then by Shāhīt Abū ʿĀlā, called Mīrān Ḥaḍrat, and Shāhīt Nār al-Ḥaḍīṣ b. ʿAbd al-Ḥaḍīṣ Dāhlawi. After a few years he himself began teaching in his native country. He first became a muwāla or disciple of his father, and after the latter's death attached himself to the famous saint, Muḥammad Maḏūm ʿIrānī. He was pursued by Hifūẓār Kān, Mir Ḥamān, to the courts of Arwaṅgēb and accepted the duties of Bakhtī (pay master) and Wargīr (writer of the official diary), but by special favour he enjoyed much leisure, which he devoted to literary work. He died in 1304 (1693) at Bahārānūr. He is the author of 1. Mirdā Gāḥal Nama (a general history compiled under Arwaṅgēb), 2. Rūdār al-Asdārā (life of saints), 3. Taṣḥīḥrat al-Saḥrā (biographies of the poets).

Bibliography: Bakhīṭar Kān, Miṣḥ-al-ʿĀlam, fol. 478; Elliot-Dowson, History of India, viii. 145–165; Rieu, Cat. Pers. MSS. Br. Mus., iii. 890; Ethé, Cat. of Persian MSS., India Office, p. 49. (M. Hidāyot Hossain)

MUḤAMMAD BAṢHIṬĪYAR KALHIṬI was an inhabitant of Ghūr [q. v.]. He was of a very mean appearance and among other deformities of his person it is said that when he stood upright the end of his fingers extended considerably below his knees. When he reached the age of manhood he went to Ghazna [q. v.] and offered himself as a volunteer to the officers of Muhammad Ghūrī, but they refused to enrol him. He, therefore, repaired to Dihlī and was appointed by Kūṭ al-Dīn ʿAbīb [q. v.] to command an army destined for the conquest of Bahrāb about 596 (1199). Here he was very successful. He was next ordered to invade Bengal. In 600–601 (1203–1204) he proceeded to Nādiṣ, the capital of Bengal, and captured it without any bloodshed. His last attempt was directed towards the invasion of Bahrāb and Tibet, but he met with reverses which compelled him to retreat. He succeeded in reaching Dēvākot in Bengal where he died, but his body was carried to Bahrāb and buried there in 602 (1206).

MUḤAMMAD BEY ABDU DHAḤAB. (See 'Ali Bey).

MUḤAMMAD BEY ʿOTTOMĀN AL-DJALĀL was born in Egypt in 1829, the son of a judge in the Court of Appeal, named Yūsuf al-Nasīrī. When a boy he learned English, French and Turkish at the school of languages (Madrasat al-ʿĀlimīn) and when only 15 was given an appointment in the government translation bureau. His patron to the biography of Muhammad Bāṭrī and edited by his son of the same name; it is perhaps the best treatise yet written in Arabic on political geography.

MUḤAMMAD BEY ʿOTTOMĀN AL-DJALĀL was born in Egypt in 1829, the son of a judge in the Court of Appeal, named Yūsuf al-Nasīrī. When a boy he learned English, French and Turkish at the school of languages (Madrasat al-ʿĀlimīn) and when only 15 was given an appointment in the government translation bureau. His patron was the daughter of the judge of Cairo, had him appointed to the Conseil de Médicine. In 1863 he entered the War Ministry and five years later the Ministry of the Interior. In 1879 the Khedive Tewfīk Pasha appointed him to his civil cabinet and several times took him to accompany him on journeys. After the death of the Khedive he was appointed a judge in Cairo. In 1895 he was pensioned and he devoted himself to literary work till his death at the end of 1898.

In collaboration with Clot Bey, he published a sketch of the biography of Muhammad ʿAli and an elementary grammar of the Arabic and French languages and also a description in rhymed verse of his journey with the Khedive Tewfīk. He then devoted himself to the translation of poetry: first of the fables of La Fontaine, the novel Paul et Virginie, and of Racine's tragedies Alexandre Le Grand, Esther and Iphigenie. All these he translated into classical Arabic. But his real importance lies in his endeavours to translate Molière's comedies into the modern Arabic vernacular of Egypt, freely adapting them to Arabic conditions: a. Tartuffe under the title Shāhīt Matnāf, which Voltaire edited under the title Πίθαρνατ (cf. Z. D. M. G., xlvi. 71 sqq. and thereon Socin, ibid., xlvi. 131 sqq.); b. Mardavek at-Awāḏī, l'Ecole des Maris), transcribed and translated by M. Sobernheim, Berlin 1896; c. al-Miṣrī, l'École des Femmes Savantes), transcribed and translated by Fr. Kern, Berlin 1898; d. Mardavek at-Nisā, l'École de Femmes), e. Racine at-Taḥkīl (Les Fâchés), 1897. His collections of popular poems were also lithographed: Ťuqal Zadāl. The Egyptians were not much attracted by these comedies translated into the vernacular. The language did not appear cultured enough to the Egyptian public. They were hardly ever produced and the rich vocabulary which the comedies contain has not been noticed or utilised by students of modern Arabic.

MUHAMMAD ČELEBI. [See CΗAΖΑ attain] MUHAMMAD DAMAD PASHA, grand-vizier, also called OKUZ MUHAMMAD PASHA, was the son of a farrier of Constantinople and was educated (rather unusual at that time for a boy from Constantinople) in the imperial palace for a military career. He left the palace as siltahdar, but we do not know his career until he was appointed, in 1616 (1607–1608), governor of Egypt. Here he was successful in the energetic suppression of a Mamluk revolt and when he returned in 1610 to the capital with two years' tribute, he was appointed Kapudan Pasha, being at the same time married to Sultan Ahmet's seven-year-old daughter Gahwir Khan (married afterwards to Radjub Pasha and as the Khân of Suljill-i ertiomân, i. 147), which assured him the qualification damad. As Kapudan Pasha he was made responsible for a defeat inflicted in 1613 on a part of his fleet, off the island of Chios, by a small Spanish-Sicilian fleet: this blow prevented the landing of Turkish ships in Syria on an expedition against the Druses. Damad Muhammad was dismissed from the post of Kapudan, became, however, second vizier and, after Našir Pasha's execution (October 17, 1614) he was appointed grand-vizier. In this office he commanded in 1615 as kor-asker in a new campaign against Persia, the peace negotiations having ended unsuccessfully a short time before. Nothing was undertaken, however, that year, partly owing to astronomical calculations. The grand-vizier remained that winter in Aleppo. The next year the Persians were attacked in Armenia, where they had made some progress; Erivan was beleaguered and capitulated at the beginning of July 1616 after a 25 days' siege. The Turkish army was obliged, however, to withdraw with heavy losses occasioned by the rude climate and the insufficient food supplies. Damad Muhammad was dismissed in January 1617 to be succeeded by Khalif Pasha [q. v.] in the Venetian relation to Khalif Pasha and Muhammed Pasha are described as the only members of the Imperial Divan that really count. The next year, on the accession of 'Othman II, he became Khalif's el-dar-mašin during that year's Persian campaign and, after Khalif's disgrace, was appointed a second time grand-vizier (January 18, 1619). This dignity he held only a year, in which peace was concluded with Persia; the reason of his dismissal was a dispute with the Kapudan Guezelde Ali Pasha [q. v.], a favourite of the sultan (January 1620). Damad Muhammad went as governor to Aleppo after having been deprived of all his wealth by the extortion of his successor. He died soon after his arrival in Aleppo and was buried in the têrê of Shaikh Abû Bakr, where he had a tumbe made for himself.

Bibliography: The principal Turkish sources are Nâma I, Pećevi and Hâljîg Khalifa (Fëdike and Tufikât el-Khîrâ). Further from Hammer, G. O. R., iv. 442, 468, 475 sqq : 507 sqq, where some contemporaneous western sources are indicated; ʻOthman Zade, Ḥâfiqat al-Wusûrâ, p. 61; Suljill-i ertiomân, i. 147.

MIRZâ MUHAMMAD DJâفار KARADJA-DAGH, Munshi of the Kâdjar prince Djalâl al-Dîn Mirzâ and translator into Persian of the famous comedies of the Adâharzâdelân playwright Mirzâ Fath ʻAli Akhundzadé. After they had been published (1859) Mirzâ Faṭh ʻAli sent a copy of his plays to the above-mentioned Kâdjar prince in the hope that he would take notice of it. But the book lay unheeded for years in the prince's library until Muhammad Ťaťfâi opened it by chance. The munshi, delighted with the plays, at once decided to translate them into Persian. As no one would help him, he was forced to print the translation at his own expense, which brought him into considerable financial difficulties. The translation appeared in lithograph in Čeberân in 1874 under the title Tamçštâf. When the work was finished, Muhammad Ťaťfâi corresponded with the author and found out that they were related. The Persian translation is of the greatest importance for the history of Persian theatre as it gives the stimulus to the composition of original works. The influence of Akhundzâde on the work of Malkum-Khan and even on more recent dramatists, such as Muhammed, is quite apparent. From the artistic point of view, however, Muhammad Ťaťfâi's translation cannot be called successful as their language is very clumsy and filled with countless Adjarbâjdzâniism. It is remarkable that European orientalists first became acquainted with Akhundzâde's works in their Persian dress and published a considerable number of these translations (see Bibli.) as textbooks for the study of spoken Persian, although, in view of their linguistic defects, the translations cannot by any means be regarded as models of the living Persian language.

MUHAMMAD ES'AD. [See ČΗILAČE DEBE] MUHAMMAD ES'AD. [See DEEČE ENDEL]. MUHAMMAD GHAWTH GAWALIYĀR, an Iranian saint. He was a descendant of the famous saint Shiākî Fāris al-Dîn Aţājir [q. v.], his full name being Abu I-Muṣ'lih Muhammad b. Hače Di al-Dîn Kâtâl b. Kâţir al-Dîn b. Bâţir b. Fatâ al-Dîn Aţājîr. Some say that his great-grandfather Muin al-Dîn Kâţir came to India and died at Dâjapûrī. One of his brothers, Shiākî Bahā'î, who was attached to the service of Humâyûn, fell in battle and lies buried at the gate of the fort in Bayûna. According to his own statement, Muhammad Ghawth was born in 906 (1500). He was a pupil of Shiākî Żâhîr al-Dîn Ḥâfiz-i Humâyûn, and belonged to the Shâfīi sect of Shi'ism. He and his eight brothers were disciples of Shiākî Ḥādîjî Hamîd, Kâhîfâ of Shâh Kâhân, the disciple and khalîfa of Shiākî Abû ʻAlî Shâhjâhâ, after leading a solitary life.
for more than thirteen years in the mountains of Čuńā, he came to Gujdarāt, where he became acquainted with the popular saint and scholar Shaikh Wadīj al-Dīn Gujdarātī. He went to Agra in 956 (1558) and was treated with high regard by Akbar. Subsequently he returned to Gawāliyār, where he died in 970 (1562). Humayūn is also said to have been a faithful follower of Muhammad Gawāliyār.

He was the author of several Ṣūfī works, the most popular of which is Dīwān-i Khvānsa, in Arabic, which he completed in 956 (1549), and which he subsequently rendered into Persian with additional improvements. His other works are Kalila-Makhlūṣ, Bahār al-Ḥaṣāy, and Mi'rād-i Nu'mān. It is related that his ecstatic sayings in the Mi'rād-i Nu'mān were condemned by the ulamā of Gujdarāt, who passed orders for his execution, but that he was saved by the timely intervention of the above-mentioned Shaikh Wadīj al-Dīn.

_Abdul Muṭadīr_ (ADUL MUṬADĪR)

MUHAMMAD GURDI PASHA. Two Ṭurkish grand-viziers are known under this name.

1. The one who is also called khādī Muhammad Pasha began his political career after having been a eunuch in the imperial palace; in 1604 he became wālī in Egypt, where he was able to establish some order; after that he was twice kātim-muḥāzin of the grand-vizierate in the capital, in 1611 and in 1615; in the meantime he had held governorships in Erzerūm, Bosnia and Belgrad. He was called to the grand-vizierate in the days of Sulṭān Muṣṭafā I's second reign, when the Janissaries and the Sipāhis were dictating their will at Constantinople (September 1622). Khādī Muhammad owed his nomination to the Sipāhs — who had obtained the dismissal of Mir Husain Pasha, the leader of the Janissaries — but also to the confidence of the wālī and to his well-earned reputation of a wise and experienced politician. He succeeded indeed in the abolition of abuses in the army administration by convoking a large council of dignitaries, where the reinforcement of the kātim was decided. When, however, in several parts of the empire, there arose opposition against the Janissary regime, especially the action of Abāzā Pasha [q.v.] in Erzerūm, the grand-vizier was unable to oppose the Janissaries in Constantinople. Their leader Mir Husain was intriguing again, while at the same time the sultan was crying for revenge for Sulṭān 'Othman II, as a result of these riots the former grand-vizier Dāwūd Pasha was killed in January 1623. On February 5 of the same year the rebellious Janissaries, declaring that a eunuch could not be their grand-vizier, obtained his dismissal in favour of Mir Husain. Gūrdī Muhammad went into exile, but after the enthronement of Murād IV he came back to the capital as vizier and acted for the third time as kātim-muḥāzin in May 1624 when the then grand-vizier went on an expedition against Abāzā. He died on March 26 and was buried in a tābi in Eṣīyāb. His age is not given in the sources. In the opinion of the English resident Roe, Gūrdī Muhammad was one of the few personalities that were able to lead the affairs of the empire.

2. One of the grand-viziers of the first period of Muhammad IV's reign, when the state affairs were governed by the wālī Kösem [q.v.] and the kīālar aghasil Sulaimān. This Gūrdī Muḥammad had already a long career as governor of Syria and other provinces before him when, at the age of 94 years, he was called to the highest dignity in the beginning of November 1651 as successor of Siyāwush Pasha, who had shown too much independence towards the court. During his grand-vizierate he is said to have shown fully his lack of capacity, taking the alarming revolts in Asia Minor of Abāzā Pasha, Iṣḥāq Pasha and Ḥāzīlī Oghlu with the greatest equanimity. He was especially responsible for the removal from the capital all possible rivals to the grand-vizierate, amongst them Muḥammad Koprūlā, which brought him, as Na'īmā says, the nickname of kātim al-sulṭānīn "the pill of the sulṭān". On June 19, 1652 he was deposed again by the court party. After having been exiled he lived some time at Eṣīyāb and died in 1664, at the age of 110 years, in Temesvār.

_J. H. Kramers_

MUHAMMAD HASAN KHĀN, a Persian man of letters, who died on 19th Shawwal 1313 (April 3, 1896). His honorific titles were Sār-i Dāvela and later l'iṭnād al-Sulṭāna.

Through his mother he was related to the Kādjarī [q.v.] and through his father he claimed descent from the Mongol rulers. His father, Ḥāsīdī 'Ali Khān of Marāgāh, was a faithful servant of Nāṣr al-Dīn Shāh (in 1852 he discovered the conspiracy of Sulaimān Khān) and the son from his youth upwards was in the service of the court.

Muḥammad Ḥasan Khān was one of the first students at the Dār al-Funūn founded in 1268 (1851) and spent 12 years there. Later he went with his father when he was appointed governor of 'Arābāt. In 1280 (1863) he was appointed second secretary to the Paris Legation and spent three and a half years there. On his return to Tehran he was appointed interpreter to the Shāh and in this capacity accompanied him on his travels. In 1288 (1871) he was appointed head of the draganate (dār al-taqrīm) and of the press bureau (dār al-tībā) as well as director of the official Rūstānâm-yi davāltā. In 1290 he was appointed superintendent of the palaces and assistant to the minister of justice and henceforth continued to rank.

E. G. Browne criticizes severely the work of
MUHAMMAD HASAN KHĀN and accuses him of having put his name to books alleged to have been written for him by indigent scholars. On the other hand, Joukovsky speaks with much respect of his works and shows that he inspired a great many literary undertakings (e.g. the printing of the Kurān with an inter-linear Persian translation, concordance and index; the foundation of a press for printing in Roman characters; the establishment of the Mushiriyat school; encouragement of the daily press etc.) although after the appearance at Bombay of a satirical work by Shahīd Ḥashimi Shāhīd, Hasan Khan was dismissed on the suggestion of Muhammad Hasan Khan.

The fact is that the number of works — often very useful — bearing the name of Muhammad Hasan Khan, is very large. Without the help of “secretaries” some of these books could not have been undertaken. To Muhammad Hasan Khan is in any case due the honour of having suggested them. His principal works deal with the history and geography of Persia and are often in the form of almanacs. They are: Mirzā al-Bulūnī, i., two editions, 1295, 1294, a dictionary of geography: letters f — w; ii., 1295 (history of the years i.—xv. of the reign of Naṣir al-Dīn and calendar); iii. (years xvi.—xxiii. of the reign of Naṣir al-Dīn and calendar); iv., 1296 (geography: letters w — e and history of 1296). In the geographical portions we find quotations from Yākūt and insular travellers along with notes specially prepared by the local authorities as an extract from the Mirzā al-Bulūnī: Tūrub-kī Bānī wa-Yanābī was published at Bombay in 3111; Tūrub-kī manāqam-Nāṣir, 3 parts, 1298—1300 (history of the time of the Ḥijāra; iii. history of the Ka‘巴巴 1194—1300); Maqāl al-Shams, 3 vols., 1301—1303 (description of the journey to Khuwāsān with important archæological data; i. 105—213 contains the autobiography of Shāh Tahmāsp and u. 469—500 a list of books in the library of the sanctuary of Masjihād); Kitāb Ḥidāya al-Sa‘ūdī fi Ḥidāya al-Shāhādā, Tihār 1304, Tabriz 1310 (history of the martys of Kharbādā); Khurṣān hukmān [cf. Šīrāz 790, 3 vols., 1304—1307 (biographies of famous women of the Islam); Kitāb Durūs al-Tiǧān fi Turāk Dash Aḥkām, 1308; 1310, 3 vols. (history of the Arάk); Kitāb al-‘Alaihī wa-l-Sawād-ī, 1309 (historical almanac for the 40th anniversary of the reign of Naṣir al-Dīn Shāh); Kitāb al-Ta‘kīn fi Aḥādīṭ Qaitābī Shāhīn, 1311 (history and geography of Sawād-khān in Māzandārān).

In the field of literature Muhammad Hasan Khan was only a translator (Swiss Family Robinson, romances of Jules Verne, discovery of America, Turākhī Inqīšāhi Yangi Donya, Tihār 1288, Memoirs on the Indian Mutiny of 1857). He also wrote a number of text-books on geography and on the French language.

(V. Minorssky)

MUHAMMAD HUSAIN TABRIZI, a famous Persian calligrapher, pupil of the celebrated Mir Sāyid Aḥmad Māshhādī and teacher of the no less famous Mīr ʻImādī. His remarkable command of the art of calligraphy, so popular in Persia, brought him the title of honour Mīrān ʻIṣā (greatest master). His father Mīrāz Shukrullah was Mustawfi al-Momālīh to the Safavid Tahmāsp I (1521—1576), the master himself, according to the Oriental sources, was vizier to Shāh Ismā‘īl II (1576—1578) but lost the favour of the sovereign and was forced to fly to India where he remained to his death. Rieu says he died about 950 (1543), but this does not agree with other biographical details and is indeed improbable. That he spent the remainder of his life in India is evident from the fact that most of the manuscripts known to have been written by him were finished in India. The inscriptions on the masjids and khānqāhs of Tabrīz are said to have been his masterpieces but unfortunately they have been almost entirely destroyed by earthquakes. After completing these inscriptions he made the obligatory pilgrimage to Mecca and on his return devoted himself exclusively to copying the masterpieces of Persian poetry. A Dīwān of the Persian poet Amir Shāhī from his pen is in the Cambridge University Library.

MUHAMMAD ISMĀ‘IL b ʻAbd al-Ḥasan al-Shāhī, born on the 28th Shawwāl 1196 (1781), of a Dīlī family that traces its origin to the Caliph ʻUmar. He was a nephew of the famous Mawlānā Shāhī ʻAbd al-‘Azīz (d. 1239 = 1823). Having lost his father early, he was brought up by his uncle Mawlānā ʻAbd al-Kadr (d. 1242 = 1826). In childhood he was inattentive to his studies and fond of swimming in the Qumma, but thanks to a retentive memory and a keen intellect he later on became a learned man.

Being shocked at the ʻirāk or idolatrous tendencies, then prevailing among Indian Muslims, he zealously preached the doctrines of Islam. Impressed by the religious sanctity of Saiyid Aḥmad al-Mudaddālī, he became his disciple and his constant companion. In 1236 (1820) they went to Mecca and then to Constantinople, where they were received with marked consideration. Six years later, on their return to Dilli, they gained many followers. In 1243 (1827) they with many disciples went to Peshāvar and declares a religious war against the Sikhs. But owing to some innovations upon the usages of the Afghans, their power declined and during a retreat they perished in a skirmish with the Sikhs in 1247 (1831).

He is the author of the following works:

1. Risālā ʻIṣāl al-Fīlāh, a treatise on the principles of Muhammadan law according to the Ḥanafī school;
2. Manṣūbī Inšātāt, a Persian treatise on the Imāmāt;
3. Taqīyyet al-Inšāt, an Urdu treatise on theology (printed 1295, translated into English by Mir Shāhūmāt ʻAli, cf. J. R. A. S., xii. 316);
4. Șīrāt al-Muṭṭallām, a treatise in Persian on the doctrines of Islam.
Bibliography: Şiiddik Hasan, İstah al-Natali, p. 416; Sait Jud Ahmad Khan, Ahsar al-Sanadid, ii, 97; and J. K. A. S., xiii, 310.

(M. Hidayet Hosain)

MUHAMMAD KAZIM E. MUHAMMAD AMIN was a muhajir or secretary to Awarangzub. He was entrusted with the compilation, from official records, of the history of the emperor's reign and was ordered to submit it to him for correction. He accompanied the emperor on his journey to Adigrat where he fell ill and was consequently sent back to Dihilt and died there shortly after his return in 1092 (1681).

The history which he composed is known as Awarangzub; it begins with the departure of Awarangzub from Awarangbad in 1068 (1657) and is brought down to 1078 (1667). It has been printed in the Bibliotheca Indica, Calcutta 1855-1868.

MUHAMMAD KHALIFA. [See Muhammad e. Hosain.]

MUHAMMAD KHAN BANGASH, Nawab styled Gha'farra-Djang, was a Kuhila chief of the tribe of Bangash. The city of Farrukhabad was founded by him in the name of his patron the emperor Farrukh Siyav. When Muhammad Shih became emperor of Dihilt, he appointed him governor of Mewa in 1143 (1730), but as he could not stop the repeated attacks of the Mahrattas he was removed in 1145 (1732) and appointed governor of Lahabadd. Muhammad Khan intended to reduce the Bundelas of whom Radj Chaturul was chief. He captured several places but as he did not know the roads, Chaturasul with the help of Peswah Badji Rao, surrounded him suddenly with an army. The Nawab took refuge in the fort of Diitaghar; whereupon his son, Kasim Djang, having collected an army of Afghans marched to Diitaghar and escorted his father in safety to Lahabadd. The imperial ministers then removed him from the governorship. He died in 1156 (1742).
arrival of her step-brother. At last at the solicitation of his sister, Muhammad Muhisin came to Hagi, and when she died at the age of eighty-one in 1218 (1803), she left a will bequeathing to Muhammad Muhisin the whole of her property.

It was thus not until Haji Muhammad Muhisin had reached the age of seventy-three that he became possessed of the great wealth which greatly helped his co-religionists in Bengal in the pursuit of education. He had never married and the death of his half-sister left him without near relatives. He was anxious that his great wealth should be put to good use after his death and consequently on the April 22, 1206 (1824), he signed a Deed of Trust, setting apart the whole of his income for charitable purposes in perpetuity.

Haji Muhammad Muhisin lived for six years after making this noble disposition of his property. For his own personal use he had reserved only so much property as would bring him in about one hundred rupees a month. In 1227 (1812) he died at the age of about eighty-two and was buried in the garden adjoining the Muhammad which he had so splendidly endowed.

(M. Hidyat Husain)

MUHAMMAD MURTADA B. MUHAMMAD B. MUHAMMAD ABU AL-RAZÅKH ABU 'L-FAUD AL-’IJASIMI AL-ZRecords Al-Hanawi, an Arabic scholar, born in 1145 (1732) in Bilgram in Khanduj in N.W. India, settled, after travelling for many years in pursuit of knowledge, in Cairo on 9th Safar 1167 (Dec. 7, 1753). There he succeeded in reviving an interest in the study of Tradition by giving lectures to specially invited companies. In Upper Egypt also he was always a welcome guest with the Arab Shaikh Humam and in the Egyptian country towns, and his fame spread to the Sudan and even to India. From the year 1191 (1777) he drew a pension from the government. He died in Shabdan 1205 (April 1791) in Cairo of the plague.

His principal works are two great treatises. He wrote the Tadí al-’Arūn on Fihristah’s Kainā, finishing it in 1181 (1767) after 14 years’ work; although in the preface he quotes over a hundred sources used by him, he takes most of the additions to the Kainā bodily from the Lisiân al-Kabir of Ibn Manzar. It was printed incompletely in 5 vols. in Cairo 1286—1287 and in 10 vols. in Cairo 1307. He wrote a commentary, also very extensive, on Ghazzali’s Iyâ’ ilm al-Din, entitled Iháj al-Sada al-muttafin, in which, in addition to explaining words he devotes special attention to establishing traditions quoted by al-Ghazzali; it was printed at Fès in 1301—1302 in 13 vols. at Cairo in 1311 in 10 vols. He also composed a number of smaller works on lexicography, Tradition and also on the genealogy of the ‘Alids: 1. Al-’Attâb al-’Iyyāf fi Bayan Ĥaqq al-Maârib wa l-’Iyâh, ed. by Landberg, Primaers arabe; l. 40—53; 2. Al-Qawl al-mabûf fi Tahâkht Lâfz al-Tâbûn, Cairo, Führst, i. 96; 3. Tahtâk al-Wazir al-Mafrâfat al-Mubâtat wa l-Rasîd, Mâsila, Dârûd, Mâzâfat, p. 140; 1; 4. Al-Amâli al-Shâhîyât, lectures on traditions, which he gave in the Djamah Shaikhui, Berlin, Ahwardt, No. 10253; 5. Khula fi Ahâdith Yuwam al-’Ammâr, Cairo, Führst, vi. 209; 6. Tahtâk al-Kâmâil fi Mabût Shaikh al-Mas‘nî illa l-’Iyyâh, u. ’Iyâh, finished on 4th Rabî‘ II 1194 (April 10, 1780), ibid., vii. 51, 7. Dhikrhot al-Ifrîzâs fi Nahaw Banû al-’Ishârâ, finished on 26th Dhu ’l-Hijja 1182 (May 2, 1769), ibid., p. 150; 8. Hikmat, a manuscript of some sixty leaves, a history of the Arabic script and of famous calligraphers, finished on 12th Dhu ’l-Hijja 1184 (March 30, 1771), ibid., p. 161; 9. Al-’Râqad al-mafir fi Nahaw al-Sâda al-Dastâr al-Mu’âth, finished on 10th Dhu ’l-Hijja 1191 (March 21, 1774), ibid., p. 343; 10. Nishât al-Sâqi al-Muhammâd Efsâni Ibn Hâwâ al-Sâmânî al-Hamadânî, ibid., p. 346, b. 8.

MUHAMMAD PASHA. [See MUMMAD, DAMAD PASA, MUHAMMAD GURHÎ PASA, KARA-MAN MEHMET PASA, SOKOLLî]

MUHAMMAD PASA, BALTADÎ, grand vizier, was born about 1660 in the town of Ôthmûndîk and, after an education in the imperial palace, entered the corps of the bâlûqash. On account of his beautiful voice he acted for some time as mîr-âsher; later on he became a scribe and rose rapidly in this career. In 1703, at Ahmed III’s accession, he became mîr-âsher and was made Kapudan Pasha in November 1704. In December of the same year he obtained the grand vizierate as successor of Kâlâyî Ahmîd Pasha, against whom, although he had been at one time his fellow bâlûqi, he had used all his power of intrigue, for which he was especially notorious, according to the historiographer Râshîd. On May 3, 1706 he was dismissed — on account of his lack of capacity, as Râshîd says — and exiled to Lemnos, but his friends obtained for him the nomination to the governorship of Erzerûm. In January 1709 he became governor of Aleppo and from here he was called, in August 1710, a second time to the grand vizierate, after Koprula Nu‘man Pasha had proved unable to restore stability in the way that had been expected from him. At that time the first great conflict with Russia was drawing near; Charles XII of Sweden, after the battle of Poltawa, remained in Turkey. The beginning of Bâltâdî Muhammad’s second grand vizierate was therefore filled with preparations for the war with Russia, which had been decided upon at a great state council in November 1710, and approved of by a fatwâ of the Shaikh al-Islâm. The grand vizier was made commander of this memorable campaign, which quickly was ended by the battle near Fâlûn (Falksen, Turk. Fâlî) on the Pruth (July 21—22, 1711). Peter the Great’s army was left in a desperate position, but his generals succeeded in concluding a truce with the
grand vizier, by the terms of which the Russian army was allowed to withdraw, while Azo was restored to the Turks. The general feeling in the Ottoman historical tradition is that Baštađi Muhammed had been bribed; his enemies at any case intrigued against him in Constantinople so that, even before his return to the capital, he was informed of his dismissal at Adrianople (Nov. 1711). The conclusion of the armistice of the Thrace was also much against the wishes of Charles XII who, on his remonstrances to the grand vizier, is said to have got the dissuading reply that, in case Peter had been taken prisoner, there would have been nobody to govern his country and that, in general, it was not good that sovereigns should leave their country (Voltaire, Histoire de Charles XII et de Pierre I). Baštađi was exiled to Lesbos and then to Lemnos, where he died in 1712, aged over fifty.

The bad reputation which this grand vizier has in Turkish history and which is also given him by von Hammer, does not seem to be confirmed by western sources (Jorga, iv. 308).

**Bibliography:** The chief Turkish authority is Rašíd's Tărık; the campaign against Russia has been described in a Tărık-i Moskov, contained in the work of Hasan of Crete and in a Munich manuscript ( habinger, G.O.W., p. 307, 310); Dilaev-Zade, Dliay to the Hadibat al-Wusara, p. 7 sqq.; Sidiğül-i othmanî, iv. 208 sqq.; von Hammer, G. O. R., vii. 111 sqq., 148 sqq.; Jorga, Gesch. des Osm. Reiches, iv. where other western sources are indicated; Ahmed Refik, Mamâlbûk-i othmanî yi Demir Bahâ Şahî, Constantinople 1910; Ahmed Mukhtar, Æn mabûstu gore Baštađi Mehmed Pashânın Frut sefari, T.O.E.M., vol. 8, p. 160 sqq., 238 sqq. (J. H. Kramers)

**MUHAMMAD PASHA, ELMAS,** grand vizier, was born about 1660 in a village near Sinûb as son of a ship's captain. After having been attached to the service of the pasha of Tripolis, he was educated in the khan qâne of the palace and became in 1687 sâhidâr; soon afterwards he became mihângî and obtained the rank of vizier. In Ahmad II's reign he was pasha in Bosnia, but did not yet play a prominent part, though he is said to have been one of that sultan's favourites. After Muştâfâ III's accession he was appointed kâm-naşîm of the imperial muster and, when a revolt of the Janissaries had cost the grand vizier Surmeli Ali Pasha's life, he was appointed in his stead (April 1695). He accompanied the new sultan during the campaign against Austria in the years 1695, 1696 and 1697. On September 11, 1697 the Turkish army was attacked by the Austrians under prince Eugène, while it was passing the Theiss near Zenta in order to march on Szegedin. The sultan had already reached the left bank, but the grand vizier, together with a number of high military chiefs, was killed that day in the battle, which meant a heavy loss for the Turkish troops. Elmas Muhammad had been against this military enterprise, but the other members of the council had persuaded the sultan to the contrary. He is said to have been the surnamer Elmas "diamond" to his accomplishments and handsome physique.

(J. H. Kramers)

**MUHAMMAD PASHA KARAMANÎ.** [See Karamanî Mehmed Pasha.]

**MUHAMMAD PASHA, LALA,** grand vizier under Ahmad I. He was a Bosnian by origin and a relation of Muhammad Şokolli Pasha. The year of his birth is not given. After having had his education in the palace, he was mîr-askor and became in 1595 agha of the Janissaries. Two years later he took part in the Austrian wars as beylerbey of Kûm-lî and was commander of Esztergom (Gran; Türkisch: Ustorgan) when this town capitulated to the Austrian army in September 1595. Disfavored the following years, Lala Muhammad was several times serscher in Hungary and when, in July 1604, the grand vizier Yavuz ʿAli had died in Belgrad, on his way to the Hungarian theatre of war, the sultan sent the imperial seal to Lala Muhammad. Although peace negotiations were continually being resumed, the new grand vizier took in that year Waitzen (Turk. Wâc) but besieged in vain Esztergom. During next year's campaign Esztergom was taken by Lala Muhammad (Sept. 29, 1605) and in November he crowned the Hungarian Bocskay as king of Hungary (without the regions occupied directly by the Turks) and Transylvania. In that same year the Turkish eastern army under Cîghale Pasha was beaten by the Persians, while the troops sent to subdue the revolt in Anatolia were routed at Bulawadin. After his return it was decided that the grand vizier should remain next year in the capital and lead the war on the two fronts and, if possible, bring about a successor and the long-drawn peace negotiations with Austria. The young sultan, however, changed his mind in keeping with the wishes of the Kapudan Pasha Derwish, who was intriguing against Lala Muhammad. Accordingly the latter was ordered to take command of the army against Persia. He had already put up his tent in Uskudar, when overthrown by sorrow because of the frustration of his plans, was seized with an apoplexy and died three days afterwards (May 23, 1606). He was buried near the twâr of Şokolli Pasha.

**Bibliography:** The tarih of Peçevî — who, as scribe, had served Lala Muhammad on several occasions (cf. Babinger, G.O.W., p. 192): — Na'îmû and Hasan Beyzâde; Othman Zade Tâhi, Hadibat al-Wusara, p. 52 sqq.; Sidiğül-i othmanî, iv. 140; von Hammer, G. O. R., iv.

(J. H. Kramers)

**MUHAMMAD PASHA, RÜM,** vizier and, according to some sources, grand vizier under Sultan Muhammad II. As his surname indicates, he was a Greek renegade. After having had an education in the palace he was destined for a military career and became at one time beylerbey. The dates of his birth and of his military advancements are not recorded. He had taken part in the final campaign of Muhammad II against Karaman in 1466 and was charged by the sultan with the transfer of parts of the population of the conquered region to Constantinople, instead of the grand vizier Mahmûd Pasha [q.v.] who executed these measures in too lenient a way, as the sources say. On the way back to Constantinople Mahmûd was dispossessed of his dignity in favour of Rûm Muḥammad. The latter remained grand-vizier until
1470, during which time Muhammad II went on his campaigns in Albania [cf. Skanderbeg] and Negroponte. Rûm Muhammad Pasha does not seem to have taken part in these expeditions, but, as a critical perusal of the sources has shown, he was especially charged with the problem of the repopulation of Constantinople; his commissionership for the transfer of the Karamanian population had been connected with the same problem.

As the measures taken to make the new capital again inhabited must have been unpopular in Muslim circles — the Greeks and other Christian elements were granted as favourable conditions as the Muhammadians to settle in the town — the historical tradition of the early Ottoman chronicles is rather against Muhammad Pasha. They ascribe to him the re-establishment of the house-rent in Constantinople called musâfirs, which was considered as an injustice to the new Muslim settlers. The musâfirs is said to have been instituted by the sultan, then abolished and again instituted by this grand vizier. But, as F.C. Giese has shown by an analysis of the text of AsÎhÎ-Pasha-Zade and Tursun Bey (cf. Ilk., xiii., 1931, p. 268 sqq.), these measures were part of the policy of the sultan himself and were probably already included in the commission of the grand vizier, who, being a Greek, must have had special qualifications for the difficult task. This last circumstance, however, makes him the more suspect in the eyes of the historiographers and for this reason we may perhaps assume that his reported cruelty towards the population of the Karmanian towns has been exaggerated by the sources, in order to add glory to his predecessor Mahmut Pasha, whose memory has survived as that of a national hero. It is not even beyond question that Rûm Muhammad was ever really grand vizier (Siçilî-i ıçmâni). The Hâdidat al-Wazarâ of Òîhîmân-Zade (p. 10) ascribes Mahmuân Pasha's fall to Rûm Muhammad's intrigues, but makes Iskâh Pasha his immediate successor in the grand vizierate. So do other historians.

He was dismissed in 875 (1470) and was afterwards (according to the Siçilî-i ıçmâni in 879 [1075]) appointed wali of Konya with the mission to pacify the newly conquered territory. He was defeated, however, by his own general, the Venetian, at the Cilician pass; soon afterwards he died, probably killed by order of the sultan (according to AsÎhÎ-Pasha-Zade, ed. Giese, p. 133). The chronological order of these events is not certain.

Rûm Muhammad Pasha was buried in a mosque which he had founded in Uskudar.

MUHAMMAD PASHA, SOKOLLI [See Sokolli, II.

MUHAMMAD PASHA, SULTAN ZADE, grand vizier under Sultan Ibrahim, was born about 1602 as son of Ahmad al-Rajmân Bey, son of the former grand vizier Ahmad Pasha (under Murad III), and by his mother a grandson of the princess of the imperial house, whence his surname Sultan Zade. After having been beylik beyi in the palace, he adopted a military career, became already in 1630 kuduk veziri and was appointed in 1638 governor of Egypt. In 1642 he was made commander of the expedition against Azof [q.v.] which town he rebuilt after it had been burned by the Cossacks before its surrender. On his return he formed with the siçilî Vüsus Pasha and the sultan's favourite Djinâdi KwaÂa a triumvirate, supported by the wâliye Kosem [q.v.]; they intrigued against the grand vizier Karâ Muştafa Pasha, who sought to remove the danger by sending Sultan Zade Muhammad in 1643 to Damascus as wâli. After Karâ Muştafa had been executed on January 1, 1644, Sultan Zade Muhammad was made grand vizier. One of his most conspicuous characteristics in this office seems to have been his ability to flatter the sultan and to satisfy his very extravagant wishes by obtaining money from all possible sources and by giving sandjakos to many of Ibrahim's favourites. At this time the Empire was at peace with Austria (which sent in August 1644 an extraordinary embassy to confirm the peace) and with Persia, although Rakocozy, the prince of Transylvania, did his best to involve Turkey in a war with Austria. There was, however, a strong desire to go to war with Venice and to conquer Crete. The grand vizier was against this undertaking, but his former confederates drew the sultan to their side. Accordingly Vüsüs Pasha was called as serdâr to Crete in the summer of 1645 and took Canea (August 17). The bad feelings that arose after Vüsüs Pasha's return led to Sultan Zade's dismissal from the post of grand vizier (December 1645). After Vüsüs Pasha in January 1646 had fallen a victim to Sultan Ibrahim's cruel capriciousness, Sultan Zade himself was made serdâr against Crete. He departed in April 1646, drove the Venetians from Tenedos, which they had taken by surprise, and died shortly after his arrival in Canea (July 1646). He was buried in the teke of Hudât in Uskudâr.

Bibliography: Namîsî's Ta'virî is the chief Turkish authority; valuable contemporary information is given in the Siçilî-nâm of Ewliya Çelebi, who himself went with the expedition against Azof. Further the Eiçilî Ta'vârişk-i Alî-Ôqûmî of Nushî Pasha Zade (cf. Babinger, G.W., p. 211) and an anonymous Nishâhat-nâmî (G.W., p. 152, note); Ôqûmî Zade Tâbih, Hâdidat al-Wazarâ, ed. Giese, p. 161; from Hammer, G. O. K., i. (J. H. KRAMERS)

MUHAMMAD PASHA, TIRYÂKÎ, grand vizier under Mahmut I, was born about 1650 at Constantinople. His father was a Janissary. He began his career as a scribe and rose to important posts; in 1730 he played a role in the peace negotiations at Belgrad with Austria. He had been kuyu of the grand vizierate, viz. minister of the interior, when the sultan, under influence of his new fêsr ebezi, the so-called Beshir the Younger, dismissed his predecessor Hasan Pasha and called him to the grand vizierate (August 1746). The twelve months of his period of office were not filled with war but with important diplomatic negotiations, in which he was supported by the new kuyu Muhammed Sâid, later grand vizier, and the reis efsâni Muştafa, both of them equally well versed in European diplomacy. During Tiryâkî Muhammad's grand vizierate peace was concluded with Nâdir Shêh of Persia (September 4, 1746) and the peace treaties with Austria and Russia were renewed. As the reason for his dismissal (August 24, 1747) is given his addiction to the use of drugs.
noble, the son of an Anatolian, who came from Kutbşa, and a Circassian mother, he received a good education. He attended the Naval School and became a naval officer but he only spent eighteen months in the navy, mainly in Crete. When quite a boy, he displayed an irresistible love for the theatre and literature and began to write at the age of 10, taking as his models the novels of Ahmed Midhat and the translations of French romances of adventure. This first production was a drama, Dönem’i yaşam Otobrücke, Kursanu’l-ı (Basin of the Coral of Gascogne). As his knowledge of French, and later of English, increased, he extended the scope of his reading and of his interests, so that at school he received the nick-name Roman opçu ça Efenidi (the novel-reader) and later Romançı (the novel-writer). His literary activity proper only began in the Naval School where he became acquainted with Georges Omnet, Octave Feuillet, Alphonse Daudet, Émile Zola, Flaubert, the French realists and naturalists and endeavoured to imitate them. His story Dişkınçî is the most notable of his efforts at this period.

When he became acquainted with the works of the modernist Usta Çitâde Khâlid Ziya [q. v.] he made complete that year against the Austrians on the Danube frontier (taking of Feth Islîm), but was nevertheless dismissed, after his return, through the influence of the Kdear oğlu Rıfşıh. Yegen Muhammed was appointed in his place (December 1737) and had to continue the peace negotiations with Austria and Russia, which were made especially complicated by the rivalry between Francis (represented by de Villeneuve) and the Sea Powers in offering their good services as mediators. The grand vizier himself was rather in favour of continuing the war and, being of a proud and arrogant character, made the negotiations still more difficult. In June 1737 he went as serdar to the Austrian front and was successful in recapturing Semendra and Orsowa (August). He was back in the capital in November. At the end of the year the Russians retired from Odakow and Kiburn, which placed Turkey in a favourable position in the never ceasing peace negotiations, in which Poland also had become involved. But not even this grand vizier was to bring the war to an end; the same influence that had disposed of his predecessor obtained his dismissal in March 1739. After that Yegen Muhammed was governor of Crete, Bonia, Aidin and Andului. When in this last office he was called to the post of serdar on the front of Kars (March 1745) against the Persians. He received large reinforcements from different quarters and thought himself strong enough to attack Nâdir Shâh in his encampment near Erivan. This battle resulted in disaster for the Turks, owing mainly to a mutiny among the irregular levées. Yegen Muhammed was killed, probably by the mutineers, in August 1745.

MUHAMMAD (MEHMED) RAÛF, an important Ottoman author and poet who plays a very prominent part in the development of the Turkish moderns and of the written language. Born on Aug. 12, 1878 (1875) in Constantinople, the son of an Anatolian, who came from Kutbşa, and a Circassian mother, he received a good education. He attended the Naval School and became a naval officer but he only spent eighteen months in the navy, mainly in Crete. When quite a boy, he displayed an irresistible love for the theatre and literature and began to write at the age of 10, taking as his models the novels of Ahmed Midhat and the translations of French romances of adventure. This first production was a drama, Dönem’i yaşam Otobrücke, Kursanu’l-ı (Basin of the Coral of Gascogne). As his knowledge of French, and later of English, increased, he extended the scope of his reading and of his interests, so that at school he received the nick-name Roman opçu ça Efenidi (the novel-reader) and later Romançı (the novel-writer). His literary activity proper only began in the Naval School where he became acquainted with Georges Omnet, Octave Feuillet, Alphonse Daudet, Émile Zola, Flaubert, the French realists and naturalists and endeavoured to imitate them. His story Dişkınçî is the most notable of his efforts at this period.

When he became acquainted with the works of the modernist Usta Çitâde Khâlid Ziya [q. v.] he made complete that year against the Austrians on the Danube frontier (taking of Feth Islîm), but was nevertheless dismissed, after his return, through the influence of the Kdear oğlu Rıfşıh. Yegen Muhammed was appointed in his place (December 1737) and had to continue the peace negotiations with Austria and Russia, which were made especially complicated by the rivalry between Francis (represented by de Villeneuve) and the Sea Powers in offering their good services as mediators. The grand vizier himself was rather in favour of continuing the war and, being of a proud and arrogant character, made the negotiations still more difficult. In June 1737 he went as serdar to the Austrian front and was successful in recapturing Semendra and Orsowa (August). He was back in the capital in November. At the end of the year the Russians retired from Odakow and Kiburn, which placed Turkey in a favourable position in the never ceasing peace negotiations, in which Poland also had become involved. But not even this grand vizier was to bring the war to an end; the same influence that had disposed of his predecessor obtained his dismissal in March 1739. After that Yegen Muhammed was governor of Crete, Bonia, Aidin and Andului. When in this last office he was called to the post of serdar on the front of Kars (March 1745) against the Persians. He received large reinforcements from different quarters and thought himself strong enough to attack Nâdir Shâh in his encampment near Erivan. This battle resulted in disaster for the Turks, owing mainly to a mutiny among the irregular levées. Yegen Muhammed was killed, probably by the mutineers, in August 1745.

vailing fashion of short sketches, tales and long
stories. Among these is his second most famous
work: Siyeh Indifler ("Black Pearls"), a collection
of poems in prose modelled on Yûnûs's Manûr
Shârâ and Beaudelaire's Fleurs du mal (Edebiyat,
No. 11, 1317); also the collection of long stories
Éğüzâne ("Emmoured") (Edebiyat, No. 16, 1325
=1910); İkâyât ("Death Agony") (Edebiyat,
No. 12, 1325); Son Emeil ("The Last Hope")
(Edebiyat, No. 29, 1329 =1913) and Bin 'Abd
-ül-Tâhâ ("History of a Love Affair") (1330=
1914), futher 4 Ul Kâhâbe ("Three Tales"); Ezkar
("Flowers"); Porwâvlel gel ("As butterflies") etc.
Raûf was no less successful as a draughtsman. He
wrote the following pieces: Penel ("The Talm"),
a drama (1910) in four acts (şufl); (Edebiyat, No. 14,
1325 =1909); Ferdi ve Şahurça ("Ferdi and Co.") in 3 acts, a dramatisation of the novel of the
same name by Ziya (Edebiyat, No. 17) and
Dinpîz ("Battle") in 5 acts (Edebiyat, No. 30,
1327 =1911); also 4 Kavuket ("Two Powers")
; Üzümruhda doluya.
Raûf died on Dec. 23, 1931 at Constantinople.
Numerous contributions by him are in the Serâtet-ı
Fünnû; the finely produced women's periodical Me-
şârîn of which he edited the only volume that
appeared. Contributions by him, some his own work,
especially poems (Raûf possessed not inconsiderable
poetic talent and was regarded as the Turkish
Beaudelaire), also essays and criticisms, of which his
analyses of the contemporary novel are valuable.
were published in different collections, periodicals
and newspapers in vast numbers. His Zâmetâ:
("Lily") brought him trouble. It was confiscat:
on account of its immorality and the author was
imprisoned. He wrote other things in the same
style which were not printed.
In his works he appears as a very artistic, rather
sentimental nature; even what he writes in prose
is pure poetry. His prose is as good as that of
Ziya, the leader of the Şerâtet-ı Fünnû movement.
He is one of the most important personalities in
this group of men of letters, although his marked
merits, in form and style are counter-balanced by
equal defects, which became worse as he paid no
attention to the cultivation of his style: in him we
find a reversed process, from the more perfect
to the less. He would have been held in higher
repute generally, if he had ceased to write after
his first works. — Owing to the identity of the name
and the parallel literary activity Muhammad Raûf
was often taken for M. Raûf, the son of Farîg
Afîn Pasha, who died on Feb. 23, 1918 and was
buried at Houdar Pasha. M. Raûf was editor of the
Rehûl-i Kûbîb. He was a dramatist and wrote:
Predâmet, Yûnefa Kürânet ("Wonder in sight"
and a comedy Akel ile Pertemelinde ("Between
Fire and Powder") and a piece entitled Tıvaâye
written jointly with Kâlif Nefzî, one of his most intimate
friends. The following dramas were never printed:
Sâhâl-ud-Din-i Eyiîh, Neîmîm and a number of
adaptations. From the English he translated Saiyid
Ameer Ali's The Life and and Teachings of Mu-
hammed or the Spirit of Islam in 2 vols. entitled
Mevâfereçenî Târîhi-î Islam.
Besides being an author, M. Raûf was also a
teacher, a task for which his extensive knowledge
of languages qualified him (in addition to French
and English, he knew Arabic, Persian, German,
Italian, Greek and others). He lectured at the
University on mythology and Greek and Italian
literature, on which he wrote two text-books: Yûnûs-i
hadım Târîhi-Edebiyat and Itâlya-Târîhi-
Edebiyat. He was also for a time teacher of
western literatures, Turkish literature and French
at various secondary schools.

MUHAMMAD SAÖDİ (Mir Dicmân), minister
of 'Abd Allah Khâtib Shâh of Haidarâbâd
during the xvith century, was originally a diamond
merchant, and was famous in the Deccan for his
wealth before he became minister. After the defeat
of his master 'Abd Allah by Aurangzeb, Mir
Dicmân took service under the latter and was
made Governor of Bengal from 1751—1755 (1660-
1664). He defeated Shât Shâtî when the latter
fought against his brother Awrangzeb. Mir
Dicmân was afterwards employed in the conquest of
Cooch Bihâr and Assâm in 1702—1703 (1661-
1662). He overran both these countries but owing
to the rainy season and the spread of disease among
his troops, he was compelled to return, only to die
of dysentery contracted during his campaign, shortly
after his arrival at Dacca in 1703 (1663).

MUHAMMAD SAÖDİ. [See Kâhil Ëfrâm]
ZâEH]
MUHAMMAD SHAÎH (1131—1161 =1719—
1748), emperor of Dîhilî, surnamed Muham-
mad Râwshân Akhtar (or the Brilliant Star), was
the son of prince Ubâdah Shâh, one of the three
brothers who perished in disputing the crown with
their eldest brother, Dâhândâh Shâh, son of Bahâdûr
Shâh. He was born on Friday the 24th Rabî I
1114 (August 7, 1702), and was crowned by the
two Saiyid brothers, Saiyid 'Abd Allah and Saiyid
Iflâm, after the death of Rabî al-Dawla on the
25th Dhû-l-Âdâd 1131 (September 29, 1719).
Mohammed Shâh reigned for about 30 years and
died one month after the battle of Surhâd, which
his son fought against Ahmad Shâh Abdâlî
[q. v.]. His death took place on Thursday the
27th Rabî II 1161 (April 16, 1748). He was
buried in the court before the Mausoleum of
MUHAMMAD SHĀH — MUHAMMAD ZA'IM

(Nizām al-Dīn Awliyā' at Dīlī. This emperor may be called the last of the Timurid line, who reigned in Dīlī and enjoyed any power. The few princes of that sovereign's family who were raised to the throne after Muhammad Shāh were mere puppets in the hands of the nobles of the court.

(M. Hidayat Hosain)

MUHAMMAD SHĀH I, 'ALĀ' AL-DĪN KHAJĀH (695—715 = 1295—1315), was the nephew and son-in-law of Sulṭān Dīlī al-Dīn Firdūsī II, Khaḍījī, whom he murdered by treachery at Kārā Mānkuī, in the province of Lakhnāū, in 695 (1295), and ascended the throne of Dīlī in the same year. He re-conquered Gūjārāt (697 = 1297), took Cīrār and temporarily subdued the Rāsidīs (703 = 1303). His chief general, Malik Kāfīr, seized Dārgrāh and Warangal, and founded a Deccan province of the Dīlī kingdom. The empire is said to have flourished during his reign. Among contemporary poets Amir Khusrau and Ḥāfīẓ ʿAṭā Ḥasan held the first rank; Shāhī Nizām al-Dīn Awliyā', one of the greatest saints of India, flourished at the same time. He died in 715 (1315) and was buried in the tomb which he had constructed in his life-time in Old Dīlī.

(M. Hidayat Hosain)

MUHAMMAD SHĀH BAHMĀNĪ. [See Muhammad I—III, above p. 664 sq.]

MUHAMMAD SHARIF AL-NADĀFRI was born in the Deccan where he spent the first twenty-five years of his life. He afterwards visited in an official capacity Gūjārāt, Mālwa, Ḍām, Dīlī, Agra, the Pāndābā, Sind and Kashmir. He went to the last country in the train of Dīlī al-Dīn and accompanied the command of Kāmīn Kān (1031 = 1621). He became the khan Bahār of Mīravāstān, a short history of the kings of Dīlī and of the Deccan dynasties from the Mughalmen conquest to the accession of Shāh Dīlī, completed in 1018 (1628).

Biography: Elliot-Dowson, History of India, vii. 134—140; Rice, Catec Pārsī MSS. Br. Mus., p. 907.

(M. Hidayat Hosain)

MUHAMMAD TĀHIR AL-FATANI AL-GUDJĀRATI. was born at Fata in Gūjārāt in 914 (1508). After completing his education in his native land, he proceeded to Mecca, where he studied traditions with eminent scholars such as Ibn Ḥadīr al-Hajjamī al-Makki and others. He acquired much learning from 'Ali b. Ḥusān al-Dīn al-Muṭṭakī (d. 975 = 1567) and also became his disciple in the Kādirī and Shīʿī Dīlī orders. After his return to his native country he tried his utmost to spread learning and to uproot the doctrines of Muhammad al-Dīwnūrī who had claimed to be the Muhāli of his time and had a considerable following among the Bohrās [q.v.], a community to which Muhammad Tāhir himself belonged.

In 980 (1572) Akbār went to conquer Gūjārāt. After its conquest he conferred honour on Muhammad Tāhir by tying with his own hands a turban on his head, saying that it was incumbent on him (Akbār) to spread the true principles of Islam. Khān Aʿṣūr Muhammad Kākūlātī was appointed governor of Gūjārāt and he helped Muhammad Tāhir in uprooting the new doctrines of Mahdollī. But when 'Ābd al-Rahīm Khān Khānān succeeded him as governor, Muhammad Tāhir suffered much at the hands of the followers of the Mahdollī, and proceeded to the court of Akbār in Akbarabad for redress. On his way to 'U'djīān he was murdered by some followers of the pretended Mahdollī in 986 (1578).

Among various the compositions the following may be mentioned:
1. Majmuʿ Bihār al-Anwar fi Gharīb al-Tanzil wa-Laqīf al-Maḥbūr, a copious dictionary of the Qur'an and the Traditions, lithographed, Lakhnāū 1248, 1284 and 1284; 2. al-Mugānī, a dictionary of proper names of Muhammadan traditionists, lithographed on the margin of Tabīb al-Tahābī by Ibn Ḥadīr al-ʿAskālānī (Dīlī 1290); 3. Tarāhirat al-Maṭfūʿāt, a treatise on traditions which have been incorrectly attributed to the Prophet.

MUHAMMAD ZA'IM, a Turkish historian. All that we know of his life is gleaned from his works. He was born in 930 (1532) for he tells us that at the accession of Sulṭān Murād III, i.e. in 982 (1574), he was 43. At the early age of eleven he took part in the campaign of 950 (1543) along with his elder brother Perwān Agha, who at that time was Kāpūsā Khaṭūn to the Saḥālab Beg of Lepanto, Yaḥyā Pasha Oğlu Ahmed Beg. When the latter, after the capture of Stahlwiesenburg, was appointed Saḥālab Beg there, the brothers seemed to have remained in his service probably till 952 (1545) when Abūl Kālīm al-Maḥdollī was summoned to Shahābul, in connection with the plundering of the Stahlwiesenburg churches. In 961 (1554) when Sulṭān Sulaimān took the field against Shah Tahmāsp of Persia, Muhammad Za'īm was a secretary in the service of the governor of Syria, Teki Oğlu Mehemmed, and a year later he was secretary to the powerful grand vizier Mehemmed Sokkoli and in this capacity compiled the official report of the death of Selim II and the accession of Murād III which was sent to the governor of Dijīābār, Aleppo and Baghḍād. This office, to which he perhaps succeeded on the promotion (978 = 1570) of the famous Feritli Ahmed Beg [q.v.], he must have filled till the death of Mehemmed Sokkoli in 987 (1578); see nothing further about it. He held a great feat (fūlat; hence his epithet Za'īm): he himself says: zanānī 'atqebel sefārat-i āli ummān-i āli Mehemmede ilā metalled-e ṣe-čokār. Friends requested him to write a history and he finished it within a year. He began the work in Multān 985 (beg. March 21, 1577) and had completed it in Lūh 'l-Hidjja of the same year (beg. Feb. 9, 1578). The date of his death and
the site of his tomb are not known but he is said to have left charitable endowments in Karafaria
near Salonika.
He called his book Humā-i Dāmī al-Taṣābī, and dedicated it to his master Mehmed
Meşhadi. As his sources he mentions eleven historians
from Firdawsi and Tabari down to the anonymous Taṣābī-i Dāmī al-Omān and gives as his
main source Ebdējdt al-Taṣābī, from which, as
has been proved, he copied out whole pages with-
out a qualm. The book, which is not yet printed,
is divided into a preface and five sections, subdivided into guvāb and then again into
dalābēj and concludes with an epilogue. Rieu
and others have given an account of the contents
of the manuscripts. In the fourth guvāb of the
fifth bent he deals with the Ottomans and here
alone do we have statements of any value, when
the author describes from his own experience
events from 1543 onwards. He brought his story
to the time of writing and the last event
that he mentions took place in the month
in which the book was finished.
The passages in the book relating to Hungary
have been dealt with by Thury (Took certumlbr, 136—139) who also collected the above data
for his life: the earlier from 1530 to 1476 are
given in extracts and the later from 1521 to 1566
translated in full. Of the other less valuable parts
of the book Dier (Bewurktdschr qm den, t. 212 sqq.) has edited a portion of the very early
history, dealing with Cain and his descendants,
while v. Hammer (Sur le origine russe, t. 120)
edited and translated a portion on the tribal
divisions of the Turks, where the Rūs appear as
the nth Turkish tribe. Of the later Ottoman
historians, Ibrāhīm Pecwrt utilised and quoted
from the work of Muḥammad Zāmīn from
the year 1542 onwards.

98 sq., 193, where further references are given.

(W. BORKMAN)

MUḤAMMADIYA, a name of several
heretical schools, notably the ultra-Shī‘a
Muḥammdiyah.

As the example of the Kāsīniyāt [q.v.] shows,
at an early date some Shī‘a transferred the imāmate
to the Alids who were not descendants of the Prophet's
doughter Fātima and then to those who were not
Alids at all. The Manṣūrīya revered such an one
in Muḥammad al-Ja‘fār b. ‘Umayr b. ‘Oma‘ī al-
Bu‘dah, governor of the ‘Irāq, executed in the
years of the Caliph Hishām, i.e. before 125 (743).
Alī Manṣūr, rejected by the Imam ‘Ja‘far al-
Sa‘di for Shī‘a exaguation, thrust the ‘Alids aside
by still further increasing this tendency: Muḥammad’s
family, he said, was heaven, the Shī‘a the earth
tand he himself the “fragment falling from heaven”
mentioned in Sūra li. 44, as he had been
personally touched and taught by God on a
journey to heaven; he is said to have abolished
the religious laws. While one group, the Husainiyah
recognised the Imam in his son al-Husain after
the death of Abū Manṣūr, another, the Muḥammdiyah,
treter celebrated as al-Nafs al-Safahī (“the
pure heart”), who in 145 (762) fell at Mecca
fighting the troops of the ‘Abbāsid Caliph al-Manṣūr. The Muḥammdiyah quoted as authority for
the recognition of an ‘Alī again an alleged testamentary

disposition of Abū Manṣūr and compared the fol-
lower order of succession: testament of the Husainid
Muḥammad Bākir for Abū Manṣūr and of the
latter for the Husainid Muḥammad b. ‘Abd Allāh,
with the Jewish line: first Mosé, then Joshua,
son of Nun, then the sons of Aaron (the later
priesthood is meant). This arrangement was chosen
in both cases so that conflict might not arise between
the two lines of brothers (ḥabarba‘). — We cannot
be certain that the Muḥammdiyah formed a definite
sect. The name rather records the fact that the rising
of al-Nafs al-Zakīya, which was of great extent,
attracted all circles of the Shī‘a to its ranks, even
those who belonged to the Husainid camp; and
members of the Mughīyā, the followers of Mughīn,
son of Sa‘d, killed in the year 119 (737) by Yūsuf
b. ‘Omar’s predecessor Khaled b. ‘Abd Allāh al-
Kari, probably under the leadership of Dābir
b. Yazīd al-Dūrī, supported al-Nafs al-Zakīya
with their good wishes at least.

Quite a different group is the ultra-Islāmic
Muḥammdiyah of Mi‘rimīya. It took its name from
the belief in reply to an ‘Umayyā or ‘Amīnī
who regarded ‘All as God. Its principal representative
al-Fārūq b. All was executed between 279 (892)
and 289 (902).

The Khāṛījī Muḥammdiyah was a separate
party within the strictly Khāṛījī sub-group of the
Adjurida: it is called after a certain Muḥammad b.
Zurak.

(R. STROHMANN)

MUḤAMMARA, a town and port at
the head of the Persian Gulf and in the Persian
province of ‘Arabān. It lies on the right bank
of the Ḥaffar channel (formerly called Nahi Bayān)
which connects the Kūrūn river with the Shat-
‘Abī‘Arab, The original village from which the town
grew appears to have lain on the left bank of
the channel, on the island of ‘Abī‘ānān [q.v.],
and Muḥammarā is probably therefore not to be
identified with the town of Bayān, though it now
lies on the same site. Further, Bayān was included
in ‘Irāq ‘Arabī by the geographers, whereas Mu-
hammarā, lying on ‘Abī‘ānān island, was part of
Persia until the shifting of a channel threw the
possession of the town into dispute between
that country and Turkey. By the treaty of Erzerum
(1847) it was assigned to Persia, but though the
government was nominally directed from ‘Aṣhār, it
remained in reality in the hands of the Arab
(of ‘Arab) sheikh of the Jaf (or Ka‘ī) tribe, who were
Shī‘a. From the fact that the Arab geographers
ignore the town, at any rate under its present
name (for references to Bayān see G. Le Strange,
below), it may be inferred that the place (‘Muḥam-
ra) was either of minor importance or of compara-
tively recent origin. At the present time the
port is of some importance for the trade of Persia,
its principal article of commerce being dates,

MUḤĀRĪB, the name of several Arab tribes (Wustenfeld, *Register zu den genan. Tabellen*, p. 320 gives five of this name) of which the most important is that of the Muḥārīb b. Khaṣaфа b. Kāsī Aḥlān (Wustenfeld, *General Tabellen*, D, 8). They do not however seem to have been of very great importance either in the Dāhilīyya or in Ṭūrān; Ibn al-Kalbī only gives them two pages of his *Dīmarṣarat al-Ṭūrān* (Brit. Mus. MS., *Add. 23.297*, fol. 163b—165b) but these add considerably to the very meagre information in the *Tabellen* especially as regards the names of Ṭāir b. Ḍarṣ b. Muḥārīb and of Bādha wa (sic) b. Ḥuṭah b. Ṭāir b. Khaṭṭāf b. Muḥārīb. A typical tribe, these latter lived in the mountainous region of southern Najd between Medina and al-Yamāma (Wustenfeld, *Register*, p. 320 following Ibn Ḥuṭah, *Kitāb al-Maqārīs*, ed. Wustenfeld, p. 41); several places in their territory are recorded in Yākūt’s geographical dictionary (cf. the index of tribes, s. v.). We know very little about their history before Islam; they were closely connected with other tribes of the great group of the Kāsī Aḥlān, like the Ḥawāzīn, with whom they are said to have shared the worship of the idol Dāhil (Yaḥūm, *Muḥjam*, ed. Wustenfeld, ii, 167, l. 2—3 = Wellhausen, *Reste*, p. 65; cf. *Ṭadī al-Ṭūrān*, iii, 115, l. 7 from below), and especially the Ghaṭāfān (notably their clan Thālāb b. Sa’d b. Ḥuṭah) alongside of whom the clan of the al-Ḥuṭah b. Tāir b. Khaṭṭāf b. Muḥārīb (the genealogy of the *Tabellen* is to be rectified in as much as al-Mālik is the name of al-Khuṭūr and not that of his father) fought the war known as the yawan al-ḥawāśib or yawan Dārat Maṣwāq alluded to by the poet of the Ḥuṭahān Ḥusayn b. al-Ḥumām in some of his poems (cf. al-Mufaddalīṣiyūt, ed. Lyall, *Nis. xxi. xxii. and the commentary of Ibn al-Anbārī, with the passages quoted in the notes).

The Muḥārīb at the beginning of Islam were hostile to Muhammad; this hostility was perhaps only the continuation of that which prevailed between the nomad tribes of the Aḥlān of al-Najd and the citizens of Mālikina. Thus we find, in the early years of the Hijrīa, that Muhammad sent against them (and against the Ghaṭāfān) a series of expeditions, of the nature of raids and conquests rather than regular military enterprises (our sources, give 30 or 40 men as the total of the Muslim forces); the details of their fighting are given in Caetani, *Annali dell’ Islama*, i, p. 537—538 (3 a. H. *S. 6*), 596—597 (5 a. H. *S. 3*), 689—690 (6 a. H. *S. 1*), 694 (6 a. H. *S. 6*) with reference to the sources utilised (we may add Ibn Sa’d, II/1, 23—24, 43—44, 61—62). One part at least of the tribe must however have been attracted within the growing sphere of Muslim influence since we find Muḥārībis in the cavalry led by al-Zubair at the taking of Mecca (Caetani, *Annali*, ii, 9 a. H. *S. 396*). But it was not only in the a. H. that the Muḥārīb sent their ambassadors to Muhammad and gave their formal adhesion to Islam (Ibn Sa’d, II/1, 43; cf. Caetani, *Annali*, ii, 344—345); even on this occasion they were conspicuous by their uncoyness, quite Beduin, of which another example is given in the anecdote of the Muḥārīb (he is said to have been called Suṣāwa b. al-Hārīb or b. Ḍarṣ, who dared to doubt the Prophet’s word in connection with the purchase of a horse (cf. Ibn Sa’d, iv, 2, 90—91 etc., and Caetani, *Annali*, ix, 627—628).

The Muḥārīb abandoned Islam during the Rīḍa but were easily brought back to obedience (*Annali*, ii, p. 594, 596, 11 a. H. *S. 115, 118*); they took part in the conquest of the Ṭūrān (Ibn Ḥaḍarah, *Iṣābā*, Cairo 1325, iv, 20—21: biography of *Aḥd b. Sa’id*, who fought at al-Kādisiya and Dāhilīyā and again, in 36 and 37, at the battle of the Camel and that of Sīfīn, where he was slain); they were encamped at Kūva in the same quarter as the Usād and Ghaṭāfān, not far from that allotted to the Tamīn (Ṭabarī, i, 2490, 2495).

The contribution of the Muḥārīb to the politics and literature of Arabia is practically nil; we need only mention the names of Lajjīt b. Buqair b. Nadr (d. 190), who belonged to a branch of the Banū ‘Ali b. Ḍarṣ b. Muḥārīb, a poet (cf. *Ṭabarī*, iii, 540), ascetic and historian (*Fihrat*, p. 94 and Yākūt, *Iṣābā*, ed. Margoliouth, vii, 218—220, give a list of his works, relating mainly to literary history).

Of the other tribes bearing the name of Muḥārīb the best known is the Meccan tribe of the Muḥārīb b. Fīhr to which al-Daḥṣāk b. Kāsī belonged (q. v.); the Muḥārīb lampooned by al-Farazāḏaḏ and celebrated by Ḏarir (Yaḥūm, ed. Bevan, p. 817 l. 1, 1039 l. 2) are difficult to identify: it is not certain, although they are so identified in the index, that they were the Muḥārīb b. Khaṣaфа.

Bibliography: given in the article. (G. LEVI DELLA VIDA)

Al-MUḤARRAM (Muharram), the first month of the Muhammadian year. The name is originally not a proper name but an adjective, as the article shows, qualifying Safar. In the pre-Muhammadian period the first two months of the old Meccan year were Safar [q. v.] and I, which is reflected in the dual of a pottor “al-Safarānī” for al-Muḥarram and Safar; in the old Arab year the first half year consisted of “three months of two months each” (Wellhausen), as the two Safars were followed by two Rabi’s and two Džumāds. The first of the two Safars, as the one that belonged to the sacred months, was given the additional epithet al-muḥarram which gradually became the name of the month itself. As Dhu ‘l-Hijja also belonged to the sacred months, three of the four sacred months came together in leap year. The month intercalated to equate the year to the solar year was inserted after Dhu ‘l-Hijjada and was not sacred. It thus came about that learned Muslims described the intercalation as renaming the Muhammarran concerned Safar, i.e. as making Muḥarram not sacred; they mean that the month after the pilgrimage, which they consider as al-Muḥarram, following the custom, is not sacred i.e. is “Safar” and the second month i.e. in their view Safar, is “al-Muḥarram”. In doing this they of course overlook the fact that Safar proper now only comes third; but when the intercalary month was abolished in ISlam, the proper conception of the state of affairs was lost (cf. NASI’).

In the early period when an attempt was made
to equate with the solar year by inserting intercalary months, — which was not successful on account of the ignorance of the old Arabs in astronomical matters. — al-Muharram introduced the winter half year as the names of the first six months show. The Arab year began, like the Jewish, in autumn. After Muhammad had forbidden the portion of the intercalary months in Sura iv. 17, 1st Muharram, the beginning of the year, went through all the seasons as the year, which now consisted of 12 lunar months, had always only 354 or 355 days, as it still has. Whether the first month of the year was originally marked by a festival we do not know. Wellhausen has endeavored to show that the hajj originally fell in the first month of the year, so that Muharram was ʿAraf in its quality as "Dhuʾl-Ḥijja," this idea suggests that there was originally only one sacred month, but it was observed at different times in different parts of Arabia. Muhammad in the Kaʿbah always speaks of the sacred month (v. 194, 217: v. 2, 97): only in Sura ix. 36 in laying down the method of reckoning time does he speak of four sacred months, in which it was thought to recognize a later declaration of the equal sanctity of four different sacred months of different districts, which was however illusory, as within Islam the peace of God was not without this and, according to Sura ii. 217, the defence of the faith takes preference over the sacred month. What the sacred month referred to in the Kaʿbah is, we do not know; in Sura v. 2, at any rate, the month of the pilgrimage must be meant, which its Wellhausen’s theory excellently. The commentators think Raḍāb or Dhuʾl-ʿAraf is meant, at any rate not al-Muharram.

Al-Muharram has 30 days of which, in addition to the 1st as the beginning of the year, the following are especially noted: the 9th as the fast-day of the ʿAshura: the 10th as the anniversary of Kurʾān (60 = 680), on which al-Husayn b. ʿAli b. ʿAbd Allāh b. Abī Ṭalib [q. v.] fell fighting against the Caliph Yazid b. Muʿawiya and therefore the great day of mourning of the Shīʿa (on the significance of the 10th month for the Sunnis see ʿAshura); celebrated by pilgrimages to the sacred places of the Shīʿa, especially to Kurʾān [see MISHAʾIR HUSAYN], in which the passion play, representing the death of Shīʿa sons [see TAʾIYĀ], plays the most important part, also the 16th as the day of the selection of Jerusalem as the Kibla [q. v.] and the 17th as the day of the arrival of the "people of the elephant" Sura iv. 17.

MUḤĀṢĪBĪ ṬABʿ AʾDALLĀH ḤĀṣIŠĪ (ASĀD M.-ʿANĀZI), called Muḥāṣībī, i. e. "who knows his conscience," was born in Baṣra; he died in Baghdad in 243 (587). A legist of the Shāfiʿī school, a theologian who advocated the use of reason (ʿaʃf), using the dialectic vocabulary of the Muʿtazilīs, which he was the first to turn against them, he finally adopted a life of a-cetic renunciation after a moral conversion long meditated which is described at the beginning of his Wirkig. Involved with the Muʿtazilīs in a general persecution as a result of Ibn Ḥanbal’s attack on the dialecticians, he had to give up all teaching in 232 (546) and died in retirement.

His principal works are: Rūfas ʿAbd Allāh, Ṭabʿ (more accurately: Ṭabʿ), Kātib al-Fuṣūl, Mālik al-ʿĀṣī wa-Mālik Ṭabʿ, Kātib al-ʿĀṣī, Faḥm al-Ṣalāt; none of them is yet printed. The Dāʾirat al-ʿĀṣīn, which Sprenger attributes to him, is of an earlier date; it was arranged by his chief teacher ʿAbd Allāh b. ʿAbī Ḥāmid Ṭabʿī. Muḥāṣībī is the first Sunni mystic whose works reveal a complete theological education; they combine in a very original way a keen concern for exact philosophical definitions, and a fervid reverence for the most naive traditions with the rigorous search for an increasing moral purification.

In his Rūfas he discards the foundations of the "method" of introspection which ʿAbd Allāh had envisaged; he shows that there is a difference between the series of human happenings, the external actions of the members and the intentions of the hearts (against this: ʿAbd Allāh and the majority of contemporary muṭʿaṣṣīlūn): he proves in detail that the enhancement of the states of conscience (ʿaʃf) can be guided progressively towards a perfect purity, provided an ascetic and moral rule of life is observed, the true mawāḥib mentioned in Sura xvi. 27.

His adversaries (muhāṣībatīn), especially Ḥanbalīs, attacked him for having differentiated the concepts of ʿāsha and ʿaʃf (parable of the "sower"), mawāḥib and mawāḥib (like Ibn Karrām); admitted the created character of the ʿaʃf (our pronunciation of ʿaʃf) verses); held that the elect, in Paradise, would be "summoned to enjoy directly familiarity with the divine being; chosen his references from authors not by following the formal correctness of their descriptions, but on account of their intrinsic significance, from their moral weight (ʿāsha), for the reader.

The Rūfas is his main work; it forms in 61 chapters, in the shape of advice given to a pupil, a complete manual of the inner life. Ghazālī used it before writing his Ṭabʿ; and in spite of occasional attacks, its reputation among Aramean-speaking Muslim mystics lasted for a long time and may be compared with that of the Initiation, from Christ among Christian mystics using Latin: the Shāḏīliya brotherhood, with Mūṣīr, Ibn Aḥmad Rundi and Zarghūn Burnūsī, have always recommended its use; and one of them, ʿĪṣā al-Din Makhūlī, has made a summary of it.

The Ṭabʿī theologians also esteem Muḥāṣībī as a precursor.

§ 43: Margoliouth, Third Internat. Cong. of Orientalists, Oxford 1968, c. 292–293; I. Mas-

**AL-MUHIBBI,** a family of scholars in Damascus of the 5th–6th (viii–ixth) centuries of which three members distinguished themselves in literature:

1. Muhibb al-Din Abu l-Fadl Muhammad b. Abi Bakr b. Dâwûd b. ʿAbd al-Rahmân b. ʿAbd al-Khair b. Muhibb al-Din ʿAbd al-Rahmân b. Taqî al-Din al-ʿUsâni al-Hamawi al-Dimashqî al-Hanafi, born in the middle of Ramdân 949 (Dec. 23, 1542) in Hamât, studied there, in Halab and Hims and after a journey to Constantinople obtained a post as teacher in the Madrasa al-Kadîya in Damascus. In 978 (1571) he accompanied the Shaikh al-Islâm and Chief Kâfi Čiye Zâde to Cairo, was for a period a kâfi there and after a second journey to Constantinople was appointed kâfi in Hims, Maṭarr al-Nuṣâr and several other towns of northern Syria. In 993 (1585) the post of a chief kâfi (al-nâbî al-kâfîr) was given to him; at the same time he was military judge, judge of the Syrian caravan, taught in several madrasas and gave fatwas at the Sultan's request. He died on the 23rd Shawwâl 1016 (Feb. 18, 1608). Of his numerous writings only three have survived: his commentary written in 969 (1561) (according to al-Muhibbi, iii. 322, on the other hand, prepared at the age of 16) on Muhammad b. al-Shînâ's (d. 815 = 1412) *Uṣūl al-Bayyina* (Mashûma fī l-Mauâna wa l-Bayān) in the Berlin, Alvaradt, Vers., No. 7256–7257 and Gottha, Pertsch, No. 2789 MSS., his *Tarjuma al-Kibîrla wa l-Ḥadi al-ʿĀṣîn wa al-Nahdîya ilā l-Diḏâr al-Màdíya*, in the Paris, Cat. de Slane, No. 2293; Cairo, Fihrist, vii. 464; Stambul, ʿĀṭif Efendi, No. 2030 (s. Rescher, in *M.F.O.B.*, v. 496) MSS., which he wrote when kâfi in Maṭarr al-Nuṣâr, and his commentary written in 1011 (1602) on the authoritative verses in Zâhâshâri's *Kadîf al-Kadîf* entitled *Tansîl al-ʿĀṣî*, pr. Bûlûk 1281, Cairo 1307–1308, and on the margin of *Kadîf al-Kadîf*, ibid. 1318.

2. His grandson Fâdî Allah b. Muhibbi Allah b. Muhibbi al-Din was born on the 17th Muharram 1031 (Dec. 2, 1621) in Damascus, at an early age showed great linguistic ability, received in 1018 (1608) from Nâzîma al-Din al-Ghazzî (d. 1016 = 1608) (see Brockelmann, *G.-A.L.*, ii. 292) the *ṣafâs* (or Hadîf) and after failing to secure something in Halab through the Shaikh al-Islâm Muhammad b. Zakariyyâ, was given by his father the latter's post at the Perwîshiyâ. In 1051 (1641) he accompanied Muhammad ʿIsâmat to Constantinople, was appointed to the Madrasa Amrâ in there, but dismissed a year later, when he returned home. In 1059 (1649) he accompanied the ցափ Մուհամեդ b. ʿAbd al-Ḥamîm al-Burqawî to Egypt and became his deputy. After a quarrel with him, he resumed his studies in al-ʿArçar and came home next year. In 1073 (1662) he again went to Constantinople and four years later was appointed ցափ of Bairût but returned to Damascus in 1079 where he died on the 23rd Dâimâdâ II, 1082 (Oct. 27, 1671). While his own *Dîwân* and his description of his journeys to Constantinople have not been preserved, his edition of the poems of his friend Մանդաժ Փաշա (d. 1080 = 1669 in Damascus) are still in existence. He first of all arranged the chronologically beginning with a poem on Sultan İbrahim I of the year 1055 (1645), its addition to the MSS. mentioned in Brockelmann, *G.-A.L.*, ii. 277 there are now Kopruš, ii. 1243 and Moşağl, Dâwûd, *Mağhârât*, No. 153, 20, their alphabetically, including poems of a later period down to 1071 (1660); this edition was printed at Damascus in 1301. In 1078 (1667) he edited the biographical work of ʿAlî ʿEnan al-Ṭurînî (d. 1024 = 1615), *Taʿrîṣî al-ʿĀṣî min Abûd al-ʿĀṣî* and published it with a supplement; we may add to the MSS. mentioned by Brockelmann, *G.-A.L.*, ii. 290: Muhammad Kurd ʿAli, in *R.A.A.D.*, iii. 1925, p. 193–202.

3. His son Muhammad al-Amin b. Fâdî Allah b. Muhibbi and Muhammad b. Jâhan al-Din al-Dimashqî b. Muhammad b. al-Din al-Dimashqî, born in 1061 (1651) in Damascus, went with his father in 1077 (1666) to Bairût but returned home several times from there. A friend of his father's, Muhammad b. Lutf Allah b. Barîm al-Izzâti, who had been kâfi in Damascus in 1065 (1655) and was military judge in Anatolia in 1078 (1668), provided him with funds to study in Brusa. He returned home after a brief stay there on 8th ʿĀṣîr 1086 (May 4, 1675) in company with the muftî Muhammad b. ʿAbd al-Ḥâlim. Al-Izzâti had in the meanwhile been appointed military judge in Adrianople and was able to procure him a post there. But his patron fell ill soon afterwards and had to resign. Muhammad accompanied him to Stambul and looked after him till his death on 10th Shawwâl 1092 (Oct. 24, 1681). He then returned to Damascus and began to write. When in 1101 (1690) he had made the pilgrimage to Mecca, he was appointed deputy kâfi and then a teacher in the Aminîya in Damascus. He died there on the 18th Dâimâdâ I 1111 (Nov. 11, 1699).

His principal work is a collection of 1,289 biographies of scholars, poets etc. of his time and the period immediately preceding it arranged in alphabetical order, entitled *Khuṭâb al-ʿĀṣîr fî ʿĀṣî al-karn al-hādiʾ aṣhar*, the first fair copy of which he finished in 1096 (1685) (printed Cairo 1254, 4 vols.). The draft of a number of biographies from the Hijâz and Yemen, which is preserved in the Biûl-Houtsma MS., No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is in Berlin, Alvaradt, No. 9895. A synopsis was prepared by ʿAli b. ʿAbd al-Ḥâlim al-Ghazzî al-Amîri (d. 1101 = 1777); Murâdî, iii. 215; MS in Tubingen (Seybold, No. 9). A second great biographic work on personalities of all ages entitled *al-Tâbaq* was to give under each letter al-ʿĀṣîr wa l-ḥādîf wa l-kurâ wa l-ʿaimân wa l-ṣâhadet wa l-nâma thâyîlî, separately. In the draft in Leipzig (Vollers, No. 683) giving the letter min the sources, which from the articles are taken usually word for word, are generally quoted. He also wrote a continuation of al-Khâdîjî's *Râihânât al-Muhibbî* entitled *Nâṣihat al-Râihânât wa Râihânât Tâbâq al-Fâna*, which survives, in addition to the MSS. quoted by Brockelmann, *G.-A.L.*, ii. 294, in Stambul, Nûr-i Othmânîya, No. 4352 (M.S.O.S., xv. 22) and Moşağl, Dâwûd, *Mağhârât*,
The seal was changed at each accession of a new monarch (cf. Na'ima, i. 117) as was the tughrā itself. Ewliya Čelebi's statement, which implies the contrary, is therefore rather strange (vii. 300, v. 4 from below). In Persia the seal was retained but the name was changed (cf. Khatam).

The grand vizier produced the imperial seal on the ḍā‘lūn days for the Kiṣlah Bard to seal the bag (ḵāle) for the registers of the riṣāla and the archives of the Finance Department or muḥālīde (muḥālīd) (the Treasury (ḵāṭar-i Buqā) and the general Archives (ḵāṭar-i Khābā)). The grand vizier also had, like all the viziers or governors of provinces, two other seals, one, a large one, impressed at the top of ḥayvārāt or "ordinances," and the other, a small and modest one, placed at the foot of letters from the vizier, including official ones (cf. Ahmad Rūsīm, Othmān, Turābbi, iii. 1514).

The use of seals in Turkey (we know very little of those of the Sālūqū: cf. Reinaud, Mon., i. 121 note) was exceedingly wide-spread. They were used for impressions in wax (muḥār muma) and for stamping in a particular kind of ink to which saliva was added, as in Persia (cf. I.e Père Raphael du Mans, p. 129). In more modern times the seal was carried in the purse (cf. a verse by Mešāl Ṭākī in his poem Sīrār Baha). It is only recently that under the influence of the west the muḥār has been displaced by the signature. It must have received its coup de grâce with the recent adoption of the Roman alphabet and of rubber seals.

The industry of seal-engraving has thus been gradually perfected. It had at one time reached a high degree of perfection and the artists used to sign their work. These signatures were usually very brief, Miḥlī, Sāʾī, Aḥmād etc. They were written in characters so small that they could only be distinguished with a lens and only when very cleanly engraved. Quite a study could be written on these artists.

Ewliya Čelebi gives the following information about the seal engravers of Istanbul (i. 575). He distinguishes:

1. Engravers on stone. Ḥakīmatān, 105 workmen in 30 shops. They engraved on stones such as
agate, garnet, turquoise and jasper. Their patron saint or sir was Ābū Ḥabīb Yūnān, a disciple of war irās al-Karānī who is buried in Ta'izz.

2. The engravers of mukhār: mukhor-khānān who worked especially for the vizirs. So workers in 50 shops. Their sir was the Caliph al-Mu'āwīyā. In the reign of Murūd IV the most noted were Māhmūd Čelebi, Rūzā Čelebi and Ferīd Čelebi, who charged from 100 to 500 piasters for their work.

3. The engravers of silver seals and talismans: mukhor-khānān-i sīn-i ḍawāboi, 40 workers in 15 shops. Sir: ʿUkkašā who is buried near Māhān, who, having seen on the Prophet's back the mukhor-i muwaffaq (cf. above), began to engrave talismanic formulae (two of these are quoted). These workers cannot engrave Yemen agate". They were established in the area called Sīyakānār.

We may still mention the custom of making partisans, whose loyalty one wished to be sure of, stamp their seals on a Kurān (fīrūn mukhor-khānāk) i.e., in the Turkish papers of June 8, 1925, statements by a rebel Kurd.

The word maḥārūn in the old language of the Janissaries meant vouchers for their pay (M. d'Ohsson, vii. 337).

In figurative language Persian and Turkish uses the expression "to break the seal": mukhor berdağa, mukhor əmâh (or boząh, əmâh, şatava mukâh) for "to deliver a virgin" (cf. further th art. TAMHIH).

The mukhārā (mukhorā), Turk. mukhārā [cf. the article KHAṬĀN], keeper of the seals or better "private secretary" (cf. below), was therefore a very important personage. Mār Ādī Shīr Nūsārī was the mukhorā of Husayn Baikārī before becoming ʿāzīm bezī and first minister (cf. Belin, Notice sur l'lx., 1861, p. 13; cf. de Saçy, X. E., iv. 282, 261). He was succeeded in these offices by another poet, Mawrāth (ibid.). — On the mukhorā in Persia, cf. Le Père Raphaël du Mans, p. 21.

In Central Asia the title of mukhārā seems to have replaced that of tarmāzā which occurs as early as the Orkhon inscriptions.

In Turkey, each vīner had his mukhārār (Ahmad Rāsīm, ʿOṣrīm. Twiriği, i. 455). Cf. the account of the career of a mukhorār in the Sīāḥ-i ʿotbānā, ii. 31 below (Beloljet Pasha [the same as is mentioned in the Memoirs of Saïd Pasha, i. 4]).

The rūzmoğāhī had also their own mukhārārā (I. Deny, Sammār des arches turques du Caire, p. 136). At Sādī Kūn they exist a quarter called Mukhārār. For the work bearing the title Mukhārār Twiriği, cf. Babinger, G. O. V., p. 216 sq.

With the viceroys of Egypt the mukhārār was a "private secretary" of the Khedive. The title of mukhārār was abolished in 1884 but the office has remained. His salary was the same as that of the chief of the cabinet (cf. ibid., p. 92 and 476).

Bibliography: Cf. the article KHAṬĀN. We may now add: Babinger, Das Archiv des Bosnak Osman Pasha, Berlin 1931, p. 23 and note 5, where reference is made to a little known article by Riza Efencli Mudezirovic. Cf. also von Hammer, Histor. de l'Empire Othoman, iii. 425, 430, 461, vii. 2. (I. Deny)

MUḤSIN MĀLĪ, son of Shāh Ḫusāin Ḫāṭāt, was an inhabitant of Lucknow. In poetry he was the pupil of Khuwāja Wazir. He flourished in the latter part of the sixth century. He is the author of a Diwān, a collection of lyrical poems, and a biography of Urdu poets called Sarāpā Shāhān. Bibliography: Nāṣīḥ, Tuḥdim-i Shurub (Lucknow 1874), p. 419. (M. Hidayat Hosain)

AL-MUḤTAḌĪ, Ābū ʿAbd Allāh Muḥammad, an ʿAbdāsīd caliph. After the Wālijī's death, a number of officials wished to pay homage to the young Muḥammad, son of the deceased caliph and a Greek slave; instead however, the Wālijī's brother was proclaimed his successor and only after the deposition and murder of the unfortunate al-Muṭazz (end of Raḍāb 255 = July 869) Muḥammad ascended the throne with the name al-Muṭāḍī. His ideal was the Umayyād Āmir b. ʿAbd al-ʿAzīz. Like the latter, he was distinguished for the strictness with which he conducted his life; with piety and simplicity however, he combined strength and ability and during his brief reign he did his best to raise the caliphate from its degradation and to restore the power of the Commander of the Faithful. In several provinces there were risings by ʿAlīds, real or alleged; but the most dangerous enemy of the caliph was the Turkish general Mūsā b. Bogha. When the latter, who was fighting against the ʿAlīds in Persia, heard of the accession of al-Muṭāḍī, he returned home. Reaching Sūmārā in Muḫarram 256 (Dec. 869) he forced the caliph to take an oath to bring to justice the Turkish chief Shāhī b. Wāṣīf, who had robbed the mother of the caliph al-Muṭazz of all her priceless treasures. When Shāhī concealed himself, the Turkish mercenaries mutinied and were intending to depose al-Muṭāḍī but were appeased by the resolution of the latter. Al-Muṭāḍī promised Shāhī's followers that he would pardon him; but as the latter did not appear, they went to Sūmārā and began to pillage it until they were scattered by Mūsā. Shāhī was soon afterwards discovered and killed by one of Mūsā's men. When Mūsā had taken the field against the Khuṭāfīs, al-Muṭāḍī began to incite the people against him and his brother Muḥammad b. Bogha and accused them of embezzlement. Muḥammad was brought to trial and put to death although al-Muṭāḍī had expressly guaranteed his pardon. The only course left for the caliph was to dispose of Mūsā if he wished to keep his throne. But his plan was betrayed; Mūsā advanced with superior forces and the caliph suffered a disastrous defeat. As he declined to abdicate, he was murdered in Raḍāb 256 (June 870) in horrible fashion.

MUḤTAṢĪB (A.), "censor", an officer appointed by the caliph or his vizier to see that the religious precepts of Islam are obeyed, to detect offences and punish offenders. His office was the ḥiba, and to it only men of good standing could, in theory, be appointed. Like all
Group of 29 seals accompanying the address to Muhammad 'Ali Pasha by the principal religious authorities in Mecca: the governor at the time, the imāms, khatībs, muftis of the four schools etc. The text dated at the end of the month of Muharram 1226 (Feb. 25, 1813) contains congratulations on the occasion of the victory over the Wahhābis and expressions of gratitude for the restoration of freedom of pilgrimage.

Art. MUHR
Seals of various individuals, Ottoman, Algerian and Hijjarian (beginning of the sixteenth century).

2. Esmâ Sultan, sister of Mahmud II. 11 Ram. 1222 (November 12 1807).
3. Muᾱş Pasha, kâ'īmaḫ̲ūm or grand vizier interim. 8 Shaw. 1222 (December 9 1807).
5. Kasım Âgha, chief eunuch. 19 Rab. II 1225 (May 24 1810).
8. Mehmed 'Arif Efendi, former sheikh-ul-islam. 9 Saf. 1227 (Feb. 21 1812).
9. Mehmed Sa'âd Khâlet, Minister of the Interior. 25 Dżum. II 1227 (July 4 1812).
10. Shâkir Âhmad, kâ'īmaḫ̲ūm. 28 Dżum. II 1227 (July 8 1812).
11. Mehmed Khusrâw Pasha, kapudan-pâsha (at this date). 15 Saf. 1228 (Feb. 17 1813).
12. Tosun Âhmad Pasha, son of Mehmed 'Ali. 12 Muḥ. 1228 (Jan. 15 1813).
15. Khusraw Âhmad Pasha, grand vizier. 18 Dżum. I 1228 (May 19 1813).

18. Selim Thâbit, as wa'kil of Algiers at Constantinople. 7 Shaw. 1242 (May 4 1827). Cf. Nō. 4: same seal, but on this impression the signature of the engraver 'Omer appears clearly under the fleuron on the left).
22. Sulaimân Ismâ'il, gnamuk emini and wa'kil of Algiers at Durazzo. 7 Ram. 1244 (March 13 1829). To left under the fleuron: signature.
holders of public office, he had to be a Muslim and free. Generally he was a faqih, and in addition to his police functions he performed those of a magistrate. In some respects his duties were parallel with those of the kâfi, but the muhtasib's jurisdiction was limited to matters connected with commercial transactions, defective weights and measures, fraudulent sales and non-payment of debts. Even in these matters he could hear only those cases in which the truth was not in doubt. As soon as evidence had to be sifted and oaths administered the muhtasib's jurisdiction ceased. As a censor he had power to enforce the law without first requiring complaints from an injured party. He had to see that in a place where Muslims lived they did not neglect to hold a Friday service in the mosque and that if they numbered forty or more they formed themselves into an organized community. But if the number was large and there were differences of opinion on the question of worshipping together, his authority might be disputed, and it was not within his power to compel the attendance of the individual Muslim at the mosque unless he was a persistent defaulter. Even then the officer could do no more than admonish the delinquent. So far as the mosque was concerned the muhtasib could insist on the adhan and he could examine the muadhdhin in the subject of the times lawful for the adhan. If a public mosque fell into disrepair, the muhtasib was charged with the duty of calling the attention of the authorities to the matter.

An important part of the muhtasib's duties was to see that the laws of the sharî'ah were maintained. Persons breaking the fast of Ramadan, widows and divorced women who did not observe the idda (q.v.) before remarriage, and other transgressors, were liable to have to make explanations before him. Public morals, further, came under his jurisdiction. He had to prevent men from consorting with women in public and from indulging openly in wine; also the playing of forbidden musical instruments came under his ban and he had to see that games and toys did not lead to offences against the sharî'. However, he could not act on suspicion alone nor had he the right to go behind closed doors to pursue his investigations. His powers would appear to have been wider where the spiritual welfare of Muslims was concerned. Thus if a faqih propounded views contrary to idjmâ' (q.v.) it was the muhtasib's duty to admonish him and report to him to the sovereign if he persisted in preaching heretical doctrines. Also, if a person not a faqih suddenly turned to the study of the fiqh, the muhtasib had to make investigation in order to discover his motive and to prevent his misleading persons who might apply to him. Schools also had to be visited by the muhtasib, though not so much for the purpose of inspecting the character of the teaching as to ensure that teachers did not beat their pupils too severely (Ma'qzri, Kâfi¹t, i. 494). Other matters which came within his jurisdiction were concerned with public amenities rather than with morals or religious institutions. Thus, in towns where the source of drinking-water was fouled or no provision was made for poor wayfarers he could order the townsfolk to rectify matters. He had to ensure that no house overlooked the women's quarters of another belonging to a Muslim and that no house had projecting rainspouts or drains leading on to the street to the inconvenience of wayfarers, and finally that the suk was kept clean and clear of obstacles to traffic.

MUHYI L-DIN [See Allâh, b. 2.]

MUHYI L-DIN MUHAMMAD (MEHMET) b. 'ALî AL-DIN 'ÂLI AL-DJAMALî, a Turkish theologian and historian of the time of Selim I (1512-1520) and Sulaimân I (1520-1566). His father was the famous muftî Zambî 'Ali al-Djamalî, a grandson of Djamal al-Din Mehemd of Aş Serai (hence the epithet Djamalî). He received his theological training first from his maternal grandfather, Hûsân-zâde Efendi, then from his father 'Âli al-Din and later from Muayyad-zâde Efendi. He worked as madressî in several medreses, in Constantinople at the Murâd medrese and at the eight schools of the Fâtimî mosque and in Adrianople where he was also a mulla for a period. He died in retirement and was buried at Adrianople in 957 (1550); according to some, however, in 956 (1549).

His main importance lies in the fact that he edited the anonymous Ottoman chronicles, the Tawârîh-i Âlî 'Othmân, under the title Tawârîh-i 'Ali-i 'Othmânî. These chronicles which run from the beginning of the Ottoman empire were continued by him down to 956 (1549) i.e. till shortly before his death.

Two versions of his Chronicle exist, both of which go back to him: 1. a shorter one to which corresponds the translation of the Book manuscript by Gaudier-Spiegel: Chronica oder Acta von der Turkischen Tyrannen herkommen und geführte Kriegen, aus Türkischer Sprachen ver- deutlicht. Vorhin nie in Druck ausgangen. Frankfurt a/O. 1567; it was also published in Latin and German by Leunclavius: Annàles Sultanioum ot Alexandrianum a Tauricis sua lingua scripti, Frankfurt 1588; 2nd edition with index and German transl.: Neutg Chromata Turcicner Nation von Turenken selbs beschrieben, Frankfurt a/Main 1590; 2. a longer version: the so-called Veraniian Chronicle (Codex Veraniianus), edited in Latin and Iberian by Leunclavius: Historiarum Musulmanarum Turcorum et monumentorum eorum exscriptae libri XVIII, Frankfurt 1591. There were 18 books instead of the 30 planned. As early as 1590 the first three books were published in German at Frankfurt: Neuerer Musulmanner Histori, Turkischer Nation, von ihrem Herkommen, Geschichte und Taten: drey Bücher, die ersten drey, dargestellt, followed by the complete German translation of the Annales: Neuerer Musulmanner Histori Turkisner Nation, Frankfurt a/M. 1595.

In addition to his chronicle, which exists only in manuscript ( MSS. of Vienna, Munich, Berlin, Gotha, London, Constantinople etc.), Muhyî al-Din is also credited with poems in Turkish, Arabic and Persian (also extant in a manuscript) and a theological work.

MÜHİYİ LÂRÎ (d. 933 = 1526–1527), a Persian writer, author of the famous Fahith al-Harâmân, a poetic description of the two holy cities, Mecca and Medina, which also contains a full account of all the rites of the obligatory pilgrimage (hajûjî).

This book, written in 911 (1506) and dedicated to Mu'azzar b. Mahmûd Shâh of Guzûrât (917–932 = 1511–1526), was for a long time wrongly attributed to the celebrated poet 'Abd al-Râhîm Lîfûtî. Mumiy Lârî was a pupil of the great philosopher Muhammed al-Dâwânî (d. 907 = 1501) and made use of his extensive philosophical knowledge in a commentary on the great Kâshf of Ibn al-Fârîd, which is known as al-Târîkh al-kabîr. In this work he endeavoured, following in the footsteps of his teacher, to reconcile the principles of orthodox Muhammadan mysticism with the teachings of Aristotle in the form in which they were disseminated in the east.

(E. BERTHELS)

AL-MU'TÎD. [See AL-LÎ '\b. 2.]

MU'IN AL-DIN SULAIMÂN PARWANA, vice-regent of the Saljûq Empire in Asia Minor after the Mongol invasion of that territory. His father Muhammedîb b. Ali al-Da'llî (in some sources, such as the Târîkh-i Gâzî-i Mu'ín) is called “al-Kashî”, which implies origin from Kashân) had been a minister during the reign of Kai Khosrow II and had been able, after the battle of Ko-e Dâgh (1243), to secure for a time the continuation of the Saljûq dynasty in Asia Minor, by his intercession with the Mongol general Bairgû (Bibi Bîbî, p. 243). His son Mu‘în al-Dîn Sulaimân soon rose to hold important offices and had been commander of Tolûtî, and later of Tolûtî and Kirîdjin, when, in 1256, he was promoted, by the favour of Bairgû, to the rank of parâmîn.

The title parâmîn denoted a high administrative office (high chancellor) in the Saljûq empire and is erroneously explained by the Persian dictionaries as a synonym of farâmî (the word is fully discussed in the foot-note on p. 486 of Khalîl Edémî's article in T.O.E.M., vol. viii.; cf. also Huart, Les Saints, etc., i, 80). At the time indicated the three sons of Kai Khosrow were nominally reigning, but Mu‘în al-Dîn was already the real director of affairs. After Hûlûgû had appeared on the scene in 1260, the empire was divided into two parts, of which Rûnk al-Dîn Killoj Arslân got the eastern part with Parwana as vizier at his side. The latter had also a family connection with the dynasty, for he was married to a daughter of Kai Khosrow II, while one of his own daughters became the wife of the Sâlîq(? Ghiyâsh al-Dîn Mas‘ûd II. As vizier of Rûnk al-Dîn he conducted Sinope (Sinûb) from the Greek emperor of Trebizond; the town was given to himself, and after his death some of his descendants continued to reign there (cf. sixh and Tewûl, Sinûbâ Parwana, ed. in T.O.E.M., 1st year, p. 203). In February 1265 Parwana, warned that his successor wanted to get rid of him, had him imprisoned and afterwards strangled at Al-Serîy. The two and a half years’ old son of Rûnk al-Dîn, Ghiyâsh al-Dîn Kai Khosrow, was set up as a puppet-king. During the following years, when Parwana was, under the supervision of the Mongols, the real master in Eastern Anatolia, the wretched situation of the country induced many notable Turks to emigrate to Egypt, where they incited Sultan Baîbars to a military expedition against the Mongol domination in their country. It is highly probable that Mu‘în al-Dîn Parwana himself was secretly at the head of these negotiations. Baîbars invaded Asia Minor, defeated a Mongol army at Al-bistân and occupied the town of Kaštîriyeh in April 1277. Here he waited for Parwana to join him, but the latter had lost his confidence in the enterprise and fled to Tolûtî with the young Sultan. Baîbars returned a second time and soon a Mongol army appeared under the Ilkhan Âbâka to inflict drastic punishment on the Muslim population; he is said to have killed over 200,000 people. At the same time suspicion fell on Parwana. He was accused of having fled with his army at the battle of Al-bistân, of having not appeared before the Ilkhan after the defeat, and of having neglected to inform the Mongols of Baîbars’ approach. At first Âbâka was willing to spare him, but on the insistence of the relatives of those killed in the battle of Al-bistân, he ordered him to be executed at Al-Dâgh, together with his retainers, probably on the 1st Rabi‘ 1 676 (August 2, 1277). Al-Dâgh is, according to Khalîl Edêmî, probably the same as Kose Dageh, to the east of Siwâs. His burial place is not known. A foundation inscription on a mosque built by Mu‘în al-Dîn Parwana in 665 (1264–1265) is still extant in Marzîfûn. His death inspired several poets to make elegies on him (Munzâmîjîm Bahshî). From the tradition of the Mawlawîî order it appears that Parwana was on intimate terms with Djâlîl al-Dîn Rûmî; the latter’s work Fihî nîwâ fihî was dedicated to him (cf. Kropoulâ-Zade M. Fûkî, Ilk Muttânawîlî, p. 258).

MU'IN AL-MISKIN whose full name was Mu'in al-Din Muhammad Amin b. Hâdji Muhammad 'Abd-al-Qadir al-Harrâwi and who was bâbâlik, was Mu'inni (d. 907 = 1501–1502), a celeb. at the Turkish court. He studied Hadith for 31 years and throughout this period preached every Friday in the great mosque of Herât. He was for year kâdi of Herât but gave up the post by his own request. In 866 (1461–1462) at the request of a friend, he began to write a little book on the life of the Prophet Muhammad. Out of this little book there grew in time the great biographical work, exceedingly popular in the East, called Mârij 'i al-Nabwâwa fi Mustâdârî al-Nabwâwa, which was not finished till 891 (1386) and contains a very full account of the life of the Prophet, consisting of a Mu'adhdhina, four books and a Khâtûnu'udin. The book is based on the Bi'thâr of the Prophet, and it is true that he indeed wrote a commentary on the Kur'an entitled Bi'thâr al-Durar and a collection of forty hadîths, Kitâb al-Khatûnu'udin. His study of the history of the prophets produced a large history of Moses entitled Mu'irjatî-Mu'inni (also called Târibkî-Mu'inni or Kitâba-yî Mu'inni), which was completed in 904 (1506–1508), and the story of Yu'suf and Zulaykhat, Ahsan al-Kijâz.  

AL-MU'IZZ. [See ALLAH, II.]

AL-MU'IZZ B. BADIS. [See ZIRIDS.]

MU'IZZ AL-DAWLA, Abu 'l-Husain Ahmad b. 'Abd Allah Nasir, a Bâ'bîyid, was born in 305 (915–916). After the taking of Shîmâ by the Turco-Caucasians he brought Kîrmân under his rule in 324 (935–936). When the rebel governor of al-Ahwâz, al-Bârîdî [q. v.], after several unsuccessful encounters with Bedjikem [q. v.], the general of the 'Abbasîd caliph, sought the help of the Bâbîyid 'Imad al-Dawla, the latter sent his brother Ahmad against al-Ahwâz with an army; Bedjikem was defeated first at Arradjan and then at 'Askari Mukriam (326 = 938), whereupon Ahmad took this town; but when he demanded as a reward for the help he had given that al-Bârîdî should help the Bâbîyid Rukn al-Dawla against Wangirî, the brother of Mardawâdî [q. v.], al-Bârîdî refused and went to Bâsra. After 328 Ahmad had received reinforcements from 'Imad-al-Dawla, he was able to take al-Ahwâz. In 332 (943–944) he undertook a campaign against Wâsiit while the Amir al-Umarî, the Turkish chief Tuzan, was involved in a war with the Hâmadîn of al-Mawâlî.  

Tuzan hurriedly made peace and set out against Ahmad, and the two armies met in Dhu l-Ka'da' of this year (July 945). The Tuzanis are variously given; it is certain at least that Ahmad soon afterwards returned to al-Ahwâz. At the end of Ridâb the following year (middle of March 945), he made a further attempt to take the town but had to withdraw the next month on the approach of Tuzan. In 334 (945) he attacked Wâsiit for a third time; its governor had gone over to his side and the town surrendered without a blow being struck; he then marched against Baghdad and in December 134 (December 945) entered the capital where he at once seized the power. The caliph of the Musulmân appointed him vâlî of the capital and gave him the title Mu'izz-al-Dawla but was deposed and blinded a few weeks later because he was alleged to be dealing with the enemies of al-Mawâlî. Mu'izz al-Dawla was soon afterwards attacked by the Hâmadîn. Nâşir al-Dawla of al-Mawâlî, who advanced on Baghdad along with Abu Qâfar b. Shirzâd and very quickly occupied the eastern part of the capital. Nâşir al-Dawla was not driven back till Mawârân of the following year (Aug. 946) when he made peace with the Bâbîyids but without consulting his Turkish allies. The latter were angered at this and turned against him. Nâşir al-Dawla had to sue to the Turks in bringing the Turks to terms with the help of the Bâbîyids; he then returned to al-Mawâlî as a vassal of the Bâbîyids. Abu'l-Kâsim, son and successor of al-Bârîdî, was the next to be dealt with. Mu'izz al-Dawla sent an army against him which put his forces to flight and in 336 (947) he took the field in person. Abu'l-Kâsim fled to the Karmâzâns of al-Bâhram and Mu'izz al-Dawla occupied Bâsra. Abu'l-Kâsim's governor 'Imrân b. Shâhin however held out in al-Jamda, the capital of the Euphrates territory between Wâsiit and Bâsra, and after several years' fighting Mu'izz al-Dawla had to confirm him in his governorship. In 337 (948–949) Mu'izz al-Dawla undertook a campaign against al-Mawâlî because Nâşir al-Dawla did not send the tribute imposed on him. The latter fled to Nâfûn, but when Rukn al-Dawla, brother of Mu'izz al-Dawla, was attacked by the Sâmtâns, Mu'izz al-Dawla had to send him help and concluded peace with the Hâmadîns. In 347 (958–959) Nâşir al-Dawla rebelled again but on the approach of Mu'izz al-Dawla he left al-Mawâlî and went first of all to Nâfûn and then to Hâlab to his brother Saif al-Dawla, while Mu'izz al-Dawla advanced on al-Mawâlî and took this town and also Nâfûn. Through the intervention of Saif al-Dawla however peace was made (Mawârân 348 = March–April 959). In the last year of his life Mu'izz al-Dawla had to fight the Karmâzâns and 'Imrân b. Shâhin. The former acknowledged his suzerainty; the war against the latter was interrupted by the death of Mu'izz al-Dawla on 13th or 17th Rabi' II 356 (March 28 or April 1, 967).  

Greetings, d. Chafchen, ii. 651—653, 666 seq., 688, 692, 695—697; iii. 2—7; Le Strange, Baghdad during the Abbasid Caliphate, p. 161—164. 251—253, 318 sq. (K. Y. Zettersten).

**AL-MU'IZZ LI-DIN ALLAHI**

AL-MU'IZZ LI-DIN ALLAHI, fourth Fatimid caliph, was born at Madhayya on 11th Ramadan 310 (28th Sept. 921), proclaimed heir-apparent in Shawwal of the same year (March 923). His first object was to restore the Fatimid power, which had been reestablished in Ifriqiya by his father, over the remaining provinces of the Maghrib. In 342 he led an army in the Ahrar mountains and not only reduced the turbulent tribes of that region for the first time, but also received the formal submission of the chiefs of Zenata and of the ruling princes of the west. The hostility and intrigues, however, of the Unayzah ruler of Spain, 'Abd al-Rahmân III (q. v.), maintained a situation of unrest in the Maghrib, and after ineffectual naval raids on both sides, al-Mu'izz despatched thither in 347 (958) a strong force under the command of his freedman and kābiṭ Djawhar al-Rūmī (q. v.). Tāhār and Sidjīmās were captured with little difficulty. Fās surrendered after an obstinate siege of eleven months in Ramādān 348. And the other strongholds in the Maghrib were occupied, with the exception of Salā and Sabta, which were held for 'Abd al-Rahmân. Although the results of this campaign in the western Maghrib were ephemeral, the establishment of the Šanhadji chief 'Abd b. Manâd at Tāhār placed an effective check upon the Zenata of the Central Maghrib. There can be no doubt that al-Mu'izz was already contemplating the conquest not only of Egypt and Syria, but also of Baghdad, using for this purpose the Kitâma, the ʿAbdālādā had used the army of Kūrāisān, while the Šanhadji should hold North-west Africa for him, and with this end in view he actively pursued a policy of conciliation of these tribes by lavish gifts and the abolition of financial exactions.

Though this ambition was no secret, it is represented in the official correspondence of al-Mu'izz as subsidiary to his desire (which was probably sincere) to secure the leadership in the ghâṣb against the Arber. Merchants in 350 (961) the Cretans, besieged by Nikephoros Phokas, and desiring of assistance from Kāfār, had solicited his aid. In spite of the victory claimed for al-Mu'izz by Ibn al-Athîr (viii. 404), it appears that he was unable to send assistance in time, but he seized the opportunity to denounce the treaty made with the Emperor Constantine VII in 956, and opened a fresh attack in Sicily. Taormina was captured in 351 (962), and an expeditionary force sent from Constaninople was severely defeated both on land and sea, the general Manuel Phokas being killed, and the commander Niketas taken prisoner.
